Section V

DIRECTORY OF INSTITUTIONS AND AGENCIES PARTICIPATING IN TRAINING

This Section contains a list of hospitals and other agencies participating in graduate medical education.

There are 1,558 institutions listed in this Section. Approximately three-fifths of these institutions are identified as the "parent," i.e., principle institution for at least one residency program. The list is intended as a reference for information about the institutions which are part of a residency program. Candidates seeking a residency should refer to the list of programs in Section IV. Applications for a residency position *should be addressed to the program director* rather than to an institution.

Relationship Between Hospitals and Medical Schools

It is *not* a requirement that hospitals have a formal relationship with a medical school to have an accredited program. The type of medical school relationship of an institution has been provided by the dean of the medical school, and is listed as an item of information. The type of medical school-hospital relationship is indicated as M (*Major*), G (*Graduate Only*), or L (*Limited*). The number code following identifies the medical school. (See Appendix D for a list of schools.)

Major signifies that the hospital is an important part of the teaching program of the medical school and is a major unit in the clinical clerkship program.

Graduate indicates that the hospital is used by the school for graduate training programs *only*. Thus the *Graduate* designation is used only for hospitals not designated as *Major* or *Limited* and *only* in cases in which one or more of the following arrangements is in effect:

- a) The house staff are selected by officials of a medical school department or by a joint committee of the hospital teaching staff and medical school faculty.
- b) The medical school faculty (other than the hospital's attending staff) are regularly scheduled to participate in the teaching programs of the hospital. If the medical school faculty participation at the hospital is limited to an occasional lecture or consultation visit, or if the hospital's residents attend medical school teaching conferences only as visitors, the hospital is not designated as having a graduate affiliation.
- c) A contractual arrangement (with or without financial commitment) specifies the medical school participation in the organization and supervision of the graduate training program in the hospital.
- d) There is some degree of exchange of residents between this hospital and the principal teaching hospital of the medical school.

If the hospital is used for undergraduate clerkship teaching, the medical school relationship will be designated as either *Major* or *Limited*, but not *Graduate*.

Limited indicates that the hospital is used in the school's teaching program only to a limited extent.

There are several additional hospitals to which residents rotate for a brief period during the training program. Space limitations preclude listing these institutions in this DIRECTORY.

A. The following institutions and agencies are SPONSORS of residency programs.

APPENDIX A
COMBINED MEDICINE/PEDIATRICS PROGRAMS

COMBINED MEDICINE/PEDIATRICS PROGRAMS

The programs listed below offer two years of medicine and two years of pediatrics and are acceptable to both the American Board of Internal Medicine and the American Board of Pediatrics toward certification.

Neither the ACGME nor the Residency Review Committees have reviewed these combined programs. This list has been provided by the staffs of the American Board of Internal Medicine and the American Board of Pediatrics and is printed here as a service to the reader.

The two Boards believe that all four years should be completed in the same combined training program and that continuity clinics in each specialty should be provided throughout at least three years. The training in each specialty should be undertaken in a single institution. All four years of training must be satisfactorily completed prior to admission to the Certifying Examinations of each Board. Applicants to combined training programs are encouraged to review all of the requirements for admission to the certification process of each Board, which appear in other sections of this Directory.

ARIZONA

Phoenix

Phoenix Hospitals Program

Good Samaritan Hospital (Internal Medicine)
Maricopa Medical Center
Phoenix Children's Hospital

Program Directors:

APPENDIX B
CERTIFICATION REQUIREMENTS

CERTIFICATION REQUIREMENTS

American Specialty Boards

The Council on Medical Education of the American Medical Association and the American Board of Medical Specialties (formerly the Advisory Board for Medical Specialties) have now approved 21 primary and 2 conjoint examining and certifying boards on the basis of minimal standards listed in the "Essentials for Approval of Examining Boards in Medical Specialties."

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to cooperate with the Accreditation Council for Graduate Medical Education in evaluating residency training programs, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice

medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioners of medicine.

Table 1 is intended to be an aid primarily to graduates of foreign medical schools. The details of requirements for certification will be found on the following pages. Each board has provided the information which is published here for the convenience of physicians interested in certification. *Specific inquiries concerning certification by a specialty board should be addressed to the appropriate official whose name and address is listed in Table 2.*

The American specialty boards publish booklets containing statements on the requirements for certification. This information is also included for each board in The ABMS Compendium of Medical Specialists. The ABMS Compendium of Medical Specialists contains biographical and educational information on each living specialist (including those retired from practice) who had been

Table 1.—Summary of American Specialty Board Requirements

Specialty Board	Graduates of U.S., Canadian or Puerto Rican Schools										Foreign Medical Graduates Special or Additional Requirements		All Graduates	
	License to Practice	Approved Internship or Other Prerequisite	Years of Residency or Other Formal Training	Years of Practice or Other Special Activities	Periods of Credit in Related Fields	Credit for Military Service	Alternate plans for Training	Osteopaths Eligible for Certification	Accepted Under Certain Conditions	Board Accepts Screening by Nat. Bd. Med. Exam. ECFMG, or Other Method	Special Certificate or Statement Granted	Standard Certificate Granted	Initial Applications or Registration Fee	Total Fees

¹ Also certifies in Special Qualification in Diagnostic Laboratory Immunology with the American Board of Internal Medicine and the American Board of Pediatrics.

² Also grants Certificate of Special Qualifications in Critical Care Medicine.

³ Practice category option available until June 30, 1988. Practice category requirements are available by writing to the Board office.

⁴ Also certifies in the subspecialties of Cardiovascular Disease, Endocrinology and Metabolism, Gastroenterology, Hematology, Infectious Disease, Nephrology, Medical Oncology, Pulmonary Disease, Rheumatology, and in Diagnostic Laboratory Immunology, Critical Care Medicine, and Geriatric Medicine.

⁵ Fee for Anatomic Pathology Only or Clinical Pathology Only is \$850. Fee for Combined Anatomic and Clinical Pathology is \$950.

⁶ Also certifies in subspecialties of special areas of Pediatric Cardiology, Pediatric Hematology-Oncology, Pediatric Nephrology, Pediatric Endocrinology, Neonatal-Perinatal Medicine, Pediatric Pulmonology, Pediatric Critical Care Medicine, and Diagnostic Laboratory Immunology.

⁷ Also certifies in Neurology with Special Qualification in Child Neurology and subspecialty of Child and Adolescent Psychiatry.

⁸ Certifies in Diagnostic Radiology, Diagnostic Radiology with Special Competence in Nuclear Radiology, Therapeutic Radiology and Radiological Physics and one or more of its subfields.

⁹ Also grants Certificate of Special Qualification in Pediatric Surgery, and in General Vascular Surgery and Certification of Added Qualification in General Vascular Surgery and Surgical Critical Care.

¹⁰ Certification of American Board of Surgery prerequisite.

NOTE: In this table, those items are marked "x" on which the Board makes specific statement. In most instances, there are additional qualifying statements not indicated in this table. In all instances, refer for details to the board requirements which follow. While all boards may accept the foreign medical graduate under certain circumstances, they do not all specify that ECFMG certification is required. ALL FOREIGN GRADUATES WHO CONTEMPLATE SPECIALTY BOARD CERTIFICATION SHOULD CORRESPOND WITH THE APPROPRIATE BOARD AT THE EARLIEST POSSIBLE MOMENT.

certified by an examining board approved by the American Medical Association. Executive Vice President of the American Board of Medical Specialties is Donald G. Langsley, M.D., One American Plaza, Evanston, Illinois 60201.

The American Board of Medical Specialties is actively concerned with the establishment, maintenance, and elevation of standards for the education and qualification of physicians recognized as specialists through the certification procedures of its member specialty boards. As a corollary, the American Board of Medical Specialties cooperates actively with all other groups concerned in establishing standards,

policies, and procedures for assuring the maintenance of continued competence of such physicians.

The American Board and the Council on Medical Education of the American Medical Association, through the Liaison Committee for Specialty Boards, jointly issue the "Essentials for Approval of Examining Boards in Medical Specialties," which document is approved by the House of Delegates of the American Medical Association. Copies of the "Essentials" may be obtained from the Executive Director of the American Board of Medical Specialties or from the Council on Medical Education, American Medical Association, Chicago, Illinois 60610.

AMERICAN BOARD OF ALLERGY AND IMMUNOLOGY

(A Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics)

Gail G. Shapiro, MD, Co-Chairman, Seattle, Washington
 Co-Chairman (to be determined)
 Richard Evans III, MD, MPH, Secretary, Chicago, Illinois
 Harold S. Nelson, MD, Treasurer, Denver, Colorado
 I. Leonard Bernstein, MD, Cincinnati, Ohio
 John J. Condemni, MD, Rochester, New York
 Peyton A. Eggleston, MD, Baltimore, Maryland
 Philip Fireman, MD, Pittsburgh, Pennsylvania
 Raif S. Geha, MD Boston, Massachusetts
 Allen P. Kaplan, MD, Stony Brook, New York
 Donald C. McLean, MD, Atlanta, Georgia
 Robert E. Rich, MD, Houston, Texas
 Warren Strober, MD, Bethesda, Maryland
 John W. Yunginger, MD, Rochester, Minnesota
 Herbert C. Mansmann, Jr., MD, Executive Secretary
 American Board of Allergy and Immunology,
 A Conjoint Board of the American Board of
 Internal Medicine and the American Board of Pediatrics
 3624 Market Street
 University City Science Center
 Philadelphia, Pennsylvania 19104

Organization

The American Board of Allergy and Immunology (ABAI) was established in 1971 as a non-profit organization. It is sponsored jointly by the American Board of Internal Medicine, the American Board of Pediatrics, the American Academy of Allergy and Immunology, the American Academy of Pediatrics—Section on Allergy, the American College of Allergists, and the American Medical Association—Section on Allergy.

General Explanation of Requirements and Examination

The ABAI is interested in candidates who have embarked voluntarily on a graduate program of study, with the express purpose of excelling in the practice of the specialty of Allergy and Immunology. In outlining its requirements, the ABAI hopes to help the candidates select superior educational programs that will develop his/her competency in Allergy and Immunology. The ABAI believes that all Allergists and Immunologists should have a fundamental knowledge of the biological science basic to this discipline. Such knowledge is essential to the continued professional progress of any qualified allergist and immunologist. The ABAI anticipates that adequate knowledge in basic science, as applied to this discipline, will be acquired by the candidates during a post-medical school training program. The ABAI wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of Allergy and Immunology.

The candidate must qualify for examination by *having passed* the examination of the American Board of Internal Medicine, the American Board of Pediatrics or be certified in Internal Medicine or Pediatrics by the Royal College of Physicians and Surgeons of Canada, *and* by presentation of evidence, acceptable to the Board of Directors, of the following graduate medical education.

1. At least three years of general training in Internal Medicine (with approval of the director of the second year of training and with twenty-four months of primary patient responsibility) or Pediatrics, in programs approved by the Accreditation Council for

Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or such other programs acceptable to the Board of Directors; and

2. At least two years of full-time residency/fellowship or other acceptable training in allergy and immunology programs accredited by the Accreditation Council for Graduate Medical Education upon the recommendation of the Residency Review Committee for Allergy and Immunology. These programs are listed in the *Directory of Residency Training Programs*, published by the American Medical Association.

Application forms for accreditation of new residency programs may be obtained upon written request to:

Secretary
 Residency Review Committee for Allergy and Immunology
 535 North Dearborn Street
 Chicago, IL 60610

Fellows in allergy and immunology receiving training in Canadian programs will be required to obtain approval from the ABAI prior to starting training in order to sit for the certification examination. It is suggested that Canadian program directors forward outlines of their programs as approved by the Royal College of Physicians and Surgeons of Canada to the ABAI in order to receive individual approval for their fellows and meet the necessary guidelines.

Conjoint Committees —The nature of a Conjoint Board requires involvement of the sponsoring primary boards through understanding, evaluation, trust and input into critical areas of decision making. With these concepts in mind, the ABAI has formed two advisory committees with representation by the ABAI, the ABIM, and the ABP.

The Conjoint Credentials Committee will review and recommend the credentials of candidates for the certification examination to the Board for its determination.

The Conjoint Standards Committee will review and recommend the passing grade for the certification and recertification examination to the Board for its determination.

Program Directors' Evaluation and Assessment of Competency —All candidates will be required to have documentation from program directors to support the chronological training and quality of health care they deliver. The recommended frequency for evaluation is every six months. The Evaluation Forms may be obtained from the ABAI and will serve as a guideline for the director in preparing recommendation letters as to the clinical experience and competency of each fellow ultimately registered for the certification examination.

Community ABAI Diplomates, who are familiar with a candidate's standing and clinical competence, will be sent a reference form by the Board to complete to further support entry to the certification process by the candidate.

Progress Towards Certification

The ABAI no longer issues statements of or implying "Board Eligibility" for any reason. This policy has been recommended by the American Board of Medical Specialties (ABMS). Medical specialty certification is a process of advancement through several individual steps including examination. Having completed one step, such as the minimal educational requirements, should not imply that a candidate is now possessed of some special qualification which is more or less equivalent to certification. Upon written request the ABAI will reveal progress toward certification of registered candidates.

A candidate who passes the certification examination will be certified as a Diplomate in the specialty of Allergy and Immunology as of the date of the examination and receive an appropriate certificate. This information becomes public information and will be listed in the *ABMS*

Allergy and Immunology

Directory of Certified Allergy and Immunology Specialists, the ABMS Compendium of Certified Medical Specialists, and the Directory of Medical Specialists, as published by MacMillan.

Method of Examination

The examination is an eight-hour multiple choice question examination which will be administered simultaneously in at least two United States locations in alternate years. The times and places are determined by the Board and announced in the *Annals of Allergy*, the *Annals of Internal Medicine*, *Immunology and Allergy Practice*, *Journal of Allergy and Clinical Immunology*, *Journal of Clinical Immunology*, *Journal of Immunology*, and *Pediatrics*.

The candidate should be prepared for examination in the anatomy, pathology, physiology, and biochemistry of hypersensitivity, as well as atopic disease and should be proficient in clinical diagnosis, including laboratory procedures, and in the treatment of allergic and immunologic diseases in children and adults. In addition to a familiarity with atopic diseases, such as hay fever, asthma, eczema, and urticaria, the candidate will be expected to have a good understanding of other clinical states in which hypersensitivity or immune deficiency plays a major or contributory role, such as autoimmune diseases, transplantation immunity, connective tissue or rheumatic disease, and those infective and parasitic diseases characterized by hypersensitivity reactions.

The candidate should be familiar with the physiology of organ systems involved in allergic diseases, most particularly the lungs, especially as modified by asthma, emphysema, chronic bronchitis and other pathological states related to or confused with immunologic reactions in this organ. He/she should be thoroughly familiar with the benefits and dangers of drugs used in the management of allergic diseases in general and asthma in particular.

The candidate should be competent in recognition of many non-allergic states that resemble allergy, including such clinical entities as physical allergies, autonomic dysfunctions, and psychogenic factors in allergic disease.

Evidence of knowledge of current research in the field of hypersensitivity will be tested by questions concerning eicosanoids, receptors, chemical mediators, complement, immunoglobulins, lymphokines, monokines, molecular biology of relevant cells as well as the structure and function of all cell types involved in the immune response.

A knowledge of the various arguments, both pro and con, on controversial subjects such as gastrointestinal allergy, allergy to foods and allergy to bacteria will be required. Also the candidate will be expected to be familiar with the difficulties inherent in clinical investigation, as well as the reliability and limitations of data obtained by various methodologies.

Applications

Application forms may be obtained from the Executive Office. The registration period will be open for three months and announcement made accordingly. Applications must be accompanied by two recent signed photographs and the Registration and Examination Fee. Completed applications must be received on or before the close of registration.

To facilitate the evaluative process, incomplete applications will be returned.

Fees

The Registration and Examination Fee as set forth in the instruction sheet must accompany the application. Candidates whose applications are rejected will receive a refund, but the Board will retain the Registration Fee to cover the evaluation costs incurred in the review of the candidate's application.

A non-refundable late fee will apply to those applications received after the close of registration.

A certificate processing charge may be payable after the successful completion of the examination. It is Board policy that each Diplomate receive only one certificate; duplicates will not be available.

Cancellations

Candidates who are accepted for examination, but fail to appear or who withdraw after the deadline for cancellation will forfeit both the Registration and Examination Fee. For each subsequent application for examination, candidates will be required to pay the current Registration and Examination Fee.

Re-Examination

Candidates who are unsuccessful on a certification examination are not restricted as to the number of opportunities for re-examination. For each subsequent registration, the current Registration and Examination Fee are required. The act of filing an application for re-examination is the candidate's responsibility.

Time-Limited Certificates

Beginning with 1989, new Diplomates will receive certificates valid for ten years. Diplomates certified prior to 1989 will not be affected by this policy change. However, all Diplomates, especially those involved in training programs, are strongly encouraged to recertify as often as possible, but at a minimum of every ten years.

Recertification

Since 1977, the ABAI has offered its Diplomates a voluntary recertification examination. Diplomates may wish to accept this challenge by sitting for the recertification examination. The examination focuses upon questions testing areas of clinical competence. Diplomates may obtain the application form from the Executive Office. It must be submitted with two recent photographs and the Registration and Examination Fee. Non-refundable late fees will apply after the close of registration.

Special Qualification in Diagnostic Laboratory Immunology

In 1983 the ABMS approved Certification of Special Qualification in Diagnostic Laboratory Immunology (DLI). The examination is offered to Diplomates of the ABAI, ABIM, and ABP periodically. Such recognition will be made to those specialists involved in the teaching, research, or practice setting in which the diagnostic immunology laboratory is of central importance. Until 1990, the examination will be administered to those ABAI, ABIM, or ABP Diplomates, who have had significant experience (at least four years) in comprehensive DLI, at least one year's training in DLI, have made significant contributions to DLI in practice, teaching and/or research, and who are recognized by their peers as competent in DLI.

Topics to be covered include the theoretical and practical aspects of all current methods 1) for the qualification of immunoglobulins, 2) for complement and component determinations, 3) for detecting autoantibodies and evaluating immunohistology, 4) used in immunoserology, including rapid diagnosis of infectious diseases, 5) of tissue typing, 6) used in assaying immune complexes, 7) used in the evaluation of phagocytic cell function, 8) of studying lymphocyte phenotypes and function, and 9) for detecting and quantifying tumor antigens. In addition, principles of quality control, laboratory management and interaction with regulatory agencies will be covered.

Changes in Policies and Procedures

The Board reserves the right to make changes in its Policies and Procedures and fees at any time, and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not

to be construed as a contract between any candidate and the American Board of Allergy and Immunology, a Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics.

THE AMERICAN BOARD OF ANESTHESIOLOGY

Wendell C. Stevens, MD, President, Portland, Oregon
 Stephen Slogoff, MD, Vice President, Houston Texas
 Robert K. Stoelting, MD, Assistant Secretary-Treasurer
 Indianapolis, Indiana
 John R. Ammon, MD, Pittsburgh, Pennsylvania
 Judith H. Donegon, MD, PhD, San Francisco, California
 D. David Glass, MD, Hanover, New Hampshire
 Carl C. Hug, Jr., MD, PhD, Atlanta, Georgia
 David E. Longnecker, MD, Charlottesville, Virginia
 William D. Owens, MD, St. Louis, Missouri
 Muer H. Rosenthal, MD, Stanford, California
 Lawrence J. Saidman, MD, San Diego, California
 Alan D. Sessler, MD, Secretary-Treasurer, Rochester, Minnesota
 Office of the Board, 100 Constitution Plaza,
 Hartford, Connecticut 06103

Certification Requirements

To be certified as a Diplomate of the American Board of Anesthesiology, each applicant must:

A. Hold an unexpired and unrestricted license to practice medicine in one state of the United States or in Canada or, for physicians in active federal service, such a license which is temporarily inactive but fully renewable.

B. Fulfill all the requirements of the four-year Continuum of Education in Anesthesiology.

C. Have on file with the American Board of Anesthesiology a satisfactory Certificate of Clinical Competence covering the final six-month period of Clinical Anesthesia training.

D. Satisfy all examination requirements of the Board. Persons certified by this Board are designated as Diplomates in *The American Medical Directory* and publications of the American Board of Medical Specialties and the American Society of Anesthesiologists.

The Continuum of Education

The Continuum of Education in Anesthesiology consists of four years of training subsequent to the date that the medical or osteopathic degree has been conferred. It includes 12 months of non-anesthesia clinical training (Clinical Base year) and 36 months of Clinical Anesthesia training (CA-1, CA-2 and CA-3 years).

The time during the Continuum at which the resident receives training in either Clinical Base or Clinical Anesthesia will be decided by the director of the training program in anesthesiology following consultation with the individual resident. The program director is encouraged to plan that at least a portion of the Clinical Base occurs early in the Continuum.

A. The Clinical Base year must be devoted to clinical training other than Clinical Anesthesia. Acceptable training for the 12 months of Clinical Base shall include training in a rotating internship, internal medicine, pediatrics, surgery, or any of the surgical specialties, obstetrics and gynecology, neurology, family practice or any combination of these as approved for the individual resident by the director of his or her training program in anesthesiology.

The Clinical Base year must be spent in programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or, in Canada, in an institution approved by the Royal College of Physicians and Surgeons. It may also be spent in programs accredited by the American Osteopathic Association.

B. The three-year Clinical Anesthesia curriculum (CA 1-3) consists of experience in Basic Anesthesia Training, Subspecialty Anesthesia Training, and Advanced Anesthesia Training. The totality of all clinical Anesthesia experiences is encompassed in the phrase "comprehensive anesthesia assignments."

(1) Experience in Basic Anesthesia Training is intended to emphasize basic and fundamental aspects of the management of anesthesia. It is recommended that at least 12 months of the CA-1 and CA-2 years be spent in Basic Anesthesia Training with a majority of this time occurring during the CA-1 year.

(2) Subspecialty Anesthesia Training experiences are required in order to emphasize the theoretical background, subject material and practice of subdisciplines of anesthesiology. These subdisciplines include obstetric anesthesia, pediatric anesthesia, cardiothoracic anesthesia, neuroanesthesia, anesthesia for outpatient surgery, recovery room care, regional anesthesia and pain management. It is recommended that these experiences be in the form of subspecialty rotations, and that they occupy 7-12 months of the CA-1 and CA-2 years. The sequencing of these rotations in the CA-1 and CA-2 years is left to the discretion of the program director.

In addition to the above requirements for subspecialty experiences, two months of training in the subspecialty of critical care medicine are required at some time during the Clinical Anesthesia years. An acceptable critical care rotation should include active participation in patient care by anesthesia residents, active involvement by anesthesia faculty experienced in the practice and teaching of critical care, and an appropriate population of critically ill patients which includes a substantial number with multi-system disease whose care requires invasive monitoring or mechanical ventilation. Experience in routine, short-term or overnight post-anesthesia units or intermediate, step-down units or emergency rooms does not fulfill this requirement.

(3) Experience in Advanced Anesthesia Training constitutes the CA-3 year. The resident and program director in collaboration will select one of the three tracks designated as the Advanced Clinical Track, Subspecialty Clinical Track, or Clinical Scientist Track. Regardless of the track selected, resident assignments in the CA-3 year should include the more difficult or complex anesthetic procedures and care of the most seriously ill patients.

Residents in the Advanced Clinical Track are required to complete a minimum of six months of experience in advanced and complex comprehensive anesthesia assignments. The remaining six months may be spent in one to three selected subspecialty rotations or, alternatively, additional comprehensive anesthesia assignments may be selected.

Residents in the Subspecialty Clinical Track may complete 9-12 months experience in one subspecialty rotation along with up to three months of advanced experience in comprehensive anesthesia assignments. Alternatively, six months' experience in each of two subspecialty rotations may be selected. Such rotations may include some time assigned to medical or surgical activities directly related to the anesthetic subspecialty.

Residents in the Clinical Scientist Track must complete six months of advanced experience in comprehensive anesthesia assignments or, alternatively, in one selected anesthesia subspecialty rotation. The remaining six months will be devoted to laboratory or clinical investigation.

(4) Credit for six months toward the CA-3 year may be granted for non-anesthesia training which has concluded with the awarding of Board certification in a specialty recognized by the American Board of Medical Specialties or a Ph.D. degree in appropriate disciplines of relevance to anesthesiology. Requests for approval of CA-3 year credit for non-anesthesia training will be considered on an individual basis by the Credentials Committee of the ABA following written request of the resident for such credit, verification of Board certification or of the Ph.D.

Anesthesiology

degree and its discipline, and recommendation by letter from the current anesthesiology program director. The program director may recommend only partial credit, thus preserving the alternative of requiring more than six months of clinical training involving anesthesia assignments in the CA-3 year.

