NOTES:

PREFACE

The *1984-1985 Directory of Residency Training Programs* is the 70th edition published by the AMA of a list of post M.D. training opportunities in the United States. The original purpose of this publication (popularly known as the "The Green Book") is still its primary function: to provide medical students with information on accredited programs offering post-graduate medical training. The Accreditation Council for Graduate Medical Education (ACGME) (composed of representatives of five national associations interested in medical education) and the Residency Review Committees accredit graduate training programs which meet the General and Special Requirements of the Essentials for Accredited Residencies.

Over the years, the DIRECTORY has gained recognition as an official list of accredited graduate training programs. State licensing boards and specialty societies refer to this DIRECTORY to verify the authenticity of training programs presented by physicians who wish to qualify for licensure and certification. The DIRECTORY is also the historical record of graduate medical education in the United States and a source for national statistics on medical manpower in training.

Current Directory

The *1984-1985 Directory of Residency Training Programs* contains five sections and five appendices.

Section I contains important information about the accreditation process, information about regulations for entry of foreign medical graduates to the U.S. and admission to U.S. residency programs, and a brief description of the National Residency Matching Program. This section also includes the addresses for obtaining more detailed information on these subjects.

Section II contains the "General Requirements for Accredited Residencies," which became effective July 1, 1982, together with the Special Requirements for training programs in each specialty. Residency programs reviewed after June 30, 1982 have been judged on the basis of the new General Requirements. The Special Requirements for each specialty are current as of January 1984.

Section III contains statistical data on the 1983 training year with some comparative data for previous years. Information on number of accredited programs, number of positions, number of trainees, and selected characteristics of trainees is provided.

Information on institutions and agencies participating in residency training is also included.

Section IV is the list of Accredited Residency Programs for each specialty. (Programs which will be discontinued June 30, 1984 are not listed.) The programs within each discipline are listed by state and city. Persons wishing detailed information about a residency program should write to the program director at the address listed. A list of Transitional Year Programs offered by hospitals or groups of hospitals is included in this section.

Section V is a "Directory of Institutions and Agencies" participating to a significant extent in residency training. The institutions are listed alphabetically by state and city. In addition to the name and address of the institution, the type of administrative control of the institution, medical school affiliations of the institution as provided by the deans of accredited U.S. medical schools, the total number of medical staff, the number of beds, the average daily census, the percentage of necropsies, and a list of the specialties in which this institution provides training, is given.

Appendix A contains a list of programs which offer a combined medicine/pediatrics training, that is, two years of medicine and two years of pediatrics. Both the American Board of Internal Medicine and the American Board of Pediatrics accept this combined training for certification. Neither the ACGME nor the Residency Review Committees have reviewed these combined programs. This list has been provided by the staffs of the American Board of Internal Medicine and the American Board of Pediatrics and is printed in this Directory as a service to the reader.

Appendix B contains the "Requirements for Certification" in each specialty. These documents have been provided by the specialty boards and are published as information. Questions concerning certification requirements should be directed to the particular board office.

Appendix C contains a summary of licensure requirements for each state. Inquiries concerning licensure should be directed to the individual state offices.

Appendix D contains a list of U.S. medical schools accredited by the Liaison Committee on Medical Education. Appendix E provides the key to abbreviations used in the DIRECTORY.

Many people have made possible the publication of the 1984-1985 edition of the DIRECTORY. Program directors and the staffs of offices of medical education and of house staff affairs have been most cooperative in providing updated information on the training programs they administer. Information on institutions and agencies participating in the training programs was provided by the chief executive officers and their staffs. A response to the Annual Survey has been received from 96 percent of the programs each of the past three years, and from approximately 80 percent of the institutions. The Editor wishes to express appreciation to those individuals who are responsible for this excellent record.

The work of the Residency Review Committees which review and evaluate programs provides the basis for this DIRECTORY. Particular mention should be made of the contributions of the Committee Secretaries who have provided corrected copy of revised Special Requirements and notification of the most recent actions of the Residency Review Committees and ACGME. Information on the National Resident Matching Program has been provided by John Graettinger, M.D., Executive Director of that organization.

The individuals who staff the specialty boards have provided current documents on the Requirements for Certification in each of the specialties. Information on licensure was provided by the state medical boards and the Department of Data Planning and Evaluation of the American Medical Association.

The AMA Division of Computer and Information Services provided electronic data processing services. John Muellner and his staff have been particularly helpful. The AMA Division of Printing Services and the Department of Creative Services provided other technical support. Particular commendation is due for Herb Hinkelman who executed the cover design.

A very special acknowledgement and thank you is extended by the Editor to a few persons who have

labored daily to bring this Directory to the public in the most accurate form possible.

Sylvia Etzel has coordinated the multiple facets of this project and supervised the preparation of material for publication. Her special skill and knowledge have been invaluable in producing a smooth operation from the survey through to publication. Ms. Etzel also edited most of the 6,300 forms in preparation for data entry.

Ann Marie Weaver has given excellent and consistent daily attention to the detail of each program listing. Her penchant for accuracy and devotion to the task are valuable assets. Ms. Weaver also assisted in preparing the statistical data for Section III. Her contribution has made available additional information included in the summary statistics.

Barbara Smith assisted in verifying the information given on the survey forms and in preparing the statistical tables. In addition, Ms. Smith provided secretarial support and with her courteous manner was able to clarify information with program directors thus contributing to the accuracy of the survey responses.

Alicia O'Brien handled the mail, kept an accurate record of returns throughout the survey process, and provided telephone assistance to respondents. In addition, Ms. O'Brien contacted many of the program directors in order to clarify information provided by them.

The cooperation, dedication to the task, and critical inquiry by these excellent staff people have produced an accurate DIRECTORY. The Editor is most grateful to each one of them.

Communications concerning the content of this Directory should be addressed to the Editor of the *Directory of Residency Training Programs*, Office of Educational Directories, 535 North Dearborn Street, Chicago, IL 60610.

INFORMATION ITEMS:

Accreditation Process Foreign Medical Graduates National Resident Matching Program

PROCESS OF REVIEW AND ACCREDITATION OF EDUCATIONAL PROGRAMS IN GRADUATE MEDICAL EDUCATION

INTRODUCTION

The Accreditation Council for Graduate Medical Education (ACGME) is composed of representatives of the American Board of Medical Specialties, the American Hospital Association, the American Medical Association, the Association of American Medical Colleges, and the Council of Medical Specialty Societies. The Federal Government names a representative to serve as a nonvoting member of the Council and the Council chooses one public member. A Residency Review Committee (RRC) consists of representatives appointed by the American Medical Association, the appropriate specialty board, and, in some cases, a national specialty society.

Residency training programs are accredited in one of the following ways: by the ACGME upon recommendation of the appropriate RRC, or by the RRC itself if accreditation authority has been delegated by the ACGME. Accreditation of a residency program indicates that it is in substantial compliance with the General Requirements and the Special Requirements of the Essentials of Accredited Residencies.

APPLICATION AND SURVEY

The accreditation review process is set in motion in one of two ways, depending upon whether the program under consideration is a new or an ongoing program.

Application. In the case of a new program, the process begins when the program director sends an application to the Secretary of the RRC. The entire processing of an application involves several steps and usually requires 8 to 12 months from the time the application is received by the Secretary until accreditation action is taken. The Secretary checks the application for completeness and forwards the document to the Director of Field Staff, who schedules the survey of the program. The scheduling and completion of the survey take approximately six months. In some specialties, the application will receive a pre-review by a member of the RRC or a specialist before the survey is scheduled.

A reapplication involves the same process described above. A program cannot initiate reapplication while engaged in either stage of the appeals process.

Resurvey of Accredited Programs. Existing programs are surveyed and reviewed on cycles determined by the RRC, as described below in the section on categories of accreditation. Programs will be notified approximately two months before the resurvey, at which time the program director will receive the appropriate forms for completion prior to the survey.

A RRC may, in special circumstances, require a resurvey of a program outside the usual cycle. A program director may also request an early resurvey. However, a program will not be resurveyed while it is in either stage of the appeals process.

Function of Surveyor. There are two types of surveys, those conducted by ACGME field staff and those done by specialist site visitors. In either case, it should be emphasized that the surveyor does not participate in the final accreditation decision or recommendation of the RRC. It is

the surveyor's primary responsibility to verify the information that has been provided by the program director. The surveyor also conducts in-depth interviews with administrators, faculty, and residents in order to report accurately on the various aspects of the educational program. The surveyor is instructed to be as objective as possible and to avoid making any statement which appears to be a recommendation regarding the accreditation status of the program.

After the survey has been completed, the surveyor's report is submitted to the Committee Secretary who prepares the program file for evaluation by the RRC at its next regularly scheduled meeting.

REVIEW AND ACCREDITATION

The RRC reviews the program information in detail, evaluates the program and determines the degree to which it meets the published educational standards. It decides upon an accreditation status for the program and identifies areas in non-compliance with the standards.

The Accreditation Categories. The accreditation status of a program will be one of the following:

Accreditation Withheld: This category is used when the RRC finds that a new program seeking accreditation does not satisfy the General and the Special Requirements of the Essentials of Accredited Residencies.

Provisional Accreditation: This category is used for a new program not previously accredited, or for a reapplication from a previously accredited program which has had its accreditation withdrawn and which is now judged to satisfy the General and Special Requirements of the Essentials of Accredited Residencies. Provisional accreditation may also be used in the unusual circumstance in which a fully accredited program has been so altered that in the view of the RRC it is the equivalent of a new program. In each case, the appropriate effective date of provisional accreditation will be stipulated.

The normal interval for resurvey of provisionally accredited programs is two years. All programs with provisional accreditation, whether or not they have residents, should be resurveyed and evaluated by RRCs at a time no longer than three years after the initial notification of provisional accreditation. Provisional accreditation should not exceed a time equivalent to the minimum length of the program plus one year. If full accreditation is not recommended within this time, provisional accreditation will be withdrawn, providing a resurvey has been made and the program has been reviewed by the RRC. Special exception may be made in cases where justification exists to extend provisional accreditation.

Full Accreditation: This category is used in three circumstances:

- a) programs holding provisional accreditation which have continued to meet the General and the Special Requirements;
- b) fully accredited programs which, following resurvey and review, continue to meet the General and the

Special Requirements;

- c) programs which had been placed on probation but are now judged to meet the General and the Special Requirements.

The maximum interval between surveys of fully accredited programs is five years. However, a RRC may specify a shorter cycle.

Probationary Accreditation: This category is used for currently accredited programs which have specific deficiencies that are considered to be correctable. Such programs may not be on probation for more than four consecutive years. Usually such programs are resurveyed one or two years after the probationary action. The time of resurvey is determined by the RRC. If, after resurvey and review, the RRC finds the stipulated deficiencies corrected, the program may be returned to full accreditation. The "Procedures for Reconsideration and for Appeal of Adverse Actions" provide further details on adverse actions (see below).

Accreditation Withdrawn: This category is for either of the following conditions:

- a) a program holding provisional accreditation fails to meet the criteria for full accreditation;
- b) a program holding probationary accreditation fails to correct its deficiencies and thus does not meet the criteria for full accreditation.

When accreditation is withdrawn, the effective date of that withdrawal shall not be less than one year from the date of the action; or, when the action is appealed and said action is sustained, shall be not less than one year from the date the action is sustained. In either case, the effective date of withdrawal shall permit the completion of the training year in which the action becomes effective.

Once there is a final action to withdraw accreditation, no residents may be appointed to the program.

The "Procedures for Reconsideration and for Appeals of Adverse Actions" contain further details (see below).

Warning Notices. The RRC may use a special procedure to advise a program director that it has serious concerns about the quality of the program and that the program's future accreditation status may be in jeopardy. In keeping with the flexibility inherent in the accreditation process, each RRC may use this procedure in accordance with its own interpretation of program quality and the use of the different accreditation categories. This procedure is not considered an adverse action and, therefore, is not subject to the appeals procedures.

- a) For a program with provisional accreditation, a RRC may elect to continue provisional accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately one year, including an on-site inspection, at which time withdrawal of accreditation will be considered if the cited deficiencies have not been addressed satisfactorily.
- b) For a program with full accreditation, a RRC may determine that a fully accredited residency program has deficiencies which, however, do not warrant probation at the time. It may elect to continue full accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately one year, including an on-site inspection, at which time probationary accreditation will be considered if the cited deficiencies have not been addressed satisfactorily.

Special Circumstances for Withdrawal of Accreditation.

Withdrawal of accreditation may also occur under the following special circumstances:

- a) Programs which are delinquent in payment of fees are not eligible for survey and shall be notified by certified mail, return receipt requested, of the effective date of withdrawal of accreditation, said date to be not longer than one year from the date of notification. On said date, the program will be removed from the list of the ACGME accredited programs. The effective date of withdrawal of accreditation should permit the completion of the training year in which the action becomes effective.
- b) In cases of persistent refusal to be resurveyed, a program may be deemed to have withdrawn from the voluntary process of accreditation. The date of the withdrawal of accreditation should allow for the completion of the training year in which the action becomes effective.

In either of the above cases, once notification has been made of the effective date of withdrawal of accreditation, no residents may be appointed to the program. Program directors must notify all current residents and applicants to the program in writing of the withdrawal of accreditation.

Voluntary Withdrawal of Accreditation. Voluntary withdrawal of accreditation is appropriate under the following circumstances:

- a) A program may request voluntary withdrawal of accreditation, without prejudice. As a rule, it is expected that programs which have been inactive for two years will seek voluntary withdrawal of accreditation, without prejudice. A new application can be submitted if plans are developed to reactivate the program.
- b) Two or more programs may merge into a single new program. If the RRC accredits the new program, it will take concurrent actions for withdrawal of accreditation, without prejudice, of the previously separate programs.

NOTIFICATION OF ACCREDITATION STATUS

Letters of Notification. Following the meeting of the RRC, letters of notification are sent to program directors informing them of the RRC's decision. Although the duration of accreditation is not specified, the notification letters usually contain reference to the approximate time of the next survey and review of the program. The accreditation status of any program will change only by subsequent action of the RRC. An adverse action concerning accreditation status can take place only after a survey of the program.

Notifying Residents. Each time an action is taken regarding the accreditation status of a program, the residents must be notified. Whenever an adverse action is taken, program directors must notify all residents and applicants to the program IN WRITING. If reconsideration of an adverse action is not requested, the residents and applicants must be notified at that stage. If reconsideration of an adverse action is requested, the program director need not notify residents and applicants until and unless the adverse action is sustained upon reconsideration. At that point the residents and applicants must be notified whether or not the action is appealed further. Copies of the letters of notification to residents and applicants must be kept on file by the program director.

(Additional information regarding notification letters is contained in the "Procedures for Reconsideration and for Appeal of Adverse Actions." See below.)

**PROCEDURES FOR
RECONSIDERATION AND FOR
APPEAL OF ADVERSE ACTIONS**

Approved September 21, 1982

by
ACGME

The Accreditation Council for Graduate Medical Education procedures for reconsideration and for appeal of adverse actions regarding the accreditation status of programs in graduate medical education provide for two steps of review.¹

I. Reconsideration

A. A draft letter containing the recommendation² by a Residency Review Committee to deny or withdraw accreditation or to place or continue a program on probation or to deny an increase in the resident complement or to recommend a reduction in the number of residents in a program shall be mailed to a program director whose program has received such adverse recommendation as soon as possible following the Residency Review Committee meeting. The draft letter when transmitted to the program involved shall include the basis for the decision and inform the program director of his right to request reconsideration. In cases of withholding or withdrawing accreditation or of placing a program on probation, a copy of the draft notification letter will also be sent to the chief administrative officer of the parent institution.

B. Final letters of notification will be sent to program directors, hospital administrators of participating institutions as indicated in the program listing, medical school and the sponsoring organizations affiliated with a medical school and the sponsoring organizations of the RRC after the action becomes final. The recommendation of the RRC becomes final upon concurrence by the ACGME.

In those cases in which the RRC has been delegated accreditation authority, the action of the RRC becomes final thirty (30) days after the receipt of the draft letter or after the RRC has acted upon a request for reconsideration.

C. If reconsideration is not requested the residents and applicants must be notified of the adverse action in writing.

D. Written requests for reconsideration must be submitted to the Secretary of the appropriate RRC by certified mail, return receipt requested, within thirty (30) days following receipt of the draft letter. If the program does not request reconsideration within thirty (30) days after receipt of the draft letter all rights to an appeal are waived.

E. When a written request for reconsideration is received, the program shall revert to its status prior to the adverse action or recommendation of an adverse action by an RRC.

F. The Secretary of the appropriate RRC will place the request for reconsideration in the program file and will present it to the next meeting of the RRC. The RRC shall complete the reconsideration no later than its next meeting. The RRC may either sustain or modify its previous recommendation.

G. If reconsideration of an adverse action is sustained, the residents and applicants must then be notified in writing that an adverse action has been taken whether or not the action is appealed further. Copies of the letters of notification to residents and applicants must be kept on file by the program director.

H. The information upon which reconsideration is based must be that which pertains to the program at the time of the on-site inspection and the initial evaluation by the RRC. New information based on data subsequent to the inspection and the initial review or representing changes in the program following an adverse decision cannot be considered at this time by the RRC.

I. Where substantial changes have occurred subsequent to the action of the RRC, the information should be delineated and submitted by the program director as part of a new application for evaluation and accreditation of the program.

J. When the RRC sustains its previous recommendation, the ACGME will either sustain the recommendation of the RRC, at which time the reconsideration phase of appeals is completed, or refer the program back to the RRC for further consideration. The ACGME will notify the program of its decision and indicate the further right to appeal an adverse decision. In those cases in which the RRC has been delegated accreditation authority, the reconsideration phase is completed when the RRC either sustains its previous action or modifies it.

K. When the RRC sustains its previous action, official letters of notification shall be sent as outlined in I. B. above.

II. Appeal Hearing

A. If following reconsideration, the RRC or the ACGME sustains its previous action, the program director may request a hearing before a Board of Appeals. If a written request for such a hearing is not received by the Chairman of the ACGME within thirty (30) days following receipt of the official letter of notification, the action of the ACGME or an RRC will be deemed not subject to further appeal from the program director.³ If a hearing is requested the Board will be appointed according to the following procedures:

1. The Chairman of the ACGME, using the *Directory of Residency Training Programs*, will develop a list of panelists made up of program directors from fully accredited programs (not to include programs on probation or provisionally approved status) who have agreed to serve on a hearing panel. The list of names of directors of fully approved programs shall be drawn from residency programs in the specialty under consideration.

2. For a given appeal, the Chairman of the ACGME will mail one copy to the program director and one copy to the Chairman of the appropriate RRC. The appellant and the Chairman of the RRC will have fifteen (15) calendar days to select one name each plus two alternate names ranked in order of preference, and submit them to the Chairman of the ACGME.

3. After these two lists are received, the Chairman of the ACGME will select two panelists from these lists and ask them to select a third panel member from the list developed by the Chairman of the ACGME. A conference telephone call will be held between the two panelists to select the third member, plus two alternate names ranked in order of preference. If both parties are unable to agree upon a third name, the Chairman of the ACGME will select the third member.

B. When a program director requests a hearing before a panel, the program reverts to its prior status until the ACGME makes a final determination on the status of the program.

C. Hearings requested in conformity with these procedures will take place no later than ninety (90) days following the appointment of the Board of Appeals. At least twenty-five (25) days prior to the hearing the program director and the institution shall be notified of the time and

¹All correspondence relating to reconsideration should be sent by certified mail, return receipt requested, in care of The Secretary, Residency Review Committee for (name of specialty), 535 North Dearborn Street, Chicago, Illinois 60610. Correspondence relating to an appeal of an adverse action should be sent by certified mail, return receipt requested, in care of The Secretary, ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

²If the ACGME has delegated accreditation authority to an RRC, the word "action" should be substituted for "recommendation" wherever it appears in this document.

³Letters should be sent certified mail, return receipt requested, in care of the Secretary of the ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

place of the hearing. Once the Appeals Board is formed, the program director and institution have the right to request and obtain all the information in the program file on which the Residency Review Committee's recommendations and actions were taken, including reports of field staff and specialist site visitors, progress reports and any additional clarifying information which was provided by the program director during the reconsideration phase of the appeal. This same material is forwarded to the panel members in advance of the hearing. Written briefs may be submitted to the Board of Appeals no later than two (2) weeks following the hearing providing that formal request to submit such briefs is made to the Board of Appeals at the time of the hearing.

D. The permanent file together with formal presentations at the hearing, the proceedings of the hearing and briefs submitted under the provisions outlined above shall be the basis for the findings of the Board of Appeals.

E. At any hearing before the Board of Appeals, the institution's representative(s) may be accompanied by counsel, make oral presentation, offer testimony and request that representative(s) of the bodies involved in the evaluation of the program appear to present testimony. The institution, at least fifteen (15) days prior to any such hearing, shall request in writing the presence of such representative(s) whom it wishes to examine. Proceedings before a Board of Appeals are not of an adversary nature as is typical in a court of law, but rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program.

Since a Board of Appeals is not a court of law, it shall not be bound by technical rules of evidence usually employed in legal proceedings but may accept any information it deems appropriate and pertinent on the content of the program and the degree to which it meets the published educational standards. The institution, through its representatives, shall have the opportunity to be present at the hearing to attempt to rebut the prior findings and defend the program.

All information presented should be for purposes of clarification only, and description of new components as defined above are not relevant. Although there is no subpoena power to compel the attendance of any individual at a Board of Appeals hearing, a request by the institution for the presence of any individual shall be sent to that individual by the Secretary of the ACGME if it is received in a timely manner pursuant to these procedures.

The Board of Appeals is charged with determining whether there is substantial, creditable evidence to support the action taken by the RRC regarding the action that is being appealed. The Appeals Board, in addition, will make a determination as to whether there has been substantial compliance with the published administrative procedures governing accreditation of graduate medical education programs.

F. Following the hearing or submission of briefs, the Board of Appeals shall submit within fifteen (15) days a recommendation on the status of the program for consideration to a subcommittee of the ACGME at its first meeting following the hearing and report of the Board of Appeals.

G. The Subcommittee on Appeals shall review the recommendations of the Board of Appeals to determine whether there has been substantial compliance with the published administrative procedures governing the appeals procedure as described in this document.

H. The Subcommittee on Appeals shall make its recommendation to the plenary session of the ACGME for final action.

I. The Secretary of the ACGME shall, within fifteen (15) days following the ACGME meeting and via certified mail, notify the program under appeal of the decision of the ACGME. The resulting subsequent decision by the ACGME as to the status of the program shall be final.

J. Expenses of the Board of Appeals shall be shared

equally by the appellant and the ACGME. The expenses of witnesses and legal counsel requested by the appellant will be the responsibility of the appellant.

PROGRAM ORGANIZATION

Program organization may involve the following types of administrative arrangements:

- a) Independent (Intramural): A program is conducted within a single institution. The assignment of residents is limited to that institution.
- b) Affiliated: Two or more institutions develop formal agreements and conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions.
- c) Integrated: A single program director assumes the responsibility for the residency program which involves more than one institution and the program director is responsible for all appointments of the residents and of the teaching staff.

Some RRCs have specific requirements relating to program organization. These may be found in the appropriate Special Requirements.

It is the editorial policy of the *Directory of Residency Training Programs* that the program listings shall include, in addition to the parent institution, only institutions to which rotations are for a minimum of six months for programs of three or more years duration, a minimum of four months for programs of two years duration, and a minimum of two months for programs of one year duration.

CHARGES FOR EVALUATION AND ACCREDITATION OF PROGRAMS

Fees charged for the accreditation of programs are determined annually by the Accreditation Council for Graduate Medical Education. As of December 1, 1983, the following fee structure is in effect:

Administrative Review

A fee is charged for the following:

- a) New applications.
- b) Request for an increase or decrease in the resident complement in those cases in which Residency Review Committee action is required; request for the increase and decrease in the number of hospitals in a program under those circumstances when Residency Review Committee action is required.

The charge for these administrative reviews is \$200.00. It is normally billed at the time requests are received.

- c) New application for subspecialty program accreditation in certain disciplines.

An administrative review charge of \$300.00 has been set for subspecialty programs. This charge is billed after applications have been received.

Program Survey

Fees charged for the following on-site inspections of programs:

- a) Survey by an ACGME Field Surveyor: \$950.00.
- b) Survey by a Specialist in the appropriate discipline: \$1,400.00
- c) Survey of a subspecialty program in certain disciplines in which such programs are surveyed in conjunction with a core program: \$475.00.

Annual Per Resident Fee

An annual fee for each resident position filled in an accredited residency training program will be charged. The fee will be calculated on the number of residents in a program as of September 1, of a given academic year. Programs will be billed sometime after December 1, of that academic year. The fee charged is \$22.00 per resident.

WHERE TO OBTAIN INFORMATION

Inquiries regarding any aspect of the accreditation process should be directed to the Secretary of the appropriate

Residency Review Committee at the following address:
535 North Dearborn Street, Chicago, Illinois 60610.

For inquiries by telephone, please use the following numbers:

Secretary, ACGME (312) 645-4950

Secretary, RRCs for: (312) 645-4692

Dermatology
Orthopaedic Surgery
Pathology
Radiology

Secretary, RRCs for: (312) 645-4642

Anesthesiology
Nuclear Medicine
Preventive Medicine
Surgery

Secretary, RRCs for: (312) 645-4687

Emergency Medicine
Neurological Surgery
Ophthalmology
Thoracic Surgery
Urology

Secretary, RRCs for: (312) 645-4947

Allergy and Immunology
Family Practice
Otolaryngology
Pediatrics

Secretary, RRCs for: (312) 645-4683

Colon and Rectal Surgery
Neurology
Obstetrics/Gynecology
Physical Medicine and Rehabilitation
Plastic Surgery
Psychiatry

Associate Secretary, RRC (312) 645-4956
for Internal Medicine

Transitional Year (312) 645-4642

Director of Field Staff (312) 645-4948
(Surveys)

Administrative Assistant (312) 645-4939
(Invoices, vouchers)

Inquiries regarding fees should be directed to: Secretary of ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

Inquiries regarding listing of programs should be directed to: Director, Office of Educational Directories, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Any inquiries regarding certification of individual candidates in any specialty should be directed to the appropriate board in that specialty. (See Appendix B, Table 2 for address.)

Inquiries regarding the Match Program should be directed to the National Resident Matching Program, One American Plaza, Evanston, Illinois 60601 (Phone: (312) 328-3440).

ENTRY OF FOREIGN-BORN MEDICAL GRADUATES TO THE UNITED STATES

The entry of foreign-born foreign medical graduates to the United States is governed by the U.S. Immigration and Nationality Act, which is administered by the Immigration and Naturalization Service. It is a violation of federal law to provide employment to a foreigner who does not hold a visa permitting him to earn a salary. Thus, residency program directors considering foreign-born foreign medical graduates should appoint only those who hold a federal work permit, an exchange visitor (J-1) visa, or an immigrant visa. These foreign-born foreign medical graduates should also hold the standard Educational Commission for Foreign Medical Graduates (ECFMG) certificate, earned through passing the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS) or the FLEX, and meeting the

other requirements of the ECFMG.

Foreign medical graduates who hold exchange visitor visas can be appointed only to residency programs in a medical school hospital, or in a hospital affiliated with a medical school; and the medical school must agree in writing to provide the training for which the medical graduate is coming to the United States. Recent amendments to the Immigration and Nationality Act permit a foreign medical graduate to remain in the United States long enough to complete training in a specialty or for seven years, whichever is shorter; a graduate may change his designation of specialty once during that period.

Exchange Visitor FMGs

Exchange visitor foreign medical graduates are at present required to have passed the FMGEMS in order to obtain a visa, and they must have demonstrated competency in oral and written English. They must have undertaken their medical studies at medical schools listed in the *World Directory of Medical Schools* and must have completed all of the medical education requirements for admission to practice in the country where they attended medical school before coming to the United States. They must, in addition, have committed themselves to return to their home country, or country of last residence, after they complete their training in the United States, and their country must provide written assurance that there is need in that country for services in the specialty of the graduate's training. A graduate holding an exchange visitor visa and a standard ECFMG certificate has met these requirements.

Immigrant Foreign Medical Graduates

Foreign-born foreign medical graduates who immigrate to the United States similarly are subject to regulations. Program directors should determine that such individuals have an immigrant's visa and an ECFMG certificate, or a full and unrestricted state license to practice medicine. Foreign-born foreign medical graduates may immigrate to the U.S. in a number of different ways. One way is to enter on a third-preference visa, that is, as a professionally trained physician or surgeon coming to the United States to practice medicine. Those physicians who apply for a third-preference (or professional preference) visa must take the FMGEMS and satisfy other immigration rules, which include obtaining a U.S. Department of Labor certificate indicating that they are not being appointed to a position that an equally qualified U.S. citizen or permanent resident has sought. A foreign medical graduate may immigrate to the U.S. without having taken the FMGEMS, as a political or religious refugee or as the first-degree relative of a U.S. citizen or a U.S. permanent resident. Program directors who are contacted by foreign-born foreign medical graduates with questions about immigration should refer the inquirer to a U.S. Consul General (if the inquiry comes from abroad) or to the Immigration and Naturalization Service (if the inquiry comes from within the U.S.). Only a U.S. Consul or the Immigration and Naturalization Service can rule whether or not a foreign-born foreign medical graduate must pass the FMGEMS in order to be eligible to immigrate. The concern of the residency program director is to determine that the foreign graduate has the standard ECFMG certificate and a visa permitting him to work in the U.S. ECFMG information booklets, containing information about procedure and on examination, are available from ECFMG, 3624 Market Street, Philadelphia, PA 19104.

Rules and Regulations for Public Law 94-484, published in the Federal Register, Volume 43, Number 63 on Friday, March 31, 1978, pages 13504 and following, indicate that a foreign-born foreign medical graduate can be admitted to the United States for the purpose of "observation, consultation, teaching, or research" (not involving responsibility for patient care) without having passed the FMGEMS. A U.S. university or academic medical center which has been designated as an Exchange Visitor Program is authorized to issue Form IAP-66 (formerly DSP-66) in such circum-

stances. A university or academic medical center which has been designated as an Exchange Visitor Program can issue a IAP-66 form to a foreign-born foreign medical graduate who is entering the U.S. for "observation, consultation, teaching, or research." Such appointments should be discussed with ECFMG.

The Fifth Pathway

The "Fifth Pathway," is available to persons who meet the following conditions:

- a. have completed, in an accredited U.S. college or university, undergraduate premedical work of the quality acceptable for matriculation in an accredited U.S. medical school;
- b. have studied medicine in a medical school located outside the United States, Puerto Rico, and Canada, which is listed in the *World Directory of Medical Schools*, published by the World Health Organization;
- c. have completed all of the formal requirements of the foreign medical school *except* internship and/or social service. (Those who have completed all of these requirements including internship and/or social service are not eligible for a Fifth Pathway program.)

Students who have completed the academic curriculum in residence at a foreign medical school and who meet the above conditions may be offered the opportunity to substitute for an internship and/or social service required by a foreign medical school, an academic year of supervised clinical training prior to entrance into the first year of approved graduate medical education. The supervised clinical training must be provided by faculty of an undergraduate program in medical education accredited by the Liaison Committee on Medical Education, and should be conducted in closely affiliated hospitals to assure that those who complete such programs are reasonably comparable to the school's regularly graduated students. The medical school should insure that the constellation of resources is adequate for the conduct of its Fifth Pathway without jeopardizing its other academic programs.

Before the beginning of the supervised clinical training,

said students must attain a score satisfactory to the sponsoring medical school on a screening examination, preferably nationally administered, acceptable to the Council on Medical Education and have their academic records and skills evaluated by the faculty to identify individual academic deficiencies to be remedied by completion of the supervised clinical program. Fifth Pathway graduates must pass the FMGEMS before they can be admitted to residency training.

Physicians who have a Fifth Pathway certificate and have passed FMGEMS are eligible for appointment to residency training. They must also meet requirements established by the state medical board in the state where the residency program is located and must be accepted for appointment by the director of the residency program.

The Council on Medical Education has recommended to all state boards of medical examiners that they consider for licensure all candidates who have completed successfully the Fifth Pathway⁴ training program on the same basis as they now consider foreign medical graduates who have received ECFMG certification.

Appointment to Armed Services Residency Training Programs

The Armed Services first-year graduate medical education (FYGME) training programs are filled by graduates of accredited schools of medicine and osteopathic medicine. The majority of the Armed Services FYGME positions are filled by individuals with existing active duty service obligations. Graduates of foreign medical schools, other than Canadian, must have a standard Educational Commission for Foreign Medical Graduates (ECFMG) certificate to be eligible to apply. To be trained in an Armed Services medical treatment facility, an individual must be qualified for appointment as a commissioned officer in the Armed Services. Selection priorities for Armed Services post-graduate year two and beyond training is given to officers on active duty. Acceptance of applications from civilian applicants may vary among the three services. Interested individuals should contact their local Armed Services recruiting office for further information.

⁴Note: There are some clinical training programs that are not Fifth Pathway programs. Foreign medical graduates finishing them are not eligible for residency training.

The National Resident Matching Program

The *Directory of Residency Training Programs* lists all of the hospitals with resident training programs accredited by the Accreditation Council for Graduate Medical Education. For the past 27 years, over 90% of the hospitals approved for such training have offered their first year positions through the National Resident Matching Program (NRMP). The NRMP is limited to those hospitals which have signed an agreement to participate for the coming year.

Because essentially all specialty boards have made significant modifications in their requirements, it is now possible for medical students to apply for a first year of graduate medical education or a first year of residency in most specialties. These recent policy changes have made it possible for new medical graduates to select their first year of graduate medical education from a much broader program base. In the revised *Essentials of Accredited Residencies in Graduate Medical Education* "institutions and all of their sponsored programs are strongly encouraged to participate in the National Resident Matching Program."

The NRMP DIRECTORY is published annually in October. The federal services, except for the Veterans Administration, are listed first. Essentially all Veterans Administration hospitals that offer graduate medical education participate as components of integrated programs. The Army, Navy, Air Force do not participate in the Matching Program. Persons applying for training in the Public Health Service should apply directly to the hospital involved. The government services do not issue contracts. Following the listings of the federal services, all participating hospitals are listed alphabetically by state, within each state by city, and within the city or vicinity by the name of the hospital. A six-digit number designates each specific hospital and type of program, or track within a program, at each individual hospital. It is to be used by the applicants on the confidential rank order list they send to NRMP to indicate their choice among the programs for which they have applied. Several special tracks may be offered within some types of residency programs for the Matching Program. These may include tracks that designate particular kinds or locations of training within the accredited program. It is essential that applicants use the specific, six-digit code number for each of their selections on their rank order lists.

If applicants are applying to a hospital which offers several different types of programs or tracks, they must indicate on their confidential rank order lists their preference for the specific type of program track in that hospital for which they have applied. For example, if applicants apply for a residency in surgery and also a transitional program at the same hospital, they must rank these just as if they were in separate hospitals.

A supplement list of new and deleted programs is sent to participants in December.

In writing to a hospital applicants should address the Program Director. The *Directory of Residency Training Programs* lists the name and address of the program director.

Because of the intense desire of some hospitals to secure candidates, and because of an equally strong desire of some applicants to serve at a particular hospital, pressure may be brought by either party on the other to force an early commitment. Such demands are contrary to the NRMP Agreements that are signed by applicants, program directors, and hospitals. In the matching plan only the confidential rank order lists submitted by hospitals and applicants should determine the placement of applicants in programs.

The algorithm of the matching plan does not penalize either group from taking "flyers." Should applicants apply to a hospital in which they think their chances of acceptance are poor, their chances at their second choice hospitals are just as good as if they had rated them first. Similarly, if hospitals rank applicants they believe they have little chance of matching, and do not match them, such hospitals will have just as good a chance to match their lower ranked applicants as if they had ranked them first.

Application materials are sent to all medical students via their dean's offices and student should enroll early in the summer.

Other individuals who wish to participate in the Matching Program may obtain application materials and more detailed information by writing to the National Resident Matching Program, One American Plaza, Evanston, Illinois 60201. Applications for such applicants are accepted between June 1st and September 30th for the following year's Match.

NOTES

Section II

REQUIREMENTS FOR ACCREDITATION OF PROGRAMS

This Section contains documents which describe the General Requirements for all residency training programs, and the Special Requirements for training in the various branches of medicine. The document, "Essentials of Accredited Residencies in Graduate Medical Education" was adopted by the Accreditation Council for Graduate Medical Education (ACGME) and became effective July 1, 1982.

The twenty-four sections of the document which give the Special Requirements for training programs in the various branches of medicine have been approved by the appropriate Residency Review Committee, the parent bodies of the Residency Review Committee, and the ACGME. The Special Requirements documents specify in general terms the curriculum content for an acceptable training program. These documents may also address the general characteristics of the resources and personnel necessary for the program, as well as the duration of training and other specifications for a program.

The distinction between "accreditation of a training program" and "certification of an individual physician is an important one. Accreditation is the process whereby the Ac-

creditation Council for Graduate Medical Education grants public recognition to a specialized program which meets certain established educational standards as determined through initial and subsequent periodic evaluations by the Residency Review Committee. The primary purpose of the accreditation process is to provide a professional judgment as to the quality of the educational program. By this process the potential candidate to the program is assured that the program meets the standards set by professionals in that specialty.

Certification is the process by which a specialty board grants recognition to an individual physician who has met certain predetermined qualifications, as specified by the board. The certification requirements for each American Specialty Board will be found in Appendix B of this DIRECTORY.

Neither of the above should be confused with licensure, which is the process by which an agency of state government grants permission to an individual physician to practice medicine within the jurisdiction of that state. A summary of medical licensure requirements of the fifty states is given in Appendix C of this DIRECTORY.

THE ESSENTIALS OF ACCREDITED RESIDENCIES IN GRADUATE MEDICAL EDUCATION (Effective: July 1, 1982)

PREFACE

Graduate medical education in the United States is an integral component in the continuum of medical education. Physicians enroll in programs in graduate medical education to develop expertise in some special branch of medicine, as undergraduate medical education does not prepare a student for independent medical practice without supplementation by graduate training. The graduate phase is essential as indicated in this statement in the Liaison Committee on Medical Education's (LCME) "Structure and Function of a Medical School":

"The undergraduate period of medical education leading to the M.D. degree is no longer sufficient to prepare a student for independent medical practice without supplementation by a graduate training period which will vary in length depending upon the type of practice the student selects."

During the undergraduate phase, students gain knowledge of the sciences basic to medicine and learn to apply that knowledge to clinical problems. Skills in collecting data are developed by interviewing and examining patients and selecting and applying laboratory procedures under the guidance and supervision of the faculty and residents. Students learn to utilize these data to arrive at diagnostic hypotheses and make therapeutic decisions. These basic skills are learned by rotations through a variety of clinical disciplines in both inpatient and outpatient settings. Undergraduate medical students have limited opportunities to assume personal responsibility for patient care, and generally do not participate in the care of individual patients for an extended period of time.

Physicians in graduate medical education are, by convention, called resident physicians or residents. During the

graduate phase, the knowledge and skills acquired in medical school are expanded through the progressive assumption of personal responsibility for patient care in supervised, clinical, educational environments which provide opportunities to learn about the variability of human beings in health and disease and about their biological, emotional, and social problems. As residents progressively gain more knowledge and skill they are provided greater latitude to make decisions and treat patients, but always under supervision.

Graduate medical education is organized by specialty. Some institutions (hospitals, medical schools, medical centers or other sponsoring organizations) may offer programs in many specialties, while others sponsor only a few, consistent with their clinical resources and capabilities. Each residency training program is organized and directed by a program director who has a staff responsible for the education, training, and supervision of the residents. Each institution is responsible for providing sufficient resources and assuring supervision for the proper conduct of its programs.

During the graduate phase of their education most residents, in addition to attaining the knowledge and skills needed to be practitioners, seek to complete training requirements for certification by a specialty board. Each board generally requires that graduate medical education be obtained in a program reviewed and approved by the Residency Review Committee (RRC) for that specialty under the authority of the Accreditation Council for Graduate Medical Education (ACGME).

APPROVAL AND ACCREDITATION

Approval and accreditation of training programs are voluntary efforts of all parties involved in graduate medical education. The process of accreditation assures medical students, residents, specialty boards, and the public that training programs are in essential compliance with published standards.

To be approved and accredited, graduate medical education programs must meet the General Requirements for graduate medical education and the Special Requirements for a specialty and be sponsored by an institution. The Special and General Requirements are the standards against which programs are judged by Residency Review Committees (RRCs) and the Accreditation Council for Graduate Medical Education (ACGME) in the process of review, approval and accreditation.

There is an established Residency Review Committee for each of the specialties in medicine for which certification is provided by a specialty board.

Urology	American Board of Urology AMA Council on Medical Education American College of Surgeons

The Accreditation Council for Graduate Medical Education is composed of representatives of the following national professional organizations which are concerned with and involved in graduate medical education:

- American Board of Medical Specialties
- American Hospital Association
- American Medical Association
- Association of American Medical Colleges
- Council of Medical Specialty Societies

In addition there is a resident representative, there is a federal representative, and there is a public representative.

Each RRC develops Special Requirements for training programs in its specialty. These Special Requirements, after review and recommendation by the RRC's sponsoring organizations and subsequent approval by the ACGME, set forth the requirements for the essential educational content, instructional activities, patient care responsibilities, supervision, and facilities that should be provided by the programs in the particular specialty.

The General Requirements delineate training program requirements and responsibilities which are common to all RRCs, institutions, and programs regardless of specialty. The General Requirements have been established by the ACGME in collaboration with the RRCs and their sponsoring organizations and approved by each of its five sponsoring organizations. An assessment of whether institutions fulfill the General Requirements is made in the process of review of their graduate programs.

Actions by the RRCs are based upon information gained through written submissions by program directors and evaluations made on site by assigned visitors. Actions of the RRCs, under the authority of the ACGME, determine the accreditation status of programs. The ACGME is also responsible for adjudication of appeals of adverse decisions and has established policies and procedures for appeal. Current operating policies and procedures for review, approval, accreditation and appeal are contained in the Manual of Structure and Functions for Residency Review Committees, which is revised and updated annually.¹ In-

formation concerning the accreditation status of any program may be obtained by communication with the Secretary of the ACGME.

PART I. GENERAL REQUIREMENTS

Programs in graduate medical education are sponsored by institutions engaged in providing medical care and health services. The principal institutions for graduate medical education are hospitals. In order to provide the complete education and training experience established by the Special Requirements of a specialty, programs may involve more than one institution and various types of settings, which can include settings for ambulatory care, medical schools and various health agencies. Whatever the institutional form, providing education, training and health services of the highest quality must be a major mission. Graduate medical education requires that residents be directly involved in providing patient care under supervision in an institution that accepts responsibility for the quality of its educational programs. The educational mission must not be compromised by an excessive reliance on residents to fulfill institutional service obligations. Excellence in patient care must not be compromised or jeopardized by needs and prerogatives of educational programs or of research. The need for an institutional commitment to education is expressed in this policy statement which was promulgated by the Coordinating Council on Medical Education and approved by its sponsoring organizations in 1974:

Institutions, organizations and agencies offering programs in graduate medical education must assume responsibility for the educational validity of all such programs. This responsibility includes assuring an administrative system which provides for management of resources dedicated to education and providing for involvement of teaching staff in selection of candidates, program planning, program review and evaluation of participation.

While educational programs in several fields of medicine properly differ from one another, as they do from one institution to another, institutions and their teaching staffs must ensure that all programs offered are consistent with their goals and meet the standards set forth by them and by voluntary accrediting agencies.

The governing boards, the administration, and the teaching staff must recognize that engagement with graduate medical education creates obligations beyond the provision of safe and timely medical care. Resources and time must be provided for the proper discharge of these obligations.

The teaching staff and administration, with review by the governing board, must (a) establish the general objectives of graduate medical education; (b) apportion residency and fellowship positions among the several programs offered; (c) review instructional plans for each specific program; (d) develop criteria for selection of candidates; (e) develop methods for evaluating, on a regular basis, the effectiveness of the programs and the competency of persons who are in the programs. Evaluation should include input from those in training. Facilities and teaching staff shall be appropriate and sufficient for effective accomplishment of the educational mission of each program. If outside facilities or staff are needed to fulfill program needs, the primary sponsor must maintain full responsibility for the quality of education provided.

Implementation of these General Requirements requires that the program directors and teaching staffs of sponsored programs work with each other, and the institutional administration and the governing authorities to provide an operating system for educational resource allocation and quality control to ensure that sponsored programs can fully meet the Special Requirements set forth in Part II of these Essentials. In order to prevent duplication of effort, all of the resources provided by institutions for their training pro-

¹General Requirements, Special Requirements, and the Manual of Structure and Functions for Residency Review Committees can be obtained from: The Secretary, Accreditation Council for Graduate Medical Education, 535 North Dearborn Street, Chicago, Illinois 60610.

grams are not specifically mentioned in this document.²

1. Responsibility of Institutions

Ensuring that each specialty program fully meets the Special Requirements for approval by its RRC is an institutional responsibility. The specifications set forth in this section make necessary an institutional system involving the teaching staff for the allocation of educational resources and maintenance of the quality of all sponsored programs.

1.1 The ACGME expects institutions sponsoring programs in graduate medical education to provide documentary evidence of a commitment to medical education by:

- a) The administration,
- b) The teaching staff.

This evidence should consist of:

1.1.1 *A written statement setting forth the reasons why the institution sponsors graduate medical education:*

There should be evidence of agreement to this statement by the teaching staff and the administration.

1.1.2 *A description of the process by which institutional resources are distributed for educational purposes:*

There should be clear evidence that the process is agreed to within the institution. Those responsible for administration of the process should be identified by name and title in the institution's table of organization.

1.1.3 *An operational system involving the program directors, based on institutional policies, establishing how the sponsored programs provide for:*

- a) The appointment of teaching staff,
- b) The selection of residents,
- c) The apportionment of resident positions among programs, consonant with the Residency Review Committee policies,
- d) The supervision of residents,
- e) The evaluation and advancement of residents,
- f) The dismissal of residents whose performance is unsatisfactory, and
- g) The assurance of due process for residents and teaching staff.

These policies should be developed after widespread consultation among the concerned parties, and should have institutional approval.

1.1.4 *A periodic analysis of each program by representatives of the concerned departments, the residents, and the administration should be developed:*

These analyses should include the appraisal of:

- a) The goals and objectives of each program,
- b) The instructional plans formulated to achieve these goals,
- c) The effectiveness of each program in meeting its goals, and
- d) The effectiveness of utilization of the resources provided.

There should be documentation of these analyses and of the mechanisms to correct identified deficiencies.

Implementation of General Requirements may be delegated to a committee of program directors or their designees and others responsible for the institution's educational program. Once a system is in place, each program must comply with these policies and procedures.

1.2 *Interinstitutional Agreements:* When the resources of two or more institutions are utilized for the conduct of one or more programs, each participating institution or organizational unit is expected to demonstrate a commitment to graduate medical education as set forth in 1.1.1 through 1.1.4. Documentary evidence of agreements, approved by the institutions, should be available for inspection by assigned site visitors. The following items should be covered in such interinstitutional agreements.

1.2.1 *Items of Agreement:*

- a) Designation of program director: A single director for each specialty program should be designated. The scope of the director's authority to direct and coordinate the program's activities in all participating institutions should be clearly set forth in a written statement.
- b) Teaching staff: The teaching staff responsible for providing the educational program and supervising the residents in each institution should be designated.
- c) Educational contribution: The expected contribution to the educational objectives to be provided by each institution to each program should be delineated.
- d) Assignment of residents: The period of assignment of residents to the segment of a program provided by each institution, and any priority of assignment, should be set forth.
- e) Financial commitment: Each institution's financial commitment to the direct support of each program should be specifically identified.

1.2.2 When several institutions or organizational units participate in sponsoring multiple programs, mechanisms should be developed to coordinate the overall educational mission and facilitate the accomplishment of the policies and procedures set forth in subsections 1.1 and 1.2.

1.3 *Facilities and Resources:* Institutional facilities and resources should be adequate to provide the educational experiences and opportunities set forth in the Special Requirements for each sponsored program. These include, but are not limited to, an adequate library providing access to standard reference texts and current journals, sufficient space for instruction, adequate facilities for residents to carry out their patient care and personal education responsibilities, a medical record system which facilitates both quality patient care and education, and clinical support services such as pathology and radiology.

1.4 *Hospital Accreditation:* Hospitals sponsoring or participating in programs of graduate medical education should be accredited by the Joint Commission on Accreditation of Hospitals. If a hospital is not so accredited, the reasons why accreditation was not sought or was denied should be explained.

2. Program Organization and Responsibilities

The director and the teaching staff of a program in graduate medical education are responsible for defining and implementing the goals and objectives of the program.

²Many of the details of these resources appear in the Accreditation Manual for Hospitals, which can be obtained from: The Joint Commission on Accreditation of Hospitals, 875 North Michigan Avenue, Chicago, Illinois 60611.

All training programs should foster the development of residents' teaching abilities and interpersonal relationships. Instruction in the socioeconomics of health care and in the importance of cost containment should be part of all programs.

The educational effectiveness of a residency training program depends largely on the quality of its supervision and organization. The responsibility for these important functions lies with the department heads or service chiefs, who in most instances are also the program directors. The program directors should have qualifications and breadth of experience which will enable them to carry out an effective training program. Each program director accepts the responsibility of resident selection, evaluation and promotion within the framework of the policies of the sponsoring institution. Additional responsibilities of the program director are the development of other members of the health care team; and the selection of the various evaluation techniques employed.

The sponsoring institution is expected to assist program directors in carrying out their responsibilities through the development of appropriate institutional policies to assure excellence in resident physician education. When a Residency Review Committee reviews a program, the extent to which the sponsoring institution is supporting the efforts of the program director through its institutional policies will be taken into consideration.

2.1 Qualifications of Program Staff: The individuals who have responsibility for the conduct of graduate medical education programs should be specifically identified.

2.1.1 *The program director* should be certified by the specialty board in the discipline of the program or should possess suitable equivalent qualifications as a teacher, clinician, and administrator. Each director should have the authority and time needed to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the program and to participate with other program directors in maintaining the quality of all institutional programs.

2.1.2 *The teaching staff* should have a strong interest in teaching, and be willing to contribute the necessary time and effort to the educational program. The key professional personnel, as teachers, clinicians, and/or administrators, should:

- a) have adequate special training and experience,
- b) actively participate in appropriate national scientific societies,
- c) participate in their own continuing medical education,
- d) engage in specific presentations as appropriate, and
- e) exhibit active interest in medical research related to their specialties.

2.2 Relationships between Medical Staff and Graduate Programs: In some institutions a distinction is made between the teaching staff and the non-teaching staff of a department. Where this is the case, the institutional educational plan (1.1.2) should clearly delineate the agreements reached regarding the utilization of institutional resources for education. This should include agreement as to whether residents and teaching staff may have contact with the patients of members of the medical staff not involved in the teaching programs and what responsibilities residents have for such patients.

3. Eligibility and Selection of Residents

Physicians with the following qualifications are eligible to

enter graduate medical education programs accredited by the ACGME:

3.1 Unrestricted Eligibility: Unrestricted eligibility is accorded to those with the following qualifications:

3.1.1 Graduates from the institutions in the U.S. and Canada whose programs are accredited by the Liaison Committee on Medical Education.

3.1.2 Graduates from institutions in the U.S. accredited by the American Osteopathic Association.³

3.1.3 Graduates of medical schools whose programs are not accredited by the LCME who meet the following additional qualifications:

- a) Have fulfilled the educational requirements to practice in the country in which they have had their medical education, or, if a national of the country concerned, have obtained an unrestricted license or certificate of full registration to practice in that country, have passed examinations designated as acceptable by the ACGME for determination of professional preparedness and capability to comprehend and communicate in both spoken and written English⁴, and have had their credentials validated by an organization or agency acceptable to the ACGME, or
- b) Have a full and unrestricted license to practice medicine in the U.S. jurisdiction providing such license.

3.1.4 U.S. citizen graduates from institutions whose programs are not accredited by the LCME who cannot qualify under Section 3.1.3, but who have successfully completed the licensure examination in a U.S. jurisdiction in which the law or regulations provide that a full and unrestricted license to practice will be granted without further examination after successful completion of a specified period of graduate medical education; or

3.1.5 In the case of students who have completed, in an accredited college or university in the U.S., undergraduate premedical education of the quality acceptable for matriculation in an accredited U.S. medical school, have studied at a medical school whose program is not accredited by the Liaison Committee on Medical Education, but which is listed by the World Health Organization, have completed all of the formal requirements of the foreign medical school except internship and/or social service, such students may substitute for an internship or other service required by the foreign medical school an academic year of supervised clinical training (such as a clinical clerkship) on or after July 1, 1971, prior to entrance into the first year of ACGME-approved graduate medical education. The supervised clinical training must be under the direction of a medical school whose program is accredited by the Liaison Committee on Medical Education. Before beginning the supervised clinical training, stu-

³Graduates of colleges of osteopathic medicine in the United States accredited by the American Osteopathic Association whose medical degree is Doctor of Osteopathy are not admissible for board certification in some specialties. Each candidate should contact the appropriate American specialty board to determine requirements for certification.

⁴Effective July 1, 1984, these examinations will be either the *Visa Qualifying Examination* or the *Foreign Medical Graduate Examination in the Medical Sciences* and the *ECFMG English Test*—administered by the Educational Commission for Foreign Medical Graduates. Entry into graduate medical education will be limited to seven (7) years after the successful completion of the requirements for certification by the Educational Commission for Foreign Medical Graduates.

dents must have their academic records and other credentials reviewed and approved by the medical school supervising their clinical training and must attain a score satisfactory to the sponsoring medical school on a screening examination. Effective July 1, 1985, candidates must have passed examinations designated as acceptable by the ACGME for determination of professional preparedness prior to entrance into the first year of ACGME accredited graduate medical education.

3.2 *Restricted Eligibility:* Restricted eligibility for foreign nationals to enroll in ACGME programs is accorded under the following circumstances:

- a) When a U.S. medical school and one or more of its affiliated hospitals have a documented bilateral agreement, approved by an agency recognized for that purpose by the ACGME, with an official agency or recognized institution in the physician's country of origin to provide an educational program designed to prepare the physician to make specific contributions in a health field upon return to the country in which the sponsoring agency or institution is located; and
- b) The physician has been granted an unrestricted license or certificate of full recognition to practice medicine in the country wherein the agency or institution making the agreement referred to in (a) is located; and
- c) The physician has passed examinations designated as acceptable to the ACGME for determination of the professional preparedness and capability to comprehend and communicate in both spoken and written English⁴; and
- d) The physician has made a formal commitment to return to the country in which the sponsoring agency or institution is located; and
- e) The credentials of the physician and the existence of a suitable agreement have been validated by an organization or agency acceptable to the ACGME.

Restricted eligibility shall be limited to the time necessary to complete the program agreed to by the parties as referenced in (a).

3.3 *The Enrollment of Non-Eligibles:* The enrollment of non-eligible residents may be cause for withdrawal of approval of accreditation.

3.4 *Special Educational Provisions for Residents Who Are Not Graduates of LCME Accredited Programs at Medical Schools:* Institutions and programs providing education and training to residents eligible under Sections 3.1.3, 3.1.4, 3.1.5 and 3.2 should make special educational provisions to correct deficiencies these residents may have in their professional preparation and their knowledge of the United States health care system, medical practices and ethics, and United States culture and cultural values.

3.5 *Transition between Undergraduate and Graduate Medical Education:* Eligible physicians may enter graduate medical education at any time after they have attained the M.D. degree. Institutions and their sponsored graduate programs are expected to select residents with due consideration of their preparedness to enter into the program they have selected. Personal characteristics and aptitude as well as academic credentials should be considered in selection. In selecting from among qualified applicants for first graduate year positions, institutions and all of their sponsored programs are strongly encouraged to par-

ticipate in the National Resident Matching Program (NRMP⁵). (Certain programs sponsored by the federal uniformed services may be exempt.) Programs which select residents to begin their first residency year at the second graduate level should not offer appointments to students before the beginning of their final year of medical school.

4. Types of Programs

Graduate programs of two types may be provided to residents by institutions:

4.1 *Categorical Programs:* Categorical (C) are programs in a specialty which meets the Special Requirements for that specialty. Some specialties require that residents have complementary educational experiences in other disciplines. Whether it is required that such experiences precede or be interwoven into the education and training for the specialty, institutions sponsoring such programs and the program director should make the necessary arrangements for residents to gain these complementary experiences in educational settings which fulfill the Special Requirements for such specialties, unless the resident has already completed these requirements.⁶

4.2 *Transitional Programs:* (Previously termed Flexible Programs) Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty. Institutions or consortia of institutions may offer a transitional year provided the following conditions are met:

4.2.1 A special committee, composed of representatives of the specialty services on which residents are being trained during this graduate year and of representatives of two or more specialties in which there are accredited residencies, should be responsible for the development and evaluation of the program.

4.2.2 A qualified director must be appointed to assume responsibility for the operation of the program, counseling the residents, and coordinating their evaluation.

4.2.3 The year should be spent in an educational setting selected by the special committee for the transitional program, in cooperation with two or more accredited programs sponsored by the institution.

4.2.4 The residents in most of their assignments are associated with more senior residents in the participating specialties.

4.2.5 The impact of the training in the transitional year should not be deleterious to the quality of training of the residents in the provider disciplines.

5. Relationships between Institutions, Programs and Residents

5.1 *Responsibilities of Institutions and Programs*

5.1.1 *Teaching and Learning:* An environment wherein both the teaching staff and the residents are seeking to improve their knowledge and skills is essential. Insofar as possible residents should be incorporated into medical staff programs of medical education and patient care in a true collegial relationship. Residents may be assigned by program directors to as-

⁵The NRMP is an agency sponsored by: American Hospital Association, American Medical Association, American Protestant Hospital Association, American Medical Student Association, American Board of Medical Specialties and Council of Medical Specialty Societies.

⁶This merges what have been termed Categorical and Categorical* designations.

sume responsibility for teaching more junior residents and students. Special attention should be given to assisting residents to acquire skills in teaching and evaluating those for whom they are responsible. The clinical departments are expected to organize formal teaching sessions tailored to meet the Special Requirements of their programs. Participation in these sessions by teaching staff from the basic science disciplines is encouraged.

- 5.1.2 *Participation in Policy Development and Review:* Residents should be involved by institutions and programs in the development of recommendations on policy issues. Their day-to-day involvement with institutional and departmental activities may provide unique perspectives which can be of significant value to improving education and patient care.
- 5.1.3 *Supervision:* There must be institutional and program policies and procedures that ensure that all residents are supervised in carrying out their patient care responsibilities. The level and method of supervision must be consistent with the Special Requirements for each program.
- 5.1.4 *Counseling:* Graduate medical education places increasing responsibilities on residents and requires sustained intellectual and physical effort. For some, these demands will, at times, cause physical or emotional stress. Institutional awareness, empathy, and responsiveness towards these problems are vital to the educational process. Program directors and teaching staff should be sensitive to the need for the timely provision of counseling and psychological support services to residents.
- 5.1.5 *Evaluation and Advancement:* There must be a clearly-stated basis for annual evaluation and advancement. This must be based on evidence of satisfactory progressive scholarship and professional growth of the trainee including demonstrated ability to assume graded and increasing responsibility for patient care. This determination is the responsibility of the program director with advice from members of the teaching staff. The institutional system should assure that through the director and staff each program:
- At least annually, but preferably semi-annually, evaluates the knowledge, skills and professional growth of its residents, using appropriate criteria and procedures.
 - Provides to residents an assessment of their performance, at least annually, and preferably semi-annually.
 - Advances residents to positions of higher responsibility only on the basis of an evaluation of their readiness for advancement.
 - Maintains a personal record of evaluation for each resident which is accessible to the resident.
- 5.1.6 *Due Process:* There must be institutional procedures which provide for due process for all parties potentially involved when actions are contemplated which could result in dismissal or could significantly threaten a resident's intended career development or when there are grievances against a program or institution. Residents, program directors, teaching staff

and administration should be involved in the development of these policies and procedures which are to be approved by the governing board. The details must be written and made known to the residents, program directors, and adhered to by all programs sponsored by the institution. There must be an equitable and satisfactory mechanism, involving the participation of the medical staff, for the redress of grievances. Although final responsibility rests with the institution's governing body, the latter should rely upon the determinations of the medical staff in professional and educational matters.

- 5.2 *Resident Physician Responsibilities:* Resident physicians are expected to:
- 5.2.1 Develop a personal program of self study and professional growth with guidance from the teaching staff.
 - 5.2.2 Participate in safe, effective and compassionate patient care under supervision, commensurate with their level of advancement and responsibility.
 - 5.2.3 Participate fully in the educational activities of their program and, as required, assume responsibility for teaching and supervising other residents and students.
 - 5.2.4 Participate in institutional programs and activities involving the medical staff and adhere to established practices, procedures, and policies of the institutions.
 - 5.2.5 Participate in institutional committees and councils, especially those that relate to patient care review activities, and
 - 5.2.6 Apply cost containment measures in the provision of patient care.
- 5.3 *Resident Agreement:* The ACGME urges that programs provide residents with a written description of the educational experience to be provided including the nature of assignments to other programs or institutions. In addition, ACGME urges that each resident be offered for acceptance a written agreement encompassing the following:
- 5.3.1 Residents' responsibilities as set forth in Section 5.2.
 - 5.3.2 Benefits including financial support, vacations, professional leave, sick leave, liability insurance, hospital and health insurance and other insurance benefits for the resident and his family, and the conditions under which living quarters, meals and laundry or their equivalent are to be provided.
 - 5.3.3 The term of residency.
 - 5.3.4 Practice privileges and other activities outside the educational program.
 - 5.3.5 The usual call schedule and schedule of assignments.
 - 5.3.6 Guarantee of Due Process.

The Special Requirements, which follow, apply to programs in each specialty and set forth the standards which must be met in order to gain approval by the Residency Review Committees and the accreditation by the ACGME.

Adopted by ACGME: Feb. 24, 1981

*Allergy and Immunology***PART II: SPECIAL REQUIREMENTS***(Revised to December 1, 1983)***1. Special Requirements for Residency Training in Allergy and Immunology****I. INTRODUCTION**

The objective of graduate medical education in allergy and immunology is the preparation of physicians to excel in the specialty of allergy and immunology. This requires the acquisition of specialized knowledge and particular skills which will prepare the physician to serve as an expert consultant in allergic and immunologic disorders. This discipline of allergy and immunology involves a wide variety of clinical problems and is likely to become even more wide-ranging in the future. Therefore, rigid criteria for graduate medical education in this discipline are not appropriate. A variety of educational options can be approved if certain basic requirements are met. A graduate medical education program in allergy and immunology must offer a minimum of two years of full-time graduate medical education. Candidates for positions in these programs should have successfully completed an accredited program in Internal Medicine or Pediatrics.⁷

II. PERSONNEL

The Program Director is responsible for the total residency training program. He or she should be an individual who is highly competent in the specialty of allergy and immunology and who has achieved stature as a scientist, clinician and teacher. The Director must possess leadership qualities and develop close and continuous contacts with the residents. The Program Director, or qualified designee, should be available to provide advice and instruction on a daily basis. In addition, a sufficient number of faculty should assist the residents when needed. The staff should include qualified allergists and immunologists who are committed to the teaching program and who possess those special competencies in teaching and research needed to provide a valuable educational experience for all residents. There should be a proper balance between the supervisory staff and residents.

The Secretary of the Residency Review Committee for Allergy and Immunology should be notified of changes in key personnel in the program.

III. CLINICAL AND EDUCATIONAL FACILITIES AND RESOURCES

Allergy and immunology programs should be conducted principally in institutions with approved graduate medical education programs in pediatrics and/or internal medicine. Affiliations needed to insure graduate education in the broad fields of both pediatric and adult allergy and immunology should be developed. Exceptions will be considered for innovative programs which demonstrate educational equivalency.

Adequate modern facilities, including library facilities and equipment for diagnosis and therapy in allergy and immunology, must be available in the training program. The facilities should be conveniently located for the purpose of teaching. In addition to the clinical laboratories required for the evaluation of patients with allergic and immunologic disorders, training programs require access to laboratories involved in basic or applied research in allergy and immunology.

⁷At the current time the American Board of Allergy and Immunology-A Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics will certify only those whose basic program was in Internal Medicine or Pediatrics. Program directors may accept residents from other disciplines for training in allergy and immunology; it is expected that any use of this experience as a credential towards certification of these residents will be determined by the Boards involved in their primary training.

IV. EDUCATIONAL PROGRAM*Clinical Allergy*

Although the emphasis in the training program may be placed on allergic diseases and all residents should be thoroughly grounded in these disorders, there is increasing need for physicians who are trained to apply immunologic theories, principles and techniques to the investigation, diagnosis and treatment of a broader spectrum of illness. Since the primary patient base of the specialty continues to be that of patients with allergic rhinitis, asthma, urticaria, angioedema, anaphylactic and anaphylactoid reactions, atopic dermatitis, stinging insect hypersensitivity, drug reactions, hypersensitivity pneumonitis and allergic diseases of the gastrointestinal tract, residents should be thoroughly familiar with the common and rare manifestations of these disorders. The resident should be introduced to the description of these disorders, to their pathogenetic mechanisms, to methods of examination, differential diagnosis and therapy. Special emphasis should be placed on principles and techniques of examining the eyes, ears, upper and lower respiratory tracts, skin and gastrointestinal tract, and on assuring that the resident gains experience in distinguishing allergic from non-allergic disorders of these organs. Training in aerobiology and in the dermatologic, gastroenterologic, ophthalmologic, otorhinolaryngologic, psychiatric and radiologic aspects of allergic diseases is required. Training is also required in the performance and evaluation of scratch and intradermal tests, and in the examination of sputum, nasal and other secretions. Training in the performance and/or of bronchial challenge procedures, patch tests, measurement of IgE protein and specific IgE antibodies is encouraged.

In view of the importance of knowledge of pulmonary physiology and of pulmonary function testing in diagnosis and management, the resident should be provided with training in pulmonary physiology and in diagnostic and therapeutic approaches to pulmonary diseases. Experience with the spectrum of pulmonary diseases that may mimic or complicate asthma and hypersensitivity pneumonitis should also be provided.

The resident should become familiar with the clinical pharmacology of drugs and with the preparation and standardization of allergenic extracts used in the treatment of allergic disorders. Training in clinical allergy must be provided for all residents through structured educational exposure to patients with various allergic disorders under the supervision of staff who are qualified to impart the principles and techniques cited above. These aims may also be met, in part, by rotation of the resident to appropriate specialty services such as dermatology, otorhinolaryngology, or gastroenterology or by participation of the resident in conferences, lectures or seminars. The latter approach should be limited in its application to those aspects of the training program which cannot be provided through other training modalities.

Clinical and Laboratory Immunology

The educational content of training in applied immunology should include the inherited and acquired immunodeficiency diseases and the principles involved in assessing the humoral and cellular immune competence of patients. Additional aspects of applied immunology include, but are not limited to, the immunologic aspects of:

- 1) diseases of the eye including conjunctivitis, blepharitis, uveitis and other inflammatory disorders of the eye;
- 2) diseases of the skin, including the purpuric and bullous disorders, discoid lupus, dermatitis herpetiformis, cutaneous vasculitis, contact dermatitis and photosensitivity reactions;
- 3) diseases of the gastrointestinal tract including malabsorptive disorders of the intestine, acute and chronic hepatitis, and inflammatory diseases of the gut;

- 4) diseases of the endocrine system including disorders of the thyroid, adrenal, ovary, testis and pancreas, (e.g., immunologic aspects of insulin resistance and immunopathology of diabetes);
 - 5) diseases of the nervous system including myasthenia gravis and demyelinating disorders;
 - 6) diseases of the generative organs including problems of immunologically-mediated infertility;
 - 7) diseases of the blood forming organs including immune responses to platelets, erythrocytes and leukocytes, and proteins of the coagulation system;
 - 8) diseases of the kidney including the immunologically-mediated glomerular and tubular disorders;
 - 9) infectious and parasitic diseases including bacterial, mycobacterial, viral diseases; opportunistic infections of the compromised host; and techniques of active and passive immunization against infectious diseases;
 - 10) transplantation including immunogenetics and the human histocompatibility system and graft-versus-host reactions;
 - 11) neoplasia including tumor antigens, immunotherapy of tumors, immunologic aspects of multiple myeloma and related plasma cell disorders, lymphoma, Hodgkin's disease, and leukemia;
 - 12) connective tissue diseases in which immunologic mechanisms are presumed to have an etiologic or contributory role including rheumatoid and other inflammatory arthritides, systemic lupus erythematosus, progressive systemic sclerosis, Sjogren's syndrome and systemic vasculitis.
 - 13) immunotherapy including the administration of gamma globulin and specific antibodies, preparation and use of transfer factor, marrow and thymus grafting, immunotherapy of allergic disorders, measures to enhance or depress the immune response including knowledge of chemical and biologic immunosuppressive agents.
- The educational content of training in applied immunology also includes the principles and techniques of the clinical immunology laboratory including, but not limited to:
- 1) quantitation of immunoglobulins in serum, cerebrospinal fluid, and respiratory and gastrointestinal secretions by radial immunodiffusion, nephelometric techniques, and radioimmunoassay; detection and identification of M components by immunoelectrophoresis of serum and urine; determination of serum viscosity;
 - 2) determination of total serum complement and components of the classical and alternative complement pathways; measurement of the inhibitor proteins of the complement systems;
 - 3) immunofluorescence: indirect method applied to the detection of antibodies to thyroid, stomach, adrenal, salivary gland, striated and smooth muscle, skin, mitochondria and microsomes, nuclear antigens. Direct method applied to the detection of antigen, immunoglobulin, complement and other proteins in skin, vascular structures and kidneys;
 - 4) serologic procedures for the detection of anti-gamma globulin or rheumatoid factors, identification of immunoglobulin or complement on erythrocytes, antibacterial and antiviral antibodies; detection of precipitins involved in hypersensitivity pneumonitis; detection of isohemagglutinins and markers involved in tissue typing;
 - 5) detection and analysis of circulating immune complexes and cryoprecipitable proteins;
 - 6) assessment of the function of cells involved in host defense:
 - a) assays of neutrophil chemotaxis, phagocytosis, and killing of bacteria
 - b) identification and enumeration of T cells and their subsets, B and null cells; measurement of the responses of these cells to mitogens and antigens
 - c) performance of assays for lymphokines
 - d) assessment of direct and antibody-mediated cellular cytotoxicity
 - e) performance of skin tests involving cell-mediated responses
 - f) evaluation of anergy
 - 7) detection and quantitation of tumor antigens
- All residents in allergy and immunology are expected to become familiar with the principles and techniques of applied immunology outlined above. To accomplish this purpose, all training programs must provide for lectures, seminars or conferences designed to cover the intellectual content of the discipline. Exposure to a basic or clinical immunology laboratory in which the resident can observe the performance of many of the procedures listed and be instructed in their interpretation must also be provided. In addition, all training programs must provide clinical exposure to other aspects of applied immunology, for example, to immunodeficiency diseases or connective tissue diseases. Some programs may choose to provide, through appropriate arrangements with other specialty units, clinical exposure to the full range of applied immunology listed above, as well as providing extensive training in clinical immunology laboratory procedures. Such programs will be recognized as offering training designed to prepare residents for the future direction of clinical immunology units and laboratories.
- Other Characteristics of the Training Program*
- The program should provide an adequate number of patients of both sexes in the pediatric and adult age groups to afford experience in the broad field of allergy and immunology, and to help residents develop insight into the varying manifestations in the different age groups. Clinics should be so located as to allow the residents to observe conveniently the constructive interaction between attending faculty and patients.
- The importance of residents performing a competent physical examination and recording a comprehensive medical and allergy history cannot be over-emphasized. An index of the quality of graduate medical education resides in the medical records. Equally important in the resident's ability to identify and summarize concisely the pertinent clinical and laboratory findings.
- It is of critical importance that the residency occur in an environment which fosters progressive experience and allows each resident to develop diagnostic impressions, consult appropriate literature and other source materials or persons, develop plans for diagnostic studies, and recommend therapeutic approaches or perform therapeutic procedures under supervision by experienced practitioners. The educational atmosphere should encourage creative independence among residents. The residents should be encouraged to teach nurses, allied health personnel, medical students and residents.
- It is expected that at least 50 percent of a resident's first year of training be spent in patient care activity. If the patient care activity is spread over a two-year period, at least 25 percent of the resident's time each year should be devoted to such activities.
- There should be an active research program in allergy and immunology which is conducted by qualified investigators and is available to residents and staff. Residents should be encouraged to participate in a clinical or laboratory research study, to analyze and interpret results, to apply statistical evaluation, to present research results to a regional or national meeting, and to prepare the results for

Anesthesiology

publication where appropriate.

Resident and Program Evaluation

It is mandatory that a personal record of the resident be maintained by the program director responsible for the training. The record should include a periodic written evaluation done at least every six months by the program director and by other attending staff members who intimately supervise the work of the resident.⁸ All records relating to the resident's work should be preserved and be made available to examining boards and other responsible agencies if required, with the consent of the resident. There should be provision for regular evaluation of the training program including participation by staff and residents.

One measure of the quality of the program is the performance of its graduates on the certification examinations of the American Board of Allergy and Immunology, a Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics.

V. CROSS TRAINING

Residents must receive training in both pediatric and adult allergy and immunology. This requirement is based on the recognition that specialists in allergy and immunology, regardless of their primary specialty, are called upon to diagnose and treat individuals of all ages. It is recommended that in institutions where separate programs exist, internists receive at least six months of training in pediatric allergy and immunology, preferably with exposure to both in-patients and out-patients. Similarly, it is recommended that pediatricians receive at least six months of training in adult allergy and immunology preferably with exposure to both in-patients and out-patients.

At present, weekly attendance in an ambulatory care clinic one-half day for six consecutive months will meet the minimal requirements for cross-training. Responsibility for in-patient consultation in the minor specialty is highly desirable.

VI. CERTIFICATION

Residents who plan to seek certification by the American Board of Allergy and Immunology-A Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics should communicate with the Executive Secretary of the Board as listed in *Directory of Residency Training Programs* to be certain regarding the full requirements for certification.

Effective: March 1983 ACGME: Feb. 1982

2. Special Requirements for Residency Training in Anesthesiology

Objectives: An approved four year program in anesthesiology provides education, training and experience in an atmosphere of mutual respect between instructor and resident so that the resident will be stimulated and prepared to apply his acquired knowledge and talents independently. It is recognized that there are varying pathways to the development of a consultant anesthesiologist and the following requirements should be regarded as minimum standards for its accomplishment.

General Considerations for an Approved Four Year Program: The Residency Review Committee (RRC) for Anesthesiology and the Accreditation Council for Graduate Medical Education (ACGME) approve and accredit programs only in those institutions that possess the educational resources to provide at least two years of CLINICAL ANESTHESIA and the SPECIALIZED YEAR. At the present time capability to provide the CLINICAL BASE year within the same institution is highly desirable but not required for accreditation.

First Postgraduate Year (G-1): This year is called the CLINICAL BASE and its purpose is to provide the resident with twelve months of clinical education, other than that directly associated with the provision of anesthesia care. Acceptable content for the CLINICAL BASE YEAR includes training in internal medicine, pediatrics, surgery or a surgical specialty, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual resident by the anesthesiology program director. The CLINICAL BASE year must be offered in a program accredited by the ACGME in the United States or by the Royal College of Physicians and Surgeons in Canada. If the CLINICAL BASE year is not spent in the parent or affiliated institution, the program director must document its educational quality.

Second and Third Postgraduate Years (G-2 and G-3): These two years are called CLINICAL ANESTHESIA. At least 20 of the 24 months involved must be concerned with (a) the management of procedures for rendering a patient insensible to pain during surgical, obstetric and certain other diagnostic and therapeutic procedures, and (b) the support of life functions under the stress of anesthesia and surgical manipulation. It is recommended that at least one of these 24 months be devoted to the supervised care of patients in a recovery room or special care unit.

Fourth Postgraduate Year (G-4): This year is called the SPECIALIZED YEAR. It is designed by the program director in consultation with each resident. There should be several choices available intramurally in subspecialty areas of clinical anesthesia or a related clinical discipline, which may include experiences in intensive or critical care, and basic science endeavors related to anesthesiology and research. The educational experience permitted by the SPECIALIZED YEAR need not comprise the final year of the program. However the program is designed, the program director must assume responsibility for its organization and educational content, and if clinical, it must be spent in programs accredited by ACGME. It is recommended that this SPECIALIZED YEAR, if it encompasses more than one unrelated endeavor, be in segments of not less than six months each.

General Considerations for a Program Approved for One Year of Specialized Clinical Training: Certain hospitals by virtue of their specialized missions provide unusual facilities and clinical experience for specialized training in anesthesiology for residents who have completed CLINICAL BASE and the two years of CLINICAL ANESTHESIA in another program. Such hospitals are eligible for accreditation for one year of freestanding specialized training. To qualify, the educational experience offered must be substantially different from that which is generally available in the first three years of the continuum. Program directors may arrange to send their residents to such specialized programs for periods of not more than six months during the CLINICAL ANESTHESIA years if such specialized experience, e.g., pediatric, obstetric, cardiac, or neurologic anesthesia, is required to supplement the opportunities available in their own program.

Faculty (Teaching Staff): The dedication of the teaching faculty to the instruction and education of residents and their own continuing education is critical. Teaching competence and motivation are vital to the continued effectiveness of a program. The faculty must be of sufficient number that each resident will receive adequate supervision at all times. The ratio of staff to residents is subject to many variables, but under most circumstances the number of residents in any program should not be more than twice the number of full-time teachers. The use of a resident as an instructor of more junior residents is not a substitute for experienced faculty. The faculty should include individuals with varying interests, capabilities and backgrounds. Clinical and didactic teaching skills, clinical or laboratory investigative abilities, and administrative talents should be among their qualifications. Faculty should be provided time

⁸ One possible format that may be used for evaluation may be obtained from the office of the Executive Secretary of the American Board of Allergy and Immunology.

to perform a variety of professional activities, including committee responsibilities within the program and the hospital community. The program director must be a competent teacher and leader who is capable of organizing and administering the program and provided with the authority and resources to do so. The director's position should be predicated on prior experience in educational programs and on abilities to relate not only to personnel within the program but to other programs within the institution. An Educational Committee, a Clinical Competence Committee and procedures for peer review and due process for all members of the department must be included in the organization of the program.

Clinical Experience: Through the parent hospital and/or limited affiliated institutions, adequate numbers of a broad spectrum of patient problems should be available to each resident so as to provide broad experience in the anesthetic management of patients undergoing all types of surgical procedures. Adequate exposure to specialized areas such as neurosurgical, pediatric, obstetric, and cardiothoracic procedures, as well as clinical experience in anesthesia for outpatients, is essential. Present requirements permit affiliations for a maximum of six months during the twenty-four months of CLINICAL ANESTHESIA. A specific number of anesthetics is not required in any category, but it is the responsibility of the program director to provide instruction and experience to each resident. Such an educational program must be directed toward the production of a consultant capable of making sound judgments in the perioperative period. During the course of anesthesia and in the perioperative period, the resident must learn current monitoring procedures, fluid therapy and pain management. Residents should also receive instruction and experience in the management of acute and chronic pain problems including diagnostic and therapeutic nerve blocks, intensive care, resuscitation and airway problems, sedation in special circumstances, and operating room safety.

Didactic Program: The manner in which the resident is taught is the prerogative of the program director and the faculty. However, it is believed, that regularly scheduled teaching sessions should be held to supplement ongoing clinical instruction. The number and type of such sessions will vary among programs and may include morbidity-mortality conferences, didactic teaching sessions, seminars devoted to journal review and resident presentations. Organization of the teaching schedule should allow time for resident reading and study. Recent journals, references books and other texts should be readily available to the residents and faculty. An adequate program should achieve a suitable balance between clinical experience, teaching sessions, independent study and informal discussions with the faculty. The intent is to provide a suitable climate for the development of a competent physician and consultant anesthesiologist. The didactic instruction provided for the resident should encompass anesthesiology and the basic, clinical and physical sciences as they relate to anesthesiology. The director should seek to enrich the program through the participation of faculty from the other disciplines and other institutions.

Research: An active program of clinical investigation and/or basic research contributes to a scholarly environment and to the educational stimulation of both residents and faculty.

Records: A comprehensive anesthesia record must be maintained for each patient as an ongoing reflection of the drugs administered, the monitoring employed, the techniques used, the physiologic variations observed, the therapy provided as required, and the fluids administered. The patient's medical record should contain evidence of pre and postoperative anesthesia assessment. When residents are participating in patient care outside of the operating room, they should be instructed in proper record keeping for the activity involved and their records reviewed by the faculty. Residents who plan to seek certification by

the American Board of Anesthesiology should communicate with the Secretary of the Board regarding specific requirements for certification.

Special Policies Applicable to Program Review and Approval:

- 1) When a new director, either acting or permanent, has been appointed, both the ACGME and the ABA must be notified immediately. The Residency Review Committee will initiate an inspection of the program in conjunction with this change when it deems it necessary to assure continuing quality.
- 2) In communities in which didactic programs of several residencies are combined, the staff of each accredited program must actively and consistently participate in the combined effort, and be capable of providing an adequate program if viewed alone.
- 3) The integration of nonmedical personnel in a department with an accredited program in anesthesiology will not influence the accreditation of such a program unless there is evidence that such personnel interfere with the training of resident physicians. Interference may result from dilution of faculty effort, dilution of the available teaching experience or downgrading didactic material.
- 4) If a program is without a resident for two years, accreditation may be withdrawn. Reactivation of the program subsequent to withdrawal of accreditation will require a new application.

Channels of Information: Questions relating to educational programs and communication for the ACGME should be directed to the Secretary, Residency Review Committee for Anesthesiology, 535 North Dearborn Street, Chicago, Illinois 60610. Inquiries relating to the credentials of individual applicants for certification should be directed to the Secretary of the American Board of Anesthesiology, Inc., 100 Constitution Plaza, Hartford, Connecticut 06103.

Effective: July, 1981 ACGME: Nov. 1980

3. Special Requirements for Residency Training in Colon and Rectal Surgery

Institutions offering residencies in colon and rectal surgery must provide the necessary education to qualify the resident as a colon and rectal specialist in the care of patients, in teaching, and in research. Surgeons admitted to such residencies are required to have completed a minimum of four years of an accredited, graded program in general surgery. Thus, the residents should already have developed a satisfactory level of clinical maturity, technical skills, and surgical judgment which will enable them to begin a residency in colon and rectal surgery for the purpose of specializing in this field of surgery. The period of training should be not less than one year and the program must comply with the General Requirements for Residency Training.

The residency program must be under the direction of a colon and rectal surgeon who is certified by the American Board of Colon and Rectal Surgery or possesses suitable equivalent qualifications. The program director must assume full responsibility for the teaching and work done in the department or section. There should be a minimum of two staff members, including the program director, that have significant teaching responsibilities. Such staff members should have the necessary interest and ability to perform their teaching duties adequately.

The program should supply the necessary volume and variety of colon and rectal surgery to assure adequate training of residents. If there is insufficient volume or variety in the primary institutions, arrangements should be made for an affiliation in an accredited institution to correct the inadequacy. While it is not feasible to require specific numbers of operations or other procedures, it is suggested that each resident have appropriate responsibilities for 200

Dermatology

anorectal patients in addition to 50 patients having diseases of the colon and rectum requiring surgery.

The educational program must also include training in colonoscopy, both diagnostic and therapeutic. It is suggested that this experience include at least 50 diagnostic colonoscopies and 25 polypectomies. The objective is to develop the necessary competence in the use of this instrument to qualify as an expert in the field.

An important aspect of the educational program is training in an out-patient facility to develop skills in patient evaluation, examination, office treatment, and surgical aftercare. Where feasible, such training should include work in the program director's office, as well as in the out-patient clinic of the hospital.

Residents in colon and rectal surgery must have sufficient knowledge of those aspects of anesthesiology, radiology, and pathology that relate to colon and rectal surgery to develop overall competence as a specialist. Such training is best accomplished in cooperation with the department of anesthesiology, radiology, and pathology.

Teaching contributes to the educational process, and therefore should be an important part of the training program. If possible, the resident should assist in the instruction of general surgical residents, medical students, and nurses. It is important to include instruction in the care of intestinal stomas, especially in institutions that do not have enterostomal therapists.

The trainee should be encouraged to do clinical investigative research and write a paper which should be submitted for presentation at a national scientific meeting and subsequent publication in an appropriate journal.

The resident's activity outside the educational program should not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and the house officer.

One measure of the educational quality of a program may be the performance of its graduates on the examination of the American Board of Colon and Rectal Surgery.

Finally, those who plan to seek certification by the American Board of Colon and Rectal Surgery should communicate with the Secretary of the Board prior to beginning their residency to be certain that their general surgical training is approved.

Effective: Jan. 1984 ACGME: Sept. 1983

4. Special Requirements for Residency Training in Dermatology

OBJECTIVES AND CONDITIONS:

Approved training programs in dermatology shall be organized to provide trainees with the educational and practical experience that will permit them to deliver superior specialized care to patients with diseases of the skin. Such experience must be varied and broad, progressive and systematic, and of sufficient duration. Moreover, it must include instruction in the pertinent basic sciences and in all clinical areas which bear upon the specialty of dermatology, and training in research and teaching. Accomplishment of these objectives requires a suitable institutional environment, a cooperative and supportive administrative authority, a stable financial base, an enthusiastic, competent and available staff, an adequate patient population, modern efficient equipment and space, and satisfactory liaison with other disciplines that relate to dermatology.

DURATION OF PROGRAMS:

The requisite four years of postgraduate training includes a first year which should consist of broadly-based training, as is provided by a transitional year program or by first year residencies in internal medicine, general surgery, family practice, or pediatrics. Under unusual circumstances, training in other clinical disciplines may be acceptable for the first postgraduate year. The remaining three years of training must be spent in one or more

accredited training programs in dermatology. At least 50 percent of the experience of the trainees in the three-year residency programs in dermatology must involve the direct care of patients. In accordance with these requirements, residency programs in dermatology are accredited for at least three years. Exceptionally, accreditation of residency programs of less than three years is possible, but only under the following conditions:

This training must represent an unusual and highly specialized experience, in research or in a selected major area of dermatology, in an institution with extraordinary capabilities in these fields and with multiple accredited training programs in other disciplines. Moreover, training under such conditions will provide the trainee with only one year of credit to be applied against the necessary three years of training in dermatology. This training may not be used in lieu of the first postgraduate year.

Residency programs accredited for four years of training in dermatology (PGY-1 through PGY-4) must provide the full three years of training in dermatology and be either directly or indirectly responsible for the training in the first postgraduate year. Thus, the trainees would spend their initial broadly-based year (PGY-1) in one of the following programs:

1. The ACGME accredited transitional year in the same or an affiliated institution;
2. An approved residency program in the same or an affiliated institution in one of the major disciplines cited above.

In each of these situations, no more than three months' rotation on the dermatology service is permissible during the first postgraduate year. Application for accreditation for four years of residency training in dermatology must include a detailed description of the first postgraduate year with a clear statement of the method of appointment of and responsibility for the trainees.

REQUISITES OF THE PROGRAM:

1. Institutional

The parent institution must assure the financial, technical and moral support and provide the necessary space, facilities and supply of patients for the establishment and maintenance of an approved residency program in dermatology. Adequate exposure to both outpatients and inpatients is necessary as are opportunities to do research, to teach and to become acquainted with administrative aspects of the specialty. A cooperative relationship with other disciplines in medicine will result in the most effective implementation of these activities. When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in dermatology, letters of agreement must be approved by the institutional governing boards. Affiliations should be avoided with institutions which are:

- 1) At such a distance from the parent institution as to make resident attendance at rounds and conferences difficult or 2) which do not add to the educational value of the program.

2. Program Director and Staff

The program director and his or her supporting staff must have had the necessary training and professional experience to enable them to properly train residents in dermatology. Their dedication to this purpose is paramount and they must be both adequate in number and willing and able to devote the time and effort required to assure the implementation of the administrative, educational, patient-care and research goals of the program. An instructor-to-trainee ratio of at least one-to-three is desirable, as is a minimum of two geographic full-time members of the clinical faculty, one of whom can be the training director. Faculty from any and all clinical and basic science departments can and should be utilized to provide a complete educational experience for the trainees.

3. Content

The training program shall be organized to permit the acquisition of experience and knowledge of dermatology in a graded and systematic fashion. Educational exercises should complement and when possible precede or parallel the clinical activities. Such exercises shall be organized to follow a content curriculum which will ensure resident exposure to the complete range of disorders encountered by the dermatologist. Appropriate direction and supervision are necessary throughout the training period. As the experience and confidence of the trainees grow, increasing responsibility for patient management can be assumed; however, the authority and supervisory role of the staff at all levels of training should be recognized. Residents should be adequately supported to permit their undivided attention to education and service responsibilities. Equality of the training experience must be assured for all the residents. Teaching methods throughout the training period should include various combinations of lectures, conferences, seminars, demonstrations, individual or group study of color transparencies and histologic slides, clinical rounds, chart and record reviews, faculty-resident sessions in small groups and one-to-one settings, book and journal reviews and attendance at local, regional and national meetings. Projection equipment and facilities for viewing and taking clinical photographs should be provided. A library containing the essential texts, journals and other learning resources should be an integral part of each training area. Space should also be made available for dermatology conferences, preferably utilizing a dermatology conference room.

A vital part of the residency program is the structured study of the basic sciences related to dermatology, including allergy, anatomy, bacteriology, biochemistry, embryology, entomology, genetics, histology, immunology, mycology, oncology, parasitology, pathology, pharmacology, photobiology, physiology, serology, virology and basic principles of therapy by physical agents. Particular emphasis should be placed upon dermatologic microbiology, dermatopathology and immunodermatology. There should be a well-organized course of instruction and range of experience in these three disciplines. It is desirable that a physician with special competence certification in dermatopathology direct and actively participate in this phase of the training programs. To facilitate clinical and laboratory teaching it is essential that the department have ready access to an adequate supply of properly classified anatomic and pathologic materials including histologic and photographic slides and that the resident participate actively in the interpretation of histopathologic sections. A clinical laboratory with facilities for microscopic analysis of biologic specimens (e.g., fungal and ectoparasite scrapings, Tzanck preparations, immunofluorescence, darkfield examinations), culture for microbes (e.g., fungi, bacteria, viruses) and interpretation of histologic specimens by light, phase and electron microscopy should be conveniently available.

The residents' training should be sufficient to assure a knowledge of and competence in the performance of procedures in allergy and immunology, cryotherapy, dermatologic surgery, dermatopathology, microbiology, clinical pathology, parasitology, photobiology, physiotherapy, and topical and systemic pharmacotherapy. Among these disciplines, cryotherapy, dermatologic surgery, and pharmacotherapy should be given special emphasis in the organization and implementation of the training program.

The practice of dermatology is concerned with both ambulatory and hospitalized patients. It is essential that an active outpatient service furnish sufficient clinical material representing the broad array of diseases seen by the dermatologist. Suitable facilities which permit the use of modern diagnostic and therapeutic techniques in the care of these patients should be provided. Inpatient facilities are also essential so that residents may have the opportunity to

treat the more serious cutaneous diseases on a daily basis and observe the dermatologic manifestations of systemic disease. Dermatology staff and residents must have primary rather than consultant responsibility on patients they hospitalize with dermatologic illnesses. Experience in the provision of consultation to other services whose patients manifest skin diseases as secondary diagnoses is also necessary. The keeping of complete and accurate clinical records should be emphasized throughout this phase of the training. Space and equipment should be provided to permit instruction in dermatologic surgery, electrosurgery, phototherapy, cryotherapy, application of topical medications and dressings, physiotherapy, radiotherapy, and appropriate epicutaneous and intradermal testing, phototesting, and other diagnostic procedures.

During training it is necessary for residents to gain an understanding of many diagnostic procedures and therapeutic techniques even though they may not personally perform them. Furthermore, some of these procedures, or techniques, may not be available in their programs. The physical modalities are especially notable, since an understanding of the basic properties of the electromagnetic spectrum is needed for the resident to become knowledgeable about the effects of various forms of this energy in the cause of disease, and about their use in dermatologic diagnosis and therapy. Electron beam, x-ray, grenz ray, ultraviolet, and laser radiation fit into this consideration. Even if some of these modalities are unavailable within a training program, it is still an obligation of the director to assure that the resident has received appropriate instruction concerning the disease implication and therapeutic application of these energy sources.

Clinical training should also be provided in appropriate aspects of other specialties that relate to dermatology, such as allergy and immunology, environmental and industrial medicine, internal medicine, obstetrics and gynecology, oncology, ophthalmology, otolaryngology, pathology, pediatrics, physical medicine, preventive medicine, psychiatry, radiology and surgery.

The participation or exposure of faculty and residents to basic and applied research is essential and research facilities should be available in amount and type suitable to the aims of the program. Some of these research facilities can be in departments other than dermatology.

Experience in the teaching of dermatology to other residents, medical students, nurses, and/or allied health personnel is an important element of the residency program. In addition, trainees should when possible be given selected administrative responsibility commensurate with their interests, abilities and qualifications.

RESIDENT EVALUATION:

Periodic in-training evaluation of residents should be carried out to insure that the resident is making satisfactory progress. Both formal examinations and performance ratings by the faculty can be utilized and the resident should be personally apprised of his strengths and weaknesses at appropriate intervals. Completion by the program director of resident yearly report forms, such as those requested by the American Board of Dermatology and other certifying boards, is an important part of this evaluation process.

SPECIAL RESPONSIBILITIES OF THE PROGRAM DIRECTOR:

Internal analysis of the training program by the program director and his or her staff is essential in addition to the regular surveys conducted by the Residency Review Committee for Dermatology. One measure of the quality of a program is the performance of its graduates on the certifying examination of the American Board of Dermatology.

The program director must notify the Secretary of the Residency Review Committee of any change in the program, staffing, affiliations or facilities which might significantly alter the educational experience.

At times of his or her absence, the program director must

Dermatopathology/Emergency Medicine

designate an interim director. If this period is for six months or longer, the Residency Review Committee should be notified. Documentation of resident evaluation, institutional and inter-institutional agreements, resident agreements and departmental statistics should be kept on file and provided upon request to the Residency Review Committee or site visitor. The accurate and complete execution of application forms, progress reports and replies to other requests from the Residency Review Committee is the responsibility of the program director. The care and precision given to these responses will be taken into consideration in the assessment of the training program.

The program director should advise all residents planning to seek certification by the American Board of Dermatology to complete the Preliminary Registration Form of this Board and to communicate directly with the Executive Director of the Board to be certain that they are in full compliance with the requirements for certification.

Effective: July 1983 ACGME: May 1982

Training Programs in Dermatopathology

The training program shall include all aspects of dermatopathology, including the gross and microscopic diagnosis of skin disorders by means of direct visual inspection and by light and fluorescence microscopy, as well as histochemistry, together with the relevant aspects of electron microscopy, cutaneous mycology, bacteriology, and entomology. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel. In order to provide such training the program shall be directed and closely supervised by a physician qualified in dermatopathology and devoting his major activities to the specialty of dermatopathology. The training institution should be of such size and composition as to provide not only ample dermatologic clinical material but possess all the supporting facilities necessary to accomplish the objectives of the program. Ordinarily, the institution would have approved residency programs in both dermatology and pathology.

The minimum training period in dermatopathology shall be one year in addition to the completion of acceptable residency training in an approved program of either dermatology or pathology as outlined in the *Directory of Residency Training Programs*.

5. Special Requirements for Residency Training in Emergency Medicine

I. PREAMBLE

General Characteristics of Accredited Programs:

Residencies in emergency medicine are designed to prepare physicians for the unsupervised practice of emergency medicine. These programs must provide education in the basic skills and knowledge which constitute the foundations of emergency medicine practice and an increasing degree of responsibility for and experience in the application of these principles to the management of clinical problems. Adequate opportunity must be provided for the resident, under guidance and supervision of a qualified teaching staff, to develop a satisfactory level of clinical maturity, judgment and technical skill which will, upon completion of the program, render the resident capable of providing quality emergency medical care and services.

Residency training programs in emergency medicine should produce physicians trained to:

- 1) provide the initial recognition, stabilization, evaluation and care of the acutely ill or injured patient;
- 2) arrange appropriate follow-up or referral as required;
- 3) manage the prehospital care of acutely ill or injured patients;

- 4) participate in the management of the emergency medical system providing prehospital care; and
- 5) engage in administration and teaching in emergency medicine and be familiar with research methodologies and their application.

II. THE INSTITUTION:

A. The institution(s) involved in the program should provide evidence of commitment to graduate medical education including emergency medicine. The administrative and academic structure must be organized in a way that facilitates the provision of an adequate educational experience.

B. Medical school affiliation is desirable but not required.

C. When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be made explicit, and should be embodied in an exchange of letters or in a contract indicating:

1. the scope of the affiliation;
2. the resources in the affiliated institution(s) which will be available to the resident;
3. the duties and responsibilities the resident will have in the affiliate institution(s);
4. the relationship which will exist between residents and staff/faculty of the affiliate and primary institution(s).

D. Presence of Other Residencies

1. Because of the nature of emergency medicine, it is important that emergency medicine residents have the opportunity to interact with residents in other specialties.

2. The emergency medicine residents should participate in the appropriate teaching of residents in other specialties, medical students, emergency department nurses, and paramedical personnel. In order to meet this requirement the program director should cooperate with other disciplines and actively foster the training of residents in those disciplines in the emergency department.

E. Administration of the Emergency Services

The administration of the emergency services in the hospital(s) must be properly organized to provide sufficient personnel, equipment and facilities for the residency training programs of the disciplines which require emergency medicine experience. The program director must have appropriate authority to conduct the teaching program and should participate fully in institutional policy making for the emergency service. The administration of the sponsoring institution should be understanding of and sympathetic to the attainment of educational goals and should evidence the willingness and ability to support these goals philosophically and financially. Additionally, the administrative structure must be such that the program director has adequate authority to organize and oversee the activities of the educational program.

F. Facilities

In every hospital in which the emergency department is used as a training site there should be adequate a) patient care and program support space; b) trained personnel; c) laboratory and x-ray support; and d) medical library resources.

G. Scope and Quantity of Patients

1. In the parent institution or a major affiliated institution there must be an adequate number of patients of all ages with a wide variety of acute traumatic and non-traumatic clinical problems presenting for initial diagnosis and treatment in the emergency department so that graded responsibility rotations can be maintained. In the institutions in which graded responsibility rotations are maintained on the emergency medicine service, the head of the emergency medicine service must be responsible for administrative direction and the quality of clinical care of

patients, presenting in the emergency department.⁹

2. In the entire program there must be a sufficient number and variety of patients to assure that all residents are adequately trained in the provision of all types of emergency care.

3. There shall be a policy regulating the care in the emergency department, by residents, of patients who have personal physicians. The policy shall provide the personal physician access to his/her patient and supervision of his/her patient's care at all times. The policy will facilitate the continuity of care of patients who have an established relationship for their care with a physician(s).

H. Number of Residents

There must be an adequate number of emergency medicine residents to result in a major service impact in the emergency department of the institutions where there is graded responsibility; to assure a meaningfully attended emergency medicine conference schedule; to allow scheduling of both junior and senior emergency medicine residents at the same time for a graded level of responsibility; and to foster a sense of resident and departmental identity.

III. THE PROGRAM:

A. Length of Training

1. The minimum time of graduate training in emergency medicine is 24 months beyond the PG-I year.

2. The PG-I year should be a broad-based clinical experience. This year may be a part of a three year emergency medicine residency program.

3. The PG-II year should focus primarily on the refinement of individual patient evaluation and management skills and the development of major emergency manipulative skills. The resident should participate in the education of other medical personnel and have experience with emergency medical systems.

4. In the PG-III year, emphasis should be placed on the ability to provide care simultaneously to multiple patients and the principal management of major emergent conditions. There should be specifically assigned advanced clinical responsibilities along with major administrative, supervisory and educational functions in the emergency department. All residents must be under appropriate supervision at all times.

B. Curriculum

1. A written curriculum which includes goals, objectives, and teaching activities should be prepared. The curriculum should describe the methods to achieve the physician competencies listed in the section "General Characteristics of Accredited Programs" and the methods to evaluate their attainment.

2. Normally at least 50% of the training time in the PG-II and III years for emergency medicine residents must be in the emergency department.

3. The residents' programs should include critical care rotation(s), with responsibility for patient care consistent with the individual resident's ability.

4. The program should provide the opportunity for each resident to obtain information on patient outcomes from patients the resident initially evaluates in the emergency unit.

IV. THE STAFF:

A. Program Director

The director of the residency program should be highly qualified, as an educator and administrator, and competent in emergency medicine. Certification by the American Board of Emergency Medicine, although not mandatory, is highly desirable. It is necessary for the program director to give sufficient time to the program to assure quality patient care and instruction. The Residency Review Committee must be notified in writing of a change in program director.

B. Faculty

1. All staff members involved in teaching should have clear responsibility defined in writing for resident supervision, teaching, administration and research, with time specifically dedicated to the educational program.

2. Physicians with teaching responsibilities should be appropriately qualified by training and professional experience to discharge such responsibilities.

C. Evaluation

1. Resident evaluation procedures should follow those found in the "General Requirements."

2. At least twice annually residents should be given the opportunity to evaluate faculty, rotations and facilities.

V. OTHER:

A. Emergency Medical Services Training

1. Residents should have the opportunity to work with basic and advanced emergency medicine technicians. They should also have direct experience with prehospital communications and should participate in basic and advanced EMS runs.

2. Planned instruction on various aspects of emergency department administration, management, medicolegal topics, medical ethics, and EMS systems and disaster planning must be presented.

B. Research

Opportunity for clinical and basic research should be provided and encouraged; residents should be taught an understanding of basic research methodologies, statistical analysis and critical analysis of current medical literature.

C. Conferences

There must be at least four (4) hours per week of planned instruction directed to emergency medicine residents and developed by the emergency medicine residency program. These conferences should include morbidity and mortality, journal review and didactic lectures based on the defined curriculum.

D. Residents who plan to seek certification by the American Board of Emergency Medicine should communicate with the secretary of that board to be certain regarding the requirements for certification.

Effective: March 1982 ACGME: Feb. 1982

6. Special Requirements for Residency Training in Family Practice

I. INTRODUCTION

Residencies in family practice must be specifically designed to meet the educational needs of medical school graduates intending to become family physicians.

The training is three years in duration after graduation from medical school and must be planned so that a coherent, integrated and progressive educational program is assured.

Applicants who have had other types of previous training may be considered for admission to family practice residencies. Credit for this previous training may be given only in the amount that is compatible with the Special Requirements for training in Family Practice. The director of the family practice residency shall be responsible for insuring that each resident who completes the program has met these requirements.

Experience in the continuity of care offered in the family practice center is essential. Therefore, it is imperative that all programs offer three consecutive years of training which includes a continuity experience with a panel of patients and families.

The program should provide the opportunity for each resident to develop and maintain a continuing physician-patient relationship throughout the three-year period with a panel of patients. This relationship must be in continuity during the resident's second and third year and include patient contacts in the family practice center, inpatient facility, domiciliary facility and the patient's home.

⁹The service function director and the educational function director may be one or two individuals.

Family Practice

Family practice residency programs should provide experience and responsibility for each resident in those areas of medicine which will be of importance to the resident's future practice. Since family practice programs are in part dependent upon other specialties for the training of residents, the ability and commitment of the institution to fulfill these requirements must be assured. Specifically, the sponsoring institutions must assure the existence and availability of those basic educational and patient care resources necessary to provide the family practice resident meaningful involvement and responsibility in the necessary clinical specialties. Further, there should be agreement regarding the resident's need to maintain concurrent commitment to his patients in the family practice center.

The family practice residents' identity should be maintained throughout graduate training while they learn the appropriate skills, techniques and procedures of other specialties. Instruction in the other specialties must be conducted by faculty with expertise in these fields. Curriculum and plans for such rotations or experiences must be developed by the family practice faculty in concert with appropriate other specialty faculty. The program should implement a plan to assure that the residents retain their identity and commitment to the principles and philosophic attitudes of family practice throughout the training program.

The programs must emphasize the importance of comprehensive patient and family medical care. The residents must be given the opportunity to achieve high levels of competence in disease and problem management and to develop knowledge, skills and attitudes which reflect expertise in patient management. Therefore, experienced family physicians should be utilized to the fullest extent as teachers within the constraints of their individual competence.

II. CURRICULUM

EVERY RESIDENCY PROGRAM MUST HAVE THE "CORE" OR REQUIRED CURRICULUM AS CONTAINED HEREIN. HOWEVER, UPON APPROVAL OF THE RESIDENCY REVIEW COMMITTEE, CURRICULUM COMPONENTS MAY VARY TO REFLECT CURRENT REGIONAL PRACTICE PATTERNS AND PATIENT CARE NEEDS, AND MAY BE FLEXIBLE ENOUGH TO UTILIZE THE STRENGTHS OF THE PROGRAM.

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching and a method of evaluation exist.¹⁰ The organization of the curriculum should reflect the application of sound educational principles, recognizing that some elements of the curriculum are best learned in a longitudinal experience while others are more efficiently learned in an intensive experience of shorter duration.

It is recognized that the content of a rotation is more important than the time assigned to it. However, in an accreditation process it is necessary to establish guidelines for the allocation of time segments in order to assure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, attitudinal orientation and practical experience required of a family physician in each of the curricular elements. Ranges of time¹¹ are indicated under the various disciplines which comprise the core curriculum. This does not prohibit additional elective time in any of the disciplines relative to the curriculum throughout the "Special Requirements."

¹⁰The Residency Review Committee expects the programs to have written detailed plans for their curriculum which should be available to the site surveyor.

¹¹In identifying ranges it is recognized that certain programs will deviate from those ranges for excellent educational reasons. It is the responsibility of the program to document and justify variations from the ranges herein stated.

A. Family Practice

Family practice is a comprehensive specialty. Although the treatment of illness is a basic function of family physicians, the family physician assumes the responsibility for the total health care of the individual and family, taking into account the social, physiological, economic, cultural and biologic dimensions.

The responsibility to provide health care to families is also a fundamental concept of the discipline of family medicine. The program must provide the opportunity for residents to acquire knowledge and experience in the provision of longitudinal health care to families.

The residents' acquisition of knowledge, skills and attitudes of family practice should take place during all curricular elements. The primary setting for this training is in the family practice center as the residents provide continuing, comprehensive care to their panels of patients.

An intensive short duration assignment to the family practice center during the first year is needed in order to provide an orientation period to introduce the comprehensive approach to health care and to help the resident develop an identity as a family physician. Additionally, residents should be assigned to the family practice center for at least one-half day per week during the first year of training.

During the second year residents should spend from two to four half days in the center. The amount of time in the center should be increased in the third year to three to five half days per week. Intensive short duration assignments to the family practice center in the second and third years may be utilized for specific educational purposes provided the overall curriculum is not thereby compromised.

Certain elements of the curriculum are of special importance to family practice but are not necessarily limited to family practice. These elements must be taught longitudinally during the entire period of residency training, in didactic and clinical settings:

1. Comprehensive care
 - a. Individual
 - 1) Health assessment and maintenance
 - 2) Prevention
 - 3) Acute and chronic illness or injury
 - 4) Trauma
 - 5) Rehabilitation
 - 6) Behavioral counseling
 - 7) Health education
 - 8) Human sexuality
 - b. Family
 - 1) Family structure
 - 2) Family dynamics
 - 3) Genetic counseling
 - 4) Family development
 - 5) Family planning
 - 6) Child rearing and education
 - 7) Aging
 - 8) Death and dying
 - 9) Epidemiology of illness in families
 - 10) Role of family in illness management
 - 11) Counseling and education
 - 12) Nutrition
2. Continuity of primary responsibility
 - a. Ambulatory care
 - b. Inpatient care
 - c. Home care
 - d. Domiciliary care: e.g. nursing, extended care facilities
 - e. Referral and consultation
 - f. Integrative function of the family physician
 - g. Utilization of community resources

B. Gerontology

A significant portion of the practice of every family physician includes the care of the aged. Educational opportunities to address this element of the curriculum must

be in a continuum throughout the resident's entire program. A structured multidisciplinary approach by faculty is essential to the teaching of this curricular element in the following settings: family practice center, the hospital, nursing homes, retirement homes, voluntary agencies, and in the patient's home. Care of the aged must include the preventive aspects of health care, the physiological and psychological changes of senescence, the social-cultural parameters, nutritional and pathological (acute and chronic) entities of aging.

C. Human Behavior and Psychiatry

In family practice training, most of the resident's knowledge and skills should be acquired through a program in which psychiatry and behavioral science are integrated with family practice, internal medicine, pediatrics and other disciplines throughout the resident's total educational experience.

The family practice center should serve as the major site for residents to achieve the objectives of this portion of the curriculum. Parts of this training may be interwoven with other curricular elements. Didactic as well as clinical methods should be utilized. Instruction should be provided by faculty who have training and experience necessary to apply modern behavioral and psychiatric principles to the care of an undifferentiated population and should include qualified family physicians as teachers. Intensive short-term experiences in facilities devoted to the care of chronically ill patients should be limited.

There must be instruction in the following areas of human behavior:

1. Diagnosis and management of the psychological components of illness
2. Management of psychological disorders
3. Family dynamics
4. Faculty and resident self-awareness; personal and professional growth and development
5. Physician/patient relationship
6. Patient counseling
7. Interviewing skills and other communicative skills
8. Patient education
9. Normal growth and variants
10. Stages of stress in the family life cycle

There should be a formal didactic program which supplements the clinical experience in human behavior. The human behavior curriculum should include the promotion of physician well-being and prevention of physician impairment.

The curriculum must identify a psychiatry training component which encompasses recognition, diagnosis and management of emotional and mental disorders along with and/or as components of organic diseases. Elements of psychotherapy, psychopharmacology, psychiatric counseling, and a broad spectrum of mental illness, alcoholism and other substance abuse must be included.

D. Community Medicine

Residents should have experiences which help them understand the role of private enterprise, voluntary organizations and government in modern health care. In addition, residents should be taught the principles of the application of modern medical knowledge to the care of populations.

There must be instruction in at least the following areas of community medicine:

1. Occupational medicine
2. Health resource agencies
3. Epidemiology of disease
4. School health
5. Sports medicine
6. Community health education
7. Public health services
8. Preventive medicine

9. Environmental health

A structured educational experience in rural and/or inner-city health care should be available to residents if such experience adds a dimension to the educational program which is not otherwise present.

Prevention of disease and disability is an important aspect of family practice. Residents should be given the opportunity to acquire specific knowledge, skills and attitudes which provide special competence in the application of modern principles of preventive medicine. This content should be presented in both didactic and clinical settings.

E. Internal Medicine

Internal medicine experience should provide the resident with the opportunity to acquire the knowledge and skills related to the diagnosis and management of non-surgical diseases of adults. This experience should be utilized to enhance the resident's understanding of the pathophysiology of non-surgical diseases and the application of modern non-surgical diagnostic and therapeutic techniques. It should also be utilized to develop a disciplined, scientific approach to the practice of medicine.

The organization of the curriculum in internal medicine in large part will be dependent upon the organization of the delivery of patient care services in the teaching environment. The experience should include both inpatient and outpatient experiences and progress from general and specific areas of content. Faculty should include both general internists and subspecialists. The total duration of internal medicine training should be 8-12 months, including structured experiences in cardiology and critical care units (ICU/CCU) as well as education in endocrinology, pulmonary diseases, hematology and oncology, gastroenterology, infectious disease, rheumatology, nephrology, allergy and immunology and neurology. Where appropriate, family physicians with recognized skills in internal medicine may be utilized as instructors. Where it exists, a family practice inpatient service may be utilized to fulfill a portion of this requirement.

F. Dermatology

The curriculum must include a required educational experience in dermatology with a duration in the range of 60-120 hours. Most of this experience will be in an outpatient setting with a qualified physician teacher of dermatology and be supplementary to the learning which results from dermatologists' consultations which may occur in the family practice center.

G. Pediatrics

There must be a structured educational experience in pediatrics, the duration of which should be four to five months. The resident should have the opportunity to develop an understanding of the pre-natal period, the growth and development of the newborn through adolescence, and emotional problems of children and their management. In addition, the resident should be taught to recognize and manage behavioral, medical and surgical problems of children and adolescents in home, ambulatory and hospital settings.

The pediatric experience must include ambulatory and in-patient experiences in pediatrics, including the newborn nursery, as well as resuscitation, stabilization and preparation for transport of the distressed neonate.

H. Obstetrics and Gynecology

The resident must be provided the instruction necessary to understand the biological and psychological impact of pregnancy, delivery and care of the newborn upon a woman and her family. The resident should be taught technical skills in the provision of antepartum and postpartum care and the normal delivery process as well as the complications of pregnancy and their management. The resident should be taught certain operative skills in obstetrical and gynecological procedures as a part of the broadly based curriculum. To obtain such skills the family practice resident must spend at least three months in a structured educational experience, of which at least two months must

Family Practice

be in obstetrics and at least one month must be in gynecology.

A program must be able to provide on an elective basis for interested family practice residents, approximately three months of additional obstetrics/gynecology training as structured educational experiences which should include high risk obstetrics and the opportunity for residents to develop the technical proficiency to perform surgical procedures which family physicians may be called upon to perform.

It is required that residents have the opportunity to provide obstetric care to pregnant women within the context of the longitudinal experience in the family practice center. The resident must assume the responsibility for provision of antenatal, confinement and postnatal care to these patients on a continuing basis.

The training program should afford an opportunity for the acquisition of skills in marriage counseling, sex education, human sexuality and family planning.

I. Surgery

The program must provide instruction in the diagnosis and management of surgical emergencies and the appropriate and timely referral of them for specialized care. The resident should also be taught to recognize conditions that are preferably managed on an elective basis.

It is important for the resident to appreciate the varieties of surgical treatments as well as the potential risks associated with those treatments. Knowledge of these matters should enable the resident to give proper advice, explanation, and emotional support to the patients and their families.

The resident must receive training in pre- and post-operative care, basic surgical principles, asepsis, handling of tissue and technical skills to assist the surgeon in the operating room. The program should provide the opportunity for residents to develop the technical proficiency to perform specific surgical procedures which family physicians may be called upon to perform. If the residents expect to include surgery as a major aspect of their practice, additional training must be obtained.

The general and subspecialty surgery experiences should total four to five months duration. The residents must be required to participate in a structured experience in general surgery of a minimum of two months duration, including operating room experience.

Outpatient experiences in general surgery are encouraged in order for the resident to achieve competencies in the diagnosis and management of a wide variety of common ambulatory general surgical problems.

The structured experiences in surgical subspecialties may be in an intense short time format, or may be in a longitudinal format. 160-200 hours of orthopedics should be required. 40-80 hours in each of the subspecialties of ophthalmology, otolaryngology and urology must be required. It is expected that experiences in the surgical subspecialties will be primarily outpatient oriented.

J. Emergency Medicine

There must be a structured education experience of one to three months duration in the delivery of emergency medicine care under competent and full-time on-site supervision. The initial month should be an intensive experience of short duration rather than in a longitudinal format.

There must be sufficient quality and types of facilities, equipment, support personnel, and broad range of patient problems to provide the residents with adequate experience in initial management of serious emergencies.

The emergency medicine portion of the curriculum should utilize both didactic and practical experiences. Specific modern life-saving skills must be taught to all residents, e.g., advanced cardiac life support, airway insertion, chest tube insertion, hemostasis.

K. Diagnostic Imaging

The program must provide the residents with ample

opportunity to learn the appropriate application of techniques and specialty consultations in the diagnostic imaging of organs and body systems. Instruction should include the limitations and risks attendant to these techniques. The format of the instruction should be adapted to the resources available, but must include radiographic film interpretation pertinent to family practice.

L. Practice Management

There must be a curriculum component that provides at least 60 hours of instruction in practice management. The family practice center should be considered the primary classroom for teaching practice management. Elements to be included:

1. Patient management
2. Records
3. Facilities
4. Office organization
5. Medical-legal aspects of practice
6. Procedures for establishing a practice
7. Team care and team development
8. Office and business management
9. Personnel management
10. Automated data systems
11. Inter-professional relationships

M. Other Curricular Elements

Other curricular elements should include:

1. Nuclear medicine
2. Physical medicine and rehabilitation
3. Nutrition
4. Clinical laboratory science
5. Ethics
6. Use of drugs and their interaction
7. Art of consultation and referral
8. Administration of anesthetics

N. Electives

Electives which are well constructed, purposeful, and effective learning experiences are an essential part of a family practice residency program. Most electives will be concerned with sub-specialized areas of the major primary specialties and may be obtained in various ways. Electives should not utilize more than six months of the total curriculum but there must be a minimum of three months available to each resident for electives.

Electives are intended primarily to enrich the resident's training with experiences relevant to enhancing their future as family physicians. At times, they may be used, in part, after proper counseling by the program director and/or faculty, to remove any identified deficiencies in knowledge or skills, but also should be chosen by the resident on the basis of future practice plans or individual interests.

No more than one-half of the total of elective time should be utilized by the resident to fulfill deficiencies in the core curriculum requirements. The choice of electives by the resident must be with the advice and consent of the program director.

O. Research

The participation of the resident in an active research program should be encouraged. Generally, this activity should be concurrent with other assignments, provided the responsibilities of the resident are adjusted in a way to permit a reasonable time for research activity. Independent research by the resident should be in addition to, rather than in lieu of, clinical instruction.

P. Conferences

Conferences (or seminars, workshops) should be designed for the family practice resident in order to augment the clinical experiences of the residency. Faculty and staff should participate, but conferences designed solely for the medical staff are inadequate as a substitute for a complete conference schedule in graduate training.

III. FACULTY**A. Program Director**

A program director must have had a minimum of two

years full-time professional activity in the field of family practice. The director should be a diplomate of the American Board of Family Practice or have had suitable acceptable training in family practice. It is highly desirable that the program director have had teaching experience in a family practice residency program.¹²

B. Family Practice Faculty

Family Practice faculty should demonstrate a conceptual grasp of family medicine and have a specific time commitment to patient care to enable them to maintain their clinical skills and serve as a role model.

The number of family practice faculty must be sufficient so that there is always an appropriate number who, without other obligations, supervise residents in the family practice center whenever residents are seeing patients. Faculty should not be involved in activities which interfere with their teaching responsibilities and supervision of the residents.

There should be at least one full-time equivalent family physician faculty for each six residents in the program.

The part-time faculty should have responsibility with sufficient continuity to relate well to the residents.

C. Other Special Faculty

Faculty in the various specialties must devote sufficient time to teaching and supervising family practice residents in their specialty fields. Teaching time may be defined as all formal or informal contacts between residents and faculty which relate to the content of the teaching program.

Additional staff and faculty may be needed to provide input into the areas such as behavioral science, the social services, nutrition, oral pathology and pharmacy. If faculty in these disciplines are not readily available from current staff or faculty, it may be necessary to seek possible resources in the community.

D. Faculty Development

There should be an explicit system to develop and maintain academic and clinical skills of the faculty.

IV. FACILITIES

A. Primary Hospital

1. Number of Beds: It is essential that the participating hospitals, primary and affiliated, be of sufficient size and have an adequate number of teaching beds to assure sufficient patient load and variety of problems for the education of the number of residents in the program. Experience has demonstrated that facilities which have fewer than 135 occupied beds, are often not able to provide adequate physical, human and educational resources for training in family medicine.¹³

2. Facilities: A program should provide facilities required for the education of residents in sufficiently close proximity to the primary hospital to allow for the efficient functioning of the training program.

Multiple teaching facilities may be used so long as there is no compromise of the quality of the educational program and no significant reduction in attendance of residents at teaching sessions, or reduction of camaraderie and information exchange among residents and/or faculty.

3. Patients: A sufficient number of inpatients must be available to provide a broad spectrum of problems in any given discipline. The disease spectrum available for resident education must be that common to the general community, and must offer a structured educational experience which allows residents the opportunity to obtain expertise

in emergency initial care of unusual, or life-threatening problems.

There should be an institutional patient care evaluation program to allow continuing improvement of ambulatory and inpatient care provided by the institution and medical staff.

4. Medical Staff: Medical staff must be available in sufficient number to insure adequate patient care and consultation in family practice, internal medicine, surgery, pediatrics, obstetrics/gynecology, pathology, psychiatry, radiology, ENT, urology, neurology, cardiology, dermatology, orthopedics, ophthalmology, anesthesia, and emergency medicine.

The medical staff should be organized so that family physician members may participate in appropriate hospital governance activities on a basis equivalent to that of the other specialties. Family physician faculty must have admitting and attending privileges in the hospital(s) where the majority of family practice center patients are hospitalized. Family practice residents must be able to admit and care for their family practice center patients in the hospital with family practice faculty supervision as appropriate.

B. Family Practice Center

1. Functional Status: A family practice center must be in operation for the training of family practice residents (whether or not in a temporary location), on the date the program begins. If more than one center is used, the additional center must meet the same criteria as the primary center.

2. Design: The center must be a clearly identifiable unit which includes a separate entry, waiting room and appointment system.

The design of the family practice center must insure adequate patient flow to provide appropriate patient care, accessibility and teaching opportunities. The family practice center should have necessary provisions for handicapped persons.

3. Size: Two examining rooms per physician working in the center at one time (counting as physicians both family practice residents and physician faculty who have patient care responsibilities) should be available. In cases where the family practice center is utilized for training of other learners, e.g. nurses, medical students, physician assistants, sufficient additional space must be available so that the efficiency of the residents is not compromised.

Other functional areas must include: business office, record room, office library, patient care rooms, conference room, basic laboratory appropriate to office practice, resident work area, and faculty/staff offices.

The family practice center should provide for the capability of the physician to conduct individual and small group counseling.

Diagnostic laboratory and imaging services must be provided so that there is prompt and convenient access by patients and residents for patient care and education.

4. Location: The location of the family practice center in relation to the hospital(s) should be such that it allows conservation of the residents' time in order to utilize efficiently the educational opportunities and provide necessary patient care at both sites.

5. Equipment: The family practice center must contain all equipment necessary to meet the basic needs of an efficient family practice office and a quality education program for family practice residents.

6. Patient Population: A stable patient population of sufficient number and variety is necessary to insure comprehensiveness and continuity of experiences for the residents. The major part of the patient visits should be from family units for which a resident is responsible. A patient population seeking only episodic care does not meet this requirement. Patients who provide a broad spectrum of problems and represent varied income levels and ages and both sexes should be attended in the hospital, the family practice center, at home, or in institutions for long-term

¹²This does not apply to program directors who have been appointed before the effective date of the "Special Requirements."

¹³Requirements concerning number of hospital beds may be regarded more appropriately in terms of those available for use in training residents whether in the primary hospital alone or primary plus affiliated hospitals combined. It is important that there be no compromise in continuity of care or attendance at teaching sessions by residents because of distance between or among institutions. Number of beds must be perceived in context of the total number, types, and locations as well as medical staff available for quality care and teaching.

Family Practice

care or rehabilitation.

7. Record System: Patients' ambulatory medical records must be maintained so that easy and prompt accessibility is assured at all times.

The record system must provide for patient care audit and chart review and must be capable of prompt documentation of all facets of family care, including care rendered in the family practice center, hospital, home, via telephone, and that provided in other institutions.

The medical record system must be designed for the retrievability of data pertinent to patient care, and the monitoring of the residents' experiences.

8. Provision of Patient Care: Appointments must be scheduled in the family practice center by regular employees of the center who are cognizant of the necessities of the appointment system in the delivery of continuing care and patient access to a requested physician.

Continuity of care is an important concept in family practice, and for this reason the training program must demonstrate a concern for continuity of care. This concern is expressed in the role and interrelationships that the system (e.g. solo or group), the professionals, the individual patient and the patient's family, the institution and the community play in the maintenance of continuity of care.

9. Support Staff: There must be appropriate numbers and types of support staff to meet the needs of health care and resident education.

10. Teaching Consultants: Consultations by recognized specialists in their fields should be utilized by the program as a teaching mechanism. Elective consultations should be in the family practice center. Where possible, the consultant's teaching role should be available to more than the single responsible resident if this can be done preserving the patient's dignity. When this is not possible, consultations should occur in a location which allows residents to participate in the consultation as an educational experience.

11. Ambulatory Units Other Than Family Practice Centers: Ambulatory units other than family practice centers are those sites which offer experience that differs from that which is offered in the primary family practice center.

The use of remote sites or rotations on clinical services must not interrupt continuity of care at the family practice center for longer than two months during the second year and two months during the third year. A resident must return to the family practice center and provide continuity of care for the resident's panel of patients for at least two months before leaving for any additional remote experience.

12. Sources of Income: The fiscal operation of the family practice center must reflect a balance between service and education which does not adversely affect the educational objectives.

There should be a plan to assure long-range fiscal stability of the Program.

It is the responsibility of the residents to render patient care in the pursuit of their education without additional remuneration based on productivity.

This does not preclude the residents from earning income from patient care during off hours provided that this activity does not interfere with the education and performance of the resident. In addition, such activity should not be in conflict with the policies of the program or the sponsoring institution.

13. Hours of Operation: The family practice center must be an exclusive facility available for patient services during weekdays commensurate with community medical practices in order to provide continuing comprehensive care and a place where patients may expect to obtain services.

When the family practice center is closed, there must be provisions for patients to have access to their personal physician or a designated substitute physician.

V. FAMILY PRACTICE RESIDENTS

A. Conceptual Understanding: Residents must be taught to demonstrate and clearly articulate the philosophy and concepts of family medicine to patients.

B. Impaired Residents: The goal of the family practice training program is to produce fully competent physicians capable of giving high quality care to their patients. Because impaired physicians cannot achieve these goals, the program should attempt to identify and prevent impending impairment. Additionally, the program must be able to intervene appropriately on behalf of the impaired resident.

C. Outside Rotations: Residents may spend time away from the family practice center to meet the needs of their training. The educational value of these rotations must be clearly documented. The availability of constant on-site supervision is required.

D. Documentation of Residents' Experience: A system for documentation of residents' experiences must be utilized to monitor the educational experience and to provide documentation for future hospital privileges.

VI. EVALUATION

A. Evaluation of Residents: There must be an adequate, on-going effort of evaluating knowledge, competency, and performance of the residents. Entry evaluation assessment, interim testing and periodic reassessment, as well as other modalities for evaluation, should be utilized.

B. Evaluation of Faculty: All teaching faculty must be evaluated on an on-going basis. Documentation of faculty evaluation should include: teaching ability, clinical knowledge, attitudes, scholarly contributions, interpersonal skills and communication abilities.

C. Evaluation of Patient Care: The program must consider high quality patient care as one of its primary objectives and evaluate the care that is provided. There must be a current and retrospective audit to provide necessary feedback for continuing improvement of ambulatory and inpatient care.

D. Evaluation of the Program: The family practice residency must incorporate all elements of the "Special Requirements." The program should be evaluated within the context of the educational needs of the residents, teaching responsibilities of the faculty and the availability of health care resources within the community.

This evaluation should include an appropriate balance between education, research and service. Continuing medical education should occupy a prominent place in the program and residents should be encouraged to develop learning patterns to continue their education.

One measurement of the quality of a program is the performance of its graduates in the certification examinations of the American Board of Family Practice. The degree of resident attrition and the presence of a critical mass of residents are also factors to be considered in the overall evaluation of the program.

E. Evaluation of the Graduate: It is the responsibility of all programs to maintain contact with their graduates to obtain information about:

1. Practice effectiveness
2. Personal satisfaction with role
3. Practical responsibilities
4. Evidence of participation in continuing medical education
5. Board certification
6. Relevance of training to practice demands

VII. GENERAL

The provision of the "General Requirements" must also be met for approval.

Family practice residents who plan to seek certification by the American Board of Family Practice should communicate with the Secretary of the Board.

It is the responsibility of the program to notify the Secretary of the Residency Review Committee for Family Practice of significant changes in the program which may occur in the interim between site surveys. This includes, but is not limited to, changes in the program director.

Effective: July 1983 ACGME: Sept. 1982

7. Special Requirements for Residency Training in General Surgery

GENERAL CHARACTERISTICS OF ACCREDITED PROGRAMS: Residencies in surgery which are designed to meet the requirements for accreditation must provide a structured educational experience of uniformly high quality which will prepare trainees to function as well qualified, independent specialists in surgery upon completion of the program. Surgery is not an exact science and there are a variety of educational plans leading to the desired qualifications as a surgeon. However, the requirements which follow must be met or exceeded in all accredited training programs in the specialty.

Since general surgery is a discipline of great breadth and a specialty which is often consultative in nature, the program should be conducted in those institutions which are accredited by the Joint Commission on Accreditation of Hospitals and classified as general hospitals. Rotation of individual trainees to affiliated institutions to obtain training not adequately available in the parent institution may be desirable. Rotations to affiliated hospitals must enhance the overall quality of the program rather than simply enlarge the program and must not be primarily for the purpose of providing service coverage.

Since interaction with peers from other disciplines contributes to the quality of the learning experience and provides the framework upon which future patterns of practice are based, it is important that there be accredited residency programs in other medical specialties in the teaching institution(s). While the minimum requirement is only for an accredited residency in internal medicine, pediatrics, or family practice in the institution, it is desirable that there be a better balance, as provided by residencies in several primary care disciplines, and in obstetrics and gynecology, pathology and radiology. Residencies in other surgical specialties, while not specifically required, contribute to quality and a balanced educational atmosphere.

The objective of the residency is to prepare the trainee to function as a qualified practitioner of surgery at the high level of performance expected of a specialist. Therefore, the educational aspects of the program must be the most important factor and the residents must be provided adequate time and sufficient facilities for study. Every residency carries with it a commitment of service to patients in the institution, but the service responsibilities must work in concert with other activities to produce a well rounded, knowledgeable and highly qualified practitioner of surgery.

The career goals and personal interests of individual residents will vary and there are several paths to an adequate education. Every resident need not conform to a single pattern, but all residents must be provided a solid foundation in the basic and principal components of the specialty and each resident within a program must be provided with an equivalent educational experience.

To be accredited, programs of graduate education in surgery must be so constructed that there is a clear demonstration by the trainee of acquisition of a solid foundation of fundamental surgical knowledge prior to progression to the level of supervised semi-independent patient management and operative care. An objective test mechanism is required as a component of the process of demonstration of this cognitive capability. While each program may utilize its own test instruments, the American Board of Surgery In-Training Examination is considered a most desirable example.

Furthermore, it must be clearly demonstrated that a

trainee has in fact reached a satisfactory level of clinical qualifications prior to completion of the program. Any program which does not establish a system of trainee evaluation which clearly shows that each trainee has successfully passed these two milestones above cannot be considered adequate.

The performance of each house officer must be evaluated by the teaching staff at least every six months and a documented record of that evaluation must be prepared and maintained for subsequent review by the accrediting authorities. Similar records should be kept for candidates for certification. Where major deficiencies exist, the evaluation should be formally reviewed with the trainee. In order to insure the proper relationship and balance of the basic sciences and the other clinical disciplines to surgery, there shall be an institutional training committee to advise program directors and evaluate all programs. For coordinating surgical education, the committee must include at least the program directors or chiefs of service when an accredited program does not exist or their designees representing surgery, internal medicine, radiology and anatomic pathology.

Graduate education programming in surgery must be a continuum with undergraduate medical education. All years must be under the guidance of the director of an accredited program in surgery regardless of rotations to other disciplines.

DURATION, SCOPE AND CONTENT OF PROGRAM: Five years of graduate training in surgery after graduation from medical school is the minimum amount of time required for acquisition of the necessary knowledge, judgment and technical skill. To be acceptable, a program must include a total of five years of which at least four years must be clinical experience. Three and one half years must be devoted to clinical surgery, and three of these years, including the final clinical year, must be devoted entirely to training in the principal components of the specialty as defined below. No more than six months of the required four clinical years may be allocated to clinical disciplines other than surgical, such as internal medicine, pediatrics, gastroenterology, anesthesiology or surgical pathology. The senior or final clinical year must consist of twelve consecutive months concerned with the multiple areas within the principal components of surgery. No more than four months may be exclusively devoted to any one principal component of general surgery. Opportunity for and documentation of development of progressively independent clinical skills are essential. Training in endoscopy and surgical intensive care may be considered as clinical surgery, but obstetrics and ophthalmology are not. Laboratory or clinical research experience and training in non-clinical disciplines such as pathology or radiology are highly desirable. Not more than a total of twelve months of clinical training may be devoted to training in a single surgical discipline other than the principal components of general surgery as defined, or in a special concentrated experience in a single principal component of general surgery.

The program must provide for advanced education in human biologic phenomena as they relate particularly to disorders of a surgical nature and an understanding of the etiology, pathogenesis, diagnosis and management of surgical disorders. The program must also provide an opportunity for each resident to acquire the technical knowledge, the interpersonal and the psychomotor skills so important for the specialist in surgery. This goal can best be attained by means of a progressively graded curriculum of study, clinical and operative experience and increasing responsibility for application of these principles and skills in the management of a broadening and more complex set of clinical conditions. Adequate and equivalent opportunity must be afforded each resident, under the guidance and supervision of a qualified teaching staff, to develop the degree of clinical maturity, surgical judgment and clinical diagnostic and operative skill to render him prepared to

General Surgery

provide the level of care to patients with a wide range of surgical disorders in the manner appropriate to a specialist in surgery.

The basic areas of surgical education must include, but need not be limited to: wound healing; hemostasis and blood disorders; oncology; shock and circulatory physiology; surgical microbiology; respiratory physiology; gastrointestinal physiology; genitourinary physiology; surgical endocrinology; surgical nutrition; fluid and electrolyte balance; metabolic response to injury, including burns; musculoskeletal biomechanics and physiology; immunobiology and transplantation; applied surgical anatomy and surgical pathology. This fundamental surgical education should be acquired primarily through clinical experience and applications and should not be based solely on didactics. Trainees must not be allowed to progress to the advanced years of residency with major responsibility for overall patient care until they have clearly demonstrated by clinical performance and by an objective test mechanism that they have acquired a satisfactory understanding of the above fundamentals.

The program design and execution must provide the resident with an opportunity to acquire not only the central core of knowledge specified above, but also to acquire a detailed knowledge and experience, under supervision, in the pre-operative, operative, and post-operative care of patients of all age groups with diseases of the alimentary tract, of the abdomen, of the breast, of the head and neck, of the vascular system, and of the endocrine system, and in the total management of trauma including musculoskeletal, hand and head injuries. Specifically, arrangements must be made for the surgery resident to receive training and graded experience, under supervision, in the pre-operative, operative and post-operative care of the injured patient, including that provided in the emergency department and intensive care unit. The resident must have personal experience with a variety of endoscopic techniques, including laryngoscopy, bronchoscopy, esophagoscopy, gastroscopy, colonoscopy, peritoneoscopy and intraoperative cholelithotomy. The above described areas are considered to be principal components of the specialty and as such must receive the appropriate degree of attention.

In addition, the program design must enable the residents to acquire an understanding of the principles of and to have a personal clinical experience to include operative care in the more usual problems in cardiac, thoracic, gynecologic, neurologic, orthopedic, plastic, neonatal and urologic surgery and in anesthesiology. This experience may be obtained by a formal rotation to an accredited program or assignment to a duly constituted service in the parent or affiliated institution. The program must provide the residents with experience in direct and progressively responsible patient management as they advance through training and must culminate in sufficiently independent responsibility for clinical decision making that the program director is assured that the graduating resident has achieved ability to execute that sound surgical judgment, including non-operative management, which characterizes the general surgical specialist.

Operative skill is essential for the surgeon and can be acquired only through personal experience and training. No amount of observation or assisting can substitute for personal performance of operative procedures. An acceptable program must provide for sufficient operative experience to train qualified surgeons, taking into account individual capability and rate of progress. The volume, variety and magnitude of the operative experience of each resident must be such as to insure that each has become technically qualified upon completion of the program. Therefore, the volume and variety of cases available must be such that there is an adequate distribution as to complexity and within the areas of general surgery, especially the principal components, to provide an equivalent and adequate distribution for all of the residents. While the number of

operations to be performed by each resident is not specified, experience has shown that an acceptable range, in most instances, is from 500-800 total cases and from 150-300 cases as the "Surgeon, Senior Year". Provided that previous personal operative experience has been adequate, cases listed as "teaching assistants" may be credited toward chief year requirements. Grossly unequal experience among residents and unexplained variations from this range, or inadequate experience in breadth or complexity will be cause for questioning the acceptability of the program.

In some institutions, a so-called "Chief Resident's Service" exists. While this may be highly desirable educationally, it should not encourage two levels of care and must be administratively defined and adequately supervised by the senior teaching staff. Regardless of the structure of the teaching service, every effort must be made to afford the residents the highest possible level of responsibility. A resident may be considered to be the "surgeon" only when he or she has played a significant role in determining or confirming the diagnosis, in the provision of pre-operative care, in the selection and accomplishment of the appropriate operative procedure, in managing the post-operative course and has had the opportunity for sufficient follow-up to be acquainted both with the course of the disease and outcome of treatment.

Clinical and/or laboratory research is an important component of a well rounded residency and residents should be encouraged to participate. However, unless the resident has an interest in participating, laboratory research should not be required as a major component. A program approved for five or more years duration may assign a resident to full-time research.

Educational conferences of an adequate nature must be conducted, not only as specified in the "General Requirements", but also to discuss specific clinical problems and advances in surgery. Weekly review of all current complications and deaths, in addition to specific and current clinical cases, must be conducted with documentation of participation by the residents and teaching staff. This should include radiological confirmation and pathological confirmation of all surgical specimens and autopsies. Regular attendance by multiple teaching and other senior staff members, as well as the residents, is considered to be a key index of interest in the educational aspects of the program. Programs in which there is little participation by multiple members of the designated staff cannot be considered acceptable.

TEACHING STAFF: The staff responsible for the direction and execution of the program must be well qualified and of enough diversity of interest so as to represent the many facets of surgery. The program director shall be highly qualified in surgery, certified by the American Board of Surgery, or have equivalent qualifications, and shall be dedicated to surgical education. He shall be institutionally based or his principal offices shall be located so that he is readily available to the resident staff. He shall be responsible for the work done and make staff appointments in the teaching department or service. He shall make resident appointments and assignments and be responsible for the proper conduct of the educational activities and for their supervision, direction and administration. In discharging these responsibilities, the program director should designate other well qualified surgeons to assist in the supervision of the resident staff on the minimum basis of one for each resident at the chief level.

Program directors, as well as surgeons appointed to the teaching staff, must have a real and demonstrated interest in teaching, personally provide the necessary time and effort to the educational process and set an example by engaging in scholarly pursuits such as (1) participation in their own continuing surgical education; (2) participation in regional or national surgical scientific societies; (3) presentation and publications of scientific studies; and (4)

demonstration of an active interest in research as it pertains to their own special surgical interests.

A program whose staff does not exhibit such characteristics will not be approved.

To be adequate, the teaching staff must be formally organized and meet regularly. The program director should customarily be appointed for at least the duration of the program plus one year. Key staff members must be appointed for a period long enough to insure adequate continuity in the supervision of the resident staff. Persons appointed or elected for short durations or in an "honorary" capacity cannot be considered adequate to serve as program directors or as key teaching staff members.

A teaching service shall be established and staff appointments to that service must be limited to those surgeons who meet the previous qualifications and who demonstrate in a practical manner that they are dedicated to the proper education of the residents and will provide access by the residents to their patients while providing the appropriate supervision. That service must achieve the proper balance between service and education, expressed both by actual operations performed by the resident staff and their role in active educational pursuits.

OUTPATIENT FACILITIES: To be adequate, a program must have both in-patient and out-patient activities. Active resident participation in out-patient services is an essential component of any program. Here, patients are to be seen by the resident staff, a provisional diagnosis established, appropriate diagnostic procedures initiated and a preliminary treatment plan made prior to admission to the hospital. An opportunity for follow-up care must be made available so that the results of surgical care may be evaluated by the responsible residents. Some training programs may use the emergency service or private staff offices in lieu of other out-patient facilities, but where the emergency service and the elective and follow-up facilities are separate, each functions more effectively and provides better experience for the residents; therefore, such an arrangement is preferred. The out-patient service must be complementary to the in-patient service and not a disconnected entity. An exposure to private or clinic office practice may be desirable so that the resident may become familiar with the patterns of private practice and when included should be so indicated in the program plan.

SPECIAL INFORMATION: Institutions which cannot provide totally adequate resources and clinical experience within their own facilities should make formal arrangements with other institutions to become "affiliates" of the program or even to join the program as an "integrated" component. Such affiliations or integrations must be approved by the Residency Review Committee prior to implementation. Ordinarily, the final clinical year must be accomplished in the parent institution. Special approval must be obtained from the Residency Review Committee if (1) a portion of the final year is spent at an affiliated program; (2) rotations to the affiliated program exceed six months; and (3) if more than one year total is spent away from the parent institution.

The number of positions in the training program must be approved by the Residency Review Committee. Changes in numbers of positions in existing programs are similarly subject to RRC approval. The Residency Review Committee permits modest variations from the approved numbers of PGY-1 and PGY-2 positions on a temporary basis only. Whenever the resident complement is decreased, the changes should be reasonably staged to project the PGY-3 and PGY-4 residents already in the program.

The numbers of PGY-1 and PGY-2 positions should be consistent with the number of chief residency positions as well as provision of prespecialty training to identifiable subspecialties.

Programs must strive for the highest possible quality of educational experience for the residents and will be judged by the reviewing authorities on this basis. One measure-

ment of the quality of a program is the performance of its graduates with respect to the certification process of the American Board of Surgery.

The provisions of the "General Requirements" must be met in addition to the above "Special Requirements" for a program to receive accreditation.

NOTE: Residents who plan to seek certification in surgery should communicate with the Secretary of the American Board of Surgery to determine the full and current requirements for certification.

Effective: July, 1983 ACGME: Nov. 1982

Revision effective: July, 1984 ACGME: Nov. 1983

Training Programs in Pediatric Surgery

General Characteristics of Approved Programs: Graduate programs in pediatric surgery should be designed to provide education in the principles of pediatric surgical practice.

There must be a clear demonstration by the trainee of competence in basic surgical knowledge prior to progression to the senior year level of supervised and semi-independent patient management and operative experience. Demonstration of competence in clinical pediatric surgery prior to completion of the program is required. Any program which does not establish an effective system of in-training evaluation cannot be considered to be adequate.

It is urged that the performance of each house officer be reviewed by the teaching staff at six month intervals and that a documented record of his performance be prepared and retained for review by appropriate accrediting and credentialing bodies. It is suggested that comments be included from other departments or services involved in his training.

It is strongly recommended that, in order to insure the proper relationship of basic sciences and other clinical disciplines to surgery the program be conducted in those institutions having a training committee advising and appraising all of its programs. Where possible, the committee should be composed of representatives speaking for pediatric surgery, pediatrics, radiology, pathology and infectious disease.

Duration of Training: At least two years of specialized training in pediatric surgery must be acquired in addition to that training required for qualification in general surgery. Eighteen months of the two years must be devoted to clinical pediatric surgery including the surgical specialties. Twelve months of this clinical training must be at the "Senior or Chief" pediatric surgical resident level with a high degree of responsibility for patient management and operative experience. The remaining six months of the two years may be devoted to clinical pediatric surgery or related disciplines or may be allocated to research.

Rotations of not more than three months of the total required twenty-four may be made to other institutions at the discretion of the program director. Rotations outside the parent program in excess of three months and not to exceed six months may be made only with the approval of the Residency Review Committee for Surgery. Assignment of residents outside the parent institution for periods of greater than six months, requires that the participating institution(s) receive prior approval of the Residency Review Committee for Surgery as "affiliates" of the parent program.

Scope of Training: The trainees must be provided with the opportunity for direct and responsible patient management experience so that they may attain detailed knowledge of congenital, neoplastic, infective and traumatic conditions of the gastrointestinal system and other abdominal organs; of the blood and vascular system; of the integument; of the respiratory system; of the endocrine glands; in gynecology; and of the head and neck. The trainee must gain an adequate understanding of the principles of and experience in the management of musculo-

Vascular Surgery

skeletal trauma; of head injuries; and of the more common problems in cardiothoracic, neurologic, orthopedic, plastic and urologic surgery in the pediatric age group.

It is expected that every trainee will have previously acquired adequate knowledge in the fundamental areas specified for general surgery. Additional education should be provided by the pediatric surgery program to include, but not be limited to, embryology; genetics; wound healing; hemostasis and blood disorders; immunobiology; oncology; transplantation; shock; circulatory physiology; muscle and bone mechanics and physiology; respiratory physiology; gastrointestinal physiology; genitourinary physiology; surgical bacteriology; surgical endocrinology; surgical nutrition; fluid and electrolyte balance; metabolic response to injury; applied surgical anatomy; pediatric pathology and antibiotic therapy as pertaining to the pediatric age group.

Surgical Staff: The staff which is responsible for the direction and execution of the pediatric surgical program must be well qualified and diversified so as to represent the many facets of pediatric surgery. The staff should be composed of qualified surgeons under the direction of a chief of service or training director who is institutionally based and certified by the American Board of Surgery as having "special competence in pediatric surgery." There should be at least one individual spending full time in the supervision and administration of the program regardless of the number of trainees.

It is essential that key staff members have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in appropriate regional or national scientific societies; (2) participation in their own continuing pediatric surgical education; (3) engage in scientific publications and presentations; and (4) show an active interest in research as it pertains to pediatric surgery. A staff which does not exhibit such characteristics will be cause of grave concern as to its adequacy and suitability for conducting a program of graduate pediatric surgical education.

The staff must be organized and at least the key members should be appointed for durations long enough to insure adequate continuity in the supervision of house staff. Persons elected or appointed for short durations in an "honorary" capacity cannot be considered adequate to serve as program directors or key teaching staff.

The Institution: An institution to have an approved pediatric surgical program must meet all requirements specified in the "General Essentials." In addition it must have intensive care facilities for the pediatric age group; a pediatric emergency facility; designated pediatric surgical beds; and pediatric anesthesiology capability. The institution should have a burn unit; inhalation therapy services; and social and physical medicine services. There should also be nuclear medicine support and the capability to carry out microanalytic determinations.

The Training Program: An acceptable program in pediatric surgery should include but not be limited to, the following structural educational activities on a regular basis: (1) proper emphasis on teaching rounds and bedside teaching; (2) supervision of residents' operative experience; (3) grand rounds; (4) weekly teaching conferences; (5) morbidity and mortality conferences; (6) chief of service rounds; and (7) other pertinent clinical conferences such as pediatric radiology, pediatric pathology and tumor board, etc.

Patient Volume: To be approved for training in pediatric surgery, an institution must provide an adequate number and variety of pediatric surgical patients. Arbitrary figures cannot reflect these conditions accurately, however, under usual circumstances, the general pediatric surgical service should perform at least 750 operations per year. The senior resident must be provided with a broad and varied experience. It is expected that he will be the responsible surgeon for at least 120 major pediatric surgical operations

during his senior year.

Special Information: As stated in the General Requirements for Residencies, it is not essential, or even desirable, that all institutions adopt exactly the same program content and structure. It is essential that all institutions participating in graduate education in pediatric surgery be able to meet the requirements for approval and either alone or in collaboration with other institutions, attain comparable results in the quality of education and experience obtained.

An important measurement of the quality of a program is the performance of its graduates on the examinations of the American Board of Surgery for Special Competence in Pediatric Surgery.

NOTE: All questions concerning the examination, or Certification for Special Competence in Pediatric Surgery should be addressed to The Secretary, American Board of Surgery, Inc.

Training Programs in General Vascular Surgery

General Characteristics of Approved Programs: Graduate training programs in general vascular surgery should be designed to provide the educational resources appropriate for the development of proficiency in the diagnosis and treatment of diseases of the arterial, venous, and lymphatic circulatory systems, exclusive of those components intrinsic to the heart, thoracic aorta and intracranial vessels. The foregoing definition is hereinafter referred to as the vascular system. The training objectives are most appropriately achieved through a structured program that is properly supervised and accredited. This may be accomplished either concurrently with, or after the completion of, a graduate educational program which meets the requirements for approval and accreditation in either general surgery or thoracic surgery.

Types of Programs: Appropriate education and training in general vascular surgery may be attained through four types of programs: (1) A program in general vascular surgery providing a chief (senior) residency in vascular surgery after the completion of an accredited residency in general surgery and/or thoracic surgery. This type of general vascular surgery program should not result in removal of patient material or operative experience required in the core program to such an extent as to adversely affect the competency of those residents completing the core program. It is recognized that certain general surgery and thoracic surgery programs especially rich in general vascular surgery may also qualify to train vascular surgeons within the context of existing programs. Under these exceptional circumstances, additional types of programs in general vascular surgery may be possible. (2) As a component of an accredited general surgery program in which the year of residency in general vascular surgery is preceded by a minimum of three and a half years of residency in general surgery, has no more than one break in the continuity, and in which the chief resident year satisfies the requirement of both the general surgery and general vascular surgery programs.¹⁴ (3) A general vascular surgery residency combined with cardiothoracic surgery training where patient material is adequate to fulfill the requirements of both areas of training.¹⁵ (4) The requirements for training in general vascular surgery may be fulfilled in the combination of an approved general surgery program and an approved thoracic surgery program in the same institution.

Duration and Scope of Training: Whichever of the four types of programs offered, the general vascular surgery

¹⁴This specialized training in general vascular surgery is in addition to the minimal requirements set forth in the "Special Requirements for Residency Training in General Surgery." Such a program shall be a minimum of five and a half years in duration.

¹⁵This specialized training in general vascular surgery is in addition to the minimal requirements set forth in the "Special Requirements for Thoracic Surgery."

program must be of sufficient duration to allow the trainee to acquire an acceptable level of skill in the diagnosis and treatment of vascular diseases. Type 1 and type 2 programs shall not be less than twelve months and shall be exclusively devoted to general vascular surgery. The minimum training period may not have more than one break in its continuity. In a combined training program with a particularly abundant and varied case load (types 2, 3 or 4), a fraction of the twelve months spent at a level below the chief (senior) year may be acceptable. Experience as a resident at levels of training earlier than the chief (senior) residency year must be at senior level responsibility in general vascular surgery to be acceptable. Special consideration for credit as senior level general vascular surgery applied toward the required twelve months will be granted by the Residency Review Committee only in exceptional circumstances. The program must provide instruction and require the trainee to become knowledgeable in the fundamental sciences, including anatomy, embryology, physiology and pathology, as they relate to the diagnosis and treatment of vascular lesions.

Familiarity with special diagnostic techniques is of great importance in the management of vascular lesions. It is essential that the trainee have an acquaintance with the methods and techniques of angiography and an expert knowledge of the interpretation of angiographic findings. The use of non-invasive diagnostic techniques such as echography, ultrasonic flow metering, and radioisotopic imaging and flow studies makes it highly desirable that the trainee also have a knowledge of these methods in order to understand not only their potential but also their limitations and hazards.

The minimum duration of residency in general vascular surgery as defined above must be clinical in nature. Research, laboratory, and non-vascular clinical assignments must not infringe on this requirement. Most importantly, the trainee must be provided with progressive senior surgical responsibilities in the four phases of total patient care consisting of patient evaluation, therapeutic decisions, operative experience and post-operative management.

Organization and Staff: To provide for an effective training program, a general vascular surgery service must be organized as an identifiable unit, even though it is within the framework of a larger administrative entity such as a department of surgery or general surgery or thoracic surgery. It is highly desirable that all patients with vascular disease available for teaching purposes be admitted to this unit so that the educational patient material may be centralized and utilized most efficiently. The general vascular surgery unit must be under the direction of a qualified vascular or cardiovascular surgeon certified by the American Board of Surgery or the American Board of Thoracic Surgery, or possessing equivalent qualifications, and dedicated to the teaching of general vascular surgery. The director of the general vascular surgery program must have continuous responsibility and authority for administrative and teaching policies of the service.

Privileges on the general surgery service accredited for teaching should be granted to surgeons only with the understanding that their patients are to be available for coordinated graduate education of the residents. Such a requirement is in no way intended to infringe upon the professional authority of the staff member responsible for the care of the patient. All members of the staff of the general vascular surgery unit with an accredited program must be highly qualified in general vascular surgery, dedicated to teaching, and must devote the necessary time and effort to the educational program. They should also engage in scholarly activities.

The objectives of a general vascular surgery training program can only be achieved when the program is based within an institution approved for graduate education in general surgery and/or thoracic surgery and also in the disciplines particularly related to surgery, namely internal

medicine, radiology and pathology. Programs in general vascular surgery are approved only as an integrated part of and administratively attached to the approved core program in general surgery or thoracic surgery.

Patient Population: The institution, department or service accredited to conduct a program of graduate education in general vascular surgery must be able to provide a sufficient number and variety of vascular surgery patients to insure that the residents have an adequate exposure to a wide spectrum of lesions of the vascular system in order that they may acquire a high level of skill in their diagnosis and management. It is desirable that the resident gain an ample degree of out-patient diagnostic and follow-up experience.

Operative Experience: The resident must be afforded the opportunity to have chief (senior) resident responsibility in the operative management of a wide range of cases that involve the commonly employed reconstructive and non-reconstructive vascular procedures that include within the scope of general vascular surgery the arterial, venous, and lymphatic circulatory systems, briefly called the vascular system, and are exclusive of those components intrinsic to the heart, thoracic aorta, and intracranial vessels. Chief or senior resident operative experience is defined as activity in the course of which the resident functions as the operating surgeon or performs critical technical portions of the operation while serving as first assistant. With respect to vascular reconstructive cases, a minimum of 70 procedures (exclusive of hemo access operations) with senior operative experience as defined is an adequate base for the acquisition of the necessary skills. The demands of the acquisition of the necessary judgment in treating vascular diseases dictate that the total operative and non-operative experience of the resident must be considerably greater than the number of cases defined as the minimal requirement for senior operative participation. This experience should represent a healthy balance of the spectrum of vascular disorders in proportion to the frequency of their occurrence in the general population and should be evenly distributed over the twelve month period of training.

Shared Programs: If the clinical and operative experiences in the training of the residents are shared between services in two or more hospitals integrated (as defined in the "General Requirements") with the core program, the combined experience must fulfill the organizational and educational requirements listed above.

Special information: (a) The Residency Review Committee for Surgery will be the reviewing body. When programs in general vascular surgery are being reviewed, there will be a cooperative arrangement whereby the Residency Review Committee for Thoracic Surgery will be appropriately represented and involved by the participation of members designated for this purpose by the Residency Review Committee for Thoracic Surgery in the numbers as mutually agreed upon by the Residency Review Committees for Surgery and for Thoracic Surgery. (b) Programs meeting the requirements specified above and having received the approval of the Residency Review Committee will be identified. A list of these programs will be maintained by the Secretary of the Residency Review Committee for Surgery and will be published in the *Directory of Residency Training Programs* where they will be separately identified as accredited general vascular surgery residencies (types 1, 2, 3 and 4).

Effective: July, 1983 *ACGME:* November, 1982

8. Special Requirements for Residency Training in Internal Medicine

Residencies should be organized to provide experience in the broad field of internal medicine and those ancillary areas necessary for its function as a primary care specialty. The major criterion for an acceptable residency program in

Internal Medicine

internal medicine is the provision of a well supervised, progressive educational experience of not less than three years duration. Such programs must provide an intellectual environment for properly teaching and learning skills and attitudes which are essential to the practice of internal medicine. The social and economic impact of disease on the patient and society as well as the efficient delivery of superior cost-effective medical care should be emphasized. These objectives can be achieved only when the leadership, the attending staff and the administration are committed to the educational program and when the proper resources and facilities are present. The objectives cannot be achieved when the residency functions primarily as a service oriented activity.

Although rigid criteria for graduate medical education are not desirable, certain specific factors are essential to the success of a program. These are discussed below:

1. *Administration:* The administration of the sponsoring institution(s) should be understanding of and sympathetic to the attainment of educational goals and should evidence the willingness and ability to support these goals philosophically and financially. Additionally, the administrative structure must be such that the program director has adequate authority to organize and oversee the activities of the educational program.

2. *Faculty:* (A) *The Program Director:* The program director is responsible for the quality of both patient care and teaching in the program. The strength of the medical service is directly related to the professional competence and leadership qualities of the program director, whose tenure should be such as to insure continuity for the program. The program director may be on a full-time or part-time basis, but must be willing and able to spend the many hours required to organize, supervise and implement a good training program. An increasing number of institutions are finding a full-time chief of service and program director to be a major asset to the training program. If there is a change in program directors, the Residency Review Committee for Internal Medicine must be notified in writing immediately.

(B) *Section Heads:* Both general medical and subspecialty sections should be well organized under the direction of qualified physicians. As with program directors, such section heads and other key professional personnel in the department must have adequate clinical training and teaching experience, must participate actively in appropriate scientific societies, must keep up-to-date through their own continuing medical education and must exhibit active interest in medical research related to their specialty. It is essential that they be able to develop in the resident the attitude of the scholar, scientist, teacher and humanist. Additionally, it is their responsibility to develop in the resident clinical judgment and technical skills as well as medical knowledge. Finally, they must assure the resident's acquisition of proficiency in interpersonal relationships and in the organization and management of patient care. As with program directors, section heads may be on a full-time or part-time basis, but an increasing number of institutions are finding full-time section heads to be a major asset to the training program.

(C) *Teaching Staff:* Physicians assigned to the teaching service should be appropriately qualified internists by talent, training and professional experience to discharge assigned responsibilities. They should be committed to the purposes and goals of the teaching program. These physicians must be willing to accept the principle of meaningful patient responsibility for residents in training. They should assist the program director and section heads in the education and development of the resident as described above.

3. *Clinical Resources:* (A) *Patient Population:* The patients encountered during the period of residency training must be of sufficient number and exhibit a sufficient variety of clinical problems to provide broad experience for

the resident. The patient population should incorporate adequate numbers of patients of both sexes and a wide spectrum of ages, including those in the adolescent and geriatric age groups.

(B) *Areas of Observation:* Patients should be seen not only in the in-hospital environment and critical care areas but also in emergency departments and in the ambulatory setting. A geographic concentration of patients assigned to a given resident is highly desirable; it promotes effective teaching and fosters meaningful interaction with allied health personnel.

4. *Facilities:* (A) *The Physical Plant:* The physical plant should be planned and constructed to assure proper medical care as well as safety and comfort for the patient. There must be adequate space and equipment for up-to-date diagnosis and therapy. Additionally, there must be adequate space and equipment for the educational program, including appropriate meeting rooms and classrooms with visual and other educational aids.

(B) *Medical Records:* The medical records department should be supervised by a qualified medical record librarian. Clinical records must be readily available and should be comprehensive and organized. Effective indices should permit the collection and evaluation of selected material from clinical records.

(C) *The Medical Library:* The medical library should be located in the institution in such a way that it is readily accessible to the resident staff. There must be a means of access during those times when the library is not open and staffed. The library should contain a representative selection of books and journals on internal medicine, such as the selection listed in the Library for Internists prepared by the American College of Physicians and published periodically in the *Annals of Internal Medicine*. Where appropriate, there should be an interlibrary loan system through the facilities of a nearby resource or regional medical library such as a medical school or national library. An *Index Medicus* should be present for reference use in locating medical literature. In addition to books and journals, a library of pertinent audio-tapes, video-tapes and films together with the equipment necessary for their use is desirable.

5. *Supporting Services:* The pathologic laboratories, both clinical and anatomic, the radiologic laboratories and other diagnostic laboratories in the hospital are important parts of the residency program. Each should be headed by qualified individuals. Such individuals should not only assure the quality of work done in their section by adequate personal supervision but also be willing and able to participate in educational exercises of the medical services as well as of their own department or section. The quality of these services, the interest and teaching ability of their staffs, and the degree to which they are correlated with clinical medicine are integral to the medical program.

Autopsies should be performed whenever possible. They must be of sufficient number to provide an adequate educational experience and to assure the quality of patient care. Autopsies are needed for unresolved diagnostic problems and may well answer questions even in those instances where a definite diagnosis has been made antemortem. The carefully performed autopsy contributes significantly to the clinical acumen of the resident. Residents should be present at autopsies performed on their patients. It is most important that clinical and mortality conferences based upon autopsy data be held regularly.

6. *Consultative Services:* Adequate consultations from other clinical services must be available. These contribute significantly to the intellectual environment.

7. *Other Graduate Educational Programs:* Additional residency programs should be present. These additional programs permit increased peer interchange and augment the breadth of the educational experience.

8. *The Curriculum and the Teaching Program:* (A) *General Principles:* Inasmuch as the ability to care for the

whole patient is one of the distinguishing characteristics of the internist, ample opportunity for education in the broad field of internal medicine must be provided. This experience is fostered by rotations on general medical services, both in-patient and out-patient, with exposure to a wide spectrum of disease. In most instances, such in-patient rotations should be of at least six weeks duration.

Emphasis should be placed on the maintenance of health and on the study of etiology, pathogenesis, clinical presentation and course of various diseases so that the resident may develop skill in diagnosis as well as mature judgment and resourcefulness in therapy. The importance of taking and recording a thorough medical history and performing a careful and complete physical examination cannot be overemphasized. Such examinations and medical records must be carefully supervised. Neglect of these fundamentals in favor of supplementary information supplied by a multiplicity of clinical laboratory and radiological procedures cannot be accepted.

Peer contact and discussion is as important to the learning process as contact with teaching faculty. There must be enough medical residents in the program to provide for frequent and meaningful discussions as well as appropriate coverage for adequate patient care. As a minimum it is suggested that there be a total of six, with two in each year of training.

The patient load for each first year resident should be such as to allow time for close and effective management and detailed study of patients and yet challenge the resident to be busy with diverse and complex problems. Generally speaking, a first year resident should be responsible for ten to fifteen patients, depending upon the average length of stay and the nature and severity of the illness. A lower number may be appropriate in critical and intensive care situations. Second and third year residents may be involved in the care of substantially more patients than a first year resident.

It is important that each resident have the opportunity to follow patients on a long-term basis, to observe and learn the natural course of disease. Such long-term observations should include following patients from the ambulatory to the in-patient environment as well as from the in-patient to the ambulatory environment.

(B) Specific Experience: (1) Subspecialty Experience: Education in the various subspecialty divisions of Internal Medicine is a vital part of the training program. These include allergy and immunology, cardiology, endocrinology and metabolism, gastroenterology, hematology, infectious diseases, nephrology, oncology, pulmonary diseases, and rheumatology. Most rotations on these subspecialties should be of at least six weeks duration. Although it is not necessary that each resident rotate through all of these subspecialties, it is important that there be exposure to the specialized knowledge and methods of a sufficient number of the recognized medical subspecialties to gain experience with their contributions to the effective care of patients. Vital to the success of subspecialty activity are well qualified subspecialists with an interest in teaching who devote sufficient time to all aspects of the service. They should have adequate assistance by well-trained colleagues and access to appropriate clinical laboratories. Not every hospital with an approved medical residency must or will have special laboratories for each of the subspecialties mentioned; it is essential, however, that the resident be exposed to patient care utilizing such subspecialty support. This may be accomplished by the sharing of facilities among departments or cooperating institutions.

(2) Experience in Other Specialties: To achieve breadth of competence, there should be available experience in areas related to internal medicine, such as neurology, psychiatry and dermatology; also medical ophthalmology, otorhinolaryngology, non-operative orthopedics and office gynecology. Most of this experience may be obtained in an ambulatory setting.

(3) Consultative Experience: Crucial to the complete internist is his ability to act as a consultant to other physicians. The resident's experience should include the opportunity to act with appropriate supervision as consultant to other clinical services. This requirement may be satisfied either by a specific assignment as medical consultant to other services or as a part of the responsibility while on subspecialty rotations.

(4) Experience With Ambulatory Patients: Residency programs must offer adequate experience in the ambulatory setting. Such additional experience permits greater appreciation of the natural history of disease and greater familiarity with the common problems encountered in the practice of internal medicine. It allows the resident the opportunity to see earlier manifestations as well as socioeconomic and psychiatric aspects of disease that may not be apparent in the hospitalized patient. It is mandatory that there be closely supervised experience with both general medicine and subspecialty patients. As with the in-patient services, there should be an active teaching program by qualified on-site staff. The patient volume and spectrum in the ambulatory environment should be large enough to provide each resident with an adequate number and variety of new patient visits in addition to patient follow-up care. The continuity experience should be at least a half day per week. It is desirable that the experience be structured to permit the residents to follow patients from the ambulatory setting, through hospitalization, and back to the ambulatory setting in order for the residents to achieve continuity of care. Both in-patient and out-patient records should be kept in such a manner as to facilitate this continuity of care. Organizing this experience may require assignments to a clinic or other ambulatory setting during all or most of the residents' educational program. The conditions under which ambulatory patients are managed should emulate those of office practice and may indeed take place in the office of practicing physicians. In any such situation, adequate nursing, clinical and ancillary personnel as well as adequate space must be provided. Where preceptorial conditions prevail, the supervisor must be accountable and the experience subject to audit.

(5) Emergency Department Experience: The resident must have experience with and first-contact responsibility for the diagnosis and management of all types of patients seen in an active emergency department. The emergency facility in the educational institution should meet the standards outlined by the Joint Commission on Accreditation of Hospitals. The resident should be assigned to the emergency department for a period of at least one month. The resident should participate in the decision to admit patients to the hospital. Senior residents in medicine should have additional experience in the emergency department. There should be careful supervision by staff acceptable to the program director. Consultations should be readily available both from and to other specialties. When appropriate and possible, the follow-up for such patients by the same resident should be arranged.

(6) Intensive Care Experience: The resident should participate directly in the care of patients with various illnesses in intensive care units. Such an educational experience should be conducted with adequate supervision and with ample consultation available. As with other parts of the educational program, there should be appropriate teaching rounds and conferences.

(7) Special Educational Experience: The ultimate responsibility for special educational tracks, such as those emphasizing primary care in the ambulatory setting, rests with the program director of the internal medicine program. The Residency Review Committee will consider special educational tracks to be part of internal medicine programs in its review and recommendations concerning accreditation.

(C) Educational Exercises: (1) Rounds: Patient teaching rounds and patient management rounds are integral to a good training program.

Internal Medicine

Patient teaching rounds are primarily educational. They should be formal and led by attending physicians selected for their knowledge of medicine and skill in bedside teaching. They should be regularly scheduled at a time reserved exclusively for this activity. There should be continuity and adequate contact between residents and faculty. Furthermore, it is desirable that the rotations assigned to the residents and their attendings more or less coincide to permit the greatest amount of time for evaluation. For example, in many programs the educational objectives can be achieved with teaching rounds conducted three times per week, with each session at least one and one half hours long and with the same teaching attending on service for at least four weeks, but preferably six weeks. It is desirable that the teaching physician see patients other than his/her own although the teaching physician's own patients may be included. Generally teaching rounds are selective rather than comprehensive so that the number of patients seen permits adequate time for discussion of such things as completeness and validity of clinical data, pathophysiology and differential diagnosis of the disease, and specific pharmacologic, dietary and social management of the patient. Teaching rounds should include direct interaction with the patient by the attending who evaluates the history and physical examination. It is of fundamental importance that the dignity of the patient-physician relationship be preserved. Patient management rounds are designed for day-to-day care of patients and should be coordinated to allow the resident to interact with other residents and with the physician of record for the patient.

The functions of teaching rounds and patient management rounds must be separately identifiable.

(2) *Conference and Seminars:* Departmental conferences and seminars and literature review activities covering both general medicine and the subspecialties must be regularly scheduled. These should promote an active interchange of information between members of the department; active resident participation in both the planning and the production of such conferences is essential. Proper structuring of these conferences should permit the incorporation of study of the basic sciences including the pathophysiology of disease processes and review of recent advances in medicine. Similarly, clinical pathological conferences and death conferences must be regularly scheduled. The resident's schedule must be such as to permit attendance at such conferences.

(D) *Basic Sciences and Research: (1) Basic Sciences:* Study of the basic sciences should be part of the clinical education of the resident. This is most effectively provided in an integrated manner at the patient's bedside and in conferences. Resident preparation for conferences should include reviewing and expanding scientific knowledge with key references to the basic science underlying specific clinical topics.

(2) *Research:* Research activities are supportive of a residency program. Research provides a healthy climate for an intellectual experience. Critical thinking tends to flourish in such an environment not only for the resident but also for members of the teaching staff. Active resident participation in clinical research projects with the advice and supervision of the teaching faculty is encouraged.

9. *Resident Responsibility: (A) Meaningful Patient Responsibility:* Professional growth with the attendant development of mature clinical judgment requires that residents, properly supervised, be given a degree of responsibility in patient care commensurate with their ability. This can be achieved only if the resident is realistically involved in the decision-making process. The residency must be mainly an educational experience; service responsibilities must be limited to patients for whom the resident bears major diagnostic and therapeutic responsibility. Residents must be given the responsibility for direct patient care including planning and management, both diagnostic and therapeutic.

This experience on general internal medicine services and a combination of related subspecialty services must be relevant to the attainment of clinical competence in the broad field of internal medicine. Each resident must have a minimum of 24 months of such meaningful patient responsibility.

(B) *Duty Hours and Personal Responsibility:* It is necessary that the resident staff have a keen sense of personal responsibility for patient care. If the residents do not accept this responsibility, no number of scheduled rounds and conferences nor devoted teaching by the attending staff can produce sympathetic and effective physicians. A resident's obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. Duty hours and night and weekend call must be sufficient to permit implementation of the concept of responsibility for patients and to provide for adequate patient care; every third or fourth night is recommended. In no case should the resident go off duty until the proper care and welfare of the patients have been assured.

Residency is a full-time responsibility; outside activities which interfere with optimal performance in the residency can not be condoned. The residents' activity outside the educational program should not be allowed to interfere with their performance in the educational process as defined in the agreement between the institution and the resident.

(C) *Progressive Responsibility:* The degree of responsibility both professional and administrative accorded to a resident should be increased progressively with each year of training. Included should be such areas as patient care, leadership, teaching, organization and administration. This goal can be achieved by senior residents supervising junior residents or by the senior residents acting as consultants to junior residents, particularly in the subspecialty areas. Residents from other disciplines must not supervise internal medicine residents on internal medicine services.

10. *Evaluation of the Resident:* This evaluation should concern itself not only with intellectual abilities and manual skills but also with attitudes and interpersonal relationships. Included should be close observation of the resident performing specific tasks of patient management such as history and physical examination, choice of diagnostic studies, formulation of differential diagnoses or problem lists, development of plans for short and long-term medical management, etc. Residents should often be made aware of their progress and particularly of any weaknesses. Adequate records must be maintained both of the results of the evaluation process as well as of the contents of personal interview with the resident.

11. *Medical School and Institutional Affiliations:* Medical school affiliation is not required for approval of a training program. Such affiliations are desirable if they offer a type of quality control or if they satisfy certain identified deficiencies in a given training program. Particularly desirable is a cooperative educational effort with faculty participation. Interhospital affiliations may correct the same type of deficiencies.

12. *Totality of Educational Program:* The training program should place emphasis on the whole patient and should take into consideration not only medical problems but also cultural, social and economic background and the impact of medical problems upon other aspects of life with special emphasis on family. The training program should include significant exposure to both the preventive and the rehabilitative aspects of medicine. The resident should become familiar with disease processes associated with various environmental stresses and with methods for their control. In the same manner the resident should be familiar with the procedures and efficacy of medical rehabilitation.

The resident must learn to apply cost-effective measures to medical care, not only as they apply to the patient but also as they apply to the selection of procedures and studies in both the in-hospital and ambulatory environment.

The resident should learn to function in harmony with other members of the health care team. He should learn to recognize and understand the contributions of nursing personnel, laboratory personnel, physical and respiratory therapists, and hospital administrators.

At the conclusion of 36 months in an accredited program in internal medicine the resident should have had experience in the prevention of illness, in the detection and the treatment of illness, in the rehabilitation of patients, as well as in the socioeconomics of illness and the team approach to the provision of medical care.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by the American Board of Internal Medicine should communicate with the Registration Section of the Board. Those who wish certification by a subspecialty board of the American Board of Internal Medicine must first be certified in internal medicine and should also apply to the Philadelphia office of the American Board of Internal Medicine.

Effective: July, 1980 ACGME: May, 1980

Special Requirements for Graduate Education in the Subspecialties of Internal Medicine

I. GENERAL INFORMATION

A. Programs of graduate education in the subspecialties in internal medicine should be offered only in the institutions where there are accredited residency training programs in internal medicine, or should be related by formal agreement to such institutions and training programs. Accordingly, accreditation of subspecialty programs will be granted only when the program is in direct association with a residency training program in internal medicine accredited by the Accreditation Council for Graduate Medical Education.

B. Subspecialty training in internal medicine is a component in the continuum of the educational process; therefore, ordinarily such training will take place on completion of accredited graduate education in internal medicine. Since there will be a close relationship with the residency in internal medicine, exceptions may be recognized wherein subspecialty training may be taken prior to the completion of the internal medicine residency.

C. Subspecialty programs will be considered for accreditation only in subspecialty areas which meet the requirements for accreditation as established by the Accreditation Council for Graduate Medical Education. Accreditation will apply only to those subspecialty programs which are an integral part of an accredited residency program in internal medicine and in subspecialty areas in which certificates of special competence are given by the American Board of Internal Medicine.

D. The principles enumerated in the Special Requirements for Graduate Education in Internal Medicine are also applicable to training in the subspecialties. In conformity with the Special Requirements, training programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment and attitudes which are essential to the practice of the specific subspecialty. This objective can be achieved only when the program leadership, the supporting staff and faculty and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the training program is established and functions primarily to meet service commitments.

The following factors, as described in the Special Requirements for Graduate Education in Internal Medicine, require further emphasis:

1. The program director must be qualified to supervise and educate trainees appropriately in the specific subspecialty. The director of the subspecialty pro-

gram must be certified in that subspecialty or possess suitable equivalent qualifications. These directors will be responsible for the adequacy of the facility including support resources necessary for the provision of an education of high quality. There should be sufficient qualified professional personnel to constitute a training faculty and to allow for the critical evaluation of the progress and competence of the trainees. As with program directors in internal medicine, it is essential that subspecialty program directors devote sufficient time and effort to the graduate education program and related activities. It is desirable that subspecialty program directors be full time.

2. The program must provide advanced training to allow the physician to acquire expertise as a consultant in a specific subspecialty. This training should consist of two major components. First, it should emphasize scholarship, self-instruction, development of critical analysis of clinical problems and the ability to make appropriate decisions. Second, the training should ensure skillful performance of the techniques required for the practice of the subspecialty.

E. Subspecialties are often expected to provide comprehensive medical care to patients in their subspecialty area. Therefore programs should provide opportunity for trainees to maintain their skills in general internal medicine as well as the internal medicine aspects of their subspecialties.

Programs will be evaluated on the availability of the following components:

1. A sufficient number of new and follow-up patients of a wide age range must be present to assure appropriate inpatient and outpatient experience for each trainee.
2. Subspecialty conferences, seminars and literature review activities covering the subspecialty must be regularly scheduled; active subspecialty trainee participation in both the planning and the production of conferences is essential. Attendance at multidisciplinary conferences is encouraged, with particular attention given to those problems that bear directly on the subspecialty concerned.
3. In preparation for roles as consultants to other specialists, subspecialty trainees should have the opportunity to provide consultation, supervised by staff members. They should become experienced in teaching, which may include experience with undergraduate medical students, graduate medical staff and allied health personnel. This experience should attempt to correlate basic biomedical knowledge with the clinical aspects of the subspecialty, including the integration of clinical management principles which should be applicable to patients of all age groups.
4. There must be close interaction between the parent program in internal medicine and the subspecialty program; lines of responsibility by resident staffs in both internal medicine and trainees in subspecialty programs must be clearly delineated. In addition, close working contact during the training period with trainees in accredited programs in other disciplines such as radiology, pathology, surgery, pediatrics and others is strongly encouraged; where appropriate, supervision and teaching by expert faculty in these disciplines should occur.
5. The training program in a subspecialty should have an investigational component. Trainees should learn the design and interpretation of research studies, evaluation of investigative methods and interpretation of data, and develop competence in critical assessment of new therapies and the medical literature. Active subspecialty trainee participation in research

Internal Medicine: Cardiology/Endocrinology and Metabolism

projects with the advice and supervision of a qualified staff is encouraged.

6. Trainees must have supervised training in the execution of procedures and perfection of technical skills where these are integral to the discipline involved. Even though the trainee in future practice will not perform all of the technical procedures of this field on a continuing basis, the trainee must have an understanding of the common technical procedures of the subspecialty, their indications, risks and limitations, and judicious utilization of technical resources.
- F. Program directors must establish procedures for the evaluation of the clinical competence of the subspecialty trainees. This evaluation should involve intellectual abilities, manual skills, attitudes and interpersonal relationships, as well as specific tasks of patient management, decision-making skills and critical analysis of clinical situations. There must be provisions for appropriate feedback of this information to the subspecialty trainee.
- G. Policies pertaining to the accreditation of subspecialties.

1. Subspecialty training program report forms will be distributed to the program director of the internal medicine residency program. It will be the responsibility of the program director of internal medicine to coordinate the collection of information from all subspecialty programs that wish to be accredited. An on-site inspector will review the entire program in internal medicine to coordinate the collection of information from all subspecialty programs that wish to be accredited. An on-site inspector will review the entire program in internal medicine, including subspecialties, and forward to the Residency Review Committee-Internal Medicine (RRC-IM) the statistical and narrative reports for all aspects of the program. The RRC-IM will review the program in its entirety and make a recommendation for accreditation of the internal medicine program and its subspecialties. Subspecialty programs will be accredited only if the program in internal medicine is accredited. An internal medicine residency program may achieve and retain accreditation without any approved subspecialty programs.
2. Loss of accreditation of the internal medicine residency will result in loss of accreditation of all subspecialty programs related to that residency. The accreditation status of subspecialty programs may equal but not exceed the accreditation status of the parent internal medicine program.
3. Review cycle for subspecialty programs will coordinate with the review cycle for the internal medicine training program with provision for separate review of a subspecialty program when major changes occur.
4. Progress reports may be used to obtain additional information regarding program progress and development.

Training Programs in Cardiology**1. EDUCATIONAL PROGRAM**

A subspecialty educational program in cardiology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of adult cardiovascular disorders, as well as the effectiveness of therapeutic programs.

The program should be structured to permit some individuals to develop procedural and technical skills essential to performance of one or more forms of invasive cardiac diagnostic studies: hemodynamic, angiographic and electrophysiologic. All trainees must have the opportunity to

acquire skill in the interpretation of data derived from these invasive studies, as well as skill in acquisition, and interpretation of data derived from other clinical modalities associated with cardiology.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be laboratories for cardiac hemodynamics and angiography, including vascular angiography. There should be provision for non-invasive cardiac procedures, including echocardiography, electrocardiography, and exercise tolerance testing. Additional facilities for electrophysiologic studies are desirable. Other resources should include facilities for assessment of peripheral vascular disease, pulmonary physiology, cardiac roentgenography and nuclear cardiology. Clinical care units should include coronary intensive care facilities, cardiac surgery intensive facilities, resources for cardiac rehabilitation and facilities for assessment for hypertension, and pathophysiology of heart rhythms and pacemakers. Close association and participation in a cardiovascular surgical program is an important component of a cardiovascular training program.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide opportunities for the individuals to develop clinical competence in the overall field of adult cardiology. Procedural and manipulative skills with intravenous, intra-arterial and intracardiac catheterization may receive emphasis in the program, depending on the intended area of practice of the subspecialty trainee. Competence in the indications for, and the interpretation of data from such studies is an important part of the subspecialty educational program. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. Cardiac hemodynamics and angiography.
- b. Interpretative skills in electrocardiography, EKG stress testing, echocardiography, radiographic and nuclear studies of the heart and blood vessels.
- c. Invasive and non-invasive electrophysiologic studies.
- d. The pathophysiology, pathogenesis, natural history, diagnosis, management and prevention of diseases of the heart and blood vessels.
- e. Diagnosis and management of peripheral vascular disease.
- f. Cardiac resuscitation techniques and elective cardioversion.
- g. Management and placement of cardiac pacemakers.
- h. Coronary Care Unit management.
- i. Congenital heart disease.

Training Programs in Endocrinology and Metabolism**1. EDUCATIONAL PROGRAM**

A subspecialty educational program in endocrinology and metabolism must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of endocrine and metabolic diseases on an inpatient and outpatient basis. The trainee should be given an opportunity to assume responsibility for and follow patients throughout the training period in order to observe the evolution and natural history of these disorders as well as the effectiveness of the therapeutic programs.

The program should include major emphasis on biochemistry and physiology as they relate to endocrinology and metabolism. Appropriate utilization of laboratory tests, radionuclide and radiologic studies for the diagnosis and

treatment of endocrine and metabolic disease should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources, and facilities for adult, adolescent and pediatric patients. Specifically, there should be a complete biochemistry laboratory; facilities for radioimmunoassay, nuclear medicine, karyotyping, sonography; a radiology service with radiologic studies available for all types of endocrine diseases; services of a qualified dietician and specialists in all the subspecialty surgical fields necessary for the diagnosis and treatment of endocrine diseases and metabolic disorders as well as a skilled pathologist to interpret such surgical specimens. In addition, there should be close liaison with the pediatric and gynecologic services for the diagnosis and treatment of endocrine and metabolic diseases in children and women.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide opportunities for the trainees to develop clinical competence in the overall field of endocrinology and metabolism. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. Disorders of all endocrine glands, including pituitary, thyroid, pancreas, adrenal and gonads.
- b. Diabetes mellitus and hypoglycemic syndromes.
- c. Disorders of the parathyroids; and bone and renal calculus disease.
- d. Disorders of fluid electrolyte metabolism, including hypertension.
- e. Disorders of lipid carbohydrate and protein metabolism.
- f. Nutritional disorders and therapy.
- g. Neuroendocrinology.
- h. Hormone-producing malignancies and the use of endocrine therapy in cancer.
- i. Human sexuality.
- j. Endocrine physiology in systemic diseases.

Training Programs in Gastroenterology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in gastroenterology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration. Clinical experience should include opportunities to observe and manage patients with a wide variety of digestive disorders on both an inpatient and outpatient basis. The trainees should be given the opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of gastroenterologic disorders, as well as the effectiveness of therapeutic programs.

The program should include emphasis on the pathogenesis, manifestations and complications gastrointestinal disorders, including behavioral adjustments of patients to their problems. The impact of various modes of therapy and the appropriate utilization of laboratory tests and procedures should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources.

Specifically, there should be a procedure laboratory completely equipped to provide modern capability in gastrointestinal procedures. Modern radiographic services should be available.

Facilities for intensive care critically ill patients with gastrointestinal disorders must be provided. In order to allow interface with other disciplines, the training program

must be conducted in settings in which there are other services such as surgery, oncology, pediatrics, radiology and pathology.

3. SPECIAL KNOWLEDGE AND SKILLS

The training program must provide for trainees to develop clinical competence in the overall field of gastroenterology, including hepatology, nutritional disorders and gastrointestinal oncology.

- a. Experience should be available which will develop the trainee's knowledge and understanding of the prudent and judicious use of special instruments and tests in the diagnosis and management of gastroenterologic disorders. Procedural and technical skills are important and may receive different emphasis in different programs depending on the intended area of practice of the subspecialty trainee. Competence in the indications for, and the interpretation of data from such studies is an important component of the subspecialty educational program. This includes knowledge of complications and the costs of treatment. Examples include endoscopic procedures, liver and mucosal biopsies, gastric, pancreatic and biliary secretory tests, and other diagnostic and therapeutic procedures utilizing enteral intubation and bougienage.
- b. Knowledge of the importance of radiologic examination of the digestive system, including appreciation of the risk and expected yield of such procedures and factors which interfere with accuracy. This experience should be extended to vascular radiology, nuclear medicine, ultrasound and other modalities which offer diagnostic techniques important to gastroenterology.
- c. Experience and knowledge of various common and uncommon gastroenterologic diseases, including cancer of the digestive system, various surgical procedures employed in relation to the digestive system disorders, natural history of digestive diseases in children and a knowledge of factors involved in nutrition and malnutrition.

Training Programs in Hematology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in hematology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of blood diseases on an inpatient and outpatient basis. The trainee should be given the opportunity to assume continuing responsibility for acute and chronically ill patients in order to observe the evolution of blood diseases as well as the benefits and adverse effects of therapy.

The program should include emphasis on basic physiologic mechanisms and therapy of diseases of the blood. Appropriate utilization of laboratory tests, biopsies and procedures used for the diagnosis and treatment of hematologic disorders should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, the resources which should be available to the program include hematology and coagulation laboratories; pathology department including the blood bank; diagnostic and therapeutic radiology services; and nuclear medicine services. In addition, there should be an oncology program to which the hematology trainee can relate formally in an educational experience.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide opportunities for the trainees to develop clinical competence in the overall field of hematology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

Internal Medicine: Infectious Diseases/Nephrology/Oncology

- a. Diseases of the blood, including anemias, diseases of white cells and disorders of hemostasis and thrombosis.
- b. Neoplastic diseases of the blood and blood forming organs.
- c. Genetic aspects of hematology.
- e. Immuno-hematology.
- f. Blood Bank techniques.
- g. Bone marrow biopsy and interpretation
- h. Coagulation tests, regulation of anticoagulant therapy, evaluation of autoantibodies and blood compatibility.
- i. Knowledge of clinical pharmacology including cytogenetics, toxicity, and the limitations of drugs used in therapy.
- j. Management treatment protocols.

Training Programs in Infectious Diseases**1. EDUCATIONAL PROGRAM**

A subspecialty educational program in infectious diseases must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of infectious diseases on both an inpatient and an outpatient basis for adults. Experience with pediatric infectious diseases is encouraged. The trainees should be given the opportunity to observe and learn the natural history of diseases and the benefits and complications of therapy.

The program should include emphasis on the basic concepts of immunology as well as an understanding of theory and practice of epidemiology. Training in vital statistics as applied to public health should be available. Appropriate utilization of laboratory tests as they relate to the diagnosis and treatment of infectious disease should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for adult and pediatric patients. Specifically, there should be access to a laboratory for clinical microbiology, including diagnostic bacteriology, immunology, mycology, parasitology and virology. Although a geographically defined infectious disease patient unit is not a requirement, facilities for isolation of patients with communicable diseases are necessary. It is desirable that the training program be conducted in a setting in which programs in surgery, obstetrics and gynecology, pediatrics and other medical and surgical specialties and subspecialties are available.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide opportunities for trainees to develop clinical competence in the overall field of infectious diseases. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. Factors that determine the outcome of the interaction between host and parasite; the effects of disease states and immunosuppressive therapies on host responses to infectious agents; experience with mechanisms of enhancement of resistance by immunization.
- b. Mechanisms of action and adverse reactions of antimicrobial agents.
- c. Procedures such as transtracheal aspiration, thoracentesis, arthrocentesis, spinal tap and aspiration of abscess cavities.
- d. Methods of determining antibacterial activity of a drug.

- e. Techniques to determine concentration of antibiotics in blood and other fluids.
- f. Cultural techniques (and methods for identification in tissues and fluids) for bacteria, mycobacteris, fungi, viruses, rickettsia, chlamydia and parasites.
- g. Standard pharmacology studies to determine absorption and excretion of antibiotics.
- h. Recently developed technologies, such as the detection of antigen by means of counter immunoelectrophoresis.

Training Programs in Nephrology**1. EDUCATIONAL PROGRAM**

A subspecialty educational program in nephrology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of kidney related diseases on an inpatient and outpatient basis. The trainees should be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of renal disease as well as the effectiveness of therapeutic programs.

The program should be structured to permit individuals to gain experience in the performance and interpretation of laboratory tests and biopsies, including personal experience with these procedures. There should be close liaison with other disciplines including surgery, urology, obstetrics and gynecology, pediatrics and psychiatry.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be facilities for acute and chronic hemodialysis programs; provision for peritoneal dialysis; a radiology service which can provide modern renal-related procedures; a diagnostic radioisotope laboratory; and the opportunity to become familiar with renal transplantation procedures.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for trainees to develop clinical competence in the overall field of nephrology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. Pathogenesis, natural history and management of congenital and acquired primary renal disease and renal diseases associated with systemic disorders.
- b. Disorders in electrolyte and acid base regulation including knowledge of renal physiology.
- c. Hypertension of all origins and its complications as well as treatment programs.
- d. The effect of renal function and renal disease on the pharmacokinetics of drugs as well as the effects of drugs on renal structure and function.
- e. The principles of immunology involved in the mechanisms of renal disease and renal transplantation.
- f. Renal biopsy performance and interpretation.
- g. Acute and chronic hemodialysis procedures.
- h. Peritoneal dialysis procedures.
- i. Knowledge of renal transplantation and its management decisions.

Training Programs in Oncology**1. EDUCATIONAL PROGRAM**

A subspecialty educational program in oncology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of clinical

neoplastic problems on an inpatient and outpatient basis. The trainees should be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of cancer as well as the effectiveness of therapeutic programs.

There should be broad support from other clinical specialties, including diagnostic and therapeutic radiology, gynecology, pediatrics, nuclear medicine, pathology and surgery and its subspecialties. In addition, it is desirable to have the support of oncologic nursing, rehabilitation nutrition and dietetic and social services.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be advanced pathology services, including electron microscopy and immunopathology; resources for nuclear medicine imaging; blood banking and blood therapy facilities; a multidisciplinary tumor conference; available cancer protocol studies; on-site radiation oncology facilities; a modern diagnostic radiologic service; a general surgical service and its support; and pediatric support. It is desirable that there be other clinical subspecialties of Internal Medicine to which the oncology trainee can relate formally as well as facilities for clinical pharmacology and tumor immunology.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for the trainees to develop clinical competence in the overall field of oncology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. The epidemiology and natural history of cancer.
- b. The etiology of cancer including predisposing casual factors leading to neoplasia.
- c. Knowledge of the concepts of cellular biology, cytogenetics, basic and clinical pharmacology, including pharmacokinetics and toxicity.
- d. Chemotherapy, including drugs available for treatment of neoplastic diseases and indications and limitations for their use in specific clinical situations.
- e. Management of treatment protocols.
- f. Marrow aspiration and biopsy and interpretation.
- g. Involvement with a multidisciplinary tumor conference, including exposure to tissue pathology.
- h. Understanding of indications and limitations of surgery and radiation therapy in the treatment of cancer.
- i. Concepts of supportive care, including hematologic, infectious disease and nutrition.
- j. Familiarity with rehabilitation and psycho-social aspects of clinical management of the cancer patient.

Training Programs in Pulmonary Diseases

1. EDUCATIONAL PROGRAM

A subspecialty educational program in pulmonary diseases must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of pulmonary diseases on an inpatient and outpatient basis. The trainees should be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of pulmonary disease as well as the effectiveness of the therapeutic program.

The program should include emphasis on pulmonary physiology and its correlation with clinical disorders. Trainees should learn utilization of laboratory tests. They should gain familiarity with radionuclide procedures and radiologic studies for the diagnosis and treatment of pulmonary diseases.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be a laboratory for pulmonary function tests, exfoliative cytology, and the availability of extensive pathology services. Appropriate space and staffing for pulmonary procedures should be available. Special units for intensive care, post-operative care and respiratory care services should be provided. There should be close liaison with other services such as pediatrics, radiology, pathology, thoracic surgery, physiology, microbiology and biochemistry. In addition, there should be a working relationship with the otolaryngology and anesthesiology services.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for trainees to develop clinical competence in the overall field of pulmonary diseases. Examples of knowledge and skills that are

desirable include, but are not limited to, the following:

- a. A broad spectrum of pulmonary diseases including obstructive pulmonary disease, malignancy, tuberculosis, fungus and bacterial infection, and hypersensitivity diseases.
- b. Pulmonary manifestations of systemic diseases, including connective tissue and hematologic disorders.
- c. Primary and secondary vascular diseases of the lung.
- d. Genetic and developmental disorders of the respiratory system.
- e. Thoracic trauma.
- f. Interpretation of the chest roentgenograms, tomograms, bronchograms, pulmonary angiograms and other radiologic procedures.
- g. Interpretation of pulmonary function testing.
- h. Involvement in the supervision and management of patients requiring critical care.
- i. Knowledge of respiratory physical therapy and rehabilitation.
- j. Interpretation of radionuclide scanning in relation to pulmonary disorders.
- k. Competence in procedures such as thoracentesis, pleural and other biopsy procedures, fiberoptic bronchoscopy and biopsy procedures and endotracheal intubation.
- l. Additional recommended but not mandatory skills include, insertion of chest tubes, rigid tube bronchoscopy and needle biopsy or tissue aspiration of the lung.

Training Programs in Rheumatology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in rheumatology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of rheumatic diseases on an inpatient and outpatient basis including pediatric rheumatologic problems. The trainee should be given the opportunity to assume continuing responsibility for both acute and chronic rheumatic diseases in order to observe the natural history of the disease process and the effectiveness of therapeutic programs; it is desirable that a group of patients be monitored by each trainee for at least 12-18 months.

The program should include training in appropriate use of community resources that are available to assist in the rehabilitation and vocational guidance of patients with rheumatic diseases. There should be a systematic opportunity to observe and participate in comprehensive programs for the treatment of chronic rheumatic disease problems in-

Neurological Surgery

cluding rehabilitation medicine (e.g., physical therapy, occupational therapy) and orthopedic surgery. The program should be structured to permit individuals to gain experience in the selection and interpretation of laboratory tests, roentgenograms and biopsies; experience in the methodology of pertinent laboratory tests is highly desirable.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for pediatric and adult patients. Optimally there should be a clinical immunology laboratory; rehabilitation medicine services with capabilities in rehabilitative therapy and occupational therapy; radiologic services including arthrography; an orthopedic surgical department with capabilities in reconstructive and rheumatologic surgery.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for trainees to develop clinical competence in the overall field of rheumatic diseases. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

- a. The anatomy, biochemistry and physiology of the connective tissues and of musculo-skeletal systems.
- b. Pertinent microbiology and immunology, the pathophysiology of inflammation and pharmacology of anti-inflammatory drugs.
- c. Skill in the examination of the joints and the aspiration and analysis of synovial fluid.
- d. Etiology, pathogenesis, clinical features, and pathologic aspects of specific primary and systemic diseases of the joints and musculo-skeletal system.
- e. Laboratory studies including measurement of serum immunoglobulins and complement components, modern serological tests, tissue typing, identification of various serologic and biochemical abnormalities occurring in rheumatic diseases and the principles of immunohistologic techniques.
- f. Competency in the performance of closed biopsy of the joints and interpretation of histopathology of the synovium.
- g. Prescription of appropriate physical therapy.
- h. Involvement in the post-operative care of orthopedic surgical procedures applied to rheumatic diseases.
- i. Comprehension of muscle physiology and recognition of the methodology and indications for electromyography, muscle biopsy and nerve condition studies.

Effective: (not specified) ACGME: February 1982

9. Special Requirements for Residency Training in Neurological Surgery

Training programs in neurological surgery are evaluated by the Residency Review Committee and accredited by the Accreditation Council for Graduate Medical Education on the basis of recommendations forwarded to it by the Residency Review Committee. A list of accredited training programs in neurological surgery is published annually in the *Directory of Residency Training Programs*.

To be accredited by the Accreditation Council for Graduate Medical Education, an educational program in neurological surgery shall meet not only the Special Requirements for Residency Training in Neurological Surgery but also the General Requirements of the Essentials of Accredited Residencies.

EDUCATIONAL REQUIREMENTS

The training in neurological surgery shall follow after a minimum of one year of training in an accredited program in general surgery or after at least one year of a program sponsored for the acquisition of fundamental clinical skills, which must include at least six months of surgical disciplines other than neurological surgery. The neurological

surgery trainees can then begin their neurological surgery training program which shall be of at least 60 months duration—36 months of which shall be on the clinical service of neurological surgery. Residents shall assume increasing responsibility during these months. A block of training of three months minimum in an accredited neurology training program must be arranged for all trainees unless they have previously had a minimum of one year of formal residency training in an accredited neurology training program.

There shall be a 12 month period of time as senior resident in neurological surgery. This is considered an essential component in each trainee's planned program. The senior resident will have major or primary responsibility for patient management as deemed appropriate by the program director. The senior resident shall also have administrative responsibility as designated by the program director.

Twenty-one months of the total 60 months may be devoted to any of several aspects of the training program depending on the needs of the trainee. It may be spent in the study of the basic sciences, neuroradiology, neuropathology, or other appropriate subject matters related to the neurosciences as agreed upon by individual trainees and the program director. A diversified and balanced educational program is expected.

Appointments of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of regularly appointed trainees. Addition of such individuals by a program director requires a clear statement of the areas of training, clinical responsibilities, and duration of the fellowship. This statement is to be supplied to the Residency Review Committee at the time the program is reviewed. If fellows so appointed will, in the opinion of the Residency Review Committee detract from the education of the regularly appointed trainees, the accreditation status of the program may be adversely affected.

The house officer's activity outside the educational program shall not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and house officer.

One of the measures of a training program is the quality of trainees chosen for training and the ability of the program to assure a steady increase in the trainee's knowledge and skills. The review process will evaluate the selection process of trainees and seek evidence that the program evaluates the progression of the residents during training. Another measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Neurological Surgery. The number of residents completing training and taking and passing the certification examinations will be part of the evaluation.

There shall be a well coordinated schedule of teaching conferences, rounds, and other educational activities in which both the neurological surgery faculty and the resident participate. Educational experience in neuroradiology and neuropathology should be an integral part of the training program and designed for the education of the neurosurgical residents. Such experience shall be under the direction of qualified neuroradiologists and neuropathologists. The program shall provide opportunities for and experience in the basic sciences of neuroanatomy, neurophysiology, neuroncology, neurochemistry and neuroimmunology. A program for the residents to acquire such experience in the neurosciences must be evident. A well organized written plan for rotation of residents among the various services and institutions involved should also be maintained and be available to the residents and faculty.

FACULTY

The training program director and the neurological surgery staff shall be well qualified neurological surgeons who possess the necessary administrative, teaching and clinical skills to conduct the program. Under most circumstances,

there should be at least three neurological surgeons associated with the training program who devote a significant period of time to the educational process of the residency. The program director must assume responsibility for all aspects of the training program. The program director shall be certified by the American Board of Neurological Surgery or possess equivalent qualifications. All faculty members shall be certified by or be in the certification process of the American Board of Neurological Surgery or possess equivalent qualifications. There should be evidence of scholarly activity among the neurological surgery faculty. Such evidence should include a high order of teaching skills, participation in clinical and/or basic research, involvement in neurological surgery and/or other medical scientific meetings and their organizations, and publication of papers, monographs and books. Assessment of the scholarly activity and the administrative, teaching and clinical skills of the program director and the faculty shall be part of the program's evaluation. Neurological surgery faculty and resident participation in undergraduate medical education is highly desirable.

There shall be a qualified neurological surgeon responsible for the education of the residents in each geographically separate hospital. Such an individual will also supervise the educational activities of other neurosurgeons relating to resident education in that institution. Certification by the American Board of Neurological Surgery is one measure of such qualification. The neurological surgeon shall be appointed in this training capacity by the program director. Appointments will generally be for a one year period and can be renewable to ensure continuity of leadership. This appointee's major clinical responsibilities shall be at the hospital where the appointee is responsible for the educational process.

FACILITIES

An educational program in neurological surgery must have one parent institution with primary responsibility for the entire program. Appropriate institutions include medical schools, hospitals, and medical foundations. Affiliations with other hospitals must be based on a clear statement of the value of such affiliation to the teaching program as a whole. Affiliation of hospitals at a distance from the parent institution which makes attendance at conferences and teaching rounds difficult is not satisfactory. Conferences should be coordinated among institutions in a training program so that attendance by a majority of staff and trainees is facilitated.

The number and distribution of participating hospitals must not preclude satisfactory participation by residents in teaching and training exercises. As a general rule, there shall be a maximum of two geographically separate hospitals in the educational program. Exceptions to this rule may be made if a hospital offers special clinical resources, i.e., stereotactic surgery, trauma, or pediatric neurological surgery which significantly augment the resources of the training program as a whole.

Inpatient facilities available for training programs in neurological surgery shall be geographically identifiable and have an adequate number of beds, support personnel, and proper equipment to ensure quality education. Inpatient facilities may vary from one affiliated hospital to another but should support essential prerequisites for excellence in patient care and teaching. The presence of a neurological surgery operating room with microsurgical capabilities and an intensive care unit specifically for the care of neurological surgery patients are considered definite assets to a training program as are other units for specialized neurological surgery care. Similarly, neurological surgery beds should be on a designated nursing unit.

There shall be sufficient neurological surgery patients admitted each year to ensure that the resident trainee is exposed to a full spectrum of neurological surgery diseases. This must include substantial experience in the manage-

ment and surgical care of patients in the pediatric age range, and should include disorders of the spine and of peripheral nerves, cerebrovascular disease including extracranial vascular disease, trauma, and tumors of the nervous system. The patient population and procedures reported to the Residency Review Committee must be limited to those utilized in the resident's educational program.

The program must demonstrate that a satisfactory profile of clinical experience is available to the residents in training. The following minimum number of clinical procedures is suggested with the understanding that the majority of the procedures occurs at the parent institution. It must be understood that achievement of this minimum of clinical procedures will not ensure accreditation of a training program. It is also understood that the educational requirements of the resident trainee must be considered at all times and assignments of a clinical service that limits or precludes educational opportunities will be adversely considered in evaluation of the program.

1. Within the total clinical facilities available to the training program, there should be a minimum of approximately 300 major neurological surgery procedures per year per finishing resident. The location within a given training program of this neurological surgery work-load, as well as the distribution of types of cases is equally important. For instance, the cases should be appropriately distributed between cranial and extracranial surgical procedures and should represent a well balanced spectrum of neurological surgery. As a minimum, they should include approximately 60 histologically verified intracranial neoplasms and/or aneurysms and vascular malformations per year per finishing resident.

2. No affiliated hospital unit in the training program shall be a component of a training program unless there are approximately 100 major neurological surgery operations per year including 25 procedures for a combination of brain neoplasms, aneurysms, and intracranial or spinal vascular malformations. Again, exception may be made if a hospital offers special clinical resources, i.e., stereotactic surgery, trauma, or pediatric neurological surgery, which significantly augment the resources of the training program as a whole:

There shall be space and support personnel for research identifiable in the neurological surgery division or department and some activity should be ongoing in this area. Evidence of such activity could be presentations at meetings, published papers, and/or research grants. Research facilities should be available to the neurological resident who should participate, at some point, either in ongoing clinical and/or basic research or project(s) which the faculty is involved in or projects of the resident's own design.

In certain circumstances, where there is demonstrated excellence in providing an educational experience for residents and in patient care, as evidenced by the quality of residents trained, the program may be authorized to take more than one resident per year. The ability to do so does not depend on any multiplication of the minimum requirements for resident training but does require the presence of more than an adequate number and distribution of cases, adequate facilities and presence of a faculty who are of national stature in neurological surgery. The appointment of additional residents, fellows or other trainees to the institutions participating in the program must be reported to the Residency Review Committee prior to the appointment so that the Committee can determine whether the educational experience of the individual already in training is compromised. Dilution of the residents' experience by other appointees may be deemed substantial noncompliance with these requirements.

RELATED DISCIPLINES

Recognizing the nature of the specialty of neurological surgery, it is unlikely that a program can mount an ade-

Neurology

quate educational experience for neurological surgery trainees without approved training programs in related fields. Clinically oriented training programs in the participating institutions of the neurological surgery program shall include accredited training programs in neurology, general surgery, internal medicine, pediatrics and radiology. There shall also be resources for the education of neurosurgical residents in anesthesia, endocrinology, ophthalmology, orthopedics, otolaryngology, pathology, and psychiatry. A lack of such programs will adversely affect the accreditation status of the neurological surgery program.

Residents who seek certification by the American Board of Neurological Surgery shall communicate with the Secretary of the Board to be sure that the requirements for certification have been fulfilled. The current address of this office is published in each edition of the *Directory of Residency Training Programs*. Requests regarding evaluation of educational programs in neurological surgery and all related program inquiries should be addressed to the Secretary of the Residency Review Committee for Neurological Surgery, 535 North Dearborn Street, Chicago, Illinois 60610.

Effective: Jan., 1985 ACGME: Nov., 1983

10. Special Requirements for Residency Training in Neurology

Introduction¹⁶

The purpose of the training program is to prepare the physician for the independent practice of clinical neurology. This training should be based on supervised clinical work with increasing responsibility for out-patients and in-patients. It should include not only the specific diseases of the nervous system of different age groups, but also the neurological complications of medical and surgical conditions. The resident must also learn to differentiate those patients whose primary illness lies in other areas, for example, internal medicine and psychiatry.

Length of Program¹⁷

¹⁶This material constitutes the special requirements for residency programs in neurology and includes material formerly published as a "guide" for residency programs in neurology. The "Guide" is no longer published separately. The reader is also referred to the General Requirements for Residency Training and to the publications of the Accreditation Council for Graduate Medical Education which outline the composition and function of all Residency Review Committees and which indicate the actions which any Residency Review Committee may take, as well as the actions which the Accreditation Council for Graduate Medical Education (ACGME) may take.

The General Requirements and the other publications of the ACGME also indicate the appeals procedure, the types of programs and the relationships between the Residency Review Committee (RRC), its parent organizations and the ACGME.

Requests to have a program accredited to train residents in neurology (or related inquiries regarding residency programs) should be addressed to: Secretary, Residency Review Committee for Psychiatry and Neurology, 535 North Dearborn Street, Chicago, Illinois 60610. All inquiries as to whether a physician is qualified to be examined for certification in neurology should be addressed to: Executive Director, American Board of Psychiatry and Neurology, One American Plaza, Evanston, Illinois 60201.

¹⁷Note: The regulations of the American Board of Psychiatry and Neurology, referred to, state that two patterns of training are acceptable:

- Prior to entering an approved neurology training program, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine. This year should be devoted primarily to clinical experience in internal medicine or pediatrics or family practice.
- A four-year training program in neurology would be acceptable with the provision that at least four months be spent in an approved program providing direct responsibility for the general medical care of children and/or adults.

At the present time it should be understood that although two certificates in neurology are issued by the American Board of Psychiatry and Neurology, (1) Neurology and (2) Neurology with Special Competence in Child Neurology, residency programs are approved and accredited in one area only, i.e., Neurology. Consequently, the description of special requirements for training in neurology is intended to incorporate the necessary components of residency programs including the areas of general (or adult) neurology, child neurology, the basic neurological sciences and special clinical areas which are closely allied to a full understanding and diagnostic study of nervous system diseases.

Approved residencies in neurology must provide at least three years of graduate education in neurology. The programs meeting these requirements may be of two types:

- Those which provide four years of graduate training beyond the receipt of the M.D. degree, the first year of which includes a broad clinical experience in general medicine in such primary care specialties as internal medicine, family medicine or pediatrics. Except for unusual circumstances, residents should spend no more than two months, and preferably no time, in neurology or psychiatry during this year.

- Those which provide three years of neurology residency training but accept only residents who have had an initial first year of graduate training. This first year should have the minimum requirements as noted in 1. above.

General Curriculum Considerations

It is essential that the residency program contain a component of service to patients. This component should be so designed as to assure a balance between service and education which achieves for the resident an optimal educational experience consistent with the best of medical care.

The resident must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in conducting a thorough examination (general, mental status, neurological, etc.) and in organizing and recording the data. The resident must understand the indications for various laboratory and special diagnostic procedures, i.e., radiological and radioisotope studies, computed tomography, electroencephalography, electromyography and nerve conduction studies, psychological testing, and other investigations pertinent to clinical neurology, and their interpretation. The resident must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan for patients with disorders of the nervous system.

Residents must have experience with child neurology problems, including evaluation of neurological disease in newborns and infants. Particular emphasis should be given to understanding the growth and development of the nervous system. This training is best obtained in a child neurology service under the supervision of a qualified child neurologist.

While a wide range of clinical experience is mandatory, each resident should be counseled and aided in planning various parts of the program in accordance with individual capabilities and future plans. Clinical assignments need not be identical for each resident and the program must be flexible in this regard. Elective time should accommodate individual interests.

Programs must provide mechanisms for the evolution of responsibility and professional maturity of residents. The early clinical assignments are based on direct patient responsibility for a limited number of patients. Subsequent assignments must place a resident in a position of increasing responsibility for the patients and for a liaison with the staff and referring physicians. Night call is an excellent method of furthering the resident's ability to make clinical judgments in evaluation and care of patients. In this way the resident matures to a point of eventually assuming full responsibility. Reserving the hospital consultation services for the latter portions of the program when a resident is most mature is an excellent manner of inducing this responsibility. Adequate faculty supervision, however, is necessary throughout the program. Periodic review of the resident's performance is helpful, pointing out the strengths and weaknesses of the residents and planning their educational program.

Service, teaching and research must be present in every training program. The importance of service is obvious, as clinical neurology can only be mastered at the bedside, in the out-patient department, and in the emergency room. Teaching of other residents, medical students, nurses, and

health care personnel, formally or informally, are important aspects of the resident's training in neurology. Programs should include research opportunities for residents. It is not necessary for all residents to engage in basic research, but participation in clinical research is extremely helpful in teaching the resident to appraise published reports of research.

An important exchange of ideas and mutual stimulation should develop among the neurology residents themselves. This is fostered by choosing residents from different schools and backgrounds. Also, on the neurological ward the mixture of neurology residents with medical, neurosurgical, pediatric and psychiatric residents who may rotate through the neurological service adds a wholesome broadening of the educational experience.