The maximum amount of credit granted toward the CA-3 year for non-anesthesia training occurring prior to the CA-1 year or during the CA-3 year is six months. Residents seeking such credit will be required to pursue either the Advanced Clinical Track or the Subspecialty Clinical Track, but not the Clinical Scientist Track, for the remaining portion of the CA-3 year. Thus, every resident must complete at least 30 months of clinical training involving anesthesia assignments.

C. Credit toward the CA 1-3 year requirements is granted by the Board for Clinical Anesthesia training which satisfies all of the following conditions:

(1) The training is spent in or under the sponsorship of at most two ACGME-accredited anesthesia residency programs.

(2) The period of Clinical Anesthesia training in or under the sponsorship of any single program is at least six months. When the Continuum of Education in Anesthesiology specifies that the duration of a specific component exceeds six months, at least this length of time is spent on that component in one program.

(3) The period of six months or more of training in any single program ends with receipt of a satisfactory Certificate of Clinical Competence. When the final period of training in any single program ends with receipt of an unsatisfactory Certificate, credit is granted for Clinical Anesthesia training in that program only to the date of the most recent satisfactory Certificate received by the resident from that program.

(4) No more than six months during the first two Clinical Anesthesia years, and a maximum of 12 months during the three years of Clinical Anesthesia training, is spent training in affiliated institutions outside the parent programs.

D. Requests for prospective approval of planned anesthesia training which will not meet one or more of the conditions specified above or will be spent in non-affiliated institutions whether or not they are accredited by ACGME will be considered by the Credentials Committee on an individual basis.

Each request must include a chronological description of the planned training rotations and a letter of support from the program director of the parent program. The resident must remain on the roster of the parent program during those months spent in affiliated or non-affiliated institutions.

Credit toward training requirements other than those described above may be recommended prospectively to the Board by the Credentials Committee when it has determined that exceptional educational or other experience warrants such judgment.

Principal Objectives

The anesthesiology examination system of the American Board of Anesthesiology is designed to identify those candidates who possess the knowledge, judgment, communicative skills, and decision-making abilities that are considered essential for the Diplomate to function as a consultant in anesthesiology and as the leader of the anesthesia care team. The critical care medicine examination system is designed to identify those Diplomates who have obtained special qualifications in critical care medicine through additional training and experience.

The written examination analyzes primarily the cognitive and deductive skills of the candidates. It is necessary for candidates to pass the written examination to qualify for the oral examination.

The oral examination is designed to measure those components of the candidate's competence that cannot be evaluated by written examinations or other instruments. Specifically, it is designed to

measure not only how and what candidates do to reach their conclusions concerning diagnosis and therapy, but why the formulations are made in the particular way or sequence. Further, it analyzes whether candidates can recognize and treat the complications of anesthesia practice. The principal thrust is to determine that candidates can synthesize their knowledge, judgment and analytical skills so as to reach rational diagnoses, prevention, and treatment protocols; and to establish that candidates can communicate this information effectively to others.

The Board acts to maintain the integrity of its examination and certification process and to ensure the equitable and objective administration of its examinations to all candidates. Information about behavior the Board considers a possible subversion of its examination and certification process is sent to all candidates scheduled for examination. Statistical analyses may be conducted to verify observations and reports of suspected irregularities in the conduct of an examination. Candidates whose conduct, in the Board's judgment, subverts or attempts to subvert its examination and certification process may have their examination invalidated and the results withheld, in which event they would be informed of the reasons for the Board's actions and given an opportunity to present information they deem relevant to the issue and to petition the Board to reconsider its decision.

Application Procedure

Application for admission to the examination system of the American Board of Anesthesiology must be made to the Secretary upon a form prescribed by the Board. *Copies of the application form are not acceptable.*

Proper forms for making application and other information may be obtained by writing to the Secretary, The American Board of Anesthesiology, 100 Constitution Plaza, Hartford, Connecticut 06103. An applicant must request an application form by writing to the Board. *Telephone requests are not acceptable.*

The application form contains the following statement which the applicant shall be required to sign.

I hereby make application to The American Board of Anesthesiology, Inc. for the issuance to me of a Certificate, and for examination relative thereto, all in accordance with and subject to its rules and regulations, and the fee requested. I agree to disqualification from examination or from the issuance of a Certificate or to forfeiture and redelivery of such Certification in the event that any of the statements heretofore made by me are false or in the event that any of the rules governing such examinations are violated by me or in the event that I did not comply with or shall violate any of the provisions of the Certificate of Incorporation or By-Laws of The American Board of Anesthesiology, Inc., or both, as then constituted. I understand that the American Board of Anesthesiology, Inc. may report the score of my first written examination to the Director of the program in which I completed my training, use any score in psychometric analyses to confirm observations and reports of suspected irregularities in the conduct of an examination, and respond to any inquiry about my status in its examination system in accordance with its policy as then constituted. I authorize any and all repositories to grant access to or to produce copies for The American Board of Anesthesiology, Inc. of all documents and records containing information and data pertaining to my practice of the medical specialty of anesthesiology which includes critical care medicine. I understand that such information and data will be used exclusively to study and assess the certification processes of The American Board of Anesthesiology, Inc. More particularly, such information as it pertains to me shall be held in confidence and shall be reported or released only as a part of the aggregate of such information gathered and studied without specific reference to myself or any other individuals. Such information and data will not bear in

any way whatsoever upon the decision of The American Board of Anesthesiology, Inc. whether or not to grant me a certificate. I agree to hold The American Board of Anesthesiology, Inc., its members, examiners, officers, and agents free from any damage or complaint by reason of any action they, or any of them, take in connection with this application, such examinations, the grade or grades given with respect to any examination, the failure of said Board or Corporation to issue to me such certification, the gathering and collecting of information and data about my practice of anesthesiology, or the use of such information or data in studies of the certification processes of The American Board of Anesthesiology, Inc. as described above.

Entrance Requirements

To enter the examination system of the American Board of Anesthesiology the applicant shall:

A. Have graduated from a medical school approved by the Liaison Committee for Medical Education, or have met medical educational requirements otherwise acceptable to the American Board of Anesthesiology.

B. Provide evidence satisfactory to the Board of having been awarded a medical or osteopathic degree acceptable to the Board.

C. Provide evidence acceptable to the Board of having an unexpired and unrestricted license to practice medicine or osteopathy in one of the United States or in Canada, or for physicians in active federal service evidence of having such a license which is temporarily inactive but fully renewable.

D. Have on file in the Board office evidence of having satisfactorily fulfilled all requirements of the four year Continuum of Education in Anesthesiology before the date of examination and after receiving a medical or osteopathic degree. Such evidence must include a satisfactory Certificate of Clinical Competence commensurate with the final six months of Clinical Anesthesia training (see Section 2.5 for details). A grace period will be permitted so that applicants completing this requirement by August 31st may apply for the immediately preceding July written examination.

E. Have on file with the Board evaluations of various aspects of his or her performance as solicited by the Board in determining the applicant's qualifications for admission to the examination system. Such evaluations may be requested from the residency program director and others familiar with the applicant's professional activities. The Clinical Competence Committee Report from the department and the evaluation of the program director and others will be used as the basis for assessing admission qualifications. The response of the program director will be given considerable weight in these deliberations.

F. Submit proof with the application of having reestablished his or her qualifications for admission to the examination system *only if residency training was completed more than 12 years before the date of application or a second or subsequent application has been declared void.* Acceptable proof is documentation of having qualified on an entry examination designated by the Board or of having completed a 12 month term of additional clinical training in anesthesia in an ACGME accredited program with receipt of a satisfactory Certificate of Clinical Competence covering the final six months. The Board has designated the examination administered annually by the Joint Council on In-Training Examinations as the entry examination.

The Board shall determine that entry into the examination system is merited when a judgment of adequate levels of scholarship and clinical competence can be made from the information submitted.

Certificate of Clinical Competence

The Board requires every residency training program to file, on forms provided by the Board, an Evaluation of Clinical Competence in January

and July on behalf of each resident who has spent any portion of the prior six months in Clinical Anesthesia training in or under the sponsorship of the residency program and its affiliates.

Entry into the examination system is contingent upon the applicant having a Certificate of Clinical Competence on file with the Board attesting to satisfactory clinical competence during the final six months of Clinical Anesthesia training in or under the sponsorship of the residency program. The Board, therefore, will deny entry into the examination system until this requirement is fulfilled.

Absence From Training

The total of any and all absences from training during each year of Clinical Anesthesia training may not exceed twenty working days. Attendance at scientific meetings, not to exceed five working days per year, shall be considered a part of the training program. Duration of absence during the Clinical Base year may conform to the policy of the institution and department in which that portion of the training is served. Absences in excess of those specified will require lengthening of the applicant's total training time to the extent of the additional absence.

Admission to the Examination System

An applicant who is admissible to the examination system will be so notified by the American Board of Anesthesiology after approval of all credentials. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed appropriate. The Board reserves the right to correct clerical errors affecting its decisions.

The Board office is not responsible for breaks in communication with candidates that are due to circumstances beyond its control. Candidates are advised to send the Board notice of an address change immediately so that the Board's examination notices will not go astray and to call the Board office if they do not receive communications they are expecting within the expected timeframe. The candidate's social security number is used by the Board for identification purposes and should be included on all correspondence with the Board.

Examinations

Each applicant becomes a candidate when accepted by the American Board of Anesthesiology for the purposes of examination and shall be examined in such a manner and under such rules as the American Board of Anesthesiology from time to time may prescribe.

Candidates are required to respond to every examination announcement sent to them, whether or not they ask to be scheduled for the examination. Every reply to an examination announcement will be acknowledged within 2 weeks of its receipt in the Board office.

1. **Written Examination.** Written examinations are held annually in locations throughout the United States and Canada on a Saturday in July. Written examinations cover the basic and applied aspects of physiological, physical and clinical sciences. A passing grade, as determined by the Board, is required.

In the event a candidate fails the first written examination for which he or she is eligible, two additional opportunities will be provided at yearly intervals.

2. **Oral Examination.** Candidates who complete the written examination successfully must wait at least six months before being declared eligible for oral examination. Oral examinations are conducted in the spring and fall of each year at a single location in the United States. Examiners consist of Directors of the Board and others who assist as associate examiners. Oral examinations evaluate all phases of anesthesiology, but emphasize clinical practice. A passing grade, as determined by the Board, is required.

In the event a candidate does not pass the first oral examination for which he or she is eligible, two additional opportunities will be provided. The Board requires that there be an interval between

Anesthesiology

opportunities of no less than the time between alternate regularly scheduled oral examinations. Therefore, the candidate who fails or fails to appear for oral examination, whether or not notice is given of the cancellation of the scheduled appointment for examination, is not eligible to appear at the next regularly scheduled oral examination.

Candidates are expected to appear for each examination opportunity the Board provides. Failure to take an examination for which the candidate is eligible constitutes an opportunity just as much as failure to pass an examination.

Under certain circumstances the Board, entirely at its discretion, may grant a candidate's request for an excused absence from any scheduled examination without forfeiture of the opportunity. Such a request must be filed in writing, include a valid reason for the absence, and arrive in the Board office prior to the date of the examination. A request for an excused absence will not be granted when the reason is judged to be inadequate or there is insufficient time remaining in the prescribed application period to provide the number of examination opportunities which the candidate is permitted.

An examination opportunity is used when the candidate appears for examination. An examination opportunity is forfeited when the candidate does not respond in writing to the Board's formal announcement of the examination or is not granted an excused absence from the examination. The Board reserves the right to limit the number of candidates to be admitted to any examination.

Fees

The application fee for primary certification in anesthesiology shall be \$650.00 which must accompany the application provided that the completed application and required documentation are received in the office of the American Board of Anesthesiology on or prior to January 10th of each year. For completed applications received by November 20th and accompanied by required documentation, the fee will be \$600.00—a reduction of \$50.00 for early filing. *The January 10th deadline is absolute and no applications will be accepted after that date for any reason.*

The reexamination fee for the anesthesiology written examination will be \$150.00, the reexamination fee for the oral examination will be \$400.00. The reexamination fee will be charged candidates whether they have failed a previous examination, have cancelled a scheduled appointment for examination, or have failed to appear for any examination for which they were properly scheduled.

A charge of \$50.00 will be made whenever a check in payment of a fee is returned for nonpayment.

In the event an application cannot be accepted, or the application is accepted and subsequently withdrawn by the candidate, a fee for administrative services will be retained and the balance of the application fee will be refunded. The fee for administrative services relating to applications for primary certification is \$50.00. No fee will be remitted if the candidate's notice of withdrawal from the examination system is received in the Board office after the deadline by which candidates must notify the Board of their choice of test center for the first written examination for which they are eligible.

The American Board of Anesthesiology is a nonprofit organization. The fees for application and examination are computed on a basis of cost of maintaining the functions of the Board. The Board reserves the right to change the fee when necessary.

Reapplication

The application of a candidate who has failed to satisfy the examination requirements in the prescribed time or number of opportunities for whatever reason shall be declared void. The physician may reapply by submitting a new application. Such application shall be

subject to the fees, rules, privileges and requirements that apply at the time of reapplication. The applicant who is adjudged to meet existing requirements will be readmitted into the examination system.

The reapplicant for primary certification who has had a second or subsequent application declared void for any cause or has completed anesthesia residency training more than 12 years before the date of reapplication must reestablish his or her qualifications for admission to the examination system before filing another application. In all instances, the candidate must pass both the written and oral examinations under the new application.

Status of Individuals

The term Board eligible is specifically mentioned to indicate that it is neither recognized nor used by the American Board of Anesthesiology. The Board will reply to any inquiries requesting the status of individuals with one of the following statements:

A. The physician is certified by the American Board of Anesthesiology.

B. The physician is certified by the American Board of Anesthesiology with special qualifications in critical care medicine.

C. The physician is certified by the American Board of Anesthesiology and is in the Board's examination system for critical care medicine.

D. The physician is in the examination system of the American Board of Anesthesiology.

E. The physician is neither certified by the American Board of Anesthesiology nor in the Board's examination system.

Equivalence of Royal College Certification

Fellowships in the specialty of anesthesiology which are awarded by the Royal College of Physicians and Surgeons of Canada, or by the Faculty of Anaesthetists of the Royal Colleges of Surgeons of Australasia or England or Ireland or of the College of Medicine of South Africa, are considered by this Board to be comparable to certification by the American Board of Anesthesiology. Nevertheless, there are Fellowship certificate holders who continue to seek entrance into the examination and certification system of the American Board of Anesthesiology. For those physicians who have such interest, the requirement of a Clinical Base year and of two of the three years of Clinical Anesthesia training in a program accredited by ACGME is waived. Holders of the Fellowship certificate who wish to enter the American Board of Anesthesiology examination system may do so by satisfactorily completing one year of clinical training in anesthesia in an ACGME accredited program.

Chemical Dependency

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease currently is known to be under control will be admitted into the examination system and to examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known to be under control will be admitted to examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to examination. Denial of admission to examination may result in the loss of opportunities to take an examination and, ultimately, in the Board's decision to declare the candidate's application void for failure to successfully complete the requirements for certification within the time allotted to every candidate.

Candidates who have had a history of chemical dependency as reported to the Board will not be issued a certificate upon completion of

all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the date of the most recent occurrence of their disease.

Revocation of Certificate

A certificate is issued by the Board with the understanding that it remains the property of the Board during the life of the Diplomate. Any certificate issued by the Board shall be subject to revocation in the event that:

A. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this Board or its By-Laws; or

B. The person certified shall not have been eligible to receive such certificate whether or not the facts making him or her ineligible were known to, or could have been ascertained by, the Board or any of the Directors at the time of issuance of such certificate; or

C. The person certified shall have made any misstatement of fact in his or her application for such certificate or in any other statement or representation to the Board or its representatives; or

D. The person certified shall fail to maintain a moral, ethical and professional standing satisfactory to the Board.

The Board shall be the sole judge of whether or not the evidence or information before it is sufficient to require or permit revocation of any certificate issued by the Board, and the decision of the Board shall be final.

Recertification

Insufficient confidence in currently available methods of assessing continuing competence of the practicing anesthesiologist makes it inappropriate to implement a recertification process as yet. The American Board of Anesthesiology will continue to study all options for a meaningful recertification program but intends to expend its major effort and resources toward improvement of the process leading to primary certification.

AMERICAN BOARD OF COLON AND RECTAL SURGERY

Peter A. Volpe, MD, President, San Francisco
California

J. Bryon Gathright, Jr., MD, Vice President,
New Orleans, Louisiana

Wallace Bailey, MD, Dallas, Texas

Kirby I. Bland, MD, Gainesville, Florida

Victor W. Fazio, MD, Cleveland, Ohio

Elias Jacobs, MD, Daly City, California

Ira J. Kodner, MD, St. Louis, Missouri

John M. MacKeigan, MD, Grand Rapids, Michigan

Gene W. Slagle, MD, Shreveport, Louisiana

Lee E. Smith, MD, Washington, DC

Malcolm C. Veidenheimer, MD, Burlington
Massachusetts

Herand Abcarian, MD, Secretary-Treasurer/Executive Director
615 Griswold, #1717,
Detroit, Michigan 48226

General Qualifications and Requirements

All candidates shall comply with the following regulations:

1. A candidate shall appear personally before the Board and shall submit to the required examinations.

2. A candidate shall limit the majority of his practice to colon and rectal surgery.

3. A candidate may be required to deliver to the Board sufficient case reports to demonstrate proficiency in colon and rectal surgery.

4. A bibliography of papers and books published by the candidate shall be submitted to the Board upon its request.

Professional Qualifications

1. A candidate must successfully complete the Qualifying Examination of the American Board of Surgery.

2. A candidate must have completed an approved residency in colon and rectal surgery.

3. A candidate shall have a license to practice medicine in the country of his residence.

Application for Examination

Each candidate for examination must complete and submit an Application for Examination which may be obtained from the Secretary of the Board. Applications must be submitted before July 15 of each year.

Within two weeks after conclusion of the training program, the applicant must submit to the Secretary of the Board a prescribed form, listing all operative procedures performed during the training period. This form is available from the Secretary of the Board and must be countersigned by the Program Director when it is submitted.

The application must also be accompanied by two unmounted, recent photographs of the applicant, and the required application fee.

The acceptability of a candidate for examination depends not only upon completion of the requirements listed under "Qualifications of Candidates," but also upon information available to the Board regarding the candidate's professional maturity, surgical judgment, and technical competence.

Examinations

To achieve certification by the American Board of Colon and Rectal Surgery, a candidate must pass a Written Examination (Part I) and an Oral Examination (Part II). The Written Examination is offered in the spring of the year and a candidate is required to pass this examination before being permitted to take the oral examination. The oral examination is given in the fall of the year.

Examinations are conducted at times and places determined by the Board and this information may be obtained from the Board office. It is also published in DISEASES OF THE COLON AND RECTUM and in the Journal of the American Medical Association. Examinations will be held in one designated city in the United States.

Part I—Written Examination

The written examination is an assessment of a candidate's knowledge on the theory and practice of colon and rectal surgery and is given in three sections, one each on colon and rectal surgery, pathology, and radiology. The colon and rectal portion of the examination is a four-hour test of multiple choice questions covering the spectrum of colon and rectal surgery and the body of basic science pertinent to it. The pathology and radiology portions of the examination each are each one hour in length and consist of questions and slide presentations.

Part II—Oral Examination

The oral examination is conducted by members of the Board or its designated examiners. Its objective is to evaluate the candidate's clinical experience, problem-solving ability and surgical judgment, and to ascertain the candidate's knowledge of current literature on colon and rectal diseases and surgery. Each candidate will undergo at least two 30-minute oral examinations by two 2-member examining teams.

Examination Results

The Board makes every effort to be as prompt as possible in notifying candidates of their examination results and letters of notification may be expected from four to six weeks following the examination.

Dermatology**Re-examinations**

A candidate who has failed either the written or oral part of the examination may be re-examined after one year has elapsed.

A candidate who fails to pass either the written or oral portion of the examination may repeat that part of the examination no more than three times.

A candidate who fails to pass either the written or oral portion of the examination three times may not repeat the examination without satisfactory completion of an approved colon and rectal residency program and submission of a new application for examination.

Status of Applicants

The Board no longer uses the terms "Board eligible" or "Board qualified." An individual's standing with the Board varies according to the current status of his credentials.

A candidate must apply to take the Board's certifying examination within five (5) years after completion of approved colon and rectal training.

A candidate whose application for examination has been approved and who does not take the examination within three (3) years must submit a new application.

Beginning in 1987, a candidate whose application has been approved must pass the written examination within five (5) years. A candidate who has passed the written examination must then pass the oral examination within the next five (5) years.

In exceptional or unusual circumstances, the Board may, at its discretion, waive one or more of the limitations listed specified under "Status of Applicant."

Fees

Application fee: A non-refundable fee of \$200 shall accompany the application.

Examination fee: A fee of \$400 is due and payable when the candidate is notified of approval to take the Written Examination (Part I).

A fee of \$400 is due and payable when the candidate is notified of approval to take the Oral Examination (Part II).

Re-examination fee: A fee of \$300.00 is due and payable when the candidate is notified that he has been approved for re-examination.

All fees shall be made payable to the American Board of Colon and Rectal Surgery and shall be sent to the Secretary.

Appeals

Any candidate who is not acceptable to the Board for examination or who has failed an examination, totally or in part, may appeal such a decision by the Board and may, by registered letter to the Secretary of the Board, request a hearing, specifying the reasons thereof. An ad hoc Hearing Committee shall be appointed within thirty days to conduct the hearing.

If the decision of the Hearing Committee is not satisfactory, the candidate, by registered letter to the Secretary of the Board within 21 days after receipt of the notice of an adverse decision, may request an appellate review by the Board.

Certification

A candidate who has met all the requirements and successfully completed the examinations of The American Board of Colon and Rectal Surgery will be issued a Certificate attesting to his qualifications in colon and rectal surgery. The certificate shall be signed by the President of Vice President and the Secretary, and shall bear the corporate seal of the Board.

The Certificate granted by the Board does not confer privilege or license to practice colon and rectal surgery but is evidence that a

physician's qualifications for specialty practice are recognized by his peers. It is not intended to define the requirements for membership on hospital staffs, to gain special recognition or privileges for its diplomates, to define the scope of specialty practice, or to state who may or may not engage in the practice of the specialty.

Unless the candidate specifies otherwise, the Board forwards the names of candidates who have achieved certification to the American Board of Medical Specialties for listing in the ABMS COMPENDIUM OF MEDICAL SPECIALISTS.

Recertification

The American Board of Colon and Rectal Surgery endorses the concept of voluntary recertification of its Diplomates. However, details of the process have not yet been determined. When the recertification procedure is established, appropriate announcements will be made.

Revocation of Certificates

The filing of an application for examination, participating in examination, and accepting a Certificate are voluntary acts. Therefore, the Board assumes no responsibility for any effect which certification or failure to obtain certification may have on the private or professional activities of candidates.

When an application is submitted, candidates are required to sign an agreement, a portion of which reads as follows: "*I agree to disqualification from examination or from the issuance of a certificate of qualification or to forfeiture and redelivery of such certificate of qualification to the Secretary of the Board in the event that any of the statements hereinafter made by me are false or in the event that any of the rules governing such examinations are violated by me.*"

Certificates which have been issued are subject to the provisions of the Articles of Incorporation, the Constitution and Bylaws of The American Board of Colon and Rectal Surgery, Inc., and may be revoked for violation of any of these provisions.

Harry J. Hurley, MD, Assistant Executive Director,
Upper Darby, Pennsylvania

Requirements for Eligibility to Take the Examination

Each applicant must satisfy the following requirements before he or she is eligible to take the examination of the Board.

A. General Qualifications.

(1) The candidate must have graduated from a medical school in the United States accredited by the Liaison Committee on Medical Education (LCME) or an accredited medical school in Canada, or an accredited osteopathic school in the United States. Graduates from foreign medical schools are required to have the standard certificate of the Educational Commission for Foreign Medical Graduates (ECFMG).

(2) The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

B. Residency Training Requirements

(1) Candidates for certification by the American Board of Dermatology are required to have a total of four years of postgraduate training, all of which must be in the United States or Canada. The first year must consist of clinical training in one of the following types of broad based programs in the United States accredited by the Accreditation Council for Graduate Medical Education (ACGME) or a similar program in Canada accredited by the Royal College of Physicians and Surgeons of Canada: transitional year, flexible first postgraduate year, and first year residencies in internal medicine, general surgery, family practice or pediatrics. A residency in a discipline which does not involve direct patient care, such as pathology, is not acceptable for first postgraduate year credit.

Three years of full-time training as a resident in a dermatology residency training program in the United States accredited by the ACGME or three years of full-time training as a resident in a dermatology residency training program in Canada, accredited by the Royal College of Physicians and Surgeons of Canada. Accreditation of dermatology training programs in the United States is the responsibility of the Residency Review Committee for Dermatology acting with authority delegated to it by the ACGME. Accredited dermatology residency training programs and clinical programs for first postgraduate year credit are listed in this Directory.

Approximately 75% of the resident's time spent in each year of dermatology residency training must be related to the direct care of dermatologic outpatients and inpatients; this includes consultations, clinical conferences, inpatient rounds.

Dermatopathology, microbiology, and other basic science lectures, seminars, and conferences are essential components of the resident's training (see the Special Requirements for Residency Training in Dermatology).

The Board also recognizes the importance of basic and clinical investigation in the educational experience of trainees. Accordingly, all residents are encouraged to participate in research during their training.

During or following the first year of dermatology training (PGY-2), which must conform to the requirements above (at least 75% of time related to the direct care of patients), the training director may request prospective approval from the American Board of Dermatology for a special final two years for those trainees whose career plans involve a primary commitment to investigative dermatology. For candidates entering this track, additional time may be devoted to research training during these years. The training director must provide assurance that clinical competence at a level consonant with the standards of the American Board of Dermatology will be attained by the completion of the training period.

(2) A Preliminary Registration Form must be filed by the candidate and signed by his/her training director as soon as the resident begins residency training in dermatology. It is mandatory that the training director submit a Yearly Report Form for each resident to the Board office within three weeks after completion of the first and second year of

training and six weeks prior to completion of the third year of training. The training director must document that each year of training was completed in a satisfactory manner.

(3) Training must be completed within five years after the beginning of dermatology residency, except when military service or other compelling circumstances intervene.

Registration for the Examination of the Board

Candidates who have completed the training requirements as outlined above are eligible to apply to take the examination of the Board. Candidates should request an Application for Certification form from the office of the Executive Director of the Board. The completed application must be filed with the Board office before *May 1st* of the year in which the candidate plans to take the examination. Physicians who complete their residency training in dermatology by July 1st of a given year are eligible to apply to take the examination in the fall of that year. It is emphasized that it is the candidate's responsibility to send a completed application form to the Board if he or she plans to take the certifying examination of the Board.

In assessing the credentials of candidates who apply voluntarily for certification by the Board, the Requirements Committee reviews the application, letters of reference, and annual evaluation reports from the candidate's training director.

A candidate is not considered an "active" candidate until his or her application has been received and approved by the Board. After the application is approved, the candidate is required to take the examination within three years. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application and have their eligibility for examination reviewed by the Requirements Committee. If the re-application is approved by the Board, the candidate is again eligible to take the examination for another three-year period.

The Board does not use the term "Board-eligible" in corresponding with directors of hospitals or others who send inquiries to the Board office. On written request by a candidate, the Board will send to the candidate a letter stating his or her status with the Board at any given time; this letter may be used in applying for hospital privileges or for other purposes.

Board Examination

The certifying examination consists of two parts. Part I is a comprehensive written examination. Among the topics included in this part of the examination are the following: clinical dermatology, preventive dermatology, dermatopathology, cutaneous allergy and immunology, dermatologic surgery, cutaneous oncology, sexually transmitted diseases, internal medicine as it pertains to dermatology, photobiology and cutaneous microbiology as well as anatomy, physiology, biochemistry, radiation physics, radiation therapy, physical therapy, pharmacology, genetics, and electron microscopy as related to dermatology. Considerable emphasis is placed on comprehensive knowledge of the literature.

Part II of the certifying examination utilized visual aids and histopathologic sections to assess the candidates' knowledge of the topics listed for the Part I examination but with special emphasis on clinical and laboratory dermatology, dermatologic surgery and microscopic dermatopathology. Examples of the type of projected pictorial material which are used include photographs of patients, diagrams of dermatologic surgical procedures, histopathologic sections, fungal cultures, culture mounts, bacterial cultures, Tzanck preparations, skin scrapings and smears, roentgenograms, fluorescent microscopy, darkfield examinations, parasites affecting the skin, and electron microscopy. In microscopic dermatopathology, which accounts for 25% of the Part II examination, the questions relate to histopathologic

Dermatology

slides which candidates examine. Candidates are required to furnish microscopes for the dermatopathology section of the Part II examination.

It is necessary for candidates to pass both Part I and Part II of the examination in order to be certified. If a candidate passes one part of the examination and not the other, only the failed portion must be repeated.

The examination is given annually in the fall over a two-day period involving a total of approximately ten hours. In 1988, it will be held on October 30 and 31 at the O'Hare Holiday Inn O'Hare/Kennedy in Rosemont, Illinois, which is in the O'Hare Airport area of Chicago.

Re-examination

Candidates who fail Part I, Part II or both parts of the certifying examination are eligible to repeat the examination the following year. Candidates who fail the re-examination three times or who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application form and have their eligibility for examination reviewed by the Requirements Committee.

It is the responsibility of the candidate to notify the Board of his or her intent to take the re-examination. The request for re-examination and the appropriate fee (see Fees for Examination and Re-examination) must be mailed to the office of the Board no later than *May 1st* of the year in which the candidate wishes re-examination.

Certification

After meeting the above requirements and passing the examination the candidate will be awarded a certificate which acknowledges that he or she has completed the required course of graduate study and clinical training, has met other specific standards and qualifications, and has passed the examination conducted by the Board. The candidate is then referred to as a diplomate of the American Board of Dermatology, Inc. The names of diplomates of the Board appear in the *ABMS Directory of Certified Dermatologists* and the *ABMS Compendium of Certified Medical Specialists*, published by the American Board of Medical Specialists.

Each certificate is subject to revocation in the event that (a) the physician so certified shall not have been eligible to receive such certificate, whether or not the facts concerning his or her ineligibility were known or could have been ascertained by the Directors of the Board at the time of the issuance of the certificate; (b) the physician so certified shall have made any material misrepresentation or omission in the application for such certificate or in any other statement to the Board or its representatives; (c) the physician so certified shall have been convicted by a court of competent jurisdiction of a crime relating to or arising out of the practice of medicine.

Fees for Examination and Re-examination

The members of the Board serve without compensation. Fees are based on the actual expenses incurred in office administration and in conducting the examination.

The examination fee for the certifying examination is \$700 payable when the application is filed. The fee for re-examination is \$600. All checks are to be made payable to the American Board of Dermatology, Inc.

When a candidate's application for the certifying examination or a special qualification examination is disapproved or when the candidate withdraws, the Board retains an administrative fee of \$50.

Publication

The American Board of Dermatology, Inc. publishes a Booklet of Information which may be obtained from the Board office.

All correspondence should be sent to:

Henry Ford Hospital
Detroit, Michigan 48202

Certification for Special Qualification in Dermatopathology

Special Qualification certification in Dermatopathology is a joint and equal function of The American Board of Dermatology (ABD) and The American Board of Pathology (ABP). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate.

All candidates applying for examination must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

A. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of Special Qualification in Dermatopathology who are otherwise qualified and who have met one of the following requirements:

(1) Applicants already holding a basic certificate from the American Board of Dermatology or the American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and the addition of one or two years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the full training requirements for certification in dermatology or pathology.

(2) Applicants who are diplomates of both The American Board of Dermatology and The American Board of Pathology.

B. Training

Training programs in dermatopathology are reviewed and accredited by the Residency Review Subcommittee for Dermatopathology, which includes three members from the Residency Review Committee for Dermatology and three members from the Residency Review Committee for Pathology, acting with authority delegated to it by the Accreditation Council for Graduate Medical Education. Accredited training programs in dermatopathology are an equal and joint function of the departments of dermatology and pathology. The dermatologist applicant shall spend 50% of the required training time of the one or two year program in pathology.

Committee for Dermatopathology:

William A. Caro, MD (ABD)
Merle W. Delmer, MD (ABP)
Mark Allen Everett, MD (ABD)
Thomas J. Gill III, MD (ABP)
Loren E. Goltz, MD (ABD)
William H. Hartman, MD (ABP)
M. R. Abell, MD, (Staff, ABP)
Robert W. Goltz, MD (Staff, ABD)

C. Deadline for Application and Date of Examination

The deadline for receipt of applications to take the examination for Special Qualification in Dermatopathology is *July 1st* of the year in which the candidate plans to take the examination. In 1988, the examination will be given in Dallas, Texas on November 12, 1988.

D. Fee

The fee for the examination for Special Qualification in Dermatopathology is \$950 payable when the application is submitted.

Special Qualification in Dermatological Immunology/Diagnostic and Laboratory Immunology

A. Prerequisite

The requirements for Special Qualification Certification in Dermatological Immunology/Diagnostic and Laboratory Immunology (DI/DLI) are as follows:

1. An applicant must be a diplomate of the American Board of Dermatology.
2. An applicant must:
 - a. have satisfactorily completed an accredited one year fellowship or residency in Dermatological Immunology/ Diagnostic and Laboratory Immunology, OR
 - b. have had four years experience in the practice of dermatological immunopathology under conditions acceptable to the American Board of Dermatology. Candidates following this pathway must submit their application for the examination on or before December 31, 1988 and must have successfully passed the examination prior to December 31, 1990.

B. Training

A minimum of one year of full-time training in an accredited DI/DLI training program will be required of all candidates except those who qualify under paragraph 2b above.

C. Deadline for Application and Date of Examination

The deadline for receipt of applications to take the examination for Special Qualification in DI/DLI is *April 1st* of the year in which the candidate plans to take the examination. The next examination in DI/DLI will be given in Chicago, Illinois on November 7, 1989.

D. Fee

The fee for the examination of Special Qualification in DI/DLI is \$850, payable when the application is submitted.

COMMITTEE FOR DERMATOLOGICAL IMMUNOLOGY/DIAGNOSTIC AND LABORATORY IMMUNOLOGY

- Harold O. Perry, MD, Chairman
- Peter J. Lynch, MD
- Robert W. Goltz, MD (Staff)
- Mark V. Dahl, MD*
- Irma Gigli, MD*
- Stephen I. Katz, MD*
- Thomas T. Provost, MD*
- Arnold L. Schroeter, MD*
- Denny L. Tuffanelli, MD*

*Non-ABD Director members of the DI/DLI Committee

AMERICAN BOARD OF EMERGENCY MEDICINE

- Gail V. Anderson, MD, President, Los Angeles, California
- Judith E. Tintinalli, MD, President-Elect, Royal Oak, Michigan
- James D. Mills, MD, Immediate Past President, Alexandria, Virginia
- Joseph E. Clinton, MD, Secretary-Treasurer, Minneapolis, Minnesota
- Bruce D. Janiak, MD, Member-at-Large, Toledo, Ohio
- Richard I. Shader, MD, Member-at-Large, Boston, Massachusetts
- Steven J. Davidson, MD, Philadelphia, Pennsylvania
- R. R. Hannas, Jr., MD, Kansas City, Missouri
- Ronald L. Krome, MD, Royal Oak, Michigan
- Harvey W. Meislin, MD, Tucson, Arizona

- John F. Murray, MD, San Francisco, California
- Robert C. Neerhout, MD, Portland, Oregon
- George Podgorny, MD, Winston-Salem, North Carolina
- Frank N. Ritter, MD, Ann Arbor, Michigan
- Roger Sherman, MD, Atlanta, Georgia
- Henry Thiede, MD, Rochester, New York
- Michael V. Vance, MD, Phoenix, Arizona
- David K. Wagner, MD, Philadelphia, Pennsylvania
- Benson S. Munger, Ph.D., Executive Director, 200 Woodland Pass, Suite D, East Lansing, Michigan 48823

General Requirements

An applicant must satisfy all credential requirements at the time of application. Requirements fulfilled after the date of application will not be considered.

The applicant must have graduated from medical school and completed 12 months of internship (of PGY I) or other postmedical school training acceptable to the Board.

Graduates of approved schools of osteopathic medicine in the United States of America are considered when they have satisfactorily met the credential requirements as outlined.

An applicant graduating from a medical school other than one in the United States of America, its territories or Canada must provide the Board with a verified and translated diploma.

The applicant must hold a valid and unrestricted license to practice medicine in the United States of America, its territories or Canada, throughout the certification process.

The applicant who is accepted to candidacy for a given examination may at no time use the words "board eligible in connection with the Board."

Application Categories

Practice Category

Under this category the applicant must have practiced and/or taught emergency medicine a minimum of 60 months and accumulated at least 7,000 hours. This practice and/or teaching need not be continuous but it must total at least 60 months and at least 7,000 hours. No projections are allowed on an application. The Board independently verifies the emergency medicine practices listed on an application. If practices are maintained at more than one hospital during the same period of time, all the hours may be listed to fulfill the Board's requirements, but the months will only be counted once. Actual calendar months can only be counted once, regardless of the number of practices being maintained.

The practice and/or teaching must have taken place in a hospital-based emergency department within the United States, its territories or Canada. Emergency medicine practices resulting from military assignments outside the US will be considered only if the practice took place in a US military hospital which had been reviewed and accredited by the Joint Commission on the Accreditation of Hospitals (JCAH).

Effective May 1982, teaching shall mean the teaching of medical students, physicians-in-training and physicians. Any other teaching may be claimed as CME. Of the minimum 7,000 hours, at least 2,800 hours must have been accumulated within any 24 consecutive months.

For each complete year in practice beginning with January 1, 1974, the applicant must submit 50 hours of continuing medical education activity, relevant to emergency medicine, and acceptable to the Board. CME can be averaged over the years of practice and can be any category.

On June 30, 1988 the practice category of application will expire. To apply under the practice category, a candidate must have fulfilled the requirements of the practice category by that date. Those applicants may apply through the 1990 application cycle.

Family Practice**Emergency Medicine Residency Category**

Under this category the applicant must have successfully completed a total of 36 months of post-medical school training an emergency medicine residency program approved by the Residency Review Committee for Emergency Medicine or the Royal College of Physicians and Surgeons of Canada for Canadian programs. If the emergency medicine residency program is structured so that it exceeds the length of training specified above, the applicant must successfully complete the requirements of the program to apply under the emergency medicine residency category. The applicant must submit 50 hours of continuing medical education activity, relevant to emergency medicine, starting one year from the date of graduation from the residency program and continuing until the date of application. CME can be averaged over the years and can be any category.

The Board independently verifies with the residency director that the candidate completed the training necessary to meet the requirements of the emergency medicine residency category of application, and the requirements of the individual residency program.

Special Application Category

An applicant who does not meet all of the specific requirements (each requirement, including medical education) of the practice category or the emergency medicine residency category, but who believes he/she has equivalent experience and/or training, may make special application to the Board. The Board may grant practice credit for incomplete emergency medicine residency training or for residency training in other specialties under this category of application.

The special application category is not intended to bypass the credential requirements, but rather, equivalency must be shown to the requirements of either the practice category or emergency medicine residency category.

Methods of Examination

The certification examination in emergency medicine consists of two parts. Part I is a one-day written examination utilizing multiple choice questions. Part II is a one-day oral examination utilizing case simulations presented by a series of examiners.

Candidates must successfully complete Part I to be seated for Part II. Candidates must successfully complete both Part I and Part II to be certified.

Certification

All candidates who successfully complete both Part I and Part II shall be known as Diplomates of the American Board of Emergency Medicine and shall receive an appropriate certificate which shall remain the property of the American Board of Emergency Medicine.

Recertification

Certification is for a period of ten (10) years. Each Diplomate must be examined again to be certified.

Applications

Applications are available from the administrative office and will be accepted only during the specified application dates each year of May 1 through July 15. Only the current year's application form will be acceptable during that year's application cycle. The application fee must accompany the application form. This is a processing fee and is nonrefundable. No application will be processed without receipt of the application fee.

Examinations

The written examination is offered once each year during the fall months. Oral examinations are scheduled throughout the year.

Exam fees are billed and due upon assignment to an exam administration.

AMERICAN BOARD OF FAMILY PRACTICE

Paul C. Brucker, MD, President, Philadelphia, Pennsylvania
Loren H. Amundson, MD, Vice President, Sioux Falls, South Dakota
Robert F. Avant, MD, Treasurer, Rochester, Minnesota
Worth B. Daniels, Jr., MD, Baltimore, Maryland

George S. Sturtz, MD, Watertown, New York
Nicholas J. Piscano, MD, Executive Director and Secretary, 2228 Young Drive, Lexington, Kentucky 40505

ABFP Official Definition of Family Practice

"Family practice is the medical specialty which is concerned with the total health care of the individual and the family. It is the specialty in breadth which integrates the biological, clinical and behavioral sciences. The scope of family practice is not limited by age, sex, organ system or disease entity."

The Certification Process

The American Board of Family Practice (ABFP) administers the certification examination in various centers throughout the United States annually, on the second Friday in July.

The American Board of Family Practice certification examination is a written test of cognitive knowledge and practice. Appropriate subject areas of the following disciplines include: internal medicine, pediatrics, surgery, obstetrics, gynecology, psychiatry and behavioral sciences, community medicine, and gerontology. Elements of the examination include, but are not limited to, diagnosis, management, and prevention of illness.

Requirements for Certification**A. GENERAL**

1. All candidates for the ABFP certification examination must be graduated from a medical school in the United States or Canada, accredited by the Liaison Committee on Medical Education (LCME), or graduated from an osteopathic college of medicine accredited by the American Osteopathic Association (AOA), or must hold a Standard Certificate certification by the Educational Council for Foreign Medical Graduates (ECFMG).

2. All candidates must hold a currently valid, full and unrestricted license to practice medicine in the United States or Canada. Furthermore, every license to practice medicine held by a candidate in any state or territory of the U.S. or province of Canada must be currently valid, full and unrestricted whether or not the candidate in effect practices in such state. Any candidate whose license to practice has been revoked, restricted, or suspended in any state or territory of the United States or province of Canada shall be ineligible for certification until such time as the license is reinstated in full. Career military physicians serving full time in the U.S. Armed Forces or U.S. Public Health Service may request waiver of licensure requirements by submitting proper documentation of their career U.S. Uniformed Service status. In cases where such waiver

is granted and the physician subsequently leaves the service, the requirement for licensure must be satisfied immediately upon departure from the service in order to maintain Diplomate status.

3. All candidates must have satisfactorily completed three years of training (a full 36 calendar months) in a family practice residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME) subsequent to receipt of the M.D. or D.O. degree.

Although the Board prefers all three years of training to be in the same ACGME family practice program, the Board will consider other first year training as equivalent (e.g., Flexible/Transitional year, AOA Osteopathic Internship, etc.). In these cases, each individual's training will be evaluated by the Board. It must be noted, however, that the latter two years of residency training must be completed in the same ACGME accredited program unless the Board has granted prior approval of transfer from one ACGME family practice program to another. The Board allows some flexibility in the first year (G-1), but emphasizes that the continuity of care experience in a family practice center should take place in the same program during the G-2 and G-3 years.

Verification of satisfactory completion must be stated in writing by the director of the program. All applicants are subject to the approval of the ABFP, and the final decision regarding any application rests solely with the ABFP.

4. All candidates' experiences are subject to review and approval by the ABFP. Any variance from the above must have prior approval of the Board. No credit may be given for any previous training as equivalent to family practice training without the prior approval of the Board.

5. Candidates must complete all requirements of the Board no later than June 30 of the year of the examination. Complete documentation from the program director that the resident, has or is expected to have, satisfactorily completed the residency must be received by the Board by June 30. Applications supplied to the residents directly through the program director are made available only to residents expected to complete the required training on June 30th of the current year. Residents who complete their training at an interim date must write to the Board for an application.

6. No candidate will be allowed to take the examination until all fees are paid and all of the above requirements have been satisfactorily met.

B. CANADIAN APPLICANTS

Canadian applicants may qualify for examination in one of the following ways:

1. Physicians who have satisfactorily met the requirements of the College of Family Physicians of Canada (CFPC) by completion of two years of training in a family practice program accredited by the College of Family Physicians of Canada must have a third year of accredited family practice residency. This third year of training must be satisfactorily completed in an ACGME accredited family practice program or, if taken in Canada, must be approved by the College of Family Physicians of Canada and must have the prior approval of the American Board of Family Practice. Only those programs that bring the three-year experience into compliance with the ACGME "Special Requirements for Training in Family Practice" will be considered as being equivalent to a third year in a U.S. accredited family practice training program. The request for approval must provide a description of the proposed curriculum signed by the program director. The request must be accompanied by documentation of satisfactory performance, which includes a description of the curriculum of the previous two years of training signed by the director of that program.

2. Physicians who have been certified by examination by the College of Family Physicians of Canada (Certificants), and who:

- a) have established legal residence in the U.S. for not less than the immediate past two (2) years at the time of application; and

- b) since residing in the U.S. have accumulated a minimum of 50 hours per year of continuing medical education approved by the American Board of Family Practice; and

- c) are actively engaged professionally full-time and exclusively in family practice (practice, and/or teaching, administration); and

- d) are members in good standing of the College of Family Physicians of Canada at the time of application;

may be permitted to apply for examination for certification by the American Board of Family Practice. In cases of Canadian Certificants, a special application form must be submitted.

C. OSTEOPATHIC PHYSICIANS

Osteopathic physicians who have graduated from an American Osteopathic Association (AOA) approved school of osteopathic medicine in the United States may qualify for ABFP examination if they meet all the same residency requirements specified for M.D. graduates. They may apply to ACGME accredited family practice programs for entry into the first year (G-1). Osteopathic physicians who have documented satisfactory completion of an AOA approved internship (G-1) year may receive credit for that portion of the G-1 year which meets the ABFP guidelines for Advanced Level Entry or Interprogram Transfers.

The amount of credit which may be granted for AOA approved rotating internships will not exceed one year. In order to qualify for the ABFP examination, all candidates must satisfactorily complete at least 36 calendar months of accredited graduate medical education. All training beyond the G-1 year (G-2/G-3 years) must be in continuity in an ACGME accredited family practice residency program.

The Recertification Process

The American Board of Family Practice confers Diplomate status for the specified period of time noted on the certificate. The certificate is dated for a seven-year period. In order to maintain Diplomate status, the Diplomate must be recertified before the certificate expires. Although the certificate is dated for seven years, the Board routinely administers the recertification process on a six-year cycle. This allows a "reserve" year for those Diplomates who for some reason are unable to participate in the sixth year, or in cases where the Diplomate fails to receive a satisfactory score in the sixth year.

Should a Diplomate not be recertified by the end of the seventh year, the certificate will expire and the physician will lose Diplomate status. However, the physician may reapply for the recertification process, but must meet all criteria in effect at that time.

Diplomates will be given advance notice of any changes in the recertification requirements.

Re-examination

Candidates who fail the examination will be given the opportunity of taking it again as given annually. There is no limit to the number of times a qualified candidate may take the examination. A valid and unrestricted license and 50 hours per year of continuing medical education are requirements of the application necessary for re-examination. Full fees are charged for each examination.

Revocation

A. GENERAL

Each certificate issued by the Board of Directors shall be subject to revocation in any of the following circumstances:

The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Articles of Incorporation of the American Board of Family Practice, Inc., or of the Bylaws of the American Board of Family Practice.

The person certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting such ineligibility were known to, or could have been ascertained by, the Directors of the Corporation or its representatives.

Internal Medicine

The person so certified shall have made a misstatement of fact in the application for such certificate or in any other statement or representation to the corporation or its representatives.

The person so certified shall at any time have neglected to maintain the degree of competency in the field of family practice as established by the Board.

B. LICENSURE STATUS

A Diplomate of the American Board of Family Practice shall be required to hold a currently valid, full and unrestricted license to practice medicine in the United States or Canada. Furthermore, every license to practice medicine held by a Diplomate in any state or territory in the U.S. or province of Canada must be currently valid, full and unrestricted whether or not the Diplomate in effect practices in such state.

In the event a Diplomate's license to practice in any state or territory of the United States or province of Canada is revoked, restricted or suspended, the Diplomate's status with the American Board of Family Practice is to be simultaneously rescinded at the time of the licensure revocation, restriction or suspension. If and when the physician's revoked or suspended license is reinstated in full (with no restrictions) and official documentation of reinstatement is provided to the ABFP, the physician, in order to regain Diplomate status, must meet all the recertification requirements in effect at the time including but not necessarily limited to the written recertification examination which is held annually.

Board Eligibility

The American Board of Family Practice has *never* used the term "board eligible." The current requirements for admission to the certifying examination include satisfactory completion of a three year family practice residency program as accredited by the ACGME. No other pathway to the certifying examination currently exists. The term "board eligible" is now an obsolete term for all specialty boards under the aegis of the American Board of Medical Specialties.

Applying for the Certification Examination in Family Practice

An application must be submitted with a check or money order in the amount of \$500 (U.S. Dollars), payable to the American Board of Family Practice and postmarked no later than the published deadline.