Continuity of Patient Care and Resident Education

While much of this education will take place through supervised experience in caring for in-patients on the neurology service, a supervised experience in the out-patient clinic is also important. As much as possible, the resident should have individual responsibility, with supervision, for following long-term patients throughout the three or more years of neurology training. This can be accomplished by periodic clinics in which each resident is responsible for scheduling of personal patients. Continuity of education throughout the residency is accomplished by attendance at conferences in the various disciplines. They should include electroencephalography, neuroradiology, child neurology, neuro-ophthalmology and general neurological conferences. There should be gross and microscopic pathology conferences utilizing recent pathological specimens. Clinical pathological conferences are particularly valuable. It is useful to put increasing responsibility for the planning and supervision of the conferences on the residents.

Training in Other Clinical Areas

a. General

Neurological training must include assignment as a consultant, under supervision, to the medical, surgical, obstetrics and gynecology, pediatric and psychiatry services and their subspecialties, to provide for broad exposure to the many neurological complications of systemic diseases. An appreciation of the surgical management of disorders of the nervous system can be obtained by close liaison between neurology and neurosurgery services. Patients requiring care by both disciplines should be the joint responsibility of residents from both services.

Residents should have an adequate opportunity to acquaint themselves with the management technique of the physical medicine and rehabilitation service.

b. Psychiatry

Because of the intertwining of neurological and psychiatric problems in many patients, it is important that residents in neurology have adequate training in psychiatry. Residents must be acquainted with the symptomatology and differential diagnosis of the more frequently encountered psychiatric syndromes, particularly those associated with lesions of the nervous system. The residents must be made aware of the psychological aspects of the patient-physician relationship and the importance of personal, social and cultural factors in disease processes and their clinical expression. Knowledge of the use and complications of drugs used in psychiatry is essential. Time spent on a psychiatric in-patient and out-patient service with proper supervision, availability of liaison psychiatrists on the neurology service and close contact of residents from both disciplines in the care of patients is extremely valuable in acquiring these skills.

Basic Science

Well trained neurologists must have an adequate background in those basic sciences upon which clinical neurology is founded. These include: neuroanatomy, neuropathology, neurophysiology, neuropsychology, neurochemistry, neuropharmacology, as well as the application of genetics and epidemiology to neurological dis-

orders. They should acquire familiarity with principles of normal and abnormal personality development. Since it is not possible for residents to spend time in each of these subdisciplines within the three year period of residency, the particular resident's capabilities and needs must be considered. An extensive exposure in one or more of these areas is desirable for each resident. Didactic courses in all or some of the basic sciences are important for providing an overall review and understanding of the field. A particularly good way for the resident to review the basic sciences is to participate in the teaching and laboratory supervision of the neuroscience courses offered in the medical school.

There should also be organized instruction in the clinical sciences relating to neurology. This is often best obtained by participating in and performing laboratory procedures and attending instructional exercises in which clinical correlations with laboratory data are emphasized. The resident should be kept informed of major developments in both the basic and clinical sciences relating to neurology, usually best presented by periodic seminars, journal clubs, lectures, didactic courses and attendance at local and national meetings.

Library Accessibility

Because of the great diversification in the neurological sciences, the library needs are great, covering not only clinical texts, monographs and journals in clinical neurology but also the basic neurosciences and behavioral sciences. While it may be impossible for a department to maintain a large collection outside of the general medical library, essential references should be maintained and be accessible.

Clinical Facilities and Training

Clinical facilities must be adequate. It is desirable that neurology patients be assembled in one area to enhance patient care and proper training. There should be adequate out-patient facilities, examining areas, conference rooms, and research and clinical laboratories. There is no set rule to the number of patients necessary for each resident. It is the program director's responsibility to see that the number of patients is adequate. They must be diversified as to age and sex, short term and long term neurologic problems, and in-patients and out-patients.

Number of Residents

The exact number of residents which may be appointed to a given program, and the exact number of full or part-time staff required to operate the program, is not specifically designated. However, the program must maintain a sufficient number of residents and staff to provide the "critical mass" needed to promote an intellectually stimulating educational atmosphere for the residents and a broad base of clinical expertise among the staff. Likewise, the available patient cases must be neither too large nor too small to provide a sound educational program. Programs that fail to recruit new residents for two consecutive years will be subject to negative action.

Teaching Staff

The program must have a sufficient number of qualified staff with competence in general neurology, and preferably, an area of special and recognized interest. It is desirable that the educational and training background of the staff provide diversity of ideas in meeting the goal of providing service, teaching and research.

Special Training for Child Neurologists

Training in child neurology should be conducted only in a setting where accredited programs in both neurology and pediatrics already exist and should be integrated into the three-year program in neurology.

During the period of training, residents in a neurology training program should have experience in the special problems involved with both history taking and neurological examination of infants and newborns. Special attention should be devoted to training in the detection of congenital malformations, prenatal infections, genetics, and hereditary metabolic and degenerative diseases of childhood.

The required two years of general pediatric residency,

Nuclear Medicine

for residents seeking training in child neurology, should be designed to provide the resident with a wide variety of experiences in the care of sick children, including required rotation in a newborn nursery.

Residents should be assigned to a child neurology service under the supervision of a director who is suitably trained and experienced to oversee the work of the residents in both primary patient care responsibility and in consultation with both medical and surgical pediatric subspecialties, including a general and newborn intensive care unit. The program should provide for increasing responsibility and continuity of patient care.

It is assumed that the resident will have gained some insight into surgical neurology in his general training and so it is assumed that the setting for training in child neurology will include an active neurosurgical service. An opportunity should also be afforded the resident to study problems of growth and development, mental and learning disabilities and gain an understanding of psychiatric diseases in children.

One measure of the quality of a program may be the performance of its residents on the examinations of the American Board of Psychiatry and Neurology.

General Requirements

The provisions of the general requirements must also be met for approval.

Effective: January 1983 ACGME: September 1982

11. Special Requirements for Residency Training in Nuclear Medicine

I. INTRODUCTION

Accredited residency training has been available in the field of nuclear medicine since 1975. The Residency Review Committee for Nuclear Medicine consists of appointees of the AMA Council on Medical Education and the American Board of Nuclear Medicine who are well qualified nuclear physicians from the backgrounds of diagnostic radiology, internal medicine, pathology and other recognized medical specialties.

II. GENERAL CONSIDERATIONS

A good residency program in nuclear medicine requires the support of strong services in other specialties, notably medicine, surgery, radiology, and pathology. Other clinical training resources should be such that the total number of residents is large enough to permit intellectual exchange and sharing experiences within and without the nuclear medicine program.

A training program in nuclear medicine must have a single parent institution. Affiliations with other hospitals should be based on the value of such affiliation to the training program as a whole.

The general criteria for approval for residency training are both qualitative and quantitative. Qualitative considerations include the qualifications of the director of nuclear medicine services; qualifications of the nuclear physicians, basic scientist associates and technologist assistants; the supervision of the work of the trainees; the quality of the educational experiences; and the accuracy, appropriateness and completeness of the nuclear medicine studies performed.

Quantitative considerations include the numbers of procedures and tests and their relationship to the size of the medical center. Also considered will be the diversity and completeness of studies performed; the space and equipment of the nuclear medicine facilities; and the number of medical and nonmedical personnel in relation to the volume of work.

III. DURATION OF TRAINING

A minimum of four years of residency training is considered necessary to train a physician in the specialty of

nuclear medicine. This training should include at least two years of satisfactory preparatory residency training in programs accredited or acceptable by ACGME. Such programs shall provide broad experience in clinical medicine in which the primary emphasis is on the patient and the patient's clinical problems. The satisfactory completion of the equivalent of an accredited Transitional Year program is recommended as the minimum primary patient care experience. Preparatory training may, or may not, be within the specialties of radiology, pathology or internal medicine. It is recommended that the preparatory post-doctoral training precede training in nuclear medicine.

In addition to the preparatory residency training programs, residents must complete in a satisfactory manner a two-year residency training program in nuclear medicine.

IV. SCOPE OF TRAINING

The training program in nuclear medicine should include the diagnostic, therapeutic, and investigational uses of radionuclides. It should be of sufficient breadth to insure that all residents become thoroughly acquainted with the techniques and methodology of the major nuclear medicine diagnostic and therapeutic applications. The training experience should assure ample opportunity to attain competence in correlating the patient's problem with the optimum selection of nuclear medicine studies, performing these studies, interpreting the information obtained, correlating this information with other diagnostic studies, and following up patients receiving radionuclide therapy. The resident staff should directly participate in the performance of a sufficient number and wide variety of studies (imaging, non-imaging and therapy) under adequate staff supervision.

Residents should become familiar with methods of investigation and should be encouraged to participate in research, particularly as it relates to developing or evaluating instrumentation and radiopharmaceuticals, radioassay or radioimmunoassay advances, and the utility of new radionuclides or radiopharmaceuticals.

V. PROGRAM CURRICULUM

A. STRUCTURE

1. *Didactic Presentations.* Didactic instruction for both imaging and non-imaging applications must be well organized, thoughtfully integrated, and carried out on a regularly scheduled basis.

2. *Laboratory and Practical Experience.* Exposure to the basic sciences should not be limited to didactic instruction even when clinically related. The resident's activities should include laboratory experience and regular contact with basic scientists in their clinical adjunctive roles.

3. *Patient Management and Consultation.* At the completion of the entire training program, residents should have a sufficiently broad knowledge of medicine to obtain a pertinent history, to perform an appropriate physical examination, and to arrive at a differential diagnosis. Residents should be able to plan and perform appropriate nuclear medicine procedures, to interpret the results, and to make a logical diagnosis. They should be qualified to recommend therapy or further studies. If radionuclide therapy is indicated, they should be capable of assuming responsibility for patient care.

Supervision of the residents in this part of their nuclear medicine training is very important. The program should be structured so that the resident's direct responsibility increases progressively during training. At the completion of training, the resident should be knowledgeable in the relevant aspects of clinical medicine and patient care, he/she should be able to serve as consultant to referring physicians in interpreting data, in choosing optimum nuclear medicine procedures, and in explaining the meaning, limitations and complications of such procedures.

4. *Conferences and Seminars.* All residents must participate in regularly scheduled clinical conferences in which the resident is responsible for presenting case material and

discussing the relevant theoretical and practical issues.

There should be active resident participation in well-structured seminars which review the pertinent literature with respect to current clinical problems and which discuss additional topics to supplement the didactic curriculum.

Teaching case files involving diagnostic and therapeutic nuclear medicine procedures should cover the full spectrum of clinical applications; they should be indexed, coded with correlative and follow-up data, and readily accessible for resident use.

5. *Resident Evaluation.* It is essential that the program director regularly evaluate the clinical competence of the residents. This evaluation should concern itself not only with intellectual abilities and manual skills, but also with attitudes and interpersonal relationships. Included should be observation of the resident performing specific tasks such as image interpretation, taking a history and performing a physical examination, choosing diagnostic studies, formulating patient management and communicating effectively. Residents should regularly be made aware of their progress and particularly of any weaknesses. These records must be maintained on file and discussed with and shown to the individual resident.

B. CONTENT

The training program should provide educational experience in the following areas:

1. *Physical Science.* Structure of matter; modes of radioactive decay and particle and photon emissions, and interactions of radiation with matter.

2. *Instrumentation.* Nuclear medicine instrumentation, with special emphasis on the gamma scintillation cameras, radiation detector collimation, associated electronic instruments and computers, and image production and display.

3. *Mathematics, Statistics, and Computer Sciences* including probability distributions, medical decision making, basic aspects of computer structure and function, programming and processing.

4. *Radiation Biology and Protection.* Biological effects of ionizing radiation, means of reducing radiation exposure, calculation of the radiation dose, evaluation of radiation overexposure, medical management of persons overexposed to nuclear ionizing radiation, management and disposal of radioactive substances, establishment of radiation safety programs in accordance with federal and state regulations.

5. *Radiopharmaceuticals.* Production of radionuclides, radiochemistry, pharmacokinetics and formulation of radiopharmaceuticals.

6. *Diagnostic Uses of Radionuclides.* Clinical indications, technical performance and interpretation of *in vivo* imaging and function studies using radionuclides; use of scintillation cameras and external detectors; physiologic gating techniques; patient monitoring during intervention studies and the relationship between nuclear medicine procedures and other pertinent imaging modalities such as computed tomography and ultrasonography.

7. *In Vitro Studies.* Methodology and quality control of competitive binding and radioimmunoassay procedures; principles of activation analysis and autoradiography.

8. *Therapeutic Uses of Radionuclides.* Patient selection, dose administration, including dosimetry, and specific applications.

VI. PROGRAM DIRECTOR AND STAFF

The director of the program must be a qualified physician, certified by the American Board of Nuclear Medicine or possessing suitable equivalent qualifications, and must devote most of his/her professional time to the conduct of the residency training program and the supervision of nuclear medicine services. The program director's tenure should be long enough to assure continuity to the program.

The professional staff who participate in the program

must be qualified nuclear medicine physicians and basic scientists. It is essential that they be trained in their subspecialties; have experience, interest and competence in resident teaching; devote adequate time to teaching activities; participate in their own continuing education; engage in scientific presentations; and have an active interest in research.

VII. PROGRAM REQUIREMENTS

The medical facility and patient population of the institutions or institution offering a residency program in nuclear medicine should be of such size and composition as to provide an ample and varied patient population. The program should provide an opportunity for residents to study and participate in all aspects of clinical nuclear medicine, including nuclear medicine diagnosis, and patient treatment and follow-up. The number of nuclear medicine physicians and the technologist staff must be large enough to carry out the workload of the facility, as well as to carry out the teaching responsibilities. There must be a mechanism for maintaining case records and treatment results to facilitate patient follow-up and to provide teaching material. Adequate space must be available for educational, clinical and research functions of the nuclear medicine program. The institution or institutions should have other residency programs to provide an opportunity for interaction among residents in the various medical disciplines.

While minimum requirements may vary from one training program to another, a well designed program will usually perform annually at least 4,000 nuclear medicine imaging procedures; 10,000 *in vitro* procedures; 500 *in vivo* kinetic and body composition procedures; and 20 radionuclide therapeutic procedures. These procedures should be distributed over the full spectrum of nuclear medicine practice, including the pediatric age group.

The ratio of teaching staff to residents shall be sufficient to assure adequate clinical supervision and the teaching of the basic sciences. There should be a clinical workload adequate to the needs of residency training attempted.

VIII. LIBRARY

Residents should have ready access to a medical library with a representative selection of books and journals related to the specialty of nuclear medicine. Where appropriate there should be an interlibrary loan system through the facilities of a nearby resource or regional medical library such as a medical school or national library.

IX. RECORDS

Program directors should be familiar with the "General Requirements" of the "Essentials of Accredited Residencies," including those relating to maintaining a personal record of each resident. It is anticipated that this record would include a record of clinical duty assignments and personal evaluations by attending staff supervising the resident. All records relating to the individual resident's training experience should be preserved and made available to the Residency Review Committee if requested. Confidentiality regarding individual residents will be maintained in any review.

X. OTHER

The provisions of the "General Requirements" also must be met for approval.

Residents who plan to seek certification by the American Board of Nuclear Medicine should communicate with the office of that Board regarding the fulfillment of requirements for certification.

Obstetrics-Gynecology

12. Special Requirements for Residency Training in Obstetrics-Gynecology

The residency programs in obstetrics-gynecology should constitute a structured educational experience, planned in continuity with undergraduate and continuing medical education, in the health care area encompassed by this specialty. While such residency programs contain a patient service component, they must be designed to provide education first and not function primarily to provide hospital service.

An educational program in obstetrics-gynecology must provide an opportunity for increasing responsibility, appropriate supervision, formal instruction, critical evaluation and counseling for the resident.

The program in basic obstetrics-gynecology must provide in-hospital and ambulatory training. It must include, but not necessarily be limited to, experience in high-risk obstetrics, immediate care of the newborn, the full range of gynecologic surgery, gynecologic oncology to include experience in the use of radioactive materials, gynecologic surgical pathology, reproductive endocrinology and infertility, family planning, emergency medicine, psychosexual and psychosomatic counseling, genetics, medical jurisprudence, and the full range of commonly accepted diagnostic procedures.

For those residency programs associated with post-residency fellowships, the education of fellows must not compromise the experience of residents.

TYPES OF GRADUATE PROGRAMS

The Residency Review Committee for Obstetrics-Gynecology, for the purpose of monitoring the structure of residencies, uses the following categories. In all cases, where more than one institution is involved, a formal written agreement must be developed between the responsible administrative bodies of those institutions.

- A. Independent—An independent program is conducted within a single educational institution under a single program director. Extramural rotations are permitted under the regulations applied to all programs (see below).
- B. Integrated—An integrated program is conducted within multiple educational institutions but under a single program director. Each educational institution must have the overall quality and level of supervision and the educational requirements demanded of an independent program. The residents may rotate at any level, including the final senior resident year. The program director must have authority over the educational program in each hospital, including the appointments and assignments of all teaching staff and all residents and must assure the uniformity of the educational experience for each resident. Additional extramural rotations are permitted under the regulations applied to all programs (see below). If a program includes rotations for a total of more than six months for any resident, at institutions other than those included in the integrated program, that program becomes an affiliated program.
- C. Affiliated—An affiliated program is one in which any resident spends a total of more than six months in extramural rotations outside of the parent institution (institutions in the case of integrated programs). Extramural rotations may be arranged by the program director of either an independent or integrated program in order to enhance the educational experience of the residents. Only under exceptional circumstances, and with written prior approval of the Residency Review Committee, may they be included in the final senior resident year. Residents are appointed by their parent program and assigned by it to the affiliated hospitals, where they spend no more than one-third of the total residency and no more than twelve months of obstetrics-gynecology. Two types of extramural rota-

tions may be considered: a) If the total time of extramural rotation from the parent program by any resident during the entire residency exceeds six months, the program is considered to be an affiliated program and the entire program must receive prior approval by the Residency Review Committee. b) Rotations for a total of six months or less will not require that the program be designated as an affiliated program and these rotations may be arranged by the program director without prior Residency Review Committee approval.

LENGTH OF GRADUATE MEDICAL EDUCATION

A resident must have a minimum of four years of approved clinically oriented graduate medical education, of which at least three years must be entirely in the specialty of obstetrics-gynecology. Residency programs preceded by a year of training sponsored by the program may contain more trainees in that year than the number approved for each year of specialty training. Residency programs may, therefore, be of three or more years duration, but programs of different lengths or quality in the same institution will not be approved.

A program director, under suitable circumstances, may elect to credit a resident with a period of graduate training in obstetrics and gynecology gained by the resident before entering the program. The period of training must have been of four or more months in duration and must have been received in a hospital conducting a currently approved residency in obstetrics-gynecology. This time may then be used to provide time, within the thirty-six months of obstetrics-gynecology, for appropriate electives on other clinical services. It may not be used to shorten the total length of the residency program.

The Residency Review Committee has the responsibility for the review of all graduate education programs in obstetrics-gynecology seeking accreditation. If a program includes sponsorship of a first graduate year experience, then the Residency Review Committee has the responsibility for review of that first graduate year training.

TYPES OF FIRST GRADUATE YEAR

Programs differ widely in the types of experience they offer to physicians entering the first year of graduate training. Many programs include rotations to other clinical services, such as medicine, surgery or neonatology. Other programs, however, offer predominantly experience in obstetrics-gynecology but may provide elective time later in the residency for rotations to other clinical services.

The specific definition given to the first year of graduate training, as described in the General Requirements, depends on the content of the training and the administrative structure developed for implementing and supervising the experience.

NUMBER OF RESIDENTS

The number of residents that can be adequately and responsibly trained depends on several interrelated factors. The provision of adequate supervision, education, individual evaluation and administrative support is critical. With this, it is of utmost importance that each resident have sufficient independent operative and clinical responsibilities to prepare for practice in the specialty.

Increasing responsibility must progress in an orderly fashion, culminating in a senior resident year. The senior resident year consists of twelve months of clinical experience, in the last year of the resident's program. Elective time in the senior resident year requires the prior approval of the Residency Review Committee. The senior resident must have sufficient independent operating experience to become technically competent and have enough total responsibility for management of patients to insure proficiency in the diagnostic and treatment skills that are required of a specialist in obstetrics-gynecology in office and hospital practice.

Clinical involvement alone does not constitute an educational experience. It is also very important that each

program have a dedicated program director with an interested and competent teaching faculty sufficient in number and quality to be able to supervise and instruct the residents at all levels and in all of the practice areas of the specialty.

The *maximum* number of residents in a program is linked to the number that can be accommodated within the framework of the above requirements. Since one of the most important considerations is the clinical experience available to give each resident adequate primary responsibility, and since this usually centers upon the senior resident year, the maximum number of residents in a program depends upon how many senior residents the program can educate. Usually the maximum number of residents in a program is the number of senior residents the program can accommodate multiplied by three or four, depending upon the length of the program.

The *minimum* number of residents in a program requires consideration. Residency programs with a planned complement of only one resident in each of three or four years may not sustain the critical mass necessary to keep the program vital and can rarely maintain approval. There must be a potential for development into a program with two or more residents at each level.

Accreditation is granted on the basis of a balance between the educational resources and the number of residents in the program. The appointment of residents in excess of the approved number may adversely affect the quality of the total experience of each resident. Therefore, changes in the educational resources should be reported to the Residency Review Committee and proposed increases in the number of residents must first be approved in writing by the Residency Review Committee.

All requests for increase in the resident complement must be based not only on the availability of an adequate patient population but also on adequate resources for supervision, education and evaluation. A request for a change in the number of residents must describe the impact of total experience upon each of the senior residents under the new circumstances. The request will be considered incomplete if it lists only expansion in beds, hospitals, or overall clinical experience and does not address the question of expansion of faculty and administrative support necessary to teach, supervise and evaluate the additional residents. Conversely, a reduction in beds, hospitals or other changes in the program which may lead to an anticipated decrease in total experience for the residents, must be promptly called to the attention of the Residency Review Committee to determine if a reduction in the number of resident positions in a given graduate medical program is necessary.

PROGRAM DIRECTOR AND FACULTY

An obstetrics-gynecology training program must have an attending staff with professional ability, as well as enthusiasm, dedication and a sense of responsibility for teaching. It would be well for the staff to regard these attributes as a prerequisite to active faculty membership and promotion. The performance of the faculty must be reviewed periodically.

The program must exist in an educational environment which includes other relevant graduate medical education programs in the institution(s), such as internal medicine, pediatrics and surgery.

The program director must be able to provide a significant time commitment to the residency program, demonstrate the ability to organize and direct the teaching program, and maintain a quality teaching staff. The program director is specifically responsible for all communications with the Residency Review Committee, and must report any major change in the residency program. Further, the program director has the responsibility of verifying that residents have satisfactorily completed the program and are prepared to enter specialty practice.

It is desirable that the program director and the chief of service of the department be Diplomates of the American Board of Obstetrics and Gynecology. In the absence of such

certification, the Residency Review Committee may approve programs in which these individuals have suitable equivalent qualifications and a high professional standing in the specialty.

Assignment of the responsibilities for the resident training by the program director should be clearly defined. To assure continuity of teaching efforts and departmental policy, the program director should have a reasonable tenure of office. The Residency Review Committee should be notified of any change in program directors.

GRADUATE TEACHING

Every program, in order to be approved, must have a written statement of the educational objectives for the residents in that program. One example of such objectives is set forth in the current "Educational Objectives for Residents in Obstetrics and Gynecology." Directors of programs must be able to document that they are reviewing the implementation of the educational objectives and that the residents are indeed accomplishing what is anticipated of them. Any program which does not establish a system which clearly demonstrates that each resident has or has not successfully accomplished each of the items indicated in the program's statement of educational aims and objectives cannot be considered to be an adequate program.

The program director must establish methods of periodically and systematically evaluating and documenting the level of performance, experience and technical skills of the residents. One example of an acceptable mechanism helpful in evaluating cognitive knowledge is the CREOG In-Training Examination. On a regular basis program directors or their designees must inform the residents of their individual progress, emphasizing strong points and offering guidance with regard to correcting deficiencies. These evaluations, as well as a list of skills which the resident has mastered, must be documented and available (without revealing the specific resident's identity) at the time the program is reviewed for approval.

Formal teaching activities in obstetrics-gynecology should be structured and regularly scheduled. They should generally consist of patient rounds, case conferences, journal clubs and coverage of appropriate basic sciences pertinent to the specialty. In cross-disciplinary conferences, such as perinatology, appropriate physicians from other specialties should be invited to participate.

The patient population available to the training program should provide a variety of operative experiences in obstetrics-gynecology. While quality of the surgery in a hospital is more important than the actual number of cases, and while there is a great value to a resident in acting as an assistant to a skilled and experienced obstetrician-gynecologist, it is also essential that the resident gain experience in management of patients by personal evaluation of the signs and symptoms, physical and laboratory findings leading to a diagnosis and decision for therapy as well as the performance of technical procedures. An acceptable residency program in obstetrics-gynecology must be able to provide substantial, diverse and appropriate surgical experience after the residents have mastered the basic skills.

For the purpose of program review, accurate and complete documentation of each individual resident's experience for each year of training is mandatory. These records should indicate the level of participation of the resident and skills achieved. The program director must review at least semi-annually the record of operative experience with the individual resident for breadth and depth of experience as well as for evidence of continuing growth in technical achievements. These cumulative data will be reviewed in detail at the time of survey for program approval or continued program approval. For the purposes of these records, there is no distinction between private and service patients.

Complete management of a patient's care under adequate supervision should be considered the highest level of

Ophthalmology

training. There are, however, circumstances under which the trainee may not assume complete management:

1. When the program director or his designee does not believe the trainee's expertise or understanding is adequate to insure the best care of the patient.
2. When the attending physician is not willing to delegate the necessary degree of responsibility.
3. When the trainee for religious or moral reasons does not wish to participate in the proposed procedures.

An essential feature of resident education is that a significant number of staff support the principle of delegation of complete management under supervision.

A medical library is an important resource to the obstetrics-gynecology training program. The library may be sponsored by the hospital or the department, but it should be readily accessible to staff, both during the day and in the evening. The textbooks should be kept up to date, and there should be an ample supply of current journals devoted to obstetrics-gynecology and related subjects. When a comprehensive library is not available in the hospital, an active reference system should be provided through ready access to larger medical libraries.

The fundamentals of good medical history taking and thoughtful, meticulous physical examination should be taught. Information gained by these procedures must be carefully recorded in the medical record. A reliable measure of the quality of a program is the quality of hospital records. These records should include daily appropriate progress notes by both trainees and attending staff, as well as a discharge summary. The hospital should maintain a record room with adequate cross indexing and ready reference for study of the patients' charts. Periodic summaries of department statistics are essential for the evaluation of results and usually will be requested at the time a program is reviewed by the Residency Review Committee.

Knowledge of obstetric and gynecologic pathology is essential. Therefore, assignment to general and obstetric and gynecologic pathology may be arranged in such a way that the resident retains at least part-time contact with clinical obstetrics and gynecology (night and weekend duty, for instance), in order to fulfill the minimum clinical requirements. While much value also may be gained from assignment to other clinical services, in general such additional formal rotations are feasible only in programs of more than three years duration, as such rotations cannot be counted as a formal part of the required thirty-six months of clinical experience in obstetrics-gynecology.

It is desirable that a resident in obstetrics-gynecology receive instruction in the application of radioactive materials. Since the experience is also desirable for other residents, some system of sharing in the care of patients with pelvic malignancies should be achieved.

It is not required, but nevertheless highly desirable, that every program encourage a research project for each resident, but it may not detract from or be a substitute for the assignment to clinical services. An active departmental research environment is a useful educational experience, whether or not the individual resident participates directly.

Since obstetricians-gynecologists function as providers of comprehensive care for women, experience in the care of ambulatory patients is essential in training programs. The ratio of outpatient visits to admissions for operations should be evidence of this emphasis. Since many of the patient problems seen in the hospital outpatient department are comparable to those seen in office practice, it is essential to provide a closely supervised experience in an active outpatient setting that also insures a continuity of care for patients by the individual resident. Increasing responsibility should be given to the resident under the conscientious guidance of a qualified attending staff member.

It is not essential or desirable that all training programs be identical in structure or function. It is, however, mandatory that each residency program provide quality edu-

cation and experience for each of the residents completing the program.

One significant measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Obstetrics-Gynecology.

In addition to these Special Requirements as set forth, all provisions of the General Requirements must also be met for approval of a residency program. Residents who plan to seek certification by the American Board of Obstetrics and Gynecology should communicate with the Secretary of the Board to obtain the latest information regarding current requirements for certification.

Effective: July, 1982 ACGME: May, 1981

13. Special Requirements for Residency Training in Ophthalmology

SECTION 1. INTRODUCTION

The "Special Requirements for Residency Training in Ophthalmology" set forth the educational prerequisites for trainees and the minimum components that a residency training program in ophthalmology must possess, including the duration of training, institutional support and administration, faculty, educational program, patient resources, and facilities.

Residency training programs in ophthalmology should be organized to provide a stable, well coordinated progressive educational experience for the trainee rather than simply to provide health care to patients.

SECTION 2. PREREQUISITES

A first post-graduate clinical year (PGY-1) in an accredited program or equivalent training is required of all candidates entering ophthalmology training programs. It is suggested that the year be comprised of training in which the resident has primary responsibility for patient care in a field such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, six months of the year should be a broad experience in direct patient care.

SECTION 3. DURATION OF TRAINING

The length of training in ophthalmology must be at least 36 calendar months, including appropriate short periods for vacation, special assignments, or exceptional individual circumstances approved by the program director.

SECTION 4. INSTITUTIONAL SUPPORT AND PROGRAM ADMINISTRATION

A. General

Program directors must be given sufficient authority, financial support, and facilities by the governing body of the sponsoring institution to permit them to organize and supervise the following activities of the training program: staff recruitment, resident selection and evaluation, instructional program, patient management, and research.

B. Qualifications of the Program Director

The program director must be a qualified physician, fully trained in the discipline of ophthalmology, certified by the American Board of Ophthalmology or possessing suitable equivalent qualifications in the judgment of the members of the Residency Review Committee. The tenure of the program director should be adequate to insure stability and continuity of the program.

The program director must be able to devote sufficient time to the administration and conduct of the residency training program so that the educational experience for the residents is satisfactory. The Residency Review Committee for Ophthalmology will evaluate the overall effectiveness of the program director as an administrator, educator, and research coordinator.

C. Administrative Responsibilities of the Program Director

The program director must develop and maintain cur-

rent documentation of institutional or inter-institutional agreements, resident agreements, patient care statistics, faculty evaluations, and assessment of resident performance. The forms necessary to document these activities shall be provided by the Residency Review Committee.

The program director is responsible for notifying the Secretary of the Residency Review Committee of any change which may significantly alter the educational experience for the residents. These will include a change in:

- 1) program director and/or departmental chairman;
- 2) formal affiliation with another institution;
- 3) required rotation to any institution other than the parent institution or institutions integrated into the programs;
or
- 4) the number of resident positions offered.

A proposed change in the number of resident positions offered at any level of training or in the total number of resident positions offered must receive prior review of the Residency Review Committee to determine whether adequate resources exist to train the number of residents contemplated and to determine whether an adequate balance exists between educational opportunity and clinical responsibility.

SECTION 5. THE TEACHING FACULTY

The faculty should possess good clinical and teaching skills. The faculty must devote adequate time to the education of residents. It is desirable that the faculty be chosen with a broad range of subspecialty interests.

Faculty members should be certified by the American Board of Ophthalmology or possess suitable equivalent qualifications.

As a general rule, there should be sufficient faculty in the program to provide a minimum of approximately one full-time equivalent faculty person for every three residents in the program.

SECTION 6. PARTICIPATING INSTITUTIONS

All institutions participating in the training program must be described as requested by the Residency Review Committee in its information forms. Affiliations with institutions which are geographically remote from the parent institution (not within commuting distance) should not represent a significant proportion of the training program, unless the remote institution can be shown to provide equivalent educational experience to that obtained at the parent institution. Rotations to foreign countries shall not be used to meet minimum educational standards.

SECTION 7. EDUCATIONAL PROGRAM

The program director is responsible for the structure and content of the educational program and must provide the Residency Review Committee with a statement of objectives, methods of implementation, and procedures for assessment of the program. Extramural educational experiences may be used to complement the teaching program, but the preponderance of the educational experience must be designed and supervised by the program director. The components of the educational program should include:

A. Didactic Instruction in the Basic and Clinical Sciences

Residents should be educated in basic and clinical sciences through lectures or discussions relevant to the practice of ophthalmology. Regularly scheduled required lectures or seminars should be held at the parent institution. As a general rule, the didactic curriculum should encompass a minimum of approximately 400 hours of instruction for residents during the 36 month training program.

B. Case Presentations and Clinical Conferences

A minimum of approximately eight hours per month should be devoted to regularly scheduled case presentations and clinical conferences attended by majority of residents and faculty.

C. Pathology

The intramural training experience in ocular pathology should be comprised of lectures, clinicopathological conferences and a minimum of approximately 50 hours of intramural laboratory experience in gross and microscopic examination of pathological specimens.

D. Clinical Experiences

The volume and variety of clinical ophthalmological problems in children and adults must be sufficient to afford each resident a graduated supervised experience with the entire spectrum of ophthalmic diseases so that the resident may develop appropriate diagnostic, therapeutic, and manual skills and be able to judge whether these should, or should not, be applied.

1. Out-patient Experience

Residents should be responsible for the care of an adequate number of outpatients during the course of training. The out-patient experience for a resident during the three year training program should consist of a minimum of approximately 3,000 patient visits appropriately distributed through a broad range of ophthalmic disease in adults and children. There should be evidence of faculty supervision in at least two-thirds of these visits, and evidence that residents have major management responsibility in at least two-thirds. Approximately 1,500 of these patients should be refracted by the resident.

2. Surgical Experience

Residents should perform and assist at sufficient surgery to become skilled as general ophthalmic surgeons. For example, each resident's experience should typically include a minimum of approximately 25 cataract procedures and approximately 10 strabismus procedures in which the resident has major technical and patient care responsibilities.

The Residency Review Committee will require documentation (on its information forms) of the surgical experiences of each resident, to include the number of cases in each category where the resident has served as a primary surgeon, or the assistant surgeon.

3. Consultation Experience

Each resident should care for a minimum of approximately 150 patients seen in consultation during the course of three years of training. The types of cases seen should cover a wide spectrum of ophthalmic diseases and ophthalmic manifestations of systemic diseases.

E. Fellowship Program

If the residency training program is conducted in conjunction with fellowship training programs for teaching advanced competence in specialized areas of ophthalmology, such fellowship programs must not adversely effect the experience of residents in the core training program.

SECTION 8. FACILITIES

A. Clinic

The outpatient area in at least one participating institution must have at a minimum one fully equipped examining lane for each resident in the clinic. There must be current equipment for ophthalmic photography, fluorescein angiography, perimetry, retinal electrophysiology, ultrasound and microbiology readily available in the clinic area or nearby.

B. Operating Room Facilities

The surgical facilities at each participating institution in which residents are trained in surgery must include at least one operating room fully equipped for ophthalmic surgery, including an operating microscope.

C. Inpatient Facilities

There must be inpatient facilities with sufficient space and beds for good patient care and for educational purposes. An eye examination room with a slit lamp should be available and conveniently located within or near the inpatient area of each participating institution.

D. Library

Orthopaedic Surgery

Residents should have access to a major medical library. In addition, there should be readily available a collection of ophthalmological and general medical texts, journals, films, records and tapes.

SECTION 9. OTHER

In its review and evaluation of training programs the Residency Review Committee for Ophthalmology may use the pass rate on the examinations of American Board of Ophthalmology for residents completing a particular program as one measure of the quality of that training program.

Training programs in ophthalmology should comply with all of the provisions of the "General Requirements."

Residents who plan to seek certification by the American Board of Ophthalmology should communicate with the Secretary of the Board regarding specific requirements for certification.

Effective: July 1982 ACGME: Sept. 1981

14. Special Requirements for Residency Training in Orthopaedic Surgery

Orthopaedic surgery is the medical specialty that includes the investigation, preservation, and restoration of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

The Special Requirements for Orthopaedic Surgery detail the content and scope of the education and experience which a program must provide.

I. TRAINING PERIOD**A. Duration of Training**

The post-graduate medical educational requirement is five years, of which at least three years must be in an accredited orthopaedic residency. These three years must include a significant quality educational experience and appropriate mix in adult orthopaedics, children's orthopaedics, and trauma. An orthopaedic residency program may be responsible for three, four or five years of post-graduate medical education. Accreditation by the Residency Review Committee and the Accreditation Council for Graduate Medical Education (ACGME) is required for all years in the program.

B. Categories of Post-Graduate Education

As many as two years of post-graduate education may be obtained from the following categories:

1. The first post-graduate year (PGY-1) may be in a broadly based ACGME accredited program with no more than three months of orthopaedic surgery.
2. Up to two years may be spent in an ACGME accredited residency in a broadly based medical discipline.
3. Up to twelve months of study may be in either clinical or laboratory research.

II. RESPONSIBILITIES OF INSTITUTIONS**A. Institutional Support**

The governing body of the institution should provide support for the program director in teaching, recruiting staff, selecting residents, and dismissing residents whose performance is unsatisfactory. The institution should demonstrate proper support for the program by encouraging continuity in the program directorship. Assurance of due process for residents and teaching staff should be demonstrated.

B. Affiliation Agreement

When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in orthopaedic surgery, letters of agreement must be approved by the institutional governing boards.

Affiliations should be avoided with institutions which are:

- 1) at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult, or
- 2) which do not add to the educational value of the program.

Clinical responsibility alone does not constitute a suitable educational experience.

III. PROGRAM ORGANIZATION AND RESPONSIBILITIES¹⁸**A. Qualifications of the Program Director**

The program director should be certified by the American Board of Orthopaedic Surgery or possess suitable equivalent qualifications. The evaluator of such equivalency will be the Residency Review Committee. The program director usually shall be the chairman of the department or chief of the division of orthopaedic surgery. The effectiveness of the program director will be considered by the Residency Review Committee.

B. Responsibilities of the Program Director

1. The program director must arrange for the provision of adequate facilities, teaching staff, resident staff, teaching beds, educational resource materials, outpatient facilities, and research facilities.
2. The program director is responsible for the selection of residents and must insure that the appointed residents meet the eligibility requirements listed under item 3 of the "General Requirements." The program director should monitor each resident's performance and progress in cognitive, judgmental, interpersonal and manual skills aspects of orthopaedic surgery. It is the program director's responsibility to counsel, censure, and, after due process, to dismiss residents who fail to demonstrate appropriate industry, competence, responsibility, learning abilities, and ethics.
3. In programs which offer post-graduate fellowships and instructorships, the program director should insure that such fellowships and instructorships do not compromise resident education.
4. The program director must keep documentation of institutional and interinstitutional agreements, resident agreements, patient care statistics, and evaluations, including periodic assessments of resident performance. These documents must be provided upon request to the Residency Review Committee or site visitor.
5. The program director must notify the Secretary of the Residency Review Committee of any change which might significantly alter the educational experience. Examples of such changes are:
 - a. Change of program director.
 - b. Major changes in institutional affiliation. Any change in formal affiliation with an institution where a resident spends six months or longer requires prior approval by the Residency Review Committee. The total experience in institutions in which programs in orthopaedic surgery are not accredited by the ACGME shall not exceed six months for any resident.
 - c. Extension of resident education period. A program director may retain a resident longer than the duration for which the program is accredited in orthopaedic surgery so that the resident may achieve sufficient competence in the specialty. The Residency Review Committee must be notified of such retention.

¹⁸Program directors are referred also to the "General Requirements" of the *Essentials of Accredited Residencies* for further explanation of the requirements for program organization and responsibilities of the program director and the staff.

- d. A change in number of residents. Any change in the number of residents at any level of training or change in the total number of residents must receive prior approval of the Residency Review Committee.

C. *Responsibilities of the Teaching Staff*

1. It is the responsibility of the teaching staff to insure that the orthopaedic residency is an educational experience with the resident in the role of student. The structure and content of the of the residency program should reflect the education-service ratio of an educational experience.
2. There must be sufficient staff available to supervise and instruct residents at all times. The teaching staff should demonstrate sufficient commitment in time and energy to fulfill the teaching assignments.
3. The teaching staff should participate in appropriate scientific societies, pursue their own continuing education, and develop an active interest in related research.

IV. ELIGIBILITY, SELECTION, RETENTION AND DISMISSAL OF RESIDENTS

Program directors are referred to the "General Requirements" in this area.

V. TYPES OF PGY-1 EDUCATIONAL EXPERIENCE

A. *Categorical PG-1 Year*

The categorical post-graduate year (PGY-1) must be spent in an accredited institution which has accredited residency programs in general surgery, internal medicine and pediatrics. In categorical programs, the non-orthopaedic PG-1 year should include no more than three months of orthopaedic experience.

B. *Transitional Programs*

In transitional programs, the non-orthopaedic PG-1 year should include no more than three months of orthopaedic experience.

VI. SCOPE OF CLINICAL, BASIC SCIENCE, AND RESEARCH EXPERIENCE

A. *Clinical Resources*

Clinical problems must be of sufficient variety and volume to afford the residents adequate educational experience in diagnostic, therapeutic, judgmental, and manual skills in adult orthopaedics, pediatric orthopaedics, fractures and trauma, surgery of the spine, including disc surgery, hand and foot surgery, athletic injuries, rehabilitation and related basic sciences.

B. *Resident Responsibility*

The residency program should provide gradually increasing responsibility. Inpatient and outpatient experience including all age groups is necessary.

C. *Teaching Rounds and Conferences*

There must be regularly scheduled and held teaching rounds and clinical conferences. Subjects of mutual interest should be discussed at interdisciplinary conferences.

D. *Basic Medical Sciences*

Basic science education must include anatomy, biochemistry, biomechanics, microbiology, pathology, physiology, embryology, and other studies related to the musculoskeletal system. Specific time must be available for basic science instruction and routine clinical duties must not encroach upon this time.

1. Anatomy should include study and dissection of anatomical specimens, appropriate lectures or other formal sessions, and correlation of anatomical information with clinical problems.
2. Pathology should include formal teaching sessions with lectures or seminars in correlative pathology, and the study and discussion of microscopic pathology with correlation to physical and roentgenographic findings and patient care.
3. Biochemistry and physiology should include presentation of formal course materials as related to orthopaedic surgery. The application of biochem-

istry and physiology to daily clinical problems should be emphasized.

4. Biomechanics should be presented in seminars or conferences emphasizing principles and terminology as applied to orthopaedic practice.
5. Bacteriology and pharmacology should be discussed in depth as related to patient care.

E. *Research*

Reasonable facilities for research by the residents should be provided. Research activities should be documented.

F. *Library Facilities*

Library facilities should have available current and past orthopaedic periodicals and reference books.

VII. PROGRAM EVALUATION

A. *Site Visits*

All programs will be evaluated periodically by the Residency Review Committee for Orthopaedic Surgery. This evaluation will include a site visit by a salaried field surveyor or an orthopaedic site visitor as determined by the Residency Review Committee for Orthopaedic Surgery. A report of the site visit will be sent to the Residency Review Committee and will be considered in the evaluation of the program.

B. *Examinations*

One measure of the quality of a program is the performance of its graduates on examinations for certification by the American Board of Orthopaedic Surgery.

C. *Programs on Probation*

Programs on probation will be reviewed by a specialist within one year of their accreditation on a probationary status.

If deficiencies as documented by the specialist site visitor have not been corrected, withdrawal of accreditation of the program may be recommended after review by the Residency Review Committee.

D. *Change of Director*

Upon receiving notification of a change in program directorship, the Residency Review Committee will undertake appropriate re-evaluation of the program, which may include an on-site inspection by a specialist, within one year of the change in directorship. Programs which have operated under the leadership of an acting director for more than twelve months shall be subject to similar re-evaluation by the Residency Review Committee.

VIII. BOARD CERTIFICATION

Residents who plan to seek certification by the American Board of Orthopaedic Surgery should communicate with the Secretary of the Board to obtain the latest information regarding certification.

Effective: July 1984 ACGME: Nov. 1983

15. Special Requirements for Residency Training in Otolaryngology

Duration of Training: Residency training programs in otolaryngology are designed to meet the requirements of the Council on Medical Education of the American Medical Association, the American College of Surgeons, and the American Board of Otolaryngology. The training must be of at least five years duration, which should include one year of general surgery training, three years of progressive training in otolaryngology, and one additional year in otolaryngology, general surgery or in other residency programs accredited by ACGME. The final year of training must be a senior experience in otolaryngology.

This senior year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. Rotations of six months or more in any year of training, to institutions which are not approved as part of the program, require prior approval of the RRC.

Scope of Training: It is not essential or even desirable

Otolaryngology

that all programs should adopt exactly the same program, or that they should offer a rigidly uniform sequence of experience. It is essential, however, that all institutions participating in graduate training in otolaryngology should be able to meet the fundamental requirements for an accredited program and, either alone or in collaboration, should obtain comparable results in the quality of training and in the experience obtained.

Residencies in otolaryngology should offer broad training and should preferably include some experience in closely related fields of surgery. Adequate educational content and overall clinical and operative experience should be provided to enable the resident on completion of his training to begin the practice of his specialty in a scientific and competent manner. Residencies in otolaryngology must provide in-depth training and experience in medicine and regional surgery. It is essential that the training program have a well-organized, comprehensive, and effective educational curriculum. The curriculum content should reflect careful planning, with evidence that the cyclical presentation of core specialty knowledge is being supplemented by the addition of current information and that teaching is being conducted in a variety of educational settings employing accepted principles of educational methodology.

Essential equipment for diagnosis and treatment should be available, including all special apparatus. The clinical material should be sufficient in variety and amount to provide adequate training in the various divisions of the specialty. The program should provide for training in the following areas:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, immunology, allergy and neurology relevant to the head and neck; the air and food passages; the communication sciences, including a working knowledge of audiology and speech; the endocrine disorders as they relate to otolaryngology.

2. The recognition and management of congenital anomalies, abnormal function, trauma and disease in the regions and systems enumerated in item one above.

3. The recognition and medical management of diseases and abnormality of function of the ears, upper and lower respiratory tract and food passages.

4. The recognition, technique and surgical management of congenital, inflammatory, neoplastic and traumatic states, including among others:

- a. Temporal bone surgery
- b. Paranasal sinus and nasal septum surgery
- c. Maxillofacial, plastic and reconstructive surgery of head and neck
- d. Surgery of the salivary glands
- e. Head and neck oncologic surgery
- f. Head and neck reconstructive surgery particularly as it relates to the restoration of function in congenital anomalies; following extensive surgery and complications of head and neck trauma
- g. Peroral endoscopy, both diagnostic and therapeutic
- h. Surgery of lymphatic tissues of the pharynx
- i. Pre- and post-operative care.

5. Diagnosis and diagnostic methods including related laboratory procedures.

6. Diagnostic and therapeutic radiology, including the interpretation of roentgenograms of the nose, accessory sinuses, salivary glands, temporal bone, skull, neck, larynx, lungs and esophagus.

7. Awareness of the current literature especially pertaining to the areas mentioned in item one above.

8. Awareness of the habilitation and rehabilitation techniques and procedures pertaining to otolaryngology.

A more detailed list of the procedures to be performed by residents may be obtained by reviewing the Residency Review Committee form entitled "Otolaryngologic Opera-

tive Experience Report for an Individual Resident." It is essential that there be documentation of a careful analysis of the operative experience of the individual residents and the cumulative operative experience of the graduating residents annually by the program director as a part of his responsibility for the evaluation of the balanced progress of individual residents and the total program. The training shall include a systematic course of instruction with demonstrations on clinical and technical subjects pertinent to the various phases of otolaryngology. Adequate experience should be provided in office practice procedures and management.

A program need not necessarily be confined to a single hospital. In programs involving two or more hospitals, it is essential that the training programs be organized by the parent institution with progressive responsibility for the residents. Collaborative programs can be developed where two hospitals of graduate training caliber have complementary clinical resources which can be combined to advantage in developing an acceptable program.

Application of the Basic Medical Sciences: There should be training in the concepts and technique of allergy therapy, and in audiology and speech and language disorders. There should be applied training in hearing, hearing evaluation, hearing aid use, hearing conservation, hearing rehabilitation and the effects of noise on hearing. There should be instruction in the recognition and management of such disorders as aphasia, articulation, dysfluency and voice disorders as well as in normal and abnormal language development. Also, there should be applied training in vestibular function evaluation and vestibular disabilities.

Frequent departmental conferences for a detailed discussion of problem cases are important, as are also clinicopathological conferences. The residents should study and discuss with the pathologist all tissues removed at operation and all autopsy material from patients on their services. It is desirable to have the residents assigned for a period of service in the department of pathology.

Surgical anatomy should be stressed by the attending surgeons in discussing surgical cases with the residents, and also by the pathologists in the performing of autopsies as far as is possible. In addition, opportunity for the residents to work out special anatomic problems by performing dissections in the laboratory should be provided.

Research offers an important opportunity for the application of the basic sciences in clinical problems, and is an essential part of the preparation of the resident for a lifetime of self-education after the completion of formal training. It is essential that the training program provide a meaningful research experience for the residents, sufficient to result in an awareness of the basic principles of study design, performance, analysis and reporting. The research experience may be clinical or basic in nature and should reflect careful advice and planning with the faculty. Reasonable facilities for research by the residents should be provided, together with stimulating guidance and supervision.

One of the major areas of responsibility for program directors is the area of continuing program and trainee evaluation. It is essential that the training program conduct a periodic evaluation of the adequacy of the total educational experience of the residents and of the professional and educational progress of each resident.

It is essential that the residents participate in existing national examinations. Analysis of the results of these testing programs should guide the faculty in regard to the strengths and weaknesses of the individual trainees and the teaching program.

One measure of the quality of a program is the performance of its graduates on the examination of the American Board of Otolaryngology.

Staff: The chief of the training program should be certified by the American Board of Otolaryngology, or possess suitable equivalent qualifications.

At least one other member of the staff should be similarly qualified.

The director of the otolaryngology training program must devote sufficient time to the conduct of the program to assure that an appropriate educational experience is provided for the residents.

It is the responsibility of the program director to develop a sound administrative organizational framework and an effective teaching staff as essential elements of an approved training program. It is essential that there be clear documentation of an adequate faculty commitment to the residency training program and that there be assurance of adequate institutional support for the otolaryngology training program in terms of budgetary, space and clinical resources provided by the institution.

Staff members must have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing surgical education; (3) engage in scientific publications and presentations; and (4) show active interest in research as it pertains to their specialty. A staff which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate education in otolaryngology.

Surgical Staff: The surgical staff should be composed of surgeons who are highly qualified in both surgical skill and judgment. It should be properly organized and harmonious, with the designated head or chief of service responsible for the quality of work done in the department, and he should be the surgeon best fitted for this responsibility. The members of the staff should have a sincere interest in teaching and in the welfare of the residents and must be willing to give the time and effort required by the educational program.

Approval cannot be granted for residency training in otolaryngology if the service is a division of the department of surgery unless that division is headed and staffed by qualified otolaryngologists as specified above.

Clinical Material: The institution must be able to provide an adequate number and variety of otolaryngic medical and surgical patients. Arbitrary figures cannot reveal these considerations accurately. The surgical cases provided by the hospital should reflect a broad range of pathological problems and clinical experience pertinent to otolaryngology. This is essential to give the progressive operative experience necessary for the resident. The residency program should be organized so that the residents will hold positions of increasing responsibility for the care and management of patients.

An approved residency in otolaryngology should include a well-organized and well-supervised active outpatient service.

A hospital which limits its clientele to special types of cases may, if otherwise qualified, be approved as a collaborating hospital if its residency is an integral part of an approved comprehensive program.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, to be certain regarding the full requirements for certification.

Effective: Not Specified ACGME: Nov. 1983

16. Special Requirements for Residency Training in Pathology

Accreditation is granted for residency training programs in pathology in the following categories:

Category APCP-4—In both anatomic and clinical pathology, two years in each, for a total of four years.

Category AP-3—In anatomic pathology only for three or more years.

Category CP-3—In clinical pathology only for three or more years.

Category APFP-4—In both anatomic pathology and forensic pathology, two years in each, for a total of four years.

Category APNP-4—In both anatomic pathology and neuropathology, two years in each, for a total of four years.

Category FP-1—In forensic pathology for one year.

Category FP-2—In forensic pathology for two years.

Category NP-2—In neuropathology for two years.

Category DP-1—In dermatopathology for one year.

Category DP-2—In dermatopathology for two years.

Category BB-1—In blood banking for one year.

Category RIP-1—In radioisotopic pathology for one year.

Category PCH-1—In chemical pathology for one year.

Category HMP-1—In hematology for one year.

Category MM-1—In medical microbiology for one year.

Category SP-1—In selective pathology (formerly, special pathology) usually for one year. Programs in this category are ordinarily approved in highly specialized hospitals of acknowledged excellence which because of the limitations of their clinical material cannot provide general training in anatomic or clinical pathology. Resident experience in a selective pathology program is deemed to be equivalent to one year of training in either anatomic or clinical pathology. Residents receiving part of their training in such programs should consult with The American Board of Pathology as to what other training is necessary to provide acceptable breadth of experience.

Training programs intended to qualify applicants for certification in other special fields of pathology by The American Board of Pathology are approved by the Board on an individual basis.

The provisions of the General Requirements (Section 1 to 10) must also be met for accreditation.

Training Programs in Anatomic and Clinical Pathology

Scope of Training: The training programs in AP/CP, AP and CP should be designed so as to offer the opportunity to acquire a broad and in-depth understanding of the subject matter in clinical and anatomic pathology, as well as the techniques and methodology required to gain this information. Experience in the interpretation of laboratory data, in the management and direction of a laboratory, in teaching and in investigation are all objectives of a good program.

Every opportunity should be offered to and every attempt made by the trainee to gain clinical correlative experience in anatomic pathology and in clinical pathology and to relating these experiences directly to the patient.

Systematic instruction in anatomic pathology should be accomplished primarily through the use of fresh tissues, microscopic slides, and photographs from current cases supplemented by museum specimens and seminar and course materials. Equal attention should be paid to material from the autopsy service as well as from the surgical pathology service. Proficiency in frozen section diagnosis, in exfoliative and other forms of cytology, in electron and other special forms of microscopy, in histochemistry, in cytogenetics and in immunopathologic techniques is an important aim. Training should be given in forensic pathology neuropathology, pediatric pathology and gynecologic pathology and where such training is not available in the primary institutions, arrangements should be made to accomplish this in other institutions. The teaching material must be sufficient in quality and variety to afford adequate training in gross and microscopic pathology. Special emphasis, however, should be placed on the quality of the supervision and instruction and the nature and quality of opportunities to gain clinical correlative experience.

Blood Banking/Chemical Pathology

The training in clinical pathology should emphasize an integrated understanding of procedural theory and selection, quality control and clinical correlation since the result of a clinical pathology laboratory procedure should closely reflect the medical requirements involved. Assurance of quality, precision, accuracy and medical appropriateness of laboratory data to the diagnosis, management and prognosis of patients, and the development of medical administrative ability and responsibility are of special importance in clinical pathology.

Instruction in clinical pathology should include, but not be limited to, training in medical microbiology, medical parasitology, immunohematology-blood banking, chemical pathology, hematology, medical microscopy, immunopathology, radioisotopic pathology, toxicology, endocrinology and the application of the physical and biological sciences to the diagnosis, prognosis and treatment of diseases. Instruction in automation and data handling in the clinical laboratory should be included in the training program. It is expected that instruction will be augmented by the use of seminar and course materials, laboratory indices of unusual cases and clinical correlative conferences.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and his associates and assistants, the supervision of work of the trainee, the quality of the educational program which includes the educational environment of other training programs, the opportunities for significant exchange of information and experience with patient care physicians through conferences, seminars, rounds, consultations and on-call and trouble-shooting responsibilities, the exactness and completeness of the laboratory work performed and the quality control procedures used. On the score of quantity, consideration is also given to the volume and distribution of laboratory work both in absolute numbers and in relation to the size of the hospital, to the pattern of medical practice in the institution, to the diversity and completeness of tests performed, to the size and equipment of the laboratory, and to the number and qualifications of medical and nonmedical personnel in relation to the volume of work.

It is expected that the director of the program be fully qualified in the branches of the specialty for which training is approved, and that he provide adequate supervision of the hospital laboratory. Adequate supervision is not interpreted in terms of hours, but rather that the director have no obligation outside of the one approved hospital which will dilute the quality of this supervision; the equivalence of full time direction by two or more qualified persons is acceptable in special instances. Similarly, two or more hospitals may be approved as a unit with a single, full-time director of laboratories if it is apparent that a satisfactory training program can be conducted.

It is expected that the number of medical technologists and their qualifications will be appropriate for the volume of work in the laboratory.

Sufficient laboratory and office space, as well as equipment, should be provided for both staff and trainees to enable the department to function efficiently and the training program to be effective. There should be facilities in all hospitals for the procedures usually performed in clinical pathology, including cytogenetics and immunopathology, and for the study of surgical and cytologic specimens, and for the performance of necropsies. The trainee must be provided with the opportunity to study such special procedures not available on the premises of the main training institution.

The work and training of trainees must be fully supervised with appropriate and increasing responsibilities of trainees being clearly defined. Inter- and intra-department conferences, seminars, journal clubs and demonstrations should be conducted as frequently as the volume of the material and the size of the staff justifies. A clinicopatho-

logic correlative conference should be held regularly to review necropsy cases.

In institutions offering training in both anatomic and clinical pathology, the program should be so arranged as to assure even division of the residents' training and experience in anatomic and clinical pathology. Ordinarily, this can best be achieved by a series of exclusive, or nearly exclusive, assignments to the various departments of the laboratory. Assignment in cytopathology is a mandatory requirement for training in anatomic pathology with the trainee being given adequate instruction and supervision, and appropriate responsibility. The training should be supervised by a pathologist trained or fully experienced in cytopathology and should include experience with extragenital as well as genital material.

Quantitative Requirements: In the field of anatomic pathology there should be sufficient volume and variety of necropsy, and surgical and cytopathologic material (except in special programs) to insure adequate education, training, and experience in this branch of the specialty. There are no absolute criteria but special scrutiny will be given to a hospital in which an adequate volume and variety of the various types of anatomic material does not exist.

In the field of clinical pathology there should be a reasonable diversification of tests and in each category there should be sufficient volume to provide training and experience. There are no absolute criteria but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

Effective: July, 1981 ACGME: May, 1980

Training Programs in Blood Banking

The program must be directed and adequately supervised by a physician qualified in blood banking.

The training program shall include all aspects of blood banking, i.e., medical, technical research, and administrative. The program must be conducted in institutions where blood is regularly drawn and processed and also must include training and experience on an active transfusion service of a hospital.

The administrative experience should include donor recruitment and processing as well as logistic aspects of blood banking. The program should also provide adequate study of the technical and laboratory facets of transfusion and transplantation. The hospital training should include clinical experience in the use of blood and blood components. The resident in blood banking should participate in research or development activities and that adequate facilities will be provided.

In order to obtain adequate training in a blood bank program, a sufficient number of blood donations and transfusions to provide the required skills should be performed in the participating institution(s). Also, an active teaching program in laboratory medicine and pathology, as well as a training program for blood bank technologists, in one or all of the institutions in the training of blood bank physicians, is desirable.

Training Programs in Chemical Pathology

The training program in chemical pathology must be directed and supervised by a physician who is qualified in clinical pathology and/or chemical pathology. If qualified in clinical pathology only, the director must have special qualifications and experience in chemical pathology. The program must provide opportunities for trainees to become expert in the development, operation and quality control of a chemical pathology laboratory; expert in the clinical interpretation of laboratory results; and to become a consultant in these areas to physicians and patients.

The training institution should be of sufficient size to

Dermatopathology/Forensic Pathology/Pathology: Hematology/Medical Microbiology

provide the program with the necessary volume and variety of clinical material in chemical pathology. The analytical repertoire of the laboratory must be distributed satisfactorily within the various categories and subdivisions of chemical pathology to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in chemical pathology.

The laboratory must have office and bench space sufficient to provide for both laboratory personnel and trainees. The facilities should be well equipped with modern instrumentation in all major areas of analytical work.

The laboratory should have ongoing research and development programs in methods, and have good quality control programs in continuous operation. There must be adequate library facilities to provide for the trainees' needs, including an adequate selection of current periodicals.

The training program must provide opportunities for trainees to develop knowledge and skills relating to: 1) analytical chemical pathology, both basic and applied; 2) instrumentation; 3) administration and management of a chemical pathology laboratory; and 4) data processing. It is further expected that the trainee will engage in research activities during the period of training. The laboratory must therefore have the capacity to support research by trainees, including facilities, equipment, and a professional staff competent to direct research training. Clinical training in relation to chemical pathology, including the use and interpretation of chemical analyses in clinical diagnosis and management, must be an integral part of the training program.

The minimum training program in chemical pathology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the *Directory of Residency Training Programs*, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

Effective: Nov. 1983 ACGME: Nov. 1983

Training Programs in Dermatopathology

The training program shall include all aspects of dermatopathology, including the gross and microscopic diagnosis of skin disorders by means of direct visual inspection and by light and fluorescence microscopy, as well as histochemistry, together with the relevant aspects of electron microscopy, cutaneous mycology, bacteriology, and entomology. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel.

In order to provide such training the program shall be directed and closely supervised by a physician qualified in dermatopathology and devoting his major activities to the specialty of dermatopathology. The training institution should be of such size and composition as to provide not only ample dermatologic clinical material but possess all the supporting facilities necessary to accomplish the objectives of the program. Ordinarily, the institution would have approved residency programs in both dermatology and pathology.

The minimum training period in dermatopathology shall be one year in addition to the completion of acceptable residency training in an approved program of either dermatology or pathology as outlined in the *Directory of Residency Training Programs*.

Training Programs in Forensic Pathology

Institutions or offices may apply for approval of training programs in forensic pathology.

It is expected that the program will be for a minimum of one year and be directed and adequately supervised by a qualified forensic pathologist.

The approved institution or office should conduct a minimum of approximately 500 medico-legal necropsies per year. Of these, 100 or more should be in cases in which death is due to the immediate (within 24 hours) and direct effects of physical or chemical injury. In 25 or more of these autopsies, the investigation by the pathologist should also include an on-scene investigation with examination of the body before it has been disturbed.

Adequate facilities and competent personnel shall be available and properly utilized for the conduct of all bacteriological, biochemical, toxicologic, firearms, trace element, physical anthropology, odontology and other scientific studies as may be needed to insure complete postmortem investigation.

Effective: July, 1981 ACGME: Sept. 1980

Training Programs in Hematology

The training program in hematology must be directed and closely supervised by a physician who is qualified in hematology and whose efforts are devoted primarily to hematology.

The training program should include all aspects of hematology, with emphasis on the basic understanding of hematologic disorders, and appropriate utilization and application of laboratory procedures and methods to this understanding.

The training institution must have competent personnel, adequate facilities, and modern instruments for the study of all laboratory facets of hematologic and coagulation disorders. The program must provide a sufficient volume and variety of hemostatic problems and other hematologic material for a trainee to acquire the competency of a specialist in hematology. The program should be coordinated with an active clinical hematology service and should include active participation in the regularly scheduled teaching conferences in hematology. The department should have ongoing programs in research and development in hematology.

Examples of knowledge and skills that are desirable for the trainee to achieve include, but are not limited to, the following:

- a. Development of professional skills in obtaining, examining, and interpreting hematologic material.
- b. Development of consultative abilities in clinical hematologic programs.
- c. Investigation and research in the field of hematology.
- d. Administrative and managerial aspects of the hematology laboratory.

The minimum training period in hematology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the *Directory of Residency Training Programs*, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

Effective: Nov. 1983 ACGME: Nov. 1983

Training Programs in Medical Microbiology

The training program in medical microbiology must be directed and supervised by a physician who is qualified in medical microbiology and whose efforts are devoted to the laboratory aspects of medical microbiology.

Neuropathology/Radioisotopic Pathology/Pediatrics

The training program should provide the necessary clinical material and analytical capability in medical microbiology to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in medical microbiology.

Instruction should include, but not be limited to, training in medical bacteriology, mycobacteriology, mycology, virology, parasitology and immunology. Access to reference laboratories should be available for training in specialized procedures not available in the laboratory.

The laboratory should have adequate modern facilities, policies and procedures, equipment, and personnel for the performance of all laboratory aspects of medical microbiology, epidemiology, and infectious diseases. The institutional library facility should be convenient and spacious and house an adequate current collection of books and periodicals. Adequate facilities for necessary and relevant research must be provided.

The training program in medical microbiology must be designed to provide a broad knowledge in the discipline through didactic instruction and personal participation in microbiologic techniques and methodology, as well as in the reporting and interpretation of laboratory results, principles of laboratory management, teaching, and investigation.

The training program must provide opportunities for trainees to develop knowledge and skills relating to preparation and examination of cultures, identification of microorganisms, and performance of diagnostic immunologic procedures, supplemented with stock cultures of infrequently encountered and medically important microorganism microscopic slides, photographs, and seminar material. Also, knowledge of specimen collection, transport and processing, microscopic examination of specimens, histopathologic and clinical correlation of microbiologic data, activity and pharmacokinetics of antimicrobial agents, antibiotic assay, antimicrobial susceptibility testing, and interpretation of findings are important objectives.

Trainees must also develop knowledge and skills relating to principles of disinfection and sterilization, hospital infection control, infection control committee functions and responsibilities, microbiologic safety, quality control, workload accounting, budgeting, personnel supervision, and hospital and public health epidemiology.

Educational experiences should include opportunities to observe patients, adults and children, with a wide variety of infectious diseases through interaction with physicians from other clinical services. The program should provide regular administrative meetings, seminars and conferences in medical microbiology, in pathology, and in the clinical and epidemiologic aspects of infectious diseases.

The minimum training period in medical microbiology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the *Directory of Residency Training Programs*, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

Effective: Nov. 1983 ACGME: Nov. 1983

Training Programs in Neuropathology

It is expected that the program will be for a minimum of one year and will be directed and adequately supervised by a qualified neuropathologist and that additional neuropathologists be involved in the training.

The neuropathology program should be associated with the department of pathology in which during each year at least 200 necropsies, with examination of the nervous system, are performed, and 100 neurosurgical specimens from operative procedures on brain and spinal cord are

examined for diagnosis. In addition, there should be a reasonable number of neuromuscular and peripheral nerve biopsy specimens and an opportunity to study tumors and related lesions of peripheral nerves and sympathetic and parasympathetic nervous systems. The number of residents in training should be proportional to the amount and quality of material available.

Adequate laboratory space and facilities and competent personnel should be available and properly utilized for the conduct of the special procedures customarily employed in neuropathology, including electron microscopy and histochemistry.

There should be teaching materials in the form of indices of unusual cases, course and seminar materials and microscopic slide collections augmented by photographs and/or museum specimens sufficient to provide adequate study of conditions and diseases not frequently encountered in the routine necropsy and surgical specimens.

Teaching conferences in neuropathology, joint conferences with the general pathology service and with the clinical services of neurology, psychiatry, and neurosurgery should be regularly scheduled and attended by residents.

It is expected that residents in neuropathology will participate in research and will be provided with adequate facilities for the conduct of same.

Effective: July, 1981 ACGME: Sept. 1980

Requirements for Training Programs in Radioisotopic Pathology

The training program shall include all aspects of the use of radionuclides in the study of body fluids, excreta, or tissues quantified outside the body. The training program should provide the trainee adequate information regarding the basic theory and physics of radiation, isotope production and labeling, radiation protection, appropriate instrumentation, a broad spectrum of in vitro analyses and their interpretation, autoradiography, quality control, and other related topics. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel.

In order to provide such training, the program shall be directed and closely supervised by a physician qualified in radioisotopic pathology and devoting his major activities to the specialty of radioisotopic pathology. The training institution should be of such size and composition as to provide not only ample radioisotopic clinical material but possess all the supporting facilities necessary to accomplish the above objectives of the program.

The minimum training period in radioisotopic pathology shall be one year in addition to the completion of acceptable residency training in an approved program of either anatomic and/or clinical pathology as outlined in the *Directory of Residency Training Programs*.

17. Special Requirements for Residency Training in Pediatrics

Residency programs in pediatrics are organized and conducted to provide an advancing educational experience with increasing patient responsibilities over a period of three years. The Residency Review Committee designates the various levels of pediatric training as Pediatric Levels (PL) 1, 2 and 3. Residents and trainees of other varieties may also rotate through the pediatric program for short term educational experience.

PL-1 refers to the first full year of accredited basic or core training in pediatrics. This may correspond to a categorical internship, or to the first year of pediatric residency for someone with previous nonpediatric experience. The PL-1 year must contain at least eight months of supervised pediatric experience. Any or all of the remaining four months may be scheduled by the pediatric training program

director for other enriching or elective educational experience.

PL-2 refers to the second core year of an accredited pediatric residency. Increased assumption of responsibility including supervisory activities is expected.

PL-3 refers to the third year of accredited pediatric clinical training. It may be a chief or senior supervising residency.

A year of supervisory experience must be an integral part of the total three-year program. This year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Subspecialty rotations, if any, e.g., cardiology, hematology, neonatal intensive care, nephrology, etc., should be at least one month in duration. No one subspecialty should accumulate more than six months time over a three year program and the total of all such rotations should not exceed eleven months. In keeping with the commitment of pediatrics to primary and comprehensive care, the three year program must include the equivalent of at least six months' experience in ambulatory pediatrics. To enhance understanding of longitudinal aspects of disease, as well as growth and development, it is recommended that at least a portion of the ambulatory experience be of continuing as well as block assignments.

An accredited training program may be entirely independent (intramural) or may occur in two or more institutions as an affiliated or integrated program.

In both integrated and affiliated programs the strengths of each institution are drawn upon to make a satisfactory unitary educational experience for the house officer. The amount of time to be spent by the house officer in each of the participating hospitals should be determined by his/her educational needs rather than by the service needs of each institution. The educational objectives and experiences obtained in each institution must be described. Copies of formal written agreements and contracts specifying administrative and organizational relationships which bear upon the educational program must be submitted.

Accredited programs may use the resources of other appropriate but less closely affiliated hospitals or institutions to provide certain essential or enriching elements in the house officer's training, such as newborn, subspecialty, adolescent, development or community pediatrics rotations. If such affiliate hospitals or institutions do not have their own approval by the Residency Review Committee, periods of rotation through them should not total more than three months in each of the years of training.

When a program which cannot supply a complete educational program relies upon another program to provide some essential element, it is important that the arrangement between the two programs be such that the needs of the house officer are actually met. The commitment of each program to the other must be made explicit, and should be embodied in an exchange of letters or in a contract indicating:

1. the scope of the affiliation;
2. the resources in the affiliate program which will be available to the house officer;
3. the duties and responsibilities the house officer will have in the affiliate program;
4. the relationship which will exist between house officers and staff of the affiliate and primary programs.

The needs of the house officer will not be met in such affiliations by his relegation to second-class status, such as observer or other relatively inactive or passive participant, and the Residency Review Committee will look with disfavor upon such arrangements if it appears that in the affiliate program the affiliating house officer is not fully absorbed into the prevailing pattern of instruction and patient care.

Staff: Of foremost importance in a successful graduate training program is the quality of supervision and evaluation of the clinical work of the house officers. An attending

staff with professional ability, enthusiasm, and a sense of responsibility for teaching is essential. The director of the residency program must be capable of administering the program in an effective manner and be competent in the care of pediatrics patients. He/she should have demonstrated ability as a teacher and be knowledgeable in the related basic sciences and in research methodology. The director should be certified by the American Board of Pediatrics or should possess suitable equivalent qualifications. The faculty should contain similarly qualified teachers with diversified interests and expertise in clinical pediatrics and the basic sciences, and should be sufficient in number to meet the training responsibilities of the program. Qualified pediatric subspecialists provide highly desirable depth of teaching and facilitate the incorporation of new advances into the training program. The example set by dedication of the teaching staff to patient care is essential to the excellence of the educational program. Junior staff appointments, equivalent to chief residencies at the fourth-year or other advanced residency level, may be desirable in some programs. Such appointments may serve to provide better coordination and supervision of the educational and patient care programs.

Continuity of leadership over a period of years is important to the integrity of a program. The Committee feels that it is imperative that the program director assume full responsibility for supervision of the work of the department. When a change in program director occurs, the Committee must be notified promptly since appropriate reevaluation of the program must be undertaken.

The chief of the service must take responsibility for all educational programs, including any subspecialty programs, carried on in his department. All program descriptions submitted from his department must bear his original signature indicating his review and approval of the submitted programs.

It is desirable that the staff include qualified members of allied health professions, such as social service, physical therapy, psychology, nutrition and the like. Adequate numbers of qualified pediatric nurses are also essential.

Number of House Officers Appointed: The Committee does not designate the exact number of house officers which should be appointed to a program. If evaluation of a program discloses deficient or excessive patient loads, however, or if imbalances between supervisory and house staff are found, the program director will be so advised and correction will be expected.

Scope of Training and Facilities: Residency programs in pediatrics should be designed and organized to prepare physicians for comprehensive care of the pediatric patient, through a continuum of advancing educational experience and increasing patient care responsibilities. The degree of resident responsibility for patient care must be carefully advanced during the training years according to the individual's capabilities in order to develop necessary medical judgment and demonstrated competence.

Residents at all levels should be expected to provide care for the whole patient. The program should include a broad experience in all of the aspects of human growth and development from conception through fetal life, infancy, childhood and adolescence. Sufficient time must be devoted to studies in the basic sciences related to clinical pediatrics. The patient population served should encompass age groups from the newborn (including premature infants) through adolescence with respect to both therapeutic and preventive pediatrics. It is expected that accredited programs will include adequate training in the basic medical sciences, as well as in the clinical, laboratory, public health and community aspects of pediatrics.

The house officers should be exposed to pathologic conditions ranging from minor illness to life threatening conditions requiring intensive care. There should be experience with health supervision of the well child, diseases encountered frequently in office-based pediatric practice,

Pediatrics

psychological and social problems and problems which lie in subspecialty areas, both surgical and medical, involving chronic as well as acute or emergent conditions.

The inpatient and outpatient facilities must be adequate in size, variety and equipment necessary for a broad educational experience in pediatrics.

Ambulatory Services: A high quality of ambulatory pediatric care is essential to adequate training. Attainment of high quality requires the physical presence of supervising teachers in ambulatory settings where the patient load is kept at a level controlled to permit adequate teaching. An array of pediatric problems varying widely in variety and complexity should be included in the patient group cared for in the outpatient setting. Appropriate consideration should be given to the total environment including the psycho-social influences on, and needs of, the patient and family. Provision must be made for continuity between inpatient and ambulatory services.

Certain aspects of ambulatory care deserve special mention, and their implementation will be an important factor relative to the accreditation of training programs.

1. *Continuity Clinic (follow-up clinic):* This clinic provides experience with continuity of care for both house staff and patients. House officers should have weekly or biweekly assignment to the clinic, during which they should be relieved of other duties. Their patients should include those initially cared for by the resident on the ward or in the outpatient department, some well children of different ages and children with a variety of chronic diseases. Children with chronic, and often multiple, problems are in the greatest need of care such as this arrangement provides. Subspecialty consultants for these patients should be available to the house officers. They should designate who will see their patients when they are not available. The duration of this commitment should be for at least two years of training.
2. *Acute Illness Clinic and Emergency Room:* This rotation can be non-educational if inadequately supervised or if the patient load reaches a point where learning is compromised. On the other hand, high volume forces one to set priorities and facilitates development of accurate clinical judgment. The patient load should be kept reasonable with due consideration being given to the stage of training of the resident, the number of new patients versus return visits and the complexity of the problems. The duration of such an assignment should total at least three months over the three years of core training. Training in minor surgery and orthopedics should be included in this rotation.
3. *Specialty Clinics:* Special clinics should provide the house officer with experience in the role of a supervised consultant. It is strongly recommended that the resident have experience in dermatology, allergy, neurology, cardiology, psychology, developmental pediatrics, care of the handicapped and adolescence. Other desirable experiences include hematology, endocrinology, gastroenterology, pulmonary and renal disease, collagen diseases and learning problems. Where special clinics for patients with these problems do not exist, an equivalent exposure should be arranged.
4. *Preceptorships:* Office electives for preceptorships may constitute up to two months in either the second or third year of pediatric graduate education. Assignments may be solid blocks of time, or may run concurrently with other assignments on a part-time basis. Training programs incorporating this educational method should submit to the Residency Review Committee adequate descriptions of the content of these educational experiences and a short

curriculum vitae for each supervising preceptor. Preceptors should be specifically designated by the director and chosen for their willingness and ability in teaching. The manner in which responsibility is delegated is important. House officers should be involved in decision-making processes, not merely function as observers. The house officer may advantageously accompany the preceptor on hospital visits. The resident's role in the management of inpatients should not, however, conflict with that of other house officers assigned to inpatient duty. A preceptee is not a locum tenens employed to substitute for a pediatrician temporarily absent from the office. A preceptor must be physically present to supervise the resident and assure the resident's continuing educational experience.

A house officer in a preceptorial relationship should be responsible for the maintenance of office records as well as for the management of patients assigned to him/her. The program director is responsible for the maintenance of records of preceptorial activities, including justification of the qualifications of the preceptor, evaluation of the house officer by the preceptor and evaluation of the preceptor by the house officer.

Quantitative Requirements: It is not considered feasible to establish numerical quotas of either inpatients or outpatients for house officers. A relatively small inpatient service may be offset by a sizeable outpatient department. Programs should have a sufficient number and variety of hospital patients to assure each house officer broad training and experience. There should be a sufficient number of residents at each level of the training program to provide intellectual interaction necessary for a stimulating, worthwhile educational experience. Hospital duties should not be so pressing or consuming that they preclude ample time for other important phases of the training program or for personal needs. On the other hand, it is equally essential that the resident staff have a keen sense of responsibility for patient care. Night and week-end duty provides a valuable educational experience. Duty of this type not less than every fourth night and week-end on inpatient services is desirable.

Basic Science Teaching: Clinical rounds and conferences should correlate fundamental physiological, biochemical, microbiological, pathological and psychological aspects of disease in infancy, childhood and adolescence. Although departmental clinical faculty may have sufficient knowledge and expertise to provide satisfactory instruction, participation of basic scientists may increase the breadth and depth of the educational challenge. House officers should be encouraged to utilize basic science resources in the development of an understanding of the mechanisms of diseases and their management.

Laboratory, Radiology and Pathology Facilities: Laboratory, radiology and pathology services must be adequate to permit the house officer to obtain an educational experience during the care of his/her patients. The services should be available each day throughout the entire 24 hours. The percent of deaths in which autopsy is performed, and the use to which this activity is put, reflect the house officer's interest in observing post-mortem findings, the quality of the pathology service, and the intensity of the attending staff's interest in teaching.

Learning Experiences: The most important vehicle for learning is the assumption of meaningful responsibility by the house officer for arriving at his/her own diagnostic impressions, for consulting appropriate literature or other source material or persons, for developing plans for diagnostic studies and for writing orders. The resident must be involved, under supervision, in an adequate number and variety of procedures in order to develop appropriate skills. This assumption of responsibility must be carefully supervised by the pediatric faculty and attending physicians.

The most important formal teaching session is attending rounds conducted by a qualified teacher who is immediately available to the house officer for consultation and who is backed by a staff of consultants in subspecialty areas.

In addition to the teaching rounds at the bedside, there should be other regularly scheduled teaching assignments which the house officer is required to attend.

Conferences: In addition to regular departmental conferences, there should be available teaching sessions devoted to pathology, radiology, and various subspecialties such as hematology, cardiology, neurology, basic sciences, psychiatry and development. At least weekly, there should be an hour's meeting attended by both house staff and attending staff. House staff should be given the responsibility of presenting and discussing patient material or other subject matter. These conferences ought to involve the house officers actively (not be simply didactic), and should be conducted by highly qualified individuals, preferably with pediatric orientation.

Clinical Investigation and Research: Time consuming research projects at the expense of clinical learning should not be required for house officers in the relatively short core training program in pediatrics. Encouragement, supervision and needed facilities should, however, be placed at the disposal of the research-minded, insofar as circumstances permit.

Clinical investigation, such as the adequately supervised collection of data, review of pertinent literature, and preparation of a paper for presentation before a group, offers valuable experience that might well be a requirement for all house officers.

Medical Library: An adequate medical library should be readily available day or night. There should be an ample supply of current pediatric textbooks and journals. If library facilities are inadequate within the hospital, arrangements should be made for ready access to a larger medical library. Access to computerized literature search facilities is highly desirable.

Records: There can be no substitute for a well taken history and a carefully performed physical examination. On the basis of these two procedures alone, the house officer should record his/her impressions, and develop an initial study and management plan. The house officer's progress notes and final summary are a revealing index of the quality of his/her training. The medical record room should maintain a cross-indexing system that makes patients' charts readily available for review and study. The Committee recommends a unit record system for inpatient and outpatient charts.

Evaluation: Periodic evaluation of the educational progress of all residents is required. Residents should be encouraged to take a standard in-training examination at the beginning of the PL-1 and PL-2 years and, if performance is questionable or unsatisfactory, at the beginning of the PL-3 year. In-house evaluations, utilizing a variety of acceptable techniques, must be carried out on a recurring basis. These evaluations must be discussed with the resident and must be kept on file and be available for review.

One measure of the quality of a program is the performance of its graduates in the examination of the American Board.

Conclusion: Hospitals conducting accredited graduate training programs in pediatrics, or contemplating establishment of such programs, should be ever mindful that success for both teachers and students requires unselfish expenditure of time, effort, ability and enthusiasm to the end that the educational experience be of the highest possible quality.

Training Programs in Pediatric Cardiology

I. Duration of Training and Prerequisites

A minimum period of two years¹⁹ is required, and a third year, emphasizing research preparatory to an academic career, is strongly recommended. Training need not be confined to the parent institution although it is essential that the resident in pediatric cardiology receive progressive education, experience and responsibilities in the specialty.

Training programs in pediatric cardiology must exist in conjunction with an accredited three year pediatric residency program; these postgraduate programs should not dilute the patient material available to the core program.

Ordinarily, the resident will have completed three years of training in an accredited pediatric residency program prior to beginning a program in pediatric cardiology.

II. General Scope of Approved Programs

Graduate training in pediatric cardiology should provide for properly balanced, well-organized and progressive responsibility for care and study of patients on ward and outpatient services. This must encompass age groups from the newborn (including premature infants) through adolescence. Approved programs must include adequate training in the basic medical sciences, as well as in the clinical laboratory, public health and community aspects of pediatric cardiology. Significant experience in investigational activities is expected. The resident must be exposed to pathologic conditions ranging from moderate to those found in the seriously ill child needing intensive care. There must be experience with a broad spectrum of congenital and acquired heart disease, both surgical and medical, and chronic as well as acute or emergency situations. There should be opportunities to develop teaching skills. These opportunities should include both formal and informal experiences, including rounds, outpatient clinics, conferences, grand rounds and formal lectures. There should be opportunities to participate in and learn the fundamentals of administration of a pediatric cardiology program, including organization of clinics, organization and function of the cardiac team, and interaction with support agencies in the community such as CCS, third party insurance companies, school nurses, public health nurses and others.

III. Content Areas

A. Basic Sciences — The program should offer instruction through courses, seminars, workshops, or laboratory experience to provide appropriate background in basic and fundamental disciplines related to the heart and cardiovascular system, such as anatomy, physiology, biochemistry, embryology, pathology, pharmacology, genetics, bioelectronics and biostatistics. The resident must receive instruction in cardiovascular pathology. Specimens demonstrating the various types of congenital cardiovascular anomalies should be classified and readily available for study. Conferences involving current pathological material must be held and closely correlated with clinical experience; such conferences should include clinicians, surgeons, physiologists, roentgenologists and pathologists.

Thorough understanding of embryology and anatomy of the normal heart and vascular system as well as the deviations from normal that may occur should be mastered. Normal and abnormal cardiovascular and cardiopulmonary physiology and metabolism should be taught, as well as fundamentals of cardiovascular pharmacology, including mechanisms of drug action, therapeutic indications, and side effects.

B. Clinical Practice — The program should prepare the resident to provide optimal care and consultation for children with cardiovascular disease. Clinical experience

¹⁹At the present time only two years of training will be accredited by the Residency Review Committee.

Pediatric Cardiology

should be broad and include inpatient and outpatient experience and encompass age groups from newborn through adolescence (birth to 21 years, preferably) with opportunity to observe heart disease in adults, particularly congenital and rheumatic disease.

Aftercare—The resident should participate in consultations or conferences in which the medical and surgical staffs evaluate the results of surgery and the patient's cardiac status prior to discharge from the hospital. The resident should have the opportunity to arrange for follow-up visits and send information to the referring physician to assist him/her in the future management of the patient.

Residencies in pediatric cardiology must offer broad and inclusive training in the specialty. This should include fundamentals of clinical diagnosis with special emphasis on auscultation and physical examination, roentgenology, electrocardiography, 2-D and M-mode echocardiography, radionuclear cardiography, exercise stress testing, Holter monitoring and such other laboratory tests that may become established to facilitate diagnosis and management. Experience and instruction in techniques of and understanding of the limitations of cardiac catheterization and selective angiocardiography are required. Opportunity must be provided for the resident to participate in a minimum number of catheterizations in infants and children; this number may vary from institution to institution but should approximate 100 patients during a two-year program. The resident should have the opportunity to master the use of relevant electronic equipment, recording devices, and angiographic equipment necessary to perform cardiac catheterization. In addition, the program must provide the resident with the opportunity to learn the fundamentals of radiation safety.

Experience with pre and postoperative care of patients having cardiac surgery, both by closed and open methods, in close cooperation with the cardio-thoracic surgical staff is required. A basic understanding of current surgical techniques, methods of cardiopulmonary bypass and hypothermia is important for adequate training. The resident should understand and know how to manage postoperative complications—both immediate and delayed. Opportunity for long term follow-up observations of both pre and postoperative patients must be afforded the resident.

The program must provide the resident with the opportunity for the study of rheumatic fever, collagen diseases, infective endocarditis and other infections and metabolic conditions. The resident should be made aware of etiologic and risk factors in hypertensive and atherosclerotic heart disease, including hyperlipidemic states and should gain experience in the diagnosis and management of patients with these cardiovascular problems.

C. Research—A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric cardiology and an ongoing active research program with investigation into clinical and basic aspects of various cardiovascular problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of cardiology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

D. Administration—The resident should gain experience in organizational responsibilities necessary to his role as a pediatric cardiologist in the community. He should be

exposed to methods of organization of the cardiac catheterization laboratory, the outpatient clinic, organization of a teaching service and organization and day-to-day function of the entire cardiology team. He should have the opportunity to interact with Crippled Children's Services, insurance companies, community resources and others necessary to the proper care of children with cardiac problems.

E. Conferences—Conferences must be held on a regular basis in the areas of clinical diagnosis and therapy, cardiovascular research and clinical morphologic correlations. Conferences with other disciplines such as physiology, pharmacology, pathology, neonatology, cardiovascular radiology, cardiothoracic surgery and adult cardiology are encouraged.

IV. Staff

A. The Chief of Service—An approved pediatric cardiology training program must be under the direction of a physician certified by the American Board of Pediatrics and the Sub-Board of Pediatric Cardiology or who possesses suitable equivalent qualifications. The program director should be physically present on a day-to-day basis to supervise and direct the training program and is directly responsible to the general pediatric program director for the content, quality and supervision of the training program. Directors of pediatric cardiology training programs should provide an environment for the open discussion of ideas, creation of hypotheses which can be examined in the laboratory or by clinical protocol and will actively discourage unquestioning adherence to dogma. Implementation of the training program should involve collaborative efforts with other pediatric cardiologists, with internists working in areas of mutual concern and assistance of other training program directors so that highly-specialized resources may be shared.

B. It is desirable that members of the pediatric cardiology training staff include Board-certified or equivalent pediatric cardiologists, medical cardiologists and basic scientists actively engaged in cardiovascular research.

C. A general pediatric staff with a broad range of subspecialty interests is essential to teach complete care of infants, children and adolescents with cardiac problems.

D. Staff from other disciplines, including cardiovascular radiology, cardiothoracic surgery, adult cardiology, anesthesiology, neonatology, pulmonary disease, pathology, hematology, nephrology, gastroenterology, and genetics should be readily available. Residents should also learn to work with and utilize the special skills of pediatric cardiovascular nurses, intensive care nurses, catheterization laboratory technicians, operating room personnel, social workers and psychologists.

V. Facilities

It is desirable that all facilities should be located at the same institution. Where a facility is shared by several institutions in the interest of cost and efficiency, the program director may arrange for a resident to rotate to that facility.

A. Inpatient Services—An active inpatient pediatric cardiology service is essential. This should provide all the diagnostic and treatment services characteristic of a comprehensive children's facility.

1. Patients admitted to the inpatient service should be under the direct or indirect supervision of the training program staff and available to the resident.
2. The number of inpatients necessary to provide the resident with an optimum experience will vary with the number of residents and staff supervisors. A sufficient number and variety of hospital patients is necessary to assure broad training and experience and, in general, will only be provided if the minimum number of catheterizations and operations listed in Section VI are performed. A ratio of pediatric cardiology training staff to residents of 2/1 is desirable.
3. The following support facilities should be available on a 24-hour basis:

- a. General X-ray diagnostic facilities; nuclear cardiology;
- b. A graphics laboratory with facilities for recording the standard electrocardiogram and 2-D and M-mode echocardiograms;
- c. Laboratories to do routine analyses of blood and urine, to determine blood gas values, blood chemistries, blood clotting studies and to cross match blood;
- d. An operating room designed and equipped for cardiopulmonary extracorporeal circulation with appropriate monitoring devices, defibrillator and cardiac pacing devices;
- e. A blood bank equipped to meet the demands of cardiac surgery must be closely affiliated with the center;
- f. An intensive care unit in each center in which patients with heart disease are operated upon, with personnel and equipment available to allow provision of the special and constant care needed by pre- and postoperative patients.

B. Ambulatory Services— There must be a regularly scheduled pediatric cardiology clinic, and this must be supervised by one or more members of the cardiology staff. Time and space in this clinic must be available for residents to provide continuity and follow-up care for all patients under their care.

C. Catheterization Laboratory— The catheterization laboratory should ordinarily be located within a facility completely equipped to take care of patients in order to provide a comprehensive experience for the residents. A program which includes a catheterization laboratory located in a facility which cannot meet this criterion will be expected to provide evidence that the training of residents is not compromised in this regard.

1. Personnel

Physician in Charge— The physician in charge of the procedure must be certified by the Sub-Board of Pediatric Cardiology or possess suitable equivalent qualifications. He/She must be able to carry out the technical aspects of the procedures and correlate the results of the study with clinical information in reaching sound anatomic, electrophysiologic and hemodynamic conclusions. A second physician should be available in the event that additional help is needed or a complication develops. In addition, a radiologist competent in cardiovascular radiology, an anesthesiologist and a thoracic surgeon with expertise in the pediatric cardiovascular aspects of their specialties should be immediately available for consultation, assistance and emergency surgical procedures. Additional personnel, adequately trained in pediatric cardiovascular techniques, should be available.

2. Equipment

Up-to-date equipment should include facilities for diagnostic biplane angiocardiography, blood gas analyses, and electrophysiological studies. A method for recording catheterization laboratory complications must be used and records kept of all complications. Resuscitation equipment must be available for all pediatric patients.

D. Library and Research Facilities— The training program must provide access to facilities for the resident to engage in scholarly activities including conference rooms, medical library and research laboratories. The library should be available day and night and should have an ample supply of current pediatric and cardiologic textbooks and journals. Access to computerized literature search facilities is highly desirable.

VI. Clinical Experience

The resident must gain experience with a wide variety of

cardiovascular problems in infants and children. In general, approved training programs should have a minimum yearly case load for pediatric patients of approximately 150 cardiac catheterizations and 75 operations employing extracorporeal circulation. Of these, approximately 50 catheterizations and approximately 24 open-heart surgical procedures should be performed on patients less than one year of age. Each resident should participate in or perform under supervision approximately 100 catheterizations in a two year period.

VII. Patient Information

Clinical data including inpatients, outpatients and patients undergoing catheterization and/or surgery, should be cross indexed and kept in such a manner as to allow rapid evaluation and analysis of the assembled information, including age, diagnosis, outcome, etc.

VIII. Evaluation

The program must have an on-going functional assessment of the following components of the educational program:

- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board of should communicate with the secretary of the appropriate board to be certain regarding the full requirements for certification.

Effective: July, 1983 . ACGME: November, 1982

Training Programs in Neonatal-Perinatal Medicine

Introduction

The purpose of the training program in neonatal-perinatal medicine is to provide the residents with the background to understand the physiology of the normal neonate and the patho-physiology of the sick infant and to diagnose and manage problems of the newborn. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients as well as one which stresses the development of appropriate attitudes on the part of the residents.

Training programs in neonatal-perinatal medicine must exist in conjunction with an accredited three-year pediatric residency program and an accredited obstetrical residency program. These postgraduate programs should not dilute the experience with patients available to the core program; rather, the presence of these programs should assure the availability of all facilities and personnel necessary for the complete care of the infant and adolescent patient. A thorough knowledge of the growth and development of the normal infant as well as a broad understanding of all aspects of child care are prerequisites for the proper management of disorders of the fetus or newborn.

Duration of Training

Programs in neonatal-perinatal medicine must provide two years of progressive educational experience and responsibility in the various aspects of fetal and neonatal medicine. Prerequisite training for entry into a neonatal-perinatal medicine program must include the satisfactory completion of an ACGME accredited pediatric residency, or its equivalent as judged prospectively by the Residency Review Committee for Pediatrics.

Scope of Training

The training program must emphasize fundamentals of clinical diagnosis and management. Opportunity must be provided for the resident to participate in the diagnosis and management of problems seen in the continuum of the

Neonatal-Perinatal Medicine

development of the fetus through prenatal, intrapartum, and neonatal periods, including follow-up. The resident should have the opportunity to develop an appreciation of the social implications of disorders of the fetus and newly born infant. The resident must have the opportunity to learn to identify the high-risk pregnancy, to evaluate fetal well-being and maturation, and to become familiar with the aberrant factors which may develop during the intrapartum period. The resident must have the opportunity to develop special competence in the management of critically ill newborn infants, including techniques of neonatal resuscitation, preparation for transport, ventilatory support, continuous monitoring, temperature control, nutritional support, and general principles of critical care. The resident must also be made aware of laboratory techniques essential to the care of the high-risk infant. Residents should have the opportunity for teaching and for assuming some departmental administrative responsibilities. Experience in tabulating and evaluating institutional and regional fetal and neonatal morbidity and mortality should be provided. There should also be experience and instruction in techniques of collation and critical interpretation of data pertaining to immediate outcome and sequelae of various disease entities such as hyaline membrane disease, asphyxia, neonatal sepsis, erythroblastosis, etc. This experience should be closely related to the evaluations of various modalities of therapy used in these disorders. The opportunity for long-term follow-up of high-risk infants must be provided.

The program should provide the opportunity for resident participation in regularly scheduled multi-disciplinary conferences such as sessions which review perinatal mortality, morbidity and patient care, as well as participation in case conferences and current literature and research conferences.

The training program should include instruction in related basic sciences. Seminars, conferences, courses and appropriate laboratory experiences should be offered in the basic disciplines related to pregnancy, the fetus and the newborn. Examples are: maternal physiological, biochemical and pharmacological influences on the fetus; fetal physiology; fetal development; placental function (placental circulation, gas exchange, growth); physiological and biochemical adaptation to birth; physiology, biochemistry, pharmacology, and pathology relevant to diseases of the newborn; psychology of pregnancy and maternal-infant interaction; growth and nutrition; genetics; epidemiology; and biostatistics.

Research

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in neonatal-perinatal medicine and an ongoing active research with investigation into clinical and basic aspects of various related problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of neonatal-perinatal medicine. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

Staff

The director of the training program should be certified by the American Board of Pediatrics, Sub-Board of Neonatal-Perinatal Medicine, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: fetal-maternal medicine, pediatric surgery, radiology, anesthesiology, pathology, social service, nursing and other pediatric specialties.

Essential staff for the training program are:

1. A sufficient number of neonatologists to provide adequate supervision and to ensure the educational and research quality of the program;
2. A pediatric cardiologist as a consultant and teacher;
3. A surgeon skilled in pediatric surgery as a consultant and teacher;
4. A cardiovascular surgeon skilled in pediatric cardiovascular surgery as a consultant;
5. An obstetrician with special competence in fetal-maternal medicine.

The following staff are recommended:

1. A bioengineer;
2. An ultrasonographer well versed in perinatal ultrasonic techniques;
3. A statistician and/or epidemiologist.

Nursing staffs must be sufficient to meet appropriate standards of care. This implies leadership by nurses skilled in neonatal and obstetrical intensive care. Medical social workers, qualified in maternal-child health, must also be available.

Patient Population and Facilities

An adequate number of infants must be available in order that the neonatal-perinatal resident may acquire competence in the management of the critically ill infant. The obstetrical and neonatal-perinatal programs must be closely associated in order that the residents may become knowledgeable about identifying the high risk pregnancy and evaluating fetal well-being and maturation. There should be a sufficient number of patients to ensure an opportunity for the resident to become competent in the technical aspects of care. An obstetrical program with fewer than 1,000 deliveries would not appear able to provide sufficient numbers to meet these objectives.

The number of infants requiring ventilatory assistance must be sufficient to provide each residency with the opportunity to become skilled in the management of these infants. Similarly, there should be an adequate number of infants requiring major surgery, including cardiac surgery, in order that the resident will have the opportunity to become skilled in the pre-operative and post-operative management of these infants.

The program must provide ample opportunity for residents to follow discharged infants in sufficient numbers to become skilled in the evaluation of such infants, as well as to become aware of the socioeconomic impact and the psychosocial stress that such infants may place upon a family. The resident must have the opportunity to become skilled in the management of these problems.

Facilities

Since neonatal intensive care is an integral part of the institution in which the training program is housed, it is essential that the following facilities be available within that institution or in another readily available institution which assures access, within a reasonable period of time and on a 24 hour a day basis, to:

1. Microchemical laboratory;
2. Blood gas laboratory;
3. Perinatal diagnostic laboratory which performs OD, L/S ratio or equivalent determination, plasma or urinary estriols;
4. Radiology facilities;
5. Diagnostic bacteriology and virology laboratory;
6. Hematology laboratory;
7. Cytogenetics laboratory;
8. Blood bank;

9. EKG and EEG laboratories.

In addition to these essential diagnostic facilities, the following are considered desirable:

1. Screening laboratory for inborn errors of metabolism;
2. Clinical toxicology laboratory;
3. Nuclear medicine facilities.

Evaluation

The program must have an on-going functional assessment of the following components of the educational program:

- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

Conclusion

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the Sub-Board of Neonatal-Perinatal Medicine of the American Board of Pediatrics should communicate with the Secretary of the American Board of Pediatrics regarding the full requirements for the certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Neonatal-Perinatal Medicine of the American Board of Pediatrics.

Effective: July 1983 ACGME: May 1983

Training Programs in Pediatric Hematology/Oncology

Introduction

The purpose of the training program is to provide the residents with the background to diagnose and manage hematologic and oncologic diseases. This background includes an understanding of the physiology of blood and bone marrow function, as well as the pathophysiology of hematologic disorders and malignant disease.

Training programs in pediatric hematology/oncology must exist in conjunction with accredited three-year pediatric residency programs, but should not dilute the experience with patients which is available to the core program. Rather, the presence of these programs should assure the availability of all facilities and personnel necessary for the complete care of the infant, child and adolescent patient. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of patients with hematologic and oncologic problems.

Duration of Training

Programs must provide two years of progressive educational experience and responsibility in the elements of pediatric hematology and oncology. Prerequisite training for entry into a pediatric hematology/oncology program must include the satisfactory completion of an ACGME accredited pediatric residency, or its equivalent as judged prospectively by the Residency Review Committee for Pediatrics.

Scope of Training

The training program must emphasize the fundamentals of clinical diagnosis with special emphasis on history taking and physical examination. A program in pediatric hematology/oncology should provide enough clinical experience with both inpatients and outpatients who have hematologic and oncologic disorders for the residents to develop facility in diagnosing and managing common and unusual problems.

The program should include hematologic disorders of the fetus and newborn, congenital and acquired disorders of red blood cells, white blood cells and platelets, bone marrow failure, myeloproliferative disease, disturbances of

iron metabolism, congenital and acquired coagulation defects, hemoglobinopathies, immunodeficiencies, leukemia, histiocytosis, and solid tumors of organs, soft tissue and bone.

In addition to specific hematologic and malignant disorders, the resident must have the opportunity to become familiar with all aspects of chemotherapy, including treatment protocols and management of complications, diagnosis and treatment of infections in the compromised host, appropriate use of transfusion of the various blood components, plasmapheresis and bone marrow transplantation. The resident should learn the methods of physiologic support of the cancer patient including parenteral nutrition, control of nausea and management of pain. The staging and classification of tumors, complete knowledge of the application of multimodal therapy, learning to function as a member of the "oncology team," learning the epidemiology and etiology of childhood cancer, making good observations, and keeping accurate patient data are vital aspects of pediatric oncology training. The resident should participate in the activities of the Tumor Board and in the provision of comprehensive care to the child with cancer. He should have experience in support of the patient, family and staff in dealing with terminal illness. Development of skills in communication and counseling is important for the resident.

The residents should have the opportunity to teach, organize educational conferences and develop elementary skills in medical writing.

The residents must be exposed to the proper use of laboratory techniques for diagnosis. There should be particular emphasis on recognition of the limitations of the various methods and the pitfalls in interpretation of laboratory results. They should be familiar with the normal variations in laboratory data that occur at different ages and should know the influence of medications, toxins and systemic disease on hematologic values.

The residents should be provided with the background to enable them to utilize the diagnostic procedures of hematology and oncology. These include: a) the performance and interpretation of bone marrow aspiration and biopsy, b) venepuncture, c) lumbar puncture with evaluation of cerebrospinal fluid, d) use of the microscope, and e) interpretation of peripheral blood films. Appropriate educational experiences in the laboratories, including blood bank and tissue pathology, should be included.

The resident should be able to use the diagnostic services of radiology, nuclear medicine, computerized tomography, sonography, angiography, clinical chemistry, microbiology, immunology and genetics in evaluation of patients with hematologic and oncologic disorders.

The training program should provide instruction in the related basic sciences. These include: (a) structure and function of hemoglobin and iron metabolism, (b) the phagocytic system, (c) immunology, (d) splenic function, (e) cell kinetics, (f) immunology, (g) coagulation, (h) genetics, (i) the principles of radiation therapy, (j) the characteristics of malignant cells, (k) tissue typing, (l) blood groups, (m) characteristics of chemotherapeutic agents, (n) microbiology and anti-infective agents in the compromised host, (o) bone marrow transplantation and graft versus host disease, and (p) nutrition.

Research

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric hematology/oncology and an ongoing active research with investigation into clinical and basic aspects of various related problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research

Pediatric Endocrinology

project in the area of hematology/oncology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

Staff

The director of the program should be certified by the Sub-Board of Hematology/Oncology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: surgery and surgical specialties, radiation oncology, radiology, gynecology, infectious disease, pathology, psychiatry, immunology, cardiology, neurology, endocrinology, gastroenterology and genetics.

Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to both of these endeavors. The supervising faculty should include individuals competent in research in hematology and oncology.

Patient Population and Facilities

Adequate numbers of patients with hematologic and oncologic disorders ranging in age from newborn through adolescence must be available. It is particularly important that residents have continuing responsibility for the care of patients with malignant disease and chronic hematologic problems. There should be sufficient opportunity for the resident to provide consultation on a variety of patients to become familiar with the hematologic manifestations of a broad spectrum of pediatric illnesses.

Space in an ambulatory setting must be provided for optimal evaluation and care of patients. This should include facilities for outpatient chemotherapy and transfusions, and an inpatient area with full array of pediatric and related services staffed by pediatric residents and faculty. Full support must include radiology, laboratory, pathology, intensive care, respiratory therapy, physical therapy, nutrition, social services, psychiatry and psychology.

An adequate library with appropriate periodicals and texts must be available.

Evaluation

The program must have an on-going functional assessment of the following components of the educational program:

- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

Conclusions

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub-Board of Hematology/Oncology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Hematology/Oncology of the American Board of Pediatrics.

Effective: July 1983 ACGME: May 1983

Training Programs in Pediatric Endocrinology**Introduction**

The purpose of the training program is to provide the resident with the background to diagnose and manage endocrine diseases and to understand the physiology of hormonal regulation in man. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients as well as one which encourages scholarship on the part of the residents.