The application must be accompanied by a copy of all licenses to practice medicine held by the candidate in the United States or Canada.

Examination fees may be refundable in part if the candidate notifies the American Board of Family Practice by registered or certified mail, postmarked at least 30 days prior to examination, of his/her intent to withdraw.

If a candidate fails to notify the Board by certified or registered mail of his/her intent to withdraw, the entire fee may be forfeited. Any resident whose application is not approved for examination will be refunded \$450.

No candidate will be admitted to the examination until all fees have been paid and all other requirements have been met.

All applications must be returned to the following address:

American Board of Family Practice
2228 Young Drive
Lexington, Kentucky 40505
(606) 269-5626

**Areas of Certification Offered
Specialty of Internal Medicine**

Physicians who are awarded a Diplomate certificate in the specialty of internal medicine have completed a minimum of three years of acceptable postdoctoral education, demonstrated competence in the clinical care of patients, and passed the Certifying Examination in Internal Medicine. Physicians who are awarded this certificate will have demonstrated their preparation for the practice of internal medicine.

Subspecialties of Internal Medicine

Subspecialty Board Diplomates may seek certification in a subspecialty of internal medicine. They must meet the Board's postdoctoral training requirements in the subspecialty before taking the subspecialty

examination. Physicians who are awarded these certificates will have demonstrated their preparation for the practice of a subspecialty. The Board offers examinations in the following subspecialties:

- Cardiovascular Disease
- Endocrinology and Metabolism
- Gastroenterology
- Hematology
- Infectious Disease
- Medical Oncology
- Nephrology
- Pulmonary Disease
- Rheumatology

For information concerning certification in allergy and immunology, see following pages.

Added Qualifications in Internal Medicine

Certified internists and/or subspecialists may seek certificates of added competence following additional training in the following fields:

- Critical Care Medicine
- Diagnostic Laboratory Immunology
- Geriatric Medicine

Reassessment of Competence

Beginning in 1990 all certificates issued by the Board will be valid only for a limited period of time. Certificates in internal medicine and the subspecialties issued prior to 1990 will continue to be valid indefinitely. The latter Board Diplomates will periodically be offered the opportunity to take an advanced examination. Those who pass this examination will be awarded a new certificate indicating the date of the examination.

Certification in the Specialty of Internal Medicine

Prerequisites

1. Predoctoral Medical Education

Candidates from medical schools in the United States or Canada must have attended a school accredited at the date of graduation by the Liaison Committee on Medical Education or formerly by the American Medical Association, or the Committee for the Accreditation of Canadian Medical Schools. Candidates from osteopathic medical schools must have graduated from a college of osteopathic medicine accredited by the American Osteopathic Association.

Graduates of foreign medical schools are required to have a permanent (valid indefinitely) certificate of the Education Commission for Foreign Medical Graduates or comparable credentials from the Medical Council of Canada or must hold an unrestricted license to practice in a state, territory, province, or possession of the United States or Canada or be certified by the National Board of Medical Examiners (Parts I, II, and III). A photostatic copy of this certificate or license must accompany the application for admission to the examination.

Candidates whose ECFMG certificates are currently undergoing revalidation will not be admitted to the examination even if licensed.

Candidates who entered postdoctoral medical training in the United States via the "Fifth Pathway," as proposed by the American Medical Association, must document such training to the Board.

2. Postdoctoral Training Requirements

Candidates must meet the training requirements outlined on the following pages. Requirements for graduates of foreign and osteopathic medical schools are the same as those for other candidates.

3. Components of Clinical Competence

It is essential that the internist have the appropriate medical knowledge, clinical judgment, professional attitudes and behavior, humanistic qualities, psychomotor skills including expertise in certain

procedures, and abilities to gather data—by an organized and complete medical interview, a thorough physical examination, and the appropriate use of diagnostic studies—in order to make logical diagnoses and to prescribe optimal medical care. Directors of training programs can most appropriately provide the Board with documentation of some of these components or competence, and have established committees to assist them in this evaluation. The evaluation should be a continuing process throughout a trainee's tenure in a hospital program. For more information, refer to *Annals of Internal Medicine*, 90: 402-411 (March) 1979, and *Annals of Internal Medicine*, 99: 720-724 (November) 1983.

The Board, after receiving an application for examination, requires verification of training and substantiation of the candidate's overall clinical competence. This verification is sought from each director of the candidate's training program(s). For more information about the role of the program director in certification, see following pages.

When candidates have not undergone formal evaluation for at least four years, the Board requires verification that they are currently recognized as internal medicine specialists in good standing. Verification is sought from the chief of medical service at the institution where the candidate's principal staff appointment is held. Verification of unchallenged, unrestricted licensure in a state, territory, or possession of the United States may also be sought from appropriate licensing authorities. Any challenge to good standing must be resolved locally to the Board's satisfaction before admission to the examination. Substance abuse, conviction for felonies, repeated malpractice settlements or judgments, or substantial disciplinary action by a hospital staff may lead to deferred admission to examination.

4. Humanistic Qualities and Moral and Ethical Behavior

All candidates for certification must demonstrate satisfactory humanistic qualities and moral and ethical behavior in the medical profession in each year of required training and thereafter. The program director has the responsibility to assure the Board of such satisfactory behavior (see following pages).

Training

The Board believes that all internists should have sound knowledge of the biologic and social sciences basic to internal medicine; this knowledge should be acquired during the candidate's predoctoral and postdoctoral training, and should be maintained by habits of continuing education. The Board has defined its requirements for duration and quality of training to assure an educational experience that is likely to develop competence in internal medicine. Residents are urged to discuss the details of their training with their program directors.

To ensure that all Diplomates are competent to fulfill the responsibility of an internist for the primary care of patients, whether they plan to practice general internal medicine or a subspecialty, *the Board requires that all candidates have three years of accredited training in the broad field of internal medicine.*

No internship, residency, or fellowship training taken before the date of completion of requirements for the MD or DO degree may be credited toward the Board's training requirements.

To be admitted to an examination, physicians must have completed required postdoctoral training *before July 1* of the year of examination.

The three years of required training must satisfy all the following conditions:

1. *A candidate must complete three years of training as a resident in an approved program in internal medicine.*

Approved indicates training accredited by the Accreditation Council for Graduate Medical Education (formerly by the Liaison Committee for Graduate Medical Education, or by the Residency Review Committee for Internal Medicine of the American Medical Association), or training

Internal Medicine

completed in Canada and accredited either by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec.

2. *A director of an approved training program in internal medicine must have responsibility for the educational process during all of the 36 months of training.*

The program director may prospectively assign up to six of the 36 months of the internal medicine residency to specialties other than internal medicine, and these six months may be credited toward the 36 months of required training. This is designed to permit interdisciplinary experiences consistent with primary care internal medicine. It is not intended to permit credit for training while the candidate is a resident in another specialty (see following pages).

The Board has several policies to determine credit for the first postdoctoral year of training (PGY-1), depending on which type of training was undertaken in the first year.

- a) *Categorical First Year in Internal Medicine.* This refers to PGY-1 training undertaken in the department of internal medicine under the supervision of the director of an approved internal medicine program. Twelve months of credit are given for categorical first years.
- b) *Categorical* First Year in Internal Medicine.* This refers to training undertaken in more than one department, under the supervision of the director of an approved internal medicine program. Twelve months are credited *if* training included a minimum of eight months of internal medicine, or six months in internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care.
- c) *Flexible First Year.* This refers to training in 1975-1982 that was never reviewed or accredited by a national authority. Therefore, no credit is normally given for flexible first years.
- d) *Transitional Year.* Beginning in July 1982 the Accreditation Council on Graduate Medical Education has accredited broad PGY-1 training experiences with a designated director and an institutional supervisory committee and sponsored by at least two accredited residencies. In such programs where one sponsoring residency is internal medicine, candidates will receive month-for-month credit for training in internal medicine. Twelve months are credited *if* training included a minimum of eight months of internal medicine, or six months in internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care.

3. *Training must include a minimum of 24 months of meaningful patient responsibility.*

Meaningful patient responsibility refers to time spent in direct and comprehensive care of patients. This includes responsibility for record keeping and management under the supervision of faculty and/or personal physicians. Care provided in the capacity of a consultant does not apply to the requirement for meaningful patient responsibility. Twenty of the 24 required months of meaningful patient responsibility must occur in:

- a) inpatient services where disorders of general internal medicine are managed, or
- b) inpatient services where disorders of one subspecialty of internal medicine are managed, or
- c) emergency rooms, intensive care units, general medical or subspecialty out-patient clinics, or
- d) dermatology or neurology services.

For the purposes of determining the amount of meaningful patient responsibility, four months may be taken outside of internal medicine at the discretion of the internal medicine program director, provided these months involve meaningful patient responsibility (see following pages).

4. *In each year of training, the level of responsibility for patient care must increase.*

In summary, the standard, recommended training pattern includes:

- Year 1—A Categorical first year of training in internal medicine,
or
A Categorical* first year including eight months of internal medicine; and
- Year 2—Twelve months of approved residency in internal medicine, as a medicine resident; and
- Year 3—Twelve months of approved residency in internal medicine, as a medicine resident.

Of the total 36 months of training, at least 24 must include meaningful patient responsibility. In each year of training, responsibility for patient care must increase.

Training Taken in Accredited Programs Other Than Internal Medicine

For physicians transferring to the first or second year of internal medicine programs from other accredited residencies, the internal medicine program director may grant a maximum of six months' credit *for months of training in internal medicine which were under the supervision of the director of an approved program in internal medicine.* These six months may not include common rotations for the first postgraduate year such as emergency room, pediatrics or rotations through other specialties.

Clinical Investigator Pathway

The Board's mission is to certify clinical expertise in internal medicine and to assure that training in this discipline has been broad. At the same time ABIM continues to encourage careers in clinical investigation. Therefore the Board has established a pathway for investigators highly trained both in clinical sciences and biomedical research. This pathway requires two years of accredited residency training in internal medicine with 20 months of meaningful patient responsibility and generally includes two years of documented research in the United States or Canada. The sequence of each of these four years is not set by the Board.

Specific criteria for this pathway are as follows:

1. Candidates who will be applying under the Clinical Investigator Pathway must be prospectively proposed by the program director of the accredited residency in internal medicine in which they will have completed the two years of required training.
2. Candidates must be identified early enough in the residency training to assure 1) their potential for superior overall clinical competence, 2) 20 months of meaningful responsibility for patients with internal medicine problems, and 3) an appropriately balanced curriculum.
3. Candidates must obtain letters of support from the supervisor of the research training describing the proposed program and documenting that it will have been at least two years in duration.
4. Credit will be granted only for training and research undertaken after the award of the M.D. degree.
5. The training and research may be taken in any sequence so long as two years of accredited residency training in clinical internal medicine precede admission to a Certifying Examination in Internal Medicine.
6. The Certifying Examination in Internal Medicine cannot be undertaken prior to the completion of four years of post-M.D. residency training/research experience except that those in a documented pure research experience in PGY-3 and PGY-4 make take the exam in September of PGY-4.
7. A Subspecialty Examination may be undertaken only after successful completion of at least six (seven for cardiovascular disease) years of training/research experience.

8. The requirement for clinical training in a subspecialty can be met during any of the last four years of the six (seven for cardiovascular disease) year program.

9. A continuity clinic in general internal medicine throughout the years of research is encouraged but not required.

Candidates for Special Consideration

Outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board as candidates for special consideration. Only the chairperson of a department of medicine or a program director of an approved program in internal medicine may propose a candidate for special consideration (see following pages).

The Certifying Examination in Internal Medicine

The Certifying Examination in Internal Medicine is a written examination. The material covered on the examination is clinically oriented and relevant to the practice of internal medicine in a hospital and ambulatory care setting, both for consultants and primary-care physicians. The questions are objective; they are designed to test the candidate's knowledge, clinical judgment, problem-solving skills, and, to an appropriate degree, knowledge of the basic sciences fundamental to internal medicine.

The Certifying Examination is administered annually in many centers throughout the United States and in a few centers in Canada, Puerto Rico, and overseas. It is given in four parts on two consecutive days. The next Certifying Examination in Internal Medicine will be held September 14-15, 1988.

Candidates will be informed of the results of the examination approximately four months after its administration.

Those who pass the examination are certified as Diplomates in the specialty of internal medicine. They are awarded certificates indicating obtain rescoring of any examination within a year of receiving results. The candidates' answer sheets will be destroyed 18 months after administration of the examination.

Certification in a Subspecialty of Internal Medicine

Prerequisites

1. Prior Certification in Internal Medicine

A candidate for examination in a subspecialty must be certified by ABIM as a Diplomate in internal medicine.

2. Training Requirements

Candidates must meet the training requirements outlined on the following pages.

3. Clinical Competence

The Board, after receiving an application for examination, requires substantiation of the candidate's clinical competence as a subspecialist-consultant. This substantiation will be sought by the Board from the directors of the subspecialty training program(s) and of the associated residency in internal medicine. For more information about the role of program director in certification, see following pages.

For candidates who are at least four years beyond formal education, the Board requires verification that they are currently recognized as a subspecialist in good standing in the appropriate subspecialty. Verification is sought from the chief of medical service at the institution where the candidate's principal staff appointment is held. Verification of unchallenged, unrestricted licensure in a state, territory, or possession of the United States may also be sought from appropriate licensing authorities. Any challenge to good standing must be resolved locally to the Board's satisfaction before admission to the examination. Substance

abuse, conviction for felonies, repeated malpractice settlements or judgments, or substantial disciplinary action by a hospital staff may lead to deferred admission to examination.

4. Humanistic Qualities and Moral and Ethical Standing

All candidates for subspecialty certification must demonstrate satisfactory humanistic qualities and moral and ethical behavior in the medical profession in each year of required training and thereafter. The departmental chairman and the subspecialty program director have the responsibility to assure the Board of such satisfactory behavior (see following pages).

Training

The Board requires a minimum of two years of full-time graduate training in a subspecialty, completed in a program associated with an approved residency in internal medicine in the United States, or Canadian fellowship training that was accredited either by The Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec. Beginning July 1, 1989 the Board will only accept subspecialty training that has been accredited by the Accreditation Council for Graduate Medical Education or the Canadian authorities mentioned above.

A period of training in another institution in the United States or Canada may be acceptable if the institution has a recognized reputation for an advanced educational program in the subspecialty. Applicants seeking credit for training there must submit a detailed description of the curriculum of the program for review by the appropriate Subspecialty Board. Candidates are encouraged to write to the Board for prospective evaluation of such training.

If subspecialty rotations completed during training in internal medicine are used to meet the requirements for admission to a Certifying Examination in Internal Medicine, they *cannot* be credited toward the required subspecialty training. Practice experience and attendance at postgraduate courses cannot be credited toward the requirements.

Educational experience in a subspecialty while the candidate holds a full-time junior faculty appointment in an approved medical school in the United States or Canada may be applicable toward the requirements. Such clinical experience must have been approved by the appropriate program director. Plans for such training should be reviewed prospectively by the Board.

In general, part-time training, even though continuous, is not acceptable. Interrupted full-time training, however, is acceptable, provided that no period of full-time training is shorter than six months. Individuals planning such training should seek the guidance of the Board before acting on their plans.

Please note a change in training requirements for the cardiovascular disease examination.

Beginning in 1993 all candidates applying for the cardiovascular disease examination for the first time will be required to have completed three years of accredited training in cardiovascular disease including at least two years of clinical training.

Candidates for Special Consideration

Special consideration for candidates who seek subspecialty certification is restricted to full-time faculty members of accredited medical schools in the United States or Canada. Some formal training in the subspecialty is required.

Only the chairperson of a department of medicine may propose a subspecialty candidate for special consideration (see following pages).

Certification in Two Subspecialties

The Board does not wish to encourage certification in more than one subspecialty. However, requirements for dual certification in hematology and in medical oncology have been published and are available from the Board and currently require three years of training.

Internal Medicine

Candidates who seek dual certification in other subspecialty combinations should submit written inquiries detailing their training to the Board for evaluation by the appropriate subspecialty boards.

Subspecialty Examinations

The subspecialty examinations are written examinations. The questions are objective. An outline of the general subject areas covered by a specific subspecialty examination is provided with the application form.

The subspecialty examinations are offered on an alternate-year schedule. The examinations are administered in centers in the United States, Puerto Rico, Canada, and overseas. They are given during one day; the sole exception is the examination in cardiovascular disease, which is given during one and one-half days. The 1988 Subspecialty Examinations will be held on November 1, 1988.

Candidates will be informed of the results of examination approximately four months after administration.

Those who pass a subspecialty examination are certified as Diplomates in the particular subspecialty; they are awarded certificates indicating the date of the examination.

On written request and payment of a fee of \$25.00 candidates may obtain rescoreing of any examination within a year of receiving results. The answer sheets of candidates will be destroyed 18 months after administration of the examination.

For information with regard to the Board's policy concerning accommodation to handicapped candidates during the examination, please provide details to the Registration Section in the Board office in Philadelphia, Pennsylvania.

Certification of Added Qualifications

The Board offers certification of added qualifications to Diplomates with additional training and/or experience in the following areas

Geriatric Medicine

Certification of added qualifications in geriatric medicine is a program for certified internists and family practitioners, designed to recognize excellence among those who provide care to the elderly.

The American Board of Internal Medicine and the American Board of Family Practice will offer an examination in geriatric medicine on April 20, 1988. Successful internists will be awarded a Certificate of Added Qualifications by the American Board of Internal Medicine. The certificate will bear a date limiting the duration of its validity to seven years. Reassessment will be required for renewal of the certificate. Please write to the Board office for additional information regarding certification in geriatric medicine.

Critical Care Medicine

Certification in critical care medicine is a program for certified internal medicine specialists, designed to recognize excellence among those who provide critical care. The next examination in critical care medicine is scheduled for November 14, 1989. Those who pass the examination will be awarded a certificate bearing a date limiting its validity to ten years. Reassessment will be required for renewal of the certificate.

Diagnostic Laboratory Immunology

The American Boards of Allergy and Immunology, Internal Medicine and Pediatrics certify qualified internists and pediatricians involved in teaching, research and/or practice settings in which the diagnostic immunology laboratory is of central importance. An examination will be administered on October 7, 1988. For information and application forms, please contact:

American Board of Allergy and Immunology
3624 Market Street
Philadelphia, Pennsylvania 19104

Role of Program Director in Internal Medicine

The level of competence of the internist is determined in large part by the duration and quality of training and experience. It is for this reason that the Board seeks assistance from training program directors in the certification process. The Board asks program directors to substantiate that candidates for certification have the requisite medical knowledge, clinical judgment, clinical skills (history-taking, physical examination, and certain procedural skills), humanistic qualities, skills and abilities in the provision of medical care, professional attitudes and behavior, and moral and ethical behavior to be certified by the Board. Such substantiation is a requirement of certification.

Responsibility for Training

The Board believes that an internal medicine program director should have responsibility for the candidate's entire educational process during training. The program director together with the candidate can design some flexibility within the basic training requirements.

The program director may permit up to six months of training in areas outside internal medicine, as long as the program director maintains contractual responsibility for the resident in internal medicine during this time. Such rotations may be dispersed by the program director throughout the 36 months of training.

A maximum of four months outside internal medicine (e.g., pediatrics, psychiatry, neurology, etc.) may be credited toward the requirement for 24 months of meaningful patient responsibility if the rotations are taken with the approval of the internal medicine program director *and* if they involve meaningful patient responsibility.

The Board welcomes the opportunity to evaluate prospective plans for unusual training.

Substantiation of Clinical Competence Internal Medicine

The program director of each training program of the candidate for certification is sent a clinical evaluation form and asked to verify the training indicated by the candidate. Candidates applying for certification must be judged to have satisfactory clinical competence. Substantiation of clinical competence is requested from the program director. Any candidate for any certification whose competence is judged to be less than satisfactory may, at the discretion of the Board, be excluded from the next examination.

Candidates who are judged by their program directors to have less than satisfactory clinical competence in the R-2 year of training will be required to undertake an additional 24 of accredited residency in general internal medicine before requesting admission to the Certifying Examination. Candidates who are judged by their program directors to have less than satisfactory clinical competence in the R-3 year of training will be required to undertake an additional 12 months of accredited residency in general internal medicine before requesting admission to the Certifying Examination. If this additional training is taken in a different program, the Board requires that residents inform the new training program director of such a rating to assure that the new program director recognizes the candidate's needs and devotes special attention to the improvement of deficient skills. Therefore, residents are urged to obtain documentation of the program directors' evaluations of their clinical competence for all years of training.

Candidates whose clinical competence has improved and is judged by the program director to be satisfactory after the additional training will be admitted to the Certifying Examination. Candidates who neglect to inform a new program director of unsatisfactory ratings or who do not take the required additional training in general internal medicine will not be admitted to the Certifying Examination.

For candidates beginning postgraduate training in June 1987 and after, the Board will require that they be judged by their program

directors to have demonstrated satisfactory overall clinical competence during each of the three years of training. In the R-3 year, the candidate must also be judged to be satisfactory in each of the components of competence defined by the Board.

Subspecialties of Internal Medicine

For certification in subspecialties of internal medicine, substantiation of clinical competence as a subspecialist-consultant is requested from both the director of the subspecialty training program and the director of the associated residency in internal medicine.

For those entering subspecialty training at the F-1 level after June 1, 1987, satisfactory ratings of component skills such as proficiency in performing essential procedures will be required in the final year of training. Any unsatisfactory rating will exclude the candidate from examination, regardless of a satisfactory rating of overall clinical competence.

Candidates must have a satisfactory rating of overall clinical competence in each of the required years of subspecialty training. Otherwise an additional year of acceptable training is required for each unsatisfactory year before requesting admission to examination. It is the candidate's responsibility to arrange for this training. The program director providing the additional training must devote special attention to improving the candidate's deficient skills. Therefore, trainees who change programs must inform the new program director of any previous unsatisfactory rating. Candidates who neglect to inform a new program director of unsatisfactory ratings or who do not improve the previously identified deficiencies during the required additional training will not be admitted to examination.

Verification of Humanistic Qualities and Moral and Ethical Behavior

Program directors have the responsibility to assure the Board that candidates for Board certification have demonstrated satisfactory humanistic qualities and moral and ethical behavior in the medical profession during all three years of required training.

Deficiencies in these attributes related to medical care should be identified by the program *as early in the training period as possible*, so that remedial action can occur. Candidates who are judged to have unsatisfactory humanistic qualities and/or moral and ethical behavior should be offered the opportunity to meet with their program directors and/or their local committees on evaluation of clinical competence in order to reply to the evaluations.

When the program director cannot recommend a candidate for admission to a certification examination on the basis of these deficiencies, this judgment should be indicated on the Board evaluation form with a description of the available documentation including critical incidents that illustrate adverse behavior.

Candidates for Special Consideration

Internal Medicine

Those outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board for special consideration.

The principle which guides the Board in its assessment of candidates for special consideration is that the candidate's training must be interpreted by the Board to be equivalent to 36 months of training in an approved program in internal medicine.

Except for the most unusual circumstances, it is essential that special candidates have had substantial formal training in internal medicine in the United States or Canada under the supervision of the director of an accredited residency in internal medicine.

Training in a formal subspecialty fellowship may not be substituted for training in internal medicine.

The following requirements apply to candidates for whom admission to the Certifying Examination is sought under the provisions of special consideration:

1. The candidate must be proposed by the chairperson of a department of medicine in an accredited medical school or the director of an approved residency in internal medicine.

2. Before being proposed the candidate should have been observed by the proposer for at least one year.

3. The candidate's curriculum vitae and bibliography must accompany the proposal. Authenticated credentials such as a permanent ECFMG certificate or unrestricted license must accompany proposals for foreign medical graduates.

4. The judgment of clinical competence must be the result of multiple observers and concurred with the local clinical competence committee. The qualities of the candidate's performance that support this judgment must be specified in the proposal. This documentation should also include the results of observing the candidate's performance in a clinical evaluation exercise.

Potential special candidates that may be proposed include the following groups:

Those with two years of accredited training in internal medicine in the United States or Canada *after* three or four years of verified foreign residency training in general internal medicine *and* satisfactory overall clinical competence.

Those candidates presenting two years of accredited residency training in internal medicine in the United States or Canada after some additional equivalent training and judged to have superior overall clinical competence.

Full-time faculty may be proposed as special candidates. The full-time faculty appointment must have been held for at least a year before being proposed, must be in the department of the proposer, and must continue through the date of examination and any reexamination. The proposer must be the chairman of the department of medicine of a medical school, along with the chief of the medical service at an affiliated hospital when applicable.

Staff will be happy to respond to written inquiries about other special candidates.

Proposals for special consideration should be received in the Board office *by January 1* of the year in which the Certifying Examination in internal medicine is to be taken. Should the proposal be approved after Board review, the Board will send application forms to the candidate.

Subspecialties of Internal Medicine

The following requirements apply to candidates for whom admission to a subspecialty examination is sought under the provisions of special consideration:

1. The candidate must be proposed by the chairperson of a department of medicine of an accredited medical school in the United States or Canada and the head of the associated subspecialty division.

2. The candidate must be a current *full-time faculty member* in the department of the proposer as a faculty member and have been observed by the proposer for at least one year before being proposed. The faculty appointment must continue through the date of examination and any reexamination.

3. The candidate must have been previously certified in internal medicine by the American Board of Internal Medicine.

4. The proposal must include a description of the candidate's training and experience in the specified subspecialty.

5. The proposal must substantiate the clinical competence of the candidate as a consultant-subspecialist.

6. The candidate's curriculum vitae and bibliography must accompany the proposal.

Internal Medicine

Proposals should be received in the Board office *by April 1* of the year in which the subspecialty examination is to be taken. Should the proposal be approved, the Board will send application forms to the candidate.

Procedures for Application

Awareness of registration deadlines is the candidate's responsibility.

Candidates for all examinations must have completed the required training *by July 1* of the year of examination. Candidates must use an application form which may be obtained by written request to the Board office during the scheduled period of registration.

After review and acceptance of a candidate's qualifications as presented on the application form, the candidate is informed by letter that the initial stage of processing the application form has been completed. When appropriate, the Board then seeks verification of training and substantiation of the candidate's clinical competence from the candidate's program director (see following pages). If these reports are satisfactory, the candidate will receive an admission card and examination center assignment approximately three weeks before the date of the examination.

Late Applications

There is a non-refundable penalty fee of \$200.00 for any application postmarked after the published registration period.

No applications will be accepted after April 1 for the Certifying Examination, June 1 for subspecialty and critical care medicine examinations or December 1 for the geriatric medicine examination.

Cancellations

In order to obtain a partial refund, cancellations for all examinations must be submitted to the Board in writing before *August 1* for the Certifying Examination in internal medicine, *October 1* for subspecialty and critical care medicine examinations, or *February 1* for the geriatric medicine examinations.

Refunds

Candidates who cancel their applications before the deadline or whose applications are not approved by the Board will receive a partial refund of their fee; \$65 will be retained to defray the cost of processing and evaluating the application.

Re-examination

Any candidate who does not pass any certification examination may apply for re-examination. There is no restriction on the number of opportunities for re-examination.

At each time of application for re-examination, the current examination fee is charged.

If the credentials of a candidate who requests re-examination have not been reviewed by the Board during the previous four years, the application must indicate in which hospital the candidate's principal staff appointment is held. The Board requires verification of the candidate's competence and good standing from the chief of medical service of that hospital (see following pages). Verification of licensure may also be sought from appropriate licensing authorities.

At each time of application for re-examination, the current examination fee is charged.

Announcements of Examination Information

Annals of Internal Medicine
(Medical News Section)

The Internist

Journal of the American Medical Association
(Examinations and Licensure Section)

Observer of the American College of Physicians

Careers in Internal Medicine

Resident and Staff Physician

Appropriate subspecialty journals

In addition, the Board sends bulletins each fall to directors of accredited residency programs.

Confidentiality

The Board considers a candidate's examination scores to be confidential.

Candidates are provided an opportunity on the application form to authorize the release of individual scores to responsible parties such as program directors and organizations. Because of the importance of such data to these parties, the Board urges candidates to authorize their release. The Board otherwise endeavors to release any data in a form that protects the anonymity of the candidate.

Candidates should be aware that the Board may, at its discretion, release the results of an examination under the following circumstances:

- a) The Board will release group examination results to the director of each program in which a sufficient number of candidates received training for credit toward Board requirements in order to help program directors evaluate the effectiveness of their programs.
- b) The Board will release group examination results to the Residency Review Committee for Internal Medicine for each program in which a sufficient number of candidates received training for credit toward Board requirements in order to help in the evaluation of the program's education effectiveness.
- c) The Board may release examination results, examination scores, and other pertinent information to qualified researchers; these researchers are required to maintain the confidentiality of such material.

Irregular Behavior

All Board examinations are proctored, and proctors are required to assign seats and empowered to change seats during an examination at their discretion. Proctors are required to report to the Board any irregular behavior by a candidate. Giving or obtaining unauthorized information or aid, copying of examination questions, removal of an examination from the examination center, talking or other disruptive behavior will be considered a possible subversion of the certification process. Irregular behavior that is observed, that is made apparent by statistical analysis of answer sheets, or that is shown by other means will constitute grounds for invalidation of the candidate's examination. Other sanctions such as exclusion from future examinations may be invoked at the Board's discretion.

Handicapped Candidates

The Board recognizes that some candidates may be unable to fulfill the requirement for proficiency in performing procedures because of physical handicap. For such individuals, the procedural skills requirement may be waived. Program directors are urged to write to the Board for approval before such residents enter training.

Candidates who may need accommodation during the examination should provide written details to the Board at the time of application for examination.

Requirements for Examination by the American Boards of Internal Medicine and Pediatrics

Candidates who are otherwise eligible for certification by each Board may be admitted to the examinations of both Boards, *after* such candidates complete at least two years of accredited residency training involving graded responsibility and continuity clinics in each specialty.

Certification Offered by Collaborative Examining Groups

The American Board of Internal Medicine has joined with other specialty Boards in sponsoring the American Board of Allergy and Immunology (a Conjoint Board of the American Boards of Internal Medicine and Pediatrics). Physicians certified in internal medicine who are interested in certification in this area should write to:

American Board of Allergy and Immunology
3624 Market Street
Philadelphia, Pennsylvania 19104

Inquiries

Please address all inquiries concerning examination applications to:
American Board of Internal Medicine
3624 Market Street
Philadelphia, Pennsylvania 19104
(215) 243-1500

The Board staff is ready to discuss certification with candidates. Candidates seeking an interview should request an appointment.

Examinations Schedule*

1988 Certifying Examination in Internal Medicine

Registration Period: November 1, 1987 to February 1, 1988
Examination Date: September 14-15, 1988
Fee: \$500
Cancellation Deadline: August 1, 1988
Refund: \$435

1988 Subspecialty Examinations

Hematology
Infectious Disease
Nephrology
Pulmonary Disease
Rheumatology

Registration Period: January 1, 1988 to April 1, 1988
Examination Date: November 1, 1988
Fee: \$630
Cancellation Deadline: October 1, 1988
Refund: \$565

Subspecialty Examination in Geriatric Medicine

Registration Deadline: July 1, 1987 to October 1, 1987
Examination Date: April 10, 1988
Fee: \$550
Cancellation Deadline: February 19, 1988
Refund: \$485

1989 Subspecialty Examinations

Cardiovascular Disease
Endocrinology and Metabolism
Gastroenterology
Medical Oncology
Critical Care Medicine

Registration Period: January 1, 1989 to April 1, 1989
Examination Date: November 14, 1989
(Cardiovascular Disease: November 14-15, 1989)
Cancellation Deadline: October 1, 1989

*Please see preceding pages for penalty fee for late applications and policy regarding cancellations.

AMERICAN BOARD OF NEUROLOGICAL SURGERY

Diplomates

A list of Diplomates and By-laws of The American Board of Neurological Surgery appear in the DIRECTORY OF MEDICAL SPECIALISTS which can be obtained from Marquis Who's Who, Inc., 200 East Ohio Street, Chicago, Illinois, 60611 as well as in the *ABMS Compendium of Certified Medical Specialists* which can be obtained from the American Board of Medical Specialties, One American Plaza, Suite 805, Evanston, Illinois 60201. In addition, a list of new Diplomates is published in the JOURNAL OF NEUROSURGERY shortly after each examination.

Information regarding training programs acceptable for certification can be found in the DIRECTORY OF GRADUATE MEDICAL EDUCATION PROGRAMS which is issued annually under the supervision of the Accreditation Council for Graduate Medical Education. This Directory can be secured from the American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Qualifications

The American Board of Neurological Surgery evaluates all qualified applicants for their proficiency in neurological surgery.

The minimal educational requirements of the Board should not be interpreted as restricting programs to these minimum standards. If necessary, neurosurgical program directors may retain residents in their programs beyond the required five years of residency training in order to insure satisfactory competence in neurological surgery.

It is the responsibility of the candidate to seek information concerning current requirements for certification by The American Board of Neurological Surgery. Even though directors of approved neurosurgical programs well informed regarding requirements for certification, placement in an approved training program does not guarantee adequate training for certification. The candidate must make sure he or she receives such training.

Training Prior to Neurosurgery Residency

1. Graduation from a medical school in the United States or Canada which is acceptable to the Board. Graduates from medical schools in

Neurological Surgery

countries other than the United States or Canada are eligible for certification provided they have a currently valid license to practice medicine in the state, province, or country of residence.

2. Graduates from U.S. or Canadian medical schools must also have a currently valid license to practice medicine in the state, province, or country of residence.

3. Twelve months must be devoted to acquiring adequate clinical knowledge of fundamental clinical skills. This is known as postgraduate year one (PGY 1), general surgery year one, or internship. Although recommended for completion prior to beginning neurosurgical training, this must be completed prior to beginning the third year of that training. This may be achieved by:

- A. one year of training in an approved general surgery program in the United States or Canada, or
- B. one year of training in an accredited residency program to include not less than six months in surgical disciplines other than neurosurgery the remaining six months should include training in fundamental clinical skills considered appropriate by the neurosurgical program director, but this portion of the year may not include more than six weeks of neurosurgery and/or neurology, or
- C. holding a certificate from the American Board of Surgery or a Fellowship (in surgery, not neurosurgery) of the Royal College of Surgeons of England, Edinburgh, Canada, Ireland, or Australasia.

Neurological Surgery Training Requirements

For Residents Who Began the Neurological Surgery Portion of Their Training Before July 1, 1979

1. Completion of four years of training following postgraduate year one. The neurological surgery training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery and acceptable to it.

2. Of this training period, at least 30 months must be devoted to clinical neurological surgery. Twelve of the 30 months should be spent as senior resident in one institution. The other remaining 18 months may be devoted to other aspect of the neurosciences.

3. The training in clinical neurological surgery must be progressive, not obtained during repeated short periods in a number of institutions. At least 24 months of training in clinical neurological surgery must be obtained in one institution. Exchange of residents between approved neurosurgical training centers in the United States and Canada may be arranged by the respective training program directors with the resident's consent. In such instances, the Secretary of the Board should be notified of this rotation before the exchange period begins. Such an exchange should in no way compromise any other training requirement.

4. The program director must notify the Board of the appointment of each new neurosurgical resident and whether they are entering the program with intent to obtain certification and, if so, whether or not the director has informed the trainee of the requirements necessary to obtain such certification.

5. Prior to acceptance for the certification process, the Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements and that his or her performance in training has been satisfactory and that, in the judgment of the program director, the trainee is well prepared to enter into the independent practice of neurosurgery.

For Residents Beginning the Neurological Surgery Portion of Their Training on or After July 1, 1979

1. At least 60 months of neurosurgical training is necessary following postgraduate year one. This training must occur in hospitals

or institutions recognized by the American Board of Neurological Surgery, approved by the RRC in Neurosurgery, and accredited by the ACGME.

2. The 60 months of training must include at least 36 months of clinical neurosurgery. Twelve months of this period must be served as a senior resident.

3. At least 24 months in clinical neurosurgery must be obtained in one institution. The training in clinical neurosurgery must be progressive and not obtained during repeated short intervals in a number of institutions.

4. At least three months must be devoted to training in neurology. Six months is recommended.

5. The unobligated 21 months may be devoted to neuropathology, neuroradiology, basic neurosciences, research, or other disciplines related to neurological surgery.

6. Training in any institution other than in the parent institution and its affiliated hospitals will not be considered as counting toward the requirements unless specified in advance by the program director and approved by the Board.

7. The program director must notify the Board of the appointment of each new neurosurgical resident and whether they are entering the program with intent to obtain certification and, if so, whether the director has informed the trainee of the requirements necessary to obtain such certification.

8. Residents in training after June 30 1983 are required to record, in a fashion determined by the Board, operative procedures performed during their senior clinical year of training.

9. Prior to acceptance for the certification process, the Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements, has performed in training in a satisfactory manner and, in the judgment of the program director, is well prepared to enter into the independent practice of neurosurgery.

Exceptional Modifying Circumstances

Upon recommendation of the program director and ratification by the Board, credit may be given for previous training if a candidate:

1. Transfers from one approved neurosurgical training program to another approved program with the consent of the directors of both programs, or

2. Transfers from one approved neurosurgical training program to another approved program without the consent of one of the program directors, but with the approval of the Board for the transfer.

In the above cases, the director of the program from which the candidate transfers must indicate in writing to the new program director the credit for training, both in time and category, which he is prepared to certify that the candidate has successfully completed. A copy of such statement should be submitted to the Secretary of the Board. The new program director may or may not honor such credit, depending upon his or her appraisal of the resident's professional and educational progress in the new program. A statement of how much training credit will be accepted should also be submitted to the Secretary of the Board.

3. Before entering an approved neurosurgical training program, has had substantially more than the prerequisite training in general surgery, medical neurology or the basic neurological sciences (such credit must be approved by the Board).

Requests for training away from a parent institution or for transfer from one program to another should be submitted in writing to the Board prospectively, not retroactively.

Training by preceptorship is not considered as fulfilling certification requirements. No credit is given for time spent in such training.

Credit for partial training in foreign or other non-approved centers may be granted by the Board on an individual basis when this training is

carried out as an integral part of the training program and with the advice and approval of the candidate's program director. The Board must be informed of such a rotation prior to its occurrence.

The above provisions in no way alter the basic minimum requirement of 60 months of training in neurosurgery, including a minimum of three months training in clinical neurology and 36 months of clinical neurosurgery, 12 months of which must be as senior resident, and 24 months in one institution.

Primary Examination

Each applicant for the Board's Oral Examination must first successfully pass the Primary Examination, which is a written examination prepared by the Board with the assistance of a professional testing organization. The Primary includes information on neuroanatomy, neurochemistry, neurology, neuropathology, neuropharmacology, neurophysiology, neuroradiology, neurosurgery, fundamental clinical skills and material from other relevant disciplines deemed suitable and important by the Board.

The Primary is given once each year, usually in March, at such locations as are designated by the Board.

Candidates and Diplomates may take the Primary as often as desired for either credit or self-assessment. It may be taken for credit during residency training or during practice following completion of training. A trainee in an accredited training program may take it for credit at the discretion of the program director. The Primary Examination for self-assessment is open to all trainees in neurosurgical training programs, as long as they are individuals eligible for eventual certification. It is also open to neurosurgeons who have successfully completed training at accredited programs.

An application must be filed to take the Primary Examination. The deadline for receipt of this application by the Board is usually the first of January. The form should be accompanied by the fee set by the Board. This fee will be refunded only if the candidate informs the Secretary's office that he or she is not going to sit for examination prior to the deadline date for receipt of applications.

Candidates taking the Primary Examination are required to sign a pledge which states that they agree to be bound by the Board's ruling regarding credentials irrespective of scores on the Examination. By signing the pledge, candidates grant permission to the American Board of Neurological Surgery and the testing organization to release the Examination results, either credit or self-assessment, to the candidate's program director.

Candidates should keep in mind that they must be scheduled for Oral Examination by the Board within five years of passing the Primary Examination for credit or within five years of completing a formal training program, whichever occurs later. Compliance with this regulation requires early submission of applications for certification once candidates finish training. If a candidate cannot be scheduled within the five year limit due to late submission of an application, he or she must once again pass the Primary Examination for credit before being scheduled for Oral Examination within the succeeding three year period.

Candidates should also keep in mind that usually 18 months are required between submission of an application and Oral Examination.

Practice Requirements

Following completion of a neurosurgical training program, an additional period of not less than two years of satisfactory practice of neurological surgery is required prior to Oral Examination. After one year of practice, the candidate shall furnish to the Board either the names of three physicians (two ABNS Diplomates) who are knowledgeable about the quality of the candidate's practice. The Board will request

reference letters from these physicians. It is the prerogative of the Board to contact other physicians in the community and, to send representatives to review the candidate's practice.

In addition to these letters, the candidate will submit either the names and addresses or actual letters from either the Medical Director or the Chief of Staff of each hospital where the candidate has hospital privileges. These letters are intended to advise the Board of the candidate's status regarding admitting and operating privileges in each hospital where he/she practices.

Prior to Oral Examination, candidates must forward to the Board a typewritten, chronological list of patients for whom he or she has been the responsible physician or surgeon. For candidates completing training prior to July 1982, this practice data is to be inclusive of the two years just prior to sitting for Oral Examination. For candidates completing training on or after July 1, 1982, only 12 consecutive months of Practice Data is required. Information may include, but may not be limited to:

- A. Identifying hospital number and date of admission,
- B. Clinical diagnosis,
- C. Definitive diagnostic procedures, if performed,
- D. Operations, if performed,
- E. Results, including all complications and autopsy findings, when applicable, and
- F. Summary form of the clinical material seen and surgical work performed by the applicant.

No minimum volume of diagnostic or operative procedures is required. Candidates should keep accurate records at all times so that the material is readily available. The total experience must be tabulated by the candidate in a format defined by the Board and prepared on forms available from the Board. This case material must be accompanied by documents indicating their essential accuracy from the record or medical librarian, chief of staff, chief of service, president of the medical staff or hospital administrator of the hospitals where the candidate practices.

These data must be sent to the Board at a time set by the Board. It will be reviewed prior to the Oral Examinations.

Candidates are responsible for retaining duplicate copies of these records.

Military Service Practice

Medical officers in the military may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to practice of neurological surgery. Practice information for each individual in this category must still be reviewed by the Credentials Committee and the Board.

Certification of Those Training in Canadian Programs

Those satisfactorily completing an approved Canadian training program are eligible for certification through the same route as candidates from the United States. Each candidate must:

1. Have 60 months of residency training acceptable to the American Board of Neurological Surgery, and have credentials for such training reviewed by the Credentials Committee and approved by the Board,
2. Pass for credit the Primary Examination,
3. Present evidence of a satisfactory two year period of practice, and
4. Pass the Oral Examination.

Candidates who complete training in approved Canadian programs and are certified by the Royal College of Physicians and Surgeons (Canada) in neurosurgery must have completed the same training and

Neurological Surgery

practice requirements as graduates of accredited training programs in the United States when applying to the American Board of Neurological Surgery for oral examination and certification.

Certification for Those Training in the United States and Canada but Practicing Neurological Surgery in a Foreign Country

Prior to July 1, 1972

Foreign Certificates may be issued to applicants who began neurosurgical training in the United States or Canada prior to July 1, 1972. Training for a Foreign Certificate must meet the requirements of the Board. Such individuals must file with the Board a sworn declaration of his or her intent to return to residence in a country other than the United States or Canada before he or she may be scheduled for Oral Examination. A Foreign Certification is only issued upon return of the applicant to the foreign country which he or she has declared would be the country of residence. Foreign Certificates are valid only during residency of the recipient in a country other than the United States or Canada; they are null and void, and must be returned to the Board if the recipient returns to either the United States or Canada to practice. If the holder of a Foreign Certificate becomes a resident or a practitioner in the United States or Canada and wishes to gain a Regular Certificate, he or she may apply for conversion of certificate.

On or After July 1, 1972

Individuals wishing to practice in countries other than the United States or Canada who initiated their neurosurgery training on or subsequent to July 1, 1972, and who wish to practice in a foreign country but be certified by the American Board of Neurological Surgery must apply for a Regular Certificate. This certificate would also be valid for neurosurgical practice should the individual return to the United States or Canada. Residence may be established in the foreign country for the two years of practice before being scheduled for oral examination and keep track of practice data, just as any other candidate for certification.

Applications

Applications for oral examination are automatically sent to residents in June of their last year of training. Additional applications are available from the Board's office. The application and accompanying information should be filled out and returned to the Board as soon as possible after completion of training so that inquiries may be made from references, as well as from others in the community, the individual's training program faculty, and hospitals where the candidate practiced.

It takes 18 months or more between submission of the application and scheduling for oral examination. Candidates must apply soon enough after completion of training in order to be scheduled for the Oral Examination within five years of passing the Primary Examination for credit or within five years of completion of their residency training program, whichever occurs later. If application is made beyond the five year limit, the candidate must again pass the Primary Examination for credit before being scheduled for the Oral Examination within the next three years.

A pledge is part of the application for oral examination. By signing the application, the applicant agrees to abide by all of the terms and conditions of this pledge.

Upon receipt of an application, the Board takes such steps as deemed appropriate to verify the statements of facts made in the application. Inquiries are made from references and others familiar with the candidate to obtain information relevant to the requirements for examination.

Prior to oral examination, each candidate must be in possession of hospital staff privileges in all hospitals in which he or she cares for patients. Such privileges must be unrestricted in respect to the hospital's requirements for a neurosurgeon.

The Board makes the final decision regarding a candidate's eligibility for oral examination and potential certifiability after considering all available information pertaining to the entire process of certification.

Applications must be typewritten.

Application fees, once received, will not be refunded.

Oral Examination

The oral examination is given two or three times a year. This is a clinical problem solving and patient management test. Candidates are given case histories and, where appropriate, x-rays, scans and other visual aids to augment the presentation and development of the case. The candidate must be able to explain verbally how he or she would proceed in evaluating and/or managing the case, and plan and perform the proposed operation or operations, if indicated. One hour is devoted to neurological surgery—intracranial disease; one hour to neurological surgery—spinal and peripheral nerve disease; and one hour to neurology. Each of the three hours is conducted in an interview setting with two examiners.

If, upon receipt of notification of scheduling for oral examination, a candidate cannot stand for the examination, he/she must notify the Board immediately, since there is a waiting list for each examination. The examination fee will not be refunded except under exceptional circumstances deemed appropriate by the Board.

A candidate who passes the Oral Examination will be forwarded the Board's Certificate, once it is suitably engrossed and signed by the then current officers of the Board.

Re-examination Rules

A candidate failing the oral examination once may request reexamination by writing to the Board within a three year period. A re-examination fee must be paid. A minimum of one year must elapse before taking the exam for the second time.

A candidate who has failed the oral examination on two or more occasions, must pass the Primary Examination for credit again before becoming eligible to retake the oral examination. Two letters of reference certifying the nature and quality of the candidate's practice must be submitted to the Board as well as hospital privilege letters. In addition, the candidate must pay the oral examination fee. Under these circumstances, candidates must take the oral examination within three years of re-passing the Primary Examination. Should the candidate not apply for or fail to appear for oral examination within the three year period, the candidate must retake and pass the Primary Examination before being eligible for oral examination once again.

Payment of Fees

Fees for filing an application and for oral examination will be determined by the Board. They reflect costs which the Board incurs to pay for obligations associated with the certification process. The application fee will not be returned even though the application for examination is denied. When notified by the Board that the candidate is eligible for oral examination, the candidate shall send that fee in the amount current (in U.S. dollars) at least 30 days prior to examination. Cancellation by the candidate less than 90 days prior to the examination will result in no refund of the examination fee.

Revocation of Certificate

Pursuant to Rules and Regulations established by the American Board of Neurological Surgery, the Board has the authority to revoke any certificate issued by the Board if: a) such certificate was issued contrary to or in violation of any rule or regulation of the Board, b) the person to whom the certificate was issued was not eligible to receive or has since become ineligible to continue to hold such a certificate, c) the person to whom the certificate was issued made any misstatement of fact to the

Board in his application or otherwise, d) the person to whom the certificate was issued is convicted of a felony. Should revocation be disputed, there is a hearing mechanism for such an action.

AMERICAN BOARD OF NUCLEAR MEDICINE

- John R. Hansell, MD, Chairman, Philadelphia
Pennsylvania
- Wil B. Nelp, MD, Vice Chairman, Seattle,
Washington
- Merle K. Loken, MD, Secretary, Minneapolis,
Minnesota
- M. Donald Blaufox, MD, Treasurer, Bronx, New York
- Naomi P. Alazraki, MD, Atlanta, Georgia
- David L. Gilday, MD, Toronto, Canada
- Nilo E. Herrera, MD, Danbury, Connecticut
- George A. Hermann, MD, Philadelphia, Pennsylvania
- I. Ross McDougall, MB, ChB, PhD, Stanford,
California
- Dennis D. Patton, MD, Tucson, Arizona
- Barry A. Siegel, MD, St. Louis, Missouri
- Edward V. Staab, MD, Gainesville, Florida
- Joseph F. Ross, MD, President,
- William H. Bland, Vice President,
900 Veteran Avenue, Los Angeles, California 90024

Requirements for Certification

A. General Requirements for Each Candidate

Assurance that the applicant represents himself/herself to be a specialist in nuclear medicine.