Training programs in pediatric endocrinology must exist in conjunction with an accredited three-year pediatric residency program; these postgraduate programs should not dilute the experience with patients available to the core program. Rather, the presence of these programs should assure the availability of all facilities and personnel necessary for the complete care of the infant and adolescent patient. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of individuals with endocrinological problems.

Duration of Training

Programs must provide two years of educational experience in pediatric endocrinology and responsibilities for the care of patients with endocrinologic and metabolic disorders. Prerequisite training for entry into a pediatric endocrinology program must include the satisfactory completion of an ACGME accredited pediatric residency, or its equivalent as judged prospectively by the Residency Review Committee for Pediatrics.

Scope of Training

The training program must emphasize fundamentals of clinical diagnosis with special emphasis on history taking and physical examination. A program in pediatric endocrinology should have an adequate clinical patient population for resident training defined by the following criteria. There should be a minimum annual exposure to 300-400 patient visits of children with general endocrinological disorders (outpatient and/or inpatient basis). The clinical program should include 150-200 outpatient visits of children with diabetes mellitus and 15-20 hospitalized patients with diabetes mellitus yearly. General endocrinological problems, which the resident should care for, should include children referred for: short stature, constitutional delay, genetic short stature, growth hormone deficiency, disorders of thyroid hormone physiology, secretion and synthesis, disorders of adrenal glucocorticoid physiology, secretion and metabolism, disorders of androgen excess and metabolism, the management of thyroid nodules and neoplasms, disorders of sexual development, disorders of calcium and phosphorus metabolism including rickets, parathyroid disorders, and vitamin D metabolism, disorders of fluid and electrolyte metabolism including diabetes insipidus and disorders of aldosterone metabolism. There must be clinical exposure to children with carbohydrate disorders including diabetes mellitus and hypoglycemia. The residents should be involved in the care of adolescents in order to gain knowledge of normal pubertal and hormonal alterations occurring during this phase of life and abnormal conditions, such as pituitary deficiency and gonadal dysfunction.

The trainees must be exposed to the proper use of laboratory techniques for measurement of hormones in body fluids; particular emphasis should be placed upon recognition of the limitations and pitfalls of interpretation of laboratory results. They should be familiar with normal variations that occur in laboratory data at different ages. Residents should be provided with the background which will enable them to utilize the diagnostic procedures of endocrinology involving radiology and nuclear medicine; formal rotations through such laboratories should be included. An opportunity must be available for the resident to

learn about the pertinent aspects of genetics. Particular emphasis should be placed on the areas of counseling, biochemical genetics, cytogenetics and their phenotypic expression.

The training program should include instruction in related basic sciences. These include: (1) endocrine physiology and biochemistry, (2) embryology of endocrine and related systems with emphasis on sexual differentiation, (3) genetics including laboratory methods, cytogenetics and enzymology, and (4) aspects of immunology pertinent to understanding endocrine disease and the use of immunoassays. The training program should include a meaningful exposure to endocrinological research and should identify a defined segment of time during which the resident participates in such scholarly activity.

Research

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric endocrinology and an ongoing active research with investigation into clinical and basic aspects of various endocrinologic problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of endocrinology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

Staff

The director of the program should be certified by the Sub-Board of Pediatric Endocrinology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: surgery, obstetrics/gynecology, internal medicine, psychiatry, neurology, radiology, nuclear medicine, genetics and pathology.

Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to both of these endeavors. The supervising faculty should include individuals who are active and competent in endocrinological research.

Patient Population and Facilities

Adequate numbers of children and adolescents with endocrine disorders, growth disturbances and related metabolic disorders should be available. Patients with diabetes mellitus should be a part of the patient population. It is particularly important that the resident have continuing responsibility for care of patients with diabetes and other chronic endocrine disorders. Clinic should meet at least once weekly.

Facilities should include: 1) space in an ambulatory setting for optimal evaluation and care of patients, 2) an inpatient area with full array of pediatric and related services staffed by pediatric residents and faculty. Full support services must include radiology, laboratory, nuclear medicine and pathology. An adequate library with appropriate periodicals and texts must be available.

Evaluation

The program must have an on-going functional assessment of the following components of the educational program:

- resident performance
- faculty performance

- patient care
- program objectives.

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

Conclusions

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub-Board of Pediatric Endocrinology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Pediatric Endocrinology of the American Board of Pediatrics.

Effective: July 1983 ACGME: May 1983

Training Programs in Pediatric Nephrology

Introduction

The purpose of the training program is to provide the residents with the background to diagnose and manage renal diseases and to understand the physiology of fluid and electrolyte regulation in man. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients while stressing the development of appropriate attitudes on the part of the residents.

Training programs in pediatric nephrology must exist in conjunction with an accredited three-year pediatric residency program. These postgraduate programs should not dilute the experience with patients available to the core program; rather, their presence should assure the availability of all facilities and personnel necessary for the complete care of the infant, child and adolescent. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of individuals with renal and genito-urinary problems, hypertension and disorders of body fluid physiology.

Duration of Training

Programs in pediatric nephrology must provide two years of progressive educational experience and responsibility. Prerequisite training for entry into a pediatric nephrology program must include the satisfactory completion of an ACGME accredited pediatric residency, or its equivalent as judged prospectively by the Residency Review Committee for Pediatrics.

Scope of Training

The training program must be designed to develop the physician's competence in the clinical diagnosis, pathophysiology and medical treatment of disorders of the kidneys, urologic abnormalities, hypertension and disorders of body fluid physiology in infants, children and adolescents. Experience shall be provided in the therapy of end-stage renal disease, including dialysis and renal transplantation. Training in the selection, performance and evaluation procedures necessary for morphologic and physiological assessment of renal disease must be included. The program must provide the opportunity for the residents to teach in a variety of settings and to participate in basic science, laboratory and clinical research. Opportunity must also be provided for residents to develop competence in counseling chronically ill patients and their families.

The program should offer instruction through courses, workshops, seminars or laboratory experience to provide an appropriate background for residents in the basic and fundamental disciplines related to the kidney, such as embryology, physiology, pharmacology, pathology, immunopathology, genetics, biochemistry and parenteral nutrition.

Physical Medicine and Rehabilitation**Research**

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric nephrology and an ongoing active research with investigation into clinical and basic aspects of various problems related by the teaching staff.

Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of nephrology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

Staff

The director of the program should be certified by the Sub-Board of Pediatric Nephrology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program. Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: urology, surgery, pathology, radiology, immunology, infectious disease and organ transplantation.

Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to both of these endeavors. The supervising faculty should include individuals competent in research in the area of nephrology.

Patient Population and Facilities

Adequate numbers of infants, children and adolescents with renal disorders, urologic abnormalities, hypertension and disorders of body fluid physiology should be available. The facilities available must be sufficient to provide continuing contact with patients in an inpatient and ambulatory setting. Transplantation and dialysis are essential components of the program. In addition, certain ancillary support services and facilities must be available. These include urology, radiology, pathology, nuclear medicine, laboratory, nutrition services, nursing services, social services and individuals skilled in dealing with the dying patient. Appropriate research facilities, which enable the resident to carry out scholarly activities, are an important part of a program. An adequate library with appropriate periodicals and texts must be available.

Evaluation

The program must have an on-going functional assessment of the following components of the educational program:

- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

Conclusions

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub-Board of Pediatric Nephrology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Pediatric Nephrology of the American Board

of Pediatrics.

Effective: July 1983 ACGME: May 1983

18. Special Requirements for Residency Training in Physical Medicine and Rehabilitation

I. INTRODUCTION

1.1 In addition to the general requirements, an approved residency in physical medicine and rehabilitation must document that it provides an educational experience of such quality and excellence as to assure that its graduates will possess those competencies necessary to entry level independent practice of this specialty. This will include a high order of knowledge about the diagnosis, etiology, treatment, prevention, and rehabilitation of those neuromusculoskeletal, cardiovascular, pulmonary, and other system disorders common to this specialty in patients of both sexes and all ages. The graduate should possess the attitudes and psychomotor skills required to perform the general and specific physiatric examination procedures and laboratory procedures such as electromyography and nerve conduction studies; to modify his/her history taking technique to include data critical to the recognition of physical and psychosocial impairments which may create functional disabilities; and to be able to make sound clinical judgments, design rehabilitation strategies to minimize and prevent impairment and maximize functional independence with return of his/her patient to family and community. The graduate of an approved program should be able to effectively orchestrate a team of allied rehabilitation practitioners to the maximum benefit of his/her patient by thoroughly understanding each allied health professions role, by the graduate's ability to author adequately detailed prescriptions for physiatric treatment and by acquiring the management and leadership skills necessary to rehabilitation team leadership. Additionally, the graduate should be aware of his/her own strengths and limitations and the necessity for continued professional development. He/she should possess the necessary written and verbal communication skills essential to the effective practice of physiatry.

1.2 The organization and philosophy of the residency program should make the resident aware that there are no short cuts to clinical competence and no substitutes for hard individual study. The initiative and originality of all residents should be stimulated, their independence of mind promoted, and their critical appraisal of current literature encouraged.

II. DURATION OF TRAINING

2.1 Ordinarily a minimum of three years successfully completed physical medicine and rehabilitation training after medical school is considered necessary to train a physician contemplating specialization in this field. This training should include six months of acute medical and surgical training.

2.2 Each approved program must provide a three year integrated training experience in physical medicine and rehabilitation. It should be able to design a program of flexible length, taking into consideration the previous experience of its trainees.

2.3 If a program plans to accept residents without adequate previous acute medical and surgical training, then the program should provide this experience.

III. ADMINISTRATION AND ORGANIZATION

3.1 Physical medicine and rehabilitation should be organized as a major specialty operating as a service department to the broad fields of medicine and surgery.

3.2 To provide complete training, it is necessary to have beds assigned, preferably in one area and reasonably geographically located to facilitate the rehabilitation mission

and training. A minimum of eight beds should be available for each resident assigned to an inpatient service.

3.3 The Program Director. Because the Residency Review Committee believes that the quality of the educational program is of foremost importance, the program director must have the professional ability, enthusiasm and sense of responsibility for this prioritization. The director should have the authority and time needed to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the program and to participate with other institutional program directors in maintaining the quality of all programs. Many program directors have found that a full-time program director is desirable. If the program director is not full-time, then he or she should have adequate time available without other conflicting responsibilities. To maintain program continuity he/she should be assigned over a period of years to the program directorship. Changes of program director must be reported immediately to the Residency Review Committee for review of approval status. The program director must be qualified as a teacher, clinician and administrator, and be certified by the American Board of Physical Medicine and Rehabilitation or possess suitable equivalent qualifications. He/she should possess broad experience in teaching residents and have a sufficient level of clinical experience and competence in management skills.

3.4 There must be a sufficient number of professional medical staff who are highly competent clinicians and motivated towards teaching residents. Ordinarily they should be Board certified or qualified to apply for admission to the examination of the American Board of Physical Medicine and Rehabilitation and/or an appropriate professional society or board, or possess suitable equivalent qualifications. These teachers must participate regularly and systematically in the training program and be readily available for consultations, especially when the resident is faced with a major therapeutic or diagnostic problem, a clinical emergency, or a crisis in patient care. Part-time faculty should have specific teaching responsibilities in which they engage with appropriate regularity. The teachers should be afforded an opportunity on a regular basis for advancing their educational methodology skills and as individuals who set examples for residents, they should make reasonable scholarly contributions, improve clinical care, participate in research and/or contribute to the professional literature. To improve educational quality a formal system should exist to identify special competencies and weaknesses of professional faculty and attention should be paid to making teaching assignments within their realms of greatest competency. Serious efforts should be made where indicated to correct faculty weakness. Residents should have a formal mechanism for faculty and rotation evaluation which is regularly reviewed by the program chairman.

3.5 Allied medical professional staff in the disciplines of nursing, occupational therapy, orthotics and prosthetics, physical therapy, psychology, rehabilitation nursing, social work, speech-language pathology, audiology, and vocational counseling, who are competent in their fields and professionally certified by their respective professional organizations and who are willing and capable of contributing to the resident's education, should be integrated into both the didactic and clinical experience of the resident whenever relevant. There should be evidence of coordination of the teaching roles of the allied health practitioners, and they too should be afforded regular opportunity for improving their educational skills.

3.6 There must be adequate equipment and space available to carry out a comprehensive training program in physical medicine and rehabilitation. Residents should gain familiarity with the safety, calibration and maintenance as well as the clinical use of medical equipment common to the various therapy areas and laboratories, including diathermies, ultrasound, radiated heat devices, ultraviolet and various other thermotherapy and hydrotherapy devices,

exercise equipment, canes, crutches, walkers and other ambulatory aids, wheelchairs and special devices for the impaired driver, electrodiagnostic and EMG equipment, cystometric equipment and urodynamic laboratory instruments, simple splinting apparatus, and audiometric devices. The occupational therapy area must be adequately equipped to give the residents experience in activities of daily living, and the evaluation of and training in devices to improve skills in activities of daily living. Psychometric and vocational and social evaluation facilities and test instruments must be adequate to expose the resident to the broad spectrum of their prescription and their use and interpretation in the common practice of rehabilitation medicine.

3.7 The residents should have the opportunity to observe and gain fundamental understanding or orthotics and prosthetics, including fitting and manufacturing, through documented arrangements made with appropriate orthotic-prosthetic facilities. All of the items listed under sections 3.6 and 3.7 must include equipment suitable for all age groups with special concern of availability of modified equipment for the pediatric or geriatric patient.

3.8 Relationships with community rehabilitation service facilities are encouraged to expose the resident to nursing homes, sheltered workshops, schools for the multiply handicapped, deaf and blind, and independent living facilities for the severely physically impaired individual.

3.9 The sponsoring institution should provide adequate availability of a professional library with suitable basic textbooks and journals pertinent to general medicine and surgery and the specialty of physical medicine and rehabilitation. Loan capabilities with other main or lending libraries should be available. The library should be reasonably available during evening hours and weekends. Some scholarly experience which demands the use of library reference facilities should be a part of the residency program.

3.10 Basic teaching aids such as slide projectors, sound film units, videotape facilities and the like should be available. Reasonable access to these areas on nights and weekends for residents and staff should be available.

3.11 Adequate office space should be available for the faculty and residents to participate both in clinical examinations of patients and in self-study.

3.12 Adequate space must be available which is designated for seminars, lectures, and other teaching experiences to include team conferences and specialty care clinics such as orthotics, prosthetics, children's handicaps and the like.

IV. EDUCATIONAL PROGRAMS

4.1 General. The clinical care of patients is the heart of an adequate program, since the chief objective of residency education is the development of a high order of clinical competence in its graduates. The attainment of this chief objective must not be attenuated by participation of the resident in other activities. At the same time, formal education should have a high priority. Residents should obtain adequate and supervised experience in administration, ward management and teaching. Residents should have the opportunity to participate in structured, supervised research training. A program director may elect to offer a special research or academic track for selected residents. This may take the form of an elective or research rotation within the framework of the existing educational requirements. This inclusion of structured research training is not to compromise the attainment of clinical competence.

4.2 Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. In a progressive fashion it should expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Staff meetings, clinical case conferences, journal

Plastic Surgery

clubs and lectures by visitors are desirable adjuncts but must not be used as substitutes for an organized didactic curriculum.

4.3 The curriculum must include adequate and systematic training in such basic sciences relevant to physical medicine and rehabilitation as anatomy, physiology, pathology and pathophysiology of the neuromusculoskeletal, cardiovascular and pulmonary systems, kinesiology, functional anatomy, physics, electronics and instrumentation related to the field, physiologic responses to the various physical modalities and therapeutic exercise, and the procedures commonly employed by physiatry. This training should be correlated with clinical training but should, when appropriate, include the teaching services of basic scientists. An accessible anatomy laboratory for dissection and anatomy review is highly desirable.

4.4 Number of residents. In order to insure the stimulating educational atmosphere that a good peer group provides, a minimum number of residents should be enrolled in a program at all times. It is impossible to exactly define how many residents are necessary to this "critical mass" needed to maintain vitality of a program; however, all programs should have trainees in each year of training. Failure to recruit any new trainees for two consecutive years will result in Residency Review Committee review and possible negative action.

4.5 The clinical portion of the curriculum must include a sufficient variety, depth, and volume of clinical experiences.

4.6 The training program must include a significant amount of time spent in responsibility for the direct clinical care of hospitalized patients as well as outpatients. Residents should devote at least one-third of their residency experience to work with hospitalized patients. It is undesirable for a program to devote more than two-thirds of a resident's time to the care of hospitalized patients.

4.7 Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates new competencies. Supervision must include faculty review of records and assurance of a clearly written patient history and physical examination and meaningful continuous record of the patient's illness, background, management strategies, as well as lucid presentations of the case summary.

4.8 Provision should be made for the resident to review personally pertinent laboratory, biopsy and roentgenographic materials for his/her patients and also to observe directly the various therapies in the treatment areas.

4.9 The clinical curriculum must be planned to develop measurable competencies in: a) history and physical examination pertinent to physical medicine and rehabilitation; b) assessment of neurological, musculoskeletal and cardiovascular-pulmonary systems to include evaluation of sensation, reflexes, muscle strength, muscle endurance, joint range of motion, functional capacities, gait analysis, mental status examination, peripheral vascular status, and heart and lung status; c) data gathering and interpreting of psychosocial and vocational factors; d) techniques for electromyography and nerve conduction studies; e) prescriptions of orthotics, prosthetics, wheelchairs and ambulatory devices as well as special beds and pads; f) prescriptions and supervision of therapeutic modalities and therapeutic exercise, occupational therapy modalities and testing, and pertinent psychosocial, vocational and speech pathology instruments, as well as the interpretation of those instruments; g) evaluation of cardiopulmonary systems as related to the physiatric responsibilities for cardiopulmonary rehabilitation; h) arthrocentesis and synovial fluid analysis; i) analysis of growth and development pertinent to the rehabilitation of children; j) collaboration with other medical professionals and members of the allied health team—the resident must learn management techniques consistent with his/her team leadership role.

4.10 The resident must have the opportunity to learn to

diagnose, assess and manage the conditions commonly encountered by the physiatrist in order to provide for the rehabilitation of at least the following: a) acute musculoskeletal pain syndromes; b) chronic pain management; c) radicular pain syndromes; d) congenital or acquired myopathies, neuropathies, motor neuron and motor system diseases, and trauma; e) hereditary developmental and acquired central nervous system disorders including cerebral palsy, stroke, myelomeningocele, multiple sclerosis; f) spinal cord trauma and diseases including management of neurogenic bladder and bowel and decubitus ulcer prevention and treatment; g) amputations in patients of all ages; h) sexual disturbance peculiar to the physically impaired; i) post-fracture care; j) pulmonary and cardiac disorders commonly seen by physiatrists; k) diseases, impairments and functional limitations common to the geriatric population; l) rheumatologic disorders treated by the physiatrist; m) usual medical conditions or complications seen in the rehabilitation patient.

4.11 The resident should have a demonstrable, organized formal system for his/her evaluation, with periodic review by faculty members, in-service examination, post-rotation evaluation, and external examinations such as those provided by the American Academy of Physical Medicine and Rehabilitation, and be provided with regular, formal counseling sessions and access to his/her evaluation folder. His/her rights must be protected by due process procedures. The resident should be aware of his/her and the institution's obligations and rights. He/she should possess a written agreement encompassing the following: a) the educational experience to be provided, including the nature of assignments to other programs or institutions; b) resident's responsibilities; c) stipend and/or compensation; d) vacation, professional leave and sick leave; e) practice privileges and other activities outside the educational program; f) malpractice coverage and other insurance benefits; g) individual educational plans tailored to meet a resident's personal needs or career plans; h) guarantee of due process.

4.12 One measure of the quality of a program may be the performance of its residents on the examination of the American Board of Physical Medicine and Rehabilitation.

V. All provisions of the General Requirements must also be met for approval. Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation should communicate with the Secretary of the Board through their program director to be certain regarding qualification for admission to the certifying examination.

Effective: Jan., 1984 ACGME: Sept., 1983

19. Special Requirements for Residency Training in Plastic Surgery

Duration of Training: Residency training in plastic surgery must be for a minimum of two years. The residency program must be accredited by the ACGME on recommendation of the Residency Review Committee for Plastic Surgery. If a plastic surgery residency is accredited for three years (rather than two), the trainee must complete all three years of that program.

Prerequisite Graduate Education: The minimum prerequisite for a plastic surgery residency is three years of formal training in general surgery in a program accredited by the ACGME on recommendation of the Residency Review Committee for Surgery. Of the required three years of approved training in general surgery, a minimum of twenty-four months must be spent in clinical surgery. It is to be emphasized that the minimum required general surgery training must be completed prior to entering a plastic surgery residency.

Prerequisite training may be accomplished in other ways, such as completion of an accredited residency in

otolaryngology, orthopedic surgery, urologic surgery or neurological surgery.

Individuals who plan to seek certification by the American Board of Plastic Surgery should communicate with the Secretary of that Board regarding full requirements for certification, including acceptability of prerequisite training. This inquiry should be made prior to a plastic surgery residency.

Faculty and Staff: The director of an accredited program should be certified by the American Board of Plastic Surgery or possess suitable equivalent qualifications. The faculty or attending staff should possess qualifications that contribute to the training program and should be willing to devote a significant period of time to the educational process of the residency.

Scope of Training: Training should cover a wide field of plastic surgery. It should include experience in management of congenital and acquired defects of the face, trunk, and extremities. This would encompass experience in the management of head and neck neoplasms, facial fractures and other trauma, cosmetic surgery, surgery of the hand, management of burns and the complications of burns. Resident involvement in patient management should be a graduated and progressive responsibility. A program director may increase the volume and variety of patients a resident is exposed to by rotating the resident through another service where training in the areas included in the wide field of plastic surgery is offered. Any rotation(s) outside of the accredited program totaling more than three months in a two year period require specific approval.

Applied Basic Science: The period of specialized training should emphasize the relationship of basic sciences to surgical principles fundamental to all branches of surgery and especially plastic surgery.

Didactic Program: Selected conferences should be regularly attended by residents and attending staff to allow for a discussion of topics selected to broaden their knowledge in plastic surgery. These might consist of Cleft Palate Clinics, Journal Club, Pathology Conference, Hand Conference, Review of Burn Care and Head and Neck Neoplasms, and other such conferences.

Evaluation of Educational Program: The knowledge and progress of each resident should be evaluated each year. The results of these periodic assessments of evaluations should be communicated to the residents so that remedial steps can be recommended. These evaluations should serve to designate deficiencies to be corrected prior to completion of the residency.

Effective: Nov. 1979 ACGME: Nov. 1979

20. Special Requirements for Residency Training in Preventive Medicine

Special Requirements Common to Residency Training in All Fields of Preventive Medicine

Preventive medicine is a specialty of medical practice, the primary foci of which are a) health and disease as they occur in communities and in defined population groups, and b) the promotion of practices with respect to the community and the individual that will advance health by the prevention of disease and injury, make possible early diagnosis and treatment, and foster rehabilitation of persons with disabilities.

Preventive medicine has a common group of basic components, whatever the specific field of practice. These components are listed below. It is obvious that a given component may be of major importance in some fields of practice and of relatively minor importance in others, but all are represented in some measure in each field.

1. Biostatistical principles and methodology;
2. Epidemiological principles and methodology;
3. Planning, administration, and evaluation of health and medical programs;

4. Environmental hazards to health and principles of their recognition and control;
5. Social, cultural, and behavioral factors in medicine;
6. Applications of primary, secondary, and tertiary preventive principles and measures in medical and administrative practice.

To acquire the knowledge and skills necessary to achieve these objectives, graduate education in preventive medicine shall include three phases, academic, clinical and practicum. Each of these shall be no less than one year in duration, except for the academic phase as described below. A program director should counsel residents in the selection of assignments, services, or elective courses which will help provide the skills and knowledge needed in their subsequent practice of the elected field of preventive medicine.

The required phases are as follows:

1. Clinical Phase

A graduate year of clinical training and experience in direct patient care.

This year should provide broad experience in direct patient care, including ambulatory and inpatient hospital experience, and must be completed prior to the start of the practicum phase. These requirements can be met by a year in an accredited program in one of the recognized direct patient care specialties or through a clinical year sponsored by the preventive medicine program itself. If a preventive medicine clinical year is offered, it must provide adequately supervised experience in direct patient care, and must include at least three months of service in internal medicine and three months of inpatient hospital service in a hospital accredited by the JCAH. These minimum elements of three months duration may be concurrent. An accredited transitional year program will satisfy this requirement, or equivalent training as described under the Special Requirements for Public Health and General Preventive Medicine and Occupational Medicine. Such training should be specifically approved by the Residency Review Committee.

2. Academic Phase

Successful completion of a course of academic study leading to the degree of Master of Public Health or of a post-baccalaureate curriculum of equivalent extent, depth, content and rigor.

The course of study requires a minimum of one full academic year or its equivalent as determined by the Residency Review Committee. Its content shall in all cases include biostatistics, epidemiology, health service administration and environmental health. The director of each residency program should counsel each resident about the desirability of additional subjects, including behavioral sciences, that are important to the particular field of preventive medicine contemplated. The academic requirements may be met before or after graduation from medical school.

3. Practicum Phase

A year of continued learning and supervised application of the knowledge, skills and attitudes for preventive medicine in the field of special study.

The practicum phase shall be a minimum of 12 months full-time or its part-time equivalent as determined by the Residency Review Committee. It shall offer both clinical and didactic components. It should be provided in a setting in which there is a well organized program appropriate to the special field of preventive medicine contemplated. The clinical component of the practicum phase shall provide for the supervised application of the knowledge, skills and attitudes of preventive medicine gained in the academic phase and in the didactic component of the practicum phase.

More than one of the required phases may be offered concurrently provided that the total length of such concurrent training is not less than the sum of time required for the individual phases included.

The Residency Review Committee will accredit programs which include all three of the phases listed above, or

Public Health and General Preventive Medicine

programs which provide only the academic and practicum phases. Programs which offer only the academic and practicum phases are to accept into such programs only individuals who have already completed training in an acceptable clinical phase.

The entire residency program shall be under the supervision of a director who is certified by the American Board of Preventive Medicine in the appropriate field of preventive medicine, and who is judged by the Residency Review Committee to be suitably qualified on the basis of knowledge and experience. In exceptional circumstances, an individual who is not certified in preventive medicine, but is judged by the Residency Review Committee to possess suitable equivalent qualifications, may serve as program director. The program director must devote adequate time and professional commitment to the program to insure its educational quality. There must, at all times, be continuity and direction in the education and supervision of residents.

The program director must have and maintain documentation of institutional and interinstitutional agreements and of resident agreements and evaluations, including periodic assessments of resident performance. A file should be maintained for review of documentation of periodic internal assessment of the program by the program director and faculty, by the Residency Advisory Committee, by residents in training, in addition to recent graduates, and through the use of other techniques found suitable for each residency program. A variety of acceptable techniques for performance assessment may be utilized. A record should be maintained of the instruments or processes used for assessment. The results should be discussed with the residents and then kept in a file accessible to the residents and available for review by the accrediting authority.

The program director must notify the Secretary of the Residency Review Committee of any change in program, staffing, affiliations or facilities which might significantly alter the educational experience.

In addition to the program director, there should be sufficient faculty with suitable qualifications, with adequate time commitment and with sufficient coverage of required disciplines. The program director's contribution shall be supplemented by an adequate commitment of additional faculty proportionate to the requirements for the educational needs of the residents in the various disciplines involved in the field of study.

It is essential that the program director and key faculty members have a real interest in teaching and that they be willing and able to give the necessary time and effort to the educational program. They are to be engaged in scholarly activities such as participation in the activities of appropriate scientific societies, in the continuation of their own education, and in the presentation and publication of their scientific work. They must maintain an active interest in research as it pertains to their specialty.

There shall be a Residency Advisory Committee composed of selected individual consultants from both academic and practice areas who are acknowledged to be expert in the field of study. The program director and key faculty shall be ex-officio members.

The Advisory Committee shall concern itself with the development, content, conduct, effectiveness and improvement of the training program. Additionally, it shall concern itself with the instructional techniques used and with the periodic evaluation of all phases of the program, including faculty and resident performance. The Advisory Committee should also review the credentials of individuals in affiliated programs who supervise and teach residents to assure that they are professionally qualified to perform these roles. The Advisory Committee should report periodically, at least annually, to the head of the sponsoring institution. It shall meet with the frequency required to discharge these responsibilities, but not less than semi-annually. Formal minutes of the Advisory Committee meetings should be kept.

Individual phases or parts of the training program to be accredited by the Residency Review Committee for Preventive Medicine may be offered at institutions affiliated with the sponsoring institutions. In such cases, there should be an affiliation agreement setting forth the experience and training to be provided; the plan of supervision of the residents and the reports to be provided. In such affiliations, residents shall be under the direct supervision of an individual felt to be suitably qualified in the specialty area or in a related specialty. A table of organization of the agencies or institutions involved, with delineation of the responsibility and authority delegated to the trainees, will be available.

The sponsoring institution and affiliated institutions should cooperate in program development and promotion. An efficient system of records and well established procedures for the maintenance of registers and preparation of reports must be maintained. The facilities, including office and laboratory space, should be adequate, and a basic collection of reference texts and periodicals in preventive medicine and public health should be maintained even if a complete library is available outside the agency. The program budget should provide for transportation expenses of the resident if the training program involves travel. Support services, including secretarial, should be provided.

In evaluating these training programs, the Residency Review Committee may also consider the performance of graduates in the examinations of the American Board of Preventive Medicine.

Training Programs in Public Health and General Preventive Medicine

Public health and general preventive medicine is the specialty of preventive medicine which deals with health promotion and disease prevention in communities and in defined populations. Practitioners in this field are found in official and voluntary health agencies, academic and health care institutions, group practice settings, and health service research organizations. Some of these specialists practice clinical and therapeutic preventive medicine for individual patients, many deal with public health practice and the health affairs of communities of people, and with disease characteristics of groups of patients, and some practice in both.

1. Clinical Phase

Most commonly this phase is a year in an accredited residency in internal medicine, family practice, pediatrics, or obstetrics and gynecology. An accredited transitional year program will also satisfy this requirement. In exceptional circumstances, supervised clinical experience outside an accredited residency program may satisfy this requirement. It shall be the responsibility of the program director to assure that such special clinical experiences are reasonably comparable to one year of training in an accredited program and that an adequate clinical base for further training in preventive medicine has been established. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee.

If the resident has already chosen an area of special emphasis (health promotion, disease control or health administration), the clinical phase should be designed to strengthen skills in that area.

2. Academic Phase

The course work required by an academic unit to receive the Master's degree, or its equivalent, must include courses in biostatistics, epidemiology, health service administration and environmental health.²⁰ Residency program directors should counsel residents and school authorities on course work that should be taken in the elective options of the

²⁰It is the resident's responsibility to assure that the program meets the requirements of the American Board of Preventive Medicine.

student. These should be chosen according to the special emphasis and interest of the student, and the Special Requirements of the Residency Review Committee.

3. Practicum Phase

This phase shall be a minimum of twelve months and shall include public health and/or preventive medicine practice and didactic components. The facilities in which this training is provided need not conform to a rigid pattern. The sponsoring agencies may be educational institutions, research centers or operating health agencies. In addition to the primary agency, field training may also be given in affiliated organizations which are chosen to meet a particular need of a resident. The resources and structure of such an affiliated agency should be well established and should serve a population or provide research and educational programs sufficiently comprehensive to assure appropriate experience in public health and/or general preventive medicine. The competence and interest of the professional and supervisory staff in residency training should be assured to the satisfaction of the Residency Review Committee.

If the primary sponsor is an educational or research institution, it should be responsible for teaching residents and should have resources for developing graduate programs in preventive medicine. The research program should include studies that offer each resident an opportunity to participate in the data gathering and analysis procedures. To insure experience in an operating health agency, affiliation should be negotiated with a health department or other active health service agency and that affiliation should be documented by a written agreement.

If the primary sponsor is a health agency, it should offer a comprehensive experience in community health. Its program may include communicable and chronic disease control, medical care administration, health protection and promotion, maternal and child health, environmental health and sanitation, and mental health. To insure an appropriate didactic component, affiliation should be negotiated with a medical school or school of public health and that relationship documented in a written agreement.

Because the practitioner of public health and preventive medicine will need management skills, the program should include experience in budgeting, fiscal control, personnel practice, and administrative techniques, including exposure to automated record keeping and computer applications to health. Special attention should also be given to the political process and governmental structure. Observation or participation in legislative and regulatory procedures should be planned if possible.

In summary, the purpose of the practicum year is to give the resident experience in practicing public health and general preventive medicine in well established programs under the guidance of skilled practitioners. The scope of that experience must be broad enough to assure an appreciation for and ability to cope with a range of preventive medical problems. Additionally, the training must provide opportunity for concentrated experience in an area of the resident's special emphasis.

Training Programs in Occupational Medicine

Occupational medicine is a specialty of preventive medicine that focuses on the effects of an individual's occupation on his or her health. The populations served are those whose working environment contains any element that can adversely affect the individual's health. The principal concerns of occupational medicine are:

- 1) The Worker: Physical and emotional capabilities are assessed to assure that he or she can safely perform assigned duties. Periodic examinations throughout the worker's employment life measure changes in health status for the purposes of preventing diseases and disability, and of promoting health.

- 2) The Work Environment: This is examined for unsafe or potentially hazardous substances, physical conditions or work practices.

- 3) Chemical, Physical or Biological Agents in the Work Place: These must be understood and recognized. Advice and information must be communicated to the employer so that actions necessary to protect the workers can be accomplished, and to the employee so that he/she may take actions to protect his/her own health.

1. Clinical Phase

In the event this year is not taken as a part of an accredited clinical residency, it shall be the responsibility of the program director to assure that such special clinical experiences are reasonably comparable to one year of training in an accredited program and that an adequate clinical base for further training in preventive medicine has been established. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee.

2. Academic Phase

Residency program directors should counsel residents and school authorities on course work that should be taken (toxicology and industrial hygiene, physical effects on humans of temperature, pressure, noise and stress), as well as suggested elective options of the student. These should be chosen according to the special emphasis interest of the student and the Special Requirements of the Residency Review Committee.

3. Practicum Phase

The practicum phase shall offer a balance of experience and attitudes with the objectivity necessary to present adequately the relevant scientific concerns, the concerns of workers and their representatives, and the concerns of employers. Residents shall be assigned significant responsibilities in the course of this training.

In the practicum phase of training, there shall be didactic, clinical and administrative components. There should also be opportunities for the planned and supervised application of the knowledge, skills, and attitudes of preventive and occupational medicine gained in the other phases of the training.

At least four months of the practicum phase of training shall be provided in a setting in which there is a well organized program of industrial employee health services and industrial hygiene.

Didactic Component

The didactic component should include, but not be limited to, each of the following:

1. Environmental Physiology — Responses of the body to changes in temperature, barometric pressure, noise, and other stresses related to the work environment;
2. Determination of the fitness and the appropriate placement of workers or applicants for work;
3. Maintenance and improvement of the physical and emotional health of workers;
4. Life style risk factors in occupational and non-occupational disease and injuries;
5. Toxicology — Basic principles, clinical management, and the prevention of health problems associated with agents in the work environment that are potentially hazardous;
6. Identification and assessment of potential reproductive risks in the workplace with reference to males and females, and their progeny;
7. Industrial Hygiene — The principles of the identification, assessment, and elimination or control of potential hazards in the work environment;
8. Safety, including human factor considerations in accident prevention, and the medical support of accident investigation;

Aerospace Medicine/Psychiatry

- 9 Interpretation of laboratory data from either biological or environmental monitoring, and their application to medical surveillance; and,
10. The effective management of occupational medicine programs.

Clinical Component

The clinical component should include, but should not be limited to, the following:

1. Diagnosis, prevention, and treatment of disorders arising from a variety of work situations, from light to heavy industry, in a supervised setting for the comprehensive evaluation of patients and, if appropriate, for their treatment;
2. Evaluation of the fitness of individuals for placement or continuation in a wide variety of jobs, demanding a knowledge of physical and mental requirements for the work involved and a familiarity with potential hazards of the work environment.

Administrative Component

The administrative component should include the following:

1. The planning, administration, and supervision of a broad program for the protection of the health of workers and others from any harmful effects due to an organization's environment, operations, or products; and,
2. Knowledge of and experience in the application of legislative and regulatory requirements, including workers' compensation, pertinent to such a program.

Training Programs in Aerospace Medicine

Aerospace medicine is a specialty of preventive medicine which focuses on the health of a population group defined by the operating crews and passengers of air and space vehicles, together with the support personnel who are required to operate them. Segments of this population often work and live in remote, isolated, and sometimes closed environments under conditions of physical and psychological stress rarely encountered in terrestrial life. Specialty training for the physician in this field must, therefore, address the diagnosis, prevention and treatment of disorders associated with these unique environments and with the adaptive systems designed to support life under such conditions.

In addition to the requirements common to all fields of preventive medicine, the requirements for each phase of a residency in aerospace medicine are as follows:

1. Clinical Phase

Training should emphasize neuropsychiatry, ophthalmology, cardiopulmonary diagnosis and emergency medicine. It is desirable that this year of clinical training be accomplished in a hospital or medical complex in which patients suffering from aerospace medical problems are frequently encountered. Graduated patient responsibility should be assigned to residents. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee. Supplemental clinical training in the areas mentioned above should be provided during the practicum year as described below:

2. Academic Phase

Special academic requirements for aerospace medicine are normally integrated into the curriculum leading to a post-baccalaureate degree. In addition to the common requirements of these Special Requirements, course content should emphasize environmental physiology and toxicology with respect to the biological effects of altered pressure, temperature, atmospheric chemistry, and ionizing radiation. Facilities should be available for laboratory or clinical investigation of problems with direct application to the specialty, and supervised participation by the resident in a

formal research project should be required. Because of the paramount role of clinical care in an aerospace medical practice, it is desirable that the academic faculty be either integral to or formally affiliated with an accredited school of medicine.

3. Practicum Phase

This year of supervised application should be accomplished in an institutional setting where operational aerospace medical problems are routinely encountered and aerospace life support systems are under active study and development. Laboratory facilities should be equipped to provide simulated environments in which the effects of and adaptation to extreme conditions of temperature, barometric pressure, acceleration, weightlessness and psychological stress can be studied. A flight training program should be available both to familiarize the resident with basic aeronautical skills and as a source of clinical material for the supervised management of common clinical problems encountered among flight personnel.

Effective: July 1983 ACGME: May 1983

21. Special Requirements for Residency Training in Psychiatry**1. Introduction²¹**

An approved residency program in psychiatry must demonstrate that it provides an educational experience of such quality and excellence as to assure that its graduates will possess sound clinical judgment and a high order of knowledge about the diagnosis, treatment, and prevention of all psychiatric disorders and the common neurological disorders. While residents cannot be expected to achieve in four years of training the highest possible degree of expertise in all of the diagnostic and treatment procedures used in psychiatry, those individuals who satisfactorily complete residency programs in psychiatry must be competent to render effective professional care to patients. Furthermore, they must have a keen awareness of their own strengths and limitations and of the necessity for continuing their own professional development.

Only those programs are eligible for approval which:

1. provide (*with rare exceptions*) at least three years of residency education and usually four years of graduation education following receipt of the M.D. degree (see regulations of the American Board of Psychiatry and Neurology).²²

²¹This material constitutes the special requirements for training in psychiatry and includes material formerly published as a "Guide" for residency programs in psychiatry. The "Guide" is no longer published separately. The reader is also referred to the General Requirements for Residency Training and to the publications of the Accreditation Council for Graduate Medical Education which outline the composition and function of all Residency Review Committees and which indicate the actions which any Residency Review Committee may take, as well as the actions which the Accreditation Council for Graduate Medical Education (ACGME) may take. The General Requirements and the other publications of the ACGME also indicate the appeals procedures, the types of programs and the relationships between the Residency Review Committee (RRC), its parent organizations and the ACGME.

Requests to have a program accredited to train residents in psychiatry (or related inquiries regarding residency programs) should be addressed to: Secretary, Residency Review Committee for Psychiatry and Neurology, 535 North Dearborn Street, Chicago, IL 60610. All inquiries as to whether a physician is qualified to be examined for certification in psychiatry should be addressed to: Executive Director, American Board of Psychiatry and Neurology, One American Plaza, Evanston, IL 60201.

²²The regulations of the American Board of Psychiatry and Neurology, referred to in (1) above state that two patterns of training are acceptable:

- a. Prior to entering an approved Psychiatry or Neurology training program, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine. This year of clinical experience should emphasize internal medicine or pediatrics or family practice.
- b. A four-year training program in Psychiatry or in Neurology would be acceptable with the provision that at least four months be spent in an approved program providing direct responsibility for the general medical care of children and/or adults.

2. are conducted under the sponsorship of a hospital which meets the General Requirements that apply to residency programs in all specialties, as outlined in Sections I, II, III, and IV of the Essentials of Accredited Residencies, and
3. meet all of the Special Requirements of Residency Training in Psychiatry.

Under rare and unusual circumstances, programs of either one year or two years duration may be approved, even though they do not meet all of the *above* requirements for psychiatry. Such one or two year programs will be approved only if they provide some highly specialized educational and/or research programs.

In general, there are two major entries into psychiatric residency training. Residents may enter programs at the second postgraduate year level, after a broad based clinical year of training in accredited programs such as medicine, family practice and pediatrics. Residents entering at the first postgraduate year of training must spend a minimum of four months in the specialty of internal medicine, family practice or pediatrics. A rotation in neurology is particularly encouraged at this stage of training.

The objectives of the training obtained during the first postgraduate year should provide residents with medical skills most relevant to psychiatric practice. These include:

1. learning to undertake the initial clinical and laboratory studies of patients presenting with a broad range of common medical and surgical disorders,
2. being capable of providing limited care for medical illnesses and of making appropriate referrals,
3. being especially conversant with medical disorders displaying symptoms likely to be regarded as psychiatric and with psychiatric disorders displaying symptoms likely to be regarded as medical, and
4. being especially cognizant of the nature of the interactions between psychiatric treatments and medical and surgical treatments.

If contact is maintained by the department of psychiatry with residents in the first postgraduate year while they are on services other than psychiatry, it would be an ideal time to conduct a seminar dealing with the interface between psychiatry and the rest of medicine.

An approved program must have an explicitly described educational curriculum composed of (1) formal didactic experiences such as regularly scheduled lectures, seminars, clinical conferences and required reading assignments; (2) clinical experiences in which the resident, under supervision, receives progressively greater responsibility for patient care. The clinical responsibility must never be greater than that which is optimal for educational purposes. The educational program must include systematic instruction and clinical experience in all of the generally accepted diagnostic and therapeutic procedures. All programs should state specifically and clearly as possible the objectives and criteria for successful completion of the program and these objectives and criteria should be made available to residency applicants.

Both the didactic and clinical curriculum must provide a thorough and well balanced presentation of the generally accepted theories, schools of thought, and diagnostic or therapeutic procedures in the field of psychiatry. Thoughtful and informed appraisals of the major theories and viewpoints in psychiatry, together with a thorough grounding in the generally accepted facts, are fundamental to a sound professional education.

Although the RRC does not designate any specific number of residents who can be in training in a given program, all programs must maintain a "critical mass" of trainees sufficient to promote an intellectually stimulating educational atmosphere. An educationally sound minimal "critical mass" of psychiatric residents is defined as at least two trainees enrolled in each year of a program. Programs which fall below this prescribed "critical mass" will be

reviewed, and if this deficiency is not corrected, the program will be subject to negative action.

II. Educational Programs

The chief objective of residency education is the development of a high order of clinical competence in graduates. Carefully supervised clinical care of patients is the core of an adequate program.

Formal educational activity shall have high priority in the allotment of the resident's time and energies. The clinical responsibilities of residents must not infringe unduly on didactic educational activities and formal instruction.

Clinical and didactic teaching must be of sufficient breadth to insure that all residents become thoroughly acquainted with the major methods of diagnosis and treatment of mental illness.

Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. In a progressive fashion it should expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Staff meetings, clinical case conferences, journal clubs, and lectures by visitors are desirable adjuncts, but must not be used as substitutes for an organized didactic curriculum.

The curriculum must include adequate and systematic instruction in such basic biological and clinical sciences relevant to psychiatry, in psychodynamics and child development and in sufficient material from the social and behavioral sciences. The curriculum must also provide a thorough grounding in medical ethics and in the history of psychiatry and its relation to the evolution of modern medicine.

By means of individual supervision, seminars, lectures, assigned reading, case conferences, teaching rounds and supervised patient care, the residency program must provide systematic instruction and substantial experience in:

1. The skills of clinical diagnosis such as interviewing, mental status examination, physical and neurological examination, history writing and the formulation of a differential diagnosis and treatment plan.
2. The presentation and discussion of clinical case material at conferences attended by faculty and fellow residents. This training should include the ability to formulate relevant theoretical and practical issues involved in the discussion of the diagnosis and management of the cases presented at such conferences.
3. The diagnosis and treatment of adults, adolescents and children who have psychiatric disorders. Experience should also be provided in the diagnosis and treatment of patients who have mental retardation or other developmental disabilities. Training in the diagnosis and treatment of children should provide the resident with an understanding of the biological, psychological, social, economic, ethnic, and family factors that significantly influence physical and psychological development in infancy, childhood, and adolescence.
4. The diagnosis and treatment of neurological disorders *relevant to psychiatric practice*. This must be sufficient to enable a psychiatric resident to obtain a thorough history regarding neurological disease, perform a competent neurological examination, make a differential neurological diagnosis, and, under supervision, plan and carry out the treatment of the common, clinically important neurological diseases. This requires an adequate commitment of time, during which each resident obtains supervised clinical experience in the diagnosis and treatment of neurological patients.
5. The diagnosis and treatment of psychophysiological disorders.

Psychiatry

6. Psychiatric consultation or liaison psychiatry involving patients on other medical and surgical services.
 7. Hospital emergency service (or equivalent experience in emergency care). A twenty-four hour emergency service should be an integral part of the program. Crisis intervention techniques, including the evaluation and management of suicidal patients, are best taught under such circumstances. Where the emergency service is part of a general hospital, it broadens the clinical experience of the psychiatric resident and offers a valuable opportunity for collaboration and exchange of ideas with colleagues in other specialties.
 8. Community psychiatry. This should include experience in community based programs. This training should also include the opportunity to consult with at least one community agency.
 9. Psychiatry and the law. This must involve didactic instruction in the legal aspects of psychiatric practice, such as civil commitment, guardianship and confidentiality. The opportunity should be provided to participate in court evaluations under the supervision of a psychiatrist.
 10. The use of the generally accepted techniques for diagnostic psychological assessment. In their clinical work, residents must have experience with the more common psychological test procedures in a sufficient number of cases to give the resident an understanding of the clinical usefulness of these procedures and the correlation of psychological test findings with clinical data. Under the guidance of a qualified clinical psychologist, residents should have experience with the interpretation of the psychological tests most commonly used. Some of the experience which residents have with psychological tests should be with their own patients.
 11. All of the major types of therapy. The therapeutic techniques which should be taught include:
 - a. Individual psychotherapy, including supervised experience in long term psychotherapy
 - b. Family therapy
 - c. Group therapy
 - d. Crisis intervention
 - e. Pharmacological therapies, short-term and long-term
 - f. Somatic therapies
 - g. Behavior therapy
 - h. Other techniques such as biofeedback and hypnosis
 12. Instruction in medical ethics.
 13. Clinical experiences in which residents actively collaborate with psychologists, psychiatric nurses, social workers and other professional and paraprofessional mental health personnel in the treatment of patients.
 14. The continuous care of patients. This should include the care of a significant number of patients who are seen regularly and frequently for an extended period. Of these patients who are in the resident's continuous care for an extended period of time, some must be patients with chronic psychotic conditions and some must have nonpsychotic illnesses.
 15. The resident must acquire competence in the diagnosis, treatment and management of patients with alcoholism and drug abuse. These patients represent a significant percentage of patients treated on psychiatric inpatient units and in psychiatric clinics. The effective diagnosis and management of such patients must be learned by didactic lectures as well as supervised experience in the clinical treatment of such patients. This includes detoxification and long term management in inpatient and/or outpatient settings, and familiarity with self-help groups.
 16. Residents must learn about research methodology and develop the ability to appraise critically professional and scientific literature. Approved programs must provide opportunities for actual participation in clinical or basic research by residents.
 17. Residents must obtain experience in the administrative aspects of psychiatric practice. This should include information about the structure of federal, state and local organizations that influence mental health care.
- In addition to providing systematic instruction and substantial experience in the topics and skills noted above, an accredited residency must also be characterized by:
1. An appropriate and progressive degree of clinical responsibility for the care of patients. The clinical services must be organized so that residents may have major responsibility for the care of a significant proportion of all patients assigned to them, and that they have an appropriate amount of supervision by the staff. The amount and type of responsibility for patient care which a resident assumes must increase as the resident advances in training.
 2. An adequate variety of patients. Residents must have major responsibility for the diagnosis and treatment of a reasonable number of patients with the major categories of psychiatric illness and ample experience in the diagnosis and management of the more common neurological disorders. They must have experience in the care of both sexes, of patients of various ages from childhood to old age, and of patients from a variety of ethnic, racial, social and economic backgrounds.
 3. An appropriate amount and type of experience in the treatment of inpatients. Residents should have significant responsibility for the diagnosis and treatment of psychiatric inpatients for a period of approximately twelve, but no more than eighteen, months in a four year program.
 4. Optimal case load. The number of patients for which a resident has primary responsibility at any one time must be sufficiently small to permit the resident to conduct a detailed study of each patient, provide each patient with appropriate treatment, and to have sufficient time for other aspects of his educational program. At the same time, the number must be sufficiently large to provide a variety of clinical experiences.
 5. Interdisciplinary conferences. The curriculum must include a significant number of clinical conferences and didactic seminars for residents in which psychiatric faculty members collaborate with neurologists, internists and colleagues from other medical specialties and mental health disciplines.
 6. Individual supervision. Clinical training must include an adequate amount of regularly scheduled individual supervision. As a general rule, each resident should have at least two hours of individual supervision weekly in addition to teaching conferences and rounds.
 7. Electives. All programs should provide the opportunity for residents to pursue individually chosen electives.
- III. *Director of Residency Program and Participating Faculty*
Each residency program must be under the direction of a fully qualified psychiatrist whose major responsibility is to maintain an educational program of excellence. The resi-

gency program director must be board certified or possess equivalent qualifications, and must devote a sufficient number of hours weekly to the educational program. The program director should be responsible for maintaining:

1. A process for selecting as residents physicians who are personally and professionally suited for training in psychiatry. The program should document the procedures used to select residents. Application records should document information from medical schools and graduate medical education programs. It is recommended that each program have a residency selection committee to advise the program director on selection of residents. Those residents selected at the second postgraduate year or above must have satisfied the training objectives cited above for that level of training.
2. A documented procedure for checking the credentials and past performance of residents transferring from one program to another.
3. A well-planned and systematic educational program of quality which includes specific, assessable objectives for program components and criteria for graduation.
4. Regular and systematic evaluation of the progress of each resident, including complete records of evaluations containing explicit statements on the resident's progress and his or her major strengths and weaknesses. Each resident should maintain a record of selected specific cases in a manner which does not identify patients, but which illustrates his clinical experience in the program. These records should be reviewed periodically with the program director or a designee.
5. A program of regularly scheduled meetings with each resident, of sufficient frequency, length and depth to insure that the resident is continually aware of the quality of his progress toward attainment of professional competence. These evaluation sessions should be held at least semi-annually and preferably more frequently. They should give the resident opportunity to assess the program and the faculty. Provision should be made for remediation in cases of unsatisfactory performance.
6. Procedures for helping the resident obtain appropriate help for significant personal or professional problems.
7. Procedures for the resolution of problems that occur when a resident's performance does not meet required standards. These procedures should be fair to the resident, the patient under his care, the training program and the profession. A written grievance procedure for residents and/or faculty should be maintained. Criteria for terminating a resident whose performance is unsatisfactory should be available to all concerned.
8. A written record of the educational responsibilities of all staff and faculty members (whether full-time or part-time) who participate directly in the education of residents, including the qualifications and experience of the faculty member, and the nature, frequency and amount of time involved in the teaching activity of each.
9. A system to monitor and document each resident's achievement of the educational goals as specified by the program.

The residency must be staffed by qualified psychiatrists in sufficient numbers to achieve the goals and objectives of the training program. They should be qualified clinicians and capable teachers. The teachers must participate regularly and systematically in the training program and be readily available for consultation whenever a resident is faced with a major therapeutic or diagnostic problem.

There must be sufficient variety of qualified faculty members to provide the residents with instruction and supervision in the required types of therapy.

In addition to qualified psychiatrists in appropriate numbers, the faculty should also include representatives of other mental health professions.

The director of the residency program should have an educational policy committee composed of members of the teaching staff and including representation from the residents. This committee should participate actively in planning, developing, implementing and evaluating all significant features of the residency program, including the selection of residents (unless there is a separate residency selection committee), determining goals and objectives of the curriculum, and evaluating both the teaching staff and resident staff. Each program should have a written description of the committee including the responsibility to the sponsoring department or institution and to the program director.

IV. Residents

A strong sense of responsibility for patient care is essential on the part of the resident staff. The attitudes required of a psychiatrist are those expected of all physicians. These attitudes begin to be acquired in medical school and are broadened in the special responsibilities of the medical specialty training of the psychiatrist. Mastery of the knowledge and skill objectives of the residency should be accomplished by didactic instruction, scheduled teaching rounds and conferences, assigned reading and progressive supervised responsibility for the clinical care of patients. Achieving clinical competence demands long hours and disciplined effort. Residency education in psychiatry is a major commitment. The resident should not engage in activities which interfere with optimal performance in the residency.

The ability to interview patients and other informants adequately, record a history clearly and accurately, perform a competent physical, neurological and mental status examination and record the findings of these examinations in a complete and systematic manner are essential to adequate diagnosis and treatment. Generally speaking, the quality of a residency program is reflected in the ability of the resident to conceptualize illness (including mental disorder) in terms of biological, psychological and sociocultural factors which determine normal and disordered behavior in order to accomplish further data gathering, differential diagnosis, formulation of a treatment plan, implementation of treatment and follow-up. Clinical records must include an adequate history, mental status, and physical and neurological examinations recorded by residents, an adequate treatment plan, regular and relevant progress notes, adequate justification for diagnostic and therapeutic procedures performed and a discharge summary.

The residency program director must accept only those applicants whose qualifications for residency include sufficient command of English to facilitate accurate, unimpeded communication with patients and teachers.

The residency program should provide its residents with instruction about American culture and subcultures. Many physicians may not be sufficiently familiar with attitudes, values and social norms prevalent among various segments of contemporary American life. Therefore, the curriculum should contain instruction about these issues adequate to enable the resident to render competent care to those patients from various cultural backgrounds for whom he has clinical responsibility in the course of his residency.

An important part of the education of the resident is the development of teaching skills. Residents should have ample opportunity to teach students in the health professions.

V. Clinical and Educational Facilities and Resources

Training programs must have available to them adequate inpatient and outpatient facilities, clinics, agencies

Child Psychiatry

and other suitable placements where the residents can meet the educational objectives of the program. The program should specify the facilities as well as the methods by which the goals and objectives are to be implemented.

The administration of the facility must provide ample space and equipment for educational activities. There must be adequate space and equipment specifically designated for seminars, lectures, and other teaching exercises. All residents must have offices adequate in size and decor to allow them to interview patients in a professional manner.

The facility must also provide adequate and specifically designated areas in which residents can perform basic physical examinations and other necessary diagnostic procedures.

The program should have available such basic teaching aids as slide projectors, sound film projectors, as well as teaching material in the form of films, audio cassettes and television tapes and the capability for making and playing back video tapes.

The sponsoring institution of an approved residency in psychiatry must provide residents with ready access to a library that contains a substantial number of current basic textbooks in psychiatry, neurology and general medicine, and a sufficient number of the major journals in psychiatry, neurology and medicine, necessary for an educational program of excellence. The library must have the capability of obtaining textbooks and journals on loan from major medical libraries, the capacity for Medline or other medical information processing or access to a library which has the capacity, and must be reasonably available to residents on weekends and during evening hours.

Effective: July, 1981 ACGME: Nov. 1980

Training Programs in Child Psychiatry

Essential elements for approved residency training in child psychiatry are generically similar to those in general psychiatry (see the Special Requirements of the Essentials for Residency Programs in Psychiatry). The training program should offer a well-balanced patient load, adequate supervision, and a formal educational experience to provide a combination of training and practice which will be both broad enough to insure familiarity with the variety of childhood disorders, and intensive enough to insure basic treatment skills. Consultative experience is also essential.

Essential requirements for approved training for the career child psychiatrist consist of a minimum of a two-year block of time of training in general psychiatry together with two years of specialized training in child psychiatry. This is in addition to the categorical, categorical* or flexible first year of post M.D. training. To achieve greater flexibility in the sequence of training for the career child psychiatrist and to assist in recruitment, the training experience for a career child psychiatrist may be initiated in any of the three years of general psychiatric residency training, provided that the training is full-time²³, a block of time spent at any one time is not less than six months, and that if a six-month block is chosen it be followed at another time by not less than an eighteen-month block of full-time training in child psychiatry. Two separate twelve-month full-time blocks in child psychiatry may also be chosen. Up to six months' credit for residency training in pediatrics which was at least a year in duration, may count in place of any six-month period of child psychiatry training. In summary, in addition to the categorical, categorical* or flexible first graduate year, a total of four years of training, two years in general psychiatry and two years in child psychiatry, must be taken. (Ordinarily, the exposure to child psychiatry given to most general psychiatry residents as part of their basic psychia-

try curriculum will not qualify for this credit.) The entry point of child psychiatry training may be anywhere after the first post-M.D. year.

Each training program accredited for child psychiatry must be an integral part of a general psychiatric residency program accredited for three years of training, or must have a formal educational affiliation with such a program. The written agreement of such affiliation must be signed by the training directors of both programs and a copy of it filed with the Executive Director of the American Board of Psychiatry and Neurology, Inc., and with the program file which will be reviewed by the Residency Review Committee and the Accreditation Council for Graduate Medical Education.

The program in child psychiatry must be under the direction of a qualified child psychiatrist. It is desirable that he or she be Board certified or its equivalent in child psychiatry. Educational quality must have the highest priority in the allotment of the residents' time and energy. The clinical responsibilities of residents must not infringe unduly on didactic educational activities. The program must exist for the resident and not vice-versa. A formal curriculum must be outlined and available. It must include a program of graduated learning and experience throughout the two years, which is marked by graduated and increasing clinical responsibility for the diagnosis and treatment of children and their families. The training should take place in a child psychiatric facility wherein a spectrum of supervised experience is available with children from infancy through adolescence. The program should provide an understanding of normal behavior as well as the gamut of developmental psychopathology. Biological, socio-cultural, psychodynamic, behavioral, and familial aspects of childhood and its problems must be covered both in the clinical and the didactic experience. Opportunities for the development of both conceptual understanding and clinical skill in therapeutic interventions with children, adolescents, and families, including psychotherapeutic and psychopharmacologic treatment, must be available. An experience devoted to work with out-patients should include a significant amount of work which involves active collaboration with other mental health professionals. Direct experience with psychological measurements is essential. The development of skill in working with severely disturbed children is also an essential part of the training experience and is best achieved in an in-patient or residential program. The case load for each resident must be small enough to insure the intensive study and understanding of patient management within a controlled milieu. Administrative experience in ward management should be a part of this assignment. In some circumstances, the same experience may be achieved in a day-treatment setting with an intensive milieu program. Work with severely disturbed children should constitute a significant period of time.

Consultation and liaison with pediatric services and community agencies such as well-baby centers, schools, courts, and the social welfare department is a third essential experience. The essential community consultation areas in which the resident should be able to function are: 1) medical, 2) educational, 3) forensic, 4) social. In this connection, the training program must provide a significant number of clinical conferences and didactic seminars not only with child psychiatry faculty members but with other medical specialists and other mental health professionals as well. There should be opportunities for the resident to apply principles he or she has learned in community consultation experience.

Emphasis on developmental considerations is the hallmark of a child psychiatric program. Toward this end, clinical experience with children of all ages and with families from all socio-economic levels is essential. It is recognized that some programs are unable to provide such broad populations themselves but must then do so through affiliation.

²³As in general psychiatry training, two years of half-time training is equivalent to one year of full-time training.

Opportunities for teaching with community groups, medical students, and nurses, and opportunities for learning about research should also be available.

The program director is responsible for selecting residents, planning their progress and maintaining records of these evaluations. The program director must devote sufficient time to his program responsibilities so that the program will meet the stated requirements. He or she should provide residents with an understanding of the goals of training and evaluation procedures, as well as the responsibilities of the residents for their own learning and their own clinical work. The program director must also be responsible for the provision of adequate space and equipment for educational activities, e.g. audiovisual equipment, playroom materials and library facilities which contain basic child psychiatric textbooks and journals. Individual office space for each resident with readily available play materials must be available. Special space for physical and neurological examinations, as well as the appropriate medical equipment, must also be readily available in the training facility.

The residency program should provide its residents with instruction about the various cultures existing in the country. Many physicians may not be sufficiently familiar with the attitudes, values and social norms prevalent among the various segments of contemporary American life. Therefore, the curriculum should contain instruction about these issues adequate to enable the resident to render competent care to those patients from various cultural backgrounds for whom the resident has clinical responsibility in the course of residency training.

Finally, it is unlikely that a program can function without a "critical mass" of residents because of the elements of peer teaching and interaction as well as the need for group discussion in seminars and conferences. While it is difficult to identify the optimal "critical mass" for many programs it is clear that a minimum of two residents in each of the two years of training is essential if the program is to maintain full accreditation.

Effective: June, 1979 ACGME: June, 1979

22. Special Requirements for Residency Training in Diagnostic Radiology, and Therapeutic Radiology

Training Programs in Diagnostic Radiology

Objective: Diagnostic radiology encompasses a variety of diagnostic imaging techniques, including all aspects of roentgen diagnosis, nuclear radiology, diagnostic ultrasound, and the use of other forms of radiant energy. The residency program in diagnostic radiology shall offer a quality graduate medical education experience of adequate scope and depth in all of these associated diagnostic disciplines.

Training period: The program shall offer a minimum of 3 years of graduate medical education in diagnostic radiology, of which at least 30 months training must be in the parent program(s).

Direction and supervision: Program director: The program director is responsible for the total training in diagnostic radiology, which includes the instruction and supervision of residents. The director must be a full-time staff member who is a diagnostic radiologist or a radiologist, and must contribute sufficient time to the program to ensure adequate direction. Staff. The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

Institutional support: Those institutions participating in a program of graduate medical education in diagnostic radiology should provide administrative support of the program.

Facilities: The program must provide adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in diagnostic radiology.

Clinical resources: The program in diagnostic radiology must provide a sufficient volume and variety of patients, including pediatrics, emergency medicine, obstetrics and gynecology, for adequate resident experience in the specialty.

Training content: The clinical training must provide for progressive, supervised, resident responsibility for patient care, and must ensure that the supervised resident performs, personally, those procedures commonly accepted in all aspects of diagnostic radiology. The training, in general, must include progressive study and experience in all diagnostic radiologic subspecialties, as well as diagnostic radiologic physics, radiation biology, radiation protection, and pathology. In view of the importance of an understanding of pathology as a basis for radiologic diagnosis, emphasis should be placed on its study. The radiologic education in different organ systems should provide the opportunity for residents to develop adequate knowledge regarding normal and pathologic physiology, including the biologic and pharmacologic actions of materials administered to patients in diagnostic studies.

Research: The program should encourage residents to participate in research.

Educational environment: The education in diagnostic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major clinical specialties located in those institutions participating in the program.

Training complement: The complement of residents in the program should be commensurate with the total capacity of the program to offer an adequate educational experience in diagnostic radiology.

Evaluation: The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these.

Teaching file: A teaching file of images referable to all aspects of diagnostic radiology should be available for use by residents. This file should be indexed, coded, and currently maintained.

Conferences: Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental conferences, as well as conferences with each major clinical department of sufficient frequency, and in which both residents and staff participate on a regular basis.

Literature resources: The program shall provide a sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in diagnostic radiology and associated fields, which are immediately accessible for resident study. In addition, residents should have access to a general medical library.

Effective: Nov. 1977 ACGME: Nov. 1977

Training Programs in Diagnostic Radiology With Special Competence in Nuclear Radiology

This program is designed to offer training in diagnostic radiology and its subspecialties, and also in the diagnostic procedures which comprise nuclear radiology.

Definition: Nuclear radiology is defined as a clinical subspecialty of radiology involving the imaging by external detection of the distribution of radionuclides in the body for diagnosis of disease.

Duration of the Training Period: The training period in diagnostic radiology with special competence in nuclear radiology shall be four years of approved postgraduate training, three years of which must be spent in residency

Pediatric Radiology/Therapeutic Radiology

training comprising at least twenty-four months of diagnostic radiology and its subspecialties and twelve months in nuclear radiology. The training shall provide a program of graded study, experience and responsibility in all facets of roentgen diagnosis, medical nuclear and diagnostic radiologic physics, radiobiology, health physics and protection, medical nuclear instrumentation, radiopharmaceutical chemistry and instrumentation, and the clinical applications of nuclear radiology.

Institutional Requirements: The institution offering a residency in diagnostic radiology with special competence in nuclear radiology must also be approved to offer training in diagnostic radiology. It must further provide adequate opportunity for the trainee to participate in and personally perform a broad range of nuclear radiologic procedures. The institution should thus provide no less than 3,000 nuclear imaging procedures per year, including a satisfactory spread of examinations in various systems.

Departmental Requirements: All those requirements which pertain to residencies in diagnostic radiology shall also apply to programs in diagnostic radiology with special competence in nuclear radiology. In addition, the nuclear radiology portion of the program should be under the supervision of a full-time staff member who is recognized as a specialist in nuclear radiology, and there should be available both stationary (camera) and moving (scanner) nuclear imaging systems.

Educational Requirements of the Residency:

(1) One full-time nuclear radiologist per each two residents in training would seem to provide adequate opportunity for teaching and supervision.

(2) The residency program should be so planned that residents receive adequate instruction and individual training in all of the diagnostic subspecialties, in nuclear radiology, and in health physics and protection and pathology.

Formal instruction in diagnostic radiologic and medical nuclear physics, radiobiology, and radiopharmaceutical chemistry are required.

(3) It is important that appropriate emphasis be placed on the value of teaching rounds and conferences, which should include at least one weekly conference with each of the major specialties in the institution. In addition, there should be frequent intradepartmental teaching conferences including both diagnostic and nuclear radiologic subjects.

(4) Research-It is expected that the resident participate in the research opportunities of the department. This is perhaps best accomplished by the assignment of the resident for a specific period to the diagnostic or nuclear radiologic research facilities of the department.

(5) Library Facilities-A departmental library is essential and must contain a sufficient variety of texts and journals in both the radiologic and nuclear fields to meet the needs of the various levels of resident training. There should also be easy access to a general library. Suitable areas for independent work and study should be available for the use of the residents.

(6) Teaching-Film Museum-A film museum containing both diagnostic and nuclear radiologic subjects indexed, coded, and currently maintained with continuing follow-up should be available for resident use.

A well-balanced educational program at this level requires a diversity of clinical material, continuous clinical teaching and an active investigative and research effort both in diagnostic and in nuclear fields.

Training Programs in Diagnostic Radiology With Special Competence in Pediatric Radiology

The residency in pediatric radiology should provide advanced and continuous training in the application of diagnostic radiology to the newborn, infant, and child for the purpose of producing a highly trained clinical specialist.

Pediatric radiation therapy is not an essential component. A well-balanced educational program requires a diversity of clinical material, continuous clinical training, and an active investigative and research effort.

Definition: Pediatric radiology is understood to be a segment of diagnostic radiology encompassing the same fundamentals of radiation physics and radiation protection, and the same deductive and inductive reasoning processes, but directed at the special problems of disordered physiology, pathology, and matters of health maintenance as they occur in the growing child.

Duration of Training Period: The minimal training period is three years comprising twenty-four months in diagnostic radiology, and twelve continuous months in pediatric radiology. The training in diagnostic radiology must precede the pediatric experience and include all facets of roentgen diagnosis, the clinical applications of diagnostic nuclear medicine, radiobiology, physics, and protection. It may include up to six months of pediatric radiology.

Institutional Requirements: The institution offering training in pediatric radiology may or may not be the same in which the resident obtains his initial diagnostic radiology training. It may be an entirely separate institution. In any case, the clinical material in pediatrics must be of such volume and composition as to provide ample clinical experience with the broad diversity of pediatrics. To qualify, the institution should have a full-time staff in general pediatrics, pediatric surgery, pediatric cardiology and pathology as a minimum. There should also be an AMA approved residency training program in pediatrics.

Departmental Requirements: Staff: The attending staff should comprise at least two full-time radiologists devoting themselves to pediatric radiology. The staff shall have control of adequate technical facilities devoted primarily to children's radiology. One radiologist should be designated as director of the training program in pediatric radiology. Whenever possible, more than one resident should be in training in addition to other residents who may rotate through the department for shorter time periods.

Educational Requirements for the Residency:

(1) The same basic instruction is required in pediatric radiology as in diagnostic radiology. The only difference is that the program allows concentration on pediatric rather than adult medical problems. If the program integrates experience at two separate institutions, careful planning so as to include formal instruction in radiation physics, protection, radiobiology and experience in diagnostic nuclear medicine must be assured.

(2) Increasing resident responsibility in respect to patient care should be an important feature of the training period in pediatric as well as diagnostic radiology.

(3) It is important that appropriate emphasis be placed on the value of teaching rounds and conferences, which should include at least one weekly conference with each of the major pediatric specialties in the institution. In addition, there should be frequent intra-departmental teaching conferences.

(4) A departmental library is essential and must contain sufficient variety of texts and journals to cover both general pediatrics and pediatric radiology.

(5) A film museum indexed, coded, and currently maintained should be available for resident use.

(6) Suitable areas for independent work and study should be available for the use of the residents.

Training Programs in Therapeutic Radiology

Objective: Therapeutic radiology is that branch of clinical medicine which is related to the diagnosis and treatment of patients with cancer with special emphasis in the identification of the role of radiation therapy in the care of patients, in the administration of radiation therapy in an optimum manner, and in the participation in such aspects of

medical practice as may lead to improved care of the cancer patient.

Training Period: The program shall offer at least three years of graduate medical education in therapeutic radiology. No more than six months may occur in rotations to affiliated institutions outside of the single institution in which the program resides, or outside of those participating institutions united to form an integrated program.

Direction of Supervision: Program Director: The program director is responsible for the total training in therapeutic radiology, which includes the instruction and supervision of residents. The director must be a full-time staff member qualified in and practicing therapeutic radiology, and must contribute sufficient time to the program to ensure adequate direction. All radiation therapy equipment and materials, and their clinical use, shall be under the supervision and responsibility of the chief of the therapeutic radiology service.

Staff: The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

Institutional Support: Those institutions participating in a program of graduate medical education in therapeutic radiology should provide administrative support of the program.

Facilities: A training program in therapeutic radiology must have adequate space, equipment and other pertinent facilities to ensure an effective educational experience for residents in therapeutic radiology.

Clinical Resources: A training program in therapeutic radiology must have a sufficient volume and variety of cancer patients, including pediatric and gynecologic patients for adequate resident experience in the specialty. There must be adequate programs in cancer surgery, cancer chemotherapy, and hematology. The therapeutic radiologist should be in control of those inpatients and outpatients assigned to therapeutic radiology and must maintain an adequate follow-up clinic of patients treated by radiation therapy.

Training Content: The clinical training staff must provide for progressive, supervised resident responsibility for patient care, and must ensure that the supervised resident personally performs those procedures commonly accepted in all aspects of therapeutic radiology.

Training should include basic sciences essential to training in radiation oncology, radiation physics, radiation biology, pathology with emphasis on neoplasia, radiation effects, and medical statistics. The training curriculum will identify the manner in which these basic sciences will be taught.

Also included are the allied clinical disciplines, cancer surgery and cancer chemotherapy, which play a major role in the management of the cancer patient. The training program must be designed to assure that the resident acquires a knowledge of the potential value, and the limitations of these other clinical disciplines. This may be accomplished through the attendance of various multidiscipline conferences, departmental conferences, or by actual rotations to those services.

Conferences: Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental oncology conferences, as well as conferences with each major clinical department of sufficient frequency, in which both resident and staff participate on a regular basis.

Literature Resources: A sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in radiology and associated fields in oncology and basic sciences shall be provided and must be immediately accessible for resident study. In addition, residents should have access to a general medical library.

Research: Residents should be encouraged to participate in research.

Educational Environment: The education in therapeutic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major oncology specialties located in those institutions participating in the program.

Training Complement: The complement of residents in the program should be commensurate with the total capacity of the program to offer an adequate educational experience in therapeutic radiology.

Evaluation: The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these.

Effective: Sept. 1978 ACGME: Sept. 1978

23. Special Requirements for Residency Training in Thoracic Surgery

For a residency program in thoracic surgery to be accredited, compliance is required with both the General Requirements and the Special Requirements as stated in the "Essentials of Accredited Residencies." The General Requirements are common to all residency programs. The Special Requirements are specific to thoracic surgery. The most recent versions of both sets of requirements, along with excerpts from the Accreditation Council for Graduate Medical Education's (ACGME) "Manual of Structure and Functions" and "Procedure for Appeal of Adverse Actions" are printed annually in the *Directory of Residency Training Programs*. Here also may be found the steps in the accreditation process, the designation of the types of programs, and the role of the Residency Review Committee for Thoracic Surgery and the ACGME in the evaluation and accreditation process.

A thoracic surgical residency is a graduate education program designed to give the resident a broad clinical experience in pulmonary, esophageal, mediastinal, chest wall, diaphragmatic and cardiovascular disorders. The residents, on completion of the program, are expected to be clinically proficient in these areas as well as knowledgeable in the use of cardiac and respiratory support devices. Although operative experience constitutes the most important aspect of the program, the training should include the opportunity to correlate the pathologic, physiologic and diagnostic aspects of thoracic disorders. Capability of the resident is anticipated in important diagnostic procedures such as bronchoscopy, esophagoscopy and interpretation of roentgenographic studies.

The scope of thoracic surgery is so broad that two years is a minimum period needed for training a thoracic surgeon. The encroachment on this time by laboratory investigation is no longer permitted. Training in nonsurgical areas such as cardiac catheterization or pulmonary function cannot exceed three months during the two-year program, and is likely to be an acceptable substitute only when the remainder of the program provides an abundant surgical experience.

It is desirable that the resident complete an accredited program in general surgery before beginning training in thoracic surgery. Programs or parts of programs which give the resident simultaneous responsibility for thoracic and general surgery patients are not acceptable. Rotations constituting the first year of thoracic training must be on a clearly defined thoracic surgical service for periods not shorter than three months and at an advanced level of general surgical training. The last twelve months must be served consecutively on the thoracic surgery service where the resident must assume senior responsibility for both the pre-operative evaluation and the operative and post-operative care of patients with thoracic and cardiovascular disease.

Urology

The program director plays a key role in determining the quality of the residents' training. It is his responsibility to see that the resident is provided with adequate supervised operating and clinical experience, and that the resident keeps accurate records of this experience. A guideline as to what constitutes an operation for credit as well as what is considered a *minimum* operative experience during the two year residency is as follows: A resident should perform an average of three major thoracic procedures a week during his two years of residency. Among these cases an adequate distribution in key areas is necessary to insure a reasonably balanced experience. While these figures change periodically to reflect changes in the patient population, currently the following minimal experience is recommended:

Procedures	
Lungs, pleura, chest wall	40
Esophagus, mediastinum, diaphragm	10
Congenital heart	20
Acquired heart	20
Myocardial revascularization	30

The majority of the cardiac procedures should involve the use of cardiopulmonary bypass. In addition to major operative experience, the resident should have implanted at least 15 cardiac pacemakers and performed at least 25 endoscopic procedures. It is emphasized that the actual numbers of operations in each category should not be taken too literally, but merely used as a guide in acquiring what is considered acceptable training. Major vascular operations outside the thorax should be outlined if they are itemized in the summary of operative experience.

Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the resident's training experience, a resident should nevertheless gain knowledge concerning all phases of the field.

Credit will be allowed for operative experience only when the following criteria are met:

- The resident participated in the diagnosis, pre-operative planning and selection of the patient for operation or surgical indication;
- The resident performed those technical manipulations that constituted essential parts of the procedure itself;
- The resident was substantially involved in post-operative care.

Credit will be allowed whether there is direct or indirect supervision by the responsible staff or faculty.

Affiliations with other institutions may sometimes be desirable in order to give the resident a well-rounded experience. In case this is done, it is the responsibility of the program director to see that the educational environment, the volume and variety of patient population and the concept of progressive surgical responsibility is scrupulously followed by the affiliated institution. Segments of the training program in affiliated institutions which are to be considered as part of the two year training requirement must be approved by the Residency Review Committee.

The program director is responsible for certifying to the American Board of Thoracic Surgery that the resident, having completed his training in an approved program, has had a broad surgical experience in all aspects of the specialty, and has those clinical and technical skills required to be a capable thoracic and cardiovascular surgeon. It is imperative that the program director carefully select applicants for his program, that he monitor their progress and provide guidance, and that he dismiss from the program those residents who do not measure up to the high standards of performance expected of a surgeon in this specialty. The endorsement of the program director is very important and should reflect the fact that it is his obligation to insure that residents meet these high standards.

The accuracy and completeness of the program application forms required by the Residency Review Committee

are the responsibility of the program director. A comprehensive evaluation of the program is not possible without the detailed information requested. Failure to furnish the required information necessary to complete the application form will be considered in the overall evaluation of the program. In the case of a new program, action by the Residency Review Committee will be deferred until all the requested information is furnished. Details about the specific information required may be found in the application forms for residency training in thoracic surgery.²⁴

One measure of the quality of a program may be the performance of its graduates on the examination of the American Board of Thoracic Surgery.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American Board should communicate with the secretary of the appropriate board to be certain regarding the full requirements for certification.

Effective: July, 1984 ACGME: Feb. 1983

24. Special Requirements for Residency Training in Urology

I. INTRODUCTION

Urology is the medical and surgical specialty which deals with disorders of the genitourinary tract. To be accredited a program must provide for a minimum of 36 months of clinical urology, and this must be preceded by two pre-requisite years of general surgery or other disciplines basic to urology. Twelve months of training must be spent as a senior resident in urology with appropriate clinical responsibility under supervision.

II. FACULTY

The residency training program in urology must be headed by a director who is a Board-certified urologist or who has equivalent qualifications and who possesses effective leadership and administrative abilities as well as sound clinical judgment, investigative curiosity, and teaching skills. The director must be willing to make the commitment in time which the responsibilities of such a position demand in order to ensure that an adequate educational experience is organized for the benefit of the resident trainee.

Contributions to the education of the residents should also be made by other members of the urology staff. Ideally these individuals should possess special expertise in different urological disciplines (such as pediatric urology, female urology, renal transplant, renal-vascular disease, oncology, infertility and endocrinology, stone disease, and urodynamics) so as to provide the greatest depth of knowledge in a variety of subjects. Evaluation of the qualifications of the staff as teachers of urology will include a review of their publications, research efforts and participation in major scientific meetings. Utilization of other staff members, however, does not relieve the director of the primary responsibility for the overall quality and organization of the program.

So that the expertise of the faculty is utilized maximally in the teaching effort, a close working relationship must exist between the faculty and the residents. Preferably, the program director and his primary staff should be geographically located within their respective teaching institutions although other arrangements may be acceptable if it can be shown that rapid access to the faculty is available to the residents at all times. All patients on the service should be reviewed by the staff on regular teaching rounds

²⁴Application forms may be obtained by writing to: Secretary, Residency Review Committee for Thoracic Surgery, 535 North Dearborn Street, Chicago, IL 60610.

with the residents according to a pre-determined schedule, and all major surgery performed on the service by the residents should be done under the direct supervision of the staff. Throughout the training period the faculty must remain continually alert to the competence of the resident staff through personal observation.

III. FACILITIES AND RESOURCES

Institutions involved in the training of urological residents must be able to provide broad based opportunities which include scholarly pursuits as well as relevant clinical experience in the full range of urologic disease. Institutions with limited areas of involvement in urology or those which cannot overcome academic or clinical deficiencies within their own establishment should seek affiliation with complementary institutions. It is important, however, that each affiliated institution offer significant educational opportunities to the overall program. An affiliation which merely dilutes the education of the resident in training or a program whose affiliated institutions are too scattered to allow proper supervision and coordination of training activities should not be established or maintained.

Within the various institutions bed space sufficient for the needs of the urology service must be provided, preferably within a single area under the direction of the urology service so that care specific for urological problems can be rendered more effectively. Diagnostic facilities providing cystoscopic, radiologic, and uro-dynamic equipment must be adequate to permit the urology service to carry out its necessary functions. Support facilities including office and filing space, secretarial assistance and reference libraries must be available to the urology training program.

Research facilities, while not mandatory for accreditation, are desirable since they enrich the academic environment of the program and provide the resident staff with the opportunity to explore new ideas independently. Institutions offering training programs in urology should encourage and support the development and use of such facilities.

IV. THE EDUCATIONAL PROGRAM

Programs in urology must be dedicated to the educational goals of residency training rather than the utilization of residents primarily for the purpose of facilitating patient care. For this reason there should be regularly scheduled conferences dealing with urological pathology including morbidity and mortality, urological radiology, the basic sciences and journal reviews in addition to other subjects having educational value. Conferences must be well organized, planned in advance with notification of the topics to be presented, and scheduled so that they will not conflict with other activities. They should be well attended by both residents and faculty. Each conference should be directed by a person competent to assure that a worthwhile educational experience will be provided. A list of the conferences held should be maintained and available for examination at the time of review. The list should include the names of those attending, the subjects discussed, the moderator and the principal speaker.

The faculty and residents should also be involved in pursuits which keep them abreast of current developments

in medicine and which explore new avenues to advance the science of urology. Evidence of such involvement may be found in clinical or basic science research projects, departmental publications, and presentations before major scientific meetings. A listing of these activities should be made available at the time of review. In addition, the resident staff should be exposed to developments outside their own program by attendance at major medical meetings and by visits from recognized authorities from other institutions.

Sufficient numbers of patients with urological disease must be available to provide realistic experience for the residents in training. Included should be exposure not only to the common urological problems but also to specific areas of urology such as pediatric urology, urological oncology, urodynamics, trauma, endocrinology as it relates to urology, renal transplantation, gynecologic urology, infertility, renovascular disease, and other areas of interest peculiar to urology as a medical specialty. Each program director is responsible for maintaining an annual log of all cases performed by the urology service within each participating institution and all residents must maintain an up-to-date log of all cases in which they were the primary surgeon or assistant since the beginning of their urology training. Since clinical problems often involve multidisciplinary care beyond the ordinary competence of the urologist, teaching support from other major medical fields must be readily available within the participating institutions. The activities of these disciplines should be supported by residency training programs, particularly in the areas of internal medicine, general surgery, pediatrics, obstetrics and gynecology, pathology, and radiology, in order to facilitate the rapid interchange of up-to-date information so essential to a proper educational environment.

During training the resident should gain competence in the total care of the patient including initial evaluation, method of establishing the diagnosis, selection of the appropriate therapy, implementation of this therapy, and management of any resultant complications. For this reason continuity of care must be provided through pre-operative and postoperative clinics as well as inpatient contact. As a part of this experience progressive responsibility for rendering decisions must be afforded the resident.

Evidence that all of these activities are succeeding in achieving the educational goals of the program must be assessed by some form of periodic review such as self-assessment or in-service examinations. The results of these evaluations must be reviewed with the residents so that plans to correct any deficiencies may be formulated.

V. CERTIFICATION

One measure of the quality of a program is the performance of its graduates on the examinations given by the American Board of Urology, Inc. The Residency Review Committee may consider this information as part of the overall evaluation of the program.

Effective: July 1982 ACGME: Feb. 1982

NOTES

Section III

SUMMARY STATISTICS ON GRADUATE MEDICAL EDUCATION IN THE UNITED STATES

INTRODUCTION

This annual report on graduate medical education in the United States contains data on number of residency programs by specialty and by region, number of positions offered, number of trainees by specialty and by region, number of foreign medical graduates in each specialty and in each state, information on the ethnic background and on the citizenship of trainees. This edition includes the results of a Special Survey of programs, which accept medical school graduates who have had no previous graduate medical training, i.e., programs which offer "postgraduate year-one" (PGY-1) positions.

METHODOLOGY

The accreditation actions of the Residency Review Committees and of the Accreditation Council for Graduate Medical Education (ACGME) are recorded regularly. Statistical information on graduate medical education in the United States is collected annually by means of surveys of program directors and of institutions and agencies which participate to a significant extent in graduate medical education. In September 1983 every director of an accredited graduate medical training program was sent a computer printout of the listing of the program as it will appear in the DIRECTORY. Enclosed with the printout was a survey form requesting statistics on the number of residents on duty, by year of training, type of medical school, sex, race, and citizenship. The form also requested information about the availability of shared-schedule positions in this program, of positions to be offered in the program for 1984-1985, and of Fifth Pathway certificants in the program. All program directors who had not responded to the survey by mid-November were sent a second request form. The chief executive officer of each institution participating in graduate medical education was sent a computer printout of the listing of the institution for the DIRECTORY. Enclosed with the printout was a form requesting information on the size of the medical staff involved in teaching graduate trainees, and the appointment of osteopathic physicians to the medical staff.

Every effort has been made to assure the accuracy of the statistics reported here. All data were checked for consistency before entry to the data bases. When answers appeared to be inconsistent the respondent was contacted by telephone for clarification. The statistics produced by electronic data processing of the data bases were checked for internal consistency.

Response Rate

By December 29, 1983, over 96 percent of the programs accredited to train residents had responded to the survey. The response rate was above 90 percent for all but four specialties, those for which the total programs number less than 40. Twenty-one of the 37 specialties had a response rate of 95 percent or higher. (See Table 1.) Nearly all of the program directors responding to the survey provided all information requested, i.e., a count of residents on duty by year of training, school of medical education, sex, race, and citizenship. The count of residents "on duty September 1, 1983," reported in Table 8 and Table 9 and used as the base in Tables 2, 3, and 10 was reported by 96 percent of the programs accredited to have residents.

Table 1.—Response Rate for 1983 Annual Residency Survey*

Specialty	Total No. of Programs	No. of Programs Responding	% of Programs Responding
Allergy and Immunology	88	84	95

DISTRIBUTION OF ACCREDITED PROGRAMS BY SPECIALTY AND GEOGRAPHIC REGION

Accredited Programs

On September 1, 1983 there were 4,759 accredited residency training programs in the United States. This number includes those programs for which accreditation is to be terminated June 30, 1984. Statistics from such programs were included in the tabulations; however, these programs are not listed in Section IV of the DIRECTORY.

Internal medicine had the largest number of accredited programs, followed by family practice, general surgery, obstetrics/gynecology, and pathology. In the 1983-1984 academic year over two-fifths (42.8 percent) of all residents were in training programs for internal medicine, family practice, or pediatrics. If obstetrics/gynecology is included, almost half (49.2 percent) of 1983-1984 residents were being trained in primary care. For the percent of programs and trainees in each specialty, see Table 2.

Residency programs tend to be located in the more densely populated regions of the country. Over two-fifths of accredited residency programs were located in the Middle Atlantic region. These programs were training nearly 24 percent of residents. The state of New York had the largest percentage (12.9 percent) of programs and trained the largest percentage of residents; California ranked second both in percentage of programs and percentage of residents in training (Table 3). The majority of programs (90 percent) reported having a full-time director of residency training.

Positions Available

There is currently much interest in the medical education community regarding the number of positions available for graduate medical training, particularly PGY-1 positions. Common opinion is that with the continued increase in the number of graduates of U.S. medical schools and the continued increase in the number of FMG's seeking graduate training in the U.S., particularly U.S. citizens who have studied medicine abroad, the competition for residency appointments will intensify.

One crucial factor affecting trends in graduate medical education is the number of U.S. medical school graduates. The number of graduates from Liaison Committee on Medical Education (LCME) accredited U.S. schools has increased an average of 398 graduates per year from 1978 to 1982. The number of 1983 graduates decreased 257 persons because four schools were changing from a three-year to a four-year curriculum. The number of 1984 graduates will show an increase over 1983 as a result of the above noted change. For 1985 and 1986, a slight increase is expected as a result of developing schools having reached the planned class size. By 1987, it is expected that the number of graduates will decrease by 73 persons to an estimated 16,859.

Another factor is the number of training positions available in residency programs. In past Annual Surveys, program directors were asked to project the number of positions which would be available ten months in the future. Program directors and hospital administrators have indicated the difficulty of accurately projecting the number of positions to be available in the future. For some institutions economic uncertainties have made accurate projections impossible. Several institutions have made a determination of the total positions to be supported, and individual pro-

*Less than 1/10th of percent.

gram directors have subtracted from that number as they were able to fill a position with an acceptable candidate. A small number of programs may have planned to offer the positions reported but, because of accreditation requirements, were prohibited from appointing residents. For example, a program for which accreditation will cease at a specified future date is not permitted to accept new trainees. On the other hand, a certain number of new programs may obtain accreditation in time to accept candidates in July. Those positions would not be included in the projection.

Hypothetically, the actual number of positions available might be obtained after the academic year has begun by calculating the sum of filled positions and budgeted unfilled positions. However, an analysis of the reports from program directors reveals that unfilled positions tend to be withdrawn, or at least are not reported.

The trend in positions offered is shown in Table 4 which gives the count of positions for July 1, by specialty, as estimated by program directors the previous October.

PGY-1 Positions Available

Several specialties have a prerequisite for entry to training. For example, all first-year positions in allergy and immunology are open only to trainees with at least three years of internal medicine or pediatrics. First-year positions open to medical school graduates with no previous graduate medical training are identified as postgraduate year-one (PGY-1) positions. For the Annual Survey, program directors were asked to report the number of positions open to trainees seeking a first post-graduate year (PGY-1 positions). Table 5 shows the number of PGY-1 positions available for July 1, 1982, 1983, and 1984 as estimated by program directors the previous October.

Concern about the availability of positions in graduate medical training programs persists in the medical community, particularly among medical students. Rumors of PGY-1 positions being withdrawn have heightened this concern. To respond to the concern that available PGY-1 positions were decreasing, a Special Survey of residency program directors was conducted during July and August of 1983 to determine a) trends in the number of positions open to PGY-1 candidates; b) the magnitude of such trends; and c) the reasons for withdrawing positions, if any were withdrawn.

From the 1982 Annual Survey, 2,994 programs were identified as having PGY-1 positions to be offered for July 1983. The Special Survey of these programs netted an 89 percent response. The response rate was similar across the specialties and among the geographic regions.

An analysis of the Special Survey results showed that 293 programs (11 percent) reported withdrawing 563 PGY-1 positions between October 1982 and July 1983. The number of PGY-1 positions withdrawn represents 2.8 percent of the projected positions for 1983 (reported in Table 5).

The reasons given by program directors for withdrawing positions were varied. Approximately one-third of the respondents cited "financial" reasons; but almost one-half of the respondents cited "absence of suitable candidates" and/or the "positions was filled by a trainee at a higher level," e.g., second year.

Another interesting finding was that other programs (371) increased the number of positions offered by 705. Thus the withdrawal of 2.8 percent of positions was counterbalanced by a 3.5 percent increase of PGY-1 positions for July 1983.

A comparison of the estimated number of PGY-1 positions with the actual number filled plus unfilled positions as of September 1st each year is shown in Table 6. Note that the estimate for 1981 and 1982 was low by three to four percent; whereas, the estimate for 1983 was high by almost six percent.

*Number of positions reported by program directors in the Annual Residency Survey, Fall of previous year.

As stated above, an analysis of the 1983 reports from program directors reveals a tendency to withdraw unfilled positions. There is also a pattern of transferring unfilled PGY-1 positions to a higher level of training for which suitable candidates have been identified.

The total number of residents on duty increased 1.4 percent (925) from 1981 to 1982. The number of PGY-1 residents on duty increased 3.2 percent (581) in the same year. The total number of residents on duty increased 4.7 percent (3,255) from 1982 to 1983, while in that same period the number of PGY-1 residents decreased 0.9 percent (176).

As indicated earlier in this report the number of graduates of LCME accredited U.S. medical schools decreased in 1983 by 257 persons. It would seem that the number of available PGY-1 positions is dependent upon the number of suitable candidates applying for PGY-1 training; i.e., U.S. graduates and others. Note that the number of PGY-1 positions as of September 1, 1983 equaled 1.3 positions per U.S. graduates.

The count of PGY-1 positions for a given year varies with the reporting date. The 1982 Annual Survey (Fall 1982), the Special PGY-1 Survey (July 1983), and the 1983 Annual Survey (Fall 1983) each produced a different count of the number of PGY-1 positions for 1983.

The response rate for the two Annual Surveys was 96 percent. The response to the Special PGY-1 Survey was 89 percent. In order to obtain as accurate as possible a count of the universe of PGY-1 positions, an analysis of the non responding programs in each survey was made. This allowed accounting for new programs and for programs in a withdrawal status. Table 7 demonstrates the decrease of positions from Fall 1982 to July 1983, to Fall 1983. The estimated number of PGY-1 positions given in Fall 1982 was 21,745; by the Fall of 1983 the number of PGY-1 positions had decreased to 20,078. This is a decrease of 1,667 positions, 7.7 percent of the Fall 1982 estimate.

Shared-Schedule Positions

Approximately 11 percent of programs (525) reported the availability of shared-schedule positions. Of this number, over 69 percent were programs in internal medicine, family medicine, pediatrics, psychiatry, or child psychiatry. The largest numbers of programs offering shared-schedule positions were found in New York (47 programs), Pennsylvania (46 programs), California (41 programs), Illinois (34 programs), Massachusetts (32 programs), Ohio (31 programs), Michigan (29 programs), and Texas (23 programs).

RESIDENTS IN TRAINING

Table 8 shows the number of residents "on duty September 1" for three consecutive years. The counts represent 96 percent of the programs for each year. The number of residents increased 925 in 1982 and 3,255 in 1983.

The number of PGY-1 residents on duty is shown in Table 9. The number of PGY-1 residents increased 581 from 1981 to 1982. Most of the increase in number of residents was in internal medicine and surgery programs. Emergency medicine was new to the count that year. The number of PGY-1 residents decreased 176 for 1983. It should be noted that the number of graduates from LCME accredited U.S. medical schools in 1983 was 257 less, as reported above.

The decrease in number of 1983 U.S. graduates, the report of some program directors (in the Special Survey cited above) of the "absence of suitable candidates" and of program directors transferring positions to a higher level trainee, considered with the fact that the total number of residents on duty (all levels) increased by 3,255 in 1983 would seem to indicate that for 1983 at least, positions were available for qualified candidates.

Table 6.—PGY-1 Positions: Estimated Number Vs. Actual Number: 1981, 1982, 1983

	Estimated*	Actual**	Variance (Estimated to Actual)
1981	18,034	18,696	-662
1982	18,846	19,401	-555

*Last year of Flexible.

Women Residents

The number and percent of women in residency programs has been increasing steadily. In the 1978 training year, 19 percent of residents were women; by 1983, women comprised 24 percent of all trainees. As recently as 1977, over one-third of specialties had no women among the residents. In 1983 women were found in all specialties with accredited programs. Two-fifths of women residents were training in internal medicine or pediatrics. Another 30 percent were training in obstetrics/gynecology, psychiatry, or family practice. (See Table 10.)

Foreign Medical School Graduates

Information on medical school of graduation was provided by all but a few programs reporting residents. The number of foreign medical school graduates in residency training in the United States has increased by about 100 persons. However, the statistics for 1983 reveal 18.4 percent of residents were foreign medical school graduates, somewhat lower than the 24.5 percent of residents on duty in 1977.

The percentage of foreign medical school graduates in specialty programs ranges from 3.2 percent in orthopedic surgery, to 40.4 percent in physical medicine and rehabilitation (Table 11). The number of foreign medical school graduates who are U.S. citizens increased from 5,838 (44 percent) in 1981, to 6,990 (53 percent) in 1983 (Table 12).

Information on Fifth Pathway certificants is given in Table 13 by specialty. In 1981, 15 percent of foreign medical school graduates had completed a Fifth Pathway program. In 1983 the percentage of foreign medical school graduates who were Fifth Pathway certificants had dropped to 14 percent; Table 14 provides a comparison by region of foreign medical school graduates for the years 1981, 1982, and 1983. Table 15 shows comparative data on residents from Fifth Pathway for 1981, 1982, and 1983 by region.

The number of new entry alien FMG's has decreased significantly in the past five years primarily because of amendments to the Immigration and Nationality Act. After January 1978, alien FMG's entering the U.S. on exchange visitor visas to undertake graduate medical education have been required to demonstrate competence in English and to pass the Visa Qualifying Examination. Of the 2,909 PGY-1 FMG residents on duty in 1983, 61 percent were U.S. citizens (Table 16).

Race and Citizenship of Residents

Information on ethnic background of residents on duty in the 1983 year is shown in Table 17. Approximately five percent of residents were Black non-Hispanic. Of these, 89 percent were graduates of U.S. or Canadian medical schools. Among foreign medical graduates 32 percent were Asian or Pacific Islanders.

The number of Black non-Hispanic residents has increased slightly, but the percentage of all residents who are Black has remained at about five percent over the past three years (Table 18). For the distribution of Black residents by specialty, for the past three years see Table 19.

Of those residents for whom citizenship was indicated, 91 percent were listed as U.S. citizens. As reported above, of foreign medical school graduates for whom citizenship was reported, 53 percent were listed as U.S. citizens. It should be noted that some foreign medical graduates who began the residency program as non-citizens may have recently obtained U.S. citizenship. There was some indication from survey respondents to this effect. Over 99 percent of U.S. graduates were reported as U.S. citizens.

TRANSITIONAL YEAR PROGRAMS

As of July 1982, "flexible" first-year programs were redesignated "transitional year" programs and evaluated according to standards in the General Requirements of the "Essentials." All programs formerly listed as "flexible" were

notified to provide information on the program for review by a committee of the ACGME.

By definition, a transitional year program is one sponsored by at least two accredited residency programs. In some cases appointment to transitional positions is controlled by the directors of the sponsoring residency programs. In other institutions appointment to transitional year positions is made by a committee for the transitional year.

The survey of 197 transitional year programs (to which 94 percent responded) revealed 1,377 trainees. Of this number, 17.1 percent (or 236) were graduates of foreign medical schools. Fifty-seven percent of the FMGs in transitional year programs were U.S. citizens. In all other programs (exclusive of transitional programs) 18.3 percent of residents on duty were FMGs. Fifty-three percent of these FMGs were U.S. citizens. Information on transitional programs will be found in the tables showing statistics for specialty programs.

OSTEOPATHIC PHYSICIANS IN ACGME ACCREDITED PROGRAMS

The number of osteopathic residents in ACGME accredited programs increased from 970 (in 1981) to 1,040 (in 1982) to 1,103 (in 1983). Of the 1983 osteopathic residents, 315 were in 124 federal programs which are also accredited by the American Osteopathic Association. Osteopathic residents were most frequently found in anesthesiology, internal medicine, family practice, obstetrics/gynecology, pediatrics, and psychiatry. (See Table 20.)

Of the hospitals involved in graduate medical education, 1,145 reported that osteopathic physicians are eligible for appointment to the medical staff. More than two-fifths of these hospitals (449) have appointed 1,580 osteopathic physicians in several specialties, with the largest numbers having appointments in family practice and internal medicine. The number of osteopathic physicians on staff in teaching hospitals for the past three years is shown in Table 21.

*Decrease in number of PGY-1 residents on duty may be partially accounted for by the decrease in number of graduates from LCME accredited U.S. medical schools, 1982 to 1983.

INSTITUTIONS AND AGENCIES PARTICIPATING IN GRADUATE MEDICAL EDUCATION

Hospitals are not the only institutions involved in graduate medical education. State medical examiners' offices, blood banks, ambulatory clinics, and mental health agencies also regularly provide residency training. The number of institutions and agencies identified as offering a significant portion of training in graduate medical education programs was 1,530. Eleven percent of these institutions were under the control of local governments or hospital district authorities; 11 percent were state controlled; 11 percent were federal institutions; 14 percent were church related institutions; and 46 percent were other non-profit corporations or agencies. Less than two percent of these institutions were classified as "for-profit."

Sixty-five percent of institutions have either a major or graduate affiliation with a medical school. The majority of graduate medical education institutions (1,338) were hos-

pitals. The median size of such hospitals was 382 beds. Table 22 shows the size and type of control of graduate medical education institutions listed in Section V of this DIRECTORY. The 1983 survey brought a response from 81 percent of the institutions and agencies in graduate medical education.

SUBSPECIALTY TRAINING PROGRAMS

The ACGME agreed to evaluate and offer accreditation to training programs in certain subspecialty areas which meet criteria outlined by the ACGME. Areas in which accreditation activities are underway at present include nine subspecialties in internal medicine and three in pediatrics. At its November, 1983 meeting the ACGME also approved a request to begin accreditation in chemical pathology. Information about specific activities in these areas is available from the Secretaries of the respective Residency Review Committees.

NOTES

Section IV

DIRECTORY OF ACCREDITED RESIDENCY PROGRAMS

This Section of the Directory contains the list of accredited residency programs. It includes all residency programs accredited as of December 1, 1983 by the Accreditation Council for Graduate Medical Education (ACGME), except those programs for which accreditation ends June 30, 1984.

The programs are listed by specialty under the state and city of the parent institution. Indented under the title of the program are the participating institutions at which the resident receives a significant portion of the training. The name and address of the program director follows. Other information on each program includes the number of years of training accredited by the ACGME, the average daily census, annual admissions, or other appropriate data to indicate the volume of clinical experience available to the trainee. (A key to the abbreviations used may be found at the bottom of each page and in Appendix E.)

Also given for each program are the total number of positions (indicating the size of the program) for 1984-1985, and the number of postgraduate year one (PGY-1) positions for 1984-1985 as reported by the program director. Programs for which information was not provided in the survey show zero positions. Programs which show zero PGY-1 positions presumably do not accept applicants without prior graduate medical training.

Every effort has been made to assure an accurate and current listing of programs. However, because there is a time lag involved in publication, it is important that candidates interested in a particular program obtain the most current information about the program by writing to the program director. Programs which did not respond to the survey are identified by the symbol ►. Information on these programs may be outdated.

Graduates of schools not accredited by the Liaison Committee on Medical Education should read care-

fully pages 4 and 5 of Section I *before* applying to a residency program.

Transitional Year Programs

Transitional year programs were designed to give a broad clinical experience for physicians who feel that such experience will best serve the purpose of subsequent graduate education in their fields; and physicians who have not yet decided on their specialty but may wish to choose among several fields. Transitional Programs have replaced Flexible Programs. (Persons who want information about the accreditation of Transitional Programs should write to: Secretary for the Committee on Transitional Programs, 535 North Dearborn Street, Chicago, IL 60610.)

Combined Medicine/Pediatrics Programs

Combined medicine/pediatrics programs may be found in Appendix A. These programs offer two years of medicine and two years of pediatrics. Training in these combined programs is acceptable to both the American Board of Internal Medicine and the American Board of Pediatrics toward certification. Neither the Residency Review Committee for Internal Medicine nor the Residency Review Committee for Pediatrics reviews the combined programs. The RRC for Internal Medicine does review and accredit the internal medicine residencies, and the RRC for Pediatrics reviews the pediatrics residencies, which are a part of the combined programs. The combined programs are not accredited by ACGME as such.

U.S. Armed Forces Programs

Residency programs which are sponsored by the U.S. Armed Forces may have specific entrance requirements. Persons considering such programs are referred to page 5 in Section I of this DIRECTORY.

ALLERGY/IMMUNOLOGY

CALIFORNIA

La Jolla
Scripps Clinic and Research Foundation
 Scripps Clinic and Research Foundation
Program Director:
 David A Mathison, MD
 Donald D Stevenson, MD

NOTES

Section V

DIRECTORY OF INSTITUTIONS AND AGENCIES PARTICIPATING IN RESIDENCY TRAINING

This Section contains a list of hospitals and other health care institutions and agencies which participate to a significant extent in graduate medical education. The name of the institution is listed under the state and alphabetically within the city of geographic location. The address is given for each institution. The abbreviation on the line following the address specifies the type of control. Other information reported by the institutions includes number of staff, number of beds, average daily census (ADC), and percent of necropsies (NECR). (This information is not applicable for some institutions listed, such as outpatient clinics, blood banks, pathology laboratories, etc.) Also included under each institution is a list of the specialties of residency programs for which this institution provides a significant part of the training. For a key to the abbreviations see Appendix E. Only those institutions listed as a part of a residency program in Section IV are included in Section V.

There are 1,530 institutions listed in this Section. Approximately three-fifths of these institutions are identified as the "parent," i.e., principle institution for at least one residency program. The institution list is intended as a reference for information about the hospitals which are part of a residency program. Candidates seeking a residency should refer to the list of programs in Section IV. Applications for a residency position should be addressed to the program director rather than to an institution.

Affiliation Between Hospitals and Medical Schools

It is not a requirement that hospitals have an affiliation with a medical school to have an accredited residency program. The type of medical school affiliation of institutions has been provided by the deans of the medical schools, and is listed as an item of information. The type of medical school affiliation is indicated as M (*Major*), G (*Graduate Only*), or L (*Limited*). The number code following identifies the medical school. (See Appendix D for a list of schools.)

Major affiliation signifies that the hospital is an important part of the teaching program of the medical

school and is a major unit in the clinical clerkship program. A hospital with Major affiliation will participate in any graduate medical education programs of the medical school.

Graduate affiliation with a medical school indicates that the hospital is used by the school for graduate training programs only. Thus the *Graduate* designation is used only for hospitals not designated as *Major* or *Limited* and only in cases in which one or more of the following arrangements is in effect:

- a) The house staff are selected by officials of a medical school department or by a joint committee of the hospital teaching staff and medical school faculty.
- b) The medical school faculty (other than the hospital's attending staff) are regularly scheduled to participate in the teaching programs of the hospital. If the medical school faculty participation at the hospital is limited to an occasional lecture or consultation visit, or if the hospital's residents attend medical school teaching conferences only as visitors, the hospital is not designated as having a graduate affiliation.
- c) A contractual arrangement (with or without financial commitment) specifies the medical school participation in the organization and supervision of the graduate training program in the hospital.
- d) There is some degree of exchange of residents between this hospital and the principal teaching hospital of the medical school.

If the hospital is used for undergraduate clerkship teaching, the medical school affiliation will be designated as either *Major* or *Limited*, but not *Graduate*.

Limited affiliation with a medical school indicates that the hospital is used in the school's teaching program only to a limited extent.

There are several additional hospitals to which residents rotate for a brief period during the training program. Space limitations preclude listing these institutions in this Directory.

APPENDIX A
COMBINED MEDICINE/PEDIATRICS PROGRAMS

COMBINED MEDICINE/PEDIATRICS PROGRAMS

The programs listed below offer two years of medicine and two years of pediatrics and are acceptable to both the American Board of Internal Medicine and the American Board of Pediatrics toward certification.

Neither the ACGME nor the Residency Review Committees have reviewed these combined programs. This list has been provided by the staffs of the American Board of Internal Medicine and the American Board of Pediatrics and is printed here as a service to the reader.

APPENDIX B
CERTIFICATION REQUIREMENTS

REQUIREMENTS FOR CERTIFICATION

American Specialty Boards

The Council on Medical Education of the American Medical Association and the American Board of Medical Specialties (formerly the Advisory Board for Medical Specialties) have now approved 20 primary and 3 conjoint examining and certifying boards on the basis of minimal standards listed in the "Essentials for Approval of Examining Boards in Medical Specialties."

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to cooperate with the Accreditation Council for Graduate Medical Education in evaluating residency training programs, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioners of medicine.

Table 1 is intended to be an aid primarily to graduates of foreign medical schools. The details of requirements for certification will be found on the following pages. Each board has provided the information which is published here for the convenience of physicians interested in certification.

Specific inquiries concerning certification by a specialty board should be addressed to the appropriate official whose name and address is listed in Table 2.

Most of the American specialty boards publish booklets containing statements on the requirements for certification. This information is also included for each board in the Directory of Medical Specialists. The Directory of Medical Specialists, published for the American Board of Medical Specialties by Marquis Who's Who, Chicago, contains biographical and educational information on each living specialist (including those retired from practice) who had been certified by an examining board approved by the American Medical Association. Executive Vice President of the American Board of Medical Specialties is Donald G. Langsley, M.D., One American Plaza, Evanston, Illinois 60201.

The American Board of Medical Specialties is actively concerned with the establishment, maintenance, and elevation of standards for the education and qualification of physicians recognized as specialists through the certification procedures of its member specialty boards. As a corollary, the American Board of Medical Specialties cooperates actively with all other groups concerned in establishing standards, policies, and procedures for assuring the maintenance of continued competence of such physicians.

The American Board and the Council on Medical Education of the American Medical Association, through the Liaison Committee for Specialty Boards, jointly issue the "Essentials for Approval of Examining Boards in Medical Specialties," which document is approved by the House of Delegates of the American Medical Association. Copies of the "Essentials" may be obtained from the Executive Director of the American Board of Medical Specialties or from the Council on Medical Education, American Medical Association, Chicago, Illinois 60610.

Table 1.—Summary of American Specialty Board Requirements

Specialty Board	Graduates of U.S., Canadian or Puerto Rican Schools										Foreign Medical Graduates Special or Additional Requirements		All Graduates	
	License to Practice	Approved Internship or Other Prerequisite	Years of Residency or Other Formal Training	Years of Practice or Other Special Activities	Periods of Credit in Related Fields	Credit for Military Service	Alternate plans for Training	Osteopaths Eligible for Certification	Accepted Under Certain Conditions	Board Accepts Screening by Nat. Bd. Med. Exam., ECFMG, or Other Method	Special Certificate or Statement Granted	Standard Certificate Granted		Initial Applications or Registration Fee
AMERICAN BOARD OF:														
Allergy and Immunology		X	2					X	X			X	750	750
Anesthesiology	X	X	2-3	2-0			X	X	X			X	450	450
Colon and Rectal Surgery	X		1-2		X			X	X			X	200	700

Surgery ⁷	X		5				X	X	X	X		X	100	500
Thoracic Surgery ⁸			2		X			X	X			X	100	900
Urology	X	X	3-4	1½	X	X		X	X	X		X	450	900

¹ Practice category option available until June 30, 1988. Practice category requirements are available by writing to the Board office.

² Also certifies in the subspecialties of Cardiovascular Disease, Endocrinology and Metabolism, Gastroenterology, Hematology, Infectious Disease, Nephrology, Medical Oncology, Pulmonary Disease, Rheumatology.

³ Under "years of practice," there is a class exemption for physicians in U.S. uniformed services who have a one-year practice requirement with additional requirements which may be determined by writing to the Board office.

⁴ Also certifies in subspecialties of special areas of Pediatric Cardiology, Pediatric Hematology-Oncology, Pediatric Nephrology, Pediatric Endocrinology, and Neonatal-Perinatal Medicine.

⁵ Also certified in Child Neurology and subspecialty of Child Psychiatry.

⁶ Certifies in Diagnostic Radiology, Diagnostic Radiology with Special Competence in Nuclear Radiology, Therapeutic Radiology and Radiological Physics and one or more of its subfields.

⁷ Also grants Certificate of Special Qualifications in Pediatric Surgery, General Vascular Surgery, and Critical Care Medicine.

⁸ Certification of American Board of Surgery prerequisite.

NOTE: In this table, those items are marked "x" on which the Board makes specific statement. In most instances, there are additional qualifying statements not indicated in this table. In all instances, refer for details to the board requirements which follow. While all boards may accept the foreign medical graduate under certain circumstances, they do not all specify that ECFMG certification is required. ALL FOREIGN GRADUATES WHO CONTEMPLATE SPECIALTY BOARD CERTIFICATION SHOULD CORRESPOND WITH THE APPROPRIATE BOARD AT THE EARLIEST POSSIBLE MOMENT.

Allergy and Immunology

Table 2.—Approved Examining Board in Medical Specialties

Name of Board	Corresponding Officer	Address	Telephone No.
American Board of Allergy and Immunology (a conjoint board of the American Board of Internal Medicine and the American Board of Pediatrics)	Herbert C. Mansmann, Jr., M.D. Executive Secretary	University City, 3624 Science Center Philadelphia, PA 19104	(215) 349-9466

American Board of Allergy and Immunology (A Conjoint

Board of the American Board of Internal Medicine and

the American Board of Pediatrics),

3624 University City Science Center,

Philadelphia, Pennsylvania 19104

Organization

The American Board of Allergy and Immunology (ABAI)

was established in 1972 as a non-profit organization. It was sponsored jointly by the American Board of Internal Medicine, the American Board of Pediatrics, the American Academy of Allergy, the American Academy of Pediatrics-Section on Allergy, the American Association for Clinical Immunology and Allergy, the American College of Allergists, and the American Medical Association-Section on Allergy. The ABAI is a conjoint Board of the American Board of Pediatrics and the American Board of Internal Medicine.

General Explanation of Requirements and Examination

The American Board of Allergy and Immunology is interested in candidates who have embarked voluntarily on a graduate program of study, with the express purpose of excelling in the practice of the specialty of allergy and immunology. In outlining its requirements, the ABAI hopes to help the candidate select superior educational programs which will develop his competency in allergy and immunology. The ABAI believes that all allergists and immunologists should have a sound fundamental knowledge of biological sciences basic to this discipline. Such knowledge is essential to the continued progress of any qualified allergist and immunologist. The ABAI anticipates that adequate knowledge in the basic sciences, as applied to this discipline, will be acquired by the candidate during a post-medical school training program. The ABAI wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of allergy and immunology.

However, the candidate must demonstrate his competency to the ABAI in order to justify certification to practice this discipline as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of maintaining the standards of knowledge required for certification must satisfy the general and professional qualifications listed below.

Eligibility for Examination

A candidate must qualify for examination by having passed the examination of The American Board of Internal Medicine, The American Board of Pediatrics or the Royal College of Physicians and Surgeons of Canada and by presentation of evidence acceptable to the Board of Directors, of the following graduate medical education:

1. at least three years of general training in Internal Medicine (with approval of the director of the second year of training and with twenty-four months of primary patient responsibility) or Pediatrics, in programs approved by the Council on Medical Education of the American Medical Association or the Royal College of Physicians and Surgeons of Canada or such other programs acceptable to the board of Directors; and
2. at least two years of residency, fellowship, or other acceptable training in Allergy and Immunology.

Methods of Examination

1. *The Certifying Examination.* Each applicant shall be examined in such a manner and under such rules as the Board may prescribe and must achieve a grade acceptable to the Board of Directors before receiving the certification of the Board. In all such matters, the decision of the Board shall be final.

The Certifying Examination will be administered approximately every other year. The times and places are determined by the Board and are announced in the Journal of the American Medical Association, The Annals of Allergy, The Journal of Allergy and Clinical Immunology, The Annals of Internal Medicine and The Journal of Pediatrics.

The candidate should be prepared for examination in the anatomy, pathology, physiology and bio-chemistry of hypersensitivity, as well as atopic disease. He should be proficient in clinical diagnosis, including laboratory proce-

dures, and in the treatment of allergic and immunologic diseases in children and adults. In addition to a familiarity with atopic diseases such as hay fever, asthma, eczema, and urticaria, he will be expected to have a good understanding of other clinical states in which hypersensitivity or immune deficiencies play a major or contributory role, such as auto-immune diseases, trans-plantation immunity, connective tissue or rheumatic diseases, and those infective and parasitic diseases characterized by hypersensitivity reactions.

He should be familiar with the physiology of organ systems involved in allergic diseases, most particularly the lungs, especially as modified by asthma, emphysema, chronic bronchitis and other pathological states related to or confused with immunologic reactions in this organ. He should be thoroughly familiar with the benefits and dangers of drugs used in the management of allergic diseases in general, and asthma in particular.

He should be competent in recognition of many non-allergenic states that resemble allergy, including such clinical entities as physical allergies, autonomic dysfunction, and psychogenic factors in allergic diseases.

Evidence of knowledge of current research in the field of hypersensitivity will be tested by questions concerning the beta-adrenergic receptors, chemical mediators, prostaglandins, cholinergic and adrenergic receptors, complement, immunoglobulins, lymphokines, etc.

A knowledge of controversial subjects such as gastrointestinal allergy, allergy to foods and allergy to bacteria will be required. Also the candidate will be expected to be familiar with the difficulties inherent in clinical investigation, as well as the reliability and limitations of data obtained by various methodologies.

2. *Program Directors' Assessment of Competency.* All candidates will be required to have written documentation from program directors of the quality of health care that they deliver. The program director will also be asked to support each candidate on the basis of his having excelled in the clinical areas of allergy and immunology.

Reexamination

1. Candidates who are unsuccessful on a Certification Examination in Allergy and Immunology are not restricted as to the number of opportunities for reexamination and may apply for reexamination in any year.

2. The act of filing an application for reexamination is the candidate's responsibility.

Applications

Applications are available from the Executive Office and must be completed and returned by a specific date as published in appropriate announcements.

No application will be considered until the fee and all required supporting data, including letters of recommendation, have been received by the Executive Office.

Fees

The Board is a non-profit organization. The fees for examination and certification have been computed on a basis of maintaining an administrative office and conducting examinations. The Board reserves the right to change the fee when necessary.

The 1983 Registration and Examination fee remained at \$750.00. Candidates whose applications are rejected received a refund of \$600.00; the Board retains \$150.00 of the fee to cover the application evaluation costs incurred in the review of the candidate's application.

Those physicians previously certified by the Subspecialty Board of Allergy of The American Board of Internal Medicine or the American Board of Pediatrics may obtain a certificate from the board by transmitting a fee of \$50.00 with the proper form to the Executive Secretary.

Statements of Eligibility

The Board no longer issues statements of "eligibility" for

Anesthesiology

its examinations. Upon request of the registered candidate it will reveal progress toward certification.

Cancellations

Candidates who are accepted for examinations but fail to appear or who cancel after assignment to an examination center is completed will forfeit their Registration and Examination fee. For each subsequent application for examination they will be required to pay an additional Registration and Examination fee.

THE AMERICAN BOARD OF ANESTHESIOLOGY

C. Phillip Larson, Jr., MD, President,
Stanford, California

Judith H. Donegan, MD, Milwaukee, Wisconsin
Robert M. Epstein, MD, Charlottesville, Virginia
Stephen Slogoff, MD, Houston, Texas
Wendell C. Stevens, MD, Portland, Oregon
Robert K. Stoelting, MD, Indianapolis, Indiana
Martin Helrich, MD, Secretary-Treasurer,
Baltimore, Maryland
Office of the Board, 100 Constitution Plaza,
Hartford, Connecticut 06103

Certification

To be certified as a Diplomate of The American Board of Anesthesiology, each applicant must:

1. Hold a current and unrestricted license to practice medicine in one of the United States or Canada or, for physicians in active federal service, such a license which is temporarily inactive but fully renewable;
2. Complete the accredited Continuum of Education in Anesthesiology as defined below. All such training must follow the date upon which the medical or osteopathic degree has been conferred;
3. Have on file with The American Board of Anesthesiology a satisfactory Certificate of Clinical Competence following the required 24 months of CLINICAL ANESTHESIA training as described subsequently; and
4. Complete all examination requirements of the Board.

The Continuum of Education

The Continuum of Education in Anesthesiology consists of four years of training subsequent to the date that the medical or osteopathic degree has been conferred. Twelve months of the Continuum must be devoted to clinical training other than clinical anesthesia and is referred to as CLINICAL BASE. Acceptable training for the 12 months of CLINICAL BASE shall include training in a rotating internship, internal medicine, pediatrics, surgery, or any of the surgical specialties, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual candidate by the director of his or her training program in anesthesiology. Twenty-four months must be devoted to approved residency training in clinical anesthesia and is referred to as CLINICAL ANESTHESIA. Two months of the 24 months of CLINICAL ANESTHESIA must be involved with critical care experience and not less than 20 of the 24 months of CLINICAL ANESTHESIA must be concerned with the management of procedures for rendering a patient insensible to pain during surgical, obstetrical and certain medical procedures and the support of life functions under the stress of anesthesia and surgical manipulations. The remaining 12 months of the Continuum must be completed in a curriculum designed by the program director in consultation with the resident and

is referred to as the SPECIALIZED YEAR. This year of training shall be pursued in one or more of such areas as research, clinical anesthesia that is more advanced and specialized than the usual experience gained during the 24 months of CLINICAL ANESTHESIA or in a related basic science or clinical discipline other than anesthesiology which is a planned and approved part of the program. The CLINICAL BASE YEAR and the 24 months of CLINICAL ANESTHESIA and the SPECIALIZED YEAR, if clinical, must be spent in programs accredited by the Accreditation Council for Graduate Medical Education or, in Canada, in an institution approved by the Royal College of Physicians and Surgeons. The CLINICAL BASE YEAR may also be spent in programs accredited by the American Osteopathic Association.

The time during the Continuum at which the resident receives training in either CLINICAL ANESTHESIA or CLINICAL BASE will be decided by the director of the training program in anesthesiology following consultation with the individual resident. The program director is encouraged to plan that at least a portion of the CLINICAL BASE occur early in the Continuum.

Credit toward training requirements other than those described above may be recommended prospectively to the Board by the Credentials Committee when it has determined that exceptional educational or other experience warrants such judgment.

Alternate Pathways in Lieu of Specialized Year

The granting of credit for such Alternate Pathways is at the discretion of the Board and must be sought on an individual basis. A validation form will be provided following the successful completion of the written examination.

The following options may be offered in lieu of the SPECIALIZED YEAR of the Continuum in meeting the requirements for certification:

1. Two years of practice in the field of anesthesiology following completion of the CLINICAL BASE and the two years of CLINICAL ANESTHESIA.
2. ACGME accredited training in a medical specialty related to anesthesiology may qualify for one or two years of practice time. Credit may only be granted for training periods of one or two years.
3. A Ph.D. degree in a scientific discipline related to anesthesiology.

An applicant or his Program Director may request a prospective decision concerning the acceptability of previous activities for Alternate Pathway credit at any time before or during the residency. Such a request to the Board should be accompanied by appropriate documentation and a letter from the anesthesiology program director supporting the request.

Examination System

Principal Objectives of the Written and Oral Examinations of the American Board of Anesthesiology

The examination system of the American Board of Anesthesiology is designed to identify those candidates who possess the knowledge, judgment, communicative skills, and decision-making abilities that are considered essential for the Diplomate to function as a consultant in anesthesiology and as the leader of the anesthesia care team.

The written examination analyzes primarily the cognitive and deductive skills of the candidates. It is necessary for candidates to pass the written examination to qualify for the oral examination.

The oral examination is designed to measure those components of candidates' competence that cannot be evaluated by written examinations or other instruments. Specifically, it is designed to measure not only how and what candidates do to reach conclusions concerning diag-

nosis and therapy, but why the formulations are made in the particular way or sequence. Further, it analyzes whether candidates can recognize and treat the complications of anesthesia practice. The principal thrust is to determine that candidates can synthesize their knowledge, judgment and analytical skills so as to reach rational diagnoses, prevention and treatment protocols; and to establish that candidates can communicate this information effectively to others.

To enter the Examination System of The American Board of Anesthesiology the applicant shall:

1. Have graduated from a medical school approved by the Liaison Committee on Medical Education, or have met medical educational requirements otherwise acceptable to The American Board of Anesthesiology; and

2. Provide evidence satisfactory to the Board of having been awarded a medical or osteopathic degree acceptable to the Board; and

3. Provide satisfactory evidence to the Board of having a current and unrestricted license to practice medicine and osteopathy in one of the United States or in Canada, or for physicians in active federal service of having such a license which is temporarily inactive but fully renewable, or of having successfully completed either the Federation Licensing Examinations (FLEX), the examination Parts I, II, and III of the National Board of Medical Examiners (NBME), or the Licensure of the Medical Council of Canada (LMCC) examinations which provide eligibility for such licensure; and

4. Submit proof to the Board that he or she will have satisfactorily completed before the date of examination at least three years of the four year Continuum of Education in Anesthesiology, including 18 months of CLINICAL ANESTHESIA after receiving a medical or osteopathic degree.

Evaluation of various aspects of the applicant's performance will be solicited by the Board in determining his or her qualifications for admission to the examination system. Such information may be requested from the residency program director and others familiar with the applicant's professional activities. The response of the program director will be given considerable weight in these deliberations. For those entering the residency program subsequent to June 30, 1977 the Clinical Competence Report from the department and the program director's evaluation will be used as the basis for assessing admission qualifications:

The Board shall determine that entry into the examination system is merited when a judgment of adequate levels of scholarship and clinical competence can be made from the information submitted.

The Board intends that its certification reflect evidence of qualification as a physician, and as a specialist and consultant in anesthesiology. The processes which lead to certification by the Board are intended to evaluate the attainments of the applicant in this regard. The applicant's general qualifications as a physician will be evidenced by such determinations by accrediting agencies acceptable to the Board.

To this end the successful completion of a qualifying examination in general medical will be required before embarking on the second CLINICAL ANESTHESIA YEAR and the SPECIALIZED YEAR. Acceptable evidence of such completion includes (1) a current and unrestricted license to practice medicine in one of the United States or in Canada, or for physicians in active federal service, such a license which is temporarily inactive but fully renewable. (Evidence of the date upon which such licensure became effective must be supplied if it does not appear on the face of the certificate); or (2) successful completion of Parts I, II and III of the examination of the National Board of Medical Examiners; or (3) successful completion of the Federation Licensing Examinations commonly known as FLEX; or (4) successful completion of the Licensure of the Medical

Council of Canada examination; or (5) successful completion of Parts I, II, and III of the examination of the National Board of Osteopathic Examiners. Retroactive credit will not be given. Credit for satisfying this requirement will be based on the date of the qualifying examination rather than the date of subsequent notification. This provision applies to all residents completing two years of the Continuum after December 31, 1977.

Certificate of Clinical Competence

The Board requires that each residency training program file, on forms provided by the Board, an Evaluation of Clinical Competence in January and July on behalf of each resident who has spent any portion of the prior six months in CLINICAL ANESTHESIA training. Prior to January 31st in the year in which the candidate is to take the examination, the residency training program must submit the Clinical Competence Report Form indicating that "Overall Clinical Competence" commensurate with 18 to 24 months of CLINICAL ANESTHESIA training has been satisfactory. An unsatisfactory overall evaluation, or failure to submit the form to the Board will postpone for at least one year the applicant's entry into the Examination System. This applies to all applicants starting residency July 1, 1977 and thereafter. Prior to Board certification, candidates are required to have a Certificate of Competence on file with the Board attesting to satisfactory clinical competence during a final six months of training in CLINICAL ANESTHESIA. This applies to any candidate completing 24 months of CLINICAL ANESTHESIA subsequent to December 31, 1974.

Absence From Training

The Board's policy on any and all absences from training is that the total absence during each of the two years of CLINICAL ANESTHESIA may not exceed twenty working days. Attendance at scientific meetings, not to exceed five working days per year, shall be considered a part of the training program. Duration of absence during the CLINICAL BASE and SPECIALIZED YEAR may conform to the policy of the institution and department in which that portion of the training is served. Absences in excess of those specified will require lengthening of the applicant's total training time to the extent of the additional absence.

Examinations

Each applicant becomes a candidate when accepted by the Board for the purposes of examination, and shall be examined in such a manner and under such rules as the Board from time to time may prescribe. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed appropriate.

Application for admission to the examination system may be made for the first written examination which will occur after a physician has completed three years, including 18 months of CLINICAL ANESTHESIA, of the Continuum of Education in Anesthesiology. A grace period through August 31 will be permitted so that physicians completing three years of the Continuum by August 31st may apply for the immediately preceding July written examination.

Application must be made to the Secretary upon a form prescribed by the Board; copies of the application form are not acceptable. An applicant must request an application form by writing to the Board; telephone requests are not acceptable. Completed applications including supporting documents must be received in the Board office by January 10th prior to the date of examination. Eligibility rulings are made by the Board on recommendation of the appropriate committees or their designates.

1. Written Examination. Candidates may take this examination upon completion of three years of the Continuum. Written examinations are held annually in locations throughout the United States and Canada on a Saturday in

Anesthesiology

July. Written examinations cover the basic and applied aspects of physiological, physical and clinical science. A passing grade, as determined by the Board, is required.

In the event a candidate fails the first written examination for which he or she is eligible, two additional opportunities will be provided at yearly intervals. This three year period begins on the date of the first written examination for which an applicant is declared eligible.

2. Oral Examination. After completion of the Continuum and successful completion of the written examination, the candidate's qualifications are reviewed and he or she may be declared eligible to appear for the oral examination. At least six months must elapse between the written and oral examinations. Oral examinations are conducted in the spring and fall of each year. Examiners consist of Directors of the Board and others who assist as associate examiners. Oral examinations evaluate all phases of anesthesiology, but emphasize clinical practice. Effective July 1, 1984 no candidate will be accepted for oral examination who does not have a current and unrestricted license to practice medicine and/or osteopathy in one of the United States or Canada or, for physicians in active federal service, such a license which is temporarily inactive by fully renewable.

In the event a candidate does not pass the first oral examination for which he or she is eligible, two additional opportunities will be afforded with the provision that there be an interval of no less than the time between alternately regularly scheduled examinations between opportunities. This three year period begins on the date of the first oral examination for which a candidate is declared eligible.

Failure to take an examination constitutes an opportunity just as much as failure to pass an examination. Under certain circumstances the Board, entirely at its discretion, may excuse a candidate from any scheduled examination without penalty, provided the request for such absence is filed in writing prior to time of the examination. If an applicant fails to pass either the written or oral examination within the specified periods, his or her application will be declared void and a new application will be required for admission to the examination system.

The Board reserves the right to limit the number of candidates to be admitted to any examination.

Admission to the Examination System

A candidate who is admissible to the examination will be so notified by the Board after approval of all credentials. Each candidate remains in the examination system for the number of written and oral examinations stated above. If successful completion of both written and oral examinations has not occurred within seven years, the application is voided.

Reapplication

A candidate who has failed to complete the examinations in the prescribed time for any reason may reapply by submitting a new application. Such application shall be subject to the fees, rules, privileges and requirements that apply at the time of reapplication. At the discretion of the Board, a reapplicant may be required to complete additional periods of prospectively approved training, present a newly updated Certificate of Clinical Competence, or meet other requirements comparable to those expected of candidates generally. If the applicant is adjudged to meet existing requirements, he or she will be again admitted to the examination system. This privilege shall apply retroactively without limitation, but in all instances the candidate must pass both the written and oral examinations under the new application.

Status of Individuals

The term "Board eligible" is specifically mentioned to indicate that it is neither recognized nor used by The American Board of Anesthesiology.

The Board will reply to any inquiries requesting the status of individuals with one of the following statements:

1. The physician is Board Certified.
2. The physician is in the Examination System.
3. The physician is neither Board Certified nor in the Examination System.

Equivalence of Royal College Certification

Fellowships in the Faculty of Anaesthetists of the Royal Colleges of Surgeons of Australasia, England, Ireland and South Africa are considered by this Board to be comparable to certification by the American Board of Anesthesiology. Nevertheless, there are Fellowship certificate holders who continue to seek entrance into the examination and certification system of the American Board of Anesthesiology. For those physicians who have such interest, the requirements of a Clinical Base Year and two years of clinical training in anesthesiology in an ACGME accredited program is waived. Briefly stated, holders of the Fellowship certificate who wish to enter the American Board of Anesthesiology examination system may do so by successfully completing one year of training in anesthesia in an ACGME accredited program.

Fee

The fee shall be \$450.00 which must accompany the application provided that the completed application and required documentation is received in the office of the American Board of Anesthesiology on or prior to January 10th of each year. For completed applications received by November 20th and accompanied by required documentation, the fee will be \$400.00—a reduction of \$50.00 for early filing. Evidence must be submitted with the application that the candidate has a current and unrestricted license to practice medicine in one of the United States or Canada or has successfully completed a qualifying examination in general medicine. (See section on Examination System.) Evidence of the date upon which such licensure became effective must be supplied if it does not appear on the face of the certificate. *The January 10th deadline is absolute and no applications will be accepted after that date for any reason.* If the application cannot be accepted, or if the application is accepted but the candidate withdraws from the examination system prior to the date of the first written examination for which he or she is declared eligible, \$35.00 will be retained for administrative charges and the balance will be refunded. No refund will be remitted after the date of the first written examination for which a candidate has been declared eligible.

The Board is a non-profit organization. The fees for examination and certification are computed on a basis of cost of maintaining the functions of the Board. The Board reserves the right to change the fee when necessary.

The re-examination fee for the written examination will be \$100.00 whereas the re-examination fee for the oral examination will be \$200.00.

A cancellation fee of \$100.00 will be charged when a candidate fails to appear for any cause at the written examination. A fee of \$200.00 will be charged if a candidate fails to appear at an oral examination for which he or she was properly scheduled.

Revocation of Certificate

A certificate is issued by the Board with the understanding that it remains the property of the Board during the life of the Diplomate. Any certificate issued by the Board shall be subject to revocation in the event that:

1. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this Board or its Bylaws; or
2. The person certified shall not have been eligible to receive such certificate whether or not the facts making him or her ineligible were known to, or could have been ascertained by the Board or any of the Directors at the time

of the issuance of such certificate; or

3. The person certified shall have made any misstatement of fact in his or her application for such certificate or in any other statement or representation to the Board or its representatives; or

4. The person certified shall fail to maintain a moral, ethical and professional standing satisfactory to the Board.

The Board shall be the sole judge of whether or not the evidence or information before it is sufficient to require or permit revocation of any certificate issued by the Board, and the decision of the Board shall be final.

Additional Information

Proper forms for making application and other information may be obtained by writing to the Secretary-Treasurer, Martin Helrich, M.D., The American Board of Anesthesiology, 100 Constitution Plaza, Hartford, Connecticut 06103.

Application blanks contain the following statement:

"I hereby make application to The American Board of Anesthesiology, Inc., for the issuance to me of a Certificate as a Consultant in Anesthesiology and for examination relative thereto, all in accordance with and subject to its rules and regulations, and the fee requested. I agree to disqualification from examination or from the issuance of a Certificate or to forfeiture and redelivery of such Certification in the event that any of the statements hereinafter made by me are false, or in the event that any of the rules governing such examinations are violated by me, or in the event that I did not comply with or shall violate any of the provisions of the Certificate of Incorporation or Bylaws of The American Board of Anesthesiology, Inc., or both, as then constituted. I agree to hold the American Board of Anesthesiology, Inc., its members, examiners, officers and agents free from any damage or complaint by reason of any action they, or any of them, take in connection with this application, such examinations, the grade or grades given with respect to any examination, or the failure of said Board or Corporation to issue to me such Certification of Qualification. I understand that the score of my first written examination may be reported to the Director of the program in which I completed my training in Clinical Anesthesia, and that any score may also be used in psychometric analysis conducted to compare the performance of examinees or groups of examinees. I also understand that the Board will respond to any inquiry about my status in accordance with its policy."

Recertification

Insufficient confidence in currently available methods of assessing continuing competence of the practicing anesthesiologist makes it inappropriate to implement a recertification process as yet. The American Board of Anesthesiology will continue to study all options for a meaningful recertification program but intends to expend its major effort and resources toward improvement of the process leading to primary certification.

AMERICAN BOARD OF COLON AND RECTAL SURGERY

G. Bruce Thow, MD, President, Urbana, Illinois
 Bertram A. Portin, MD, Vice President, Buffalo, New York
 Herand Abcarian, MD, Chicago, Illinois
 Wallace Bailey, MD, Dallas, Texas
 Jerome J. DeCosse, MD, New York, New York
 A. W. Martin Marino, Jr., MD, Brooklyn, New York
 John E. Ray, MD, New Orleans, Louisiana
 Frank J. Theuerkauf, Jr., MD, Erie, Pennsylvania
 Don G. Traul, MD, Monroe, Wisconsin
 Malcolm C. Veidenheimer, MD, Burlington, Massachusetts
 Peter A. Volpe, MD, San Francisco, California
 Norman D. Nigro, MD, Secretary-Treasurer,

615 Griswold, Suite 516,
 Detroit, Michigan 48226

General Qualifications and Requirements

All candidates shall comply with the following regulations:

1. A candidate shall appear personally before the Board and shall submit to the required examinations.

2. A candidate shall limit the majority of his practice to colon and rectal surgery.

3. A candidate may be required to deliver to the Board sufficient case reports to demonstrate proficiency in colon and rectal surgery.

4. A bibliography of papers and books published by the candidate shall be submitted to the Board upon its request.

Professional Qualifications

1. A candidate shall be a graduate of a medical school approved by the Liaison Committee on Medical Education. Foreign medical graduates should hold an ECFMG Certificate.

2. A candidate shall have a license to practice medicine in the country of his residence.

3. In addition to the first postgraduate year, the candidate shall have completed four years of graded general surgical training approved by the Accreditation Council for Graduate Medical Education, and shall have completed one year of an approved residency in colon and rectal surgery.

4. Candidates must successfully complete the Qualifying Examination of the American Board of Surgery prior to examination by the American Board of Colon and Rectal Surgery.

Application for Examination

Each candidate for examination must complete and submit an Application for Examination which may be obtained from the Secretary of the Board. Applications must be submitted before July 15 of each year.

Within two weeks after conclusion of the training program, the applicant must submit to the Secretary of the Board a prescribed form, listing all operative procedures performed during the training period. This form is available from the Secretary of the Board and must be countersigned by the Program Director when it is submitted.

The application must also be accompanied by two unmounted, recent photographs of the applicant, and the required application fee.

The acceptability of a candidate for examination depends not only upon completion of the requirements listed under "Qualifications of Candidates," but also upon information available to the Board regarding the candidate's professional maturity, surgical judgment, and technical competence.

Examinations

Examinations are conducted at times and places determined by the Board and are announced in the *Journal of the American Medical Association and Diseases of the Colon and Rectum*. They are usually held in the spring of the year in one designated city in the United States.

Part I:

This may be required at the discretion of the Board. It is a practical examination which is held in the community in which the candidate conducts his professional activities. The candidate will be notified by the Secretary if Part II is required. The examination includes evaluation of:

1. One colon or rectal resection and one anorectal procedure
2. Hospital rounds
3. Hospital and office records
4. Office practice
5. Colonoscopy

Part II:

This consists of written and oral examinations on the

Dermatology

theory and practice of colon and rectal surgery, with separate examinations in pathology and roentgenologic interpretation of diseases of the colon and rectum.

The oral portion of the examination is conducted by members of the Board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current literature on colon and rectal surgery, the extent of clinical experience, surgical judgment, and problem solving ability.

Re-examinations

A candidate who has failed the examination may be re-examined after one year has elapsed.

The act of filing an application for re-examination is the candidate's responsibility.

A candidate who has failed to pass the examination on three occasions must satisfactorily complete an additional year of an accredited residency program in colon and rectal surgery before reapplying for examination.

Status of Applicants

The Board no longer uses the terms "Board eligible" or "Board qualified." An individual's standing with the Board varies according to the current status of his credentials.

A candidate must apply to take the Board's certifying examination within five (5) years after completion of approved colon and rectal training.

A candidate whose application for examination has been approved and who does not take the examination within three (3) years must submit a new application.

A candidate whose application for examination has been approved must successfully complete all examinations and achieve certification within five (5) years of such approval. Should a candidate fail to become certified within this period, he must have further training before reapplying for examination.

In exceptional or unusual circumstances, the Board may, at its discretion, waive one or more of the limitations listed specified under "Status of Applicant."

Fees**Fees:**

Application fee: A non-refundable fee of \$200.00 shall accompany the application.

Examination fee: A fee of \$500.00 is due and payable when the candidate is notified that he has been approved for examination.

Re-examination fee: A fee of \$300.00 is due and payable when the candidate is notified that he has been approved for re-examination.

All fees shall be made payable to the American Board of Colon and Rectal Surgery and shall be sent to the Secretary.

AMERICAN BOARD OF DERMATOLOGY

Harry J. Hurley, MD, President, Upper Darby, Pennsylvania

John M. Knox, MD, Vice President, Houston, Texas

William A. Caro, MD, Chicago, Illinois

Richard L. Dobson, MD, Charleston, South Carolina

John H. Epstein, MD, San Francisco, California

G. Thomas Jansen, MD, Little Rock, Arkansas

Frederick A. J. Kingery, MD, Portland, Oregon

Harold O. Perry, MD, Rochester, Minnesota

J. Graham Smith, Jr., MD, Augusta, Georgia

John S. Strauss, MD, Iowa City, Iowa

Peyton E. Weary, MD, Charlottesville, Virginia

Clarence S. Livingood, MD, Executive Director,

American Board of Dermatology, Inc.,

Henry Ford Hospital,

Detroit, Michigan 48202

Robert W. Goltz, MD, Assistant Executive Director,
Minneapolis, Minnesota

Requirements for Eligibility to Take the Examination

Each applicant must satisfy the following requirements before he or she is eligible to take the examination of the Board.

A. General Qualifications.

(1) Graduation from an approved medical school in the United States of America or Canada, or graduates of approved osteopathic schools. Graduates from foreign medical schools are required to have the standard certificate of the Educational Council for Foreign Medical Graduates (ECFMG) or the certificate of the National Board of Medical Examiners.

(2) The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathic medicine in either the United States or Canada.

B. Residency Training Requirements

(1) Candidates for certification by the American Board of Dermatology are required to have a total of four years of postgraduate training. The first consists of accredited broadly-based training, as may be provided by the flexible first postgraduate year, transitional year, and first year residencies in internal medicine, general surgery, family practice or pediatrics. Three years of full-time training as a resident in the dermatology residency training program of an institution approved by the Residency Review Committee for Dermatology and accredited by the ACGME are required. Details in regard to the approved dermatology residency training programs are listed in the *Directory of Residency Training Programs*.

(2) Candidates who have had at least one year of residency training in an accredited internal medicine, general surgery, pediatrics, family practice or pathology program may apply for six months of training credit, providing this one year is not used in fulfilling the requirement of the "broadly-based" year of training referred to above. The decision in regard to possible six months of training credit under the above circumstances is not made by the Board until (a) the candidate has completed at least one year of training in dermatology and (b) the first annual report plus a letter concerning the requested credit have been forwarded to the Board office by the director of the candidate's dermatology program.

(3) All training must be completed in a manner satisfactory to the Board. Training must be completed within five years after the beginning of dermatology residency except where military service or other compelling circumstances intervene.

(4) A Preliminary Registration Form must be filed by the candidate and signed by his/her training director at the beginning of his or her three years of accredited residency training in Dermatology. A Yearly Report Form for the candidate must be filed by the training director to the Board office within three weeks after completion of the first and second year of training and one month before completion of the third year of training.

Registration for the Examination of the Board

Candidates who have completed the training requirements as outlined above are eligible to apply to take the examination of the Board. Candidates should request an Application for Certification form from the office of the Executive Director of the Board. The completed application form must be filed with the Board office before May 1st of the year in which the candidate plans to take the examination. Physicians who complete their residency training in dermatology by July 1st of a given year are eligible to apply to take the examination in the fall of that year. It is emphasized that it is the candidate's responsibility to send a completed application form to the Board if he or she plans to take the certifying examination of the Board.

In assessing the credentials of candidates who apply voluntarily for certification by the Board, the Requirements

Committee reviews the application, letters of reference, and annual evaluation reports from the candidate's training director.

A candidate is not considered an "active" candidate until his or her application has been received and approved by the Board. After the application is approved, the candidate is required to take the examination within three years. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application and have their eligibility for examination reviewed by the Requirements Committee. If the re-application is approved by the Board, the candidate is again eligible to take the examination for another three-year period.

The Board does not use the term "Board-eligible" in corresponding with directors of hospitals or others who send inquiries to the Board office. On written request by the candidate, the Board will send to the candidate a letter stating his or her status with the Board at any given time; this letter may be used in applying for hospital privileges or for other purposes.

Board Examination

The certifying examination consists of two parts. Part I is a comprehensive written examination. Among the topics included in this part of the examination are the following: clinical dermatology, dermatopathology, sexually transmitted diseases, dermatologic surgery, internal medicine as it pertains to cutaneous diseases, cutaneous allergy and immunology, cutaneous oncology, photobiology and cutaneous microbiology as well as anatomy, physiology, biochemistry, radiation physics, radiation therapy, physical therapy, pharmacology, genetics, hematology and electron microscopy as related to dermatology. Considerable emphasis is placed on comprehensive knowledge of the literature.

Part II of the certifying examination utilized visual aids and microscopic sections to assess the candidates' knowledge in three major areas: clinical dermatology, clinical pathology as it applies principally to the practice of dermatology, and microscopic dermatopathology. In clinical dermatology and clinical pathology the questions relate to projected pictorial material. Examples of the type of projected pictorial material which are used include photographs of patients, histopathologic sections, fungal cultures, culture mounts, bacterial cultures, Tzanck preparations, skin scrapings and smears, roentgenograms, fluorescent microscopy, dark field examinations, parasites affecting the skin, and electron microscopy. In microscopic dermatopathology, the questions relate to histopathologic slides which candidates examine using their own microscopes. Candidates are required to bring their own microscopes for the viewing of the histopathologic slides.

It is necessary for candidates to pass both Part I and Part II of the examination in order to be certified. If a candidate passes one part of the examination and not the other, thus, failing the certifying examination, it is not necessary to repeat that part of the examination which he or she passed.

The examination is given annually in the fall over a two-day period involving a total of approximately ten hours. In 1984, it will be held on October 28 and 29 at the O'Hare/Kennedy Holiday Inn in Rosemont, Illinois, which is in the O'Hare Airport area of Chicago.

Re-examination

Candidates who fail Part I, Part II or both parts of the certifying examination are eligible to repeat the examination the following year. Candidates who fail the re-examination three times or who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application form and have their eligibility for examination reviewed by the Requirements Committee.

It is the responsibility of the candidate to notify the Board of his or her intent to take the re-examination. The request for re-examination and the appropriate fee (see Fees for Examination and Re-examination) must be mailed to the office of the Board no later than May 1st of the year in which the candidate wishes re-examination.

Certification

After meeting the above requirements and passing the examination, the candidate will be awarded a certificate which acknowledges that he or she has completed the required course of graduate study and clinical training, has met other specific standards and qualifications, has passed the examination conducted by the Board and is then referred to as a diplomate of the American Board of Dermatology, Inc. The names of diplomates of the Board appear in the *Directory of Medical Specialists* published for the American Board of Medical Specialties by Marquis Who's Who, Inc. of Chicago, Illinois.

Each certificate is subject to revocation in the event that (a) the physician so certified shall not have been eligible to receive such certificate, whether or not the facts concerning his or her ineligibility were known or could have been ascertained by the Directors of the Board at the time of the issuance of the certificate; (b) the physician so certified shall have made any material misrepresentation or omission in the application for such certificate or in any other statement to the Board or its representatives; (c) the physician so certified shall have been convicted by a court of competent jurisdiction of a crime relating to or arising out of the practice of medicine.

Fees

The members of the Board serve without compensation. Fees are based on the actual expenses incurred in office administration and in conducting the examination.

The total examination fee is \$600 payable when the application is filed. The fee for re-examination is \$500. All checks are to be made payable to the American Board of Dermatology, Inc.

When a candidate's application for the certifying examination or the special competence examination is disapproved or when the candidate withdraws, the Board retains an administrative fee of \$50.

Publications

1. The institutions accredited for dermatology residency training are listed in the *Directory of Residency Training Programs* accredited by the Accreditation Council for Graduate Medical Education published annually by the American Medical Association.

2. The American Board of Dermatology, Inc. publishes a Booklet of Information which may be obtained from the Board office.

All correspondence should be sent to:

Clarence S. Livingood, M.D.

Detroit, Michigan 48202

Certification for Special Competence in Dermatopathology

Special competence certification in dermatopathology is a joint and equal function of The American Board of Dermatology (ABD) and The American Board of Pathology (ABP). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate. The general qualification in regard to licensure is identical to that of the American Board of Dermatology and the American Board of Pathology.

A. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of

Emergency Medicine

special competence in dermatopathology who are otherwise qualified and who have had one of the following types of training or experience.

1. Applicants already holding a basic certificate from the American Board of Dermatology or the American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and the addition of one or two additional years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the full training requirements for certification in dermatology or pathology.

2. Applicants who are diplomates of both the American Board of Dermatology and the American Board of Pathology.

B. Training

Training programs in dermatopathology are approved by the Residency Review Committee for Dermatopathology which includes three members from the Residency Review Committee for Dermatology and three members from the Residency Review Committee for Pathology, and accredited by the ACGME. Accredited training programs in dermatopathology are an equal and joint function of the Departments of Dermatology and Pathology.

Committee for Dermatopathology:

William A. Caro, MD (ABD)

Thomas J. Gill III, MD (ABP)

James H. Graham, MD (ABD)

John M. Knox, MD (ABD)

Jack M. Layton, MD (ABP)

Jack P. Strong, MD (ABP)

C. Fee

The fee for the examination for special competence in dermatopathology is \$650 payable when the application is submitted.

AMERICAN BOARD OF EMERGENCY MEDICINE

R. R. Hannas, Jr., MD, President, Kansas City, Missouri

Ronald L. Krome, MD, President Elect, Detroit, Michigan
Harris B. Graves, MD, Secretary-Treasurer, Elkhorn, Nebraska

Gail V. Anderson, MD, Los Angeles, California

Richard I. Shader, MD, Boston, Massachusetts

Judith E. Tintinalli, MD, Detroit, Michigan

Robert A. Ulstrom, MD, Minneapolis, Minnesota

David K. Wagner, MD, Philadelphia, Pennsylvania

John G. Wiegstein, MD, Lansing, Michigan

Benson S. Munger, Ph.D., Executive Director,

200 Woodland Pass, Suite D

East Lansing, Michigan 48823

General Requirements

An applicant must satisfy all credential requirements at the time of application. Requirements fulfilled after the date of application will not be considered.

The applicant must have graduated from medical school and completed 12 months of internship (of PGY I) or other postmedical school training acceptable to the Board.

Graduates of approved schools of osteopathic medicine in the United States of America are considered when they have satisfactorily met the credential requirements as outlined.

An applicant graduating from a medical school other than one in the United States of America, its territories and Canada must provide the Board with a verified and translated diploma.

The applicant must hold a valid, unrestricted, non-temporary license to practice medicine in the United States of America, its territories or Canada, at the time of application.

The applicant who is accepted to candidacy for a given examination may at no time use the words "board eligible" in connection with the Board.

Application Categories**Practice Category**

Under this category the applicant must have practiced and/or taught emergency medicine a minimum of 60 months, accumulating at least 7,000 hours. This practice and/or teaching need not be continuous but it must total 60 months. No projections are allowed on an application. The Board independently verifies the emergency medicine practices listed on an application. Its practices are maintained at more than one hospital during the same period of time, all the hours may be listed to fulfill the Board's requirements, but, the months will only be counted once. Actual calendar months can only be counted once, regardless of the number of practices being maintained.

The practice and/or teaching must have taken place in a hospital-based emergency department within the United States, its territories or Canada. Emergency medicine practices resulting from military assignments outside the US will be considered only if the practice took place in a US military hospital which had been reviewed and accredited by the Joint Commission on the Accreditation of Hospitals.

Effective May 1982, teaching shall mean the teaching of medical students, physicians-in-training and physicians. Any other teaching may be claimed as CME. Of those 7,000 hours, 2,800 hours must have been accumulated within any 24 consecutive month period of time.

For each complete year in practice beginning with January 1, 1974, the applicant must submit 50 hours of continuing medical education activity acceptable to the Board.

On June 30, 1988 the practice category of application will expire. To apply under the practice category, a candidate must have fulfilled the requirements of the practice category by that date. Applicants may apply through the 1990 application cycle.

Emergency Medicine Residency Category

Under this category the applicant must have successfully completed a total of 36 months of post-medical school training, at least 24 months of which were in an approved emergency medicine residency program (PGY II and III). The applicant must submit 50 hours of continuing medical education activity starting one year from the date of graduation from the residency program and continuing until the date of application.

The applicant who has successfully completed an approved emergency medicine residency program may apply under this category immediately upon such completion and for three years thereafter, during an annual application cycle.

The Board independently verifies with the residency director that the candidate completed the training necessary to meet the requirements of the emergency medicine residency category of application.

Special Application Category

An applicant who does not exactly meet all of the specific requirements (each requirement, including medical education) of the practice category or the emergency medicine residency requirement, but who believes he/she has equivalent experience and/or training, may make special application to the Board. The Board may grant practice

credit for incomplete emergency medicine residency training or for residency training in other specialties under this category of application.

The special application category is not intended to bypass the credential requirements, but rather, equivalency must be shown to the requirements of either the practice category or emergency medicine residency category.

Methods of Examination

The certification examination in emergency medicine consists of two parts. Part I is a one-day written examination. Part II is a one-day oral examination utilizing case simulations presented by a series of examiners.

Candidates must successfully complete Part I to be seated for Part II. Candidates must successfully complete both Part I and Part II to be certified.

Certification

All candidates who successfully complete both Part I and Part II shall be known as Diplomates of the American Board of Emergency Medicine and shall receive an appropriate certificate which shall remain the property of the American Board of Emergency Medicine.

Recertification

Certification is for a period of ten (10) years. Each Diplomate must be examined again to be certified.

Applications

Applications are available from the administrative office and will be accepted only during the specified application dates each year of May 1 through July 15. Only the current year's application form will be acceptable during that year's application cycle. The application fee must accompany the application form. This is a processing fee and is non-refundable. The fee must be in US funds and all checks or money orders must be made payable to the American Board of Emergency Medicine. No application will be processed without receipt of the application fee.

Examinations

The written examination is offered once each year. The 1984 written exam date is November 8. Oral examinations are scheduled the following year for candidates passing the written examination.

Exam fees are billed and due upon assignment to an exam administration.

AMERICAN BOARD OF FAMILY PRACTICE

W. Jack Stelmach, MD, President, Kansas City, Missouri
Ollie O. McGahee, Jr., MD, Vice President, Jesup, Georgia

Oscar M. McCallum, MD, Treasurer, Henderson, Tennessee

Loren Amundson, MD, Sioux Falls, South Dakota.

Paul C. Brucker, MD, Philadelphia, Pennsylvania

Worth B. Daniels, MD, Baltimore, Maryland

Arthur J. Dovovan, MD, Los Angeles, California

Willis J. Irvine, MD, Portland, Oregon

John Van S. Maeck, MD, Shelburne, Vermont

Thomas A. Nicholas, MD, Kansas City, Missouri

Howard H. Nichols, MD, Jackson, Mississippi

H. Judson Reamy, MD, New Philadelphia, Ohio

Richard M. Steinhilber, MD, Cleveland, Ohio

G. Gayle Stevens, MD, Birmingham, Alabama

Paul R. Young, MD, Gavleston, Texas

Nicholas J. Piscano, MD, Executive Director and Secretary,
2228 Young Drive, Lexington, Kentucky 40505

General Requirements

1. All candidates for the ABFP certification examination must be graduated from a medical school in the United

States or Canada, accredited by the Liaison Committee on Medical Education (LCME), or graduated from an osteopathic college of medicine accredited by the American Osteopathic Association (AOA), or must hold certification by the Educational Council for Foreign Medical Graduates (ECFMG); and,

2. All candidates must hold a valid and unrestricted license to practice medicine in the United States or Canada. Career military physicians serving full time in the U.S. Armed Forces or U.S. Public Health Service may request waiver of licensure requirements by submitting proper documentation of their career U.S. Uniformed Service status. In cases where such waiver is granted and the physician subsequently leaves the military service, the requirement for licensure must be satisfied immediately upon departure from the service in order to maintain Diplomate status.

3. All candidates must have three years of training in family practice subsequent to receipt of the M.D. or D.O. degree, and must have satisfactorily completed the full 36 months of a family practice residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME).

The latter two years of training must be completed in continuity in the same accredited program unless prior approval from ABFP has been obtained. The Board allows some flexibility in the first year (G-1), but requires that the continuity of care experience in a family practice center take place in the same program during the G-2 and G-3 years.

Verification of satisfactory completion must be stated in writing by the director of the program. All applicants are subject to the approval of the Board (ABFP), and the final decision regarding any application rests solely with the ABFP.

All candidates' experiences are subject to review and approval by the ABFP. Any variance from the above must have prior approval of the Board. No credit will be given for any previous training as equivalent to family practice training without the prior approval of the Board.

Candidates must complete all requirements of the Board no later than June 30 of the year of the examination. Complete documentation from the program director that the resident has or is expected to have satisfactorily completed the residency must be received by the Board by June 30. Applications supplied to the residents directly through the program director are made available only to residents expected to complete the required training on June 30th of the current year. Residents who complete their training at an interim date must request an application from the Board in writing.

No candidate will be allowed to take the examination until all fees are paid, all of the above requirements have been satisfactorily met, and documentation of same received in the Board (ABFP) office no later than June 30th prior to the examination date.

Canadian Applicants

1. Physicians who have satisfactorily met the requirements of the College of Family Physicians of Canada (CFPC) by completion of two years of training in a program accredited by the College of Family Physicians of Canada must have a third year of accredited family practice residency. This third year of training must either be satisfactorily completed in an ACGME accredited family practice program or, if taken in Canada, it must be approved by the College of Family Physicians of Canada and must have prior approval of the American Board of Family Practice. Only those programs that bring the three-year experience into compliance with the ACGME "Special Requirements for Training in Family Practice" will be considered as being equivalent to a third year in a U.S. accredited family practice training program. The request for approval must provide a description of the proposed curriculum signed by

Family Practice

the program director. The request must be accompanied by documentation of satisfactory performance, which includes a description of the curriculum of the previous two years of training signed by the director of that program.

2. Physicians who have been certified by examination by the College of Family Physicians of Canada (Certificants), and who:

- a) have established legal residence in the U.S. for not less than the immediate past two (2) years; and
- b) since residing in the U.S. have accumulated a minimum of 50 hours per year of continuing medical education approved by the American Board of Family Practice; and
- c) are actively engaged in the practice and/or teaching of family practice on a full-time basis; and
- d) are members in good standing of the College of Family Physicians of Canada

may be permitted to apply for examination for certification by the American Board of Family Practice.

In cases of Canadian Certificants, a special application form must be submitted.

Osteopathic Physicians

Osteopathic physicians who have graduated from an American Osteopathic Association (AOA) approved school of osteopathic medicine in the United States may qualify for ABFP examination if they meet all the same residency requirements specified for M.D. graduates. They may apply to ACGME accredited family practice programs for entry into the first year (G-1). Osteopathic physicians who have documented satisfactory completion of an AOA approved internship (G-1) year may receive credit for that portion of the G-1 year which is equivalent to training in an ACGME accredited G-1 year for the purpose of entry into an ACGME accredited family practice program at an advanced level.

The amount of credit which may be granted for AOA approved rotating internships must not exceed one year. In order to qualify for the ABFP examination, all candidates must satisfactorily complete at least 36 months of accredited graduate medical education. All training beyond the G-1 year (G-2/G-3 years) must be in continuity in an ACGME accredited family practice residency program.

Facts About the Examination

The American Board of Family Practice administers the certification examination in various centers throughout the United States in July of each year.

The American Board of Family Practice certification examination is a written test of cognitive knowledge and problem solving abilities relevant to family practice. Appropriate subject areas of the following disciplines include: internal medicine, pediatrics, surgery, obstetrics and gynecology, psychiatry and behavioral sciences, community medicine and gerontology. Elements of the examination include but are not limited to: diagnosis, management, and prevention in illness.

Re-examination

Candidates who fail the examination will be given the opportunity of taking it again as given annually. There is no limit to the number of times a qualified candidate may take the examination. A valid and unrestricted license and 50 hours per year of continuing medical education are requirements of the application necessary for re-examination. Full fees are charged for each examination.

Recertification

Certification will expire at the time designated on the certificate. In order to maintain Diplomate (certified) status with the American Board of Family Practice, one must be recertified periodically (example: every six years) by the process delineated by the Board.

Revocation

Each certificate issued by the Board of Directors shall be subject to revocation in the event that:

1. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Articles of Incorporation of the American Board of Family Practice, Inc., or of the Bylaws of the American Board of Family Practice; or

2. The person certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting such ineligibility were known to, or could have been ascertained by, the Directors of the Corporation or its representatives; or

3. The person so certified shall have made any misstatement of fact in the application for such certificate or in any other statement or representation to the corporation or its representatives; or

4. The person so certified shall at any time have neglected to maintain the degree of competency in the field of family practice as established by the Board; or

5. The person so certified does not maintain a valid, full and unrestricted license to practice in the United States or Canada.

The Board of Directors of this corporation shall have sole power and authority to determine whether or not the evidence or information before it is sufficient to constitute grounds for revocation of any certificate issued by this corporation. The Board of Directors may, however, at its discretion, require any person so certified to appear before the Board of Directors, upon not less than thirty (30) days' written notice by registered mail, and to show cause, at the time and place specified in such notice, why his certificate should not be revoked. The failure of any person so notified to appear as required in such notice shall, at the discretion of the Board of Directors, constitute cause for revocation of his certificate. The decision of the Board of Directors in all such matters shall be final.

Official ABFP Definition of Family Practice

"Family practice is comprehensive medical care with particular emphasis on the family unit, in which the physician's continuing responsibility for health care is not limited by the patient's age or sex nor by a particular organ system or disease entity.

"Family practice is the specialty in breadth which builds upon a core of knowledge derived from other disciplines—drawing most heavily on internal medicine, pediatrics, obstetrics and gynecology, surgery and psychiatry—and which establishes a cohesive unit, combining the behavioral sciences with the traditional biological and clinical sciences. The core of knowledge encompassed by the discipline of family practice prepares the family physician for a unique role in patient management, problem solving, counseling and as a personal physician who coordinates total health care delivery."

Board Eligible

The American Board of Family Practice, as well as the other specialty boards, does not recognize nor use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." It informs an applicant of admissibility to an examination to be given on a specific date after a formal application has been reviewed and approved.

Applying for the Certification Examination in Family Practice

An application must be submitted with a check or money order in the amount of \$350 (U.S. Dollars), payable to the American Board of Family Practice and postmarked no later than the published deadline.

The application must be accompanied by a copy of documentation of a full and unrestricted license to practice medicine in the United States or Canada.

Examination fees may be refundable in part if the candidate notifies the American Board of Family Practice by registered or certified mail postmarked at least 30 days prior to examination of intent to withdraw.

If a candidate fails to notify the Board by certified or registered mail of intent to withdraw, at least 30 days prior to the examination, the entire fee may be forfeited. Any resident whose application is not approved for examination will be refunded \$300.00.

No candidate will be admitted to the examination until all fees have been paid and all other requirements have been met.

All applications must be returned to the following address:

American Board of Family Practice
2228 Young Drive
Lexington, Kentucky 40505
(606) 269-5626

Changes in Policies and Procedures

This document supersedes all previous publications of the Board concerning policies and procedures.

The Board's decision about a candidate's admissibility to examination is governed by the policies and procedures in

effect during the current application period.

All candidates are admitted to examinations at the discretion of the Board.

The Board reserves the right to make changes in its fees, policies, and procedures at any time. It cannot assume responsibility for giving advance notice thereof.

The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Internal Medicine.

The Board is an independent, nonprofit organization. It was established in 1936 by joint action of the Section on the Practice of Medicine of the American Medical Association and the Board of Regents of the American College of Physicians.

Purpose of the Board

The purpose of the American Board of Internal Medicine is to improve the quality of medical care by developing standards to ensure that the certified internist possesses the knowledge, skills, and attitudes essential to the provision of excellent care. Certification is recognition by peers of a superior level of ability.

Meaning of Certification

Certification by the American Board of Internal Medicine recognizes excellence in the discipline of internal medicine. Certification by the Board is not a requirement to practice internal medicine, and the Board does not confer privilege to practice. The Board does not intend either to interfere with or to restrict the professional activities of a licensed physician because the physician is not certified, or to restrict the professional activities of a certified Diplomate because the Diplomate is not certified in a subspecialty.

The Board does not issue statements concerning "Board eligibility." It informs a candidate of admission to a specific examination after the application form, fee, and supporting references have been received and reviewed.

Responsibilities of the Board

The primary function of the Board is to administer the certification process. It does this by:

- a) establishing postdoctoral training requirements for Board candidates,
- b) assessing the credentials of candidates,
- c) obtaining substantiation by appropriate authorities of the clinical skills and professional standing of candidates, and
- d) developing and conducting examinations for certification and recertification.

The Board conducts research to improve the definition of its certification standards and to evaluate certification procedures.

The Board establishes requirements and standards for certification with the intent of improving the quality of educational training in internal medicine.

Areas of Certification Offered

Specialty of Internal Medicine

Physicians who are awarded a Diplomate certificate in the specialty of internal medicine have completed a minimum of three years of acceptable postdoctoral education, demonstrated competence in the clinical evaluation of patients, and passed the Certifying Examination in Internal Medicine. Physicians who are awarded this certificate will have demonstrated their preparation for the practice of internal medicine.

Subspecialties of Internal Medicine

Board Diplomates may seek a second certificate in a subspecialty of internal medicine. They must meet the Board's postdoctoral training requirements in the subspecialty before taking the subspecialty examination. Physicians who are awarded these certificates will

Internal Medicine

have demonstrated their preparation for the practice of a subspecialty. The Board offers examinations in the following subspecialties:

- Cardiovascular Disease
- Endocrinology and Metabolism
- Gastroenterology
- Hematology
- Infectious Disease
- Medical Oncology
- Nephrology
- Pulmonary Disease
- Rheumatology

For information concerning certification in Nuclear Medicine, or Allergy and Immunology, see following pages.

Recognition of Advanced Achievement in Internal Medicine

Board Diplomates in the specialty of internal medicine are periodically offered the opportunity to take an advanced examination. Those who pass the examination are awarded a new certificate indicating the date of the examination.

Certification in the Specialty of Internal Medicine

Prerequisites

1. Predoctoral Medical Education

Candidates from medical schools in the United States or Canada must have attended a school accredited at the date of graduation by the Liaison Committee on Medical Education (or formerly by the American Medical Association), or the Committee for the Accreditation of Canadian Medical Schools (or formerly by the Canadian Medical Association). Candidates from osteopathic medical schools must have graduated from a college of osteopathic medicine accredited by the American Osteopathic Association.

Those graduates of foreign medical schools who are not licensed to practice in a state, territory, province, or possession of the United States or Canada, or who have not passed the examinations (Part I, II, and III) of the National Board of Medical Examiners, must have a permanent certificate of the Education Commission for Foreign Medical Graduates. A photostatic copy of this certificate must accompany the application for admission to the examination.

Candidates who entered postdoctoral medical training in the United States via the "Fifth Pathway," as proposed by the American Medical Association, must document such training to the Board.

2. Postdoctoral Training Requirements

Candidates must meet the training requirements outlined on the following pages. Requirements for graduates of foreign and osteopathic medical schools are the same as those for other candidates.

3. Competence in Clinical Skills

It is essential that the internist have the appropriate attitudes, interpersonal and psychomotor skills including expertise in certain procedures, and intellectual abilities to gather data—by an organized and complete medical interview, a thorough physical examination, and the appropriate use of diagnostic studies—in order to make logical diagnoses and to prescribe optimal medical care. For more information on evaluation of clinical skills, refer to *Annals of Internal Medicine*, 90: 402-411 (March) 1979.

Directors of training programs can most appropriately provide the Board with the necessary documentation of some of these clinical skills, and have established committees to assist them in this evaluation. The evaluation should be a continuing process throughout a trainee's tenure in a hospital program.

The Board, after receiving an application for examination, requires verification of training and substantiation of the candidate's competence in clinical skills. This verifica-

tion is sought from each director of the candidate's training program(s). For more information about the role of the program director in certification, see following pages.

When candidates have not been evaluated for at least two years, the Board also requires verification that each is currently recognized as an internal medicine specialist in good standing. Verification is sought from the chief of medical service at the institution where the candidate's principal staff appointment is held. Any challenge to good standing must be resolved locally to the Board's satisfaction before admission to the examination.

4. Moral and Ethical Standing

All candidates for certification must have satisfactory moral and ethical standing in the medical profession.

The program director has the responsibility to assure the Board of such satisfactory standing.

Training

The Board believes that all internists should have sound knowledge of the biologic and social sciences basic to internal medicine; this knowledge should be acquired during the candidate's predoctoral and postdoctoral training, and should be maintained by habits of continuing education. The Board outlines its requirements with the intent of assisting residents to select educational programs that will develop their competence in internal medicine. Residents are urged to discuss the details of their training with their program director.

To ensure that all Diplomates are competent to fulfill the responsibility of an internist for the primary care of patients, whether they plan to practice general internal medicine or a subspecialty, *the Board requires that all candidates have three years of accredited training in the broad field of internal medicine.*

No internship, residency, or fellowship training taken before the date of completion of requirements for the MD or DO degree may be credited toward the Board's training requirements.

To be admitted to an examination, physicians must have completed required postdoctoral training *before July 1* of the year of examination.

The three years of required training must satisfy *all* the following conditions:

1. *A candidate must complete three years of training as a resident in an approved program in internal medicine.*

Approved indicates training accredited by the Accreditation Council for Graduate Medical Education (formerly by the Liaison Committee for Graduate Medical Education, or by the Residency Review Committee for Internal Medicine of the American Medical Association), or training completed in Canada and accredited either by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec.

2. *A director of an approved training program in internal medicine must have responsibility for the educational process during all of the 36 months of training.*

A maximum of six months in specialties other than internal medicine, but within an accredited residency in internal medicine, may be credited toward the 36 months of required training.

The Board has several policies to determine credit for the first postdoctoral year of training (PGY-I), depending on which type of training was undertaken in the first year. Prior to 1975 the PGY-I was called an internship year, and most training was either a straight medicine internship or a rotating internship:

- a) *Straight Medicine Internship*—This refers to PGY-I training undertaken in the department of internal medicine under the supervision of the director of an approved internal medicine program. Twelve months of credit are given for straight medicine internships.
- b) *Rotating Internships*—This refers to training undertaken in more than one department. Twelve months of credit are given *if* the program included a minimum of eight months of internal medicine or six months of

internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care. Otherwise, credit is given on a month-for-month basis for rotations under the supervision of the director of an approved program in internal medicine.

Since 1975 the terminology for the first postdoctoral year changed to the following:

- c) *Categorical First Year*—This refers to PGY-I training undertaken in the department of internal medicine under the supervision of the director of an approved internal medicine program. Twelve months of credit are given for categorical first years.
- d) *Categorical* First Year*—This refers to training undertaken in more than one department, under the supervision of the director of an approved internal medicine program. Twelve months are credited if training included a minimum of eight months of internal medicine, or six months in internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care.
- e) *Flexible First Year*—This refers to training in 1975-1982 that is not accredited. Therefore, no credit is normally given for flexible first years.
- f) *Transitional Year*—Beginning in July 1982 the Accreditation Council on Graduate Medical Education has accredited broad PGY-1 training experiences with a designated director and an institutional supervisory committee and sponsored by at least two accredited residencies. Training in internal medicine in such programs where one sponsoring residency is internal medicine will receive month-for-month credit. Credit for training beyond six months must be reviewed on an individual basis.

3. *Training must include a minimum of 24 months of meaningful patient responsibility.*

Meaningful patient responsibility refers to time spent in direct and comprehensive care of patients. This includes responsibility for record keeping and management under the supervision of faculty and/or personal physicians. Care provided in the capacity of a consultant does not apply to the requirement of meaningful patient responsibility. Twenty of the 24 required months of meaningful patient responsibility must occur in:

- a) inpatient services where disorders of general internal medicine are managed, or
- b) inpatient services where disorders of one subspecialty of internal medicine are managed, or
- c) emergency rooms, intensive care units, general medical and subspecialty out-patient clinics, or
- d) dermatology or neurology services.

At the discretion of the internal medicine program director, four months may be taken outside of internal medicine, provided they involve meaningful patient responsibility.

4. *In each year of training, the level of responsibility for patient care must increase.*

In summary, the standard, recommended training pattern includes:

- Year 1—A categorical first year of training in internal medicine or a straight medicine internship,
or
A categorical* first year or a rotating internship including eight months of internal medicine; and
- Year 2—Twelve months of approved residency in internal medicine, as a medicine resident; and
- Year 3—Twelve months of approved residency in internal medicine, as a medicine resident.

Of the total 36 months of training, at least 24 must include meaningful patient responsibility. In each year of training, responsibility for patient care must increase.

Training Taken in Accredited Programs Other Than Internal Medicine

For physicians transferring to internal medicine programs from other accredited residencies, the internal medicine program director may grant a maximum of six months' credit for months of training in internal medicine which were under the supervision of an approved program in internal medicine.

Special Requirements for Candidates Who Began Postdoctoral Training Before June, 1977

A few outstanding candidates with less than three years of training in general internal medicine will continue to be considered for certification. They must meet all the following requirements:

- a) They must have begun postdoctoral training in the US or Canada before June, 1977.
- b) They must have completed at least two years of training in general internal medicine.
- c) They must have completed at least one year of acceptable training in a subspecialty or related area.
- d) They must have 24 months of meaningful patient responsibility within the 36 months of training.
- e) This training pattern must be approved by the program director of the candidate's second year in general internal medicine. The Board will request verification of this approval.

Should the program director decline such approval, the candidate will be required to undertake a third year of approved training in internal medicine.

Candidates for Special Consideration

Outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board as candidates for special consideration. Only the chairperson of a department of medicine or a program director of an approved program in internal medicine may propose a candidate for special consideration.

The Certifying Examination in Internal Medicine

The Certifying Examination in Internal Medicine is a written examination. The material covered on the examination is clinically oriented and relevant to the practice of internal medicine in a hospital and ambulatory care setting, both for consultants and primary-care physicians. The questions are objective; they are designed to test the candidate's knowledge, clinical judgment, problem-solving skills, and, to an appropriate degree, knowledge of the basic sciences fundamental to internal medicine.

The Certifying Examination is administered annually in many centers throughout the United States and in a few centers in Canada, Puerto Rico, and overseas. It is given in four parts on two consecutive days. The next Certifying Examination in Internal Medicine will be held September 11-12, 1984.

Candidates will be informed of the results of the examination approximately four months after its administration.

Those who pass the examination are certified as Diplomates in the specialty of internal medicine. They are awarded certificates indicating the date of the examination.

The Board reserves the right to cancel and reschedule examinations under unusual circumstances. In addition, the board reserves the right to delete questions or portions of the examination.

On written request and payment of a fee of \$25.00 candidates may obtain rescoring of any examination within a year of receiving results. The answer sheets and patient management problem booklets of candidates will be destroyed 18 months after administration of the examination.

Internal Medicine**Certification in a Subspecialty
of Internal Medicine****Prerequisites****1. Prior Certification in Internal Medicine**

A candidate for examination in a subspecialty must be certified as a Diplomate in the specialty of internal medicine, or have passed the Qualifying Examination of 1979 or 1980, to be certified in *internal medicine* either by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec. Certification in Canada is not acceptable as qualification if a candidate has not been successful in passing a Certifying Examination or has not been admitted to a Certifying Examination because of unauthorized "short track," clinical incompetence, or lack of verification of recognition as a specialist in the community.

2. Training Requirements

Candidates must meet the training requirements outlined on the following pages.

3. Competence in Clinical Skills

The Board, after receiving an application for examination, requires substantiation of the candidate's clinical competence and skill as a subspecialist-consultant. This substantiation will be sought by the Board from the directors of the subspecialty training program(s) and each associated residency in internal medicine. For more information about the role of program director in certification, see following pages.

For candidates who are at least two years beyond training, the Board requires verification that each candidate is currently recognized as a subspecialist in good standing in the appropriate subspecialty. Verification is sought from the chief of medical service at the institution where the candidate's principal staff appointment is held. Any challenge to good standing must be resolved locally to the Board's satisfaction before admission to the examination.

4. Moral and Ethical Standing

All candidates for subspecialty certification must have satisfactory moral and ethical standing in the medical profession.

The program directors and the chief of medical service have the responsibility to assure the Board of such satisfactory standing.

Training

The Board requires a minimum of two years of full-time graduate training in a subspecialty, completed in a program associated with an approved residency in internal medicine.

A period of training in another institution may be acceptable if the institution has a recognized reputation for an advanced educational program in the subspecialty. Applicants seeking credit for training there must submit a detailed description of the curriculum of the program for review by the appropriate subspecialty committee of the Board. Candidates are encouraged to write to the Board for prospective evaluation of such training.

If subspecialty rotations completed during training in internal medicine are used to meet the requirements for admission to a Certifying Examination in Internal Medicine, they cannot be credited toward the required subspecialty training. Practice experience and attendance at postgraduate courses cannot be credited toward the requirements.

Training undertaken in a subspecialty while the candidate holds a full-time junior faculty appointment in an approved medical school in the United States or Canada may be applicable toward the requirements. Such training must have been approved by the appropriate program director. Plans for such training should be reviewed prospectively by the Board.

In general, part-time training, even though continuous, is not acceptable. Interrupted full-time training, however,

is acceptable, provided that no period of full-time training is shorter than six months. Individuals planning such training should seek the guidance of the Board before acting on their plans.

Candidates for Special Consideration

Special consideration for candidates who seek subspecialty certification is restricted to full-time faculty members of accredited medical schools in the United States or Canada. Some formal training in the subspecialty is required.

Only the chairperson of a department of medicine may propose a subspecialty candidate for special consideration.

Certification in Two Subspecialties

The Board does not wish to encourage certification in more than one subspecialty; however, requirements for dual certification in Hematology and in Medical Oncology have been published and are available from the Board and currently require three years of training. *However, physicians who completed two years of training in hematology, medical oncology, or hematology/oncology in June 1975 or before may still apply for dual certification in hematology and medical oncology but only through the 1986 Subspecialty Examinations.* Once admitted to a subspecialty examination such physicians will continue to have met the training requirements for the subspecialty examination after 1986.

Candidates who seek dual certification in other subspecialty combinations should submit written inquiries detailing their training to the Board for evaluation by the appropriate subspecialty committees.

Subspecialty Examinations

The subspecialty examinations are written examinations. The questions are objective. An outline of the general subject areas covered by a specific subspecialty examination is provided with the application form.

The subspecialty examinations are offered on an alternate-year schedule. The examinations are administered in centers in the United States, Puerto Rico, Canada, and overseas. They are given during one day; the sole exception is the examination in Cardiovascular Disease, which is given during one and one-half days. The 1984 Subspecialty Examination will be held on November 13, 1984. Candidates will be informed of the results of examination approximately four months after administration.

Those who pass a subspecialty examination are certified as Diplomates in the particular subspecialty; they are awarded certificates indicating the date of the examination.

The Board reserves the right to cancel and reschedule examinations under unusual circumstances. In addition, the Board reserves the right to delete questions or portions of the examination.

On written request and payment of a fee of \$25.00 candidates may obtain rescoring of any examination within a year of receiving results. The answer sheets and patient management problem booklets of candidates will be destroyed 18 months after administration of the examination.

Advanced Achievement in Internal Medicine

A voluntary modular examination process will provide practicing certified internists the opportunity to evaluate objectively the current clinical knowledge, continuing education, and the problem-solving skills needed to provide excellent care in internal medicine. Those Diplomates who pass the examination will be awarded a new certificate indicating the date of the examination. The process is scheduled for 1985.

Role of Program Director

The level of competence of the internist is determined in large part by the duration and quality of training and experience. It is for this reason that the Board seeks assistance from training program directors in the certification

process. The Board asks program directors to substantiate that candidates for certification have the requisite clinical skills and moral and ethical standing to be certified by the Board. Such substantiation is a requirement of certification.

Responsibility for Training

The Board believes that an internal medicine program director should have responsibility for the candidate's entire educational process during training. Flexibility within the basic training requirements should be designed by the program director together with the candidate.

The program director may permit up to six months of training in areas outside internal medicine, as long as the internal medicine program director maintains contractual responsibility for the trainee during this time. Such rotations may be dispersed by the program director throughout the 36 months of training.

A maximum of four months outside internal medicine (e.g., pediatrics, psychiatry, surgery, radiology) may be credited toward the 24-month requirement for meaningful patient responsibility if the rotations are taken with the approval of the internal medicine program director and if they involve meaningful patient responsibility.

The Board welcomes the opportunity to evaluate prospective plans for unusual training.

Substantiation of Competence in Clinical Skills

The program director of each training program of the candidate for certification is sent a clinical evaluation form and asked to verify the training indicated by the candidate.

For certification in general internal medicine, substantiation of competence in clinical skills is requested from the program director. For certification in subspecialties of internal medicine, substantiation of skills as a subspecialist-consultant is requested from both the director of the subspecialty training program and the director of the associated residency in internal medicine.

Any candidate for any certification whose skills are judged to be less than satisfactory may, at the discretion of the Board, be excluded from the next examination.

Candidates excluded from examination by the Board on the basis of a report of unsatisfactory clinical skills may be required to undertake a special evaluation by the Board or may be required to undertake an additional year of training, with the purpose of devoting special attention to the improvement of these skills. After such additional training, the Board will seek evidence of improvement from the program director involved, and will require a special evaluation by a Board member. Candidates whose skills are judged satisfactory by this procedure will be admitted to an examination.

Appeal mechanisms are available to candidates who are excluded from examinations on the basis of reportedly deficient clinical skills.

Verification of Moral and Ethical Standing

Program directors of chiefs of medical service have the responsibility to assure the Board that candidates for Board certification have satisfactory moral and ethical standing in the medical profession.

Deficient moral and ethical standing to medical care should be identified by the program as early in the training period as possible, so that remedial action can occur. Candidates who are judged to have persistently unsatisfactory moral and ethical standing should be offered the opportunity to meet with their program directors and/or their local committees on evaluation of clinical competence in order to reply to the charges.

When the program director cannot recommend a candidate for admission to a certification examination on the basis of moral and ethical deficiencies, this judgment should be indicated on the Board evaluation form with full documentation, including critical incidents that illustrate adverse behavior.

Should the Board accept this judgment by denying admission to its examination, and should the candidate wish to appeal the decision, the Board provides the following mechanism for review of its decision: after notice of the nature and details of the alleged deficiencies, both the candidate and the program director will be requested to appear before the Board to present their respective positions.

Candidates for Special Consideration

Internal Medicine

Those outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board for special consideration.

Two principles guide the Board in its assessment of candidates for special consideration:

- a) the candidate's training must be interpreted by the Board to be equivalent to 36 months of training in an approved program in internal medicine, and
- b) the candidate must demonstrate superior clinical competence to the satisfaction of the Board.

Except for the most unusual circumstances, it is essential that some of the candidate's training have been in the United States or Canada. This pathway for admission should not be sought for candidates who are transferring into internal medicine from residencies in other disciplines.

The following requirements apply to candidates for whom admission to the Certifying Examination is sought under the provisions of special consideration:

- 1. The candidate must be proposed by the chairperson of a department of medicine in an accredited medical school or the director of an approved program in internal medicine.
- 2. The candidate should have been observed by the proposer for at least one year.
- 3. The candidate must be judged to have superior clinical competence in general internal medicine. The qualities of the candidate's performance that support this judgment must be specified in the proposal. It is not sufficient to state that the candidate has superior clinical competence.
- 4. The judgment of superior clinical competence must be accompanied by documentation of concurrence by the local clinical competence committee. This documentation should include the results of the candidate's performance in a Clinical Evaluation Exercise.
- 5. The candidate's curriculum vitae and bibliography must accompany the proposal.

Proposals for special consideration must be received in the Board office by January 1 of the year in which the Certifying Examination in Internal Medicine is to be taken. Should the proposal be approved after Board review, the Board will send application forms to the candidate.

Subspecialties of Internal Medicine

The following requirements apply to candidates for whom admission to a subspecialty examination is sought under the provisions of special consideration:

- 1. The candidate must be proposed by the chairperson of a department of medicine of an accredited medical school in the United States or Canada.
- 2. The candidate must be current full-time faculty member in the department of the proposer and have been observed by the proposer for at least one year.
- 3. The candidate must have been previously certified in internal medicine by the American Board of Internal Medicine, or have passed the Board's Qualifying Examination of 1969 or 1970.
- 4. The proposal must include a description of the candidate's training and experience in the specified subspecialty.
- 5. The proposal must substantiate the clinical competence of the candidate as a consultant-subspecialist.

Internal Medicine

6. The candidate's curriculum vitae and bibliography must accompany the proposal.

Proposal must be received in the Board office by April 1 of the year in which the subspecialty examination is to be taken. Should the proposal be approved, the Board will send application forms to the candidate.

Procedures for Application

Candidates for all examinations must have completed the required training by July 1 of the year of examination. Candidates must use an application form which should be obtained by written request to the Board office during the scheduled period of registration.

After review and acceptance of a candidate's qualifications as presented on the application form, the candidate is informed by letter that the initial stage of processing the application form has been completed. When appropriate, the Board then seeks verification of training and substantiation of the candidate's clinical competence from the candidate's program director. If these reports are satisfactory, the candidate will receive an admission card and examination center assignment approximately three weeks before the date of the examination.

Cancellations

Cancellations for all examinations must be submitted to the Board in writing before August 1 for the Certifying Examination in Internal Medicine, or before October 1 for subspecialty examinations.

Late Applications

There is a non-refundable penalty fee of \$200.00 for any application postmarked after the published registration period.

No applications will be accepted after April 2 for the Certifying Examination, or after June 1 for subspecialty examinations.

Refunds

Candidates who cancel their applications before the deadline or whose applications are not approved by the Board will receive a partial refund of their fee; \$50.00 will be retained to defray the cost of evaluating the application.

Re-examination

Any candidate who does not pass any certification examination may apply for re-examination. There is no restriction on the number of opportunities for re-examination.

If the credentials of a candidate who requests re-examination have not been reviewed by the Board during the previous two years, the application must indicate in which hospital the candidate's principal staff appointment is held. The Board requires verification of the candidate's competence and good standing from the chief of medical service of that hospital.

At each time of application for re-examination, the current examination fee is charged.

Announcements of Examination Information

Annals of Internal Medicine

(Medical News Section)

The Internist

Journal of the American Medical Association

(Examinations and Licensure Section)

Observer of the American College of Physicians

Resident and Staff Physicians

Appropriate subspecialty journals

In addition, the Board sends annual bulletins to directors of accredited residency programs.

Confidentiality

Candidates should be aware that the Board may, at its discretion, release the results of an examination under the

following circumstances:

- a) in order to help program directors evaluate the effectiveness of their programs. The Board may release group examination results in which a candidate received training for credit toward Board requirements.
- b) in order to conduct long-term studies of its testing programs. The Board may release examination results, examination scores, and other pertinent information to qualified researchers; these researchers would be required to maintain the confidentiality of such material.

Unless authorized by the candidate, the Board will endeavor to release examination results in a form that will protect the anonymity of the candidate. Individual examination scores will otherwise be considered completely confidential by the Board.

Irregular Behavior

All Board examinations are proctored and proctors are required to assign seats and empowered to change seats during an examination at their discretion. Proctors are required to report to the Board any irregular behavior by a candidate. Giving or obtaining unauthorized information or aid, copying of examination questions, removal of an examination from the examination center, talking or other disruptive behavior will be considered a possible subversion of the certification process. Irregular behavior that is observed, that is made apparent by statistical analysis of answer sheets, or that is shown by other means will constitute grounds for invalidation of the candidate's examination. Other sanctions such as exclusion from future examinations may be invoked at the Board's discretion.

Requirements for Examination by the American Boards of Internal Medicine and Pediatrics

In 1967 these two Boards agreed that candidates who were otherwise eligible for certification by each Board may be admitted to the examinations of both Boards, after such candidates completed at least two years of approved postdoctoral training, involving graded responsibility, in each specialty.

Certification Offered by Collaborative Examining Groups

The American Board of Internal Medicine has joined with other specialty Boards in sponsoring the following collaborative examining groups: the American Board of Allergy and Immunology (a Conjoint Board of the American Boards of Internal Medicine and Pediatrics) and the American Board of Nuclear Medicine (a Conjoint Board of the American Boards of Internal Medicine, Pathology, and Radiology). Physicians certified in internal medicine who are interested in certification in these areas should write to the appropriate organization:

American Board of Allergy and Immunology

3624 Market Street

Philadelphia, Pennsylvania 19104

American Board of Nuclear Medicine

900 Veterans Avenue

Los Angeles, California 90024

Inquiries

Please address all inquiries concerning examination applications to:

American Board of Internal Medicine

3624 Market Street

Philadelphia, Pennsylvania 19104

(215) 243-1500

The Board staff is ready to discuss certification with candidates. Candidates seeking an interview should request an appointment.

Summary of Registration Data

1984 Certifying Examination in Internal Medicine

Registration Period: November 1, 1983 to February 1, 1984*
 Examination Date: September 11-12, 1984
 Fee: \$460.00 (U.S.)*
 Deadline for Cancellation: August 1, 1984
 Refund: \$410.00
 Admission Notification: Three weeks before examination date

1984 Subspecialty Examinations

Hematology
 Infectious Disease
 Nephrology
 Pulmonary Disease
 Rheumatology

Registration Period: January 1, 1984 to April 1, 1984*
 Examination Date: November 13, 1984
 Fee: \$575.00 (U.S.)*
 Deadline for Cancellation: October 1, 1984
 Refund: \$525.00
 Admission Notification: Three weeks before examination date

1985 Subspecialty Examinations

Cardiovascular Disease
 Endocrinology and Metabolism
 Gastroenterology
 Medical Oncology

Examination Date: November 12-13, 1985

*Please see Procedures for Application for penalty fee for late applications.

 M. Stephen Mahaley, Jr., MD, Secretary-Treasurer, University of North Carolina, 148 Clinical Sciences Building, Chapel Hill, North Carolina 27514

Diplomates

A list of Diplomates and By-laws of The American Board of Neurological Surgery appear in the DIRECTORY OF MEDICAL SPECIALISTS which can be obtained from Marquis Who's Who, Inc., 200 East Ohio Street, Chicago, Illinois, 60611. In addition, a list of new Diplomates is published in the JOURNAL OF NEUROSURGERY shortly after each examination.

Information regarding training programs acceptable for certification can be found in the DIRECTORY OF RESIDENCY TRAINING PROGRAMS which is issued annually under the supervision of the Accreditation Council for Graduate Medical Education. This Directory can be secured from the American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Qualifications

The American Board of Neurological Surgery evaluates all qualified applicants for their proficiency in Neurological Surgery.

The minimal educational requirements of the Board should not be interpreted as restricting programs to these minimum standards. If necessary, Neurosurgical Program Directors may retain residents in their program beyond the required five years of neurosurgical training in order to insure satisfactory competence in Neurological Surgery.

It should be stressed that it is the responsibility of the candidate to seek information concerning current requirements for certification by The American Board of Neurological Surgery. Even though Program Directors of approved programs in Neurological Surgery are well informed regarding requirements for certification, placement in an approved training program does not guarantee adequate training for certification and the candidate must make sure he or she receives such training.

Training Prior to Neurosurgery Residency

1. Graduation from a medical school in the United States or Canada which is acceptable to the Board and is accredited by the Accreditation Council for Medical Education. Graduates from medical schools in countries other than the United States or Canada are eligible for certification provided they have a currently valid license to practice medicine in the state, province, or country of residence.

2. Graduates from U.S. or Canadian medical schools must also have a currently valid license to practice medicine in the state, province, or country of residence.

3. Twelve months must be devoted to acquiring adequate clinical knowledge of fundamental clinical skills. This is known as postgraduate year one (PGY 1), general surgery year one, or internship. Although recommended for completion prior to beginning neurosurgical training, this must be completed prior to beginning the third year of that training. This may be achieved by:

- A. one year of training in an approved general surgery program in the United States or Canada, or
- B. one year of training in an accredited residency program to include not less than six months in surgical disciplines other than neurosurgery (the remaining six months should include training in other fundamental clinical skills considered appropriate by the neurosurgical program director, but this portion of the year may not include more than six weeks of neurosurgery and/or neurology), or
- C. holding a certificate from the American Board of Surgery or a Fellowship of the Royal College of Surgeons of England, Edinburgh, Canada, Ireland, or Australasia.

Surgical training in programs outside the United States or Canada by individuals without a Fellowship from one of the Royal must be taken in a program approved by the Residency Review Committee for Surgery or the American Board of Neurological Surgery prior to the resident's taking such training.

Up to, but not beyond, July 1, 1979, an individual in his first year of medical school could enter directly into a five year training program in neurosurgery without PGY-1. In order to meet this stipulation, the individual's senior year in medical school must have been spent on surgical rotations equivalent to one year of graduate training in surgery and acceptable as such in the judgment of the chairman of the department of surgery in the individual's medical school; that chairman should notify the American Board of Neurological Surgery to this effect.

Neurological Surgery Training Requirements

For Residents Who Began the Neurological Surgery Portion of Their Training Before July 1, 1979

- 1. Completion of four years of training following post-

Neurological Surgery

graduate year one. The neurological surgery training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery and acceptable to it.

2. Of this training period, at least 30 months must be devoted to clinical neurological surgery. Twelve of the 30 months should be spent as senior resident in one institution. The other remaining 18 months may be devoted to some aspect of the neurosciences.

3. The training in clinical neurological surgery must be progressive but not obtained during repeated short periods in a number of institutions. It is necessary that at least 24 months of this training in clinical neurological surgery be obtained in one institution. The American Board of Neurological Surgery will not ordinarily approve training in any hospital or Graduate School of Medicine for periods of less than six months. Exchange of residents between approved neurosurgical training centers in the United States and Canada for periods of more than six months may be arranged by the respective training program directors with the resident's consent. In such instances, the Secretary of the Board should be notified of this change in program before the exchange period begins. Such an exchange should in no way compromise any other training requirements.

4. The program director must notify the Secretary of the ABNS of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain certification and, if so, whether or not the director has informed the trainee of the requirements necessary to obtain such certification.

5. Prior to acceptance for the certification process, the Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements and that his or her performance in training has been satisfactory and that in the judgment of the program director, the trainee is well prepared to enter into the independent practice of neurosurgery.

For Residents Beginning the Neurological Surgery Portion of Their Training on or After July 1, 1979

1. At least 60 months of neurosurgical training is necessary. This training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery, approved by the RRC in Neurosurgery, and accredited by the ACGME.

2. The 60 months of training must include at least 36 months of clinical neurosurgery. Twelve months of this period should be served as a senior resident in one institution.

3. At least 24 months in clinical neurosurgery must be obtained in one institution. The training in clinical neurosurgery must be progressive and not obtained during repeated short intervals in a number of institutions.

4. At least three months should be devoted to training in neurology. Six months is recommended.

5. The unobligated 21 months may be devoted to neuropathology, neuroradiology, basic neurosciences, research, or other disciplines related to neurological surgery.

6. Training in any institution other than in the parent institution and its affiliated hospitals and institutions will not be considered as counting toward the requirements unless specified in advance by the program director and approved by the Board.

7. The program director must notify The American Board of Neurological Surgery of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain certification and, if so, whether or not the director has informed the trainee of the requirements necessary to obtain such certification.

8. Trainees beginning their final resident year on or after July 1983 are required to record, in a fashion determined by the Board, operative procedures performed during their senior clinical year of training.

9. Prior to acceptance for the certification process, the

Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements, has performed in training in a satisfactory manner and, in the judgment of the program director, is well prepared to enter into the independent practice of neurosurgery.

Exceptional Modifying Circumstances

Upon recommendation of the program director and ratification by the Board, credit may be given for previous training if a candidate:

1. Transfers from one approved neurosurgical training program to another approved program with the consent of the directors of both programs, or

2. Transfers from one approved neurosurgical training program to another approved program without the consent of one of the program directors, but with the approval of the Board for the transfer.

In the above cases, the director of the program from which the candidate transfers must indicate in writing to the new program director the credit for training, both in time and category, which he is prepared to certify that the candidate has successfully completed. A copy of such statement should be submitted to the Secretary of the Board. The new program director may or may not honor such credit, depending upon his or her appraisal of the resident's professional and educational progress in the new program. A statement of how much training credit will be accepted should also be submitted to the Secretary of the Board.

3. Before entering an approved neurosurgical training program, has had substantially more than the prerequisite training in general surgery, medical neurology or the basic neurological sciences (such credit must be approved by the Board).

In all of the above cases, the director of the program from which the candidate transfers must indicate in writing to the new program director the credit for training, both in time and category, for which he is prepared to certify that the candidate has successfully completed. A copy of such statements should be submitted to the Secretary of the Board. The new program director may or may not honor such credit, depending upon his or her appraisal of the resident's professional and educational progress in the new program. A statement of how much training credit will be accepted should also be submitted to the Secretary of the Board.

Requests for training away from a parent institution or for transfer from one program to another should be submitted in writing to the Board prospectively, not retroactively.

Training by preceptorship is not considered as fulfilling certification requirements. No credit is given for time spent in such training.

Credit for partial training in foreign or other non-approved centers may be granted by the Board on an individual basis when this training is carried out as an integral part of training and with the advice and approval of the candidate's program director. The Board must be informed of such a rotation prior to its concurrence.

The above provisions in no way alter the basic minimum requirement of 60 months of training in neurosurgery, including a minimum of three months training in clinical neurology and 36 months of clinical neurosurgery of which 24 months must be in one institution, 12 months of which must be as senior resident in that institution.

Primary Examination

Each applicant for the Board's Oral Examination must first successfully pass the Primary Examination, which is a written examination prepared by the Board with the assistance of a professional testing organization. The Examination includes information on neuroanatomy, neurochemistry, neurology, neuropathology, neuropharmacol-

ogy, neurophysiology, neuroradiology, neurosurgery, fundamental clinical skills and material from other relevant disciplines deemed suitable and important by the Board. The Examination must be passed at least six months prior to sitting for Oral Examination.

The Examination is given once each year, usually in March, at such locations as are designated by the Board.

Candidates and Diplomates may take this Examination as often as desired for either credit or self-assessment.

The Examination may be taken for credit during residency training or during practice following completion of training. It may be taken as many times as may be necessary to achieve a passing grade. A trainee in an accredited training program may take it for credit at any time at the discretion of the program director and the candidate. It is also open to neurosurgeons who have successfully completed accredited training programs.

The Primary Examination for self-assessment is open to all trainees in neurosurgical training programs which are accredited by the ACGME and the American Board of Neurological Surgery or by the Royal College of Surgeons of Canada, as long as they are individuals eligible for eventual certification. It is also open to neurosurgeons who have successfully completed training at accredited programs.

An application must be filed to take the Primary Examination. The deadline for receipt of this application by the Secretary of the Board is usually the first of January. The form should be accompanied by the fee set by the Board for the Examination. This fee will be refunded only if the candidate informs the Secretary's office that he or she is not going to sit for examination prior to the deadline date for the receipt of applications.

Candidates taking the Primary Examination are required to sign a pledge which states that they agree to be bound by the Board's ruling regarding credentials irrespective of scores on the Examination. By signing the pledge, candidates grant permission to the American Board of Neurological Surgery and the professional testing organization to release the Examination results, either credit or self-assessment, to the candidate's program director.

Candidates should keep in mind that they must be scheduled for Oral Examination by the Board within five years of passing the Primary Examination for credit or within five years of completing a formal training program, whichever occurs later. Compliance with this regulation requires early submission of applications for certification once candidates finish training. If a candidate cannot be scheduled within the five year limit due to late submission of an application for Oral Examination, he or she must once again take and pass the Primary Examination for credit, plus submit a new application, before being scheduled for Oral Examination within the succeeding five year period.

Candidates should also keep in mind that the Secretary's office usually requires 18 months between submission of an application and notification of scheduling for the Oral Examination.

Practice Requirements

Following completion of a neurosurgical training program, an additional period of not less than two (2) years of satisfactory practice of Neurological Surgery is required prior to examination. After one year of practice, the candidate shall furnish the Board either the names of or actual letters from individual physicians (one a neurosurgeon) who are knowledgeable about the quality of the candidate's practice. If only the name and address is provided, the Board will request reference letters from these physicians. It is also the prerogative of the Board to contact other physicians in the community and, at the Board's discretion, it may send representatives to review the candidate's practice.

In addition to these letters, the candidate will submit either the names and addresses or actual letters from either

the Medical Director or the Chief of Staff of each hospital where the candidate has hospital privileges. These letters are intended to advise the Board of the candidate's status regarding admitting and operating privileges in each hospital where he/she practices.

Upon request prior to Oral Examination, candidates shall forward to the Secretary of the Board a typewritten, chronological list of hospital patients for whom he or she has been the responsible physician or surgeon. The Practice Data Sheets and Summary of Practice Experience forms are to be prepared and ready for submission to the Secretary as soon as possible. For candidates completing training prior to July 1982, the Practice Data is to be inclusive of the two years just prior to sitting for the Oral Examination. For candidates completing training on or after July 1, 1982, only 12 consecutive months of Practice Data is required. Information may include, but may not be limited to:

- A. Identifying hospital number and date of admission,
- B. Clinical diagnosis,
- C. Definitive diagnostic procedures, if performed,
- D. Operations, if performed,
- E. Results, including all complications and autopsy findings, when applicable, and
- F. Summary form of the clinical material seen and surgical work performed by the applicant.

No minimum volume of diagnostic or operative procedures is required; however, candidates should keep accurate records at all times so that the material is readily available. The total experience must be tabulated by the candidate in a format defined by the Board and prepared on forms available from the Secretary of the Board. This case material should be accompanied by documents indicating their essential accuracy from the record or medical librarian, chief of staff, chief of service, president of the medical staff or hospital administrator of the hospitals where the candidate practices.

These data must be sent to the Secretary of the Board at a time set by the Secretary. The Secretary, in turn, sends the data to Board members for their review prior to the Oral Examinations.

Candidates are responsible for retaining duplicate copies of these records.

Military Service Practice

Medical officers who have elected the military as a career may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to practice of Neurological Surgery. Credit for practice in a service setting by those who are not career officers, will usually consist of one year of practice time credit for each year of practice. Practice information for each individual in this category must still be reviewed by the Credentials Committee and the Board.

Certification of Those Training in Canadian Programs

Those satisfactorily completing an approved Canadian training program are eligible for certification through the same route as candidates from the United States. Each candidate must:

- 1. Pass for credit the Primary Examination,
- 2. Have training acceptable to the American Board of Neurological Surgery, and have credentials for such training reviewed by the Credentials Committee and approved by the Board,
- 3. Present evidence of a satisfactory two year period of practice, and
- 4. Pass the Oral Examination.

Candidates who complete training in approved Canadian programs and are certified by the Royal College of Physi-

Neurological Surgery

cians and Surgeons (Canada) in neurosurgery must have completed the same training and practice requirements as graduates of accredited training programs in the United States when applying to the American Board of Neurological Surgery for Oral Examination and certification.

Certification for Those Training in the United States and Canada but Practicing Neurological Surgery in a Foreign Country

Prior to July 1, 1972

Foreign Certificates may be issued to applicants who began neurological training in the United States or Canada prior to July 1, 1972. Training for a Foreign Certificate must meet the requirements of the Board. Such individuals must return to a country in which they are legally licensed to practice medicine other than the United States or Canada, and must file with the Secretary of the Board a sworn declaration of his or her intent to return to residence in that country before he or she may be scheduled for Oral Examination. A Foreign Certification is only issued upon return of the applicant to the foreign country which he or she has declared would be the country of residence. Foreign Certificates are valid only during residency of the recipient in a country other than the United States or Canada; they are null and void, and must be returned to the Secretary's office if the recipient becomes a resident of either the United States or Canada or returns to either country to practice. If the holder of a Foreign Certificate becomes a resident or a practitioner in the United States or Canada and wishes to gain a Regular Certificate, he or she must surrender the Foreign Certificate, pass the Primary Examination for credit and, after two years of neurosurgical practice in the United States or Canada, apply for the Oral Examination leading to a Regular Certificate.

On or After July 1, 1972

Individuals wishing to practice in countries other than the United States or Canada who initiated their neurosurgery training on or subsequent to July 1, 1972, and who wish to practice in a foreign country but be certified by the American Board of Neurological Surgery must apply to the Secretary of the Board for a Regular Certificate. This certificate would also be valid for neurosurgical practice should the individual return to the United States or Canada. Residence may be established in the foreign country for the two years of practice before being scheduled for Oral Examination. During training or this period of practice, the individual must pass the Primary Examination for credit. He or she must keep track of practice data, just as any other candidate for certification, and pass the Oral Examination.

Applications

Applications for the Oral Examination are automatically sent to residents in their last year of training in June of that year. Accompanying the application is a Booklet of Information and a set of Practice Data Sheets. Additional applications are available from the Secretary's office for those candidates who have been out of training for a period of time. The application should be filled out and returned to the Secretary as soon as possible after completion of training so that inquiries may be made from references provided as well as from others in the community, the individual's training program faculty, and the hospitals where the candidate practiced.

It takes 18 months or more between submission of the application and scheduling of the Oral Examination for candidates so that the candidate will not sit for the Oral Examination until three years after the completion of training. This time is necessary so that the practice experience can be collected by the candidate and processed by the Board.

Candidates must apply soon enough after completion of training to be scheduled for the Oral Examination within five years of passing the Primary Examination for credit or within five years of completion of their formal training program, whichever occurs later.

If application is made beyond the five year limit, the candidate must again pass the Primary Examination for credit and submit a new application along with a new fee before being scheduled for the Oral Examination within the next five years.

Once a candidate's application has been approved by the Credentials Committee, the candidate is informed that, if he or she fails to sit for Oral Examination within three years of the date of notification of acceptance for the scheduled examination, he or she will not be scheduled for Oral Examination thereafter, except by filing a new application and fee.

A pledge is part of the application for Oral Examination. By signing the application, the applicant agrees to abide by all of the terms and conditions of this pledge.

Upon receipt of an application, the Secretary takes such steps as deemed appropriate to verify the statements of facts made in the application. Inquiries are made from references and possibly from others familiar with the candidate to obtain information relevant to the requirements for examination.

Prior to Oral Examination, each candidate must be in possession of hospital staff privileges in all hospitals in which he or she cares for patients. Such privileges must be full privileges in respect to the hospital's requirements for a neurosurgeon.

The Board makes the final decision regarding a candidate's eligibility for Oral Examination and potential certification after considering all available information pertaining to the entire process of certification.

Applications must be typewritten.

Application fees, once received, will not be refunded or credited against a future application submission.

Oral Examination

The Oral Examination is given two or three times a year. The format for this examination is a clinical problem solving and patient management test. The candidates are given case histories and, where appropriate, x-rays, scans and other visual aids to augment the presentation and development of the case. The candidate must verbally be able to explain how he or she would proceed in further evaluating and/or managing the case and how one would plan and perform the proposed operation or operations, if indicated. One hour is devoted to neurological surgery— intracranial disease; one hour to neurological surgery— spinal and peripheral nerve disease; and one hour to neurology. Each of the three hours is conducted in an interview setting with two examiners.

If upon receipt of notification of scheduling for the Oral Examination, the candidate cannot stand for the examination, he must notify the Secretary immediately, since there is usually a waiting list for each examination. The examination fee will not be refunded except under exceptional circumstances deemed appropriate by the Board.

A candidate who receives a passing grade for the Oral Examination will be forwarded the Board's Certificate, once it is suitably engrossed and signed by the then current officers of the Board.

Re-examination Rules

If a candidate fails the examination once and wishes to repeat it, this must be requested by writing to the Secretary within a three year period.

A new application form need not be filled out, but a re-examination fee must be paid prior to examination. A minimum of one year must elapse before taking the exam for the second time.

A candidate who has failed the Oral Examination on two occasions, must pass the Primary Examination for credit again before becoming eligible to retake the Oral Examination. It is not necessary that a new application form be filed with the Secretary. However, two letters of reference certifying the nature and quality of the candidate's practice

must be submitted to the Secretary. In addition, the candidate must pay the Oral Examination fee. Under these circumstances, candidates must apply to take the Oral Examination within (18) months of passing the Primary Examination and must actually take the examination within three years of passing the Primary Examination. Should for any reason the candidate not apply for or fail to appear for or fail the Oral Examination within the three year period, the candidate must retake and pass the Primary Examination once again before being eligible for re-examination.

Payment of Fees

The fee for filing an application with the Board and the Oral Examination will be determined by the Board. These fees reflect costs which the Board incurs to pay for obligations associated with the certification process. The application fee will not be returned even though the application for examination is denied. When notified by the Secretary that the candidate is eligible for examination, the candidate shall send the examination fee in the amount current (in U.S. dollars) at that time and at least 30 days prior to the examination. Cancellation by the candidate less than 30 days prior to the Oral Examination date for reasons unacceptable to the Board will result in no refund of the examination fee.

A candidate who has failed the Oral Examination once is eligible for re-examination within three years upon the payment of the re-examination fee. If the holder of a Foreign Certificate returns to or remains in the United States or Canada to practice and reappears before The American Board of Neurological Surgery after two years of practice in the United States or Canada, the applicant shall pay the re-examination fee current at that time.

Revocation of Certificate

Pursuant to rules and regulations established by the American Board of Neurological Surgery, the Board has the authority to revoke any certificate issued by the Board if: a) such certificate was issued contrary to or in violation of any rule or regulation of the Board, b) the person to whom the certificate was issued was not eligible to receive or has since become ineligible to continue to hold such a certificate, c) the person to whom the certificate was issued made any misstatement of fact to the Board in his application or otherwise, d) person to whom the certificate was issued is convicted of a felony. Should revocation be disputed, there is a hearing mechanism for such an action.