B. General Professional Education

Graduation from a medical school approved by the Liaison Committee on Medical Education or from a school of osteopathy. If the applicant is a graduate of a medical school outside the United States or Canada, he/she must hold a currently valid ECFMG certificate issued by the ECFMG, 2000 Pennsylvania Avenue, N.W., Suite 3600, Washington, D.C. 20037.

C. Preparatory Post-Doctoral Training

Training required for admission to the certifying examination in nuclear medicine shall be comprised of two or more years of preparatory post-doctoral training, and two or more years of residency training in nuclear medicine.

Preparatory post-doctoral training shall consist of two or more years of residency training in programs satisfactory to the American Board of Nuclear Medicine. Such programs shall provide broad experience in clinical medicine in which the primary emphasis is on the patient and his clinical problems. Preparatory training may be in any specialty in a residency program in the USA approved by the Accreditation Council for Graduate Medical Education (ACGME), or programs in Canada approved by the Royal College of Physicians and Surgeons of Canada, or the Professional Corporation of Physicians of Quebec. The American Board of Nuclear Medicine recommends that preparatory post-doctoral training should precede training in nuclear medicine. However, this preparatory post-doctoral training may be interspersed with or may follow the two years of nuclear medicine training.

Each nuclear medicine Residency Training Program Director must ensure that for each resident entering his program the preparatory post-doctoral training has been in a USA program approved by the ACGME, or in a Canadian program approved by the Royal College of Physicians and Surgeons of Canada (RCPSC), or the Professional Corporation of Physicians of Quebec (PCPQ).

D. Special Post-Doctoral Training in Nuclear Medicine

1. After completion of the preparatory post-doctoral training programs, there shall be satisfactory completion of a two-year formal

residency training program in nuclear medicine in a nuclear medicine residency training program recognized and approved by the Residency Review Committee for Nuclear Medicine and the ACGME or a Canadian program approved by the RCPSC or the PCPQ as competent to provide a satisfactory training in nuclear medicine.

2. The two-year formal residency training program in nuclear medicine must include:

- a. A minimum of eighteen months of training in clinical nuclear medicine, which will include, but not be limited to, radiobioassay, in vitro and in vivo measurements, nuclear imaging, the principals of nuclear magnetic resonance imaging, therapy with unsealed radionuclides, medical management of individuals exposed to ionizing radiation, the safe management and disposal of radioactive substances, and the direction of radiation safety programs.
- b. Training in allied sciences which must include: medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, statistics, and computer sciences; and may also include pathology, physiology, and other basic sciences associated with nuclear medicine. The time spent in training in allied science may be spaced throughout the period of training in nuclear medicine and in a manner that does not exceed six complete months of training.

c. For candidates who have completed one or more years of residency in clinical disciplines closely related to nuclear medicine, a maximum of three months credit may be given for prior training in allied sciences (described in the preceding paragraph) if obtained during a residency in an ACGME, RCPSC or PCPQ approved program. Likewise, a maximum credit of three months may be given for approved training in radioassay/radiobioassay or for training in ultrasound imaging and/or emission and transmission computed tomography. Regardless of the amount of training in fields allied to nuclear medicine, however, each candidate must satisfactorily complete a minimum of 18 months of clinical training in an ACGME, RCPSC or PCPQ approved program in nuclear medicine. Credit may be given for prior clinical training in nuclear medicine, nuclear radiology, and radioisotopic pathology obtained in programs approved by the ACGME, RCPSC or PCPQ.

3. The Board considers demonstration of clinical competence in the management of the nuclear medicine patient of paramount importance in its qualification of the applicant to take the certifying examination. The Board designates the directors of nuclear medicine residency programs and their supporting Evaluation Committees as the authorities who most appropriately can provide to the Board the necessary documentation of competence in clinical nuclear medicine, and requires that all program directors certify to the Board that each applicant from their programs is competent in clinical nuclear medicine. These reports will be reviewed by the Board before accepting an applicant to take the certifying examination.

If a residency program director's evaluation indicates a candidate's competence in clinical nuclear medicine is unsatisfactory, the applicant will not be admitted to the examination unless the Board finds that the applicant's overall performance meets its standards. An applicant not admitted to an examination on the basis of these findings may appeal in writing to the Board for a special evaluation of competence in clinical nuclear medicine within 45 days of receipt of notification. The appeal should state that a request is made for review of the decision not to admit to the examination and why the candidate considers the decision to be in error. Applicants whose clinical competence is judged satisfactory in this evaluation will be admitted to the next examination

Nuclear Medicine

for which they apply. Candidates judged not satisfactory in this evaluation are advised to spend an additional year training before applying again for special evaluation of competence.

Applicants submitting false credentials are subject to disqualification from examination or revocation of certification.

E. Patient Care Responsibility

Candidates for certification in nuclear medicine will have the equivalent of at least two years training in which the primary emphasis is on the patient and his clinical problems. This minimum period may be spaced throughout the entire post-doctoral training but should be of sufficient duration for the trainee to become knowledgeable in the aspects of clinical medicine relevant to nuclear medicine, including patient care.

F. Canadian Training

Physicians who satisfactorily complete training in Canadian nuclear medicine programs approved by the Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec are eligible for admission to the ABNM certifying examinations.

G. Completion of Training

All preliminary and nuclear medicine residency training must be completed prior to September 1st of the year the candidate takes the certifying examination.

Approved Residency Training Programs

Residency training programs in nuclear medicine accredited by the ACGME may be found in the *Directory of Residency Training Programs*, published annually by the American Medical Association or may be obtained by contacting: Secretary, Residency Review Committee for Nuclear Medicine, ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

Examination

An objective type examination is administered in a morning and an afternoon session. The examination evaluates the applicant's knowledge and competence in the management of patients in the area of clinical nuclear medicine, including, but not limited to, radioassay/radiobioassay, *in vitro* and *in vivo* measurements, nuclear imaging, the principals of nuclear magnetic resonance imaging, and therapy with unsealed radionuclides, the medical effects of exposure to ionizing radiation, the medical management of persons exposed to ionizing radiation, radiation safety, and the safe management and disposal of radioactive substances. Also included is an evaluation of the candidate's knowledge in the related sciences of medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, computer sciences, and statistics; it may also include pathology, physiology, and other basic sciences associated with nuclear medicine.

Applications

Applicants who wish to be examined by the Board must complete, sign and file with the Board office an application on the official form together with the supporting data required by the application. The application must include two photographs of the applicant, signed near any edge so that the face of the individual is not obscured. Do *not* sign the photographs on the back. The applicant must enclose a check to cover the examination fee and a self-addressed postcard which will be returned to the applicant when all application materials have been received by the ABNM. It is the responsibility of the applicant to make certain that the required evaluation forms have been completed by his/her Program Director, and sent to and received by the ABNM.

As soon as determination is made concerning admission or nonadmission to the examination, the candidate will be notified by mail; and if admitted, assignment of the candidate number and notification of the examination site will be given.

Before the final action on applications, officers, members, and employees of the Board are not authorized to estimate the eligibility of applicants. Applicants are requested not to discuss or write for opinions regarding the status of their application. The Board decides on eligibility to take the examination only by approving or disapproving individual applications, and accordingly has no "Board Eligible" category.

Inquiries concerning the applicability of previous training and experience should be sent with complete documentation of all education and training to the Board office. A copy of the Board's response to these inquiries should be forwarded with any subsequent examination application.

Release of Information

Candidates will receive the results of their examinations (pass/fail letter) approximately four months after the examination.

A list of diplomates of the ABNM will be found in the *ABMS Compendium of Certified Medical Specialists* published by the American Board of Medical Specialties and in the *Directory of Medical Specialists*, published by Marquis Who's Who.

Upon request and with the approval of the Board Chairman, the Board releases information on diplomates to federal and state licensing bodies and to educational and professional organizations for specific, limited, and appropriate professional use. An authorization for release of this information is a part of the examination application form.

Policy on Re-examination

Applicants who fail the examination are eligible for re-examination. Applicants who qualified for the 1976 examination, by fulfilling one of the alternative training requirements, but who failed or who withdrew for a valid reason may take a subsequent examination. An examination fee must accompany each completed application for re-examination. If an applicant is disqualified from the examination by reason of dishonesty in the application or in taking the examination and his/her examination is invalidated by the Board, re-examination shall be at the Board's discretion.

Recertification

The ABNM will offer voluntary recertification beginning in September 1988. The ABNM will not rescind initial certificates unless a date of expiration is a condition of the original certificate. No certificate issued to date contains an expiration date. Time-limited certificates will be issued beginning in 1992.

Changes in Policies and Procedures

The Board reserves the right to make changes in its fees, policies, and procedures at any time, and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Nuclear Medicine.

Fees

The examination fee must accompany the application. If the applicant is rejected by the Board, or withdraws prior to August 1, the application processing fee will be retained by the Board. If the applicant withdraws after August 1, the entire examination fee will be retained by the Board.

Types of Board Status

1. Active Candidate Status
 - A. A candidate for certification may achieve active candidate status when upon application the Board rules that he/she has fulfilled the requirements to take the next regularly scheduled examination. (See Requirements.)
 - B. To maintain active candidate status the candidate must have applied and have been ruled eligible to take the next appropriate regularly scheduled examination: written or oral.
 - C. Active candidate status which has been interrupted may be regained only by reapplication and reaffirmation by the Board of a candidate's current eligibility to take the next appropriate examination.
2. Diplomate Status

A candidate becomes a Diplomate of the Board when he/she has fulfilled all requirements, has satisfactorily completed the written and the oral examinations and has been awarded the Board's Diploma.

The Certification Process

Certification as a specialist in obstetrics and gynecology is the end of a process lasting many years. The required minimum duration of graduate education is four years.

During the final year of graduate training, it is necessary to initiate certain measures. Because most graduate training programs begin on July 1 and end on June 30, the following summary of the certification process is based on these dates. However, applicants who complete residency training at unusual times will have an extended time in the certification process.

Between August 15 and November 30 of the final year of residency, the candidate should request and complete the application for the written examination. If he/she is ruled eligible to take the examination, he/she will do so in June of the final year of residency.

If he/she passes the written examination, the candidate enters a two-year period of practice in the specialty. The candidate is required to provide a list of patients under his/her care for a 12-month period beginning on July 1 of his/her second year of practice. Between January 1 and February 28 of his/her second year of practice, the candidate should request and complete the application for the oral examination.

The candidate may enter a 2-year Board-approved post-residency fellowship. Upon completion, this candidate will then enter a one-year period of practice in the specialty. This candidate is required to provide a list of patients under his/her care during this year of practice. Between January 1 and February 28 of this year of practice, the candidate should request and complete the application for the oral examination.

The candidate's list of patients must be mailed to the Board office between July 1 and August 31 following the completion of the 12-month period of patient care. If ruled eligible the candidate thus takes the oral examination in December.

Important Dates in the Certification Process

- III. Final year of residency
 - July 1—Commence
 - September 1—November 30—Apply for written examination
 - June—Take written examination
- III. Practice
 - A. First year of practice
 - A. No Board activities necessary
 - III. B. Second year of practice
 - July 1 to June 30—Patient List
 - January 1-February 28—Apply for oral examination
 - III. C. Third year of practice
 - August 31—Deadline for submission of patient list
 - December—Take oral examination

Obstetrics and Gynecology

- III. Fellowship in Subspecialty
- III. A. First year (fellowship)
No Board activities
- III. B. Second year (fellowship)
No *Basic* Board activities
(September 1-November 30—Apply for Subspecialty
Written Examination)
- III. C. Third year—first year of practice
July 1-June 30—Patient list
January 1-February 28—Apply for the oral
examination
- III. D. Fourth year—second year of practice
August 31—Deadline for submission of patient list
December—Take oral examination

Responsibility of a Candidate

It is the responsibility of the candidate to seek information concerning the current requirements for certification as an obstetrician and gynecologist. The Board does not assume responsibility for notifying a candidate of changing requirements or the impending loss of his/her eligibility to take an examination.

A physician who formally obligates himself/herself to an accredited residency program and then later breaks his/ her agreement without justifiable cause may be required to provide an explanation satisfactory to the Board before being considered to have served satisfactorily as a resident in an accredited program.

The Written Examination

The Written Examination is a 3 and 1/3 hour examination consisting of questions of the objective (multiple choice) type. Questions will be chosen from each of the following areas of knowledge:

- A. Anatomy, Embryology and Genetics.
- B. Physiology.
- C. Endocrinology, Fertility and Infertility.
- D. Gynecology.
- E. Obstetrics.
- F. Medicine, Surgery and Psychosomatic Problems.
- G. Pathology.
- H. Oncology.

The candidate will be expected to demonstrate skills necessary to apply basic knowledge to the management of clinical problems. These skills include:

- 1. Obtaining needed information.
- 2. Interpretation and use of data obtained.
- 3. Selection, instituting and implementing care.
- 4. Management of complications.
- 5. Following and continuing care.

The areas of information and skills examined for are further outlined in "Educational Objectives for Resident Education in Obstetrics and Gynecology" published by the Council on Resident Education in Obstetrics and Gynecology.

Requirements

1. *Degree of Doctor of Medicine, or an equivalent degree, and unrestricted license (not educational or institutional)* to practice medicine in one of the states or territories of the United States or a province of Canada.

Candidates with a D.O. degree must have graduated from a school of osteopathy accredited by the American Osteopathic Association.

BEGINNING WITH THE 1989 EXAMINATION, GRADUATES OF MEDICAL SCHOOLS NOT ACCREDITED BY THE LIAISON COMMITTEE FOR MEDICAL EDUCATION (LCME) OR THE COMMITTEE ON ACCREDITATION OF CANADIAN MEDICAL SCHOOLS (CACMS) MUST PROVIDE

EVIDENCE OF PASSING PERFORMANCE ON BOTH PARTS OF THE FOREIGN MEDICAL GRADUATE EXAMINATION IN MEDICAL SCIENCES (FMGEMS).

2. The candidate will be required to have completed or be near completion of no less than four years in clinical programs accredited by the Accreditation Council for Graduate Medical Education or the Council of the Royal College of Physicians and Surgeons of Canada. This must include a least 36 months of obstetrics and gynecology, including the usual time as chief (senior) resident in the program. Completion of a year of "PG-1" plus a three year residency program, or a four year residency program will fulfill this requirement, but if the program consists of more than four years, the entire program must be completed.

TIME SPENT IN AN OSTEOPATHIC HOSPITAL OR IN ANY PROGRAM NOT ACCREDITED BY THE ACCREDITATION COUNCIL FOR GRADUATE MEDICAL EDUCATION WILL NOT FULFILL THIS REQUIREMENT.

3. A statement signed by the program director certifying that the candidate has:

- 3. a. followed satisfactorily the course of instruction designed for this program;
- 3. b. completed and submitted to the program director a resident experience log;
- 3. c. achieved the appropriate knowledge, ability, and judgment in order to provide competent clinical care in obstetrics and gynecology, as documented by ongoing evaluation during the entire resident program;
- 3. d. demonstrated the necessary technical skills to competently perform:
 - 3. d. (1) major abdominal and vaginal surgical procedures upon the female pelvis and related structures,
 - 3. d. (2) spontaneous and operative obstetric deliveries,
 - 3. d. (3) surgical exploration of the abdomen,
 - 3. d. (4) endoscopic procedures in the pelvis,
 - 3. d. (5) diagnostic evaluation including electronic monitoring, ultrasound, colposcopy and amniocentesis,
 - 3. d. (6) diagnosis and treatment of complications of the above, and
- 3. e. demonstrated good moral and ethical character.
- 4. Special considerations may be given for *outstanding candidates* on an individual basis if requested by a program director of an accredited program in obstetrics and gynecology. To be considered, candidates must have received adequate formal training in obstetrics and gynecology. If the request relates to foreign training, the candidate must have been observed by the proposer for at least one year. The request must document the evidence for the candidate's outstanding accomplishments.

Limited Eligibility

Candidates who fail to take the written examination within three years of completion of the residency, fail the written examination three times, or do not pass the written examination within six years of completion of the residency must have additional education in order to become eligible to take the written examination again.

The additional education shall consist of three months of full-time additional training *satisfactory* to the Board in an accredited obstetrics and gynecology residency program or satisfactory completion of 500 Category I credits in approved CME programs in obstetrics and gynecology during one year. Documentation of satisfactory completion of this additional education must be received with the candidate's application for the repeat written examination.

After the additional education as defined above is completed in a satisfactory manner, the candidate again becomes eligible to take the written examination. He/she must take the written examination within three years of establishing the new eligibility. Candidates who do not take the examination during those three years or who again fail the

examination three times must again have additional education. Candidates must pass the examination within six years of achieving new eligibility or they will be obliged to obtain additional education.

Application for Examination in 1988

A candidate who has completed an accredited residency program and a candidate scheduled to complete an accredited residency program on or before August 31, 1988 may apply on or before November 30, 1987 to write the examination on June 27, 1988.

The form on which to apply to write the examination on June 27, 1987 may be obtained by *writing* to the Board office after September 1, 1987. Each applicant must meet the requirements effective in the year he/she requests admission to the examination. As a part of the application form, endorsement and verification of the resident's experience, competence, SATISFACTORY PERFORMANCE and confirmation of the scheduled date for completion of the candidate's residency are requested of the director of the obstetric-gynecologic residency program.

The Board will make the final decision concerning the applicant's eligibility after considering all circumstances affecting his/her eligibility.

A candidate's application to write the examination on June 27, 1988, completed in all details, together with payment of the application fee of \$125, must be received in the Board office postmarked on or before November 30, 1987.

THE REQUIREMENT OF *UNRESTRICTED LICENSE* MUST HAVE BEEN MET *PRIOR* TO THE TIME THAT THE APPLICATION IS SUBMITTED. AN EDUCATIONAL OR INSTITUTIONAL LICENSE IS *NOT* SATISFACTORY.

When the candidate is ruled eligible to write the examination he/she will be notified in early April (1) that the \$250 examination fee is payable and (2) the date the fee must be paid (see FEES), if the candidate is to be scheduled to write the examination in June.

If a candidate is found to be involved in litigation or investigation regarding ethical or moral issues, he/she will not be scheduled for examination and eligibility will be re-examined. Typically the Credentials Committee will defer such a decision for one year to gain further information.

Falsification of data (including case lists) or evidence of other egregious ethical, moral or professional misbehavior may result in a deferral of consideration of a candidate's application for at least three years and the candidate must meet all eligibility requirements in effect at the end of the deferred period.

When the Credentials Committee rules an applicant *not eligible*, a *new application* and *fee* may be submitted at a later date, but the candidate must then have fulfilled the requirements effective in the year of the new application.

Admission to the Written Examination

The candidate ruled eligible to write the examination will be sent an AUTHORIZATION for ADMISSION form which must be presented to the Proctor at the time and place of examination. When a candidate is scheduled to complete his/her residency program after submission of the application (but before September of that year), verification of the currently satisfactory manner in which the candidate is completing his/her residency must be reaffirmed by the signature of the director of the residency program on the AUTHORIZATION for ADMISSION form, dated within the month the candidate is scheduled to write the examination.

Results of the Examination

The results of the examination written in late June will usually be reported to each candidate in approximately nine weeks.

A passing grade on the written examination does not establish a candidate's eligibility to take the oral examination for certification. (See Requirements to take the oral examination.)

Requests for Re-examination

A candidate eligible to write the examination in 1988 who fails to do so, as well as the candidate who writes but fails to pass the examination in 1988 must write the Board office on or before November 30, 1988 asking to be scheduled for the examination in 1989. All such requests must be accompanied by payment of the reapplication fee of \$125. It is not necessary to submit a new application in order to repeat the examination, but to maintain eligibility to write the examination, the candidate must have asked to write the next scheduled examination and have paid the reapplication fee (see Status). THE CANDIDATE MUST INDICATE CONTINUATION OF UNRESTRICTED LICENSE TO PRACTICE MEDICINE IN ONE OF THE UNITED STATES OR A PROVINCE OF CANADA.

The application and examination fee (see Fees) must be paid each year a candidate is to be scheduled to write the examination.

The Oral Examination

All correspondence, applications and information directed to the Board must be in English.

All fees must be paid in U.S. currency.

Conduct of the Oral Examination

The Oral Examination is designed to evaluate the candidate's knowledge and skills in solving clinical problems in obstetrics-gynecology. It is emphasized that candidates will be examined in all areas of obstetrics and gynecology. More than half of the examination will consist of questions concerning patient management problems. The candidate's list of patients will be used freely by the examiners for this purpose but additional basic clinical problems will be included. The remainder of the examination will include recall of basic knowledge in obstetrics-gynecology and interpretation of gross and microscopic pathology, x-ray films, sonograms and related material from photographic slides.

Microscopes and slide projectors will be used. The knowledge and skills required for the Oral Examination are the same as those listed in regard to the Written Examination.

Recording devices will not be permitted during the oral examination.

Candidates will be expected to demonstrate that they have acquired the capability to perform, independently, major gynecologic operations, spontaneous and operative obstetric deliveries, to manage the complications thereof and to perform the essential diagnostic procedures required of a consultant in obstetrics and gynecology.

CANDIDATES WILL BE EXPECTED TO DEMONSTRATE A LEVEL OF COMPETENCE WHICH ALLOWS THEM TO SERVE AS CONSULTANTS TO PHYSICIANS WHO ARE NON OBSTETRICIAN-GYNECOLOGISTS IN THEIR COMMUNITY.

The report of the examining team will be reviewed by the Board of Directors and each candidate is passed or failed by vote of the Board.

You can expect the examination to be completed within a half day, with the following exception:

At the completion of the oral examination—if a candidate believes his or her examination has not been conducted in a fair and unprejudiced manner, the candidate may report within the hour to the Registration Desk and ask for a second examination. This will be provided within the next 24 hours, at no additional charge, if the candidate agrees to the following conditions:

- a. The repeat examination will be conducted by an entirely different team of examiners, no one of whom shall have previously participated in an examination of the candidate.

Obstetrics and Gynecology

- b. Neither the questions nor the candidate's answers on the first examination will be known to or taken into account by the second group of examiners.
- c. All questions and answers will be recorded. The decision of the examiners conducting the second examination shall determine the results of the candidate's oral examination.

Requirements

1. Passing grade on the written examination.
2. Good moral and ethical character.
3. Unrestricted license to practice medicine in one of the United States or Territories of the United States or a Province of Canada, for no less than 12 months prior to the date of the application.
4. Actively engaged in (private or nonprivate) unsupervised practice.
 - a. Independent unsupervised patient care limited to obstetrics and gynecology.
4. a. 1) for no less than 12 months *immediately* prior to date of application (time spent in a critical care fellowship does not meet this requirement) or
 - 2) for no less than 6 months *immediately* prior to January 1 of the year of examination, for candidates who have successfully completed a Board-approved fellowship (this includes critical care fellowships *only* if taken in continuity with a Board approved specialty fellowship).
4. b. Unrestricted privileges to practice as an obstetrician-gynecologist in *each* of the hospital(s) in which the candidate has been responsible for patient care during the 12 months ending June 30 prior to the scheduled examination. If the candidate is under investigation or on probation, the examination will be deferred until the investigation is completed, the probation is lifted and full and unrestricted privileges are granted.
5. Submission of typewritten lists (in duplicate) on or before August 31 preceding the examination, of all patients dismissed from care in all hospitals during the 12 months ending June 30 prior to the scheduled examination and also a list of 25 patients from ambulatory (office) practice.

THE CANDIDATE IS PERSONALLY RESPONSIBLE FOR THE PROPER PREPARATION, ACCURACY AND COMPLETENESS OF THE CASE LISTS, WHICH WILL REFLECT THE UNSUPERVISED PRACTICE (PRIVATE OR NONPRIVATE) ACTIVITY *FOLLOWING* RESIDENCY AND FELLOWSHIP.

6. On the day of the examination the candidate will be expected to sign the following statement: "There have been no restrictions in my hospital privileges since the date of my application."

7. Practice which consists of ambulatory care exclusively will not be considered adequate to fulfill these requirements.

ADDITIONAL REQUIREMENTS FOR CANDIDATES PRACTICING IN A COUNTRY OTHER THAN THE UNITED STATES OR CANADA.

8. Submission *with the application* of a letter(s) from a senior responsible officer in the hospital(s) where the candidate practices, verifying the candidate's responsibility for independent, unsupervised care of obstetric and gynecologic patients.

Limited Eligibility

Candidates must pass the oral examination within six years following passing the written examination and may take the oral examination only three times. If they fail the oral examination three times, or fail to pass the oral examination within six years, they become ineligible at that time. They must repeat and pass the written examination within three years of that time to become eligible again. The repeat written examination may be taken only three times.