AMERICAN BOARD OF NUCLEAR MEDICINE

(A Conjoint Board of the American Board of Internal Medicine, the American Board of Pathology, and the American Board of Radiology and sponsored by the Society of Nuclear Medicine)

- Robert O'Mara, MD, Chairman, Rochester, New York
- Robert M. Donati, MD, Vice Chairman, St. Louis, Missouri
- Howard J. Dworkin, MD, Treasurer, Royal Oak, Michigan
- Tyra R. Hutchens, MD, Secretary, Portland, Oregon
- John A. Burdine, Jr, MD, Houston, Texas
- Frank, H. DeLand, MD, Lexington, Kentucky
- John R. Hansell, MD, Philadelphia, Pennsylvania
- B. Leonard Holman, MD, Boston, Massachusetts
- Merle K. Loken, MD, Minneapolis, Minnesota
- I. Ross McDougall, MD, Stanford, California
- Wil B. Nelp, MD, Seattle, Washington
- Dennis D. Patton, MD, Tucson, Arizona
- Joseph F. Ross, MD, President,

900 Veteran Avenue, Los Angeles, California 90024

Definition of Specialty

Nuclear medicine is the clinical and laboratory medical specialty that employs for diagnosis, therapy and research the nuclear properties of radioactive and stable nuclides to evaluate metabolic, physiologic, and pathologic conditions of the body.

Purposes of the Board

The primary purpose of the board, and therefore its most essential function, is the advancement of the health of the public through the establishment and maintenance of standards of training, education, and qualification of physicians rendering care in nuclear medicine to the people of the United States. The Board contributes to the improvement of health care in the United States and carries out this purpose by (a) establishing requirements of graduate training related to examinations given by the Board; (b) influencing the standards required by hospitals and institutions that provide such graduate training; (c) aiding in the assessment and accreditation of programs in hospitals and institutions providing graduate training; (d) assessing the credentials of candidates for the examinations of the Board; (e) conducting an examination process to determine the competence of candidates for certification by the Board; (f) granting and issuing certificates in nuclear medicine to voluntary applicants who have been found qualified by the Board; and (g) maintaining a registry of holders of such certificates, and serving the medical and lay public by preparing and publishing in the *Directory of Medical Specialists* the names of practitioners who have been certified by the Board.

Significance of Certification

A physician certified by the American Board of Nuclear Medicine has fulfilled its prerequisites for training, been certified by the Director of his/her residency training program as competent in clinical nuclear medicine, made application for and successfully completed a qualifying written examination encompassing the medical uses of radioactive materials and related physical sciences.

A Diplomate of this Board is capable of:

1. Assuming clinical responsibility for patients under his care.
2. Serving as consultant to other physicians and advising them of the clinical indications and limitations and assessment of benefits versus risks of diagnostic and therapeutic applications of radioactive materials.
3. Conducting or supervising the performance of clinical procedures, involving the use of radioactive materials.
4. Rendering a valid written or verbal interpretation of the results of such procedures.
5. The medical management of persons exposed to ionizing radiation; the safe management and disposal of radioactive substances; and the direction of radiation safety programs.

The certificate does not confer on any person legal qualifications, privileges, or license to practice medicine or the specialty of nuclear medicine. The Board does not purport to interfere with or limit the professional activities of any licensed physician.

Requirements for Certification

- A. General Requirements for Each Candidate
 - Assurance that the applicant represents himself/herself to be a specialist in nuclear medicine.
- B. General Professional Education
 - Graduation from a medical school approved by the Liaison Committee on Medical Education or from a school of Osteopathy. If the applicant is a graduate of a medical school outside the United States or Canada, he/she must have satisfactorily passed either the ECFMG, or the VQE, or the FMGEM administered by the ECFMG, 2100 Pennsylvania Avenue, N.W., Suite 738, Washington, D.C. 20037.
- C. Preparatory Post-Doctoral Training
 - Training required for admission to the certifying examination in nuclear medicine shall be comprised of two or more years of preparatory post-doctoral training, and two or more years of residency training in nuclear medicine.

Nuclear Medicine

Preparatory post-doctoral training shall consist of two or more years of residency training in programs satisfactory to the American Board of Nuclear Medicine. Such programs shall provide broad experience in clinical medicine in which the primary emphasis is on the patient and his clinical problems. Preparatory training may be in any specialty in a residency program in the USA approved by the Accreditation Council for Graduate Medical Education (ACGME), or programs in Canada approved by the Royal College of Physicians and Surgeons of Canada, or the Professional Corporation of Physicians of Quebec. The American Board of Nuclear Medicine believes that preparatory post-doctoral training should precede training in nuclear medicine. However, this preparatory post-doctoral training may be interspersed with the two years of nuclear medicine training or may follow.

Each nuclear medicine Residency Training Program Director must ensure that for each resident entering his program the preparatory post-doctoral training has been in a US program approved by the ACGME, or a Canadian program approved by the Royal College of Physicians and Surgeons of Canada (RCPSC), or the Professional Corporation of Physicians of Quebec (PCPQ).

D. Special Post-Doctoral Training in Nuclear Medicine

1. After completion of the preparatory post-doctoral training programs, there shall be satisfactory completion of a two-year formal USA residency training program in nuclear medicine recognized and approved by the Residency Review Committee for Nuclear Medicine and the ACGME or a Canadian program approved by the RCPSC or the PCPQ as competent to provide a satisfactory training in nuclear medicine.

2. The two-year formal residency training program in nuclear medicine must include:

- a. A minimum of eighteen months of training in clinical nuclear medicine, which will include, but not be limited to, radiobioassay, *in vitro* and *in vivo* measurements, nuclear imaging, the principals of nuclear magnetic resonance imaging and therapy with unsealed radionuclides, and medical management of individuals exposed to ionizing radiation and the safe management and disposal of radioactive substances, and the direction of radiation safety programs.
- b. Training in allied sciences which must include: medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, statistics, and computer sciences; and may also include pathology, physiology, and other basic sciences associated with nuclear medicine. The time spent in training in allied science may be spaced throughout the period of training in nuclear medicine and in a manner that does not exceed six complete months of training.
- c. For candidates who have completed one or more years of residency in clinical disciplines closely related to nuclear medicine, a maximum of three months credit may be given for prior training in allied sciences (described in the preceding paragraph) if obtained during a residency in an ACGME, RCPSC or PCPQ approved program. Likewise, a maximum credit of three months may be given for approved training in radioassay/radiobioassay or for training in ultrasound imaging and/or emission and transmission computed tomography. Regardless of the amount of training in fields related to nuclear medicine, however, each candidate must satisfactorily complete a minimum of 18 months of clinical residency in an ACGME, RCPSC or PCPQ approved program in nuclear medicine. Credit may be given for prior clinical training in nuclear medicine, nuclear radiology, and radisotopic pathology obtained in programs approved in nuclear medicine by the ACGME, RCPSC or PCPQ.

3. The Board considers demonstration of clinical com-

petence in the management of the nuclear medicine patient of paramount importance in its qualification of the applicant to take the certifying examination. The Board designates the directors of nuclear medicine residency programs and their supporting Evaluation Committees as the authorities who most appropriately can provide to the Board the necessary documentation of competence in clinical nuclear medicine, and requires that all program directors certify to the Board that each applicant from their programs is competent in clinical nuclear medicine. These reports will be reviewed by the Board before accepting an applicant to take the certifying examination.

If a residency program director's evaluation indicates a candidate's competence in clinical nuclear medicine is unsatisfactory, the applicant will not be admitted to the examination unless the Board finds that the applicant's overall performance meets its standards. An applicant not admitted to an examination on the basis of these findings may appeal in writing to the Board for a special evaluation of competence in clinical nuclear medicine within 45 days of receipt of notification. The appeal should state that a request is made for review of the decision not to admit to the examination and why the candidate considers the decision to be in error. Applicants whose clinical competence is judged satisfactory in this evaluation will be admitted to the next examination for which they apply. Candidates judged not satisfactory in this evaluation are advised to spend an additional year training before applying again for special evaluation of competence.

Applicants submitting false credentials are subject to disqualification from examination or revocation of certification.

E. Patient Care Responsibility

Candidates for certification in nuclear medicine will have the equivalent of at least two years training in which the primary emphasis is on the patient and his clinical problems. This minimum period may be spaced throughout the entire post-doctoral training but should be of sufficient duration for the trainee to become knowledgeable in the aspects of clinical medicine relevant to nuclear medicine, including patient care.

F. Canadian Training

Physicians who satisfactorily complete training in Canadian nuclear medicine programs approved by the Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec are eligible for admission to the ABNM certifying examinations.

G. Completion of Training

All preliminary and nuclear medicine residency training must be completed prior to September 1st of the year the candidate takes the certifying examination.

Approved Residency Training Programs

Residency training programs in nuclear medicine accredited by the ACGME may be found in the *Directory of Residency Training Programs*, published annually by the American Medical Association or may be obtained by contacting: Secretary, Residency Review Committee for Nuclear Medicine, ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

Examination

An objective type examination is administered in a morning and an afternoon session. The examination evaluates the applicant's knowledge and competence in the management of patients in the area of clinical nuclear medicine, including, but not limited to, radioassay/radiobioassay, *in vitro* and *in vivo* measurements, nuclear imaging, the principals of nuclear magnetic resonance imaging, and therapy with unsealed radionuclides, the medical effects of exposure to ionizing radiation, the medical management of persons exposed to ionizing radiation, radiation safety, and the safe management and disposal of radioactive substances. Also included is an evaluation of the candidate's knowledge in the related

sciences of medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry and statistics; it may also include pathology, physiology, electronics, and other basic sciences associated with nuclear medicine.

Applications

Applicants who wish to be examined by the Board must complete, sign and file with the Board office an application on the official form together with the supporting data required by the application. The application must include two photographs of the applicant, signed near any edge so that the face of the individual is not obscured. Do not sign the photographs on the back. The applicant must enclose a check to cover the examination fee and a self-addressed postcard which will be returned to the applicant when all application materials have been received by the ABNM. It is the responsibility of the applicant to make certain that the required evaluation form has been completed by his/her Program Director, and sent to and received by the ABNM.

As soon as determination is made concerning admission or nonadmission to the examination, the candidate will be notified by certified mail; and if admitted, assignment of the candidate number and notification of the examination site will be given.

Before the final action on applications, officers, members, and employees of the Board are not authorized to estimate the eligibility of applicants. Applicants are requested not to discuss or write for opinions regarding the status of their application. The Board decides on eligibility to take the examination only by approving or disapproving individual applications, and accordingly has no "Board Eligible" category.

Inquiries concerning the applicability of previous training and experience should be sent with complete documentation of all education and training to the Board office. A copy of the Board's response to these inquiries should be forwarded with any subsequent examination application.

Release of Information

Candidates will receive the results of their examinations (pass/fail letter) approximately four months after the examination.

A list of diplomates of the ABNM will be found in the *Directory of Medical Specialists*, published for the American Board of Medical Specialties by Marquis Who's Who.

Upon request and with the approval of the Board Chairman, the Board releases information on diplomates to federal and state licensing bodies and to educational and professional organizations for specific, limited, and appropriate professional use. An authorization for release of this information is a part of the examination application form.

Policy on Re-examination

Applicants who fail the examination are eligible for re-examination. Applicants who qualified for the 1976 examination, by fulfilling one of the alternative training requirements, but who failed or who withdrew for a valid reason may take a subsequent examination. An examination fee must accompany each completed application for re-examination. If an applicant is disqualified from the examination by reason of dishonesty in the application or in taking the examination and his/her examination is invalidated by the Board, re-examination shall be at the Board's discretion.

Recertification

The ABNM is studying mechanisms to effect voluntary recertification. The ABNM will not rescind initial certificates unless a date of expiration is a condition of the original certificate. No certificate issued to date contains an expiration date.

Journals Publishing Information on Application and Examination Schedules

Annals of Internal Medicine (Medical News Section)

Journal of Clinical Pathology

Changes in Policies and Procedures

The Board reserves the right to make changes in its fees, policies, and procedures at any time, and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Nuclear Medicine.

Fees

The examination fee must accompany the application. If the applicant is rejected by the Board, or withdraws prior to August 1, the application processing fee will be retained by the Board. If the applicant withdraws after August 1, the entire examination fee will be retained by the Board.

AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY

- Leo J. Dunn, MD, President, Richmond, Virginia
- Gloria E. Sarto, MD, Vice-President, Milwaukee, Wisconsin
- C. D. Christian, MD, Director of Evaluation, Tucson, Arizona
- William J. Dignam, MD, Chairman of the Board, Los Angeles, California

- William J. Le Maire, MD, Miami, Florida
- Edward E. Wallach, MD, Philadelphia, Pennsylvania

Types of Board Status

1. *Active Candidate Status*

A. A candidate for certification may achieve active candidate status when upon application the Board rules that he/she has fulfilled the requirements to take the next

Obstetrics and Gynecology

regularly scheduled examination.

B. To maintain active candidate status the candidate must have applied and have been ruled eligible to take the next appropriate regularly scheduled examination: written or oral.

C. Active candidate status which has been interrupted may be regained only by reapplication and reaffirmation by the Board of a candidate's current eligibility to take the next appropriate examination.

2. Diplomate Status

A candidate becomes a Diplomate of the Board when he has fulfilled all requirements, has satisfactorily completed the written and the oral examinations and has been awarded the Board's Diploma.

The Certification Process

Certification as a specialist in obstetrics and gynecology is the end of a process lasting many years. The required minimum duration of graduate education is four years.

During the final year of graduate training, it is necessary to initiate certain measures. Because most graduate training programs begin on July 1 and end on June 30, the following summary of the certification process is based on these dates. However, applicants who complete residency training at unusual times will have an extended time in the certification process.

Between August 15 and November 30 of the final year of residency, the candidate should request and complete the application for the written examination. If he/she is ruled eligible to take the examination, he/she will do so in June of the final year of residency.

If he/she passes the written examination, the candidate enters a two-year period of practice in the specialty. The candidate is required to provide a list of patients under his care for a 12-month period beginning on July 1 of his/her second year of practice. Between January 1 and February 28 of his/her second year of practice, the candidate should request and complete the application for the oral examination. The candidate may enter a 2-year Board-approved post-residency fellowship. Upon completion, this candidate will then enter a one-year period of practice in the specialty. This candidate is required to provide a list of patients under his/her care during this year of practice. Between January 1 and February 28 of this year of practice, the candidate should request and complete the application for the oral examination. The candidate's list of patients must be mailed to the Board office between July 1 and August 31 following the completion of the 12-month period of the patient list. If ruled eligible the candidate thus takes the oral examination in November.

The certification process for the majority of candidates, is summarized in the table below.

Important Dates in the Certification Process

- I. Final year of residency
 - July 1 — Commence
 - September 1, — November 30 — Apply for written examination
 - June — Take written examination
- II. Practice
 - A. First year of practice
No Board activities necessary
 - B. Second year of practice
July 1 to June 30 — Patient List
January 1-February 28 — Apply for oral examination
 - C. Third year of practice
August 31 — Deadline for submission of patient list
November — Take oral examination
- III. Fellow in Subspecialty
 - A. First year (fellowship)
No Board activities
 - B. Second year (fellowship)
No BASIC Board activities

(September 1-November 30 — Apply for Subspecialty Written Examination)

- C. Third year — first year of practice
July 1-June 30 — Patient list
January 1-February 28 — Apply for the oral examination
- D. Fourth year — second year of practice
August 31 — Deadline for submission of patient list
November — Take oral examination

Responsibility of a Candidate

It is the responsibility of the candidate to seek information concerning the current requirements for certification as an obstetrician and gynecologist. The Board does not assume responsibility for notifying a candidate of changing requirements or the impending loss of his eligibility to take an examination.

A physician who formally obligates himself/herself to an approved residency program and then later breaks his agreement without justifiable cause may be required to provide an explanation satisfactory to the Board before being considered to have satisfactorily served as a resident in an accredited program.

The Written Examination

The Written Examination is a 3 1/3 hour examination consisting of questions of the objective (multiple choice) type. Questions will be chosen from each of the following areas of knowledge:

- A. Anatomy, Embryology and Genetics.
- B. Physiology.
- C. Endocrinology, Fertility and Infertility.
- D. Gynecology.
- E. Obstetrics.
- F. Medicine, Surgery and Psychosomatic Problems.
- G. Pathology.
- H. Oncology.

The candidate will also be expected to demonstrate skills necessary to apply basic knowledge to the management of clinical problems. These skills include:

1. Obtaining Needed Information.
2. Interpretation and Use of Data Obtained.
3. Selection, Instituting and Implementing Care.
4. Management of Complications.
5. Following and Continuing Care.

Requirements**General — For All Candidates**

1. Degree of Doctor of Medicine, or an equivalent degree, and unrestricted license (not educational or institutional) to practice medicine in one of the states or territories of the United States or a province of Canada or unrestricted privileges to practice medicine in the United States Armed forces.
2. The candidate will be required to have completed not less than four years in clinical programs accredited by the Accreditation Council for Graduate Medical Education with not less than 36 months of of obstetrics and gynecology, including the usual time as "Chief Resident" in the program. Completion of a year of "PG-1" plus a three year residency program, or a four year residency program will fulfill this requirement.
TIME SPENT IN AN OSTEOPATHIC HOSPITAL OR IN A PROGRAM NOT ACCREDITED BY THE ACCREDITATION COUNCIL FOR GRADUATE MEDICAL EDUCATION WILL NOT FULFILL THIS REQUIREMENT.
3. A statement signed by the Program Director certifying that the candidate has:
 - a. Followed satisfactorily the course of instruction designed for this program.
 - b. Achieved the appropriate knowledge and ability in

order to provide competent clinical care in obstetrics and gynecology.

- c. Demonstrated the necessary technical skills to competently perform:
 1. Major abdominal and vaginal surgical procedures upon the female pelvis and related structures.
 2. Spontaneous and operative obstetric deliveries.
 3. Surgical exploration of the abdomen.
 4. Endoscopic procedures in the pelvis.
 5. Diagnostic evaluation including electronic monitoring ultrasound and amniocentesis.
 6. Diagnosis and treatment of complications of the above.

Requirements for Candidates with Graduate Medical Education (Residency) in the United States or Canada

1. General Requirements.
2. Completion or near completion of a graduate education program in obstetrics and gynecology accredited by the Accreditation Council for Graduate Medical Education or the Council of the Royal College of Physicians and Surgeons in Canada (the entire program must be completed even if the program is of more than four (4) years).

Requirements for Candidates with Graduate Medical Education (Residency) in a country other than the United States or Canada

1. Fellows of the Royal College of Obstetricians and Gynecologists (U.K.):
 - a. General Requirements.
 - b. Completion of one year of obstetrics and gynecology education (or its equivalent) in the United States in an accredited program.
 - c. Submission of a statement from the Program Director attesting that the candidate's knowledge and skills are comparable to others who have satisfactorily completed his/her program.
2. Members of the Royal College of Obstetricians and Gynecologists (U.K.) who have passed parts 1 and 2 of the Membership examination:
 - a. General Requirements.
 - b. Completion of not less than two years in an accredited obstetrics and gynecology residency in the United States, including one year as Chief Resident.
 - c. Submission of a statement from the United States program director attesting that the candidate's knowledge and skills are comparable to others who have satisfactorily completed his/her program.
3. Other Foreign Training
 - a. General Requirements.
 - b. Completion of no less than three years of an accredited obstetrics and gynecology residency program in the United States including one year as Chief Resident.
4. Exceptions to the previous requirements may be made by *special action of the Board*. After a candidate has had one year of professional practice with unrestricted privileges to practice as an obstetrician/gynecologist in a hospital with an accredited residency in obstetrics and gynecology, the program director of that residency may request an *exception* for the candidate. The request should document the evidence for the candidate's educational accomplishment.

Application for Examination in 1984

A candidate who has completed an approved residency program and a candidate scheduled to complete an accredited residency program on or before August 31, 1984 may apply on or before November 30, 1983 to write the examination on June 25, 1984.

The form on which to apply to write the examination on June 25, 1984 may be obtained by *writing* to the Secretary's office after September 1, 1983. Each applicant must meet the requirements effective in the year he/she requests admission to the examination. As a part of the application form, endorsement and verification of the resident's experience, competence, SATISFACTORY PERFORMANCE and confirmation of the scheduled date for completion of the candidate's residency are requested of the Director of the obstetric-gynecologic residency program.

The Board will make the final decision concerning the applicant's eligibility after considering all circumstances affecting his eligibility.

A candidate's application to write the examination on June 25, 1985, completed in all details, together with payment of the application fee of \$100, must be post-marked on or before November 30, 1983.

THE REQUIREMENT OF UNRESTRICTED LICENSE MUST HAVE BEEN MET PRIOR TO THE TIME THAT THE APPLICATION IS SUBMITTED. AN EDUCATIONAL OR INSTITUTIONAL LICENSE IS NOT SATISFACTORY.

When the candidate is ruled eligible to write the examination he/she will be notified in early April (1) that the \$225 examination fee is payable and (2) the date the fee must be paid (see FEES), if the candidate is to be scheduled to write the examination in June.

When the Credentials Committee rules an applicant *not eligible*, a *new application and fee* may be submitted at a later date, but the candidate must then have fulfilled the requirements effective in the year of the new application.

Admission to the Written Examination

The candidate ruled eligible to write the examination will be sent an AUTHORIZATION for ADMISSION form which must be presented to the Proctor at the time and place of examination. When a candidate is scheduled to complete his/her residency program after the date of the written examination (but before September of that year), verification of the currently satisfactory manner in which the candidate is completing his/her residency must be reaffirmed by the signature of the Director of the residency program on the AUTHORIZATION for ADMISSION form, dated within the month the candidate is scheduled to write the examination.

Results of the Examination

The results of the examination written in late June will usually be reported to each candidate in approximately 10 weeks.

A passing grade on the written examination *does not* establish a candidate's eligibility to take the oral examination for certification.

Requests for Re-examination

A candidate eligible to write the examination in 1984 who fails to do so, as well as the candidate who writes but fails to pass the examination in 1984 must write the Board office on or before November 30, 1984 asking to be scheduled for the examination in 1985. All such requests must be accompanied by payment of the reapplication fee of \$100.00. It is not necessary to submit a new application in order to repeat the examination but to maintain eligibility to write the examination the candidate must have asked to write the next scheduled examination and have paid the reapplication fee. THE CANDIDATE MUST INDICATE CONTINUATION OF UNRESTRICTED LICENSE TO PRACTICE MEDICINE IN ONE OF THE UNITED STATES OR A PROVINCE OF CANADA.

The application and examination fee must be paid each year a candidate is to be scheduled to write the examination.

Obstetrics and Gynecology**Limited Eligibility**

Candidates who fail to take the written examination within three years of completion of the residency or fail the written examination three times must have additional education in order to become eligible to take the written examination again. Candidates must PASS the written examination within SIX YEARS of completion of the residency or obtain additional education in order to become eligible to take the written examination again.

The additional education shall consist of three months of full-time additional training satisfactory to the Board in an accredited obstetrics and gynecology residency program or satisfactorily complete 500 Category I credits in approved CME programs in obstetrics and gynecology during one year.

After the additional education as defined above is completed in a satisfactory manner, the candidate again becomes eligible to take the written examination. He/she must take the written examination within three years of establishing the new eligibility. Candidates who do not take the examination during those three years or who again fail the examination three times must again have additional education. Candidates must pass the examination within six years of achieving new eligibility or they will be obliged to obtain additional education.

The Oral Examination

All correspondence, applications and information directed to the Board must be in English.

Conduct of the Oral Examination

The Oral Examination is designed to evaluate the candidate's knowledge and skills in solving clinical problems in obstetrics-gynecology. It is emphasized that those candidates submitting case lists (see below) which contain cases in a single specialty within obstetrics and gynecology will be examined in all areas of obstetrics and gynecology. More than half of the examination will consist of questions concerning patient management problems. The candidate's list of patients will be used freely by the examiners for this purpose but additional basic clinical problems will be included. The remainder of the examination will include recall of basic knowledge in obstetrics-gynecology and interpretation of gross and microscopic pathology, x-ray films, sonograms and related material from photographic slides.

Microscopes and slide projectors will be used. The knowledge and skills required for the Oral Examination are the same as those listed in regard to the Written Examination.

Recording devices will not be permitted during the oral examination.

Candidates will be expected to demonstrate that they have acquired the capability to perform, independently, major gynecologic operations, spontaneous and operative obstetric deliveries, to manage the complications thereof and to perform the essential diagnostic procedures required of a consultant in obstetrics and gynecology.

Candidates will be expected to demonstrate a level of competence which allows them to serve as consultants to physicians who are non obstetrician-gynecologists in their community.

The report of the examining team will be reviewed by the Board of Directors and each candidate is passed or failed by vote of the Board.

Requirements

Requirements to Take the Oral Examination for Candidates Practicing in the United States or Canada

All requirements as stated for written examination plus:

1. Passing grade on the written examination.
2. Unrestricted licensure to practice medicine in one of the United States or Territories of the United States or a Province of Canada, or unrestricted privileges to prac-

tice medicine in the U.S. Armed Forces for no less than 12 months prior to the date of the application.

3. Actively engaged in unsupervised practice (private or nonprivate).
 - a. Independent unsupervised patient care.
 - 1) for no less than 12 months immediately prior to date of application or
 - 2) for no less than 6 months immediately prior to the January, for candidates who have successfully completed a Board-approved fellowship.
 - b. Unrestricted privileges to practice as an obstetrician-gynecologist in each of the hospital(s) in which the candidate has been responsible for patient care for the 12 months ending June 30 prior to the scheduled examination. If the candidate is under investigation or on probation, the examination will be deferred until the investigation is completed, the probation is lifted and full and unrestricted privileges are granted.
4. Submission of a typewritten list (in duplicate) on or before August 31 preceding his/her examination, of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the scheduled examination and also a list of 25 patients from his/her ambulatory (office) practice.

THE CANDIDATE IS PERSONALLY RESPONSIBLE FOR THE PROPER PREPARATION, ACCURACY AND COMPLETENESS OF THE CASE LISTS, WHICH WILL REFLECT THE UNSUPERVISED PRACTICE (PRIVATE OR NONPRIVATE) ACTIVITY FOLLOWING RESIDENCY AND FELLOWSHIP.
5. On the day of examination the candidate will be expected to sign the following statement on the Authorization for Admission form: "There have been no restrictions in my hospital privileges since the date of my application."
6. Candidates who fail the oral examination three times are required to take and pass the written examination again before reapplying for the oral examination.

NOTE: PRACTICE WHICH TOTALLY CONSISTS OF AMBULATORY CARE WILL NOT BE CONSIDERED ADEQUATE TO FULFILL THE REQUIREMENTS TO TAKE THE ORAL EXAMINATION.

Requirement Exceptions for Candidates Practicing in a Country Other Than the United States or Canada

- (1) Unrestricted license in the United States is not required.
- (2) Submission with the application of a letter(s) from a senior responsible officer in the hospital(s) where the candidate practices, verifying the candidate's responsibility for independent, unsupervised care of obstetric and gynecologic patients.

Application for Examination in 1984

Application to take the oral examination in December 1984 must be made on the "application for the 1984 examination" form. The application, complete in all details, with payment of the application fee of \$200.00 must be received in the Secretary's office during January or February, 1984. THE DEADLINE DATE FOR RECEIPT OF APPLICATIONS IN THE OFFICE OF THE SECRETARY IS A POSTMARK OF FEBRUARY 29, 1984. REQUESTS FOR THE APPROPRIATE FORM MUST BE MADE IN WRITING.

A candidate ruled eligible to take the oral examination in December 1984 will be so notified on or before July 15, 1984. He/she must then submit, on or before August 31, 1984:

1. (a) Duplicate, typewritten and verified lists of all pa-

tients dismissed from his/her care in all hospitals during the 12 months preceding June 30, 1984 and a list of 25 patients from his/her ambulatory (office) practice.

The candidate's lists of patients will be used as a basis for questions during the oral examination and will not be returned to the candidate, and

2. Payment of the examination fee by personal check or money order of \$325.00 (IN U.S. FUNDS).

Determination of Eligibility

The Board will request, by confidential inquiry, documented evidence concerning a candidate's professional reputation and in-hospital practice privileges from administrative officers of organizations and institutions to whom the candidate and his/her conduct of practice is known.

Each candidate will be required to furnish the Board with certain prescribed information concerning his/her performance in practice (maternal mortality rate — perinatal mortality rate — Caesarean Section rate — etc.).

Time as a "resident" or "house officer" in excess of that necessary to fulfill the requirements to take the written examination or time in a "student" or a teaching or research appointment which does not involve appointment to the staff of an approved hospital with unrestricted privileges to practice as an obstetrician and gynecologist, will not be acceptable evidence of a degree of responsibility for patient care that is acceptable fulfillment of the required independent practice.

PATIENT LISTS (a) NOT PROVIDING THE INFORMATION REQUESTED (b) NOT PREPARED IN ACCORDANCE WITH THE FORMAT REQUESTED OR (c) WHICH DO NOT HAVE ADEQUATE NUMBERS OF PATIENTS OR DO NOT INCLUDE ADEQUATE BREADTH AND DEPTH OF CLINICAL PROBLEMS MAY DISQUALIFY THE CANDIDATE FOR ADMISSION TO THE ORAL EXAMINATION.

Patient List for the Oral Examination

Each candidate for the Oral Examination must prepare the following lists for review by his Examiners at the time of examination. The candidate's list must include all hospitalized patients discharged or transferred from the candidate's care during the twelve months ending June 30 of the CURRENT YEAR and 25 ambulatory (office) patients and must be mailed to the Board office on or before August 31 preceding the December examinations.

The patients listed must be only those for whom the candidate has had personal responsibility for professional management and care. Recording such professional responsibility implies that the candidate has personally controlled the medical and/or surgical management of each patient listed. In the case of partnership or group practices, the patients listed should be only those managed by the candidate.

The candidate's list of patients will be freely used as a basis for questions which will be patient-management oriented. Questions will be developed which test the ability of the candidate to:

- 1) Develop a Diagnosis. This includes the necessary clinical, laboratory and diagnostic procedures.
- 2) Select and Apply Proper Treatment under elective and emergency conditions.
- 3) Manage Complications. This includes prevention, recognition and treatment.
- 4) Plan and direct follow-up and continuing care.

CARELESSLY PREPARED OR INCOMPLETE CASE LISTS MAY CONTRIBUTE TO FAILURE TO PASS THE ORAL EXAMINATION.

THE CANDIDATE SHOULD BRING A DUPLICATE PATIENT LIST TO THE ORAL EXAMINATION FOR PERSONAL REFERENCE. DO NOT INCLUDE ANY IN-

FORMATION ON THIS DUPLICATE LIST WHICH DID NOT APPEAR ON THE CASE LISTS SENT TO THE BOARD OFFICE.

The case lists must have numbers and sufficient breadth and depth of clinical difficulty. They must include a minimum of 50 patients with sufficient problems. The clinical problems will vary according to the nature of the candidates' practices. However, the problems must be of sufficient variety and severity to permit the evaluation of a candidate's ability to function as a consultant. Ordinarily these lists will include patients having obstetric management and a variety of major abdominal and vaginal surgical procedures.

Procedure

A candidate ruled eligible to take the Oral Examination the following December will be notified about July 15. Following this notification and before August 31, the candidate must submit the required list of patients.

A patient list should be accurately typed in duplicate across unbound sheets of white paper 8 1/2 x 11 inches in size. A separate list for obstetric and for gynecologic patients is required for each hospital. The headings must conform in all details and provide the information indicated by the format of the forms enclosed with the oral application.

Standard nomenclature should be used. Abbreviations are not acceptable. Only English language will be acceptable.

The duplicate lists of patients will not be returned after the examination. The candidate should bring a duplicate list to the examination.

1. GYNECOLOGY

A list of all gynecologic patients should be prepared in the format accompanying the application and grouped in accordance with treatment as follows:

- (1) major operative procedures
- (2) minor operative procedures
- (3) non-surgical admissions

The preoperative diagnosis should appear for all major and minor surgical procedures. For non-surgical conditions the admission diagnosis should be recorded. The treatment recorded should include all surgical procedures as well as primary non-surgical therapy. Pathologic diagnosis refers to the surgical pathologic diagnosis. In cases without tissue for histologic diagnosis the final clinical diagnosis should be listed.

Days in hospital on this listing of patients, as well as on all other lists, is the arithmetic difference between date of discharge and date of admission.

2. OBSTETRICS

A list of obstetric patients should be prepared in the format accompanying the application. List separately each patient with a complication or abnormality, as well as medical and surgical intervention during pregnancy, labor, delivery and the puerperium. In addition, a total of the number of normal, uncomplicated obstetric patients, managed by the candidate during the same 12 month period should appear at the end of the obstetric list.

Interpretation of "normal obstetric patients" for this listing implies that:

pregnancy, labor, delivery and the puerperium were uncomplicated, labor began spontaneously between the 37th and 42nd week of gestation, the membranes ruptured or were ruptured after labor began, presentation was vertex, anterior or transverse, labor was less than 24 hours in duration, delivery was spontaneous or by outlet forceps with or without episiotomy, from an anterior position, the infant was not asphyxiated (Apgar 6 or more) of normal size and healthy, the placental stage was normal and blood loss was not excessive.

Obstetrics and Gynecology

Deliveries not fulfilling these criteria must be listed individually.

3. PREGNANCY TERMINATIONS

The total number of uncomplicated terminations of pregnancy managed by the candidate during this same 12 month period, of twelve or less weeks duration, should be reported simply as a total number.

Interruptions of pregnancy of more than twelve weeks (menstrual age) duration should be prepared in the format accompanying the application. List each patient separately, indicating the duration of pregnancy, the technique employed, the duration of (1) hospitalization, and/or (2) your observation of the patient.

Also list separately as individual patients, all with complications following terminations of pregnancy, either observed or reported to you following an interruption of pregnancy, regardless of the duration of the pregnancy when termination was initiated.

4. COVER SHEETS

Each list of patients, (1) gynecologic, (2) obstetric, and (3) terminations of pregnancy, from each hospital should be verified as illustrated by the form accompanying the application. Note that the record librarian or other hospital official must attest that (a) the patients listed were cared for by the candidate, and (b) that all of the hospitalized patients dismissed from the candidate's care have been separately listed or reported in the totals reported for the period indicated.

5. SUMMARY SHEET

Using the form provided for this purpose, prepare a summary of all cases for all hospitals combined.

6. AMBULATORY (OFFICE) PATIENTS:

A list of 25 patients from the candidate's ambulatory (office) practice should be prepared in the format accompanying the application. List separately patients who have presented with any of the following problems. List no more than five patients from any one category.

Genetic Problems
 Amenorrhea
 Infertility
 Abnormal Uterine Bleeding
 Developmental Problems
 Sexual Dysfunction
 Contraception Complications
 Hirsutism
 Abnormal Cervical/Vaginal Cytology
 Pelvic Pain
 Vaginal Discharge/Pruritus
 Breast Problems
 Medical Complications of Pregnancy
 Premenstrual Tension
 Postoperative Problems
 Sexually transmitted disease
 Asymptomatic Pelvic Mass
 Pelvic Relaxation Problems
 Urinary Tract Infection
 Psychosomatic Problems
 Menopause

List separately each patient and include the problem (one of the listed categories), diagnostic procedures, treatment, results and number of office visits during the 12 month period.

Ruling of Ineligibility

A candidate ruled ineligible to take an oral examination, may subsequently re-apply, but must then submit a new application, pay the application fee, and meet the requirements applicable at the time he/she re-applies.

Re-examinations

A candidate who fails to pass the oral examination must reapply in order to take the examination another year by submission of a new application during January and February, with payment of the reapplication fee of \$200.00.

A candidate reapplying for re-examination will again be asked to provide verification of his responsibilities for patient care and will again be notified, early in July in regard to his eligibility to take the next examination.

A candidate accepted for re-examination must again submit, on or before August 31 prior to examination duplicate, typewritten and verified lists of all patients dismissed from his/her care in all hospitals during the 12 months prior to June 30 prior to the oral examination and a list of 25 patients from office (ambulatory) practice.

The examination fee of \$325.00 is due each time a candidate receives notice that he/she can be scheduled to take the oral examination. Each re-examination will be conducted by examiners who have no knowledge of the fact or circumstances of a candidate's previous failure.

Candidates who fail the oral examination three times are required to take the written examination again within three years and pass it again before applying for the oral examination. At that time they will have the same level of eligibility that candidates achieve when they pass the written examination for the first time.

Postponement of Oral Examination

A candidate failing to take an oral examination for which he/she had been scheduled must submit a new application during January or February of the following year when his/her eligibility to take the next examination will be determined on the basis of the candidate's professional activities as reported during the current year. Payment of the \$200.00 re-application fee must accompany each re-application.

If notified of his/her eligibility to take the next oral examination he/she must again submit before August 31 a listing of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the oral examination and a list of 25 patients from ambulatory (office) practice.

Fees

Since the fees have been computed to cover the costs of examination and administrative expense, they will not be refunded or credited. All fees must be paid in United States currency.

The Written Examination

The application fee of \$100.00 must be enclosed with each application, reapplication or request to write the examination. The candidate will usually be notified early in April that his/her application or request has been approved, at which time the \$225.00 examination fee will be due. If payment of the examination fee has not been received in the Secretary's office postmarked on or before May 1, the candidate will not be scheduled to write the examination in June.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to June 1.

The Oral Examination

The application fee of \$200.00 must be enclosed with each application to take the oral examination. A candidate notified in mid-July of his/her eligibility to take the oral examination in December is required to pay the \$325.00 examination fee before he/she will be scheduled to take the oral examination. If the examination fee has not been received in the Secretary's office by August 31, the candidate will not be scheduled to take the examination the following December.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to October 30th.

Revocation of Diploma or Certificate

Each candidate when making application, signs an agreement regarding disqualification or revocation of his/her diploma, or other evidence of qualification certificate, for cause. Revocation may occur whenever:

1. The physician shall not in fact have been eligible to receive the diploma or certificate, irrespective of whether or not the facts constituting such ineligibility were known to or could have been ascertained by this Board, its members, directors, examiners, officers or agents at or before the time of issuance of such diploma or certificate.

2. Any rule governing examination for a diploma or certificate shall have been violated by the physician but the fact of such violation shall not have been ascertained until after the issuance of his diploma or certificate.

3. The physician shall violate the standards of the ethical practice of medicine then accepted by organized medicine in the locality in which he/she shall be practicing and, without limitation of foregoing, the forfeiture, revocation or suspension of his/her license to practice medicine, or the expulsion from, or suspension from the rights and privileges of membership in a local, regional or national organization of his professional peers shall be evidence of a violation of such standards of the ethical practice of medicine.

4. The physician shall fail to comply with the Rules and Regulations of this Board.

5. The issuance of, or receipt by him/her of such diploma, certificate or other evidence of qualification shall have been contrary to or in violation of the Certificate of Incorporation or the By-laws of this Board.

Upon revocation of any diploma or certificate by this Board as aforesaid, the holder shall return his/her diploma or certificate and other evidence of qualification to the Secretary of the Board and his name shall be removed from the list of certified specialists.

AMERICAN BOARD OF OPHTHALMOLOGY

- Melvin L. Rubin, MD, Chairman, Gainesville, Florida
- Thomas D. Duane, MD, Vice Chairman, Philadelphia, Pennsylvania
- Ronald M. Burde, MD, St. Louis, Missouri
- Frederick T. Fraunfelder, MD, Portland Oregon
- George Edward Garcia, MD, Boston, Massachusetts
- Froncie A. Gutman, MD, Cleveland, Ohio
- Dan B. Jones, MD, Houston, Texas
- Robert E. Kalina, MD, Seattle, Washington
- Paul R. Lichter, MD, Ann Arbor, Michigan
- Marshall M. Parks, MD, Washington, DC
- Thomas H. Petit, MD, Los Angeles, California
- Robert D. Reinecke, MD, Philadelphia, Pennsylvania
- Stephen J. Ryan, MD, Los Angeles, California
- Robert R. Waller, MD, Rochester, Minnesota
- George W. Weinstein, MD, Morgantown, West Virginia
- Robert B. Welch, MD, Baltimore, Maryland
- Robert N. Shaffer, MD, Secretary-Treasurer, Philadelphia, Office of the Board, 111 Presidential Blvd., Bala Cynwyd, Pennsylvania 19004

Requirements

Many candidates write the Secretary-Treasurer outlining their training and asking for an estimate of their qualifications and whether further training is required. The Board's requirements, as published herewith, provide this information and any candidate should be able to estimate his/her status after studying these requirements. Individual officers or members of the Board of Directors cannot and will not make such estimates. All determinations of a candidate's status will be made only by the Committee on Admissions in accordance with the rules and regulations of the Board, after submission of an application for examination and payment of the registration fee, which must accompany the application. Personal interviews with officers and members of the Board of Directors should not be requested at any time.

EDUCATIONAL

All applicants must have graduated from a medical

school or from a school of osteopathy.

All candidates entering ophthalmology training programs must have taken a postgraduate clinical year (PGY-1) in a program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada or in an equivalent program. The PGY-1 year should be comprised of training in which the resident has primary responsibility for patient care in a field such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, six months of this year should be a broad experience in direct patient care.

In addition to a PGY-1 year, all applicants must have completed a minimum of thirty-six (36) months in a formal graduated residency training program in ophthalmology (PGY-4 or better) in either the United States, approved by the Residency Review Committee and accredited by the Accreditation Council for Graduate Medical Education, or in Canada approved by the Royal College of Physicians and Surgeons of Canada.

If a program is disapproved during the course of a resident's training he/she must complete the remaining required number of months of training in another approved program.

As of January 1, 1985 program chairmen will be required to certify satisfactory completion of thirty-six (36) months of formal graduated ophthalmology residency. This requirement pertains to candidates applying for the April 19, 1986 Written Qualifying Test.

LICENSURE

A candidate may have graduated from a medical school of some country other than the United States or Canada. Graduates of foreign medical schools must have a certificate from the Educational Commission for Foreign Medical Graduates (ECFMG).

All applicants must have a license to practice medicine, without restriction pertaining to the practice of ophthalmology, in the United States or Canada.

Applications

Applicants who wish to be examined by the Board shall complete, sign and file with the office an application on the official form in current use by the Board, together with the supporting data required by the application. Applications can be obtained from the Chairmen of the approved residency programs or the office of the Board. *Applications will not be accepted prior to January 1st of each year and must be postmarked no later than August 1st in order for the applicant to be considered for the Written Qualifying Test to be conducted during the following calendar year. All supporting information including letters of endorsement must also be postmarked by August 1. (No extension to this deadline will be made for any reason.)*

Applications shall be accompanied by a check payable to the Board for \$450.00 to cover the application fee. No application will be considered until the fee and all required supporting data, including letters of endorsement and two recent photographs for identification at the Written Qualifying Test and Oral Examination, have been received at the office.

Applicants who meet all requirements are admitted to the Written Qualifying Test if the application is approved by the Committee on Admissions.

An incomplete application can only remain active for 2 years from date of receipt. If the applicant does not complete his/her application in this period for review by the Committee on Admissions the application will no longer be valid and the registration fee will be returned.

Fees

- Review of application and registration for Written Qualifying Test, \$450.00, payable with application
- Oral examination, \$300.00, payable on successful completion of the Written Qualifying Test
- To repeat the Written Qualifying Test, \$300.00

Ophthalmology

To repeat the entire oral examination, \$300.00

To repeat a single subject of the oral examination, \$150.00

To repeat two or three subjects of the oral examination, \$220.00

The application fee, oral examination fee and re-examination fees charged by the Board have been determined on the basis of the costs incurred by the Board in the examination of applicants and the administration of its business and may be modified from time to time by the Board of Directors. Fees for accepted candidates for the Written Qualifying Test and the oral examination are not refundable. The Directors of the Board serve without compensation except reimbursement of expenses.

Cancellations

To cover administrative expenses a fee of \$50.00 will be charged any candidate who cancels or fails to keep an examination assignment, written or oral, regardless of reason.

Written Qualifying Test

Before being accepted for oral examination, each applicant must pass a Written Qualifying Test. This is a multiple choice test which may cover any topic in ophthalmology and is especially devoted to the following subjects from the Basic and Clinical Science Course of the American Academy of Ophthalmology:

1. Fundamentals and Principles of Ophthalmology (Anatomy, Biochemistry, and Physiology)
2. Ophthalmic Pathology
3. Optics, Refraction and Contact Lenses
4. Intraocular Inflammation, Uveitis, and Ocular Tumors
5. Retina and Vitreous
6. Neuro-Ophthalmology
7. Binocular Vision and Ocular Motility
8. External Disease and Cornea
9. Glaucoma, Lens, and Anterior Segment Trauma
10. Orbit, Eyelids, and Lacrimal System
11. General Medical Care Problems

The test has been described in the Board's booklet entitled "Written Qualifying Test."

The Written Qualifying Test is given simultaneously in a number of designated cities in the United States and Canada in April of each year. An applicant who passes the Written Qualifying Test shall submit to the office a check payable to the Board for \$300.00 to cover the fee for the oral examination and shall thereafter be assigned to an oral examination. An applicant who fails the Written Qualifying Test may apply for reexamination and will be permitted to repeat the test upon payment of the reexamination fee of \$300.00. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she will be required to reactivate the application for approval and submit an additional application fee. *An applicant who fails the Written Qualifying Test on two consecutive occasions may reactivate the application for approval and is required to submit an additional application fee, and present evidence of additional preparation.*

An applicant who fails to take the Written Qualifying Test within twenty-four (24) months after notice has been sent to him/her that his/her application has been accepted will not thereafter be accepted for examination unless he/she reactivates the application for approval and submits an additional application fee.

Oral Examinations

Oral examinations are usually held twice annually at a time and place determined by the Board and shall be announced in the JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION. The Board reserves the right to limit the number of candidates admitted to any scheduled examination and to designate the candidates to be ex-

amined. *The oral examination must be taken within twenty-four (24) months after notice has been sent to the applicant that he/she has passed the Written Qualifying Test, or the applicant shall be required to reactivate the application for approval and submit an additional application fee, and again pass the Written Qualifying Test.*

1984 ORAL EXAMINATIONS

The oral examination will be divided into the following subjects:

1. Optics, Refraction and Visual Physiology
2. Neuro-ophthalmology
3. Ocular Motility
4. Medicine, Surgery and Pathology
 - I. External Eye and Adnexa
5. Medicine, Surgery and Pathology
 - II. Anterior Segment of the Eye
6. Medicine, Surgery and Pathology
 - III. Posterior Segment of the Eye

1. OPTICS, REFRACTION AND VISUAL PHYSIOLOGY.

Candidates should be familiar with the basic principles of physical and geometrical optics and the operation of standard optical instruments. They should understand the essentials of visual physiology including visual acuity, light and dark adaptation, accommodation, and color vision. They should know the various forms of ametropia, principles and techniques of refraction, principles of lens design, and methods of correction of ametropia with spectacles and contact lenses. Candidates should be familiar with the methods for prescribing protective lenses, absorptive lenses, and aids for low vision.

2. **NEURO-OPHTHALMOLOGY AND ORBIT.** Candidates should know the anatomy of the orbit and the neuroanatomy of the visual, oculomotor and pupillomotor pathways. They should be familiar with the pathogenesis, histopathology, clinical diagnosis, medical therapy and surgery of diseases of the orbit, optic nerve and chiasm. They should understand the principles and techniques of various diagnostic procedures, including visual field testing, visually evoked responses, ultrasonography, conventional x-ray imaging, and CT scanning. Candidates should be familiar with the clinical features, differential diagnosis, and management of various disorders of the orbit, visual pathways, oculomotor system, and pupillomotor pathways, including the principles and complications of orbital surgery.

3. **OCULAR MOTILITY.** Candidates should understand the anatomy and physiology of the neuromuscular mechanisms subserving ocular motility and binocular vision. They should be familiar with the methods of examination for detection and assessment of sensory and motor disorders. Candidates should know the clinical features, differential diagnosis, natural course, and management of the various types of comitant and noncomitant deviations. They should be familiar with the principles and complications of surgery on the extraocular muscles.

In each of the following examinations, the candidate must demonstrate adequate knowledge concerning pathogenesis, histopathology, clinical diagnosis, medical therapy and surgery of the diseases affecting the eye. Props illustrating clinical features, examination techniques, diagnostic studies and histopathologic findings will be used to test the candidate's knowledge of ocular anatomy, physiology, biochemistry, microbiology, immunology and pharmacology. These examinations will determine their ability to utilize and synthesize clinical, laboratory, and histopathologic data to arrive at a correct diagnosis and plan for medical and surgical management of patients. These examinations will include developmental, dystrophic, degenerative, inflammatory, infectious, toxic, traumatic, neoplastic, and vascular disease affecting the eye and its adnexa. The candidate must be able to discuss the indications for, principles of, and complications following surgical procedures.

4. MEDICINE, SURGERY, AND PATHOLOGY. I.

EXTERNAL EYE AND ADNEXA. Examination concerns diseases of the lacrimal system, lids, conjunctiva, cornea and anterior sclera.

5. MEDICINE, SURGERY, AND PATHOLOGY. II. ANTERIOR SEGMENT OF THE EYE. Examination concerns diseases of anterior chamber angle, iris, ciliary body, and lens.

6. MEDICINE, SURGERY, AND PATHOLOGY. III. POSTERIOR SEGMENT OF THE EYE. Examination concerns diseases of the vitreous, retina, choroid, and posterior sclera.

Re-examination

An applicant who fails the Written Qualifying Test may apply for re-examination and will be permitted to repeat the test upon payment of the re-examination fee of \$300.00. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she will be required to reactivate the application for approval and submit an additional application fee. An applicant who fails the Written Qualifying Test on two consecutive occasions may reactivate the application for approval and is required to submit an additional application fee and present evidence of additional preparation.

Candidates who have failed either Histopathology or Medical Ophthalmology prior to the combining of the subjects in 1982 will be re-examined on the subjects separately. Similarly, candidates who fail Medical Ophthalmology-Ocular Pathology or Principles of Ophthalmic Surgery in 1982 will be re-examined on those subjects separately.

If an applicant fails to pass all subjects within three oral examinations, he/she shall be required to reactivate the application for approval and submit the application fee, and pass another Written Qualifying Test, before being admitted to the oral examination. If an applicant is unsuccessful in five or more subjects in an oral examination he/she will be required to repeat the Written Qualifying Test and pass it before being admitted to an oral examination.

An applicant who fails the entire oral examination may apply for reexamination and will be permitted to repeat the examination within twenty-four (24) months after such failure if he/she presents evidence of additional preparation and pays the reexamination fee of \$300.00. However, reexamination will not be permitted for a period of twelve (12) months following such failure, in order to allow time for such additional preparation. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she may reactivate the application for approval and submit an additional application fee and again pass the Written Qualifying Test before being admitted again to the oral examinations.

An applicant who fails to pass all topics in the oral examination, but does not fail the entire examination, must apply within two years for a reexamination limited to the subjects which he/she failed to pass. He/she shall pay a reexamination fee of \$150.00 to repeat the examination in one subject or \$220.00 in two or three subjects. If an applicant does not repeat the one or more topics within twenty-four (24) months after such failure, he/she will be required to reactivate the application for approval and submit an additional application fee and again pass the Written Qualifying Test before being admitted to an oral examination.

Candidates who fail to pass one or two disciplines in the oral examination may apply to sit for the next scheduled oral examination. Candidates who fail to pass three disciplines or who fail the entire examination must wait one year before being permitted to sit again for the oral examination and present evidence of additional preparation.

Any candidate who shall fail or has failed, on four (4) consecutive occasions, to take a Written Qualifying Test for which the applicant was scheduled will not be permitted to register for a subsequent Written Qualifying Test until two

(2) years have elapsed from the date of the last test for which the applicant had been scheduled. This provision shall apply to all applicants who have become scheduled to take the Written Qualifying Test in 1983 and all subsequent years.

Results of Examinations

Within a reasonable time after completion of the written or oral examinations, the applicant shall be notified by the Secretary-Treasurer as to the results thereof. The decision of the Board as to the results of the written or oral examination shall be final and conclusive. To preserve confidentiality, results of an examination will not be given over the telephone.

Certification

An applicant who successfully passes both the written qualifying and oral examinations within the required time limitations hereinabove set forth, as determined by the Board in its sole discretion, shall be entitled to receive a certificate without further consideration of his qualifications by the Board. Physicians who have received the certificate are DIPLOMATES of the Board.

Revocation and Probation

A certificate of the Board may be revoked or the certificate holder placed on probation, in accordance with the rules and regulations of the Board, on the following grounds:

- (a) If the certificate was issued contrary to or in violation of any rule or regulation of the Board,
- (b) If the certificate holder was not eligible to receive, or has since become ineligible to hold, the certificate,
- (c) If the certificate holder made any misstatement or material omission of fact to the Board in his/her application or otherwise.

American Board of Medical Specialties

The American Board of Medical Specialties, previously called the Advisory Board for Medical Specialties, was established in 1933 to serve in an advisory capacity to the American Specialty Boards and to cooperate with organizations that seek its advice concerning the certification of medical specialists. The official recognition of a specialty board by the American Board of Medical Specialties is indicated by the listing of Diplomates in the DIRECTORY OF MEDICAL SPECIALISTS. The American Board of Ophthalmology contributes an annual fee of \$2,000 in addition to \$38.00 per Diplomate certified, to the American Board of Medical Specialties, as do all other medical specialty boards, in support of the activities of ABMS.

Statements of Eligibility

The Board does not issue statements of "eligibility" for its examinations. The only information the Board will divulge is whether a candidate is or is not certified or is or is not scheduled for an examination.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

- Eugene R. Mindell, MD, President, Buffalo, New York
- Kingsbury G. Heiple, MD, President-Elect, Cleveland, Ohio
- Gerald S. Laros, MD, Secretary-Treasurer, Chicago, Illinois
- Paul Campbell, MD, Portland, Oregon
- C. McCollister Evarts, MD, Rochester, New York
- J. Ted Hartman, MD, Lubbock, Texas
- Franklin T. Hoaglund, MD, San Francisco, California
- Patrick J. Kelly, MD, Rochester, Minnesota
- Donald B. Kettelkamp, MD, Indianapolis, Indiana
- George E. Omer, Jr., MD, Albuquerque, New Mexico
- Thomas E. Whitesides, Jr., MD, Atlanta, Georgia

Orthopaedic Surgery

Frank C. Wilson, MD, Chapel Hill, North Carolina
 Henry H. Banks, MD, Executive Director,
 Office of the Board, 444 North Michigan Avenue,
 Suite 2970, Chicago, Illinois 60611

Introduction

1. Orthopaedic Surgery is the medical specialty that includes the investigation, preservation and restoration of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

2. The American Board of Orthopaedic Surgery, Inc., founded in 1934 as a private, voluntary, non-profit organization, is autonomous and functions unselfishly and objectively for the purpose of conducting investigations and examinations of voluntary candidates. The standing committees of the Board are the Eligibility, Examinations, Graduate Education, Finance, Planning and Development and Recertification committees. Other committees may be named as deemed necessary. The Board has an annual meeting and special meetings are held on occasion, at appropriate times. The Board establishes minimum educational standards in the specialty, conducts a certifying examination, issues certificates, stimulates education, and aids in the evaluation of educational facilities in the best interests of the public and the medical profession.

3. Applicants desiring certification by The American Board of Orthopaedic Surgery must satisfy requisites of professional education and experience as stated in the Rules and Procedures in force at the time of application. Applicants will be considered regardless of sex, race, color or creed, and will not be rejected for discriminatory, arbitrary or capricious reasons.

4. A current registry of all of its certificate holders is maintained by the Board and is available for consultation by physicians, hospitals, medical schools and others. The names of Diplomates appear in the Directory of Medical Specialists published for the American Board of Medical Specialties by Marquis Who's Who, Inc. of Chicago, Illinois. The Board does not confer any rights on its Diplomates or purport to direct in any way licensed physicians in the conduct of their professional duties. It is neither the intent nor the purpose of the Board to define requirements for membership in any organization or on the staff of any hospital.

5. The members of The American Board of Orthopaedic Surgery are elected from the Diplomates nominated by the American Orthopaedic Association, the American Medical Association, and the American Academy of Orthopaedic Surgeons. They serve without salary.

Minimum Educational Requirements for Board Certification

The American Board of Orthopaedic Surgery evaluates all applicants for their proficiency in orthopaedic surgery. The minimum educational requirements of the Board should not be interpreted as restricting programs to the minimum standards. Directors of programs may retain residents in the educational program as long as necessary beyond the minimum time of five years in order that the resident achieve the necessary degree of competence in orthopaedic surgery. A resident who has not experienced a progressively increasing responsibility in residency education will not be viewed as having satisfied the educational requirements regardless of the number of years the resident has spent in an accredited program. In order to establish satisfactory competence in the specialty of orthopaedic surgery it has been necessary to define the minimum educational requirements, which are detailed below.

Effective with applicants who began their first accredited post-graduate year on or after July 1, 1978, satisfactory completion of five years of accredited post-doctoral education is required. Post-doctoral education is defined as education obtained following the granting of the doctoral

degree. For those applicants who began their first accredited post-graduate year before July 1, 1978, four years of accredited post-doctoral education are required; in this case, only one year of graduate education credit can be obtained from 2. A-D below.

1. During the five years some accredited programs may elect to schedule two or more subject areas concurrently. It is necessary that clearly defined education and training in orthopaedic skills be emphasized in the categories of adult orthopaedics, surgery of the spine, including removal of protruded intervertebral discs, children's orthopaedics, fractures and trauma, surgery of the hand, the foot, rehabilitation, and basic science. It is emphasized that where time requirements are indicated in each subject area, these must be considered as *minimal*; additional experience is very desirable.

Each program may develop individual sick and vacation times for the resident. However, a minimum of 46 full weeks annually is expected to be spent in full-time resident educational activity.

2. Except as noted above, two years of graduate education credit may be obtained from the following categories. It is recommended that one of these years be that as defined in (A) below.

(A) First post-graduate year (PGY-1) should be broadly based and should include no more than three months in orthopaedic surgery.

(B) One year of an accredited residency in surgery or medicine.

(C) Research. Credit may be obtained for up to 12 months of study in either clinical or laboratory research. This requires submission of documentation of the research problem and review of it by the Committee on Eligibility. If the program director has any questions about the appropriateness of such a research program, *tentative*, prospective approval may be requested from the Committee on Eligibility.

(D) Work in uniformed services of the United States of America. Credit is granted only after termination of service and presentation of a Record of Residency Assignments form, letters from chiefs of services, a list of operations performed by the applicant, and such other information as may be required by the Committee on Eligibility. Credit may be granted on the basis of one month of credit for one month of education when obtained in accredited programs. Subject to approval by the Committee on Eligibility, up to one month of credit may be granted for two months of education, not to exceed twelve months, when the applicant was assigned to unaccredited hospital services. A Record of Residency Assignments form must be maintained on applicants during their assignments. These forms may be obtained from the Board office.

3. The term "fellow" is not synonymous with "resident." A resident is an individual enrolled in an accredited educational program and who is in the process of developing credits for Board eligibility.

4. It is mandatory that at least three years (36 months) be served as an orthopaedic surgery resident in an accredited orthopaedic surgery residency educational program and include a minimum of:

Adult Orthopaedics	12 months
Children's Orthopaedics	6 months
Fractures/Trauma	9 months

Concurrent or integrated programs may allocate time by proportion of experience.

It is necessary that the children's educational experience be obtained in a program which is accredited for this category by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council

for Graduate Medical Education.

The above mandatory requirements include education in the care of the various anatomical areas of the human body, specifically including the foot, the hand, the spine, the neck, the major joint areas, and involving the contents of the spine and extremities. The various effects of trauma and athletic injuries are included.

Age groups from infancy through old age are expected to be included. Emergency, acute and chronic care as well as rehabilitation of patients must be emphasized. All phases of diagnosis and treatment must be included in the educational process, including musculoskeletal radiology and appropriate laboratory tests. Education is expected in areas relating to neurology, rheumatology, basic science, orthotics, prosthetics and physical medicine.

The remaining educational experience may consist of additional education in any of the above areas. A period of less than six months can be served in an unaccredited institution.

Basic Science: The subject areas to be included are anatomy, pathology, microbiology, physiology, biochemistry, biomechanics, biomaterials and other basic sciences related to the musculoskeletal system. This educational program should facilitate the study of what is known in these fields as they relate to orthopaedic surgery and, if possible, to provide opportunities for the resident to apply these basic sciences to all phases of orthopaedic surgery.

5. The educational experience in orthopaedic surgery obtained in the United States must be in programs accredited by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council for Graduate Medical Education. All other educational experience obtained in the United States must be in programs accredited by the Accreditation Council for Graduate Medical Education and the appropriate Residency Review Committee for the category of education for which credit is sought. (See list of accredited services in the *Directory of Residency Training Programs* accredited by the Accreditation Council for Graduate Medical Education.)
6. The educational experience obtained in Canada must be taken in services approved by the Royal College of Physicians and Surgeons of Canada for education in orthopaedic surgery and must include a minimum of three years as a resident in orthopaedic surgery as outlined in Minimum Educational Requirements for Board Certification, effective with those applicants who began the orthopaedic surgery portion of their education on July 1, 1979 and thereafter.
7. The Board also accepts educational experience obtained in programs approved by the appropriate organization in countries with which the Board has entered into reciprocity agreements, subject to individual review. (See Requirements for Examination 10.)

Requirements for Examination

In order to be declared eligible for the examination an applicant must meet the following requirements:

1. An applicant must have satisfactorily completed the minimum educational requirements as listed in the preceding Section.

2. For orthopaedic education obtained in the United States, a completed Record of Residency Assignments form, which details the location, content, time spent on each rotation and number of years of orthopaedic surgery education that have been satisfactorily completed by the applicant and for which credit has been granted, must be sent to the Board office by the program director. The fully completed Record of Residency Assignments form is due in the Board office within 30 days of the completion of the residency.

When a resident leaves a program prematurely, the program director must record the reasons for leaving and

confirm those rotations for which credit is being granted and send the completed Record of Residency Assignments form to the Board office within 30 days. If the resident enters a new program, it is the responsibility of the new program director to obtain a copy of this resident's Record of Residency Assignments form, to review it thoroughly and to develop a program for this resident which will result in progressively increasing responsibility in orthopaedic surgery residency education.

3. An applicant must possess a full and unrestricted license to practice medicine in the United States or Canada, or be engaged in full time service in the federal government. An applicant will be rendered ineligible by limitation or termination of any right associated with the practice of medicine in any state, province or country by reason of a violation of a medical practice act or other statute or governmental regulation, or disciplinary action by any medical licensing authority.

4. Applicants who completed formal education on or after June 1, 1981, are required to be continuously and actively engaged in practice restricted to orthopaedic surgery, other than as a resident or fellow (or equivalent), for at least twenty-four (24) full months prior to the date of examination. An applicant is expected to remain in one practice location for a minimum of twelve (12) consecutive months. A change in location, type of hospital practice or practice association may result in a deferral.

Those applicants who completed formal education prior to June 1, 1981, are required to be continuously and actively engaged in practice restricted to orthopaedic surgery, other than as a resident or fellow (or equivalent), for at least twelve (12) full months in one location prior to the date of examination.

The practice must take place in the United States or its territories, Canada or a United States uniformed services' installation and include hospital admitting and surgical privileges at the time of application for the examination and at the time of the examination. Professional proficiency and adherence to acceptable ethical and professional standards must be demonstrated. Preferably, this practice should be in an independent setting. The Committee on Eligibility recognizes that in the academic community, this may not always be possible. It will, therefore, consider such applicants on an individual basis. Qualifications will be determined by the Committee on Eligibility after review of the application, letters of recommendation and other data pertaining to these matters. Representatives of the Board may visit a community in order to evaluate the work of an applicant.

5. It is the responsibility of the applicant to provide the information upon which the Committee on Eligibility bases its evaluation of the qualifications of the applicant. This responsibility extends to information which the Committee on Eligibility requests from other persons. If the Committee on Eligibility does not receive requested information which it believes to be relevant to the qualifications of an applicant from the applicant, a program director, a reference, a hospital representative or other source, it will notify the applicant and defer making a decision with respect to the eligibility of the applicant until the information is received.

6. An applicant declared ineligible by the Committee on Eligibility will be informed of the basis of such action and may be afforded a hearing by the Appeals Committee of The American Board of Orthopaedic Surgery, if requested.

7. In lieu of the time requirement set forth in paragraph 4, an applicant in United States uniformed service who has a remaining military obligation of a least two years, may satisfy the practice requirement if the applicant has been assigned as an orthopaedic surgeon in a hospital setting for one full year. The applicant must submit a letter from his or her immediate supervisor evaluating his or her capability in the practice of orthopaedic surgery and such other documentation as the Committee on Eligibility may require to demonstrate professional proficiency and adherence to acceptable ethical and professional standards.

Orthopaedic Surgery

8. An applicant must be prepared to submit as a part of the application to the Committee on Eligibility, if requested, a list of all patients admitted to the applicant's care in the hospital or hospitals in which the applicant has practiced. Such a list shall include the name of the hospital, the hospital number for each patient, the patient's age, definitive diagnosis, the treatment, the end result and the period of time covered. The authenticity of the patient list must be certified by the hospital administrator or record librarian. An applicant engaged in practice in a partnership or assigned, full time in a private or governmental hospital must, upon request, submit a list of patients cared for primarily by the applicant. This list must also be certified by the hospital administrator or record librarian.

9. An applicant practicing in Canada is required to have fulfilled the requirements of The American Board of Orthopaedic Surgery and to have passed the qualifying examinations in orthopaedic surgery of the Royal College of Physicians and Surgeons of Canada before applying for the examination of The American Board of Orthopaedic Surgery unless three or more years of the required accredited orthopaedic surgery education have been obtained in the United States.

10. An applicant originating in a country with which The American Board of Orthopaedic Surgery has a reciprocal educational credit agreement and which requires other qualifying examinations shall be considered only after consultation between The American Board of Orthopaedic Surgery and the appropriate orthopaedic organization in the country in which the applicant has had orthopaedic surgery education.*

*United Kingdom
South Africa

Australia
New Zealand

The date, place and deadline for submission of applications and fees for the examination are announced in the Journal of the American Medical Association, in the Journal of Bone and Joint Surgery, and in the Bulletin of the American Academy of Orthopaedic Surgeons.

Procedure for Application

1. A completed application for examination must be postmarked on or before October 31st the year preceding the examination. *The application must be accompanied by a nonrefundable fee of \$100.00 and must be sent by registered mail.*

2. An application remains in force for three consecutive examinations unless a new application is requested by the Board. A new application must be completed if the candidate does not pass the examination within a three-year period. If a candidate does not take the examination after being declared eligible, the applicant will not be considered for any future examination during the three-year term of the application unless a written request for reconsideration and a nonrefundable reapplication fee of \$100.00 are submitted to the Board office. *These must be postmarked on or before October 31st the year preceding the examination for which reconsideration is being requested and must be sent by registered mail.*

3. It is the responsibility of the applicant to notify the Board office of any change of address, practice association or hospital staff affiliation during the three-year term of the application.

If an applicant changes practice location, practice association or acquires new hospital staff affiliations, new references will be solicited by the Board.

4. The decision of the Committee on Eligibility is mailed to the applicant no later than 60 days prior to the examination date.

5. The candidate must submit a fee of \$600.00 on or before the date specified in the letter of notification of eligibility for the examination. The fee will be forfeited if the candidate fails to appear for the examination or

cancels after being scheduled. *This fee must be sent by registered mail.*

6. If it is determined that an applicant has falsified information in the application form, the applicant will not be considered for eligibility for the examination and must wait a period of three years before being allowed to file a new application. The applicant will not be considered for eligibility during the three-year interim.

Period of Board Eligibility

The Committee on Eligibility meets each year to consider applications for the certifying examination. At this meeting, an applicant will be declared eligible or noneligible for the next examination. If declared eligible, a candidate is considered board eligible only for the period of time (usually not longer than three months) until the next examination is administered. Those candidates who elect not to take the examination, and those who do not pass may apply for the next scheduled examination by submitting a \$100.00 nonrefundable reactivation fee and a written request for reconsideration for examination before the deadline of October 31st the year preceding the examination for which reconsideration is being requested. (See Unsuccessful Candidates.) Eligibility for that examination will not be considered until the Committee on Eligibility again meets, usually in March. Eligibility does not carry over automatically from year to year.

Scope of the Examination

The examination is in all aspects of orthopaedic surgery as defined in the Introduction.

Certification by the American Board of Orthopaedic Surgery

1. The American Board of Orthopaedic Surgery awards a Certificate to a candidate who confines his/her professional activity to orthopaedic surgery, who is acceptable on the basis of his/her demonstrated proficiency in orthopaedic surgery and adherence to ethical and professional standards, and who passes the certifying examination. This portion of the Board's responsibility is discharged by issuance of a Certificate to an individual found qualified as of the date of certification.

2. A Certificate may be revoked because of intentional and substantive misrepresentation to the Board respecting the applicant's education and other requirements for eligibility, or because of suspension or termination of the right to practice medicine in any State, Province or Country by reason of a violation of a medical practice act or other statute or governmental regulation.

3. Before the revocation of a Certificate is carried out the Diplomate will be informed of the basis of such action and will be afforded a hearing following procedures as formulated by the American Board of Orthopaedic Surgery.

4. Should the circumstances which were considered in justification for revocation or surrender of the Diplomate's Certificate be corrected, the Board may subsequently reinstate the Certificate after appropriate review of the individual's qualifications and performance, using the same standards as for other applicants for certification.

Unsuccessful Candidates

Unsuccessful candidates may be permitted to repeat the examination on the following basis:

1. The Committee on Eligibility will consider applicants for re-examination upon receipt of a written request for reconsideration and a nonrefundable fee of \$100.00 to reactivate the application. *The written request and the fee of \$100.00 must be postmarked on or before October 31st the year preceding the examination for which reconsideration is being requested, and must be sent by registered mail.* Upon receipt of notification of acceptance by the Committee on Eligibility for a repeat examination the candidate

will submit to the Board a fee of \$600.00 on or before the date specified in the letter of notification of eligibility for the examination. *All applications, requests and fees must be sent by registered mail.*

2. Each applicant's application must again be approved by the Committee on Eligibility and a new application may be requested. (See Procedure for Application.) Eligibility does not carry over automatically from year to year.

3. It is the responsibility of the applicant to notify the Board office of any change of address, practice association or hospital staff affiliation during the three-year term of the application.

If an applicant changes practice location, practice association or acquires new hospital staff affiliations, new references will be solicited by the Board.

Uniformed Services

Medical officers who have elected to serve in United States uniformed services as their life career may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to the practice of orthopaedic surgery. (See Requirements for Examination 7.)

Accredited Orthopaedic Surgery Residencies

1. Education in orthopaedic surgery in the United States must be obtained in institutions accredited for graduate education in orthopaedic surgery by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council for Graduate Medical Education. The Residency Review Committee consists of representatives of the American Board of Orthopaedic Surgery, the Council on Medical Education of the American Medical Association and the American Academy of Orthopaedic Surgeons. A list of accredited institutions is published annually in the *Directory of Accredited Residency Training Programs* accredited by the Accreditation Council for Graduate Medical Education and is obtainable from the American Medical Association at 535 North Dearborn Street, Chicago, Illinois 60610.

2. Credit for time spent in institutional residency education will be granted only for the period the institutions are on the accredited list. (Credit may be given from the start of the resident's education period if the institution becomes accredited during the time the resident is under contract at such institution.)

3. A resident engaged in residency education in a program whose accreditation has been withdrawn by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council for Graduate Medical Education will receive credit only until the effective date of withdrawal of accreditation.

4. The term "fellow" is not considered synonymous with "resident" as defined in Minimum Educational Requirements. The total number of residents in a program cannot exceed the number of resident positions approved by the Residency Review Committee for Orthopaedic Surgery for that program. At any level of residency education in a program, the total number of residents must not exceed the number of residents approved by the Residency Review Committee for Orthopaedic Surgery for that level.

5. With the exception of children's orthopaedics, which must be taken in an integrated program previously accredited by the Residency Review Committee for Orthopaedic Surgery, any program has the option of using facilities of institutions not individually accredited for residency education in orthopaedic surgery, provided:

- A. that the period of residency education in an unaccredited facility is for a period of less than six months;
- B. that in adult and trauma categories of education for credit, at least one-half of the minimum required time

for each of these categories is spent in an accredited facility.

6. The education of a resident should show that graduated responsibility is developed under controlled, supervised conditions. The American Board of Orthopaedic Surgery looks with disfavor on fragmented education from one program to another unless there is evidence of graduated and increasing responsibility under such controlled and supervised conditions.

7. Residents may not engage in private practice without the approval of the program director.

Note: The Residency Review Committee for Orthopaedic Surgery will periodically inspect and accredited every hospital used for education by a given program. Hospitals giving more than six months of accredited education may be listed in the *Directory of Residency Training Programs*.

AMERICAN BOARD OF OTOLARYNGOLOGY

- George A. Sisson, MD, President, Chicago, Illinois
- Brian F. McCabe, MD, Vice President, Iowa City, Iowa
- George F. Reed, MD, Secretary-Treasurer, Syracuse, New York
- Bobby R. Alford, MD, Houston, Texas
- Byron J. Bailey, MD, Galveston, Texas
- Roger Boles, MD, San Francisco, California
- Wesley H. Bradley, MD, Albany, New York
- Robert W. Cantrell, MD, Charlottesville, Virginia
- D. Thane R. Cody, MD, Rochester, Minnesota
- Charles W. Cummings, MD, Seattle, Washington
- Patrick J. Doyle, MD, Vancouver, British Columbia
- Richard R. Gacek, MD, Syracuse, New York
- Jerome C. Goldstein, MD, Washington, DC
- Robert I. Kohut, MD, Winston-Salem, North Carolina
- Eugene N. Myers, MD, Pittsburgh, Pennsylvania
- Michael M. Paparella, MD, Minneapolis, Minnesota
- Loring W. Pratt, MD, Waterville, Maine
- Frank N. Ritter, MD, Ann Arbor, Michigan
- William H. Saunders, MD, Columbus, Ohio
- Alexander J. Schleuning, MD, Portland, Oregon
- James B. Snow, Jr., MD, Philadelphia, Pennsylvania
- M. Stuart Strong, MD, Boston, Massachusetts
- Harold G. Tabb, MD, New Orleans, Louisiana
- M. Eugene Tardy, Jr., MD, Chicago, Illinois
- Paul H. Ward, MD, Los Angeles, California
- George F. Reed, MD, Secretary-Treasurer
220 Collingwood, Suite 130,
Ann Arbor, Michigan 48103

General Requirements

The following qualifications are minimal requirements for examination by the American Board of Otolaryngology. The applicant:

- 1. Shall possess high moral, ethical and professional qualifications.
- 2. Shall be a graduate of a College of Medicine or Osteopathy.
- 3. Shall present evidence of a valid license to practice medicine in the United States or Canada. If the applicant is enrolled in a training program in a state not requiring licensure as a prerequisite to such enrollment, evidence of licensure shall not be required.
- 4. Whose post-M.D./D.O. training (accredited by the ACGME or the appropriate Canadian medical authority) began prior to July 1, 1981 must have satisfactorily completed a minimum of four years of residency training accredited by the ACGME or the appropriate Canadian medical authority; this training must include:
 - (a) one year of general surgical training in a residency program accredited by the ACGME or the appropriate Canadian medical authority.

Otolaryngology

- (b) three years of residency training in otolaryngology accredited by the ACGME or appropriate Canadian medical authority.

The training in otolaryngology must involve increasing responsibility each year and include a final year of senior experience. It is preferred that the year or years of general surgical residency be taken prior to the otolaryngologic training, but it/they may not be taken following otolaryngologic training. The residency training must be completed in a manner acceptable to the head of that residency program.

5. Whose post-M.D./D.O. training (accredited by the ACGME or the appropriate Canadian medical authority) begins July 1, 1981 or thereafter must have satisfactorily completed a minimum of five years of residency training accredited by the ACGME or the appropriate Canadian medical authority; this training must include:

- at least one year of general surgical training in a residency program accredited by the ACGME or the appropriate Canadian medical authority.
- at least three years of residency training in otolaryngology accredited by the ACGME or the appropriate Canadian medical authority.
- an additional year of residency training which may be in otolaryngology, general surgery or other residencies accredited by the ACGME or the appropriate Canadian medical authority. If this year of training is in other than otolaryngology, it must be taken prior to the final year of otolaryngology residency.

The training in otolaryngology must involve increasing responsibility in each year and the final year of the five years of training must be a senior experience in otolaryngology. The residency training must be completed in a manner acceptable to the head of that residency program.

6. Who has received some or all premedical and/or medical training in a country other than the United States or Canada and additional approved residency training as prescribed in section 5 above, is eligible for examination provided he meets all other requirements of the Board.

7. Who has completed otolaryngologic training in the United Kingdom or the Republic of Ireland in a program accredited by the Specialist Advisory Committee and has received a certificate of accreditation in otolaryngology from the Joint Committee on Higher Surgical Training in the United Kingdom and the Republic of Ireland will be considered for examination.

Application for Examination

There is no required time interval between completion of the residency program and making application for examination.

1. An applicant for examination shall complete and submit the application forms supplied by the Executive Secretary-Treasurer of the Board. The application shall include authenticated records of the following: medical education, internship, residencies and other postgraduate studies, hospital and outpatient department appointments, teaching positions, memberships in medical societies, personal publications, and any additional information that the candidate feels might be of value in processing this application.

2. Additional information may be requested by the Board from the following:

- Local medical society.
- Board certified otolaryngologists from the geographical area in which the applicant practices.
- The director of the applicant's training program.
- Hospital chiefs of staff.

3. The application shall be signed by two diplomates of the American Board of Otolaryngology. It shall be accompanied by (a) two 4-inch by 3 1/2-inch unmounted, dated photographs taken within six months of the date of application, signed by the applicant on the front; (b) a list of

operations assisted in and performed by the resident during the period of education in otolaryngology; (c) official verification of the satisfactory completion of surgical and otolaryngology residency training; (d) the first payment of the examination fee.

4. The completed application with an up-to-date or completed surgical list shall be mailed to the Secretary-Treasurer as soon as possible and before May 1st of each year. This allows review of the application by the Credentials Committee and assignment of the applicant for the next examination. An update of the operative list must be submitted to the American Board of Otolaryngology within ten (10) days of completion of the applicant's residency training. An applicant will be notified by the Secretary-Treasurer when and where to appear for examination if approved by the Credentials Committee.

5. In 1984 a written examination will be offered in September and an oral examination in March of 1985.

The American Board of Otolaryngology (ABO) certification process consists of two phases: the first phase incorporates a written examination and the second phase, an oral examination. The following is a brief summary of these two phases and their possible outcomes.

In the first phase, all candidates take a written examination with three possible outcomes:

- Candidates who score above a certain point are considered to have passed the Certification Examination and are certified. They are not required to take the oral examination.
- Candidates who score below a certain point are considered to have failed the Certification Examination and are not certified. They are not eligible to the oral examination, but may retake the written examination in a subsequent year.
- Candidates who score between the specified upper and lower points are considered to have neither passed nor failed the Examination, and a decision on certification is deferred.

The candidates in the deferred decision group have two routes for continuing to seek certification.

The first route requires that these candidates take the oral component of the Certification Examination when it is offered in either the first or second year subsequent to their taking the written examination. Combined performances on both the oral and written components are then evaluated, and a decision made that candidates have either passed the Certification Examination and are certified, or have failed in the Certification Examination and are not certified, but may reapply to participate in the entire certification process.

The second route to certification is to decline the oral and, instead, retake the written examination at a subsequent administration.

Candidates who elect to retake the written examination, either because they took the orals and failed or because they chose not to take the orals, face the same possible outcomes they did when they first took the written examination and will be required to pay another examination fee.

6. The American Board of Otolaryngology does not recognize or use the term "Board Eligible" in any manner including requests to the Board for status reports.

7. An application will be considered current for a two-year period following its acceptance. At the conclusion of said two-year period, the application will expire.

8. The Board reserves the right to reject any application.

Re-application

Candidates whose application has expired (see paragraph 7 above) may make re-application for the examination process in the same manner as new applicants and will be required to pay a new examination fee of \$1,000.

Effective with the 1982/1983 examination process,

applicants who have failed the examination three times must provide evidence of having accumulated 300 credit hours in Category I of the Physicians Recognition Award of the American Medical Association. These credit hours must be in activities directly related to otolaryngology.

Fee for Examination

The fee for the examination is \$1,000 subject to change at the discretion of the Board. Of this sum, \$500 must accompany the application and is not refundable. No application will be processed until this fee is received by the Secretary-Treasurer of the Board. The fees for the examination must be paid in US currency equivalent.

An additional \$500 must be remitted to the Board upon notification of acceptance for examination. Once the applicant has agreed in writing to the date of the examination offered by the Board, no part of this \$500 is refundable.

Candidates who elect to retake the written examination either because they took the orals and failed or because they chose not to take the orals will be required to pay a new examination fee of \$1,000.

A fee of \$50.00 will be charged to candidates who request handscoring of their examination.

Examination Procedures

The date and location of the examinations are determined by the Board. Advance notices of the date and location of the examinations are published in the Journal of the American Medical Association and journals devoted to specialty of otolaryngology.

The purpose of the examination is to determine the candidate's knowledge, skill and understanding in the following categories:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, immunology, allergy and neurology relevant to the head and neck; the air and food passages; the communication sciences, including a working knowledge of audiology and speech; the endocrine disorders as they relate to otolaryngology.

2. The recognition and management of congenital anomalies, abnormal function, trauma and disease in the regions and systems enumerated in item 1 above.

3. The recognition and medical management of diseases and abnormality of function of the ears, upper and lower respiratory tract and food passages.

4. The recognition, technique and surgical management of congenital, inflammatory, neoplastic and traumatic states, including among others:

- (a) Temporal bone surgery.
- (b) Paranasal sinus and nasal septum surgery.
- (c) Maxillofacial, esthetic plastic and reconstructive surgery of the head and neck.
- (d) Surgery of the salivary glands.
- (e) Head and neck oncologic surgery.
- (f) Head and neck reconstructive surgery, particularly as it relates to the restoration of function in congenital anomalies, following extensive surgery and complications of head and neck trauma.
- (g) Peroral endoscopy, both diagnostic and therapeutic.
- (h) Surgery of the lymphatic tissues of the pharynx and neck.
- (i) Pre-and post-operative care.

5. Diagnosis and diagnostic methods including related laboratory procedures.

6. Diagnostic and therapeutic radiology, including the interpretation of roentgenograms of the nose; accessory sinuses, salivary glands, temporal bone, skull, neck, larynx, lungs and esophagus.

7. Awareness of the current literature, especially pertaining to the areas mentioned in item 1 above.

8. Awareness of the habilitation and rehabilitation techniques and procedures pertaining to otolaryngology.

9. Research Methodology.

Certification by the Board

A certificate is granted by The American Board of Otolaryngology to a candidate who has met all the requirements and has satisfactorily passed its examination.

**By-Laws of the Board, Article VI
Certification, Rejection and
Revocation**

1. The Board shall issue an appropriate certificate of qualification in otolaryngology (or in a subdivision thereof) to those who show themselves worthy of such certification according to the requirements of training, experience and demonstrated competence as stated in the current Information Booklet of the Board.

2. No certificate shall be issued and any certificate issued by the Board shall be subject to revocation at any time by the Board if it shall determine that the person involved:

- (a) did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any member thereof or could have been ascertained by the Board prior to examination or at the time of the issuance of a certificate as the case may be,
- (b) made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional.
- (c) has been convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine,
- (d) had his license to practice medicine revoked or shall have been disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

3. If the Board determines to withhold or revoke any certificate for any reason set forth in section 1 and section 2 above, the person affected thereby shall be given written notice of the reasons therefor. Such action by the Board shall be regarded as final unless such person requests a review of such action within sixty days after notice thereof has been mailed to him by the Board.

Applicant's Agreement

Applicants are required to sign the following agreement:

I hereby apply to the American Board of Otolaryngology for examination for certification in accordance with its rules, regulations and policies, and herewith enclose a fee of \$500 for processing this application, none of which is refundable. I shall pay the remaining \$500 of the total fee of \$1,000 if and when accepted for examination and agree that this \$500 is not refundable if I agree to participate in the examination. I agree that prior to or subsequent to my examination, the Board may investigate my standing as a physician including my reputation for complying with the ethical standards of the profession. Furthermore, if the Board refuses to grant a certificate, such refusal may not and shall not be questioned by me in any court of law or equity, or any other tribunal.

AMERICAN BOARD OF PATHOLOGY

- Jerald R. Schenken, MD, President, Omaha, Nebraska
- Jack M. Layton, MD, Vice President, Tucson, Arizona
- Robert B. Jennings, MD, Secretary, Durham, North Carolina
- William W. McLendon, MD, Treasurer, Chapel Hill, North Carolina
- Thomas J. Gill III, MD, Pittsburgh, Pennsylvania
- William H. Hartman, MD
- Charles S. Hirsch, MD, Cincinnati, Ohio

Pathology

Douglas A. Nelson, MD, Syracuse, New York
 Herbert M. Sommers, MD, Chicago, Illinois
 Jack P. Strong, MD, New Orleans, Louisiana
 Frank B. Walker, MD, Grosse Pointe Farms, Michigan
 M. R. Abell, MD, Executive Director,
 Office Of The American Board Of Pathology,
 Lincoln Center
 5401 West Kennedy Boulevard
 P.O. Box 24695, Tampa, Florida 33623

Prerequisites for Examination

All applications to take the examination are considered by the Credentials Committee of The American Board of Pathology (ABP) and the following items are evaluated in this process.

I. GENERAL

1. The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

2. The candidate must devote professional time principally and primarily to pathology.

II. PROFESSIONAL EDUCATION

Graduation from a medical school in the United States or Canada accredited by the Liaison Committee on Medical Education, graduation from an osteopathic college of medicine accredited by the Bureau of Professional Education of the American Osteopathic Association, or graduation from a medical school in another country acceptable to the ABP.

III. QUALIFICATIONS

The American Board of Pathology recognizes several pathways to qualification for examination and certification, including training, experience, or a combination of training and experience. To acknowledge the diverse activities in the practice of pathology and to accommodate the interests of individuals wishing to enter the field, The American Board of Pathology offers basic certification through one of three routes (combined anatomic and clinical pathology, anatomic pathology only, or clinical pathology only) and a variety of special competence examinations. The special competence examinations are utilized to indicate expertise in one segment of anatomic or clinical pathology.

A. Basic certificates

1. *Training*—the candidate must complete satisfactorily pathology training in a program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as outlined below.

a. *Combined anatomic and clinical pathology (AP/CP) certification*—two full years of approved training in anatomic pathology and two full years of approved training in clinical pathology.

b. *Anatomic pathology (AP) certification*

(1) Three full years of approved training in anatomic pathology and one additional year which may be spent in further training or research in pathology or closely allied disciplines, in the practice of pathology, or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

or

(2) Basic certificate in clinical pathology and two full years of approved training in anatomic pathology. Dual credit is not given for any AP training which was used to qualify for CP certification.

c. *Clinical pathology (CP) certification*

(1) Three full years of approved training in clinical pathology and one additional year which may be spent in further training or research in pathology or closely allied disciplines, in the practice of pathology, or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

or

(2) Basic certificate in anatomic pathology and two full years of approved training in clinical pathology. Dual credit is not given for any CP training which was used to qualify for AP certification.

2. *Experience*—under certain circumstances a candidate may receive credit toward a basic certificate for acceptable experience in the specialty rather than by training. One year's training credit may be received for each two full years or its equivalence of acceptable experience. However, only under exceptional circumstances will experience credit be given toward combined anatomic and clinical pathology certification. The substitution of experience credit for a portion of approved training toward the requirements for AP/CP requires the assessment of the director of the training program to insure that such will permit a broad and adequate experience in anatomic and clinical pathology and that the director will be willing to so certify.

Credit for extensive full-time training or experience in a country other than the United States of America or Canada may be granted toward the requirements for a basic certificate provided that the candidate has had a total of eight years of full-time validated experience in pathology acceptable to The American Board of Pathology with four years having been in the United States or Canada. For AP qualification the training and experience must have been in AP; for CP in CP; and for combined APCP, equally divided between AP and CP.

3. *Other credit mechanisms*—the acceptability of other credits as substitutes for approved training is evaluated on an individual basis. Credit is given only for activities that have occurred in either the United States or Canada. The total combined period of credit allowed in this category for sections a, b and c below will not exceed 12 months.

To avoid any misunderstanding, potential applicants should communicate with the Office of The American Board of Pathology early in the training period to ascertain if credit may be acceptable. The training program director will be asked to assess the proposal and to provide a recommendation.

The Board will notify the director of the pathology training program of such potential credit and, prior to admission to the certifying examination, the director of the final year of training must certify that the candidate is fully qualified to sit for the examination.

a. *Training during medical school*—credit towards the qualifications for the basic examinations in pathology may be given for post-sophomore training in an approved pathology training program during medical school providing that the candidate did not receive credit for such towards graduation from medical school and that it is validated as a significant experience by the training director or chairman of the department of pathology.

b. A fellowship or instructorship in a preclinical department of a medical school may qualify for credit if, in the opinion of the ABP, the experience was applicable to pathology.

c. Candidates holding a master's degree or a doctor's degree in a special discipline of pathology or a basic science related to pathology may obtain credit regardless of whether it was received before or after the medical degree. The evaluation and approval of the amount of training credit will depend on an assessment by the ABP regarding relevance of the subjects to anatomic and/or clinical pathology.

d. Research with a direct application to the practice of anatomic and/or clinical pathology may be considered for credit not to exceed one-third of the training time requirement. The ABP encourages research and believes that all candidates should carry on investigation, teaching, and publication of scientific papers during training.

e. The ABP will allow full training credit for the first year

of graduate medical education (internship) approved as a categorical program in pathology. The ABP will under certain circumstances accept for credit that portion of an approved diversified (flexible, transitional) first year program which was spent in pathology in an institution with an accredited training program in pathology.

- f. The ABP will allow training credit for time spent in a related clinical activity. The evaluation and approval of the amount of credit will depend on an assessment by the ABP and the pathology training director with regard to relevance of the experience. Credit for clinical activity or a combination of research and clinical training will not exceed one-third of required approved training.

B. Special Competence Certificates

All candidates applying for special competence certification after 1 July 1983 must hold a basic (primary) certificate from the ABP or from another primary board of the American Board of Medical Specialties.

Credit is not given for training in areas of special competence which was part of the training program leading to qualification in AP and/or CP.

1. Blood Banking

a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:

- (1) One full year of additional supervised training in blood banking in an institution accredited for training by the ACGME, or approved for such training by the ABP, or
- (2) Two additional years of full-time experience in blood banking or its equivalence, under circumstances satisfactory to the ABP.

b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Medical Specialty Board:

Two full years or its equivalence of training or acceptable experience in blood banking.

2. Chemical Pathology

a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:

- (1) One full year of additional supervised training in chemical pathology in an institution accredited for such training by the ACGME, or approved for such training by the ABP, or
- (2) Two additional years of full-time experience in chemical pathology or its equivalence, under circumstances satisfactory to the ABP.

b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Medical Specialty Board:

Two full years or its equivalence of training or acceptable experience in chemical pathology.

3. Dermatopathology

Certification in dermatopathology is a joint and equal function of the American Board of Pathology (ABP) and the American Board of Dermatology (ABD). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate.

a. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of special competence in dermatopathology who are otherwise qualified and who have met one of the following requirements.

- (1) Applicants who are diplomates of both the American Board of Dermatology and The American Board of Pathology.
- (2) Applicants already holding a basic certificate from the American Board of Dermatology or The American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and the addition of

one or two additional years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the full training requirements for certification in dermatology or pathology.

b. Training

Training programs in dermatopathology will be an equal and joint function of the Departments of Dermatology and Pathology. The pathologist applicant shall have spent one-half of the required training time of the one or two year program in clinical dermatology.

Committee for Dermatopathology:

- William A. Caro, MD, Chicago, Illinois
- Thomas J. Gill III, MD, Pittsburgh, Pennsylvania
- James H. Graham, MD, Washington, D.C.
- John Knox, MD, Houston, Texas
- Jack M. Layton, MD, Tucson, Arizona
- Jack P. Strong, MD, New Orleans, Louisiana

Candidates may obtain an application as follows:

Pathologists — M. R. Abell, MD, PhD
 Executive Director
 American Board of Pathology
 Lincoln Center
 5401 West Kennedy Boulevard
 P.O. Box 25915
 Tampa, Florida 33622

Dermatologists — Clarence S. Livingood, MD
 Executive Director
 American Board of Dermatology
 Henry Ford Hospital
 2799 West Grand Boulevard
 Detroit, Michigan 48202

4. Forensic Pathology

a. Applicants who hold a certificate in anatomic and clinical pathology, or anatomic pathology only, or in special instances, clinical pathology only — one year of supervised training in forensic pathology in an institution accredited for such training by the ACGME, or approved for such training by the ABP.

b. For combined certification in anatomic pathology and forensic pathology — two years of approved training in anatomic pathology and two years of approved training in forensic pathology in an institution accredited for such training by the ACGME.

c. For candidates holding a certificate in anatomic and clinical pathology, in anatomic pathology only, or in exceptional instances, clinical pathology only — two years of full-time experience in forensic pathology in a situation comparable to that of an institution accredited for training in forensic pathology by the ACGME.

5. Hematology

a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only or in special instances, anatomic pathology only:

- (1) One full year of additional supervised training in hematology in an institution accredited for such training by the ACGME, or approved for such training by the ABP, or
- (2) Two additional years of full-time experience or its equivalence in hematology under circumstances satisfactory to the ABP.

b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Medical Specialty Board:

Two full years, or its equivalence, of training or acceptable experience in hematology.

6. Medical Microbiology

a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:

- (1) One full year of additional supervised training in medical microbiology in an institution accredited for

Pathology

such training by the ACGME, or approved for such training by the ABP, or

- (2) Two additional years of full-time experience in medical microbiology, or its equivalence, under circumstances satisfactory to the ABP.

b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Board:

Two full years, or its equivalence, of training or acceptable experience in medical microbiology.

7. *Neuropathology.*

a. Applicants who hold a certificate in anatomic and clinical pathology, or anatomic pathology only—two full years of supervised training in neuropathology in an institution accredited for training by the ACGME, or approved for training by the ABP.

b. Applicants who hold a certificate in clinical pathology or a basic certificate from another primary Medical Specialty Board:

- (1) One full year of approved training in anatomic pathology in an accredited training program or a program approved by ABP, plus
- (2) Two full years of training in neuropathology in a program accredited by the ACGME, or approved for such training by the ABP.

The one year of approved training in anatomic pathology does not apply to residents that are registered in a two year neuropathology training program prior to 1 July 1983.

c. For certification in anatomic pathology and neuropathology—two full years of approved training in anatomic pathology and two full years of approved training in neuropathology, with adequate experience in diagnostic neuropathology.

8. *Radioisotopic Pathology*

a. Applicants who hold a basic certificate from the ABP:

- (1) One full year of additional supervised training in radioisotopic pathology in an institution accredited for such training by the ACGME, or approved for such training by the ABP, or
- (2) Two additional years of full-time experience in radioisotopic pathology or its equivalence under circumstances satisfactory to the ABP.

b. Applicants for combined certification in clinical pathology and radioisotopic pathology—24 months of approved training in clinical pathology, 12 months of approved training in radioisotopic pathology, and 12 months of further training, research, or practice related to clinical pathology.

9. *Immunopathology*

a. Applicants who hold a certificate in anatomic and clinical pathology:

- (1) One full year of additional supervised training in immunopathology in an institution accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.

b. Applicants who hold a certificate in anatomic pathology only or clinical pathology only:

- (1) Two full years of additional supervised training in immunopathology in an institution accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Four additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.

c. Applicants who hold a certificate in anatomic pathology only or clinical pathology only plus a certificate of

Special Qualification (Competence) in Blood Banking, Hematology, Medical Microbiology, or Chemical Pathology:

- (1) One full year of additional supervised training in immunopathology in an institution accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.

d. For applicants seeking *combined certification* in anatomic pathology or clinical pathology and immunopathology, two full years of approved training in anatomic pathology or clinical pathology in an institution accredited for such training by the ACGME or approved for such training by the ABP and two full years of approved training in immunopathology in an institution accredited for such training by the ACGME or approved for such training by the ABP.

C. *Certificate Combinations*

Under certain circumstances special competence training may be arranged in conjunction with the basic training requirements, permitting a candidate to qualify for a combined certificate. However, dual credit is not acceptable, i.e., training in an area of special competence as part of the qualification toward a basic certificate is not acceptable as credit for special competence qualification. The recognized combinations of certification and the required training are:

1. *Anatomic pathology and clinical pathology (AP/CP) plus special competence*—four years of approved AP/CP training in a program accredited for such training by the ACGME plus one or two years of special competence training as defined in Section III B "Special competence certificates."

2. *Anatomic pathology (AP) plus special competence*—three years of approved training in anatomic pathology plus one year of approved special competence training in forensic pathology, dermatopathology, radioisotopic pathology, or in very special circumstances, other areas of special competence.

3. *Clinical pathology (CP) plus special competence*—three years of approved training in clinical pathology plus one year of approved special competence training as defined in Section III B "Special competence certificates"

or

two years of approved training in clinical pathology plus two years of approved special competence training as defined in Section III B "special competence certificates."

4. *Anatomic pathology and forensic pathology (AP/FP)*—two years of approved training in anatomic pathology, and two years of approved training in forensic pathology in a program accredited for such training by the ACGME.

5. *Anatomic pathology and neuropathology (AP/NP)*—two years of approved training in anatomic pathology and two years of approved training in neuropathology in a program accredited for such training by the ACGME.

D. *Qualification for Special Competence for Those Not Holding a Basic Certificate in Pathology or a Basic Certificate From Another Primary Board.*

1. Three years approved of training in an area of special competence in an institution accredited for such training by the ACGME, or approved for such training by the ABP, and

2. An additional year which may be spent either in supervised training, research, or practice in the area of special competence in circumstances satisfactory to the ABP.

3. These requirements must be met prior to July 1, 1983.

Qualification Period for Examination

The ABP does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board

Eligibility." An applicant is declared qualified for a specific examination only after a formal application has been received and approved by the Credentials Committee.

The ABP will permit a candidate who has qualified on the basis of approved training and/or experience to sit for examination during a period not to exceed three years after being declared qualified to take the examination. When this period has expired, additional periods of qualification will be permitted upon documented evidence that the candidate has obtained further training or experience after termination of the period of qualification in the form of an additional year of approved training in an accredited program or two years of experience acceptable to the ABP.

At any time after declaring a candidate qualified for examination, the Credentials Committee, at its discretion may withdraw such qualification or may as a condition require satisfaction by the candidate of specified conditions. In the exercise of its discretion under this regulation, the Credentials Committee shall be entitled to act without reason assigned.

If it be determined that an applicant has falsified information in the application form, the applicant will not be approved for the certifying examination and must wait a period of three years before being permitted to file a new application. The applicant will not be considered qualified to sit for the certifying examination during the three year interim.

Future Extension and Revision of Requirements for Primary Certification in Pathology

EFFECTIVE 1 JULY 1985, for residents entering primary pathology training programs and *1 JULY 1990* for all applicants, the qualification requirements for certification in combined anatomic and clinical pathology (APCP) and for combined primary pathology and special competence certification will be five years with one of the five years being clinical pathology (AP) or in clinical pathology (CP) only, the primary training requirements are three years with a fourth year being clinical training, experience or research.

The additional clinical requirements for certification may be met by one or a combination of the following three pathways:

1. One full year of approved graduate medical education in a transitional year training program or in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice in a program accredited for such training by the Accreditation Council for Graduate Medical Education.
2. One year of full-time research in pathology or in another clinical discipline providing that the research has clearly defined clinical implications.
3. One year of training in one of the specialty fields of pathology that includes clinical correlation and patient contact. (This year may not be used to meet the requirement both for clinical training and for special competence certification.)

or

By the incorporation of the equivalence of one full year of clinical training and/or clinical research throughout an anatomic and clinical pathology training program of five years or an anatomic pathology or clinical pathology training program of four years. The training director is responsible for defining and justifying this year of clinical activity.

Application Blank and Fee

Application must be made on the special form which may be obtained from the ABP Office and forwarded with other required credentials and the application-examination fee. An application cannot be given consideration unless it is accompanied by the application-examination fee.

The application-examination fee is six hundred fifty dollars (\$650) U.S. funds, and includes a nonrefundable processing fee of \$100. If the candidate fails in the examination, admission to a second examination is permitted after six months but any re-examination must occur within the three year period of qualification. The applicant must pay an additional fee of six hundred fifty dollars (\$650) before a second examination will be given. If after having applied for a specific examination the candidate requests a transfer to a future examination, there is a transfer fee of one hundred dollars (\$100).

Final Filing and Cut-Off Dates

The final filing date for the receipt of an application or registration for the spring examinations is February 1 of each year and for the fall examinations, August 1 of each year.

The cut-off date for cancellation of a request to appear at an examination is March 15 for the spring examinations and September 15 for the fall examinations. If a candidate cancels an appearance for the examination after the cut-off date or does not appear for the examination, the entire application-examination fee is forfeited.

Examination Dates and Sites

Examinations are held at the discretion of the Board. The basic examinations are generally conducted twice annually in May and November. The tentative schedules for forthcoming examinations are:

Anatomic and clinical pathology examinations:
 31 May, 1-2 June 1984—San Francisco, California
 15, 16, 17 November 1984—Washington, D.C.
 29, 30, 31 May 1985—Chicago, Illinois
 4, 5, 6 November 1985—New Orleans, Louisiana

Examinations for special competence are usually held in May of each year, however, dermatopathology is scheduled separately at a time and place mutually agreed upon by The American Board of Pathology and the American Board of Dermatology.

Examinations for special competence:
 30 May 1984—San Francisco, California
 28 May 1985—Chicago, Illinois

Dermatopathology examination:
 9 November 1984—Tampa, Florida

Issuance of Certificate

Upon satisfactorily passing the appropriate examination(s), a candidate will be issued a certificate by the ABP in those fields of pathology for which the ABP accepted the credentials. Thus, a candidate who is qualified for the combined examination in anatomic and clinical pathology, having fulfilled the minimum requirements of 24 months of approved training in anatomic pathology and 24 months of approved training in clinical pathology, will receive a certificate only after both parts (anatomic and clinical pathology) of the examination have been passed. The two parts may be taken at one session or at separate sessions within the three year time limit of qualification. If taken separately, there is a separate examination fee for each sitting.

Candidates qualified for examination in anatomic or clinical pathology, and an area of special competence, and claiming qualification on the basis of two years of approved training in each area, will receive a certificate only after both parts of the examination have been passed.

A candidate who has fulfilled the requirements for anatomic pathology only, or clinical pathology only, will receive a certificate after passing the examination in anatomic or clinical pathology.

If a candidate's certificate is lost or destroyed, the ABP will issue a duplicate certificate upon written request and justification together with the necessary engraving and handling charge of \$50.

Pediatrics

Appeals Procedure

An individual who has received an unfavorable ruling regarding his qualification to take the examination may initiate an appeal of such determination by making a written request for reconsideration to the ABP Office within 90 days of the date such ruling was mailed.

A candidate who fails a certifying examination may request that the examination be rescored to verify the accuracy of the results as reported. Such request must be made in writing within 90 days of the date of mailing of the results of the examination to the candidate and must be accompanied by the fee of \$50 per certifying-examination or part thereof. There shall be no further appeal from a failure on an examination.

**Requirements for Admission
to Examination**

All applicants for examination for certification must meet the following general requirements:

I. THE APPLICANT MUST BE A GRADUATE OF AN APPROVED MEDICAL SCHOOL in the United States or have fulfilled graduated from a recognized Canadian or foreign medical school. (For more detailed information, please read below.)

II. APPLICANTS MUST COMPLETE THREE YEARS OF HOSPITAL-BASED PEDIATRIC TRAINING in programs accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. (For more detailed information, please read below.)

III. THE BOARD WILL REQUEST PROGRAM DIRECTORS OF HOSPITAL-BASED PROGRAMS TO VERIFY SATISFACTORY COMPLETION OF TRAINING AND TO EVALUATE THE ACCEPTABILITY OF THE APPLICANT AS A PRACTITIONER OF PEDIATRICS. (For more detailed information, please read below.)

The American Board of Pediatrics reserves the right to withhold certification and/or permission to take its examinations in the event of exceptional circumstances demonstrating that an applicant is not capable of performing the role of physician and advocate for infants, children, and adolescents. In such instances, the applicant will be notified and may appeal the decision to the Credentials Committee of the Board.

It is Board policy that, if an applicant has any action pending against him/her regarding the right to have an unrestricted license to practice medicine, he/she may be admitted to the examination, but the certificate will not be awarded until such time as the action pending against him/her has been resolved to the Board's satisfaction.

I. GRADUATION FROM MEDICAL SCHOOL

The applicant must be a graduate of an approved medical school in the United States or have graduated from a recognized Canadian or foreign medical school. Graduates of approved medical schools in Canada may apply for examination under the same regulations that apply to those trained in the United States.

Applicants who are graduates of medical schools other than those in the United States or Canada may apply for examination if they hold the standard certificate of the Educational Commission for Foreign Medical Graduates (ECFMG) and if they fulfill the training requirements established for certification by the American Board of Pediatrics. Graduates of foreign medical schools must submit a photocopy of their medical school diploma showing the medical degree and the date it was awarded; a certificate showing that the applicant has passed the final examinations is not acceptable. Applicants who are citizens of the United States and who are graduates of a foreign medical school may apply for examination if they hold either the standard certificate of the Educational Commission for Foreign Medical Graduates or a standard permanent license to practice medicine in one of the states, districts or territories of the United States.

Graduates of osteopathic medical schools will be accepted for examination if they satisfy the training requirements of the Board. Training must be completed in programs accredited by the Residency Review Committee for Pediatrics.

II. TRAINING REQUIREMENTS

Applicants must complete three years of postgraduate hospital-based pediatric training in programs accredited by the Residency Review Committee for Pediatrics or in programs approved for general pediatric specialty training by the Royal College of Physicians and Surgeons of Canada. During this period of training, the applicant is expected to assume progressive responsibility for the care of patients. *Credit will not be given for training completed before the medical degree is awarded.*

The Board recognizes five levels of pediatric training (PL-0 through PL-4). The Pediatric Levels are defined as follows:

PL-0 Accredited internships or residencies in fields other than pediatrics, e.g., rotating, flexible, family practice, internal medicine, general surgery, psychiatry. Credit at this level may also be given for extensive pediatric training in countries other than the United States or Canada. Applicants who are graduates of foreign medical schools and who received their degrees prior to July 1, 1975 may request PL-0 credit for hospital-based training in another country, provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics, and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. **TRAINING AT THIS LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JULY 1, 1975.**

PL-1 The first postgraduate year in general comprehensive pediatric training in an accredited program.

PL-2 The second postgraduate year in general comprehensive pediatric training in an accredited program following PL-1 but with increased responsibility for patient care and for the supervision of junior staff and medical students.

the AMERICAN BOARD OF INTERNAL MEDICINE whereby an applicant may fulfill the training requirements of both Boards by completing two years of accredited training in general comprehensive pediatrics and two years of accredited training in internal medicine. A list of institutions offering combined programs is published in this *Directory of Residency Training Programs*. Applicants can apply for the written examination after they have completed two years of accredited training in general comprehensive pediatrics and one year of accredited training in internal medicine. Applicants who begin their training after July 1, 1985, will not be eligible for the written examination until they have completed all four years of training.

A special agreement also exists with the AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY whereby an applicant who completes two years of accredited training in general comprehensive pediatrics and the neurology training necessary to meet the requirements for certification in neurology with special competence in Child Neurology fulfills the training requirements of both the American Board of Pediatrics and the American Board of Psychiatry and Neurology. Applicants can apply for the written examination after completion of two years of accredited training in general comprehensive pediatrics and two years of accredited training in neurology.

Any applicant, regardless of their year of graduation from medical school, may fulfill the training requirements of the Board by completing the training routes outlined in the Special Agreements between the American Board of Pediatrics and the American Board of Internal Medicine and the American Board of Psychiatry and Neurology.

Candidates will not be permitted to appear for the oral examination until after they have completed all of their training.

GRADUATE SCHOOL COURSES: It is a fundamental concept of the American Board of Pediatrics that a residency training program should provide for properly organized progressive responsibility for the care of sick children. The Board believes further that this purpose can be accomplished best through continuity of clinical experience under supervision of attending physicians who are themselves responsible for the care of the children of that service. The substitution of a formal graduate or postgraduate school course that does not carry the essential ingredient of responsibility for patient care is, in the opinion of the Board, inconsistent with this principle. Accordingly, the Board will accept such courses as part of an accredited residency program in pediatrics only in exceptional cases.

MILITARY SERVICE: Military assignments will not be accepted in lieu of a year of required training unless served as a regular resident in a military hospital that has received specific accreditation from the Residency Review Committee for Pediatrics for pediatric training programs.

SPECIAL SITUATIONS: The Board recognizes that situations may arise that are not explained by the preceding information. Exceptionally, a physician may have worked in a pediatric field for many years, yet be deficient in the formal prerequisites for examination, or a physician may have completed specialized training not explained in the above requirements. In such cases, the individual should present his question to the Executive Secretary of the Board, who will ask the Credentials Committee to review the record and decide whether permission should be given to enter the certification process.

STATEMENT OF ELIGIBILITY: The Board does not issue statements of "eligibility" for its examinations. Upon receipt of permission from the *registered candidate*, the Board will reveal progress toward certification to hospitals or other interested parties.

III. VERIFICATION OF TRAINING AND EVALUATION BY DIRECTORS OF HOSPITAL-BASED PEDIATRIC TRAINING PROGRAMS

The Board regards the evaluation of trainee competency as a continuum which begins during training and is com-

pleted by the Board examinations following formal training. The Board depends upon program directors and their faculties to provide objective assessments of applicants' clinical competency as demonstrated in the training setting. In the written and oral examinations, candidates have the opportunity to demonstrate to the Board the knowledge and clinical problem solving abilities needed to diagnose and manage the health problems of children.

A. THE BOARD WILL REQUEST PROGRAM DIRECTORS TO VERIFY COMPLETION OF TRAINING AND TO SIGN THE FOLLOWING STATEMENT:

"I certify that the above named applicant has demonstrated the attitudes, knowledge, clinical judgment, technical skills and interpersonal skills defined in *Foundations for Evaluating the Competency of Pediatricians* and is judged to be fully prepared for independent responsibility as a general pediatrician; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the written examination. If the Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and re-apply. Alternatively the applicant may appeal to the Credentials Committee of the Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination.

For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Board must have the program director's assurance that the person meets the standards expected of a certified pediatrician. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a resident's performance.

B. THE PROGRAM DIRECTOR IS ALSO ASKED TO PROVIDE INFORMATION THAT WILL HELP THE BOARD'S ORAL EXAMINERS MAKE A FAIR JUDGMENT ABOUT THE CANDIDATE.

1. The program director is asked to evaluate the applicant in the following areas: gathering data by history, by physical examination, and by laboratory studies; assessing data and arriving at a diagnosis; managing problems and maintaining health; interpersonal relationships with patients and families; interpersonal relationships with other members of the health team; work habits and personal qualities.

2. The program director is asked to provide information that will help to determine whether the candidate's performance on the oral examination is an accurate reflection of his/her usual performance, e.g., behavior under stress, shyness, self-confidence, ability to verbalize thought processes, decision-making habits.

3. The program director is asked to rate the applicant's overall clinical competency by indicating which of the following phrases best describes the applicant in terms of his/her ability to care for children in the United States or Canada. In these phrases, the word "manage" is defined as identifying the nature of the problem, determining methods of resolving or alleviating the problem, and carrying out management plans including the appropriate and timely use of consultants.

Pediatrics

If an applicant is not approved to take the certifying examinations of the Board, the \$200 written examination fee and \$50 registration fee will be refunded. The remaining \$100 is nonrefundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$350) again.

A new registration fee and a new examination fee will be assessed for each written re-examination and each oral re-examination.

Each of the above fees entitles the applicant to one examination only.

These fees are subject to change without notice.

PART I—WRITTEN EXAMINATION

The written examination is given one day in September of each year, at a number of locations throughout the United States and Canada.

The examination is given in two sessions, of three to four hours' duration each, with a luncheon break between sessions. The examination consists of multiple-choice questions. Examples of the types of questions to be used are mailed to registered candidates prior to the administration of each examination.

PART II—ORAL EXAMINATION

A candidate may proceed to the oral examination only after completing the training requirements of the Board and passing the written examination. Site selection cards are sent each year to qualified candidates. All candidates can anticipate approximately a two-year interim period between completion of these requirements and subsequent consideration for oral examination. When offering appointments for an oral examination session, the Board takes into consideration the year the candidate passed the written examination, candidate preference, geographical location, and the date the candidate's initial application for the written examination was received by the Board. Oral examinations are held five or more times each year in cities across the United States. It is the candidate's responsibility to keep the Board informed of any changes in mailing address so that information concerning the oral examination can be sent to the candidate at the appropriate time.

Failure in Examinations

Part I (Written Examination)—Written re-examinations may be taken one or two years later at the additional charge stated above. Candidates who are unsuccessful in the written examination must appear for re-examination within three years. If a candidate fails to appear for re-examination within this time period, his/her name will be dropped from the list of active candidates and the application processing and evaluating fee and registration fee will be forfeited. A new application and full fee must be submitted before being admitted to a future examination.

Part II (Oral Examination)—Candidates who are unsuccessful in the oral examination may request a second examination after one year and must appear for re-examination within four years. A third oral examination will not be permitted until the candidate has taken and passed another written examination. If a candidate fails to appear for re-examination within four years, his/her name will be dropped from the list of active candidates and a new application and initial application fee must be submitted before being admitted to a future examination.

Postponement of Examinations

Part I (Written Examination)—After the Board has accepted an application, the candidate is expected to take the next written examination offered. Such examinations are given annually at the places announced by notice to qualified candidates. Candidates who withdraw from the written examination prior to the date admission card are prepared will be required to pay a new registration fee prior to entrance into any subsequent examination. After admission

cards are prepared, an additional fee will be assessed for those candidates who withdraw from the written examination or who fail to appear for the examination. If the candidate fails to appear for the examination by the third opportunity after acceptance of the application, his/her name will be dropped from the list of active candidates and the application processing and evaluating fee will be forfeited. A new application must be filed along with the proper fee before being admitted to a future examination.

Part II (Oral Examination)—After successful completion of the written examination, a candidate is expected to appear for the oral examination within four years of completion of all requirements. Should a candidate withdraw from the oral examination any time after the Board receives written confirmation of his/her acceptance of an appointment, the candidate will be assessed a \$50 re-scheduling fee. The Board will refund the balance of the fees submitted; payment of a new oral examination fee will be required when another appointment is given. If a candidate accepts an appointment for the oral examination and, after reminder cards are prepared, withdraws or fails to appear for this scheduled appointment, the entire fee for that examination will be forfeited and payment of a new examination fee and new registration fee will be required. If a candidate fails to appear after a lapse of four years, his/her name will be dropped from the list of active candidates. Should the physician later decide to pursue certification, a new application, along with the proper fees, must be filed. The physician must approach the Board as a new applicant and must take and pass the written examination again before being permitted to appear for the oral examination.

Certification by the Board

A certificate is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examinations.

Recertification in Pediatrics

The Board offers a voluntary recertification program which is open to all certified diplomates of the American Board of Pediatrics. Recertification is not required by the American Board of Pediatrics. The original certificate is a lifetime one.

The program is based on a six-year curriculum. Some people may want to participate continuously during their professional career, becoming recertified at six-year intervals, or sooner if they wish. Others may want to sit out a few years and then start back into the program. Some may want to be recertified once only. The recertification certificate, like the original certificate, carries no expiration date.

For more information concerning the recertification program, contact the Board office.

Certification in Pediatric Subspecialties

The American Board of Pediatrics has established a procedure for certification in the following subspecialties as areas of special competency: Pediatric Cardiology, Pediatric Endocrinology, Pediatric Hematology-Oncology, Pediatric Nephrology and Neonatal-Perinatal Medicine.

It should be noted that these criteria and conditions are subject to change. All applicants are advised to consult the Executive Secretary to ascertain any change that may have been made, especially before undertaking any variations in the training program.

Sub-Board of Pediatric Cardiology
 William B. Strong, MD, Chairman, Augusta, Georgia
 Delores A. Danilowicz, MD, New York, New York
 Laurence Finberg, MD, Brooklyn, New York
 William F. Friedman, MD, Los Angeles, California
 Arno Hohn, MD, Los Angeles, California
 Ronald M. Lauer, MD, Iowa City, Iowa
 Charles E. Mullins, MD, Galveston, Texas

- PL-3 The third postgraduate year in general comprehensive pediatric training in an accredited program. This year must be an integral part of the total three years of general pediatric training required for all medical school graduates after June 30, 1978. It may be a chief residency or a senior supervising residency.
- PL-3 A single year of advanced training and clinical responsibility in a pediatric subspecialty area in an accredited program. **SUBSPECIALTY TRAINING AT THE PL-3 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.**
- PL-4 An accredited program or fellowship in a pediatric subspecialty in which the proportion of time in non-clinical or laboratory activities is so large that a minimum of two years must be spent to gain the equivalent of a year of clinical training. **SUBSPECIALTY TRAINING AT THE PL-4 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS IN GENERAL PEDIATRICS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.**

Summary of Training Requirements

Applicants Who Received Their Medical Degrees:

1. *Prior to July 1, 1975, must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. These two years of required general comprehensive pediatric training must be taken at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of required training by completing one of the following options:*
 - a. PL-0 credit — complete an accredited internship or residency in a field other than pediatrics,
 - b. PL-0 credit — complete hospital-based training in another country provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. *Applicants requesting PL-0 level credit for hospital-based pediatric training completed in another country must submit a copy of their medical school diploma and a letter from the physician in charge of their training program indicating the dates and the specialty area of their training. The medical school diploma must be a photocopy of the actual document showing the medical degree and the date it was awarded; a certificate showing that the applicant has passed the final examinations is not acceptable.*
 - c. Complete a supervisory year in general comprehensive pediatrics (PL-3).
 - d. Complete an accredited fellowship in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.
2. *Between July 1, 1975 and June 30, 1978 must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for*

Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. These two years of required general comprehensive pediatric training must be taken at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of training by completing one of the following options:

- a. Complete a supervisory year in general comprehensive pediatrics (PL-3).
 - b. Complete an accredited fellowship in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.
3. *After June 30, 1978 must complete three years of hospital-based training in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. A year of supervisory experience must be an integral part of the total three year program; this year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Residents should not accumulate more than six months time in one subspecialty over the total three year program and the total of all such subspecialty rotations should not exceed eleven months.*

The American Board of Pediatrics recognizes that occasionally there will be an exceptional applicant who should be given special consideration to substitute other training for the third year of general comprehensive pediatrics required of medical June 30, 1978. Information concerning this may be obtained by writing to the Executive Secretary. Initiation of such requests should be made after the applicant has one year of general comprehensive pediatric training for prospective review by the Board.

TRAINING PROGRAMS: The American Board of Pediatrics approves applicants for admission to its certifying process; the Board does not accredit training programs. Requests by directors for accreditation of their programs by the Residency Review Committee for Pediatrics should be addressed to: Secretary of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, Illinois 60610.

At the present time, two-year programs in pediatric cardiology are the only pediatric subspecialty programs that are accredited by the Residency Review Committee for Pediatrics. Applicants who received their medical degree prior to July 1, 1978, and who wish to apply a subspecialty training program toward fulfillment of one of the three years of required training are advised to correspond with the Board regarding the acceptability of their training plans toward certification.

The Residency Review Committee for Pediatrics has developed a mechanism for accrediting those fellowship programs which would lead to certification in a pediatric subspecialty area, but has not as yet determined when the subspecialty accreditation will be in effect. Applicants seeking approval for individualized programs of specialized training that are not accredited are advised to ask their program directors to submit *prospectively* a description of their proposed program to the American Board of Pediatrics for evaluation by the Credentials Committee. A list of the information required for review by the Credentials Committee may be obtained by contacting the Board office. When individualized approval is granted, it does not imply automatic approval for future applicants.

SPECIAL AGREEMENTS: There exists a special agreement between the American Board of Pediatrics and

Pediatrics

dropped from the list of active candidates. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

\$175 processing and evaluating fee
60 registration fee for one written exam
400 written exam fee for one exam

\$635 TOTAL payment at time of initial application

Plus \$325 oral exam fee for one exam—payable when an appointment is received.

Re-examination:

\$ 60 registration fee for one written re-exam
400 written exam fee for one written re-exam

\$460 TOTAL

\$ 50 registration fee for one oral re-exam
325 oral exam fee for one oral re-exam

\$375 TOTAL

If an applicant is not approved to take the pediatric cardiology examination, the \$400 written examination fee and \$60 registration fee will be refunded. The remaining \$175 is nonrefundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$635) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate for special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examinations of the Sub-Board.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514. Telephone (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Endocrinology

The American Board of Pediatrics has established a procedure for certification in pediatric endocrinology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric endocrinology examination.

2. Two years of full-time fellowship training in pediatric endocrinology in a program under the supervision of a director who is certified in pediatric endocrinology or, lacking such certificate, possesses equivalent credentials.

Applicants who graduated from medical school prior to July 1, 1978, may embark on their subspecialty training after two years of training (PL 1, 2) in an accredited program in general comprehensive pediatrics. The first year of subspecialty training (fellowship) may be concurrent with the required third year of training necessary to qualify for the boards in general pediatrics provided that the subspecialty training is a two-year program or more.

Applicants who graduate from medical school after July 1, 1978, may embark on their subspecialty training after three years of training (PL 1, 2, 3) in an accredited program

in general comprehensive pediatrics.

All fellowship programs must ensure that at least half of the experience involved clinical work with children. This is meant to imply that no credit is given toward qualification to sit for a subspecialty examination for periods of less than two years of fellowship. It also specifically means that no credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Subspecialty Committee has given approval of foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

3. Verification of Training

The Verification of Clinical Competence Forms are sent to each applicant as part of the application packet. It is the applicant's responsibility to forward the Verification Form(s) to his/her pediatric endocrinology program director(s) for completion. The completed Verification Form(s) should be sent directly by the program director to the American Board of Pediatrics. All Verification Forms should be sent to the Board Office prior to the closing of registration for a particular examination.

The role of the pediatric endocrinology program director in the certification process is to verify the completion of the training and sign "Statement A" on the Verification of Clinical Competence Form as follows:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric endocrinologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric endocrinology examination. If the Subspecialty Committee is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Subspecialty Committee certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director's assurance that the person meets the standards expected of a certified pediatric endocrinologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a trainee's performance.

Each application is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Endocrinology. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in pediatric endocrinology. The Accredited Council for Graduate Medical Education has

Amnon Rosenthal, MD, Ann Arbor, Michigan
Sub-Board of Pediatric Hematology-Oncology
 Charles F. Abildgaard, MD, Chairman, Sacramento,
 California

Robert L. Baehner, MD, Indianapolis, Indiana
 Werner A. Bleyer, MD, Seattle, Washington
 Frederic M. Blodgett, MD, Milwaukee, Wisconsin
 George R. Honig, MD, Chicago, Illinois
 Jeanne M. Lusher, MD, Detroit, Michigan
 Harold M. Maurer, MD, Richmond, Virginia
 Campbell W. McMillan, MD, Chapel Hill, North Carolina
Sub-Board of Pediatric Nephrology
 Richard N. Fine, MD, Chairman, Los Angeles,
 California

Russell W. Chesney, MD, Madison, Wisconsin
 John R. Hoyer, MD, Torrance, California
 Pedro A. Jose, MD, Washington, DC
 John E. Lewy, MD, New Orleans, Louisiana
 Paul T. McEnery, MD, Cincinnati, Ohio
 Carolyn F. Piel, MD, San Francisco, California
 Norman J. Siegel, MD, New Haven, Connecticut
Sub-Board of Neonatal-Perinatal Medicine
 Nicholas M. Nelson, MD, Chairman, Hershey,
 Pennsylvania

Jerold F. Lucey, MD, Burlington, Vermont
 John Kattwinkel, MD, Charlottesville, Virginia
 Grant Morrow III, MD, Columbus, Ohio
 William Oh, MD, Providence, Rhode Island
 Michael A. Simmons, MD, Salt Lake City, Utah
 Joseph W. St. Geme, Jr., MD, Torrance, California
Subspecialty Committee of Pediatric Endocrinology
 Selna L. Kaplan, MD, Chairman, San Francisco,
 California

Alfred Bongiovanni, MD, Philadelphia, Pennsylvania
 William W. Cleveland, MD, Miami, Florida
 Thomas P. Foley, Jr., MD, Pittsburgh, Pennsylvania
 Robert P. Kelch, MD, Ann Arbor, Michigan
 Maurice D. Kogut, MD, Dayton, Ohio
 Robert L. Rosenfield, MD, Chicago, Illinois
 Mark A. Sperling, MD, Cincinnati, Ohio

Certification in Pediatric Cardiology

The American Board of Pediatrics has established a procedure for certification in pediatric cardiology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric cardiology examination.

2. *Two years of full-time fellowship training in an accredited pediatric cardiology training program.* Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for a listing of programs accredited for fellowship training in pediatric cardiology.

3. *Verification of training.* Verification of Clinical Competence Forms are sent to each applicant as part of the application packet. It is the applicant's responsibility to forward the Verification Form(s) to his pediatric cardiology program director(s) for completion. The completed Verification Form(s) should be sent directly by the program director to the American Board of Pediatrics. All Verification Forms should be sent to the Board Office prior to the closing of registration for a particular examination.

The role of the pediatric cardiology program director in the certification process is to verify completion of training and sign "Statement A" on the Verification of Clinical Competence Form as follows:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a

pediatric cardiologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric cardiology examination. If the Sub-Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified pediatric cardiologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a trainee's performance.

Examinations

Candidates must pass both the written and oral examinations in pediatric cardiology to be certified. These examinations are offered every two or three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of these examinations is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Failure in Examinations

Candidates who fail the written examination are eligible to be admitted for re-examination at the next written examination upon specific application and payment of the appropriate fee (\$460). Candidates must appear for re-examination within three examination cycles.

Candidates who fail one oral examination are eligible to be readmitted to a second oral examination upon specific application and payment of the appropriate fee (\$375). Upon failure in two oral examinations, the candidate will be required to take and pass the written examination before being admitted to a subsequent oral examination. Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$60) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be

Pediatrics

1— Unable to manage many pediatric problems including the most routine ones

2

3— Able to manage only the most routine problems in pediatrics

4

5— Able to manage the common problems of pediatrics adequately

6

7— Able to manage most pediatric problems in an adequate way

8

9— Able to manage almost any pediatric problem in a highly effective manner

A program director's assessments may be considered in arriving at a final oral examination grade when the team of examiners feel the need for additional information about the candidate. This information will not be available to the examiners prior to the oral examination.

The Board will review program directors' assessments of applicants and in the future will report from time to time anonymous data to program directors regarding their assessments of applicants and performance on written and oral examinations.

C. THE BOARD RECOMMENDS THAT EACH PROGRAM ESTABLISH A COMMITTEE OF SUPERVISING FACULTY TO EVALUATE INDIVIDUAL HOUSE OFFICER PROGRESS DURING TRAINING AND AT THE END OF TRAINING.

Judgments should be made as objectively as possible and on a regular basis. Faculties are encouraged to use their own forms for periodic evaluation or to use forms developed by the Board. It is recommended that program directors maintain files documenting each resident's performance and that the evaluations in these files be discussed with residents periodically. The Board, through its representatives, recommends to the Residency Review Committee for Pediatrics that when pediatric residency programs are reviewed, the presence of objective, systematically recorded evaluation of resident performance be assessed.

D. RESIDENTS WHO PLAN TO SEEK CERTIFICATION SHOULD BE ENCOURAGED TO TAKE THE IN-TRAINING EXAMINATION AT THE BEGINNING OF THE PL-1 AND PL-2 YEARS AND AGAIN IN THE PL-3 YEAR IF PREVIOUS PERFORMANCE IS NOT SATISFACTORY. Results can be used by the program director to evaluate the program and to indicate to residents areas in which they are weak and need additional study or training.

Program directors and their faculties may want to explore and develop evaluation procedures for assessment of physician performance. Examples are: medical record audits, rating scales for assessment of work habits, observational checklists for assessment of technical skills, peer review, patient-parent simulators for assessment of interpersonal skills, oral examinations, and consumer questionnaires.

The Board will continue to participate in and support research efforts to develop methods for evaluating the day-to-day performance of residents in caring for infants, children, and adolescents.

E. Since ultimate certification in a pediatric subspecialty area is contingent upon passage of the examinations of the American Board of Pediatrics, program directors should ensure that residents offered pediatric subspecialty fellowships have a thorough grounding in general comprehensive pediatrics as an entering qualification, and that the resident meets the training requirements established for certification by the Board.

Information Concerning Examinations

The goal of residency education in pediatrics is to pro-

duce physicians capable of performing competently in the role of physician and advocate for infants, children, and adolescents. The ability to care for sick children, as well as to encourage healthy growth and development, should be more highly developed in pediatricians than in any other health providers. In the future, pediatricians will continue to manage both acute and chronic health problems of children and adolescents. They will use consultants when appropriate. They will educate and counsel families regarding the stages of normal development and identify early those health problems and risk factors which may adversely affect development.

The content of the examinations for certification is appropriate to the practice of general comprehensive pediatrics as defined above. Emphasis is placed on practical aspects; however, good practice is founded on sound scientific knowledge and the candidate should be prepared to demonstrate an understanding of basic science. The examinations for certification are given in two sections: Part I is a written examination, Part II is an oral examination.

The Board does not sponsor or maintain records on any courses which claim to be review courses in preparation for the examinations.

Competency Document

Candidates are encouraged to order the document *Foundations for Evaluating the Competency of Pediatricians* in order to obtain a detailed list of competencies expected of all pediatricians by the American Board of Pediatrics. While this is not a study guide, where possible, all questions used on the examination of the American Board of Pediatrics will be testing for these competencies. Copies of this document may be ordered for \$5.00 each from the American Board of Pediatrics' office. Please make checks payable to the American Board of Pediatrics, Inc. **APPLICATION TO THE BOARD**

Application material for admission to the certifying examinations of the Board is available throughout the year by writing to the Board. Applicants who received their medical degrees prior to July 1, 1975, may apply for admission after they have satisfactorily completed the two core years in pediatrics, (PL-1 and PL-2), but they are encouraged to wait until the end of their third year of training to take the written examination. Applicants who receive their medical degrees after June 30, 1975 will be admitted to the written examination only after they have satisfactorily completed three years of pediatric training in accredited programs prior to the date on which the examination is to be held.

APPLICATIONS MUST BE POSTMARKED BY JANUARY 31ST OF THE YEAR IN WHICH THE APPLICANT WISHES TO TAKE THE WRITTEN EXAMINATION. Early application is desirable, as subsequent assignment to sites for the oral examination depends in part upon the date the first application is received by the Board. Those applications received by this deadline will be processed and evaluated and the Board will request Directors of general pediatric training programs to verify completion of training. Those applicants who meet the training requirements of the Board and who are recommended by their program director(s) for examination will be accepted and registered for Part I — the written examination.

Fees

The cost of certification includes the following fees, payable in United States dollars only:

Processing and Evaluating Fee	\$100.00
Registration Fee	50.00
Written Examination (one only)	200.00
Total payment at the time of initial application	\$350.00
Oral Examination (one only — fee payable on receipt of appointment)	250.00
TOTAL EXAMINATION FEES	\$600.00

granted the Residency Review Committee for Pediatrics the authority to begin to review and accredit subspecialty training programs in pediatric endocrinology. The review and accreditation process is not expected to be completed until January 1986. Notice of the accreditation status of a program will be published in the Directory of Residency Training Programs and directors of subspecialty training programs will be notified. Physicians entering subspecialty training in pediatric endocrinology prior to completion of the accreditation process by the Residency Review Committee for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric endocrinology or possesses equivalent credentials. Only those pediatric endocrinology training programs which are operated in association with accredited residency programs in general comprehensive pediatrics offering PL1, 2, 3 will be considered.

Special Requirements

Special Requirements for Training Programs in Pediatric Endocrinology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as examples of suggested criteria for training programs in pediatric endocrinology. The Credentials Committee of the Subspecialty Committee will be guided by these requirements for programs in evaluating the applicant's eligibility.

Examinations

A written examination in pediatric endocrinology is offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of the examinations is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Failure in Examinations

Candidates who fail the examination are eligible to be admitted for re-examination at the next examination offered upon request and payment of the appropriate fee (\$460). Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$60) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

- \$175 processing & evaluating fee
- 60 registration fee for one exam
- 400 written exam fee for one exam
- \$635 TOTAL payment at time of initial application

Re-examination:

- \$ 60 registration fee for one exam
- 400 written exam fee for one exam
- \$460 TOTAL

If an applicant is not approved to take the pediatric endocrinology examination, the \$400 written examination fee and \$60 registration fee will be refunded. The remaining \$175 is nonrefundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$635) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate of special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514. Telephone: (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Hematology-Oncology

The American Board of Pediatrics has established a procedure for certification in pediatric hematology-oncology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric hematology-oncology examination.

2. *Two years of full-time fellowship training in pediatric hematology-oncology,* in a program under the supervision of a director who is certified in pediatric hematology-oncology or lacking such certification, possesses equivalent credentials.

Applicants who graduated from medical school prior to July 1, 1978, may embark on their subspecialty training after two years of training (PL 1, 2) in an accredited program in general comprehensive pediatrics. The first year of the subspecialty training (fellowship) may be concurrent with the required third year of training necessary to qualify for the boards in general pediatrics provided that the subspecialty training is a two-year program or more.

Applicants who graduate from medical school after July 1, 1978, may embark on their subspecialty training after three years of training (PL 1, 2, 3) in an accredited program in general comprehensive pediatrics.

All fellowship programs must ensure that at least half of the experience involves clinical work with children. This is meant to imply that no credit is given toward qualification to sit for a subspecialty examination for periods of less than two years of fellowship. It also specifically means that no credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to

Pediatrics

an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

3. *Verification of training.* Verification of Clinical Competence Forms are sent to each applicant as part of the application packet. It is the applicant's responsibility to forward the Verification Forms to his/her pediatric hematology-oncology program director(s) for completion. The completed Verification Form(s) should be sent directly by the program director(s) to the American Board of Pediatrics. All Verification Forms should be sent to the Board office prior to the closing of registration for a particular examination.

The role of the pediatric hematology-oncology program director in the certification process is to verify the completion of the training and sign "Statement A" on the Verification of Clinical Competence Form as follows:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric hematologist-oncologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric hematology-oncology examination. If the Sub-Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified pediatric hematologist-oncologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a trainee's performance.

Each application is considered individually and must be acceptable to the Sub-Board of Pediatric Hematology-Oncology. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in pediatric hematology-oncology. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics the authority to begin to review and accredit subspecialty training programs in hematology-oncology. The review and accreditation process is not expected to be completed until January 1986. Notice of the accreditation status of a program will be published in the *Directory of Residency Training Programs* and directors of subspecialty training programs will be notified. Physicians entering subspecialty training in pediatric hematology-oncology prior to completion of the accreditation process by the Residency Review Committee for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric hematology-oncology or

possesses equivalent credentials. Only those pediatric hematology-oncology training programs which are operated in association with accredited residency programs in general comprehensive pediatrics offering PL 1, 2, 3 will be considered.

Special Requirements

Special Requirements for Training Programs in Pediatric Hematology-Oncology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as examples of suggested criteria for training programs in pediatric hematology-oncology. The Credentials Committee of the Sub-Board will be guided by these requirements for programs in evaluating the applicant's eligibility.

Examinations

A written examination in pediatric hematology-oncology is offered every two or three years. Please contact the Board Office for the exact date of the next examination.

The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis, therefore, is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology and the like.

Failure in Examinations

Candidates who fail the examination are eligible to be admitted for re-examination at the next examination offered upon request and payment of the appropriate fee (\$460). Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$60) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

- \$175 processing and evaluating fee
- 60 registration fee for one examination
- 400 written examination fee for one examination
- \$635 TOTAL payment at the time of initial application

Re-examination:

- \$ 60 registration fee for one examination
- 400 written examination fee for one examination
- \$460 TOTAL

If the applicant is not approved to take the pediatric hematology-oncology examination, the \$400 written examination fee and the \$60 registration fee will be refunded. The remaining \$175 is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$635) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate for special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Neonatal-Perinatal Medicine

The American Board of Pediatrics has established a procedure for certification in neonatal-perinatal medicine.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the neonatal-perinatal medicine examination.

2. *Two years of full-time fellowship training in neonatal-perinatal medicine*, in a program under the supervision of a director who is certified in neonatal-perinatal medicine or lacking such certification, possesses equivalent credentials.

Applicants who graduated from medical school prior to July 1, 1978, may embark on their subspecialty training after two years of training (PL 1, 2) in an accredited program in general comprehensive pediatrics. The first year of the subspecialty training (fellowship) may be concurrent with the required third year of training necessary to qualify for the boards in general pediatrics provided that the subspecialty training is a two-year program or more.

Applicants who graduate from medical school after July 1, 1978, may embark on their subspecialty training after three years of training (PL 1, 2, 3) in an accredited program in general comprehensive pediatrics.

All fellowship programs must ensure that at least half of the experience involves clinical work with children. This is meant to imply that no credit is given toward qualification to sit for a subspecialty examination for periods of less than two years of fellowship. It also specifically means that no credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

3. *Verification of training.* Verification of Clinical Competence Forms are sent to each applicant as part of the application packet. It is the applicant's responsibility to forward the Verification Forms to his neonatal-perinatal medicine program director(s) for completion. The completed Verification Form(s) should be sent directly by the program director(s) to the American Board of Pediatrics. All Verification Forms should be sent to the Board office prior to the closing of registration for a particular examination.

The role of the neonatal-perinatal medicine program director in the certification process is to verify the completion of the training and sign "Statement A" on the Verification of Clinical Competence Form as follows:

"I certify that the above named applicant has demon-

strated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a subspecialist in neonatal-perinatal medicine; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the neonatal-perinatal medicine examination. If the Sub-Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified neonatologist-perinatologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a trainee's performance.

Each application is considered individually and must be acceptable to the Sub-Board of Neonatal-Perinatal Medicine. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in neonatal-perinatal medicine. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics the authority to begin to review and accredit subspecialty training programs in neonatal-perinatal medicine. The review and accreditation process began in the summer of 1983 and is not expected to be completed until January 1985. Notice of the accreditation status of a program will be published in the *Directory of Residency Training Programs* and directors of subspecialty training programs will be notified. Physicians entering subspecialty training in neonatal-perinatal medicine prior to completion of the accreditation process by the Residency Review Committee for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in neonatal-perinatal medicine or possesses equivalent credentials. Only those neonatal-perinatal medicine training programs which are operated in association with accredited residency programs in general comprehensive pediatrics offering PL 1, 2, 3 will be considered. Also, only those programs which are a part of an institution which offers residency or fellowship training in obstetrics and gynecology and includes experience in fetal-maternal-perinatal medicine will be considered.

Special Requirements

Special Requirements for Training Programs in Neonatal-Perinatal Medicine have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as examples of suggested criteria for training programs in neonatal-perinatal medicine. The Credentials Committee of the Sub-Board

Pediatrics

Gordon M. Martin, MD, Executive Secretary-Treasurer,
Suite 674, Norwest Center,
21 First Street, S.W., Rochester,
Minnesota 55902

Donald J. Erickson, MD, Assistant Secretary-Treasurer,
Rochester, Minnesota

General Requirements for Certification

A. Graduates of Educational Institutions in the United States and Canada.

1. Graduation from a medical school approved by the Liaison Committee on Medical Education, or graduation from a Canadian medical school approved by the Canadian Medical Association, or graduation from an osteopathic medical school approved by the American Osteopathic Association.

2. Satisfactory completion of the requirements of the Board for graduate education and experience in physical medicine and rehabilitation as set forth below.

3. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

B. Graduates of Educational Institutions NOT in the United States and Canada.

1. Graduation from a school which, in the opinion of the Board, offers medical education equivalent to a medical school approved by the Liaison Committee on Medical Education.

2. Holding a valid certificate of Educational Commission for Foreign Medical Graduates (ECFMG) and/or certificate from Visa Qualifying Examination (VQE) and/or Fifth Pathway certificate.

3. Satisfactory completion of the Board's requirements for graduate education and experience in physical medicine and rehabilitation as set forth below.

4. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

C. Having a full and unrestricted license to practice in one or more of the 50 United States or Puerto Rico, or holding the Federation Licensing Examination (FLEX) certificate, may be supportive, but not required, of an application submitted by an American and/or non-American graduate.

Residency Training Requirements

Applicants for the certifying examinations must have satisfactorily completed 48 months (4 years) of training in a physical medicine and rehabilitation residency approved by the ACGME on recommendation of the Residency Review Committee for Physical Medicine and Rehabilitation. The program must include 36 months of training in physical medicine and rehabilitation. Twelve of the 48 months of training should consist of an integrated year of internal medicine residency to be completed during the first half of the 4-year program.

To provide for some flexibility when needed, alternatives to the integrated 12 months of internal medicine are available as follows:

1) Rotations through selected clinical teaching services in related specialty fields arranged by the training program director. In addition to six months in internal medicine, two- to six-month rotations may be arranged in rheumatology, cardiology, vascular disease, pulmonary medicine, pediatrics, neurology, family practice, or emergency medicine, and three to six months in orthopaedics or general surgery. Services considered not acceptable are anesthesiology, pathology, radiology, psychiatry, ophthalmology, dermatology, urology, and obstetrics and gynecology.

2) A nonintegrated year of internal medicine approved by and acceptable to the program director and the Board, and comparable to the program described under alternative 1.

3) A nonintegrated transitional (flexible) year of training taken in an accredited program may be approved on recommendation of the program director as meeting the 12-month internal medicine requirement if it meets the above criteria with respect to services.

The Credentials Committee of the Board will make the decision regarding the acceptability of the year of credit for previous training as submitted by the program director on the original registration form at the beginning of the residency.

Some training programs may elect to schedule residents in the new 4-year training program format starting already in 1984. However, this new format will be mandatory for all residents who enter training in 1985 or subsequently. In some instances, three years of physical medicine and rehabilitation residency may be acceptable on recommendation of the program director, with one year of credit being granted on the basis of training criteria described above, such as a nonintegrated transitional year or other residency training. Residents who entered training in 1983 or earlier are not required to conform to the new training requirements.

Credit for Other Specialty Training

Candidates who have had one year or more of residency training (up to and including certification) in a residency approved by the ACGME or by the Canadian Medical Association in related relevant specialties, including internal medicine, neurology, orthopaedics, pediatrics, family practice, and surgery, may receive up to 12 months of non-physical medicine and rehabilitation training credit on recommendation of the program director and at the discretion of the Board. However, completion of 36 months of the physical medicine and rehabilitation training requirement is mandatory. The maximum of 12 months of training credit will be considered for approval by the Board only upon recommendation of the residency training program director.

No credit will be given towards shortening the basic required four year program for internships; for non-ACGME approved residencies or fellowships; for Fifth Pathway in a United States AMA designated training institution; or for hospital house officer experience.

A resident entering or beginning the required four year program in physical medicine and rehabilitation with previous approved graduate training or education experience may qualify for an *institutional* appointment at the second year level. However, such an appointment may not be interpreted to mean that the resident is in the second year of a physical medicine and rehabilitation residency. Such a resident will be considered by the Board to be in the first year of the required four year residency training program as stated above, unless other arrangements are made by the program director and the specialty Board.

Essentially all of the required training and experience as stated above must have been taken in the United States or Canada. However, a candidate who received graduate medical education beyond an internship in a foreign country may, at the discretion of the Board, and recommended by the program director, be granted limited credit for such training but not more than six months.

Program Director Procedures

The procedure required by the Board for approval of the first year and subsequent years of graduate training as a resident is:

1) At the time of appointment, the submission of a form to the Executive Secretary of the Board by the director of the residency program in physical medicine and rehabilitation which shall outline the proposed residency training curriculum/program which will meet the above requirements. Any anticipated credit, (which may not be for more than six months), should be indicated at the time of submission of the proposed preliminary outline of education

Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training: If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form may take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified pediatric nephrologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's faculty is not satisfied with a trainee's performance.

Each application is considered individually and must be acceptable to the Sub-Board of Pediatric Nephrology. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in pediatric nephrology. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics the authority to begin to review and accredit subspecialty training programs in pediatric nephrology. The review and accreditation process is not expected to be completed until January 1986. Notice of the accreditation status of a program will be published in the *Directory of Residency Training Programs* and directors of subspecialty training programs will be notified. Physicians entering subspecialty training in pediatric nephrology prior to completion of the accreditation process by the Residency Review Committee for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric nephrology or possesses equivalent credentials. Only those pediatric nephrology training programs which are operated in association with accredited residency programs in general comprehensive pediatrics offering PL 1, 2, 3 will be considered.

Special Requirements

Special Requirements for Training Programs in Pediatric Nephrology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as examples of suggested criteria for training programs in pediatric nephrology. The Credentials Committee of the Sub-Board will be guided by these requirements in evaluating the applicant's eligibility.

Examinations

A written examination in pediatric nephrology is offered every three years. Please contact the Board Office for the exact date of the next examination.

The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Failure in Examinations

Candidates who fail the examination are eligible to be admitted for re-examination at the next examination offered upon request and payment of the appropriate

fee (\$460). Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$60) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New Application:

- \$175 processing and evaluating fee
- 60 registration fee for one written examination
- 400 written examination fee for one examination
- \$635 TOTAL payment at the time of initial application

Re-Examination:

- \$ 60 registration fee for one examination
- 400 written examination fee for one examination
- \$460 TOTAL

If an applicant is not approved to take the pediatric nephrology examination, the \$400 written examination fee and the \$60 registration fee will be refunded. The remaining \$175 is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$635) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate of special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board.

Applications

Application forms are available only during the registration period of a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION

- John F. Ditunno, Jr., MD, Chairman, Philadelphia, Pennsylvania
- B. Stanley Cohen, MD, Vice-Chairman, Baltimore, Maryland
- Victor Cummings, MD, Toledo, Ohio
- Barbara deLateur, MD, Seattle, Washington
- Murray M. Freed, MD, Boston, Massachusetts
- Arthur E. Grant, MD, San Antonio, Texas
- Catherine N. Hinterbuchner, MD, New York, New York
- John L. Melvin, MD, Milwaukee, Wisconsin
- John W. B. Redford, MD, Kansas City, Kansas
- Donald M. See, MD, Billings, Montana

Physical Medicine and Rehabilitation

will be guided by these requirements for programs in evaluating the applicant's eligibility.

Examinations

A written examination in neonatal-perinatal medicine is offered every two years. Please contact the Board Office for the exact date of the next examination.

The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis, therefore, is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology and the like.

Failure in Examinations

Candidates who fail the examination are eligible to be admitted for re-examination at the next examination offered upon request and payment of the appropriate fee (\$460). Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$60) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

- \$175 processing and evaluating fee
- 60 registration fee for one examination
- 400 written examination fee for one examination
- \$635 TOTAL payment at the time of initial application

Re-examination:

- \$ 60 registration fee for one examination
- 400 written examination fee for one examination
- \$460 TOTAL

If the applicant is not approved to take the neonatal-perinatal medicine examination, the \$400 written examination fee and the \$60 registration fee will be refunded. The remaining \$175 is non-refundable. If the applicant wishes to pursue certification in the future, he will be required to complete a new application and submit the full fee (\$635) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate of special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Nephrology

The American Board of Pediatrics has established a procedure for certification in pediatric nephrology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric nephrology examination.

2. *Two years of full-time fellowship in pediatric nephrology* in a program under the supervision of a director who is certified in pediatric nephrology or lacking such certification, possesses equivalent credentials.

Applicants who graduated from medical school prior to July 1, 1978, may embark on their subspecialty training after three years of training (PL 1, 2) in an accredited program in general comprehensive pediatrics. The first year of subspecialty training (fellowship) may be concurrent with the required third year of training necessary to qualify for the boards in general pediatrics provided that the subspecialty training is a two-year program or more.

Applicants who graduate from medical school after July 1, 1978, may embark on their subspecialty training after three years of training (PL 1, 2, 3) in an accredited program in general comprehensive pediatrics.

All fellowship programs must ensure that at least half of the experience involves clinical work with children. This is meant to imply that no credit is given toward qualification to sit for a subspecialty examination for periods of less than two years of fellowship. It also specifically means that no credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

3. Verification of Training.

Verification of Clinical Competence Forms are sent to each applicant as part of the application packet. It is the applicant's responsibility to forward the Verification Form(s) to the program director for completion. The completed Verification Form(s) should be sent directly by the program director to the American Board of Pediatrics. All Verification Forms should be sent to the Board Office prior to the closing of registration for a particular examination.

The role of the pediatric nephrology program director in the certification process is to verify the completion of the training and sign "Statement A" on the Verification of Clinical Competence Form as follows:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric nephrologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric nephrology examination. If the Sub-Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The

and if recommended, at the time of submission of the first evaluation form.

2) Following review by the Board, the Executive Secretary shall then notify the program director by letter of the approval or disapproval of the proposed program of training.

3) An annual evaluation form is to be submitted to the Board office on each resident at the end of each year of training indicating quality of performance and number of months of residency training satisfactorily completed in physical medicine and rehabilitation including elective services.

4) If a resident transfers to another program in physical medicine and rehabilitation, the Board is to be notified by the resident and each program director involved regarding the circumstances relative to the change, the amount of credit being given in the program being terminated and the outline of the program content and time in the continuing program. A resident is expected to complete training in a single program except when significant extenuating circumstances make a change advisable.

5) When a candidate applies for admissibility to the certifying examinations, the program director certifies satisfactory completion of the required residency training (or anticipated completion by August 31 of the year of examination) and also provides an indication of the candidate's competence to enter independent clinical practice in the specialty. In case of subsequent change in status or recommendation regarding a candidate, the Board office should be notified promptly.

Requirements for Admissibility to Part I of the Board Examination

To be admissible to Part I of the Board examination, candidates are required to complete satisfactorily at least 48 months of postgraduate residency training of which at least 36 months are spent in supervised education and clinical practice in physical medicine and rehabilitation and 12 months in internal medicine or an acceptable alternative in an ACGME accredited training program.

Satisfactory completion of educational and training requirements in force at the beginning of the resident's training in an accredited program will be considered acceptable for application for admissibility to the certifying examination. Residents in approved PM&R training programs in Canada, on satisfactory completion of all the requirements for certification in that country, may apply for admissibility to Part I of the American Board.

Requirements for Admissibility to Part II of the Board Examination

A minimum of one year of full time broadly based clinical practice in the specialty of physical medicine and rehabilitation following satisfactory completion of an approved residency program documented and attested to by a diplomate of the American Board of Physical Medicine and Rehabilitation is required.

Alternately, a candidate may take Part I and II together if all residency training and the practice time requirement are completed. However, if the candidate fails Part I, Part II will not count or be recognized in any way.

An optional fifth year in a physical medicine and rehabilitation residency which includes at least six months of advanced clinical practice of physical medicine and rehabilitation with essentially full patient responsibility, and also includes teaching experience, plus opportunities for time in research or relevant clinical or basic science electives may qualify such resident for admissibility to Part II of the certifying examinations upon the recommendation of the training program director. An optional fifth year may be valuable for those anticipating a full or part time academic career.

Dual Specialty Certification

For those desiring to pursue double specialty certification the Board will participate with the other Boards provided there is completion of 36 months of accredited training in general comprehensive physical medicine and rehabilitation. The proposed program agreed to by the respective training program directors should be submitted to both Boards for approval before or during the first quarter of training. Admissibility to Part I of the certification examinations may be sought at the end of training.

Application

The application form which must be submitted by a candidate applying for the examination leading to certification is obtained by writing to the Executive Secretary of the Board. The completed application shall contain a record of the candidate's undergraduate and postgraduate training and a copy of the medical degree diploma or certificate, the program director's statement that the candidate has or will have satisfactorily completed an approved graduate program, other graduate study, hospital staff appointments, teaching positions, length of time in a practice which has been limited to physical medicine and rehabilitation, medical papers published, and any other information the candidate deems relevant to the determination of his admissibility for examination.

In addition, there must be submitted with the application the names of three physiatrists or other physicians to whom the Board may write for professional and character references. At the option of the applicant, he may include the names of any additional physicians. The candidate will submit to the physicians so named a form requesting them to rate the professional ability of the applicant which they will promptly return to the Board office. No decision regarding admissibility to the examination will be made until the physicians from whom references are requested have replied.

All information submitted to the Board by the physician from whom a reference has been requested shall remain confidential and shall not be disclosed to the candidate without the permission of the said physician. Strict confidentiality of references submitted is required to assure that the Board receives complete and accurate evaluations of all candidates.

A candidate who plans to take Part I only must submit a fee of three hundred fifty dollars (\$350), fifty dollars (\$50) of which is an evaluation fee and not refundable nor reassessed. The fees must accompany the application. The candidate who is applying for Part II must write a letter of application which includes a brief description of his/her year of broadly based clinical practice and send an examination fee of three hundred dollars (\$300), and must also submit a statement from a physician, preferably a Board certified physiatrist, verifying that the candidate has practiced physical medicine and rehabilitation full-time for one year. A candidate who plans to take both Parts I and II, initially the same year, must send with the application, the fee of six hundred fifty dollars (\$650). Fifth dollars (\$50), as heretofore mentioned, is an evaluation fee and not refundable. Fees for re-examination are three hundred dollars (\$300) for either Part I or II, or if both Parts I and II are retaken the same year, the fee is six hundred dollars (\$600).

The completed application form or letter of application, as applicable, and appropriate fee must be submitted by November 15 of the year before the scheduled examination. A penalty fee of one hundred dollars (\$100) will be required before consideration of applications postmarked after November 15 and before December 15. Once a candidate is declared admissible, fees are forfeited if the candidate withdraws for any reason or does not appear for the examination.

The candidate must have completed his graduate education or clinical practice requirements on or before August

Physical Medicine and Rehabilitation

31 following the scheduled examination date for which he has applied in order to have his application considered for the examination of that year. Except as hereafter provided, no fees paid hereunder will be refunded. Only in the event that a candidate withdraws his application prior to the meeting of the Board to act thereon or in the event that a candidate is declared not admissible to the examination, will the Board return to the candidate the refundable portion of his fee.

The Board is a non-profit organization and the fees of the candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. The Board reserves the right to change the fees when necessary.

Designation of Admissibility

Board admissible is a term used by the Board to define the status of the candidate who has been accepted by the Board to take the examination for which the candidate has applied; designation of "Board admissible" does not continue beyond the date such examination is given, regardless of results.

A. For those candidates who have not previously applied or who have previously applied and withdrawn their application or who have previously applied and have been declared not admissible,

the procedures required of candidates to be designated board admissible are as follows:

1. Timely filing of the application form and educational credentials with the Executive Secretary of the Board by the applicant.
2. Payment of the fee for the examination by the applicant.
3. Receipt of requested references.
4. Transmission of a letter of confirmation from the Executive Secretary of the Board to the candidate verifying that the applicant has fulfilled all requirements, and by Board action has been declared admissible.

B. For those candidates who are reapplying for Part I, having failed Part I; or who are applying for Part II, having successfully completed Part I, or who are reapplying for Part II, having failed Part II but who have successfully passed Part I,

the procedures required of candidates to be designated Board admissible are as follows:

1. Submitting a letter of reapplication for Part I of the examination by the applicant to the Executive Secretary of the Board or, as requested, the resubmission of an application form.
2. Submitting a letter of application for Part II of the examination by the applicant to the Executive Secretary of the Board. The letter should contain a statement describing the one year of full-time broadly based clinical practice.
3. Payment of the examination fee by the applicant.
4. Receipt of a letter of verification of a year of full-time broadly based clinical practice of physical medicine and rehabilitation, preferably from a Board certified physiatrist.
5. Transmission of a letter of confirmation from the Executive Secretary of the Board to the candidate verifying that the applicant has fulfilled all requirements, and by Board action has been declared admissible.

Following the establishment of Board admissibility, the candidate will be notified of the time and place for the examination.

A candidate who fails Part I or Part II or both Parts of the examination may re-apply for admissibility for re-examination, if done before November 15th of the year before the scheduled examination.

Forfeiture of Fees

Once a candidate is declared admissible, the fees are forfeited if the candidate withdraws for any reason or does not appear for the examination.

Examinations

As part of the requirements for certification by the American Board of Physical Medicine and Rehabilitation, candidates must demonstrate satisfactory performance in an examination conducted by the Board covering the field of physical medicine and rehabilitation.

The examination for certification is given in two parts. Part I is written, Part II is oral.

Part I (written) may be taken after the satisfactory completion of the specialized graduate education required by the Board outlined above.

Part II (oral) may be taken only after one year of full-time broadly based practice in physical medicine and rehabilitation, following residency training.

In the event a candidate taking both Part I and Part II in the same year fails Part I of the examination, results of Part II shall not be considered or disclosed.

Both the written and oral examinations will cover certain aspects of the basic sciences as well as clinical physical medicine and rehabilitation. Those basic sciences will include:

1. *Anatomy*, including kinesiology and functional anatomy.
2. *Physics*, related to the field
3. *Physiology*, including physiology of movement and physiologic effects of the various physical agents used in physical medicine and rehabilitation.
4. *Pathology*
5. *Other fundamental sciences*: The applicant may be examined concerning his knowledge of other subjects related to physical medicine and rehabilitation.

The clinical aspects will include:

1. Those diseases and conditions that come within the field of physical medicine and rehabilitation including those of children. These include various rheumatic diseases; neuromuscular diseases; cerebral and spinal cord injuries and diseases (e.g. cerebral vascular accidents, postoperative sequelae of surgery of the brain and spinal cord, cerebral palsy and paraplegia) and musculoskeletal diseases, including the large group of traumatic and orthopedic conditions.

2. The clinical use of such physical agents as heat, water, electricity, ultraviolet radiation, massage, exercise, and rehabilitation techniques.

3. Diagnostic procedures including electromyography and electrodiagnosis.

4. A knowledge of the roles of allied personnel within or associated with the field of physical medicine and rehabilitation, such as the physical therapist, occupational therapist, clinical psychologist, speech pathologist and therapist, medical social worker, and vocational counselors; and the ability to coordinate the services of such personnel.

5. An understanding of the basic principles of physical medicine and rehabilitation, and the ability to prescribe and supervise specific treatment to be executed by allied health personnel.

Method of Examination

Part I and Part II of the Board examination are given once each year, usually in May or June, at such time and place as the Board shall designate.

Part I is a written examination. This examination is divided into morning and afternoon periods of approximately three hours each. The questions are designed to test the candidate's knowledge of basic sciences and clinical management as related to physical medicine and rehabilitation, and will be in the form of objective testing.

Part II is an oral examination. The oral examinations are

given by the members of the Board with the assistance of selected guest examiners.

Candidates will be expected to present in a concise, orderly fashion evidence of their proficiency in the management of various clinical conditions which come within the field of physical medicine and rehabilitation. During the oral examination, questions will be asked about diagnostic procedures, therapeutic procedures and patient management. The candidate should be prepared to demonstrate his ability to interpret roentgenologic, electrodiagnostic and other material related to patient management. The candidate should demonstrate familiarity with the literature of basic and clinical research. Conciseness and clarity of statement is desirable. Evidence of the maturity of the candidate in a clinical procedure and of factual knowledge will be sought.

Certificate

Upon approval of the candidate's application and successful completion of the examinations, the Board will grant a certificate to the effect that the candidate has met the qualifications required by the Board for the specialty of Physical Medicine and Rehabilitation. The recipient of a certificate shall be known as a certificant or a diplomate of the American Board of Physical Medicine and Rehabilitation.

A certificate granted by this Board does not of itself confer or purport to confer any degree or legal qualifications, privileges, or license to practice physical medicine and rehabilitation. The Board does not limit or interfere with the professional activity of any duly licensed physician who is not certified by this Board. Privileges granted physicians in the practice of physical medicine and rehabilitation in any hospital or clinic are the prerogatives of that hospital or clinic, not of this Board.

The chief aim of the Board is to establish the training requirements, to standardize qualifications for specialists in physical medicine and rehabilitation and to certify as specialists those who voluntarily appear before the Board for such recognition and certification, according to its regulations and requirements; and thereby provide assurance to the public and the medical profession that certificants possess particular competence in physical medicine and rehabilitation.

The names of consenting diplomates of the Board appear in the Directory of Medical Specialists by Marquis Who's Who, Inc. of Chicago, Illinois, for the American Board of Medical Specialties.

AMERICAN BOARD OF PLASTIC SURGERY

James Bennett, MD, Chairman, Indianapolis, Indiana

 Philadelphia, Pennsylvania 19103

Prerequisite Requirements

1. Undergraduate Medical Education

Graduation from an accredited school in the United States or Canada which grants an MD degree or from an osteopathic medical school accredited by the American Osteopathic Association. Graduates of medical schools in other countries must have completed one of the following requirements: (1) certification by the ECFMG, or (2) have successfully passed the Visa Qualifying Examination (VQE).

After 1985, all must hold unrestricted licensure to practice medicine issued by a state or other jurisdiction of the United States or a Canadian province. Commissioned officers of the medical service of the armed forces of the United States or Canada on active duty need not present evidence of current registration of licensure, but must provide appropriate information regarding their status.

2. Graduate Education in Surgery

A. A minimum of three years of clinical training with progressive responsibility in a program in general surgery approved by the Residency Review Committee for Surgery and accredited in the United States by the ACGME or in Canada by the Royal College of Physicians and Surgeons for full training (effective July 1, 1981, for those individuals entering the PGY-1 year of training). All general surgery residency training must be completed prior to entering a plastic surgery residency. The general surgery program director(s) must verify in writing the successful completion of a minimum of three years of progressive residency. Each case will be evaluated by the Board on its own merits; or

B. Satisfactory completion of an accredited residency training program in orthopaedic surgery. The training must be verified in writing by the orthopaedic surgery program director. All orthopaedic surgery residency training must be completed prior to entering a plastic surgery residency; or

C. Certification by one of the following Boards: American Board of Otolaryngology or American Board of Urology. Prospective candidates may initiate residency training in plastic surgery following satisfactory completion of the entire course of training as prescribed for certification by the respective specialty Board, but they may sit for the examination(s) of The American Board of Plastic Surgery, Inc. only after becoming certified in their primary specialty. Satisfactory completion of training must be verified in writing by the appropriate program director; or

D. Final fellowship in surgery in the Royal Australasian College of Surgeons or the Royal College of Surgeons of South Africa. Those holding Fellowship in the Royal Colleges of Surgeons of England, Edinburgh, Glasgow, and Dublin also must have received the Certificate from the "Council and of the Joint Committee on Higher Surgical Training" in general surgery. Documentary evidence satisfactory to the Board is required.

Graduate Education in Plastic Surgery

Training in plastic surgery for a period of not less than two years is required, and the final year must be at the senior level. Prospective candidates entering a plastic surgery residency approved for three years of training must complete the entire three years, with one year of senior responsibility. Training in plastic surgery must be obtained in the United States or Canada. The American Board of Plastic Surgery, Inc. will accept training accomplished in those programs in the United States which have been approved by the Residency Review Committee for Plastic Surgery and accredited by the Accreditation Council for Graduate Medical Education, and it will accept training in plastic surgery in those programs in Canada approved by the Royal College of Physicians and Surgeons of Canada.

A candidate must hold positions of increasing responsibility for the care of patients during these years of training. Major operative experience and senior responsibility are

Plastic Surgery

essential to surgical education and training. An important factor in the development of a surgeon is the opportunity under guidance and supervision to grow by progressive and succeeding stages to the stature of complete responsibility for the surgical care of the patient. It is equally imperative that a resident hold positions of increasing responsibility when he or she receives training in more than one institution, one year of which must be at the senior level. The normal training year for the program must be completed. Credit is not granted by the Board for part of a year of training.

Training in plastic surgery must cover a wide field of plastic surgery. It should include experience in both the functional and aesthetic management of congenital and acquired defects of the face, neck, body and extremities. Sufficient material of a diversified nature should be available to prepare the trainee to pass the examination(s) of the Board after the prescribed period of training. If the available material on a service is inadequate, the chief of that service may correct the deficiency by establishing an affiliation with one or more surgeons on other services within the hospital, or by regular rotation of his residents on other approved affiliated services in order that a broad experience be obtained. The trainee should be provided an opportunity to operate independently on suitable cases under more remote supervision.

This period of specialized training should emphasize the relationship of basic science— anatomy, pathology, physiology, biochemistry, microbiology— to surgical principles fundamental to all branches of surgery, and especially to plastic surgery. In addition, the training programs must provide in depth exposure to the following subjects: the care of emergencies, shock, wound healing, blood replacement, fluid and electrolyte balance, narcotics and hypnotics, anesthetics, and chemotherapy.

Approved Training Programs in Plastic Surgery

Information concerning acceptable training programs may be found in the *Directory of Residency Training Programs* published under the aegis of the Accreditation Council for Graduate Medical Education. The candidate should inquire of the Office of the Board before initiating training if there is any question as to whether a residency is approved.

The American Board of Plastic Surgery, Inc. does not inspect or approve residencies. The Residency Review Committee inspects and makes recommendations for or against approval of a residency training program in plastic surgery only after the director of the residency has filed an application for approval with the Secretary of the Residency Review Committee for Plastic Surgery, 535 North Dearborn Street, Chicago, Illinois 60610. The Committee consists of three representatives from The American Board of Plastic Surgery, Inc., three from the American College of Surgeons, and three from the American Medical Association.

Neither the Board nor its individual members can be responsible for the placement of applicants for training. The Board does not maintain a list of available openings in programs. Prospective candidates seeking accredited training in plastic surgery should correspond directly with the directors of those training programs in which they are interested.

Requirements for Admission to Examinations

The primary interest of the Board is to encourage well-rounded training in Plastic Surgery with the ultimate goal of producing a plastic surgeon capable of managing the wide variety of problems which may come under his care. The standards established by the Board further this aim. The quality of training received will be reflected in the candidate's ability to achieve good results in his practice. The

examinations of the Board evaluate the general knowledge and ability of the candidate in his chosen specialty of plastic surgery.

General Requirements

The following requirements are in agreement with those promulgated by the American Board of Medical Specialties:

1. Moral and ethical standing in the profession satisfactory to the Board. Practices contrary to ethical public relations will be subjected to close scrutiny and may result in deferral for examination until such matters have been resolved satisfactorily.

2. The Board will accept only those persons who have fulfilled the requirements as set forth herein.

3. The Board will accept only those persons whose major professional activity is limited to the field of plastic surgery.

Professional Requirements

The Board considers the requirements detailed in "Prerequisite Requirements" and "Graduate Education in Plastic Surgery" to be minimal in attaining its purposes and encourages candidates to take advantage of broadening experiences in other fields.

The Board reserves the privilege of:

- (1) requesting lists of operations performed solely by the candidate for one or more years;

- (2) requesting special and extra examinations, written or oral and practical; and

- (3) requesting any specific data concerning the candidate that may be deemed advisable before making a final decision for certification.

The Board, at its prerogative, may give consideration to exceptional individuals who did not conform to all the stipulations concerning plastic surgery training requirements.

The Board, in accordance with policies of the American Board of Medical Specialties, does not use or recognize the terms Board "Eligible" or "Qualified."

Application for Examination and Certification

Prospective candidates desiring certification by The American Board of Plastic Surgery, Inc. should write to the Office of the Board requesting application materials immediately following completion of required training in plastic surgery. A *Booklet of Information* and an "Application for Examination and Certification" form will be provided. The form must be completed and returned to the Office of the Board as soon as possible. The application must be completed fully and precisely and must be signed by the applicant and program director. Accompanying forms must be completed properly, and the required photographs must be provided. The required registration fee must accompany the Application. The candidate must receive the endorsement of his program director(s) in plastic surgery verifying successful completion of the residency program and recommendation for examination. It is the responsibility of the candidate to obtain the letters of endorsement. If training was received in more than one program, the candidate must receive the endorsement of each of the directors in junior years in the form of a letter. Additionally, the Board may require a favorable evaluation and recommendation from other surgeons.

Applications must be received in the Office of the Board no later than December 1st if they are to be reviewed and approved in time for assignment to the Part I: Written Examination given each year in the spring.

If the application is approved, the candidate will be notified concerning the time and place of the Part I: Written Examination. If, however, it appears that the stated requirements have not been met, further details will be requested, and the information will be reviewed by the Credentials Committee of the Board at its next scheduled meeting. It should be noted that the Credentials Committee

meets only twice yearly and that decisions are not rendered at other times.

Until the application has been received and approved, the Board will not inform any person, institution, or organization that the candidate is admissible to examination.

Fees for Examination

Registration Fee U.S. \$100.00
 (not refundable)
 Part I Examination U.S. \$400.00
 Part II Examination U.S. \$500.00
 Fees must be submitted in U.S. CURRENCY. FOREIGN CURRENCIES, INCLUDING CANADIAN, are unacceptable.

The Registration Fee (\$100.00) must be submitted with the "Application" and is not refundable.

The fee for the Part I: Written Examination (\$400.00) must be submitted upon receipt of assignment to the examination.

The fee for the Part II: Oral Examination (\$500.00) must be submitted WHEN THE REPLY CARD IS RETURNED to the Office of the Board. Approximately three months prior to the date of the Part II: Oral Examination, each admissible candidate will be sent an Announcement of Examination and a Reply Card. The Reply Card indicating whether or not the candidate wishes to take the examination, must be returned to the Office of the Board AT ONCE. The fee is to accompany the Card only if the candidate wishes to be scheduled for examination.

For both the Part I and Part II Examinations, candidates who notify the Office of the Board in writing that they wish to withdraw from the examination before the letters of Assignment to Examination are dispatched will be refunded the examination fee, less a processing charge of \$100.00.

Candidates who do not notify the Office of the Board at least one week prior to examination of their intent to withdraw or who fail to appear for examination will forfeit the entire fee. The Board may waive this rule if the circumstances are such that the Board deems it warranted.

Fees for RE-EXAMINATION(S) are the same as for the original examination.

Fees are subject to change by the Board whenever the Board deems it to be necessary. The fee schedule applicable to the examination at the time it is to be taken will apply regardless of when a candidate is approved for admission to examination.

The Board is a non-profit organization, and the fees of candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. Because of the limited number of surgeons certified by this Board, it may be necessary to request a voluntary annual contribution from Diplomates after the first year of certification to help defray expenses.

The Examination

Each qualified candidate shall be entitled to take such examination or examinations as the Board may from time to time determine. Upon successful completion of the required examination or examinations, the candidate shall be certified by the Board as a medical specialist in plastic surgery.

All candidates must comply with the Board regulations in effect for the year in which the examination is taken regardless of the time when the original application was approved.

The candidate may be examined annually for five years, after which he must submit a "Re-Application for Examination and Certification Form." A \$100.00 Registration Fee will be required.

All candidates taking the examination of The American Board of Plastic Surgery, Inc. must complete the entire examination.

Certification by another medical or surgical specialty Board does not exempt a candidate from any part of the examination(s).

The Part I: Written Examination

The Part I: Written Examination of The American Board of Plastic Surgery, Inc., is conducted each year in the spring, or at any other time as deemed necessary by the Board. The examination will be given on the date specified and at the time specified. There will be no exceptions made, and no special examinations will be given.

The Part I: Written Examination will consist of the following:

- A. A three-hour, multiple choice, written examination covering the spectrum of clinical plastic and reconstructive surgery and the body of basic science pertinent to it:
 - 1. Basic techniques, wound healing, microsurgery, transplantation.
 - 2. Burns, sepsis, metabolism, trauma, resuscitation, nutrition, endocrinology, shock, hematology.
 - 3. Pre- and post-operative care, anesthesia, cardio-respiratory care, complications, clinical pharmacology.
 - 4. Tumors of: head and neck, skin, breast: radiation therapy, immunotherapy, chemotherapy, and surgery.
 - 5. Trunk, lower extremity, musculoskeletal, pressure sores, rehabilitation.
 - 6. Hand, peripheral nerves, rehabilitation.
 - 7. Maxillofacial and craniofacial surgery and micro-surgery.
 - 8. Congenital anomalies: genetics, teratology, facial deformity, speech pathology, gynecology, and genitourinary problems.
 - 9. Aesthetic surgery, psychiatry, and legal medicine.
- B. A multiple choice, written examination covering pertinent:
 - 1. Gross and microscopic pathology as well as basic knowledge of pathology, e.g., the biologic behavior of neoplasms, inflammation, and repair.
 - 2. Gross, microscopic, and functional anatomy, and embryology.

Grades

Successful completion of the Part I: Written Examination requires that the candidate achieve a passing grade for the entire examination rather than for each and every specific section separately. Effective May, 1982, ALL candidates will be required to complete successfully the entire examination even though informed previously that they had passed one or more parts thereof.

A candidate will be judged to have successfully completed Part I if his grade is at or above that grade which is one standard deviation below the mean of a peer reference group. The characteristics of that peer reference group have been determined by the Board and will set the standard of performance. Each candidate participating in the Part I: Written Examination will receive a histogram of total scores for all candidates and an individual, computer-generated letter concerning his performance.

The American Board of Plastic Surgery, Inc. will obtain from the appropriate contractor a report which will be sent to plastic surgery residency training directors concerning the performance of their candidates on the Part I: Written Examination.

Hand scoring of the Part I: Written Examination will be performed upon request. The request must be submitted to the Office of the Board in writing. The charge for hand scoring of the examination will be determined by the Secretary-Treasurer and this cost will be borne by the candidate requesting the hand-scoring.

Pass

A candidate who passes the Part I: Written Examination will be notified of the fact. He will be notified of the date and

Plastic Surgery

place of the Part II: Oral Examination approximately three months prior to the date.

Fail

In case of failure, the candidate must repeat the complete Part I: Written Examination rather than a component segment thereof.

The Board may, for reasons it deems sufficient, deny any candidate the privilege of further examination or re-examination.

The Part II: Oral Examination

The Part II: Oral Examination will be conducted each year in the Fall, or at any other time as deemed necessary by the Board.

When the Announcement of the Part II: Oral Examination is received, the candidate must signify his intent to take the examination by completing and returning the Reply Card immediately. If the Reply Card is not received in the Office of the Board more than sixty days before the date of examination, it is unlikely that the candidate will be admitted.

Description of the Examination

Part II: Oral Examination consists of two parts given the same day:

1. A 45-minute oral examination on eight MAJOR cases submitted by the candidate indicative of his work in the field of plastic surgery.
2. A 45-minute oral examination on the art and science of the practice of plastic surgery.

Each candidate will be examined by at least two teams of two examiners. Under two circumstances, a candidate may be examined by a third team. In the first instance, if a candidate feels he has been unfairly or inadequately examined by one of the two teams, he may petition for re-examination immediately following the examination. If his petition to the Chairman of the Board or his designee is judged to have merit, that candidate will be given one additional 45-minute oral examination. The candidate, in so petitioning for another examination, should be fully aware that he does so without knowledge of his status as to pass or fail in the examination in question. Secondly, a candidate whose performance has been judged marginal by the original two teams may, at the direction of the Chairman of the Examination Committee, be required to undergo examination by a third team. In either of the above circumstances, performance by the candidate before all examining teams shall be considered in the grading process.

The Case Reports

The Office of the Board will send nine sets of plastic folders to each candidate for binding of the individual Case Reports. It is imperative that the assigned CANDIDATE NUMBER, which is designated on the Admission Card, appear on the cover of each one of the Case Reports.

Eight cases will be assembled by the candidate and brought to the Board examination. Each of the Case Reports will be judged on the basis of the DEGREE OF DIFFICULTY as well as the QUALITY OF EXECUTION. All cases must have been performed by the candidate as the independent, responsible surgeon:

- a. Patients managed by the candidate within the context of a residency or fellowship training program are *not* acceptable as Case Reports.
- b. Hospital and office records must clearly identify the candidate as the operating surgeon.
- c. No significant portion of submitted operative procedures may have been performed by an individual other than the candidate.

The candidate will not be admitted to the examination if preliminary review of the cases shows that the possibility

exists that the candidate received supervision or guidance. The following signed DISCLAIMER STATEMENT must be included in the Case Reports if assistance has been provided by any surgical assistant other than a resident, intern, physician's assistant, medical student or nurse:

Patient's Name:

This is to certify that I did not provide supervision or guidance in the planning and execution of the operative treatment of this patient.

Signed:

Each candidate will bring to the examination the following materials on each of his eight submitted cases:

1. Narrative one-page summary of preoperative, operative, and postoperative course of the patient.
2. Pre- and post-operative photographs: approximately 3 1/2" x 5" black and white or color prints mounted on 8 1/2" x 11" heavy paper similar to a standard photographic album. Descriptive legends and dates of the photos should be placed adjacent to each photograph. No slides will be allowed.
3. Photocopies of the original operative reports and anesthesia records, in English, on the eight (8) submitted cases.
4. Photocopies of pertinent laboratory data and pathology reports.
5. Photocopies of pertinent X-rays. Drawings.
6. Drawings or intra operative photographs (when appropriate).
7. Photocopies, in English, of Progress Notes both in the hospital and in the office.
8. Information as to the final outcome of treatment.

The diversified nature of the case material submitted is evidence of the candidate's expertise in the representative areas of plastic surgery and should be drawn from the following categories; in order to be acceptable, there must be cases in seven of the nine categories:

1. Congenital facial clefts.
2. Defects requiring reconstructive surgery:
 - a) Maxillofacial region
 - b) Body and extremities
3. Acute burns.
4. Facial bone fractures (excepting simple nasal fractures).
5. Aesthetic operations.
6. Malignancies or conditions prone to malignancy:
 - a) of the head and neck region
 - b) of the body and extremities
7. Hand surgery.
8. Congenital anomalies: (Examples: syndactylism, microtia, hypospadias, congenital cysts, extensive nevi, congenital bands, craniofacial dysostosis, etc.)
9. *Treatment of complications resulting from previous treatment of the patient by the candidate.*

The eight cases must be selected from at least three of the following five anatomical regions: head and neck, upper extremity, trunk, lower extremity, and genitourinary system.

To be accepted, case summaries must be assembled according to the instructions given. In addition:

1. There must be two separate listings of cases by categories, including the identifying hospital number, diagnosis and principal operative procedure.
2. A separate signed form, stating, "I hereby certify that the planning and essential surgical procedures herein were performed by me as an INDEPENDENT operator." (only one statement is necessary for the entire group.)
3. Each report is to be typed on standard, letter-size paper (8 1/2 x 11) with the candidate's name, the

number of the case, the hospital case number, and a summary.

4. All assembled material, including photographs and copies of original operative reports and laboratory and pathology data, should be on or affixed to the same size paper and bound in the plastic folders furnished by the Board Office.

The American Board of Plastic Surgery, Inc. regards the Case Reports submitted as important evidence of the candidate's basic ability and organization in plastic surgery. **CASES CONSIDERED TO LACK THE DEGREE OF DIFFICULTY TO DEMONSTRATE A LEVEL OF COMPETENCE EXPECTED OF A FULLY TRAINED PLASTIC SURGEON WILL BE DISALLOWED AT THE DISCRETION OF THE BOARD. IMPROPER AND DISORDERLY PREPARATION OF THIS MATERIAL WILL BE SUFFICIENT CAUSE TO DISQUALIFY THE CANDIDATE FOR CONTINUED EXAMINATION.** The candidate must be prepared to defend his choice of operation, to present alternative treatment plans, and to discuss pertinent literature on the subject. The Board, at its discretion, may request certification of the case reports by the hospital where the operations were performed.

Grades

All candidates will be evaluated by each member of his examining teams and any having difficulty will be discussed in detail by the entire Board. The final decision regarding certification will be rendered at the meeting of the Board following completion of the oral examinations.

Pass (See "Certification")

Fail

The Board may, for reasons it deems sufficient, deny any candidate the privilege of further examination or re-examination.

Certification

After a candidate has met the requirements for admission and passed the examinations of the Board, a certificate attesting to his qualifications in plastic surgery will be issued by the Board. It shall be the prerogative of the Board to determine the fitness, professionally and ethically, of any candidate for a certificate; and the Board, for cause, may defer or deny certification to any candidate.

Certificates issued by the Board shall be in such form as the Board of Directors may from time to time determine and shall be signed by the Chairman, the Vice-Chairman, and the Secretary-Treasurer of the Board and shall have placed upon them the Official Seal of the Board. Effective in 1985, certificates issued by the Board will be dated and will be valid for ten (10) years. Revalidation will be accomplished by the Board's recertification process.

Certificates of the Board shall state that the holder has met the requirements of the Board and is certified by the Board as a medical specialist in plastic surgery and is entitled to be known as a "Diplomate of the American Board of Plastic Surgery." Diplomates will have their names reported to the American Board of Medical Specialties; and their names will be included in the *Director of Medical Specialists* published by Marquis Who's Who unless they notify the Board in advance that they do not wish to be listed.

The directors may adopt such further rules and regulations governing examinations, issuance, and revocation of certification as they may from time to time determine. The directors may adopt further rules and regulations to implement the principle of continuing education of physicians certified by the Board.

The Board considers a candidate's record not to be in the public domain. When an inquiry is received by the Board regarding an individual's status with the Board, a general—but factual—statement is provided which indi-

cates that persons's location within the process of certification. The information will be provided only to individuals, organizations, and institutions with a reasonably valid "need to know" for professional reasons.

Foreign Certificates

Individuals holding the Foreign Certificate issued by The American Board of Plastic Surgery, Inc. must relinquish the Certificate to the Board in the event they return to the United States for the purpose of practicing medicine. Such individuals may apply for examination and certification in the manner described herein.

Revocation of Certificates

Any certificate issued by the Board shall be subject to revocation at any time in case the Board shall determine that a candidate who has received such a certificate was not properly qualified to receive it. The Board may revoke the certificate of any Diplomate who, after opportunity for full and fair hearing by the medical staff of a hospital, state or county medical society, government licensing body, professional specialty society or a court of law, has been found guilty of or pleaded guilty to a felony, professional incompetence, professional misconduct, unethical conduct or harmful, deceptive or fraudulent advertising.

The Board may revoke the certificate of any diplomate who after "a full and fair hearing" has been found guilty of professional incompetence, unethical conduct, or harmful, deceptive, or fraudulent advertising by the medical staff of a hospital, state or county medical society, governmental licensing body, or professional specialty society.

The American Board of Plastic Surgery, Inc. shall have the jurisdiction and right to determine and decide whether or not the evidence or information placed before it is sufficient to constitute grounds for the revocation of any certificate issued by the Board. The candidate will be provided with the "Appeals Policy" of the Board, and the Policy will be observed in pursuing resolution of the problem.

Each certificate issued by the Board of Directors shall be subject to revocation in the event that the physician so certified shall have made any misstatement of material fact, or failed to make any statement of material fact, in his application for such certificate or in any other statement or representation to the corporation or its representatives, or shall have otherwise acquired the certificate by deception. Upon revocation the certificate shall be returned and surrendered to the Board.

AMERICAN BOARD OF PREVENTIVE MEDICINE

- Duane L. Block, MD, Chairman, Dearborn, Michigan
- Albert Oberman, MD, Vice Chairman for Public Health and General Preventive Medicine, Birmingham, Alabama
- Norbert J. Roberts, MD, Vice Chairman for Occupational Medicine, Bronxville, New York
- George F. Catlett, MD, Vice Chairman for Aerospace Medicine, Jamaica, New York
- John B. Atwater, MD, Ann Arbor, Michigan
- Terence Collins, MD, Gainesville, Florida
- Constance C. Conrad, MD, Atlanta, Georgia
- Robert W. Day, MD, Seattle, Washington
- Roy L. DeHart, MD, Brooks AFB, Texas
- Bertram D. Dinman, MD, Pittsburgh, Pennsylvania
- H. Bruce Dull, MD, Atlanta, Georgia
- Eugene W. Fowinkle, MD, Nashville, Tennessee
- A. Marshall McBean, MD, Baltimore, Maryland
- Pauline O. Roberts, MD, Los Angeles, California
- John H. Smith, MD, Vancouver, British Columbia
- Stanley R. Mohler, MD, Secretary-Treasurer, Department of Community Medicine, Wright State University School of Medicine, P.O. Box 927, Dayton, Ohio 45401

Preventive Medicine

Eligibility Requirements for Examination

Each applicant for a certificate in public health and general preventive medicine, aerospace medicine, or occupational medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the By-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the By-laws, as from time to time in force, by which alone such requirements are governed:

General Requirements

1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education of the American Medical Association, or from a school of osteopathic medicine which was at the time approved by the American Osteopathic Association, or from a foreign school satisfactory to the Board;
2. A year of postgraduate clinical training developed as part of an approved residency program in preventive medicine or in a clinical program approved by one or more Residency Review Committees and comprising experience involving direct patient care; or service or training deemed by the Board to be equivalent to such training;
3. An unrestricted license to practice medicine in a State, Territory, Commonwealth or possession of the United States or in a Province of Canada.
4. Residency of not less than one year which shall have provided supervised experience in the practice of public health, aerospace medicine, occupational medicine or general preventive medicine including planned instruction, observation and active participation in a comprehensive organized program in one of the specialty areas, approved by the Accreditation Council for Graduate Medical Education on the recommendation of the Joint Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and the American Board of Preventive Medicine; or a period of experience deemed by the Board to be substantially equivalent to such residency.
5. A period of academic training consisting of completion of a course of study leading to a master's degree in preventive medicine or public health, the content of which shall include biostatistics, epidemiology, health services administration and environmental health; or successful completion of post-baccalaureate study of the extent, depth, content and rigor generally required in such master's degree program.

Special Requirements in Public Health and General Preventive Medicine

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, preventive medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
2. The applicant must have been engaged in training for, or the practice of, public health for at least two of the five years preceding application for certification.

Special Requirements in Aerospace Medicine

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, aerospace medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
2. The applicant must have been engaged in training for, or the practice of aerospace medicine for at least two of the five years preceding application for certification.

Special Requirements in Occupational Medicine

1. In addition to the general requirements, a period of

not less than one year of special training or research in, or teaching or practice of, occupational medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.

2. The applicant must have been engaged in training for, or the practice of, occupational medicine for at least two of the five years preceding application for certification.

Equivalencies for Eligibility Determination

Individuals who have not formally completed all of the components previously described may be considered eligible if their training and experience is considered by the Board to provide suitable equivalency for that formal training.

The Board will consider granting certain credit toward satisfying requirements for eligibility for such factors as:

1. certification by one of the American specialty boards with significant preventive medicine components in their practice (e.g. internal medicine, pediatrics, family practice) plus a minimum of two years of full-time practice of preventive medicine;
2. teaching or research experience in fields relevant to preventive medicine; and
3. suitable periods of practice, research or teaching in preventive medicine.

An applicant who is lacking a formal academic year may substitute four additional years of practice in the special area of aerospace medicine, occupational medicine, general preventive medicine or public health.

Each applicant is considered individually by the Board in accordance with the existing guidelines.

Applications for Examination and Re-examination

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine). It must be accompanied by the required documentation, application fee, and two recent, clear, autographed photographs of the applicant. An official transcript of all graduate academic training in preventive medicine should be sent directly to the Board from the registrar of the institution where the training was undertaken.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the full Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his or her application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination but who fails to submit to examination within three years of the date of the first examination for which he or she is declared eligible, is required to file a new application, and to pay a new application fee.

Candidates failing the examination, may, upon timely application and payment of appropriate fee, be admitted to re-examination within a three-year period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

Multiple Certification

An individual may establish eligibility for certification in multiple fields of preventive medicine by submitting separate applications and fees for each field. Eligibility determination will be carried out independently and candidates

may be given credit for any period of appropriate training or experience, regardless of its having been used to establish eligibility in another field.

Fees

Application fee \$150
 Must be submitted with application; is not refundable.
 Examination fee \$600
 Fee is payable 45 days prior to the examination date.

Examination

The examination is a one, one-day examination. It is a multiple choice examination covering all of preventive medicine but weighted in those areas for which candidate is declared.

Certification

Upon satisfactory completion of the examination and proof to the satisfaction of the Board that the applicant is eligible for certification, a certificate will be issued to the effect that the applicant has been found to be possessed of special knowledge in the field specified. The certificate will be signed by officers of the Board and will have its seal affixed. Each certificate remains the property of the Board, but the person to whom it is issued is entitled to its possession unless and until it is revoked. Any certificate issued by the Board may be revoked if evidence, satisfactory to the Board, is presented that the applicant was not eligible to receive it at the time of application or issuance, or that any pertinent fact had been misstated, misrepresented, or concealed. The issuance of a certificate to any person does not constitute such person a member of the Board.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

Patrick F. Bray, MD, President, Salt Lake City, Utah
 S. Mouchly Small, MD, Vice President, Buffalo, New York
 John R. Calverley, MD, Secretary, Galveston, Texas
 Richard I. Shader, MD, Treasurer, Newton Centre, Massachusetts
 Leonard Berg, MD, Member-at-Large, St. Louis, Missouri
 Robert A. Fishman, MD, San Francisco, California
 Elliott L. Mancall, MD, Philadelphia, Pennsylvania
 Layton McCurdy, MD, Philadelphia, Pennsylvania
 John F. McDermott, Jr., MD, Honolulu, Hawaii
 Robert Michels, MD, New York, New York
 Desmond S. O'Doherty, MD, Washington, D.C.
 Carolyn B. Robinowitz, MD, Washington, D.C.
 N. Paul Rosman, MD, Boston, Massachusetts
 S. Mouchly Small, MD, Buffalo, New York
 John A. Talbott, MD, New York, New York
 William L. Webb, Jr., MD, Memphis, Tennessee
 Jack P. Whisnant, MD, Rochester, Minnesota
 Lester H. Rudy, MD, Executive Director,
 One American Plaza, Suite 808,
 Evanston, Illinois 60201

Certificates

The Board currently issues four types of certificates: (1) in psychiatry, (2) in neurology, (3) in child psychiatry, and (4) in neurology with special qualification in child neurology. An applicant may be certified in more than one area. The applicant shall receive a separate certificate for each area in which he or she qualifies. Each certificate shall be in such form and for such period of time as may be specified by the Board.

Revocation of Certificates

The Board shall have authority to revoke any certificate issued by it or to place a certificate holder on probation for a fixed or indefinite time if:

- (a) The certificate was issued contrary to or in violation of the Bylaws or any Rule or Regulation of the Board.
- (b) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his application or otherwise.
- (c) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended without such person's consent.

Board Eligibility

The American Board of Psychiatry and Neurology, in accord with the policy of the American Board of Medical Specialties, does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." The Board informs an applicant of admissibility to examination only when the applicant has an active, approved application on file in the Board office.

Application

An applicant who wishes to be examined by the Board shall complete, sign and file with the Executive Director an application on the official form, together with the required application fee and supporting data. Photocopies of applications are not acceptable. Application forms may be obtained from the Executive Secretary.

Completed applications must be received in the Executive Office of the Board no later than the September 1 preceding the scheduled date of the Part I examination for which the physician is applying.

An acknowledgement postcard accompanies each application. Upon receipt of an application, the Board office will return the postcard to the applicant, provided that name, address and proper postage are affixed.

It takes approximately ten weeks for the Board to review and process an application. Applications received on the deadline date may take longer because of the volume received at that time.

Applications which are not accompanied by the application fee will not be processed. Application fees unaccompanied by the formal application will be returned.

Residents may initiate the application process for the Part I examination during the last six months of residency training. The final review of application materials, however, cannot take place until the applicant successfully completes and documents all training requirements. Such documentation must be received in the Board office within two weeks following the date of completion of training.

An applicant must complete the Board's training requirements no later than September 1 of the year in which he or she is submitting an application.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on either Part I or Part II of the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures.

1) Within twenty (20) days after receiving notice of a negative determination, the applicant or candidate must give written notice of appeal to the Review Committee of the Board at the address specified in (4) below. Information tending to rebut the negative determination must be received within forty-five (45) days after receiving notice of a negative determination.

2) The Review Committee will review the written information required in (1) above. If the Review Committee decides to affirm the negative determination in question, the applicant or candidate will be notified in writing of the decision, the basis therefor and of the applicant's or candidate's right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Re-

Psychiatry and Neurology

view Committee must be received within twenty (20) days after receiving notice of the Committee's original decision. At any such appearance, the applicant or candidate will be given an opportunity to present his position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate.

3) If the applicant or candidate appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand that matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant or candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the applicant or candidate.

4) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and
Neurology, Inc.
One American Plaza
Suite 808
Evanston, Illinois 60201

General Requirements

At the time of submission of the application, the physician must establish that:

- (a) He or she has an unlimited license to practice medicine in a state, commonwealth, or territory of the United States, or a province of Canada. All applicants are required to submit copies of licenses with current registrations with their Part I applications.
- (b) He or she has satisfactorily completed the Board's specialized training requirements in psychiatry or neurology, or both; or that he or she is in the last six months of such training. (Please refer to the "application" section.)

Training Requirements

First Postgraduate Year

Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977.

Two patterns of training are acceptable:

1. Prior to entering an approved three-year training program in psychiatry or Neurology, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of Osteopathy. This year of clinical experience should emphasize internal medicine, or pediatrics or family practice. The following programs would be acceptable:

"Categorical First Year"—These are first-year programs planned, sponsored, and conducted by a single, approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program.

The Categorical First Year must be completed in internal medicine, family practice, pediatrics, surgery or obstetrics and gynecology.

"Categorical First Year"*—The asterisk designates a first-year program that will be planned, sponsored, and supervised by a single, approved residency program as part of that residency's program of graduate medical education, the content of which will not be limited to the single specialty of the sponsoring residency program but may include experience in two or more specialty fields as determined by the sponsoring program.

The categorical* first year in neurology or psychiatry must include at least four months with direct patient care

responsibility in internal medicine, family practice or pediatrics.

"Flexible First Year"—The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for: (1) students who feel the need for this type of first year; (2) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (3) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student.

The categorical first year, categorical* first year, and the flexible first year are in accord with those defined by the Department of Graduate Medical Evaluation, American Medical Association, May 22, 1974.

2. A four-year training program in psychiatry or in neurology would be acceptable with the provision that no less than four months during the first year be spent in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults. For the candidate who spends 12 or more months in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults this may come at any time in the four years.

For the physician seeking certification in both psychiatry and neurology, one general clinical year is required.

Criterion for PGY-1 Abroad—For those candidates seeking a PGY-2 position on or after July 1, 1984, who have completed a first postgraduate year of training in a training center located outside of the United States or Canada, the following conditions must be met:

The candidate must have successfully completed one year of training, after receipt of the medical degree, in a program reviewed and approved by an accrediting body comparable to the Accreditation Council for Graduate Medical Education, as evidenced by appropriate documentation. This documentation must consist of a letter of verification from the institution at which the training was completed and a letter from the person who was in charge of the training. These letters should verify the program's status and the period that the applicant spent in the program, including the length and content of rotations. Exceptions will be made only in unusual circumstances. The burden of verification for this year rests with the candidate.

REQUESTS FOR REVIEW MUST BE SUBMITTED TO THE BOARD OFFICE ACCOMPANIED BY PROPER DOCUMENTATION AS OUTLINED PRIOR TO ENTERING AN APPROVED TRAINING PROGRAM. In addition to Board approval, the final decision regarding suitability of prior training rests with the director of the training program to which the applicant is applying.

Certificate in Psychiatry and/or Neurology

An applicant who seeks admission to examination for certification either in psychiatry or in neurology, must have satisfactorily completed an approved PG-1 year and three full years of postgraduate, specialized training in a program accredited by the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada. The training must be in the specialty in which the applicant seeks certification and must be undertaken in the United States or Canada. No credit will be given for training done on less than a half-time basis.

For an applicant who began training after June 30, 1956, at least 24 months of training must have been spent in a training program or different programs approved for at least two years of training in the specialty in which he or she seeks certification.

For an applicant whose training began after June 30, 1964, at least two full years training must be spent in a single program approved for two or three years of training credit.

For those who plan to seek certification in child psychiatry, the above requirement can also be satisfied if the candidate completed one year of adult psychiatry and one year of child psychiatry in a single program approved for at least two years of training credit. Similarly, for the candidate in neurology with special qualification in child neurology, this requirement will be satisfied by a candidate who completed one year of child neurology and one year of adult neurology in a single program approved for at least two years of training credit.

In rare instances, alternate training pathways will be individually considered by the Credentials Committee for those exceptional individuals who have made outstanding contributions to the fields of psychiatry and/or neurology, provided that the applicant has also completed a minimum of two years (24 months) of training in an approved program in the specialty in which he or she is seeking certification. Up to three (3) months of these 24 months may be spent in the alternate specialty.

As an alternative to two years of a three-year program being spent in a single program, the ABPN will accept other patterns of training if the applicant can document that the total time (i.e., three years) permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered.

With the approval of the psychiatry program director, up to one year of training in neurology may constitute a portion of the training program in psychiatry.

Neurology candidates who have completed one year of approved training in neurosurgery may be granted up to six months of neurology training credit, contingent upon the approval of the neurology training director. One year of neurology training credit will be granted to neurology candidates who have completed three or more years of approved neurosurgery training, contingent upon the approval of the neurology training director.

No residency training credit can be given for experience or work performed in another medical specialty.

Training programs approved by the Residency Review Committees and accredited by the Accreditation Council for Graduate Medical Education may be found in the current issue of the *Directory of Residency Training Programs* published by the American Medical Association. This *Directory* includes the "Essentials of Accredited Residencies."

If an applicant seeks certification in both psychiatry and neurology, he or she must have satisfactorily completed five full years of postgraduate training, two years in each specialty, in approved training programs in the United States or Canada and an approved PG-1 year. For an applicant whose training began after June 30, 1964, the two-year training period in psychiatry must be spent in a single program approved for at least two years of training in psychiatry. Similarly, the two-year training period in neurology must be spent in a single program approved for at least two years of training in neurology.

Certificate in Child Psychiatry

Each applicant for certification in child psychiatry must be certified by the Board in the specialty of general psychiatry prior to applying for the examination in child psychiatry. The general policies regarding training, application and examination in child psychiatry are contained in the pamphlet "Information for Applicants for Certification in Child Psychiatry," which is available from the Executive Office.

Dual Certification in Child Psychiatry and in Neurology With Special Qualification in Child Neurology

An applicant who wishes to obtain certificates both in

child psychiatry and in neurology with special qualification in child neurology must meet the following requirements. He or she must be certified by the Board in the specialty of general psychiatry prior to applying for the examination in child psychiatry. The applicant must also meet the requirements for certification in neurology with special qualification in child neurology. One year of training in neurology may be substituted for one year of the required psychiatric training.

Certificate in Neurology With Special Qualification in Child Neurology

The American Board of Psychiatry and Neurology, Inc., believes that the proper preparation for the practice of child neurology requires that the practitioner be a qualified neurologist who has had additional training in pediatrics and child neurology. To qualify for this certificate a different type of preparation and certifying examination is required. The same diploma will be used, the only difference being that instead of certifying qualification in "neurology," it certifies qualification in "neurology with special qualification in child neurology." The applicant must comply with the Board's requirements for certification and examination as stated in the section on GENERAL REQUIREMENTS. An applicant seeking admission to examination for certification in neurology with special qualification in child neurology must have completed the following specialized training:

1. A PL-2 year (or its equivalent) as defined by the American Board of Pediatrics.¹

2. A total of three years of residency training in neurology which includes:

- a) One year of adult clinical neurological residency;
- b) A total of one year of neurological residency devoted to clinical child neurology;
- c) A total of one year in neurology in which the trainee is offered adequate experience in (1) basic neurological sciences such as neuroanatomy, neurophysiology, neuropathology, neuropharmacology, and neurochemistry; (2) closely related specialties such as neuroradiology, neurosurgery, neuro-ophthalmology, child psychiatry, and child psychology; and (3) special studies and laboratory procedures essential to the production of an effective practitioner and investigator in the field of child neurology.

¹In its "Booklet of Information" dated September 1, 1975, the American Board of Pediatrics defines the PL-1 and PL-2 years as follows:

"PL-1 The first postgraduate year in general pediatric training in an approved program, it may occur immediately after graduation from medical school or following training at the PL-0 level."

"PL-2 Similar to and following PL-1 but with increased responsibility for patient care and for supervision of junior staff and medical students."

Training Credit for Applicants from the United Kingdom

For each year of residency training completed in an approved hospital program in psychiatry or in neurology in the United Kingdom, one year of training credit will be given toward eligibility for examination by the Board in psychiatry or neurology.

The hospital program must be among those approved by the Visiting Inspecting Specialty Committee in Psychiatry or the Visiting Inspecting Committee in Neurology of the Royal College of Physicians.

In order to obtain credit for two or three years of approved training in the United Kingdom, at least two years of the training must be spent at the same training center in psychiatry or in neurology.

Psychiatry and Neurology

The applicant will be responsible for sending the details of his or her training to the American Board of Psychiatry and Neurology's Executive Office, along with verification of this training from the approved hospital or hospitals in the United Kingdom. The applicant's program director must certify that the applicant was engaged in *full-time* residency training. Credit for approved residency training in the United Kingdom will be given only for training begun on or after July 1, 1976. Applicants who have completed residency training in the United Kingdom prior to July 1, 1976 must meet the criteria outlined in the section "Applicants With Non-U.S. Training Qualifications."

Applicants with Non-U.S. Training Qualifications

The following criteria pertain to all applicants who residency training was undertaken at a center located outside the United States or Canada. These criteria also apply to applicants who completed residency training in the United Kingdom prior to July 1, 1976.

1. The candidate must have had full-time specialty training in a manner equivalent in length of time and content to that required for U.S. training and
2. the candidate must successfully complete a comparable, national certification examination in the country of training in the specialty in which the physician is seeking admission to examination and
3. the candidate must possess an unlimited license to practice medicine in a state, commonwealth, or territory of the United States or a province of Canada and
4. the candidate must have achieved certification within the past seven (7) years. If certification was achieved earlier, then the candidate must have had one year of clinical practice in a setting in which his professional work has been observed by at least two ABPN diplomates in that specialty and documented by two letters of sponsorship from such diplomates.

At present, the only certifications recognized by the Board as clearly equivalent are, for psychiatry, the United Kingdom's MRCPsych. (Member of the Royal College of Psychiatrists), Australia and New Zealand's MRANZCP (Member of the Royal Australian and New Zealand College of Psychiatrists), the South African Medical and Dental Council's F.F.Psych(S.A.) (Fellowship of the Faculty of Psychiatry of the College of Medicine of South Africa) and Israel's specialty certification of the Scientific Council of the Israel Medical Association, and, for Neurology, the United Kingdom's MRCP (Member of the Royal College of Physicians), Australia's MRACP (Member of the Royal Australian College of Physicians) and Israel's specialty certification of the Scientific Council of the Israel Medical Association. Certification by the Royal College of Physicians and Surgeons of Canada had been previously approved.

Criterion for PGY-1 Abroad

For those candidates seeking a PGY-2 position on or after July 1, 1984, who have completed a first postgraduate year of training in a training center located outside of the United States or Canada, the following conditions must be met:

The candidate must have successfully completed one year of training, after receipt of the medical degree, in a program reviewed and approved by an accrediting body comparable to the Accreditation Council for Graduate Medical Education, as evidenced by appropriate documentation. This documentation must consist of a letter of verification from the institution at which the training was completed and a letter from the person who was in charge of the training. These letters should verify the program's status and the period that the applicant spent in the program, including the length and content of rotations. Exceptions will be made only in unusual circumstances. The burden of verification for this year rests with the candidate.

REQUESTS FOR REVIEW MUST BE SUBMITTED TO THE BOARD OFFICE ACCOMPANIED BY PROPER DOCUMENTATION AS OUTLINED PRIOR TO ENTERING AN APPROVED TRAINING PROGRAM. In addition to Board approval, the final decision regarding suitability of prior training rests with the director of the training program to which the applicant is applying.

Examinations

Though the purpose of the examination is to test the qualification of the candidate in psychiatry or neurology, or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires proficiency in neurology on the part of those it certifies in psychiatry and vice versa, but examines the candidate in accordance with the certificate he or she seeks.

The Board uses DSM-III as its primary authority in psychiatric diagnostic nomenclature.

Each candidate must pass both Part I and Part II of the examinations given by the Board. Each examination shall cover such subjects as the Board may determine.

The Board may conduct such examinations at such times and places as it deems appropriate. The Board reserves the right to limit the number of candidates admitted to any scheduled examination. The administration and grading of all examinations shall be at the sole discretion of the Board. After completion of such examinations, the candidate will be notified by the Executive Director as to the results.

Rules on Forfeiture of Examination Fees

A candidate who is unable to attend any examination to which he or she has been admitted and who fails to notify the Executive Director in writing at least three (3) months before the start of such examination shall forfeit the examination fee. This is necessary because all arrangements for each candidate's examination must be made several months in advance. The Board is responsible for expenses incurred whether the candidate appears or not. All fees may be modified from time to time as necessary.

Part I Examination Content

Successful completion of the Part I written examination in both basic psychiatry and basic neurology is required of candidates seeking certification in either psychiatry, neurology, or neurology with special qualification in child neurology.

Examination for Psychiatry Candidates

The psychiatric portion of the examination will include questions on the following areas in psychiatry: normal and abnormal growth and development through the life cycle, mental retardation, psychopathology (descriptive and psychodynamic), biological and psychosocial psychiatry, diagnostic procedures, history, ethics, transcultural studies, epidemiology and psychiatry and the law.

The neurological portion of the examination will include questions on the following areas in neurology: clinical neurology, neuroanatomy, neuropathology, pharmacology and clinical diagnostic procedures (including questions on computed tomography, cerebrospinal fluid, neuro-ophthalmology and electroencephalography).

For candidates in both psychiatry and neurology, there will also be clinical questions on the following areas: altered states of consciousness, memory disorders, perceptual disorders with cerebral damage, motor disorders and verbal expressive disorders, dementia and deterioration in specific diseases, personality changes with cerebral lesions, mental retardation, clinical aspects of diagnostic testing including psychological testing, radiography, and EEG, therapy and management of patients with medical disorders.

BEGINNING WITH THE APRIL 1981 PART I EXAMINATION, PSYCHIATRY CANDIDATES WHO SUCCESSFULLY COMPLETE THE PART I WILL BE RE-

REQUIRED TO TAKE THE PART II EXAMINATION IN CLINICAL PSYCHIATRY ONLY.

Examination for Neurology Candidates

The neurological portion of the examination will include questions on the following areas in neurology: neuropathology, neurochemistry, neuropharmacology, neuroanatomy, neurophysiology, neuroradiology and computed tomography, EEG, evoked potentials, EMG, neuroophthalmology, neuro-otology, cerebrospinal fluid, radio-nuclide scans, noninvasive blood flow studies, genetics, neuro-immunology, neuro-virology and neuro-endocrinology.

The psychiatric portion of the examination will include questions on the following areas in psychiatry: growth and development, psychopathology, biological psychiatry, psychosocial psychiatry and diagnostic procedures.

For candidates in both psychiatry and neurology, there will also be clinical questions on the following areas: altered states of consciousness, memory disorders, perceptual disorders with cerebral damage, motor disorders and verbal expressive disorders, dementia and deterioration in specific diseases, personality changes with cerebral lesions, mental retardation, clinical aspects of diagnostic testing including psychological testing, radiography, and EEG, therapy and management of patients with medical disorders.

BEGINNING WITH THE APRIL 1982 PART I EXAMINATION, NEUROLOGY AND CHILD NEUROLOGY CANDIDATES WHO SUCCESSFULLY COMPLETE THE PART I EXAMINATION WILL BE REQUIRED TO TAKE THE PART II EXAMINATION IN CLINICAL NEUROLOGY AND CHILD NEUROLOGY ONLY.

Part I Examination Procedures

The Part I examination is given once a year, in the spring, on a regional basis throughout the United States and Canada, as well as in selected sites outside the continental limits of the United States. Applicants will also be expected to indicate, in order of preference, their choice of two examination sites. Every effort is made to accommodate candidates in the locale of their choice, but transfer to another site cannot be made during the three-month period preceding the Part I examination.

After an applicant has been advised by the Board of acceptance for examination, the applicant shall, on request, submit the required examination fee.

Because of the volume of applications, the Board must adhere firmly to the deadlines established for receipt of examination fees. A candidate's name will be removed from the examination roster if he or she fails to submit the examination fee by the deadline specified. Candidates will then be required to request and submit a new application and application fee.

All candidates are required to take the next scheduled Part I following the date of acceptance for examination. Candidates who fail to do so will be required to request and submit a new application, all supporting documentation and application fee.

A candidate who passes Part I shall, upon request, submit to the Executive Secretary a check payable to the Board to cover the fee for Part II. Candidates who pass the Part I examination will automatically be assigned to a Part II examination and shall be required to be present as scheduled. All candidates will be scheduled for Part II within one year following notification of successful completion of the Part I.