Candidates who fail to take or do not pass the repeat written examination during the three year period are no longer eligible for the

examinations of The American Board of Obstetrics and Gynecology unless they successfully repeat a full residency in an accredited program in obstetrics and gynecology.

Candidates who do pass the repeat examination may repeat the oral examination only three times and must pass the oral examination within the ensuing three years or they will no longer be eligible for the examinations of The American Board of Obstetrics and Gynecology. Eligibility to again enter the process may be re-established only by successfully repeating a full residency in an accredited program in obstetrics and gynecology.

Determination of Eligibility

The Board will require, by confidential inquiry, documented evidence concerning a candidate's professional reputation, moral and ethical character and in-hospital practice privileges from administrative officers of organizations and institutions to whom the candidate and his/her conduct of practice is known.

Time as a "resident" or "house officer" in excess of that necessary to fulfill the requirements to take the written examination or time in a "student" or a teaching or research appointment which does not involve appointment to the staff of an approved hospital with unrestricted privileges to practice as an obstetrician and gynecologist, will not be acceptable evidence of a degree of responsibility for patient care that is acceptable fulfillment of the required "independent practice."

Each candidate will be required to furnish the Board with certain prescribed information concerning his/her performance in practice (maternal mortality rate—perinatal mortality rate—Caesarean Section rate—etc.).

If a candidate is found to be involved in litigation or investigation regarding ethical or moral issues, he/she will not be scheduled for examination and eligibility will be re-examined. Typically the Credentials Committee will defer such a decision for one year to gain further information.

Falsification of data (including case lists) or evidence of other egregious, moral or professional misbehavior may result in deferral of consideration of a candidate's application for at least three years and the candidate must meet all eligibility requirements in effect at the end of the deferred period.

PATIENT LISTS (a) NOT PROVIDING THE INFORMATION REQUESTED (b) NOT PREPARED IN ACCORDANCE WITH THE FORMAT REQUESTED OR (c) WHICH DO NOT HAVE ADEQUATE NUMBERS OF PATIENTS OR DO NOT INCLUDE ADEQUATE BREADTH AND DEPTH OF CLINICAL PROBLEMS MAY DISQUALIFY THE CANDIDATE FOR ADMISSION TO THE ORAL EXAMINATION.

Application for Examination in 1988

Application to take the oral examination in December 1988 must be made on the "application for the 1988 examination" form. The application, complete in all details, with payment of the application fee of \$225 must be received in the Board office during January or February 1988. THE DEADLINE DATE FOR RECEIPT OF APPLICATIONS IN THE BOARD OFFICE IS A POSTMARK OF FEBRUARY 28, 1988. REQUESTS FOR THE APPROPRIATE FORM MUST BE MADE IN WRITING.

The Board will make the final decision concerning the applicant's eligibility after considering all circumstances affecting his/her eligibility.

A candidate ruled eligible to take the oral examination in December 1988 will be so notified on or before July 15, 1988. He/she must then submit, on or before August 31, 1988:

1. Duplicate, typewritten and verified lists of all patients dismissed from his/her care in all hospitals during the 12 months preceding June 30, 1988 and a list of 25 patients from his/her ambulatory (office) practice.

The candidate's lists of patients will be used as a basis for questions during the oral examination and will not be returned to the candidate, and

2. Payment of the examination fee by personal check or money order of \$350 (IN U.S. FUNDS).

Patient Lists for the Oral Examination

Each candidate for the Oral Examination must prepare the following lists for review by his/her Examiners at the time of examination. The candidate's list of patients will be freely used as a basis for questions which will be patient-management oriented. Questions will be developed which test the ability of the candidate to:

- 1) Develop a Diagnosis. This includes the necessary clinical, laboratory and diagnostic procedures.
- 2) Select and Apply Proper Treatment under elective and emergency conditions.
- 3) Manage Complications. This includes prevention, recognition and treatment.
- 4) Plan and direct follow-up and continuing care.

CARELESSLY PREPARED OR INCOMPLETE CASE LISTS MAY CONTRIBUTE TO FAILURE TO PASS THE ORAL EXAMINATION.

THE CANDIDATE SHOULD BRING A DUPLICATE PATIENT LIST TO THE ORAL EXAMINATION FOR PERSONAL REFERENCE. DO NOT INCLUDE ANY INFORMATION ON THIS DUPLICATE LIST WHICH DID NOT APPEAR ON THE CASE LISTS SENT TO THE BOARD OFFICE.

The case lists must have numbers and sufficient breadth and depth of clinical difficulty. They must include a minimum of 50 patients with significant problems. The clinical problems will vary according to the nature of the candidates' practices. However, the problems must be of sufficient variety and severity to permit the evaluation of a candidate's ability to function as a consultant. Ordinarily these lists will include patients having obstetric management and a variety of major abdominal and vaginal surgical procedures. Candidates who have successfully completed a Board-approved fellowship and who are *active candidates* for certification of special qualification may submit cases in a single specialty within obstetrics and gynecology.

The candidate's list must include all hospitalized patients discharged or transferred from the candidate's care during the twelve months ending June 30 of the *current year* and 25 ambulatory (office) patients and must be mailed to the Board office on or before August 31 preceding the December examinations.

The patients listed must be only those for whom the candidate has had personal responsibility for professional management and care. Recording such professional responsibility implies that the candidate has personally controlled the medical and/or surgical management of each patient listed. In the case of partnership or group practice, the patients listed should be only those managed by the candidate.

Procedure

A candidate ruled eligible to take the Oral Examination the following December will be notified about July 15. Following this notification and before August 31, the candidate must submit the required list of patients.

A patient list should be accurately *typed* in duplicate across *unbound* sheets of white paper 8 1/2 x 11 inches in size. Separate lists are required for each hospital. The headings must conform in all details and provide the information indicated by the format of the forms enclosed with the oral application.

Standard nomenclature should be used. Abbreviations are not acceptable. Only English language will be acceptable.

The duplicate lists of patients will not be returned after the examination. The candidate should bring a duplicate list to the examination.

1. GYNECOLOGY

A list of ALL gynecologic patients—(a) hospitalized (b) ambulatory or short-stays surgery—should be prepared in the format accompanying the application and listed in order as follows:

- (1) major operative procedures
- (2) minor operative procedures
- (3) non-surgical admissions

The preoperative diagnosis should appear for all major and minor surgical procedures. For non-surgical conditions the admission diagnosis should be recorded. The treatment recorded should include all surgical procedures as well as primary non-surgical therapy. Surgical diagnosis refers to the pathology diagnosis. FOR HYSTERECTOMY SPECIMENS THE UTERINE WEIGHT IN GRAMS MUST BE RECORDED. In cases without tissue for histologic diagnosis the final clinical diagnosis should be listed.

Days in hospital on this listing of patients, as well as on all other lists, is the arithmetic difference between date of discharge and date of admission.

2. OBSTETRICS

A list of obstetric patients should be prepared in the format accompanying the application. List separately each patient with a complication or abnormality, as well as medical and surgical intervention during pregnancy, labor, delivery and the puerperium. In addition, a total of the number of normal, uncomplicated obstetric patients, managed by the candidate during the same 12 month period should appear at the end of the obstetric list.

Interpretation of "normal obstetric patients" for this listing implies that:

pregnancy, labor, delivery and the puerperium were uncomplicated, labor began spontaneously between the 37th and 42nd week of gestation, the membranes ruptured or were ruptured after labor began, presentation was vertex, position was occiput anterior or transverse, labor was less than 24 hours in duration, delivery was spontaneous or by outlet forceps with or without episiotomy, from an anterior position, the infant was not asphyxiated (Apgar 6 or more) of normal size and healthy, the placental stage was normal and blood loss was not excessive.

Deliveries not fulfilling these criteria must be listed individually.

3. PREGNANCY TERMINATIONS

The total number of uncomplicated terminations of pregnancy of twelve or less weeks duration, managed by the candidate during this same 12 month period, should be reported simply as a total number.

Interruptions of pregnancy of more than twelve weeks (menstrual age) duration should be prepared in the format accompanying the application. List each patient separately, indicating the duration of pregnancy, the technique employed, the duration of (1) hospitalization, and/or (2) your observation of the patient.

Also list separately as individual patients, all with complications following terminations of pregnancy, either observed or reported to you following an interruption of pregnancy, regardless of the duration of the pregnancy when termination was initiated.

4. COVER SHEETS

Each list of patients, (1) gynecologic, (2) obstetric, and (3) terminations of pregnancy, from each hospital should be verified as illustrated by the form accompanying the application. Note that the record librarian or other hospital official must attest that (a) the patients listed were cared for by the candidate, and (b) that all of the hospitalized patients dismissed from the candidate's care have been separately listed or reported in the totals reported for the period indicated.

Obstetrics and Gynecology**5. SUMMARY SHEET**

Using the form provided for this purpose, prepare a summary of all cases for all hospitals combined.

6. AMBULATORY (OFFICE) PATIENTS:

A list of 25 patients from the candidate's ambulatory (office) practice should be prepared in the format accompanying the application. List separately patients who have presented with any of the following problems. List no more than five patients from any one category.

Genetic Problems

Amenorrhea

Infertility

Abnormal Uterine Bleeding

Developmental Problems

Sexual Dysfunction

Contraception Complications

Hirsutism

Abnormal Cervical-Vaginal Cytology

Pelvic Pain

Vaginal Discharge/Pruritus

Breast Problems

Medical Complications of Pregnancy

Premenstrual Tension

Postoperative Problems

Sexually Transmitted Disease

Asymptomatic Pelvic Mass

Pelvic Relaxation Problems

Urinary Tract Infection

Psychosomatic Problems

Menopause

List separately each patient and include the problem (one of the listed categories), diagnostic procedures, treatment, results and number of office visits during the 12 month period.

Admission to the Oral Examination

If the examination fee has been paid AND the duplicate lists of patients have been submitted by August 31, 1988, the candidate will receive an Authorization for Admission Form and a Reservation Card for the hotel at least one month prior to the examination, indicating the day, time and place to report for the examination. *Please keep us informed of your current mailing address.*

Ruling of Ineligibility

A candidate ruled ineligible to take an oral examination, may subsequently re-apply, but must then submit a new application, pay the application fee, and meet the requirements applicable at the time he/she re-applies. (See Status.) If the candidate was disqualified because the case lists were judged insufficient for a fair examination, the new case lists will be added to those already submitted.

Re-examinations

A candidate who is disqualified or who fails to pass the oral examination must reapply in order to take the examination another year by submission of a new application during January and February, with payment of the reapplication fee of \$225.

A candidate reapplying for re-examination will again be asked to provide verification of his/her responsibilities for patient care and will again be notified, early in July in regard to his/her eligibility to take the next examination.

A candidate accepted for re-examination must again submit, on or before August 31 prior to examination, *new* case lists of patients for the 12 months prior to June 30 prior to the oral examination.

The examination fee of \$350 is due each time a candidate receives notice that he/she can be scheduled to take the oral examination. Each re-examination will be conducted by examiners who have no knowledge of the fact or circumstances of a candidate's previous failure.

Postponement of Oral Examination

A candidate failing to take an oral examination for which he/she had been scheduled must submit a new application during January or February of the following year when his/her eligibility to take the next examination will be determined on the basis of the candidate's professional activities as reported during the current year. Payment of the \$225 re-application fee must accompany each re-application.

If notified of his/her eligibility to take the next oral examination he/she must again submit before August 31 a listing of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the oral examination and a list of 25 patients from ambulatory (office) practice.

Fees

Since the fees have been computed to cover the costs of examination and administrative expense, they will not be refunded or credited. All fees must be paid in United States currency. The candidate's cancelled check is to be considered the receipt.

The Written Examination

The application fee of \$125 must be enclosed with each application, reapplication or request to write the examination. The candidate will usually be notified early in April that his/her application or request has been approved, at which time the \$250 examination fee will be due. If payment of the examination fee has not been received in the Board office postmarked on or before May 1, the candidate will not be scheduled to write the examination in June.

No application fees will be either credited against a future application or refunded.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to June 1.

The Oral Examination

The application fee of \$225 must be enclosed with each application to take the oral examination. A candidate notified in mid-July of his/her eligibility to take the oral examination in December is required to pay the \$350 examination fee before he/she will be scheduled to take the oral examination. If the examination fee has not been received in the Board office postmarked on or before August 31, the candidate will not be scheduled to take the examination the following December.

No application fees will be either credited against a future application or refunded.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to October 31.

Listings of Certified Diplomates

Each year the Board office notifies the American College of Obstetricians and Gynecologists of the names and addresses of the Diplomates certified in that year. A list of the names of the most recently certified Diplomates is sent also to the American Medical Association and to the American Board of Medical Specialties with the request that they be included in the next issues of (1) the American Medical Association Directory and (2) in the Directory of Certified Obstetrician-Gynecologists.

A candidate's name will be included in the lists to be published only if the candidate has authorized inclusion of his/her name in the specific listings by signing accordingly on the Authorization for Admission Form at the time of his/her oral examination.

After this effort to assure initial listings of the newly certified Diplomate, the Board assumes no responsibility for a Diplomate's listing in subsequent issues of any Directory.

Revocation of Diploma or Certificate

Each candidate when making application, signs an agreement regarding disqualification or revocation of his/her diploma, certificate, or other evidence of qualification, for cause. Revocation may occur whenever:

1. The physician shall not in fact have been eligible to receive the diploma or certificate, irrespective of whether or not the facts constituting such ineligibility were known to or could have been ascertained by this Board, its members, directors, examiners, officers or agents at or before the time of issuance of such diploma or certificate.

2. Any rule governing examination for a diploma or certificate shall have been violated by the physician but the fact of such violation shall not have been ascertained until after the issuance of his diploma or certificate.

3. The physician shall have violated the moral or ethical standards of the practice of medicine then accepted by organized medicine in the locality in which he/she shall be practicing and, without limitation of the foregoing, the forfeiture, revocation or suspension of his/her license to practice medicine, or the expulsion from, or suspension from the rights and privileges of membership in a local, regional or national organization of his/her professional peers shall be evidence of a violation of such standards of the ethical practice of medicine.

4. The physician shall fail to comply with the Rules and Regulations of this Board.

5. The issuance of, or receipt by him/her of such diploma, certificate or other evidence of qualification shall have been contrary to or in violation of the Certificate of Incorporation or the By-laws of this Board.

Upon revocation of any diploma or certificate by this Board as aforesaid, the holder shall return his/her diploma or certificate and other evidence of qualification to the Executive Director of the Board and his/her name shall be removed from the list of certified specialists.

Governing Rules and Regulations

The Board's Rules and Regulations, which are subject to change from time to time without notice, contain specific provisions concerning eligibility for the examinations administered by the Board; an appeals process, which is available under certain circumstances; the application process; the examination processes; a description of the circumstances under which the applicant will be required to reactivate an existing application, or submit a new application, or repeat part or all of an examination; a list of occurrences that could lead the Board to revoke a certificate previously issued by it to a Diplomate or to place the Diplomate on probation; and other matters relating to the Board's examination and certification processes. Many, but not all, of those provisions are summarized or described in this publication. In the event of any inconsistency between the Board's Rules and Regulations and this publication, or any omission from this publication of any provision of the Rules and Regulations, the Rules and Regulations shall govern. Copies of the Rules and Regulation are available upon request from the Board's Executive Office.

Requirements

Many physicians write to the Board outlining their training and asking for an estimate of their qualifications and whether further training is required. The Board's requirements, as published herewith, provide this information and any potential applicant should be able to estimate his/her status after studying these requirements. Individual officers or Directors of the Board cannot and will not make such determinations. All evaluations of an applicant's status will be made only by the Committee on Admissions in accordance with the rules and regulations of the Board, after submission of an application for examination and payment of the registration fee, which must accompany the application. Personal interviews with officers and Directors of the Board should not be requested at any time.

EDUCATIONAL

All applicants must have graduated from a medical school or from a school of osteopathy.

All candidates entering ophthalmology training programs must have taken a postgraduate clinical year (PG-1) in a program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The PG-1 year must be comprised of training in which the resident has primary responsibility for patient care in fields such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, six months of this year must consist of a broad experience in direct patient care.

In addition to a PG-1 year, all applicants must have satisfactorily completed an entire formal graduated residency training program in ophthalmology of at least thirty-six (36) months duration (PG-4 or better) in either the United States, accredited by the Accreditation Council for Graduate Medical Education, or in Canada approved by the Royal College of Physicians and Surgeons of Canada.

The applicant's program director is required to verify satisfactory completion of an entire formal graduated ophthalmology residency training program of at least thirty-six (36) months duration.

Only those applicants who have completed their entire ophthalmology residency, PG-4 or beyond, by August 1st are eligible to apply for the following April written qualifying examination.

If a program is disapproved during the course of a resident's training, he/she must complete the remaining required number of months of training in another approved program in which case the last program director under whom the applicant trains becomes responsible for the verification of satisfactory completion. The program director's verification form cannot be submitted to the Board until the applicant has completed the entire residency training program.

Ophthalmology

LICENSURE

An applicant may have graduated from a medical school of a country other than the United States or Canada. Graduates of foreign medical schools must have a certificate from the Educational Commission for Foreign Medical Graduates (ECFMG).

All applicants must also have a valid and unrestricted license to practice medicine in the United States, its territories, or Canada. Applicants must reveal if a license in any state or province has previously been restricted or revoked.

Applications

An applicant who wishes to be examined by the Board shall complete, sign and file with the Executive Director an application on the official form then in use by the Board. The application shall be considered complete only when all supporting data required by the application including the program director's verification form are also filed with the Executive Director. Applications can be obtained from the chairmen of accredited residency programs or from the Office of the Board. *If an applicant wishes to be considered for a Written Qualifying Examination to be conducted in a particular year, his or her application and all supporting data, including supporting data furnished directly by others with respect to the applicant, must be postmarked between January 1st and August 1st except for the program director's verification form which may be postmarked on or before October 1st of the calendar year immediately preceding the calendar year in which the Written Qualifying Examination is to be conducted.*

By paying a late fee the deadline for postmarking the completed application may be extended from August 1st to September 1st. No other exceptions to, or extensions of, these requirements will be made for any reasons. The dates of future examinations will be announced in *Ophthalmology* and the *Journal of the American Medical Association*.

An applicant who does not receive notification from the Board office by January 15 of the acceptance or rejection of his or her application must contact the Board office in writing to inquire about the status of the application. Failure to contact the Board office in writing by February 15 will result in such applicant's removal from the examination roster.

If a completed application and all required supporting data are not timely postmarked the application will not be valid, and the application fee shall be returned. It is best not to mail application materials just before the postmark deadline because packets are sometimes postmarked a day or two after mailing. Caution: If there is a discrepancy between a metered postmark and an official U.S. Postal Service postmark, the later will be considered official.

The application shall be accompanied by a check payable to the Board for the application fee. No application will be considered to be complete until the fee and all required supporting data, including a copy of your current registration to practice medicine and two recent photographs for identification at the written qualifying examination and the oral examination, have been received by the Executive Director.

Fees

Review of application and registration for Written Qualifying Examination, \$575, payable with application.

Late application fee after August 1st, \$735.

Oral examination, \$470, payable on successful completion of the Written Qualifying Examination.

To repeat the Written Qualifying Examination, \$420.

To repeat the entire oral examination, \$470.

To repeat a single subject of the oral examination, \$210.

To repeat two or three subjects of the oral examination, \$315.

Fees for accepted candidates for the written qualifying examination and the oral examination are not refundable. The fees for examinations

shall be established annually by the Board of Directors on the basis of the actual and anticipated costs of the Board in the examination of applicants and the administration of its business. The Directors of the Board shall serve without compensation except for reimbursement of expenses.

Cancellations

To cover administrative expenses an additional charge equal to fifty percent of the original fee for the particular examination will be imposed on any applicant who cancels or fails to keep an examination assignment, written or oral, regardless of reason.

Written Qualifying Examination

In order to qualify for an oral examination, each applicant must pass a Written Qualifying Examination. This is a multiple choice test which may cover any topic in ophthalmology and is especially devoted to the following subjects from the Basic and Clinical Science Course of the American Academy of Ophthalmology:

1. Fundamentals and Principles of Ophthalmology
1. (Anatomy, Biochemistry, and Physiology)
2. Optics, Refraction and Contact Lenses
3. Intraocular Inflammation, Uveitis, and Ocular
3. Tumors
4. Retina and Vitreous
5. Neuro-Ophthalmology
6. Pediatric Ophthalmology and Strabismus
7. External Disease and Cornea
8. Glaucoma, Lens, and Anterior Segment Trauma
9. Orbit, Eyelids, and Lacrimal System
10. General Medical Care Problems
11. Ophthalmic Pathology

The examination has also been described in the Board's booklet entitled "Written Qualifying Examination."

The Written Qualifying Examination is given simultaneously in designated cities in the United States in April of each year.

An applicant who, on three (3) consecutive occasions, fails to take a Written Qualifying Examination for which the applicant is scheduled will not be permitted to apply for a subsequent Written Qualifying Examination until twenty-four (24) months have elapsed following the date of the last examination for which the applicant was scheduled but which he or she failed to take.

An applicant who passes the Written Qualifying Examination shall submit to the Executive Director a check payable to the Board in the amount then in effect for the Oral Examination and shall thereafter be assigned to an Oral Examination. No applicant who cancels or fails to appear for an Oral Examination to which he/she has been assigned will be scheduled for another Oral Examination until he/she pays the Board the cancellation fee then in effect.

In addition, an applicant who fails the Written Qualifying Examination may apply for re-examination and will be permitted to repeat the test upon payment of the current re-examination fee.

Oral Examinations

Upon successful completion of the Written Qualifying Examination, applicants will be sent specific instructions for taking the Oral Examination. A check payable to the Board for the amount then in effect for the Oral Examination must accompany the completed registration form and be forwarded to the Executive Director within the appropriate time frame. The applicant will then be assigned to a specific Oral Examination.

Oral examinations are usually held twice annually at a time and place determined by the Board. The Board reserves the right to limit the number of candidates admitted to any scheduled examination and to

designate the candidates to be examined. The Oral Examination is given by a panel of examiners. All subjects in the Oral Examination are given in a one day period.

SUBJECTS

The oral examination will be divided into the following subjects:

1. Optics, Refraction and Visual Physiology
2. Binocular Vision and Ocular Motility
3. Neuro-ophthalmology and Orbit
4. External Eye and Adnexa
5. Anterior Segment of the Eye
6. Posterior Segment of the Eye

In each of the oral examinations emphasis will be place upon recognition of depicted or described abnormalities and diseases that affect the eye, ocular adnexa and the visual pathways, and upon the ability of the candidate to synthesize clinical, laboratory, and histopathologic data in order to arrive at a correct diagnosis and differential diagnosis. Candidates will be expected to provide a reasonable and appropriate plan for medical and/or surgical management of patients with the complications depicted or described. These examinations will include developmental, dystrophic, degenerative, inflammatory, infectious, toxic, traumatic, neoplastic, and vascular diseases affecting the eye and its surrounding structures.

1. OPTICS, REFRACTION AND VISUAL PHYSIOLOGY

Candidates should be familiar with the basic principles of physical and geometrical optics and the operation of standard optical instruments. They should understand the essentials of visual physiology including visual acuity, light and dark adaptation, accommodation, and color vision. They should know the various forms of ametropia, principles and techniques of refraction, principles of lens design, and methods of correction of ametropia with spectacles and contact lenses. Candidates should be familiar with the methods for prescribing protective lenses, absorptive lenses, and aids for low vision.

2. BINOCULAR VISION AND OCULAR MOTILITY

Candidates should understand the anatomy and physiology of the neuro-muscular mechanisms subserving ocular motility and binocular vision. Candidates should be familiar with the methods of examination for detection and assessment of sensory and ocular motor disorders. They should also know the clinical features, differential diagnosis, natural course, and management of the various types of comitant and noncomitant deviations. They should be familiar with the principles and complications of surgery on the extraocular muscles.

3. NEURO-OPHTHALMOLOGY AND ORBIT

Candidates should know the anatomy of the orbit and the neuro-anatomy of the afferent and efferent visual systems. They should understand the principles and techniques of various diagnostic procedures, including visual field testing, visually evoked responses, ultrasonography, conventional X-ray imaging, CT scanning and magnetic resonance imaging. Candidates should be familiar with the clinical features, pathology, differential diagnosis, and management of various disorders of the orbit, visual pathways, oculomotor system, and pupillomotor pathways, including the indications for, principles of and complications of orbital surgery.