A candidate who fails the initial Part I examination may, upon payment of the Part I re-examination fee, repeat the examination the following year. Re-examinees who do not sit for re-examination as scheduled will be required to request and submit a new completed application and application fee. Two failures necessitate re-application (request for and submission of another completed application and payment of the application fee):

EFFECTIVE JULY 1, 1976, A PASSING GRADE ON THE PART I EXAMINATION DATED ANY TIME SINCE APRIL 1, 1969, WILL BE VALID FOR A PERIOD OF SEVEN (7) YEARS FROM THE DATE OF PASSING. ALL INDIVIDUALS HOLDING SUCH A GRADE MAY APPLY OR REAPPLY FOR THE PART II EXAMINATION.

Part II Examination Content

Part II, an oral examination, will include the examination of patients under the supervision of an examiner. The manner of examining patients, and the reasoning and deductions therefrom will constitute an important part of the examination. Knowledge of basic science principles, special diagnostic procedures, and management recommendations and risks are also essential parts of this examination, which is focused upon evaluation of clinical skills.

Candidates are expected to discuss the patient and their findings with their examiner. Questions frequently cover such areas as diagnosis, differential diagnosis, treatment, prognosis and management. The mental status examination is one of the areas in which candidates seeking certification are expected to demonstrate proficiency. Reference to the basic sciences of psychiatry and neurology may be made.

Psychiatry candidates who successfully completed the Part I examination prior to April 1, 1981 will take three examinations:

- 1 one-hour examination in clinical psychiatry (patient)
- 1 one-hour examination in clinical psychiatry (audio-visual)
- 1 one-hour examination in clinical neurology (audio-visual)

Psychiatry candidates who successfully completed the Part I examination after April 1, 1981 will take two examinations:

- 1 one-hour examination in clinical psychiatry (patient)
- 1 one-hour examination in clinical psychiatry (audio-visual)

In the patient section, the psychiatry candidate will be given 30 minutes to examine a patient under the supervision of one or more examiners. Following the examination of the patient, the candidate will be examined by one or more examiners. This section will stress physician-patient interaction, conduct of the clinical examination, capacity to elicit clinical data, formulation, differential diagnosis and prognosis, therapeutic management and knowledge of therapies. Additional questions may be addressed to the basic science of psychiatry.

The psychiatry audio-visual section will consist of a 20-minute video-taped psychiatric examination which the candidate will observe. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape.

Those candidates who took the Part I examination prior to April, 1981 but did not take or did not pass the neurology portion of the Part II examination will take a one-hour examination in neurology which will consist of a 20 to 30 minute video-taped examination followed by an individual examination by one or more examiners with particular reference to the content of the tape.

Neurology candidates who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

- 1 one-hour examination in clinical psychiatry (patient)
- 1 one-hour examination in clinical neurology (patient)
- 1 one-hour examination in clinical neurology (audio-visual)
- 1 one-hour examination in clinical child neurology (audio-visual)

Psychiatry and Neurology

Neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

- 1 one-hour examination in clinical neurology (patient)
- 1 one-hour examination in clinical neurology (audio-visual)
- 1 one-hour examination in clinical child neurology (audio-visual)

Child neurology candidates who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

- 1 one-hour examination in clinical psychiatry (patient)
- 1 one-hour examination in clinical neurology (audio-visual)
- 1 one-hour examination in clinical child neurology (patient)
- 1 one-hour examination in clinical child neurology (audio-visual)

Child neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

- 1 one-hour examination in clinical neurology (audio-visual)
- 1 one-hour examination in clinical child neurology (patient)
- 1 one-hour examination in clinical child neurology (audio-visual)

Those candidates who took the Part I examination prior to April, 1982 but did not take or did not pass the psychiatry section have been given the choice of a patient section or a special written, multiple-choice examination in psychiatry in 1984. After 1984, the special written examination will not be given and candidates will take an audio-visual section in psychiatry.

In the psychiatry patient section, the examination will follow the same format as outlined for the patient section for psychiatry candidates.

In the neurology and child neurology patient sections, the candidate will be given 30 minutes to examine the patient under the supervision of one or more examiners. During the conduct of the examination, the candidate's ability to obtain an adequate history and perform a neurological examination will be observed. Following the examination of the patient, the 30-minute discussion with the examiner will focus on the evaluation of the findings and discussion of the diagnosis, treatment, and management. This discussion may not be limited to the patient examined and may also include other clinical topics. The examiners may also ask additional questions concerning the basic science of the particular section.

In the audio-visual sections, the candidate will observe a video-taped neurological examination and interview. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape.

Part II Examination Procedures

All successful Part I candidates will receive a notice of assignment to a Part II examination together with a request to submit the required examination fee. Scheduling for the Part II examination will be made as much as possible, on a regional basis as much as is possible. Candidates who fail to take Part II as scheduled by the Board will be required to reapply for the Part II examination.

The limited space available and the complicated logistics involved in administering the Part II make it impossible for the Board to allow candidates to select either the site or the date for examination. It is the candidate's privilege to decline the assigned examination, but there is no guarantee

that another date or location will be available within the year's examination cycle.

Candidates who do not pay the Part II examination fee for their scheduled examination by the deadline specified, will be removed from the roster of candidates for that examination. Such candidates will be required to request and submit a Part II application fee in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

Candidates who pay their Part II examination fee but fail to appear at their scheduled Part II examination, will forfeit the fee. Such candidates will be required to request and submit a Part II application and new examination fee in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

One month prior to the date of his or her Part II examination, a candidate will receive informational materials and an admission notice specifying the time and date to report for registration. Candidates are requested to report for registration only at the time indicated on the admission notice. Registration schedules are arranged to accommodate candidates in accordance with their examination schedules.

The Board office will not provide information concerning specific examination schedules prior to registration.

Policy for Retaking of Part II Examination

1. A candidate who passes both sections of the major subject of the Part II examination need not repeat this portion of the examination within a period of seven (7) years following the date of successful completion of the Part I examination.

To pass the major subject, the candidate must achieve final passing grades on both sections of the major subject at the same examination.

A candidate who fails one or both sections of the major subject must take both hours of examination in the major subject at each subsequent examination until he or she passes both sections at the same examination or until the expiration of the seven (7) year period following successful completion of the Part I examination.

2. Candidates who pass the Part II examination in the minor subject(s) need not repeat this portion of the examination within a period of seven (7) years following successful completion of the Part I examination.

3. Candidates who are unsuccessful in the Part II examination during the seven (7) years following completion of the Part I examination, will be required to request and submit a new Part I examination, documentation and application fee.

4. Candidates, themselves, should be aware of the expiration date of their passing the Part I examination.

Procedures for Retaking of Part II Examination

Candidates who have failed the Part II examination are automatically assigned to another Part II examination and are required to be present as scheduled. Candidates who fail to take the re-examination at the time specified are required to request and submit a Part II application. Candidates submitting the Part II application will be scheduled for examination within one year, if possible, from the date the Part II application is received in the Board office. Candidates will be scheduled for examination based on space availability and order of receipt of application. Invitations will be sent at least two months prior to the scheduled examination. A request for the examination fee will be made at that time. The examination fee should not be sent with the application.

Candidates who have submitted a Part II application may choose to decline two invitations to Part II examinations. If the third invitation is declined, the candidate will be required to request and submit a new Part II application and

will be placed at the end of the waiting list once the application is received in the Board office.

Supplementary Certification

A candidate who has been certified in either psychiatry, neurology or neurology with special qualification in child neurology may apply for supplementary certification in another specialty upon submission of a new Part I application and application fee. If the credentials for such other certificate are acceptable to the Board, the candidate thereupon becomes eligible to take Part I and Part II examinations in the supplementary subject.

Candidates who have achieved certification in neurology and are desirous of gaining certification in neurology with special qualification in child neurology shall be required to take two one-hour examinations in child neurology during the Part II examinations. Such candidates will not be required to retake the Part I examination in neurology.

Candidates should note that certification in one specialty must be obtained before the Board can consider an application for certification in the supplementary subject. It is the policy of the Board not to maintain two active applications simultaneously.

Application for Certification in Child Psychiatry

An applicant who wishes to be certified in child psychiatry shall complete, sign and file with the Executive Secretary of the Board an application on the official form together with the required supporting data. Applications may be obtained from the Executive Secretary. The application shall be accompanied by a check payable to the Board for \$200. No part of this fee is refundable.

No application will be considered until the fee and all required data have been received by the Executive Secretary. *The application, supporting data and fee must be received by the Board no later than the May 1 preceding the Fall examination for which the candidate is applying.*

Determinations of applicants' eligibility will be made in accordance with the rules and regulations of the Board.

General Requirements

Each applicant for certification in child psychiatry must comply with the following requirements:

(a) He or she must have been certified by the Board in the specialty of general psychiatry prior to submitting an application for examination in child psychiatry. He or she must at all times continue to meet all requirements of the Board for certification in general psychiatry.

(b) He or she must have satisfactorily completed the Board's specialized training requirements in child psychiatry.

Training Requirements

All candidates beginning their specialized training in child psychiatry after June 30, 1965, must have two years of training in child psychiatric centers approved by the Committee in conjunction with the Residency Review Committee for Psychiatry. All training must be completed in the U.S. No credit will be given for training done less than half-time.

The exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatric curriculum will not qualify for this credit.

The two years of specialized training in child psychiatry are usually taken at one center, but may be taken at no more than two centers. If training is taken at two centers, the training director of each center must evaluate the candidate's training at that center.

The training director of the second center is responsible for ensuring that the total *two years* of the candidate's specialized child psychiatry training in the *combined program* is balanced to meet the essentials of the second training program as they have been described and submitted to the Board. A minimum of one year of training

must be taken at the second center.

Candidates who have completed at least one year of approved pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year) after July 1, 1960, may be granted up to six months' credit toward child psychiatry training requirements. The six months' credit may be granted if the director of the child psychiatry training program recommends such credit, and if the candidate completes a minimum of one year of training in that child psychiatry program (in the event that training is split between two child psychiatry training programs). This recommendation should be set forth in the form of a letter from the director of the training program to the child psychiatry trainee. A copy should be attached to the application for examination in child psychiatry. This letter should specify the following:

(1) The exact dates of the pediatric training for which child psychiatry training credit is being granted and the pediatric residency program in which this training was obtained;

(2) The exact number of months of credit being granted toward child psychiatry training.

Thus, the following patterns of specialized training in child psychiatry are acceptable:

(1) Two years of training in basic psychiatry, plus two years of training in child psychiatry;

(2) Two years of training in basic psychiatry and at least 18 months of training in child psychiatry, plus up to (but not more than) six months of child psychiatry training credit for one year of pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year). The total minimum amount of child psychiatry training is TWO FULL YEARS.

Any trainee or potential trainee in child psychiatry who contemplates a training program at variance with one of the above training patterns is advised to submit his or her proposed training sequence to the Executive Secretary of the Board. This should be done before beginning child psychiatry training, in order to allow for an advisory opinion of the Committee as to whether the proposed training is likely to meet requirements for admission to examination.

The applicant should obtain from his or her training director(s) a statement certifying satisfactory completion of the training requirements during the period for which training credit was granted.

The Committee may require, at its discretion, the publications of the applicant and/or a series of case reports of children treated by the applicant, as part of the qualifications of eligibility for examination for certification in child psychiatry.

In rare instances, alternate training pathways will be individually considered by the Credentials Committee for those exceptionally qualified individuals who have made outstanding contributions to the field of child psychiatry. A candidate must be nominated by a director of a training program approved by the Residency Review Committee for Psychiatry. The program director must be from the institution where the candidate had a substantial portion of his or her training experience, or where he or she has a current professional appointment. The director must justify the unique but adequate character of the candidate's training program in child psychiatry, and must describe in detail the candidate's clinical experience and competence, as well as his or her professional goals and accomplishments. The candidate must have completed at least five years of training, and evidence must be submitted showing that he or she has had satisfactory direct responsibility for patient care in the field of child psychiatry. In addition to the usual application form, the candidate's curriculum vitae, bibliography, and reprints should be submitted for consideration. Each inquiry will be considered on an individual basis by the Credentials Committee and the Committee on Certification in Child Psychiatry. Applicants admitted under this plan must sit for the next scheduled examination

Psychiatry and Neurology

and are restricted to an initial examination and one re-examination. Candidates who are unsuccessful in completing the examination process within this period will be required to meet the Committee's current training requirements.

Application and Fees

Applicants shall make application on official forms. Such applications must be accompanied by an application fee of \$200. This fee is nonrefundable.

Those applicants accepted for examination will be notified and scheduled for examination. The examination fee of \$550 (\$350 for the oral examination, \$200 for the written examination) is payable when such payment is requested by the Executive Secretary of the Board.

Should the applicant be denied admission to the examination he or she will be notified of his or her deficiencies.

Applications remain active for one examination year only. Candidates who fail to present themselves for the next scheduled examination following the date of submission of their applications will be required to submit a new application and pay a new application fee.

The number of spaces available for examination is limited. After the quota is filled, applications will be placed on a waiting list in order of receipt in the Board office. In the event that a candidate is not accepted for the examination for which he or she applied due to space limitations, his or her application will be held over for the following year's examination.

Examinations

The Committee on Certification in Child Psychiatry does not endorse or recommend any texts or other teaching aids identified as "Board preparation" material. Furthermore, this Committee does not have any affiliation with or responsibility for programs identifying themselves as "Board Review Courses."

Examinations are given once a year. The Committee reserves the right to limit the number of candidates admitted to any scheduled examination. There will be oral and written examinations which will include examination in all areas relating to normal personality development and pathological deviations from infancy through adolescence. The examinations will cover any area of developmental disturbance, etiological mechanisms, and therapeutic measures and planning. Knowledge and critical understanding of the history and literature of child psychiatry as they apply to practice in the field will constitute a part of the examination. The utilization of psychological testing, contributions of collaborative personnel, and types of social planning will be included in the examination. A major part of the examination will assess the candidate's ability to reason from the material presented to formulate a differential diagnosis, and to organize a practical program of therapy and management from these data.

The examination consists of a written examination, covering all areas of child psychiatry noted above, plus the following four oral examinations:

- 1) A 45-minute examination on the preschool child;
- 2) A 45-minute examination on the grade-school child;
- 3) A 60-minute examination on the adolescent;
- 4) A 45-minute examination on child psychiatry consultation.

The examinations on the preschool and grade-school child are based on short, videotaped interviews. Candidates are evaluated on their ability to observe and describe the most significant behaviors of the child and to determine the additional data needed to define the clinical situation, formulate a differential diagnosis and treatment plan.

The examination in adolescence will include the psychiatric examination of an adolescent under the supervision of an examiner. The manner and process of interviewing the adolescent and the reasoning and deductions therefrom, including differential diagnosis and treatment plan, will constitute an important part of the examination.

The examination on child psychiatry consultation will include clinical and community-oriented written vignettes. These short vignettes will focus on consultation with medical colleagues, schools, courts, and social agencies. The examination will include discussion to show that the candidate is familiar with community resources and can facilitate their utilization. Discussion should further show that the candidate understands the principles of consulting and working appropriately with other professional disciplines. Questions may also be asked about consultative problems such as child abuse, psychophysiological disorders, delinquency and learning disabilities.

The current regulations for failure or condition of the examination for certification in child psychiatry are as follows:

Failure: Fails two (2) or more oral sections of examination
Fails two (2) or more oral sections and the written examination

A candidate who fails the examination must upon re-examination repeat the entire examination including the written examination unless it has been specified that the written examination has been passed.

Condition: Fails one (1) oral section of the examination and/or the written examination

A candidate who conditions the examination must upon re-examination repeat only the section(s) conditioned.

Effective with the February 1978 examination passage of the written examination is valid for a period of seven (7) years.

Effective with the February 1980 examination passage of all portions of the oral examination is valid for a period of four (4) years.

According to the regulation of the Committee on Certification in Child Psychiatry, candidates who are unsuccessful in their initial examination must appear for the next Child Psychiatry examination as scheduled. Should a candidate elect to decline the scheduled re-examination, he or she would be required to request and submit a new application and application fee in order to pursue certification.

According to the regulations of the Committee on Certification in Child Psychiatry, candidates who are unsuccessful in their re-examination must request and submit a new application and application fee in order to pursue certification.

PLEASE NOTE THE CHANGE IN THE DEADLINE FOR SUBMITTING APPLICATIONS. All applications must be received by the Board office no later than the May 1 date of preceding the examination for which the applicant is applying.

Candidates who fail only the written examination may be given a choice of sites at which they may sit for re-examination. Such examinations would be given on the same day as the written examination for all other child psychiatry candidates. The general policy is: if the examination for all candidates is held in the midwest, no alternate sites will be offered. Should a candidate decline the written examination to which he or she has been assigned, the candidate will automatically be assigned to the written examination for the following year. A written examination fee will be requested at the appropriate time. This option applies solely to candidates who must repeat only the written examination.

Any candidate who is unable to attend an examination to which he or she has been admitted and who fails to notify the Executive Secretary of the Board at least two (2) months before the date of the examination will forfeit the examination fee and the application fee. Such candidates must request and submit a new application and application fee. In the event that an urgent situation develops which makes it impossible for the candidate to attend an examination, an exemption from this ruling may be requested. Candidates should contact the Executive Secretary.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures.

1) Within twenty (20) days after receiving notice of a negative determination, the applicant or candidate must give written notice of appeal to the Review Committee of the Committee on Certification in Child Psychiatry (hereafter called the "Committee") at the address specified in (4) below. Information tending to rebut the negative determination must be received within forty-five (45) days after receiving notice of a negative determination.

2) The Review Committee will review the written information required in (1) above. If the Review Committees decides to affirm the negative determination in question, the applicant or candidate will be notified in writing of the decision, the basis thereof and of the applicant's or candidate's right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally or with counsel before the Review Committee must be received within twenty (20) days after receiving notice of the Committee's original decision. At any such appearance, the applicant or candidate will be given an opportunity to present his position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate.

3) If the applicant or candidate appeals the decision of the Review Committee to the Committee, the Committee will review all of the evidence considered by the Review Committee. However, the Committee will not consider any evidence that was not presented to the Review Committee. If the Committee disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant or candidate will be informed in writing of the Committee's decision which, in all events, will be final and binding on the Committee and on the applicant or candidate.

4) All notices or other correspondence directed to the Review Committee or to the Committee should be sent to the following address:

Committee on Certification in Child Psychiatry,
American Board of Psychiatry and Neurology, Inc.,
One American Plaza,
Suite 808,
Evanston, Illinois 60201

Amendment of Rules and Regulations

The Board of Directors has authority to issue and amend from time to time, rules and regulations relating to the issuance and revocation of certificates in child psychiatry.

Revocation of Certificates

All certificates issued by the Board shall be issued subject to the provisions of its Certificate of Incorporation, Bylaws and Rules and Regulations. The Board has authority to revoke any certificate issued by it or to place a certificate-holder on probation for a fixed or indefinite time, in accordance with the rules and regulations of the Board, on the following grounds:

- (a) The certificate was issued contrary to or in violation of its Bylaws or Rules and Regulations;
- (b) The person to whom the certificate was issued was not eligible to receive, or has since become ineligible to hold, the certificate;
- (c) The person to whom the certificate was issued made

any material misstatement or omission of fact to the Board in his/her application or otherwise;

(d) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended.

AMERICAN BOARD OF RADIOLOGY

- Jerome F. Wiot, MD, President, Cincinnati, Ohio
- Luther W. Brady, MD, Vice President, Philadelphia, Pennsylvania
- M. Paul Capp, MD, Treasurer, Tucson, Arizona
- C. Allen Good, MD, Assistant Secretary and Treasurer, Rochester, Minnesota
- James H. Christie, MD, Albuquerque, New Mexico
- Lawrence W. Davis, MD, Philadelphia, Pennsylvania
- Juan A. del Regato, MD, Tampa, Florida
- Jack Edeiken, MD, Philadelphia, Pennsylvania
- Milton Elkin, MD, Bronx, New York
- Theodore E. Keats, MD, Charlottesville, Virginia
- Eugene C. Klatte, MD, Indianapolis, Indiana
- Jack S. Krohmer, MD, Detroit, Michigan
- Richard G. Lester, MD, Houston, Texas
- Robert W. McConnell, MD, Houston, Texas
- Thomas F. Meaney, MD, Cleveland, Ohio
- Robert G. Parker, MD, Los Angeles, California
- William R. Powers, MD, Detroit, Michigan
- Paul A. Riemenschneider, MD, Santa Barbara, California
- Lee F. Rogers, MD, Chicago, Illinois
- Kenneth L. Krabbenhoft, MD, Secretary, Kahler East, Rochester, Minnesota 55902

Certificates

A certificate will be issued to each candidate who has finished a prescribed and approved period of training and study and has passed an examination demonstrating an adequate level of knowledge and ability in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or therapeutic radiology in accordance with the definitions as stated in the Bylaws.

A certificate granted by the Board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice radiology.

Definitions

1. *Diagnostic Radiology* is that branch of radiology which deals with the utilization of all modalities of radiant energy for the image portrayal of human morphology and physiologic and pathologic processes in medical diagnosis. This includes diagnostic imaging techniques using radiations emitted by x-ray tubes, radionuclides, infrared sources, ultrasonographic devices, and the radiofrequency electromagnetic radiation emitted by atomic nuclei.

2. *Nuclear Radiology* is a clinical sub-specialty of radiology involving the imaging by external detection of the distribution of radionuclides in the body for the diagnosis of disease.

3. *Therapeutic Radiology* is that branch of radiology which deals with the therapeutic application of ionizing radiation including roentgen and gamma rays as well as particulate radiation from whatever source including artificially produced and naturally occurring radioactive materials as well as X-ray generators and particle accelerators.

Certification

Each applicant for admission to an examination of this Board must present evidence that he/she has fulfilled the following requirements.

A. General Qualifications:

That the applicant is a specialist in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, and/or therapeutic radiology as stated in the Bylaws.

Radiology

B. General Professional Education:

Graduation from a medical school accredited at the date of graduation by the Liaison Committee on Medical Education of the American Medical Association; or the Canadian Medical Association or from a College of Osteopathic Medicine approved by the American Osteopathic Association. If the applicant is a graduate of a medical school outside the United States or Canada, the applicant must be screened with approval by an agency approved by the Board of Trustees.

C. Special Training

After graduation from medical school there shall be a period of special training. This period of special training shall be as the Board of Trustees by resolution or motion shall determine from time to time.

Effective for candidates beginning their training July 1, 1981 and thereafter, the Board of Trustees shall require a written statement from the program director to the effect that the applicant will have satisfactorily completed the prescribed special training at the time of the examination and is prepared to take the examination.

D. In special instances these requirements may be modified by majority vote of the Board of Trustees.

E. If the program director fails to indicate in writing that the applicant is adequately trained and prepared for the examination, documentation of the reason(s) must be submitted along with evidence that the candidate has been appropriately apprised of his deficiencies. The Executive Committee of the Board will notify the applicant in writing that an appeals mechanism exists as outlined in paragraphs (F) and (G) below.

F. In utilizing the appeals mechanism, the applicant must provide the Executive Committee of the Board with the written statement describing the reasons which he/she believes will support his/her appeal. The Executive Committee may ask the program director to submit a written response to the applicant's appeal.

G. The Executive Committee must reach a final decision with the least possible delay in order that the applicant who wins his/her appeal does not lose the opportunity to be accepted for the examination for which he/she has applied.

Diagnostic Radiology

1. Candidates beginning their training in diagnostic radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved post-graduate training. Three of these years must be spent in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year of another approved specialty. No credit will be allowed for a foreign internship.

2. The previously stated requirement of one full year (12 months) in a clinical field of medicine in an institution approved for such training by the Accreditation Council for Graduate Medical Education prior to entering residency training in diagnostic radiology has been deferred indefinitely. The required four years of approved graduate training must include three years in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The other year may be spent as described in the foregoing paragraph.

3. Candidates beginning their training in diagnostic radiology after June 30, 1984 will be required to have four years of postgraduate training in a residency in diagnostic radiology approved for such training by the Accreditation Council for Graduate Medical Education. In the required four years of radiological training, a minimum of six months of nuclear radiology is required. The length of the residency training program will be at least four years (48 months).

Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will have completed this amount by September 30 of the year in which the examination is given.

Candidates must receive training in nuclear radiology. Time spent in nuclear radiology may not exceed twelve months. A maximum of three months may be spent in therapeutic radiology.

Candidates will be asked questions concerning computed tomography (CT) and ultrasound on both the written and oral examinations.

Diagnostic Radiology with Special Competence in Nuclear Radiology

1. The American Board of Radiology will give a special examination leading to a certificate in diagnostic radiology with special competence in nuclear radiology to those diplomates in radiology, roentgenology, diagnostic radiology or diagnostic roentgenology who have fulfilled the requirement of one full year of formal residency or fellowship training in nuclear radiology.

2. Continuing its policy adopted in June, 1979 the Board will give a regular examination consisting of at least ten examiners (eleven if candidate previously failed physics in the written examination in diagnostic radiology). The subjects to be covered are: bones and joints, the chest, the gastrointestinal tract, the genitourinary tract, neuroradiology, cardiovascular radiology, nuclear radiology (three examiners) and CT and ultrasound, to candidates who have not been previously certified, who have passed the written examination in diagnostic radiology, and who will have completed four years of approved postgraduate education in this country or Canada, three years of which have been spent in residency training comprising at least twenty-four months of diagnostic radiology and its subspecialties and twelve months in nuclear radiology.

3. Candidates beginning their training in diagnostic radiology with special competence in nuclear radiology July 1, 1981 or thereafter will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The fourth year must be spent in an accredited training program for nuclear radiology or for diagnostic radiology with special competence in nuclear radiology.

Therapeutic Radiology

1. Candidates beginning their training in therapeutic radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in therapeutic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year in another approved specialty. No credit will be allowed for a foreign internship.

2. The three-year residency training period must include training in Pathology and training in the therapeutic aspects of nuclear medicine. Credit may not exceed three months for time spent in either subject. A maximum of three months' training in diagnostic radiology will be allowed.

Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will complete this amount by September 30 of the year in which the examination is given.

Effective with the written examination in therapeutic radiology to be held in 1982, the candidate must pass the entire examination including the sub-sets of radiological physics and radiation biology before being admitted to the oral examination.

Application and Fee

Application for examination must be made in exact duplicate (2 original copies on prescribed forms which may be obtained from the Secretary). No xerox or any other kind of copy will be accepted. These forms shall be forwarded with the required data, two unmounted photographs autographed on the front, and the application fee of \$750.00 (U.S. Currency) by the deadline established for filing. A certified check or money order is required to be made payable to THE AMERICAN BOARD OF RADIOLOGY, INC. APPLICANTS FOR EITHER THE WRITTEN OR THE ORAL EXAMINATION TO BE GIVEN IN ANY YEAR WILL NOT BE ACCEPTED PRIOR TO APRIL 1 OF THE PRECEDING YEAR AND MUST BE FILED NO LATER THAN THE DEADLINE OF SEPTEMBER 30 OF THE PRECEDING YEAR. The application fee (noted above) will cover both the written and the oral examinations provided the candidate is successful in the written examination.

Incomplete applications will not be accepted. The postmark affixed to the last item received to complete the application must be on or before the deadline date.

All applications must be typed or neatly printed (in ink).

A candidate will have three consecutive opportunities to pass the written examination beginning with the written examination for which he/she is first declared eligible and for which he/she has accepted an appointment. If a candidate fails to accomplish this, he/she must submit a new application and the fees in effect at that time. Failure to appear for a scheduled written examination will be regarded as one of the three opportunities.

A candidate who has passed the written examination will have three consecutive opportunities to appear for and pass the oral examination beginning with the oral examination for which he/she is first declared eligible. If a candidate fails to accomplish this, he/she must submit a new application and the fees in effect at that time and reinstate the examination process including the written examination. Failure to appear for a scheduled oral examination will be regarded as one of the three opportunities.

A candidate who finds it necessary for any reason to cancel after acceptance of an appointment for either the written or oral examination shall be required to submit an additional fee of \$100.00. This amount represents administrative costs to the Board. A candidate who FAILS TO APPEAR for an examination without notifying the office of the ABR at least twenty (20) days prior to the date of his/her examination must wait a period of two years before being offered another appointment for examination. Under certain circumstances, the Board, entirely at its discretion, may excuse a candidate from a scheduled examination without penalty, provided the request for such absence is filed in writing.

If a candidate withdraws his/her application, a portion of the fee will be retained for processing.

Objectives of the Written Examination

In 1965 it became apparent to the Board of Trustees of The American Board of Radiology that the then current oral examination could not cover the entire burgeoning field of Radiology without the addition of more segments, and in turn more examiners. This would not only impose a further burden on the candidates but also on the Board itself. It was decided, therefore, to search for other methods of examination. At that time, it was agreed to adopt a written examination to be given once each year as a prerequisite for the oral examination. The content of the examination was to include the basic sciences of anatomy, pathology, physiology and pharmacology as these subjects relate to its clinical practice. Also to be included were roentgenologic technique, radiological physics, and radiation biology.

The content of the examination in therapeutic radiology was to include the basic sciences of physics, radiation biology, and clinical oncology as well as anatomy, pathology, physiology and chemotherapy as these subjects relate to the clinical practice of therapeutic radiology.

With the help of many radiologists who were not Trustees of the Board and with the assistance of the National Board of Medical Examiners, a pool of multiple-choice questions was developed and the first examination was given in 1969 to all candidates seeking certification in diagnostic radiology and in therapeutic radiology.

Content of Written Examination in Each Field

Each examination consists of between 300 and 350 multiple-choice questions to be administered over a period of approximately eight hours. About one-half of the questions are contained in the test booklet to be distributed on the afternoon of one day and the other half in the test booklet distributed on the morning of the following day.

New written examinations are formulated each year in all categories of radiology and the content of the examinations is carefully evaluated in order to keep pace with new information and developments. Even the number of questions in each category may be changed as necessity dictates from year to year.

Effective January 1, 1981 the written examination will not be waived for any reason.

Candidates who fail the radiological physics portion of the written examination in diagnostic radiology or diagnostic radiology with special competence in nuclear radiology must be examined in this subject at the oral examination.

Effective for the written examination in 1982, candidates in therapeutic radiology must pass all of the examination including the physics and radiation biology portions before admission to the oral examinations.

ORAL EXAMINATION

Oral examinations are given at a time designated by the Board of Trustees.

Eligibility for the oral examination is determined by the Executive Committee. Experience has shown that to delay taking the oral examination does not benefit the candidate.

Content of Oral Examination

In general, the examination consists of film interpretation, and interpretation of other imaging modalities such as ultrasonography, problems regarding the clinical application of roentgen rays, radium, and radionuclides, and questions in pathology, physiology, radiobiology, and radiological physics.

Re-examinations

Failures

A candidate who fails or conditions the oral examination in diagnostic radiology or in therapeutic radiology may be

Surgery

re-examined in one year. The required fee of \$400.00 must be submitted.

Beginning in 1983, a candidate who conditions in therapeutic radiology will be re-examined by TWO examiners in that subject.

Effective July 1, 1981 a candidate who has failed the oral examination three times must start the examination procedure from the beginning with the submission of a new application, pay the fees in effect at that time and retake the written examination.

Status of a Physician

The Board will reply to an inquiry concerning the status of a physician with one of the following statements:

1. The physician is Board certified.
2. The physician is in the examination process.
3. The physician is neither certified nor in the examination process.
4. No official status of "Board Qualified" or "Board Eligible" is recognized by the Board.

Final Action of the Board

The final action of the Board is based on the applicant's professional record, training, and attainment in the field of diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or in therapeutic radiology, as well as on the results of his examination. This Board has been organized, not to prevent qualified radiologists from obtaining certificates, but to assist them in becoming recognized in their communities as men and women competent to practice diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or therapeutic radiology.

Revocation of Certificates

Certificates issued by this Board are subject to the provisions of Articles of Incorporation and the Bylaws. According to Article IX, Section 4, of the Bylaws, "Any certificate issued by the Board of Trustees shall be subject to revocation in the event that:

- (a) The issuance of such certificate or its receipt by the individual so certified shall have been contrary to or in violation of any provision of the Certificate of Incorporation of this, The American Board of Radiology, or of these Bylaws or rules and regulations adopted by the Board of Trustees; or
- (b) The individual so certified shall not have been eligible in fact to receive such certificate; or
- (c) The individual so certified shall have made any misstatement of fact in the application or in any other communication to the Corporation or its representatives; or
- (d) The individual so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in the opinion of the Board of Trustees, moral turpitude; or
- (e) The license to practice medicine of the individual so certified shall be revoked.

Before any such certificate shall be revoked a notice shall be sent by registered or certified mail to the last known address of the holder of such certificate, as it appears on the records of this Corporation, setting forth the act, omission or conduct alleged or complained of, and giving the holder of such certificate a reasonable opportunity to answer in writing thereto. Such certificate holder shall have not less than 30 days in which to reply thereto. The Board of Trustees may at its discretion make such further investigation as it deems necessary and proper.

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this Corporation, and the decision of such Board of Trustees in the premise shall be final."

**Specialty of Surgery
("General Surgery") Defined**

The Board interprets the term "general surgery" in a comprehensive, but still specific manner, as follows:

1. A CENTRAL CORE OF KNOWLEDGE OF, AND SKILLS COMMON TO ALL SURGICAL SPECIALTIES; viz., anatomy, physiology, metabolism, pathology, wound healing, shock and resuscitation, neoplasia and nutrition.

2. THE DIAGNOSIS, PRE-OPERATIVE, OPERATIVE, AND POST-OPERATIVE CARE OF PATIENTS WITH DISEASES OF THE FOLLOWING PRIMARY COMPONENTS:

- a. The Alimentary Tract.
- b. The Abdomen and its Contents.
- c. The Breast.
- d. The Vascular System, excluding the intracranial vessels, the heart and those vessels intrinsic and immediately adjacent thereto.
- f. The Endocrine System.
- g. The Total Management of Trauma, including musculoskeletal, hand and head injuries. The responsibility for all phases of care of the injured patient, including that provided in the Emergency Department and the Intensive Care Unit is an essential component of general surgery.

3. ADEQUATE EMPLOYMENT OF ENDOSCOPIC TECHNIQUES, PARTICULARLY RIGID PROTOGASTROSCOPY AND OPERATIVE CHOLEDOCHOSCOPY. In addition, the general surgeon must be familiar with a variety of endoscopic techniques such as laryngoscopy, bronchoscopy, esophagoscopy, gastroscopy, colonoscopy and peritoneoscopy.

4. ADDITIONALLY AS SECONDARY COMPONENTS, the general surgeon is expected to possess understanding of the principles of and to have acquired a personal clinical experience, to include operative gynecologic, neurologic, orthopaedic, plastic, neonatal and urologic surgery, and anesthesiology. Appropriate clinical experience in the special disciplines enumerated in the preceding sentence should be acquired by a formal rotation on a separately constituted service, or by having been the operating surgeon or first assistant surgeon on an acceptable number and variety of cases.

The Meaning of Certification

Certification by the American Board of Surgery means that one has completed a process of education, both undergraduate in medicine in a generic sense and graduate, in surgery ("general surgery" as previously defined) in a manner satisfactory to the program director and faculty of the graduate phase and to the Board; has acquired a detailed knowledge of the core subjects and primary components of the specialty and adequate familiarity with the secondary; has developed technical and interpersonal skills and surgical judgment to the degree that one may be judged to deserve to be recognized as having the qualifications to be a specialist in surgery and prepared for independent practice of the specialty.

The Board considers certification to be based upon a process which includes the educational and evaluation phases and an examination phase. It holds that the preliminary undergraduate medical and graduate surgical educational phases are of the utmost importance and therefore relies heavily upon the judgment of the program director and faculty to ensure that the applicant has had an appropriate educational experience and has attained a sufficiently high level of knowledge, judgment and skills to be prepared for designation, by the Board's certificate, as a specialist in surgery and to enter into independent practice thereof.

Graduate Education in Surgery

I. GENERAL INFORMATION

The purpose of graduate education in surgery is to provide the opportunity to acquire a broad understanding of human biology as it relates to disorders of a surgical nature and the technical knowledge and skills appropriate to be applied by a specialist in surgery. This goal can best be attained by means of a progressively graded curriculum of study and clinical experience under guidance and supervision of senior surgeons and which provides progression through succeeding stages of responsibility for patient care up to the final one of complete management. Major operative experience and senior/chief responsibility at the final stage of the program are essential components of surgical education. The Board will not accept into the process of certification anyone who has not had such an experience in the specialty of surgery, as previously defined, regardless of the number of years spent in educational programs.

The graduate educational requirements set forth in these columns are considered to be the minimal requirements of the Board and should not be interpreted to be restrictive in nature. The Board recognizes that the time required for the total educational process should be sufficient to provide adequate clinical experience for the development of sound surgical judgment and adequate technical skill. The requirements do not preclude additional desirable educational experience and program directors are encouraged to retain residents in a program as long as is required to achieve the necessary level of qualifications.

The integration of basic sciences with clinical training is considered to be superior to formal courses in such subjects. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept such courses in lieu of any part of the required clinical years of surgical education.

The Board may at its discretion require that a member of the Board or a designated Diplomate observe and report upon the clinical performance of a candidate before establishing his admissibility to examinations or awarding his certification.

The Board considers a residency in surgery to be a full-time endeavor and looks with disfavor upon any other arrangement. A minimum acceptable training year is forty-eight (48) weeks. Any exception to the above should be justified individually to the Board by the program director.

All phases of the graduate educational process must be completed in a manner satisfactory to the Board.

II ACCEPTABLE PROGRAMS

The residency programs in surgery in the United States which are reviewed and accredited by the Residency Review Committee for Surgery or the Accreditation Council for Graduate Medical Education (ACGME) are acceptable to the Board as an adequate educational experience.

In Canada, those University residency programs in surgery which bear accreditation by the Royal College of Physicians and Surgeons are an acceptable educational experience. Applicants from such programs must meet the Board's specific requirements and cannot receive credit for training in countries other than the United States or Canada.

Except as mentioned above, participation in surgical training programs in countries other than the United States is not creditable toward the Board's educational requirements unless under the specific conditions set forth in the section "Credit for Foreign Graduate Education."

Training in those residency programs in the United States which bore the three-year (Type II) approval of the Conference Committee on Graduate Education in Surgery is not now acceptable except in partial fulfillment of the Board's requirements. All persons who were in Type II programs and have not attained certification must meet the

Surgery

current requirements of the Board.

To provide flexibility and the opportunity for experimentation in surgical education, proposed programs at variance with the requirements outlined will be considered upon request by program directors to the Residency Review Committee for Surgery (535 North Dearborn Street, Chicago, Illinois 60610).

Listings of accredited programs in the United States may be found in the *Directory of Residency Training Programs*, published annually under the aegis of the Accreditation Council for Graduate Medical Education.

Requirements for General Certification in Surgery

I. GENERAL

A. Must have demonstrated to the satisfaction of the authorities of the graduate educational program in surgery, to their peers and to the Board, that one has attained the level of qualifications in surgery required by the Board.

B. Must have an ethical standing in the profession and a moral status in the community acceptable to the Board.

C. Must be actively engaged in the practice of surgery as indicated by holding active operating privileges in an approved hospital, or be currently engaged in pursuing additional graduate education in a component of surgery or one of the other recognized surgical specialties.

D. Must have a currently registered full and unrestricted license to practice medicine granted by a state, or other United States jurisdiction, or by a Canadian province. A temporary limited license such as an educational, institutional or house staff permit is not acceptable to the Board. Commissioned officers of the medical services of the Armed Forces of the United States or Canada on active duty need not present evidence of a currently registered license, but must provide verification of their status in writing from their respective commanding officer.

II. EDUCATIONAL

A. Undergraduate Medical

1. Must have graduated from a school of medicine in the United States or Canada accredited by the Liaison Committee on Medical Education and which grants an MD degree.

2. Graduates of schools of medicine from countries other than the United States or Canada must present evidence of (a) final certification by the Educational Commission for Foreign Medical Graduates (ECFMG), or (b) successful passing of the Visa Qualifying Examination (VQE).

B. Graduate Education in Surgery

1. Must have satisfactorily completed a MINIMUM OF FIVE YEARS of progressive education in an acceptable accredited program in surgery (general surgery) following graduation from medical school. The Board recognizes that there may be unusual educational environments and individuals and it is prepared to be flexible when the circumstances are shown, to the Board's satisfaction, to clearly support such a decision. It is also recognized that under some circumstances an even longer period of education may be required.

2. Must have completed ALL PHASES of graduate education in surgery in an ACCREDITED PROGRAM in SURGERY. Training received in accredited programs in other recognized specialties, although containing some exposure to surgery, is not acceptable. A FLEXIBLE or TRANSITIONAL first year is NOT creditable, as a PGY-1, toward the Board's requirements unless it is accomplished in an institution having an accredited program in surgery and at least six months of the year is spent in surgical disciplines and under the jurisdiction of the surgery program director.

3. Must successfully complete the ENTIRE PROGRAM as accredited. However, those residents in the final year of training will be acceptable under the previous accreditation

status. For example, a five-year program applied for accreditation as a six-year program and this is granted. In such a case the PGY-V residents will be acceptable to the Board upon satisfactory completion of the five years, the final year being chief resident. All others must complete the six years.

4. Must have, in a program accredited for a minimum of five years, at least four years of clinical surgical experience with progressively increasing levels of responsibility. There must be no less than thirty-six months devoted to the primary components of surgery (general surgery) as previously defined. The ENTIRE FINAL "CHIEF RESIDENT" YEAR MUST BE DEVOTED TO THE PRIMARY COMPONENTS OF THE SPECIALTY OF SURGERY. During junior years a total of six months may be assigned to non-surgical disciplines such as medicine, gastroenterology, pediatrics, etc. No more than a total of twelve months during junior years may be allocated to training in any ONE surgical specialty other than general surgery. Training in anesthesiology, surgical pathology and endoscopy is considered to be surgical, but obstetrics and ophthalmology are not. One year of the minimal five may, if so desired, be allocated to non-clinical activities such as laboratory research or basic sciences. A clinical elective year in a component of general surgery may also be elected.

5. Must have a FINAL YEAR in the capacity of CHIEF RESIDENT in general surgery. The Board considered the terms chief resident and senior resident to be synonymous and to mean the final clinical year in the program in which the resident assumes the ultimate responsibilities for patient care under the supervision of the teaching staff. A chief residency may not be served prior to the final year. The chief residency year must be spent only in the parent or an integrated institution unless rotation to an affiliated institution has been specifically approved by the Residency Review Committee for Surgery.

6. The Board does not accept a partial year of training. It considered a training year to be at least 48 weeks and any period less than this is not creditable toward the Board's requirements.

7. All phases of the graduate educational process must be in accordance with the Special Requirements for Residency Training in General Surgery as promulgated by the Accreditation Council for Graduate Medical Education and approved by the Residency Review Committee for Surgery.

8. The Board believes that optimal surgical education requires that the resident remain in the same program for at least the final two years of his training.

II. OPERATIVE EXPERIENCE

Applicants for examination must have had an operative experience of such breadth and depth as may be deemed adequate by the Board. Each must submit a *Resident's Record* form on which are to be tabulated the operative procedures performed and those on which he has been first assistant or teaching assistant. The *Resident's Record* forms should be obtained from the Residency Review Committee for Surgery by the office of the program director and made available to the resident. An *Operative Experience* form prepared by the Board may be used if a *Resident's Record* form is not available.

In tabulating cases for credit toward Board requirements a resident may claim a case "As Surgeon" when he has actively participated in the patient's care so that he has made or confirmed the diagnosis; participated in selection of the appropriate operative procedure; has either performed or has been responsibly involved in performing the critical portions of the operative procedure; been a responsible participant in both pre- and post-operative care and in so far as possible seen the patient in follow-up visits. All this must be accomplished under the supervision of the responsible member of the senior staff.

Failure to submit a complete and properly authenticated list of operative procedures will constitute incomplete credentials.

Applicants are advised to keep a copy of the lists of operative work they submit, for their records, as the Board cannot furnish copies.

IV. SPECIAL INFORMATION FOR PROGRAM DIRECTORS

A. Program directors are cautioned that appointment of residents at advanced levels without being certain that their previous training is in accordance with the Board's requirements, will probably result in the affected residents not being accepted by the Board upon completion of the program. In any case in which there is question, it would be prudent to make inquiry of the Board prior to taking action.

B. According to the Special Requirements for Residency Training in General Surgery promulgated by the Accreditation Council for Graduate Medical Education, special approval of the Residency Review Committee for Surgery must be obtained (1) if a chief resident is assigned to an institution other than the parent one or an "integrated" one; (2) if rotations to any one approved "affiliate" exceed six months; (3) if more than one year of the total program is spent away from the parent and integrated institutions; and (4) if more than six months' total is spent in any assignment outside the parent, the integrated and approved affiliated institutions. The Board concurs in this and will find any violations of these requirements to be non-acceptable training.

C. Since the Residency Review Committee does not act upon the adequacy of training outside the United States, program directors must request the Board's approval, in advance, if they wish periods of training abroad to be creditable toward the Board's requirements. The Board will rule on individual requests.

Credit for Military Service

Credit will not be granted toward the minimum requirements of the Board for service in the Armed Forces, the Public Health Service, the National Institutes of Health or other governmental agencies unless the service was as a duly appointed resident in an accredited program in surgery.

Credit for Foreign Graduate Education

Acceptance for examination and certification by the American Board of Surgery is based upon satisfactory completion of the stated requirements in accredited residency programs in surgery in the United States. Applicants from approved Canadian programs must have completed all of the requirements in the Canadian program or in combination with an accredited U.S. program. No credit for training outside the U.S. and Canada will be granted to those applicants seeking certification who completed a Canadian program. Applicants from Canadian programs must complete the Board's stipulated requirements. Regardless of an individual's professional attainments here or abroad, no credit will be granted directly to a candidate for surgical education in a foreign country. The Board will consider granting partial credit only upon the request of the Director of an accredited program who has observed the candidate as a junior resident for nine to twelve months and wishes to advance the candidate to a higher level in that program. The credit granted will not be valid until the candidate has successfully completed that program. If the candidate moves to another program the credit is not transferable and must again be requested by the new program director. Only under exceptional conditions will the Board consider granting more than one year of residency credit at a junior level for foreign training.

Rules Governing Admissibility to Examinations for General Certification in Surgery

1) An applicant is admissible to the examinations only when all of the preliminary and graduate educational re-

quirements of the Board, currently in force at the time of receipt of the formal application, have been satisfactorily fulfilled; his operative experience has been reviewed and deemed acceptable; his general credentials are in order; the program director has certified to the Board in writing that he has attained the required clinical skills; and the formal application has been reviewed and approved. The applicant then must successfully complete the cognitive qualifying examination before becoming a "candidate for certification." When all of the above requirements have been met, the applicant will be notified that he has become a "candidate for certification" and will be scheduled for appearance at the appropriate certifying examination.

2) The qualifying examination will be offered, annually for ten (10) years, if necessary, to those whose applications have been approved. Examinees will be assigned to a specified center designated by the Board based upon the last recorded address of the applicant. No personal preferences will be honored and assignments by the Board are final. Those who have not completed the qualifying examination within ten (10) years will no longer be considered Applicants. To be admitted again to examination such persons shall:

- a. Submit documented evidence of completion of not less than 150 hours of accredited Category I Continuing Medical Education in general surgery within the twenty-four month period prior to requesting readmission to examination.
- b. Receive an evaluation acceptable to the Board as to his surgical capabilities from the chiefs of surgery in the hospitals in which he exercises surgical privileges or from such other peers as the Board shall select.
- c. Submit a new formal reapplication and all attendant fees.
- d. Be approved by the Board for readmission to examination.

3) The certifying examination will be offered to those who have passed the qualifying examination and have become "candidates for certification" at the earliest practicable time consistent with the Board's geographical examination policy. Candidates will be assigned to centers as designated by the Board; no personal preferences will be honored and center assignments are final. Candidates will be offered three (3) and only three opportunities to appear for examination during the five academic years following completion of the qualifying examination. The *admissibility expiration date* shall be established as *June 30th of the fifth calendar year after the qualifying examination*, but an opportunity offered which is refused or not taken will be counted as one of the three available. If a candidate fails the examination three times or fails to accept or to appear at the opportunities offered, his *admissibility date* will be revised to indicate that he is no longer a "candidate for certification." He will not again be considered by the Board until after satisfactory completion of at least one year of residency in surgery at an advanced level in an accredited program and receipt of a favorable endorsement to the Board from the program director. A candidate who is admitted to the certifying examination for the fourth time and again fails must complete a minimum of three (3) years of residency in surgery, including a chief year, in an accredited program and receive a favorable endorsement by the program director before again being considered by the Board for admission to examination.

4) Applicants who have not successfully completed the qualifying examination within ten years shall be considered to be "new applicants." Candidates for certification who have failed the certifying examination four (4) times and those who have not become certified within five academic years after becoming "candidates for certification" shall be considered to be "new applicants." A "new applicant" shall be required to submit a reapplication for admission to examination and all supporting documents, pay all estab-

Surgery

lished fees and again successfully complete the qualifying examination before advancing to the status of "candidate for certification."

5) Those persons who, ten years after approval of their original application or reapplication, have not become certified and *who are not actively pursuing completion of the appropriate above-stated requirements applicable in each case* will have their files disposed of and no longer have any status with the Board. If they wish later to be considered they must fulfill the appropriate requirements specified above and become "new applicants."

6) The Board, on the basis of its judgment, may deny or grant an "applicant" or "active candidate for certification" the privilege of examination whenever the facts in the case are deemed by the Board to so warrant.

The Board, does not use or sanction the terms "board eligible" or "board qualified." The standing of an individual with the Board varies according to the current status of his credentials and will be so reported.

Special Certification

The Board has been authorized by the American Board of Medical Specialties to award a Certificate of Special Qualification in certain limited disciplines pertinent to the overall specialty of surgery, to those Diplomates of this Board who meet the agreed-upon requirements. Such special certificates are now authorized in pediatric surgery, general vascular surgery, and critical care medicine.

The Board considers all the above disciplines to be an integral part of the specialty of surgery and expects that all surgeons certified in surgery by this Board will be qualified to practice in these areas if they so desire and demonstrate the capability. The special certificates are designed to recognize only those Diplomates who have acquired, through advanced education and training and other activities, special qualifications in these disciplines well over and above those expected of the well trained general surgeon.

All persons seeking special certification by this Board must first have been awarded general certification in surgery by the Board. All special certificates require additional intensive training in the discipline beyond that required for general certification; an operative experience and/or patient care data acceptable to the Board; evidence of dedication to the discipline by the means specified by the Board; favorable peer review by recognized Diplomates in the particular discipline, and examination.

Those who are interested in obtaining information regarding the special certificates in pediatric surgery and in general vascular surgery may obtain it upon request to the Office of the Board.

Those interested in critical care medicine should address their inquiry to: Secretary, Joint Committee on Critical Care Medicine, American Board of Anesthesiology, 100 Constitution Plaza, Hartford, CT 06103.

The Examinations Offered by the Board

The Board offers a *Qualifying Examination* and a *Certifying Examination for General Certification in Surgery*, an *Examination for Certification of Special Qualifications in Pediatric Surgery*, an *Examination for Certification of Special Qualifications in General Vascular Surgery*, and an *In-Training Examination*. The examinations leading to certification are offered to individuals, but the in-training examination is offered to program directors for their use as an educational tool, for the assessment of the individual resident's grasp of surgical fundamentals.

The Board notifies each candidate for general and special certification of his performance on examinations. Beginning with candidates whose formal applications were approved in 1975, the Board may report their performance on any or all of the Board's examinations to the director of the program in which the candidate completed his final year of residency. All reports pertaining to the in-training

examination are provided to the program director.

All examinations are composed annually by members of the American Board of Surgery.

Assignment to Examination

The Board will determine the specific examination and center to which examinees are to be assigned. There will be *no option as to time, date or place* available to examinees. The Board's assignment is final and if not accepted will be counted as an opportunity.

I. EXAMINATIONS FOR GENERAL CERTIFICATION IN SURGERY

A. THE QUALIFYING EXAMINATION

This examination is written and is offered once a year, usually late November or early December. It is given simultaneously in a number of locations in the United States and at selected locations abroad.

Applicants whose applications have been approved by the Board are sent annually, throughout their period of admissibility, an announcement of the examination. With the announcement is a reply card which must be returned to the Board if the applicant wishes to be scheduled for this examination. Shortly before the date of examination he is sent an admission card indicating the specific location of the examination center, and reporting times, and a pamphlet describing the examination and the types of questions to be expected.

The examination consists of questions of the objective multiple-choice type designed to cover general surgical principles and the basic sciences applicable to surgery. It is administered in two sections, one in the morning and one in the afternoon, but is considered to be one single examination and is so graded. Its primary intent is directed to a candidate's fund of cognitive information relevant to the specialty of surgery, more than to his clinical judgment or problem-solving ability.

Successful completion of the qualifying examination is a requirement for all, to attain the status of "active candidate for certification" and admission to the certifying examination.

B. CERTIFYING EXAMINATIONS

Examinations are held periodically, usually six or seven times a year, in major cities within the continental United States. Candidates for certification will receive an announcement of the examination to which they may be assigned approximately two months prior to the examination session, with a reply card which must be returned at once if a candidate wishes to be included in that examination. Failure to return or late return of the card will result in that examination being counted as one of the three opportunities to be offered. Since announcements are sent to a few more candidates than can be examined at a particular session, if the Board cannot accommodate a candidate at that particular examination it will not be counted as an opportunity and he will be offered another. A candidate firmly assigned to an examination will be sent an admission card indicating the specific time and place to report for examination.

The Board will normally assign candidates to the examination center serving the geographical area in which the candidate was last known to reside. Personal preferences for assignment to other centers or dates will not be honored.

The examinations are conducted by members of the American Board of Surgery and certain selected associate examiners who are Diplomates of the Board and usually from the local geographic area.

The examinations consist of three oral sessions conducted by teams of two examiners each, directed toward determining the candidate's understanding of clinical entities, his level of surgical judgment, and his problem solving ability. During all sessions, the ability to apply knowledge of anatomy, physiology, pathology, biochemistry, and bacteriology to clinical problems is also evaluated.

The examination occupies one full day and since it ordinarily starts at approximately 7:00 a.m. it is well for those who live at some distance to arrange to stay in the city of the examination the night before.

II. EXAMINATIONS FOR SPECIAL CERTIFICATION

The Board offers examinations for "Certification of Special Qualifications in Pediatric Surgery" and for "Certification of Special Qualification in General Vascular Surgery." *These examinations are described in the separate pamphlets pertaining to the respective disciplines, which may be obtained from the Board Office upon request.*

III. IN-TRAINING EXAMINATION

The Board offers annually to program directors of accredited residency programs in surgery, a written "in-training examination" which is designed to test the general level of knowledge which has been attained by residents regarding the fundamentals and the basic sciences related to surgery. The test is aimed at the level of the third-year resident, but at the program director's discretion, may be administered to any one. It is also designed to meet the first milestone which is required by the "Essentials" for residencies in general surgery.

The Board will normally furnish pertinent information to the directors of all accredited programs in surgery several months in advance of each year's examination and ascertain the number of test booklets desired.

The examination will be administered by each participating program director in the winter each year and reports should be in their hands within 60 days.

Program directors should take note of the fact that the Board does not contact each institution in which residents are located, but depends upon the director of the program to order an adequate number of test booklets for residents in his total program which includes not only his own institution but also all those indented under his program designation in the *Directory of Residency Training Programs*.

It is important to note that the in-training examination is not offered to individuals, but to program directors only.

The in-training examination is not required by the Board as part of the certification process.

Even though the in-training examination is prepared by the Board as a convenience to program directors, it is to be used as an assessment of residents' progress and not as a pool of questions for study or other purposes. Duplication and improper use of the examination material defeats the purpose of the examination and will not be tolerated by the Board. The examination is protected under the copyright laws.

Application for Examination for General Certification in Surgery

A prospective candidate for examination by the Board should carefully read the requirements set forth in its booklet. If he needs advice about his plans for graduate education in surgery, or believes that he has met or is within six months of meeting the requirements, he should write the Board and request an *Evaluation Form*. This form should be completed precisely and returned to the Board. The candidate will then be advised as to whether or not it appears that he has met or will meet the requirements, or what will be necessary. Candidates are advised not to submit documents, testimonials, letters of recommendation, case reports or other information unless requested by the Board.

Candidates should communicate with the Board at least four months before completion of their educational requirements and not later than June 1st if they wish to receive the formal *Application for Examination* and be considered for the qualifying examination to be given in that year. The application for examination form will not be sent to candidates until they are within several months of completing the educational requirements and appear to have met all other requirements.

The application for examination form must be completed and returned to the Board *no later than August 1st* or the candidate will not be considered for the qualifying examination to be given in that year.

Candidates who complete the educational requirements after September 30th will not be considered for admission to the qualifying examination in that year, but must wait until the following year.

The acceptability of a candidate does not depend solely upon the completion of an approved program of education, but also upon information available to the Board regarding his professional maturity, surgical judgment, technical competence and ethical standing.

A candidate who has submitted an application for examination form will be notified as to his admissibility to examination.

Fees (General Certification)

Registration — payable with	
<i>Application Form</i>	U.S. \$100.00
Qualifying Examination	U.S. \$200.00
Certifying Examination	U.S. \$200.00
(Both these examination fees payable upon assignment to a center.)	

Fees for a re-examination are the same as shown above, for each Examination.

Each fee for examination or re-examination includes a U.S. \$100.00 processing charge which is not refunded if the candidate withdraws after he has been assigned to an examination center.

A candidate who withdraws must notify the Board Office *more than 3 business days* before the examination for which he is scheduled. (For Certifying Examination this means more than 3 business days before the start of the three-day period of examining at the center, regardless of which day he is scheduled). A candidate who fails to appear for examination or who withdraws without giving more than three days' notice as defined above, may forfeit the *entire fee* for examination.

Fees are subject to change as directed by the Board.

The Board is a non-profit organization. All fees will be used, after a reasonable amount is set aside for necessary expenses, to aid in improving existing opportunities for the education of surgeons. The members of the Board, except the Secretary-Treasurer, serve without remuneration.

Certification

I. GENERAL CERTIFICATION

A candidate who has met all the requirements and has successfully completed the examinations of the American Board of Surgery will be issued a certificate by the Board, signed by its Officers, attesting to his qualifications in surgery.

II. SPECIAL CERTIFICATION IN PEDIATRIC SURGERY

A candidate who has met all the requirements and has successfully completed the examination in pediatric surgery will be issued a certificate by the American Board of Surgery, signed by its Officers, attesting to his *special qualifications in pediatric surgery*.

III. SPECIAL CERTIFICATION IN GENERAL VASCULAR SURGERY

A candidate who has met all the requirements and has successfully completed the examinations in general vascular surgery will be issued a certificate by the American Board of Surgery, signed by its Officers, attesting to his *special qualifications in general vascular surgery*.

IV. SPECIAL CERTIFICATION IN CRITICAL CARE MEDICINE

The requirements to be met and the examinations related to this discipline are under development by the Joint Committee on Critical Care Medicine. When this certificate is offered, a candidate who has met all the requirements

Thoracic Surgery

and has successfully completed the examination in critical care medicine will be issued a certificate by the American Board of Surgery, signed by its Officers, attesting to his *special qualifications in critical care medicine.*

Recertification

The policy of the American Board of Surgery is that it will offer Recertification to its Diplomates in surgery and in all the disciplines in which it offers special certification. The Board considers recertification to be voluntary in the same connotation as is original certification. Those persons certified in surgery prior to December 31, 1975 were issued a certificate with no indication of time limited validity. All Certificates issued on or after January 1, 1976, both general and special, bear a limiting date of ten years, after which they are no longer valid.

I. RECERTIFICATION IN SURGERY (GENERAL SURGERY)

The REQUIREMENTS to be met by those seeking recertification are:

1. Have been previously issued and hold a certificate issued by the American Board of Surgery.
2. Have been certified seven or more years at the time of application for recertification.
3. Hold a valid license to practice medicine and/or surgery.
4. Currently hold privileges to practice surgery in a hospital(s) accredited by the Joint Commission on Accreditation of Hospitals, or such other hospitals as may be judged acceptable by the Board.
5. Be currently engaged in the practice and/or teaching of surgery.
6. Receive a satisfactory evaluation as to his surgical qualifications by the current chiefs of surgery in those hospitals in which practice privileges are exercised, or by the president or chief of medical staff or similar official.
7. Be in good standing in the profession as evidenced by membership in the local medical/surgical society, fellowship in the American College of Surgeons or other regional or national surgical associations. This requirement is not applicable to Diplomates residing and practicing abroad. If not a member of any association it shall be of the applicant's own choice.
8. Present evidence that they have engaged in educational activities essential to the maintenance of qualifications in surgery, including reading of surgical journals, self-education/self-assessment programs, participation in organized Continuing Medical Education conferences, attending medical education conferences, attendance at specialty society meetings, participation in local hospital educational programs.

While the Board does not intend to establish a requirement for a specified number of hours credit/time by Category of Continuing Medical Education in surgery, it will take into consideration the reported activities of those who apply for recertification and this will be a factor in assessing credentials.

9. Submit for the Board's consideration a practice profile in the form of an operative experience report covering the two calendar years prior to application. The report must be authenticated by an official (other than the applicant) of the hospital in which the operations were performed.

10. Approval of the above credentials by the Board and authorization for admission to the examination for recertification. If the individual's credentials are not approved he will be so notified and will have the opportunity to appeal to the Credentials Committee of the Board.

11. Attainment of a score on the examination for recertification which has been determined by the Board to demonstrate acceptable knowledge of the specialty of surgery.

The American Board of Surgery will offer an examination for recertification annually or at other appropriate

intervals and at such centers and times as may be decided by the Board. The examination will be written, clinical in nature and devoted to the components of the specialty of surgery as defined earlier in these columns. The examination will be constructed and administered by the Board.

The American Board of Surgery and the American College of Surgeons have agreed that while surgical education and the certification process are directly interconnected they need not be carried out by the same body. It was further agreed that the American College of Surgeons would continue as in the past to provide the opportunities for continuing education for the surgeon through its Congresses, post graduate courses, surgical education and self-assessment programs and other activities and that the Board would not produce nor provide educational materials nor opportunities, but would continue to be the body concerned with testing and certification of the specialist in surgery.

It was further agreed that the Board would recommend, but not require, participation in the SESAP of the College and would base the greater part of any examination for recertification upon the material contained in SESAP and other educational activities of the College, but would not utilize the actual SESAP questions as such.

The recertification procedure involves submission of an application by those seeking recertification. The application will be accompanied by the necessary documentation to indicate that the applicant meets the requirements. Those who meet all the requirements will be admitted to examination. However, in cases in which requirements have not clearly been met, the Credentials Committee will thoroughly review the data submitted and make recommendations to the Board of Directors as to further action. Those who pass the examination will be recertified. Applicants who fail the examination may take it four more times in consecutive years. If the applicant has not become recertified within the five years it will be necessary to again establish credentials with the Board and meet the requirements listed in items (3) through (11) above, before again being admitted.

Those desiring to seek recertification are encouraged to communicate with the Board for further information regarding the process.

II. RECERTIFICATION IN SPECIAL DISCIPLINES

Recertification is offered to those Diplomates holding certificates of special qualifications in critical care medicine, general vascular surgery, and pediatric surgery.

Recertification in surgery is *not* required in order to become recertified in the disciplines enumerated above.

The requirements to be met for recertification of those Diplomates holding special certificates are similar to the requirements for recertification in surgery, but differ slightly according to the discipline. Details of the requirements are available in the special publications regarding each special certificate. These publications may be obtained upon request from the Secretary of the Board.

Revocation of Certificate

Any certificate issued by the Board shall be subject to revocation at any time in the case the Board shall determine, in its sole judgment, that a candidate who has received a certificate was in some respect not properly qualified to receive it.

The Board may also revoke any and all certificates of any Diplomate who, after opportunity for full and fair hearing by the medical staff of a hospital, state or county medical society, professional surgical society, governmental licensing body, court of law, or the Board, has been found guilty or pleaded guilty to a felony, professional misconduct, professional incompetence or unethical conduct.

AMERICAN BOARD OF THORACIC SURGERY

Donald G. Mulder, MD, Chairman, Los Angeles, California

Hassan Najafi, MD, Vice Chairman, Chicago, Illinois
 Herbert Sloan, MD, Secretary-Treasurer, Ann Arbor, Michigan
 Harvey W. Bender, Jr., MD, Nashville, Tennessee
 John R. Benfield, MD, Duarte, California
 Richard J. Cleveland, MD, Boston, Massachusetts
 Paul A. Ebert, MD, San Francisco, California
 Hermes C. Grillo, MD, Boston, Massachusetts
 Charles R. Hatcher, Jr., MD, Atlanta, Georgia
 Harold V. Liddle, MD, Salt Lake City, Utah
 Richard M. Peters, MD, San Diego, California
 W. Gerald Rainer, MD, Denver, Colorado
 Quentin R. Stiles, MD, Los Angeles, California
 Benson R. Wilcox, MD, Chapel Hill, North Carolina
 Miss Louise Sper, Executive Assistant,
 14640 East Seven Mile Road, Detroit, Michigan 48205

Lungs, pleura, chest wall	40
Pneumonectomy, lobectomy, segmentectomy	20
Other	20
Esophagus, mediastinum, diaphragm	10
Esophageal operations	5
Other	5
Congenital heart	20
Open operations	8
Other	12
Acquired valvular heart	20
Myocardial revascularization	30
Pacemaker implantations	10
Bronchoscopy and esophagoscopy	25

Bronchoscopies may also be counted for credit when they are performed immediately preceding a thoracic operation.

Major vascular operations outside the thorax should be listed.

The Board recognizes that supervised operative experience in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery protects the patient who, in most instances, is the personal and identifiable responsibility of a faculty surgeon. This supervised experience optimally prepares the candidate to begin the independent practice of cardiothoracic surgery after the completion of his/her residency.

The Credentials Committee has been authorized by the Board to reject candidates from approved programs if their training is considered to be inadequate. The candidate, the program director, and the Residency Review Committee for Thoracic Surgery will be notified if such actions are taken by the Credentials Committee.

Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the candidate's training experience, a candidate is nevertheless held accountable for knowledge concerning all phases of the field. This includes a knowledge of extracorporeal perfusion (physiologic concepts, techniques, and complications). In addition, a candidate should have responsibility for the care of pediatric general thoracic surgical patients.

Criteria for Credit

Credit will be allowed for supervised operative experience in a well-organized teaching setting only when the following criteria are met:

- a. The resident participated in the diagnosis, pre-operative planning and selection of patient for operation or surgical indication;
- b. The resident performed under appropriate supervision in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery those technical manipulations that constituted essential parts of the procedure itself;
- c. The resident was substantially involved in post-operative care.

Supervision by the cardiothoracic faculty is required in preoperative, intraoperative, and postoperative care.

The Board wishes to emphasize, in addition, that first-assisting at operations is considered an important part of resident training, particularly in complex cases such as certain kinds of congenital heart surgery.

Credit for Foreign Graduate Education

Foreign candidates may be considered for examination by the Credentials Committee regardless of when the training occurred when the following conditions have been met:

- 1. The candidate has obtained certification by the American Board of Surgery.
- 2. The candidate has been allowed no more than one year's credit by the Credentials Committee for training outside the United States and Canada.

General Requirements

- 1. Certification by the American Board of Surgery.
- 2. Adequate training in thoracic and cardiovascular surgery.
- 3. Satisfactory performance on the American Board of Thoracic Surgery examination.

Training Requirements

Candidates applying for admission to the 1981 certifying examination, and thereafter, must fulfill all the training requirements of the Board in force at the time their applications are received.

Candidates certification must complete a minimum of 24 months of identifiable training in thoracic and cardiovascular surgery. This must include 12 months of senior responsibility which should be continuous. The director of the thoracic training program is required to sign the application form stating that the candidate has satisfactorily completed training in thoracic surgery, of which the last 12 months were of senior responsibility.

Candidates who have satisfactorily completed a minimum of two years of training in thoracic surgery and are recommended by their program director are eligible for examination subject to the following conditions:

Candidates for certification will be accepted for examination only if they have completed two years of training in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada.

Candidates who apply for examination more than five years after the satisfactory completion of their residency must have an additional year of training in an approved program before they will be eligible to apply for examination.

Operative Experience Criteria

1. The application of candidates whose supervised operative experience falls below the minimal numerical acceptable standard based on 1 standard deviation of the mean value of the number of operations performed by each candidate for the previous year will be referred to the Credentials Committee for review. For candidates applying in 1984, 150 major operative cases are required. (Previously the criterion was the 30th percentile of candidates.)

2. The applications of candidates whose supervised operative experience for full credit in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery is below minimal acceptable standards for one or more areas within thoracic and cardiovascular surgery will be referred to the Credentials Committee for review. The numerical criterion of the minimal acceptable standard for each area is based on 1 standard deviation of the mean of the number of operations in that area of all candidates for the previous year. Based on the candidates for 1983, the number of procedures required to meet minimal acceptable standards in the various areas for 1984 are:

Thoracic Surgery

3. The candidate has obtained one year of thoracic residency training at the senior level in an approved United States or Canadian program.

Applications

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the office of the secretary of the Board, outlining briefly their training and experience in thoracic surgery.

An application blank will be sent to those candidates who have completed residency training programs which have been approved by the Residency Review Committee for Thoracic Surgery. Candidates who have completed their training in other than approved programs will be sent an Evaluation Form, which, when completed and returned, will be considered by the Credentials Committee of the Board. If the candidate's training is acceptable, an application blank will be sent.

Candidates are notified of their eligibility for examination when their applications have been approved. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration fee.

Examinations

It is the policy of the American Board of Thoracic Surgery to examine candidates only upon completion of their thoracic surgery residency.

Separate written and oral examinations are each held annually at times and places determined by the Board. Information regarding the dates and places of the examinations is published in the Examination and Licensure column of the Journal of the American Medical Association, the Journal of Thoracic and Cardiovascular Surgery, and the Annals of Thoracic Surgery.

Part I—Written Examination

The examination consists of an objective multiple choice written examination designed primarily to assess cognitive skills. Candidates unfamiliar with objective, multiple choice, machine scorable type of examinations might find helpful the book, "Measuring Medical Education: The Tests and the Experience of the National Board of Medical Examiners" by J. P. Hubbard, M.D., Lee and Febiger, Philadelphia, 1978.

Part II—Oral Examination

Successful completion of the Part I (written) examination will be a requirement for admission to the Part II (oral) examination. The oral examination must be taken within three years after notice has been sent to the candidate that he/she has passed the written examination, or the candidate will be required to submit a new application for approval by the Board and pay a new registration and examination fee. The oral examination is designed to test the candidate's knowledge, judgment, and ability to correlate information in the management of clinical problems in thoracic and cardiovascular surgery.

Re-examinations

Candidates who fail an examination (Part I or Part II) are eligible to repeat the examination the following year.

Candidates who fail an examination (Part I or Part II) three times must complete an additional year of training, preferably in a program approved by the Residency Review Committee for Thoracic Surgery, before they will be considered for examination a fourth time. If training in an approved program cannot be obtained, training may take place in an unapproved program if the training has been reviewed and approved in advance by the Credentials Committee.

Candidates who are eligible for re-examination and who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application blank, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration and examination fee.

Fees

Registration fee	\$100.00
Part I examination fee	\$550.00
Part I re-examination fee	\$550.00
Part II examination fee	\$350.00
Part II re-examination fee	\$350.00

Candidates who do not appear for the examination (Part I or Part II) or who cancel less than six weeks before either examination may forfeit their examination fee.

The Board is a non-profit corporation, and the fees from candidates are used solely for defraying actual expenses incurred in office administration and conducting examinations. The directors of the Board serve without compensation.

Appeals

Individuals who receive an unfavorable ruling from the Credentials Committee of the Board may appeal such determination by mailing a notice of appeal to the office of the American Board of Thoracic Surgery within 30 days of the date such ruling was mailed. Copies of the appeals procedures of the American Board of Thoracic Surgery may be obtained from the office of the Board. Under the appeals procedures of the American Board of Thoracic Surgery, the only appeal permitted from a failure of the written examination is a hand rescoring to verify the accuracy of the score as reported. The only appeal with respect to the oral examination is the opportunity to request a re-examination immediately following the completion of the oral examination.

Certification

After a candidate has met the requirements for eligibility and passed the examination, a certificate attesting to his qualifications in thoracic surgery will be issued by the Board.

Recertification

Applicants who are certified in thoracic surgery after December 31, 1975, will be issued certificates valid for ten years from the date of certification, after which the certificates will no longer be valid. Certificates can be renewed prior to expiration by fulfilling the requirements for recertification specified by the American Board of Thoracic Surgery at that time. A Recertification Booklet is available upon request.

Revocation of Certificate

No certificate shall be issued and any certificate may be revoked by the Board if it shall determine that:

(a) the candidate for certification did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any Committee thereof prior to examination or at the time of the issuance of the certificate as the case may be,

(b) the candidate for certification or certified physician made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional,

(c) the candidate for certification or certified physician was convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine, or

(d) the candidate for certification or certified physician had his license to practice medicine revoked or was disci-

plined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

AMERICAN BOARD OF UROLOGY

- John T. Grayhack, MD, President, Chicago, Illinois
- Alan D. Perlmutter, MD, Vice President, Detroit, Michigan
- William H. Boyce, MD, Secretary-Treasurer, Winston-Salem, North Carolina
- Winston K. Mebust, MD, Chairman, Examination Committee, Kansas City, Kansas
- Abraham T. K. Cockett, MD, Rochester, New York
- Joseph B. Dowd, MD, Boston, Massachusetts
- Jay Y. Gillenwater, MD, Charlottesville, Virginia
- Frank Hinman, Jr., MD, San Francisco, California
- Joseph J. Kaufman, MD, Los Angeles, California
- Paul C. Peters, MD, Dallas, Texas
- John D. Young, MD, Baltimore, Maryland
- J. Tate Mason, MD, Executive Secretary, Harborview Medical Center, 325 Ninth Avenue, Seattle, Washington 98104

Requirements for all Applicants

All applicants for examination and potential certification by the American Board of Urology shall meet certain basic requirements.

The candidate must have been appointed to programs as outlined in the Directory of Residency Training Programs published by the AMA, Section II, Paragraph III, "Eligibility and Selection of Residents."

A. APPLICATION

1. A special application form, provided by the Secretary shall be completed by the applicant and returned to the Board with documentation of graduation from an approved medical school, school of osteopathy, and the prescribed pre-urology training (see Section C). Foreign medical graduates must furnish documentation of ECFMG certificate.
2. A portion of the examination fee shall be paid at the time the application is submitted, as specified in section B, FEES.
3. Application must reach the American Board of Urology by January 1 in order to permit the applicant to be seated for the written or qualifying examination in the June following.
4. Applications from senior residents must be supported by a letter from the program director, confirming that the applicant will have completed at least six months of senior residency by June 1 of the year in which the written or qualifying examination is taken and recommending the applicant for Part I. In addition, an evaluation form supplied by the American Board of Urology must be completed by the program director for each applicant and be forwarded to the Board Office by May 1st prior to the examination in June.
5. Applications for examination will be examined by the Credentials Committee, reviewed by the Board, and additional data if required will be requested by the Secretary.
6. Applications will be suspended if two successive examination appointments are cancelled by the applicant. (See section B, FEES).
7. A new application will be required of an applicant who fails to take the examination within five years of the date of original application.
8. An applicant or candidate who fails any portion of the examination on three occasions must file a complete new application, with full fees, to be approved by the Board, and document continuing medical education in the areas showing the lowest scores on the candidate profile sheet, in the "candidate average" column sent with the results of the written examination. For further details, please contact the Office of the American Board of Urology.

B. FEES

The examination fee is \$900.00, but may from time to time be altered as deemed necessary in the judgment of the Board. No fees are returnable or refundable.

Four hundred fifty dollars (\$450) shall be paid and should accompany the initial application, except in the case of senior residents who shall pay \$350.00 at the time of initial application to take Part I, the written or qualifying examination. In all cases, the balance of the examination fee shall be paid by the candidate on notification of successful completion of the qualifying examination and eligibility to take the certifying examination, Part II.

Applicants or candidates failing one or more parts of the examination will be permitted to take repeat examinations after one year or within three years, and a fee of \$350.00 will be charged for each re-examination.

Applications suspended by reason of cancellation by the applicant or unexcused absence on two successive occasions will require payment of a reinstatement fee of \$350.00 to be returned to active status.

Applicants or candidates failing any portion of the examination on three occasions will be required to file a new application with payment of fees as specified at the time of reapplication.

Applicants failing to pass Part I, the written or qualifying examination within five years of date of original application will be required to file a new application with payment of fees as specified at that time.

Candidates failing to take Part II, the certifying examination, within five years of notification of eligibility to take that examination will be required to file a new application with payment of fees in full as specified at that date.

C. EDUCATION PREREQUISITES

1. Applicants must submit documentations of graduation from a medical school approved and recognized by the Liaison Committee on Medical Education or school of osteopathy, or from a medical school deemed by the Board to have provided equal or superior medical educational opportunities and experience.
 2. Two years of clinical postgraduate training in areas other than urology are required before beginning the final year of residency in an approved urology program. Preferably, both postgraduate years should be in basic surgical training; at least one year must be in surgical training. Neither of these two postgraduate years may be used to satisfy requirements of a urology residency program.
 3. A program of one year of non-urology and four years of urologic residency does not fulfill this requirement. Applicants must satisfactorily complete a urologic residency of at least three clinical years in an approved program conforming to RRC guidelines. The last year must be as a senior or chief resident with appropriate clinical responsibility.
 4. Training in a formally integrated urologic residency program embracing variations in preliminary and urologic training may be permitted by the Board at its discretion, provided the basic minimum intervals of training are observed.
 5. Applicants are urged by the Board to seek more than minimal training opportunities, and additional experience in both surgical and urologic residency programs will be encouraged.
 6. Applications which do not reflect the applicant to have met these basic requirements will be judged on individual merit, and the Board may in its own discretion permit some variation from these requirements when a suitable and satisfactory documentation of equivalent or superior education and training is provided.
- ANY VARIATIONS FROM THE BASIC REQUIREMENTS MUST BE APPROVED BY THE BOARD BEFORE AN APPLICANT STARTS HIS/HER RESIDENCY PROGRAM.

D. LICENSURE AND PRACTICE

1. Applicants for Part I, the written or qualifying

Urology

examination, may be practicing urologists or senior residents as specified in section A.

2. Candidates for Part II, the certifying examination, having met all other requirements and passed the Part I examination, must document not less than 12 months in the practice of urology in a community, academic appointment, or military service. Practitioners must document 18 months.

3. Applicants must assure the Board of full time engagement in the practice of urology.

4. PEER REVIEW: It is the purpose of the American Board of Urology to ascertain and document competence of any candidate for certification. This is a duty to the public. Under no condition will peer reviews or their source be revealed to any person other than the Board of Trustees.

The applicants must have satisfactorily completed the educational licensure and practice requirements; and must be of high ethical, moral, and professional standing, and this must be established to the satisfaction of the Board. Following is the Policy of the American Board of Urology as adopted in 1981:

Peer comments are solicited by the American Board of Urology to identify candidates whose practice patterns deviate significantly from those judged adequate by colleagues. The purpose of peer review is to alert the American Board of Urology to possible irregularities involving practice patterns or standards of performance. A significant indication of concern as determined by the review of two or more Board members will be a basis for Board action.

The purpose of the case log is to allow the Board to review the volume and diversity of practice and to assess the appropriateness of those procedures. The information provided in the log allows the individual examiners to focus their questioning on apparently questionable areas as indicated by numbers or types of procedures and to question the applicant regarding his practices and their appropriateness. If, on review of the log, the initial reviewer is concerned about practice procedures, then the log will be reviewed by at least one other Board member. If there is concurrence among the reviewers, this assessment or practice activity may be a basis for Board action.

The log material and peer comments may be used to postpone Board action until questionable areas are clarified.

Actions of the Board to achieve clarification material may include:

1. Inquiring into questionable practices at the time of examination.
2. Inquiring into questionable practices at a requested appearance before a group of Board representatives.
3. Requests for certified copies of complete hospital records for review.
4. A site visit at the candidate's expense.
5. Other appropriate measures to provide answers to questions regarding deviations from standard urologic practice.

Requirements for Certification

The requirements for certification include:

A. EVIDENCE OF HOSPITAL PRACTICE

1. The candidate must mail to the Board Office by DECEMBER 1, prior to the examination in February, a list of all major and minor surgical cases since leaving his residency. In the case of practitioners, lists for the previous 18 months are required. These lists must be prepared in accordance with the form provided by the American Board of Urology and must be verified by the hospital administrator of all hospitals where the procedures were performed.

2. Photostatic copies of one or more of the full hospital records of any of the above may likely be requested. The candidate is expected to furnish this within one month of the request.

B. EXAMINATIONS

1. Part I—Qualifying Examination (Written)

This examination will be given in June of each year, simultaneously at various locations convenient for applicants. Anyone who has completed his/her residency or senior residents in training whose applications have been approved may take this part of the examination. The written examination is designed to demonstrate the candidate's knowledge of the entire field of urology and allied subjects.

Following is a concise outline of the areas covered:

Anatomy—The gross anatomy, relations, blood and nerve supply, and lymphatic drain of all of the organs involved in urology including the adrenal.

Physiology—Physiology of the pituitary, as related to urology, adrenal gland, kidney, organs of urinary transport, prostate, seminal vesicles, testis, epididymis, and penis.

Embryology, Growth and Development, Physiology of the Genitourinary System Peculiar to the Infant and Child—This area covers pediatric endocrinology, sex differentiation, and all of the endocrine and ambiguous sex problems. All physiology related to the genitourinary system in the infant and child.

Neoplasms—All benign and malignant neoplasms including adrenal, plus all organs of the genitourinary system. Diagnosis, surgical treatment, nonsurgical treatment and prognosis, urologic oncology.

Calculous Disease—All aspects of calculous disease including etiology, diagnosis techniques, and all forms of medical and surgical treatment.

Obstructive Uropathy and Urinary Diversions—The pathophysiology of obstruction, causes and diagnosis of obstruction, treatment of acquired obstructive lesions, and urinary diversions of all types.

Trauma and Fistula—of all of the organs involved in urology are covered (Etiology, diagnosis, and treatment).

Neurogenic Bladder and Incontinence, Priapism and Impotency, Endocrinology Related to Urology and Infertility.

Fluid and Electrolyte Problems, Transplantation, Renovascular Problems, and Nephrology That is Essential to Urology—In this section all types of fluid and electrolyte problems are covered. In those questions dealing with nephrology essential to urology, the candidate is asked about a number of conditions which are eventually treated by the nephrologist but which the urologist should be able to recognize.

Infectious Disease—All infections of the genitourinary tract are covered as well as a certain amount of basic bacteriology that is related to the diagnosis and treatment of infections of the genitourinary system. This area covers, to a measure, basic bacteriology as related to urology, immunology as related to urology, and all of the specific and nonspecific bacterial and viral infections as they may effect the genitourinary tract.

Gross Congenital Anomalies—Anomalies of the entire genitourinary system are covered. These include anomalies of all of the organs and systems normally treated by the urologist.

Obstructive Uropathy (Congenital and Acquired) Infectious Disease, Nephrology, Urinary Diversion, and Neoplasms as is Related Specifically to the Infant and Child—All of the obstructive lesions that might be found in an infant or child are covered. Pediatric nephrology that the urologist should be familiar with, at least to the extent that he can make the diagnosis, are covered. Urinary diversion in the infant and child is covered. All the neoplasms found in the infant and child, of a urologic nature.

Gynecologic Urology—The urologist should be responsible for a comprehensive history and physical examination of the female patient. The candidate should be familiar with the steps in diagnosis and treatment of a wide range of disorders arising from alterations in the anatomy and physiology of the genito-urinary organs. (Anatomic structures common to urology and gynecology.)

The urologist should demonstrate competence in the

performance and interpretation of urodynamic studies for vesical and urethral dysfunction. The candidate must demonstrate knowledge of the indications for techniques necessary to perform voiding cysto-urethrography, urethral profile studies, cystometrography, and sphincter electromyography.

The trained urologist must be competent in the endoscopic, pharmacologic and various surgical procedures for the management of female incontinence. The candidate must demonstrate knowledge of the methods of diagnosis, localization and management of genital and urinary infections in the female patient.

The urologist must be familiar with the indications for institution of intermittent catheterization and the techniques necessary to accomplish this.

The candidate must be familiar with the steps in diagnosis and management of neoplasms involving the urinary tract and the genital organs in the female.

2. Part II—Certifying Examination (Oral)

This examination will consist of pathology, radiology, and the oral, and is given each year in February. All who have passed Part I, have a minimum of eighteen months in practice, academic appointment, or military service, and have been approved by the Credentials Committee as candidates will be eligible to take Part II. The supplemental application must be in the Board Office by September 15.

OBJECTIVES:

The oral examination is an interactive process between examiner and candidate, during which an assessment can be made of the candidate's ability to diagnose and manage urologic problems.

For the purpose of the oral examination, the examiner assumes the candidate to have a satisfactory degree of cognitive knowledge, inasmuch as the candidate has already passed Part I (written) of the certification examination.

Therefore, the oral examination can be devoted to the following three areas:

A. Assessment of the candidate's problem-solving ability. The candidate is evaluated regarding his ability to systematically collect information, integrate it, assess the problem and propose an appropriate solution.

B. Assessment of the candidate's response to a change in situation. The flexible, dynamic interaction between the examiner and the candidate allows for an assessment of the candidate's ability to deal with changing clinical conditions. Changing clinical conditions may be posed arbitrarily by the examiner in order to assess various responses of the candidate, or may be developed by the examiner from the outcome of recommendations offered by the candidate during the interview.

C. Assessment of the candidate's professional behavior, in his role as a urologist. The candidate's attitude, interaction with the examiner, and expression of patient management concerns, contribute to the assessment of professional behavior.

D. The professional adaptability of each candidate will be investigated in an attempt to determine his/her ethical conduct and his/her attitude toward his/her patients and fellow practitioners before taking Part II of the examination but shall not be a prerequisite to taking Part I.

Final Action of the Board

Final action concerning each applicant is made by the entire Board and is based on the applicant's training, his/her professional record, his/her attainments in the field of urology, and the results of the examinations. This Board is organized not to prevent qualified urologists from obtaining certificates but to assist them in becoming recognized in their communities as persons competent to practice in the special field of urology. An appeals mechanism, however, is

available to all applicants at any stage of the certification proceedings.

THE ACTIVITIES DESCRIBED IN THE FOREGOING PROCEED FROM THE CERTIFICATE OF INCORPORATION IN WHICH IS STATED THE NATURE OF THE BUSINESS, OBJECTS, AND PURPOSES PROPOSED TO BE TRANSACTED AND CARRIED OUT BY THIS CORPORATION.

Guidelines for Special Training

While certificates of special qualifications in certain areas of urology are not offered by the Board, it is recognized that special expertise in some aspects of the discipline may be achieved through an organized program of study, practice and exposure, which is in addition to formal residency training. The Board has established guidelines for such special training programs in the fields of pediatric urology, renal transplantation, urologic oncology, and male and female reproductive surgery. These guidelines and others to be developed in the future can be obtained by program directors and prospective trainees from the office of The American Board of Urology, Inc.

Revocation of Certificate

Certificates issued by this Board are subject to the provisions of the Articles of Incorporation and the By-laws. According to Article IX, Section 4, of the By-laws: "Each Certificate shall be subject to revocation in the event that:

"A. The issuance of such certificate or its receipt by the physician so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this, The American Board of Urology, Inc., or of the By-laws; or

"B. The physician or party certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting him/her so ineligible were known to, or could have been ascertained by, the directors of the Board at the time of issuance of such certificate; or

"C. The physician or party so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board or its representatives; or

"D. The physician so certified shall at any time have neglected to maintain the degree of competency in the practice of the specialty of Urology as set up by the Board, and shall refuse to submit to re-examination by the Board; or

"E. The physician so certified has been found to be guilty of unethical practices or immoral conduct or of conduct leading to revocation of his license.

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this corporation. The Board of Trustees, may, however, in its discretion, require any physician so certified to appear before the Board of Trustees or before any one or more of them or before any individual or individuals designated by the Board of Trustees, upon not less than twenty (20) days written notice, and to show cause, at the time and place specified in such notice, why his/her certificate should not be revoked upon any one or more of the above-described grounds specified in such notice. The failure of any physician so notified to appear as required in such notice, without due excuse deemed sufficient to the Board of Trustees, shall constitute, *ipso facto*, cause for revocation of his/her certificate. The decisions of the Board of Trustees relating to all matters under this Section 4 shall be final and binding."

NOTES

APPENDIX C
MEDICAL LICENSURE REQUIREMENTS

MEDICAL LICENSURE REQUIREMENTS

The following information has been provided by Annette Van Veen Daigle of the staff of the AMA Department of Data Planning and Evaluation in cooperation with Arthur Osteen, Ph.D. of the Department of Physician Credentials and Qualifications. The tables are taken (with publication corrections) from "U.S. Medical Licensure Statistics, 1982 and Licensure Requirements, 1983," published by the AMA.

Policies for Initial Medical Licensure for Graduates of U.S. Medical Schools

The initial medical license of most U.S. medical school graduates is granted by endorsement of their National Board Certificates. All licensing jurisdictions, except Louisiana, Texas, and the Virgin Islands, will endorse certificates from the National Board. The Texas licensing board will endorse National Board certificates when Part II of the examination was passed before January 1, 1978, and will endorse state licenses based on the National Board certificate when Part II of the National Board examination was passed after January 1, 1978, if the candidate passes Day III of the Federation Licensing Examination (FLEX). Those graduates who are not licensed by endorsement of a National Board certificate, must pass the FLEX which is used by all states as the medical licensing examination. In many states the certificate of the National Board of Examiners for Osteopathic Physicians and Surgeons can be endorsed for licensure. Boards of medical examiners in Guam, Massachusetts, New Hampshire, Oregon, and West Virginia will endorse U.S. specialty board certificates for licensing purposes in specific circumstances as delineated by the licensure regulations of those states.

Policies for Licensure of Graduates of Foreign Medical Schools

Most of the state medical boards will accept graduate training in Canada as equivalent to training undertaken in the U.S. Thirty-five states will issue a medical license to a graduate of a Canadian medical school who holds a license in one of the provinces of Canada. Twenty-two licensing boards will, under certain specified conditions, endorse a Licentiate of the Medical Council of Canada certificate held by a foreign medical graduate.

In the most recent survey (March, 1983) conducted by the AMA Department of Data Planning and Evaluation, forty-four states have indicated they will license foreign medical graduates who hold a Fifth Pathway certificate, but do not hold a standard ECFMG certificate.

Foreign educated candidates for licensure are permitted by fifteen state boards to take the FLEX before they have had graduate training. In most cases, however, candidates are not awarded a license until they have undertaken one or more years of training in the U.S. and have met other specific requirements of the individual boards, e.g., an

Educational Commission for Foreign Medical Graduates (ECFMG) certificate, personal interview, etc.

Tables 1, 2, 3, 4, and 5 on the following pages summarize the licensure policies of state boards. It is strongly recommended that candidates contact the specific state board for the most current information on licensure requirements in that state. Names and addresses of the corresponding officers are listed in Table 6 of this Appendix.

Restricted Licenses and Educational Permits

Fifty boards provide for the issuance of educational permits, limited and temporary licenses, or other certificates for the restricted practice of medicine. The terms for the issuance of such certificates vary. Such certificates may be issued (1) for hospital training of those eligible for licensure, (2) for supervised employment in state or private hospitals, and (3) for full-time practice until the next regular session of the licensing board. These permits must generally be renewed once a year with a stipulated maximum number of renewals allowed (usually five years):

Amendments to the Immigration and Nationality Act made through Public Law 94-484, the Health Professions Educational Assistance Act of 1976, establish requirements for the admission of alien physicians to the United States, whether for permanent residency or for participation in graduate medical education training programs. The amendments require that alien graduates of foreign medical schools pass an examination determined by the Secretary of Health and Human Services to be the equivalent to Parts I and II of the National Board of Medical Examiners examination. The amendments also require that alien medical graduates demonstrate competence in oral and written English.

The Secretary of Health and Human Services has determined that the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS), which is prepared by the National Board of Medical Examiners and administered by the Educational Commission for Foreign Medical Graduates, is the equivalent of Parts I and II of the National Board of Medical Examiners examination for purposes of the amendments to the Immigration and Nationality Act. This examination, which lasts for two days and is composed of equal proportions of clinical science and basic science questions in a multiple choice format, is given twice a year at examination centers abroad and in the United States. Applications for the examination and questions should be addressed to the Educational Commission for Foreign Medical Graduates, 3624 Market Street, Philadelphia, PA 19104, U.S.A.

Graduates of foreign medical schools who are citizens of the United States and lawful permanent residents of the United States must pass the FMGEMS Examination in order to be provided with the ECFMG Certificate.

MEDICAL LICENSURE REQUIREMENTS

Table 1.—Policies of State Boards of Medical Examiners for Initial Licensure for Graduates of U.S. Medical Schools

No—Implies no or not required.

NL—Indicates no limit.

1—Applicant must pass an oral examination if 10 years have passed since last licensure examination.

2—Oral examination required.

3—Or 5 years licensed practice.

4—At discretion of the Board.

5—After July 1, 1985, one year of acceptable postgraduate hospital training will be required.

6—First year of residency in pathology and psychiatry not accepted.

7—If Part III of the National Board Examination was passed after January 1, 1978, applicant must sit for Day III of FLEX.

Table 2. — Policies of State Boards of Medical Examiners for Citizens of Canada Who Are Graduates Accredited Canadian Medical Schools¹

¹All State Boards of Medical Examiners consider Canadian citizens who have graduated from an accredited Canadian medical school on the same basis for licensure as graduates of accredited U.S. medical schools.

²— Must be endorsed by provincial licensing Board. (In Texas, if the LMCC was passed after January 1, 1978, candidates must pass Day III of FLEX.)

³— Training not required.

⁴— On an individual basis (if not already American Specialty Board certified or may substitute for Day III of FLEX).

⁵— Two years formal postgraduate training required. (Or its equivalent, Ohio only.)

⁶— Applicant must have received LMCC after May 12, 1979.

⁷— By vote of Board.

⁸— Can be used instead on Days II and III of FLEX—if used, must have 75% grade on Day I of FLEX to pass.

⁹— If taken after January 1, 1978.

¹⁰— Only FLEX.

.. — Did not respond.

Table 3.—Policies of State Boards of Medical Examiners for Physicians Trained in Foreign Countries Other Than Canada¹

State	Requires ECFMG Certificate Before Admission to FLEX	Permits Candidate Without U.S. Training to Take FLEX	Permits Partial Retake of FLEX	Physicians Who Complete a Fifth Pathway Program Are Qualified for License Candidates	Endorses the Canadian Certificate (LMCC) When Held by an FMG	ECFMG Certificate Required for License	Number of Years of Accredited U.S. or Canadian Graduate Medical Education Required for License

Yes—Implies yes.

No—Implies no or no requirement.

¹—This summary should be verified by direct communication with the officer of the licensing board in the state in which the physician is interested. *IN ALL STATES* licenses based on the endorsement/acceptance of a physician's credentials are granted to those physicians meeting all state requirements—*AT THE DISCRETION OF THE LICENSING BOARD.*

²—After completion of an additional 12 month medical postgraduate program.

³—One year in California, two in other states.

⁴—If passed the ECFMG examination.

⁵—Only after completion of one year of accredited graduate medical education (or five years licensed practice in state or foreign country—*FLORIDA ONLY*).

⁶—Temporary until permanent rule.

⁷—Or Visa Qualifying Examination.

⁸—Only if graduate of state-approved medical education program.

⁹—With two years of medical postgraduate training.

¹⁰—May be counted as one of the three years of required postgraduate training in Louisiana. (May be counted as one of the two years of postgraduate training in North Dakota and Oregon.)

¹¹—Board discretion.

¹²—Three years total in Nebraska; two years total in North Dakota.

¹³—Only if originally taken in New Hampshire.

¹⁴—Additional training may be required.

¹⁵—A candidate may retain credit for parts of the examination passed for a period not to exceed three years from the examination date. After that time, such candidate shall be re-examined in all parts.

¹⁶—If passed *after* May 12, 1979 (Pennsylvania); January 1, 1978 (Wisconsin). If passed *before* January 1, 1978 (Tennessee).

¹⁷—LMCC credited for Days II and III of FLEX for all M.D.s.

.. Indicates that states did not respond to the question.

Table 4.— Fees for Issuing Medical Licenses by Examination and by Reciprocity or Endorsement¹

State	Examination (\$)	Reciprocity or Endorsement (\$)

 03548 State University of New York, Stony Brook Health Science Center School of Medicine, Stony Brook

NORTH CAROLINA

- 03601 University of North Carolina at Chapel Hill School of Medicine, Chapel Hill
 03605 Bowman Gray School of Medicine of Wake Forest University, Winston-Salem
 03607 Duke University School of Medicine, Durham
 03608 East Carolina University School of Medicine, Greenville

NORTH DAKOTA

- 03701 University of North Dakota School of Medicine, Grand Forks

OHIO

- 03806 Case Western Reserve University School of Medicine, Cleveland
 03840 Ohio State University College of Medicine, Columbus
 03841 University of Cincinnati College of Medicine, Cincinnati
 03843 Medical College of Ohio at Toledo, Toledo
 03844 Northeastern Ohio Universities College of Medicine, Rootstown
 03845 Wright State University School of Medicine, Dayton

OKLAHOMA

- 03901 University of Oklahoma College of Medicine, Oklahoma City
 03905 Oral Roberts University School of Medicine, Tulsa

OREGON

- 04002 University of Oregon Health Sciences University School of Medicine, Portland

PENNSYLVANIA

- 04101 University of Pennsylvania School of Medicine, Philadelphia
 04102 Jefferson Medical College of Thomas Jefferson University, Philadelphia
 04107 Medical College of Pennsylvania, Philadelphia
 04109 Hahnemann Medical College and Hospital, Philadelphia
 04112 University of Pittsburgh School of Medicine, Pittsburgh
 04113 Temple University School of Medicine, Philadelphia
 04114 Pennsylvania State University College of Medicine, Hershey

PUERTO RICO

- 04201 University of Puerto Rico School of Medicine, San Juan
 04202 Ponce School of Medicine, Ponce
 04203 Universidad Central del Caribe Escuela de Medicina, Cayey

RHODE ISLAND

- 04301 Brown University Program in Medicine, Providence

SOUTH CAROLINA

- 04501 Medical University of South Carolina College of Medicine, Charleston
 04504 University of South Carolina School of Medicine, Columbia

SOUTH DAKOTA

- 04601 University of South Dakota School of Medicine, Vermillion

TENNESSEE

- 04705 Vanderbilt University School of Medicine, Nashville
 04706 University of Tennessee College of Medicine, Memphis
 04707 Meharry Medical College School of Medicine, Nashville
 04720 East Tennessee State University Quillen-Dishner College of Medicine, Johnson City

TEXAS

- 04802 University of Texas Medical Branch at Galveston, Galveston
 04804 Baylor College of Medicine, Houston
 04812 University of Texas Southwestern Medical School at Dallas, Dallas
 04813 University of Texas Medical School at San Antonio, San Antonio
 04814 University of Texas Medical School at Houston, Houston
 04815 Texas Tech University School of Medicine, Lubbock
 04816 Texas A & M University College of Medicine, College Station

UTAH

- 04901 University of Utah College of Medicine, Salt Lake City

VERMONT

- 05002 University of Vermont College of Medicine, Burlington

VIRGINIA

- 05101 University of Virginia School of Medicine, Charlottesville
 05104 Virginia Commonwealth University Medical College of Virginia School of Medicine, Richmond
 05107 Eastern Virginia Medical School of Eastern Virginia Medical Authority, Norfolk

WASHINGTON

- 05404 University of Washington School of Medicine, Seattle

WEST VIRGINIA

- 05501 West Virginia University School of Medicine, Morgantown
 05502 Marshall University School of Medicine, Huntington

WISCONSIN

- 05605 University of Wisconsin Medical School, Madison
 05606 Medical College of Wisconsin, Milwaukee

APPENDIX E
ABBREVIATIONS USED IN DIRECTORY LISTING

ABBREVIATIONS USED IN DIRECTORY LISTING

TYPE OF HOSPITAL CONTROL

A	Army
AF	Air Force
CH	Church
CITY	City
CO	County
CORP	Corporation
CYCO	City/County
HDA	Hospital District Authority
IO	Individual Owned
MISC	Miscellaneous
N	Navy
NP	Other Not-for-Profit
OF	Other Federal
P	Partnership
PHS	Public Health Service
ST	State
VA	Veterans Administration

MEDICAL SCHOOL AFFILIATION

M	Major
L	Limited
G	Graduate

SPECIALTIES

AIM	Allergy and Immunology
AM	Aerospace Medicine
AN	Anesthesiology
BBK	Blood Banking
CHP	Child Psychiatry
CRS	Colon and Rectal Surgery
D	Dermatology
DP	Dermatopathology
DR	Diagnostic Radiology
EM	Emergency Medicine
FOP	Forensic Pathology
FP	Family Practice
GPM	General Preventive Medicine
GS	Surgery
IM	Internal Medicine
N	Neurology
NM	Nuclear Medicine
NP	Neuropathology
NR	Diagnostic Radiology (Nuclear)
NS	Neurosurgery
OBG	Obstetrics/Gynecology
OM	Occupational Medicine
OPH	Ophthalmology
ORS	Orthopedic Surgery
OTO	Otolaryngology
P	Psychiatry
PD	Pediatrics
PDA	Pediatric Allergy
PDC	Pediatric Cardiology
PDS	Pediatric Surgery
PH	Public Health
PM	Physical Medicine and Rehabilitation
PS	Plastic Surgery
PTH	Pathology
TR	Therapeutic Radiology
TRS	Transitional
TS	Thoracic Surgery
U	Urology

ABBREVIATIONS FOR SPECIALTY DATA BY SPECIALTY

Allergy and Immunology

OPV-A	Outpatient Visits-Adult
OPV-CI	Outpatient Visits-Clinical Immunology
OPV-M	Outpatient Visits-Mixed
OPV-P	Outpatient Visits-Pediatric

Anesthesiology

AN	Total Anesthetics
CNP	Consultation on Nonsurgical Patients

Colon and Rectal Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Dermatology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Dermatopathology

ADPWH	Accessions Dermatopathology Within Hospital
ARH	Accessions Referred to Hospital
GPSS	Gross Photos Patients or Specimens
PS	Photomicrographs of Specimens

Family Practice

OPV	Annual Outpatient Visits
-----	--------------------------

Internal Medicine

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Neurological Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Neurology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Nuclear Medicine

IVTP	Total In Vitro Procedures
IVVP	Total In Vivo Procedures
TP	Total Therapeutic Procedures

Obstetrics/Gynecology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Ophthalmology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Orthopedic Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits
TT	Type of Training
A	Adult Orthopedics
C	Children's Orthopedics
F	Fractures

Otolaryngology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Pathology

LE	Total Laboratory Examinations
N	Number of Necropsies
SS	Total Surgical Specimens
SSEM	Surgical Specimens Examined Microscopically
TT	Type of Training
AC	Anatomic/Clinical Pathology
AP	Anatomic Pathology
CP	Clinical Pathology
SP	Special Pathology

Pathology, Blood Banking

TSP	Total Special Procedures
UBC	Units of Blood Collected
UBP	Units of Blood Processed
UBT	Units of Blood Transfused

Pathology, Forensic

MN	Total Medicolegal Necropsies
NB	Necropsies on Bodies Examined at Scene
NH	Necropsies on Homicides
NT	Necropsies, Toxicological Tests Made

Pathology, Neuropathology

NCNS	Necropsies with CNS Examinations
NS	Neurosurgical Specimens

Pediatrics

AA	Annual Admissions
ADC	Average Daily Census
NP	Average Daily Census-Newborn
OPV	Annual Outpatient Visits

Pediatric Cardiology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Physical Medicine and Rehabilitation

OPV	Annual Outpatient Visits
PT	Number of Patients Treated
T	Number of Treatments

Plastic Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Preventive Medicine, General

AE	Area of Emphasis
----	------------------

Psychiatry

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Psychiatry, Child

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Radiology, Diagnostic

NXE	Number of X-Ray Examinations
-----	------------------------------

Radiology, Therapeutic

ACP	Annual New Cancer Patients
ATT	Annual Teletherapy Treatments
IIC	Interstitial, Intra Cavitory Treatments

Radiology, Diagnostic (Nuclear)

NXE	Number of X-Ray Examinations
NNI	Number of Nuclear Images

Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Surgery, Pediatric

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Thoracic Surgery

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits

Urology

AA	Annual Admissions
ADC	Average Daily Census
OPV	Annual Outpatient Visits