4. EXTERNAL EYE AND ADNEXA

Candidates should know the anatomy, embryology and physiology of the structures comprising the lacrimal system, lids, conjunctiva, and anterior sclera. They should demonstrate knowledge of the pathologic substrate, differential diagnosis and medical therapy as well as indications for, principles of, and complications of surgical procedures utilized to alleviate abnormalities and diseases affecting these tissues.

5. ANTERIOR SEGMENT OF THE EYE

This examination concerns the anatomy, physiology, and pathology of abnormalities and diseases of the anterior chamber angle, iris, ciliary body, and lens.

Candidates will be expected to discuss these conditions and those to be considered in their differential diagnosis. They should also be able to describe and provide indications for medical and surgical therapy directed toward alleviating or curing these conditions.

6. POSTERIOR SEGMENT OF THE EYE

This examination concerns the anatomy, embryology, physiology, and pathology of abnormalities and diseases of the vitreous, retina, choroid, and posterior sclera.

Candidates will be expected to discuss these conditions and those to be considered in their differential diagnosis. They should also be able to describe and provide indications for medical and surgical therapy directed toward alleviating or curing these conditions.

PATHOLOGY EXAMINATION

In October 1988, an examination in pathology will be given at the time of the oral examinations. Slides depicting the gross and histopathology appearance of several common ocular and ocular adnexal disorders, as well as of normal structures, will be projected. Candidates will be expected to recognize and identify these entities.

The Board recognizes that this examination is a significant departure from previous testing requirements. Therefore, no determination has been accorded to its weighing with respect to the overall scoring of the examination.

Re-activation

WRITTEN QUALIFYING EXAMINATION

An applicant who fails to take the Written Qualifying Examination within twenty-four (24) months after notice has been sent to him/her that his/her application has been accepted will not thereafter be accepted for examination unless he/she reactivates the application for approval and submits an additional application fee.

In addition, any applicant who does not repeat the Written Qualifying Examination within twenty-four (24) months after failing will be required to reactivate the application for approval and submit an additional application fee. For every two consecutive failures the application must be reactivated and the current fee must be submitted. Re-examination may be taken as often as necessary until the applicant is successful.

ORAL EXAMINATION

An applicant who receives a conditional grade in only one part and fails no other part of the Oral Examination will be deemed to pass the examination. An applicant who fails one or more parts, or conditions one part and fails one or more parts, or conditions two or more parts will be required to repeat all or part of the Oral Examination as specified in the Rules and Regulations, except that an applicant who receives three or more failures or any combination of failures and conditions equal to four or more on the Oral Examination will be required to present evidence of additional preparation and pass another Written Qualifying Examination before being permitted to repeat the Oral Examination.

A applicant shall be required to reactive his/her application for approval, submit an additional application fee, and pass another Written Qualifying Examination before being admitted to the Oral Examination under the following circumstances:

- a) If a candidate does not take the Oral Examination within twenty-four (24) months after notice has been sent to the applicant that he/she has passed the Written Qualifying Examination;
- b) if a candidate is eligible to do so fails to repeat the Oral Examination within twenty-four (24) months after failing or conditioning part of such examination;
- c) if the candidate does not pass all subjects covered therein in three or

Orthopaedic Surgery

fewer partial or complete examinations; or d) if the candidate does not pass the Written Qualifying Examination and the entire Oral Examination within seventy-two (72) months after notice has been sent to him/her that his/her original application is accepted.

In order to reactivate an application, the request and accompanying fee must be postmarked on or before August 1st of the calendar year immediately preceding the calendar year in which the Written Qualifying Examination is to be conducted. The applicant must indicate continuation of a valid and unrestricted license to practice medicine in one of the United States, its territories, or in a province of Canada. By paying a late fee the deadline for reactivation of the application may be extended from August 1st to September 1st.

Results of Examinations

Within a reasonable time after completion of the written or oral examinations, the applicant shall be notified by the Executive Director as to the results thereof. The decision of the Board as to the results of the written or oral examination shall be final and conclusive. Because such is the case, individual Directors of the Board should not be contacted about specific examination results. To preserve confidentiality, results of an examination will not be given over the telephone.

Certification

An applicant who successfully passes both the Written Qualifying and oral examinations within the required time limitations hereinabove set forth, as determined by the Board in its sole discretion, shall be entitled to receive a certificate without further consideration of his/her qualifications by the Board. Physicians who have received the certificate are DIPLOMATES of the Board.

DURATION OF CERTIFICATION

Certificates issued by the Board after July 1, 1992 will be valid for a period of ten (10) years. Thereafter, a diplomate will be required to satisfactorily complete a designated renewal program every ten years in order to extend the validity of his/her certificate. Certificates issued prior to July 1, 1992 are valid during the diplomate's lifetime.

Revocation and Probation

The Board shall have authority to revoke any certificate issued by it or to place the Diplomate on probation for a fixed or indefinite time or some combination of these if:

- (a) If the certificate was issued contrary to or in violation of any rule or regulation of the Board;
- (b) The person to whom the certificate was issued was not eligible to receive it;
- (c) The person to whom the certificate was issued either made a substantial misstatement of a material fact to the Board in his/her application or, if such was received in any supporting data presented to the Board and accompanying or relating to the application or if a material fact was omitted from the application or those supporting data;
- (d) The license to practice of the person to whom the certificate was issued has been revoked.

American Board of Medical Specialties

The American Board of Medical Specialties, previously called the Advisory Board for Medical Specialties, was established in 1933 to serve in an advisory capacity to the American Specialty Boards and to cooperate with organizations that seek its advice concerning the certification of medical specialists. The official recognition of a specialty board by the American Board of Medical Specialties is indicated by the listing of Diplomates in the DIRECTORY OF MEDICAL SPECIALISTS. The American Board of Ophthalmology contributes an

annual fee of \$2,000 in addition to \$38.00 per Diplomate certified, to the American Board of Medical Specialties, as do all other medical specialty boards, in support of the activities of ABMS.

Statements of Eligibility

The Board does not issue statements of "eligibility" for its examinations. The only information the Board will divulge is whether a candidate is or is not certified or is or is not scheduled for an examination.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

George E. Omer, Jr., MD, President, Albuquerque,
New Mexico
Frank C. Wilson, MD, President-Elect, Chapel Hill,
North Carolina
Franklin T. Hoaglund, MD, Secretary, San Francisco,
California
Robert E. Leach, MD, Treasurer, Boston, Massachusetts
Michael W. Chapman, MD, Sacramento, California
Harold K. Dunn, MD, Salt Lake City, Utah
Robert B. Greer III, MD, Hershey, Pennsylvania
James H. Herndon, MD, Providence, Rhode Island
Gordon B. McFarland, Jr., MD, New Orleans, Louisiana
John A. Murray, MD, Houston, Texas
James R. Urbaniak, MD, Durham, North Carolina
Senior Directors
Paul Campbell, MD, Portland, Oregon
Kingsbury G. Heiple, MD, Cleveland, Ohio
C. McCollister Evarts, MD, Hershey, Pennsylvania
Gerald S. Laros, MD, Lubbock, Texas
Thomas E. Whitesides, Jr., MD, Atlanta, Georgia
Donald B. Kettelkamp, MD, Executive Director
Office of the Board, 737 North Michigan Avenue,
Suite 1150, Chicago, Illinois 60611

Introduction

A. Definition

Orthopaedic surgery is the medical specialty that includes the preservation, investigation, and restoration of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

B. Purpose

The American Board of Orthopaedic Surgery, Inc., was founded in 1934 as a private, voluntary, non-profit, autonomous organization. It functions to serve the best interests of the public and of the medical profession by establishing educational standards for orthopaedic residents and evaluating the initial and continuing qualifications and competence of orthopaedic surgeons. For this purpose, the Board reviews the credentials and practices of voluntary candidates, conducts examinations for these candidates, and issues certificates as appropriate. It defines minimum educational requirements in the specialty, stimulates graduate medical education and continuing medical education, and aids in the evaluation of educational facilities.

The Board does not confer any rights on its Diplomates, nor does it purport to direct licensed physicians in any way in the conduct of their professional duties. It is neither the intent nor the purpose of the Board to define requirements for membership in any organization or on the staff of any hospital.

C. Directors

The directors of The American Board of Orthopaedic Surgery are elected from the Diplomates of the Board who are nominated by the

American Orthopaedic Association, the American Medical Association, and the American Academy of Orthopaedic Surgeons. They serve without salary.

D. Organization

Directors of the Board elect a President, President-elect, Secretary, and Treasurer annually. An Executive Director, who is a Diplomate, serves as an ex-officio director of the Board. The President appoints directors to serve on standing committees on Credentials, Examinations, Finance, Graduate Education, Planning and Development, and Certificate Renewal. Other committees may be formed as deemed necessary. The Board holds four regularly scheduled meetings yearly and additional meetings as needed.

E. Directory

A current directory of certified and recertified orthopaedic surgeons is maintained and published by the Board. The names of Diplomates also appear in the Compendium of Certified Medical Specialists published by the American Board of Medical Specialties.

General Statement of Educational Goals for Orthopaedic Surgery

The goal of orthopaedic education is to prepare orthopaedic residents to be competent and ethical practitioners of orthopaedic surgery. In fulfillment of this goal, applicants for certification must have received through their orthopaedic residency:

- A. Education in the entire field of orthopaedic surgery, including inpatient and outpatient diagnosis and care as well as operative and nonoperative management and rehabilitation.
- B. The opportunity to develop, through experience, the necessary cognitive, technical, interpersonal, teaching, and research skills.
- C. The opportunity to create new knowledge and to become skilled in the critical evaluation of information.
- D. Education in the recognition and management of basic medical and surgical problems.
- E. An evaluation of their ethical performance.

Minimum Educational Requirements for Board Certification

The Board has established the following minimum educational requirements for certification. These requirements should not be interpreted as restricting programs to minimum standards. Throughout these rules, the term "accredited" means accredited by the Accreditation Council for Graduate Medical Education.

These educational requirements shall apply to all residents who began their first year of accredited orthopaedic surgery residency on or after January 1, 1985 with the following exception. Residents in programs providing only three years of orthopaedic education may receive credit for two years of accredited non-orthopaedic clinical education if they enter the orthopaedic program before January 1, 1989. This exception is available only to residents enrolled in a three-year orthopaedic program which has specifically requested the Board to make its residents eligible for this exception and has presented the Board with a plan for implementing the four-year program. The deadline for receiving such a plan was December 31, 1985. Residents entering orthopaedic residency programs structured for four or five years may receive credit for one but not two years of accredited non-orthopaedic clinical education.

A. Time Requirements

- 1. Five years (60 months) of accredited postdoctoral residency are required.
- 2. Four of these years (48 months) must be served in a program whose curriculum is determined by the director of an accredited orthopaedic surgery residency. Three of these years (36 months) must be served in an accredited orthopaedic surgery residency program and one

year (12 months) may be served in an accredited graduate medical educational program whose educational content is determined by the director of an accredited orthopaedic surgery residency program.

3. Each program may develop individual sick and vacation times for the resident in accordance with overall institutional policy. However, one year of credit must include at least 46 weeks in full-time orthopaedic education; furthermore, vacation or leave time may not be accumulated to reduce the five-year requirement.

4. Program directors may retain a resident in the educational program for as long as necessary beyond the minimum time specified so that the resident can achieve the necessary degree of competence in orthopaedic surgery. Currently, according to the Special Requirements of the Residency Review Committee for Orthopaedic Surgery, the committee must be notified of such retention. This information must also be provided to the Board on the Record of Residency Assignments form.

B. Content Requirements

1. General Requirements

A minimum of nine months during the first 36 months of graduate medical education must be broadly based on clinical services other than orthopaedics. This requirement may be fulfilled by a year of accredited residency in any broadly based program involving patient care.

2. Orthopaedic Requirements

The orthopaedic education must be broadly representative of the entire field of orthopaedic surgery. The distribution of educational experience must include a minimum of:

- Adult orthopaedics—12 months
- Fractures/trauma—12 months
- Children's orthopaedics—6 months
- Basic science and/or clinical specialties—6 months

Experience may be received in two or more subject areas concurrently. Concurrent or integrated programs may allocate time by proportion of experience.

Orthopaedic education must provide experience with all patient age groups, pertinent anatomic areas, acute and chronic care, related clinical subjects and basic science, and exposure to research.

1. Children's orthopaedics: The educational experience in children's orthopaedics must be obtained in an accredited position in the specific residency program in which the resident is enrolled or in a children's hospital in an assigned accredited residency position.

2. Anatomic areas: Orthopaedic education must include all aspects of diagnosis and care of disorders affecting the bones, joints, and soft tissues of the upper and lower extremities, including the hand and foot; the entire spine, specifically including intervertebral discs; and the bony pelvis.

3. Acute and chronic care: Orthopaedic education must include the diagnosis and care, both operative and nonoperative, of acute trauma (including athletic injuries), infectious disease, neurovascular impairment, and chronic orthopaedic problems including reconstructive surgery, neuromuscular disease, metabolic bone disease, benign and malignant tumors, and rehabilitation.

4. Related clinical subjects: Orthopaedic education must include musculoskeletal imaging procedures, use and interpretation of clinical laboratory tests, prosthetics, orthotics, physical modalities and exercises, and neurological and rheumatological disorders.

5. Research: Orthopaedic education must include exposure to clinical and/or laboratory research.

6. Basic science: Orthopaedic education must include instruction in anatomy, biochemistry, biomaterials, biomechanics, microbiology, pathology, pharmacology, physiology, and other basic sciences related to orthopaedic surgery. The resident must have the opportunity to apply these basic sciences to all phases of orthopaedic surgery.

Orthopaedic Surgery

7. Options: Twelve (12 months) of the four years required to be under the direction of the orthopaedic surgery residency program director may be spent on services consisting partially or entirely of:

7. a. Additional experience in general adult or children's orthopaedics or fractures/trauma;
- b. An orthopaedic clinical specialty;
- c. Orthopaedically related research;
- d. Experience in an accredited graduate medical educational program whose educational content is reviewed and approved by the director of the orthopaedic surgery residency program.

C. Accreditation Requirements

1. The educational experience in orthopaedic surgery obtained in the United States must be in programs accredited by the Residency Review Committee for Orthopaedic Surgery and by the Accreditation Council for Graduate Medical Education. All other clinical education obtained in the United States must be in programs accredited by the Accreditation Council for Graduate Medical Education and the appropriate Residency Review Committee for the category of education for which credit is sought. (The *Directory of Graduate Medical Education Programs Accredited by the Accreditation Council for Graduate Medical Education*, published annually and obtainable from the American Medical Association, 535 North Dearborn Street, Chicago, IL 60610, lists accredited rotations of six months or longer.)

2. Within the five years of accredited residency, a total period of no more than six months may be served in unaccredited institutions.

3. Credit for time spent in residency education will be granted only for the period during which the residency program is accredited, and only for time served in an approved position within an accredited program.

4. If an orthopaedic residency program has its accreditation withdrawn by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council for Graduate Medical Education, no educational credit will be granted past the effective date of withdrawal of accreditation.

5. Educational credit may be granted for clinical experience in the military and/or public health services of the United States of America if the experience is accepted by the director of the orthopaedic surgery residency program that the applicant enters. Up to one month of credit may be granted for two months of clinical experience, not to exceed 12 months of credit, subject to approval by the Committee on Credentials. This approval should be sought prior to entry into the program.

6. Educational experience obtained in Canada must be on services approved by the Royal College of Physicians and Surgeons of Canada and must extend over a minimum of five years. The content requirements outlined in "B. Content Requirements" must be met.

7. The Board does not grant credit for foreign educational experience, other than as permitted in C.2 and C.6.

8. The term "fellow" is not synonymous with the term "resident" for the purpose of obtaining Board credit for educational experience. A resident is an individual enrolled in an approved position in an accredited educational program.

D. Achievement Requirements

1. The director of the program providing general graduate medical education must certify the satisfactory completion of that segment of education.

2. In orthopaedic surgery residency programs, the program director must certify the satisfactory completion of each rotation for which credit is awarded. (See "F. Documentation Requirements")

3. The program director responsible for the final year of the resident's education must certify that the resident has achieved a satisfactory level of competence and is qualified for the certifying process.

4. The certification referred to in 2. and 3. above must be made on the appropriate Record of Residency Assignments form and must be countersigned by the resident.

5. Medical practice activity outside the residency must not be allowed to interfere with deriving maximum benefit from the educational experience. Residents may not engage in such activities without the specific prior approval of the program director; such approval must be based on the judgment of the director that rotations are being completed without compromise and that the circumstances of the resident warrant such activity.

E. Continuity Requirements

The resident should have progressively increasing patient care responsibility. A part-time or piecemeal approach to residency requirements is discouraged. The final 24 months of orthopaedic residency education must be obtained in a single orthopaedic residency program unless prior approval of the Committee on Credentials is obtained.

F. Documentation Requirements

1. For orthopaedic education obtained in the United States, the program director must provide the Board with *yearly* documentation during the residency. Each June, directors will receive two computer diskettes on which the required information will be recorded. The appropriate forms will be printed after the data has been entered. The forms will be signed by the program director and the resident, and the forms and diskettes will be returned to the Board office within 30 days of the end of the academic year.

2. Form 1 of the Record of Residency Assignments must be submitted the year the resident enters the program. Form 1-A must be provided for residents receiving educational credit in a non-orthopaedic ACGME accredited program and for non-orthopaedic education taken within the ACGME accredited orthopaedic residency. Form 2-A must be completed yearly for each resident in the orthopaedic program and must detail the content and time spent on rotations, information on any unaccredited rotations and whether or not credit was granted for a full year. Form 3 is the final evaluation and is due in the Board office within 30 days of completion of the residency. It should be noted that Part I examination results of candidates who take the examination the year in which they complete their residency will not be mailed to the candidate or the program director until Form 3 has been received in the Board office.

3. When a resident leaves a program prematurely, the program director notify the Board office in writing within 30 days. The letter must record the reasons for leaving and confirm the rotations during the academic year in which the resident left for which credit is granted. At the end of the academic year in which the resident left, Form 2-A and Form 3 information must be provided on the computer diskettes. Before a resident enters a new program, it is the responsibility of the new program director to obtain a copy of the resident's Record of Residency Assignments forms from the Board office, to review them thoroughly, and to develop an appropriate program for the resident that will result in progressively increasing responsibility and will otherwise meet the minimum educational requirements.

Requirements for Taking the Certifying Examination

The certifying examination is divided into two parts. Part I is a written examination which may be taken any time after the completion of the educational requirements. Part II is an oral examination which may be taken upon passing Part I, completion of the practice requirement, evaluation of the applicant's practice and determination of admission to the examination. A candidate must pass both parts of the certifying examination to be certified.

After taking and passing the written examination, candidates have five years to take or retake the oral examination. Candidates who do not pass the oral examination within those five years must retake and re-pass the written examination before applying to take the oral examination.

An applicant desiring certification by the American Board of Orthopaedic Surgery must satisfy the educational requirements of the Rules and Procedures in effect when the applicant first enrolls in an accredited orthopaedic residency. An applicant must satisfy all other requirements in effect at the time of application.

A. Educational Requirements

1. An applicant must satisfactorily complete and document the minimum educational requirements in effect when he or she first enrolls in an accredited orthopaedic residency.

2. Upon successful completion of 54 months of the 60 months of required education and upon the recommendation of the program director, a candidate may apply to take Part I of the examination.

3. In order to be admitted to the examination, the candidate must complete the full 60 months of required education and must present an examination admission card signed by the program director confirming satisfactory completion of all educational requirements.

4. An applicant who has received orthopaedic surgery residency education in Canada must have fulfilled the requirements of the American Board of Orthopaedic Surgery and must have passed the qualifying examination in orthopaedic surgery of the Royal College of Physicians and Surgeons of Canada before applying for either part of the examination of the American Board of Orthopaedic Surgery.

B. License Requirements

Applicants who are in practice at the time they apply for Part I and all applicants for Part II must possess a full and unrestricted license to practice medicine in the United States or Canada, or be engaged in full-time practice in the United States Federal Government for which licensure is not required. An applicant will be rendered ineligible for any part of the certification examination by limitation, suspension, or termination of any right associated with the practice of medicine in any state, province, or country by reason of violation of a medical practice act or other statute or governmental regulation, disciplinary action by any medical licensing authority, or voluntary surrender while under investigation.

C. Practice Requirements

1. An applicant must be continuously and actively engaged in the practice of orthopaedic surgery, other than as a resident or fellow (or equivalent), for at least twenty-three (23) full months prior to the date of Part II of the examination. An applicant must be in one practice location for a minimum of twelve (12) consecutive months. A change in location, type of hospital practice, or practice association may result in deferral. The practice must be located in the United States or its territories, Canada, or a United States service installation. It must include hospital admitting and surgical privileges in effect at the time of application for the examination and at the time of examination. The applicant must demonstrate professional competence and adherence to acceptable ethical and professional standards. The practice must allow independent decision-making in matters of patient care. A reduction, restriction, suspension, termination, or resignation at the request of a hospital of all or any portion of an applicant's surgical staff privileges, or pending action to do so, will normally result in a deferral until such action is finally resolved and the applicant's practice has stabilized sufficiently for it to be evaluated.

2. An applicant in the United States uniformed services may satisfy the practice requirement if the applicant has been assigned as an orthopaedic surgeon in a hospital for at least twenty-three (23) full months prior to the date of examination. The applicant must submit a

letter from his or her immediate supervisor evaluating his or her capability in the practice of orthopaedic surgery, as well as such other documentation as the Committee on Credentials may require to demonstrate professional competence and adherence to acceptable ethical and professional standards.

D. Evaluation of Applicant

1. Qualifications for taking Part II of the examination will be determined by the Committee on Credentials after review of the application, letters of recommendation, and other relevant information.

2. It is the responsibility of the applicant to provide the information on which the Committee on Credentials bases its evaluation of the qualifications of the applicant. This responsibility extends to information that the Committee on Credentials requests from other persons. If the Committee on Credentials does not receive requested information that it believes to be relevant to the qualifications of an applicant from the applicant, a program director, a reference, a hospital representative, or another source, the Board will notify the applicant and defer making a decision as to the admission of the applicant to the examination until the information is received.

3. An applicant for Part II of the examination must submit as part of the Part II application to the Committee on Credentials, four copies of a list of *all* patients cared for by the applicant in the hospital or hospitals in which the applicant has practiced. A separate list must be provided for each hospital. The lists are to cover a 12-month period beginning September 1 two years prior to the year in which the applicant wishes to take the Part II examination and ending on August 31 the following year. The lists must include *all* patients, including ambulatory or on-day operative patients, for whom the applicant was the responsible operating surgeon. The lists are to be in chronological order, contain the patient's name or initials, unit or hospital number, sex, age, diagnosis, treatment or surgical procedure, length of follow-up and outcome, including any complications. All four copies should be on the forms provided by the Board and must be signed by the applicant and certified as accurate and complete by the hospital's record librarian. The signatures on all four copies must be notarized to confirm their authenticity.

An applicant engaged in practice in a partnership or assigned full-time to a private or government hospital must submit four copies of the list of patients cared for primarily by the applicant for the 12-month period described above. The list must contain the information noted in the preceding paragraph and must be submitted on the form provided by the Board. All four copies must be signed by the applicant and by the responsible hospital record librarian. The signatures on all four copies must be notarized to confirm their authenticity.

4. Individual cases from the case lists for use in the Part II examination will be selected by the Board. The cases selected and additional information that will be required on those cases will be provided to candidates in advance of the Part II examination.

5. Representatives of the Board may visit the site of an applicant's practice if the Committee on Credentials believes that this is necessary for adequate evaluation of the work of the applicant.

E. Chemical Dependency

Candidates who have a history of chemical dependency will not be admitted to either Part I or Part II of the certifying examination unless they present evidence satisfactory to the Board that they both (1) have been drug free for at least three years and (2) have satisfactorily completed the program of treatment prescribed for their condition. In addition, any such candidates for Part II of the examination will have a site visit of their practices by representatives of the Board as described in D.5.

Orthopaedic Surgery

Procedure for Application for Part I and Part II of the Certifying Examination

The dates and places for Part I and Part II of the certifying examination and deadlines for submission of applications and fees are announced in the Journal of the American Medical Association and the Journal of Bone and Joint Surgery. Examination dates may be changed at the discretion of the Board. Because of the journals' publication deadlines, confirmation of published examination date can be obtained from the Board's office.

A. Application Deadlines

1. Part I. A completed application for Part I of the certifying examination must be postmarked by registered mail on or before March 1 of the year of the examination. *The application must be accompanied by a nonrefundable examination fee of \$600.00 and must be sent by registered mail.*

2. Part II. A completed application for Part II of the certifying examination must be postmarked by registered mail on or before October 31 of the year preceding the examination. *The application must be accompanied by a nonrefundable fee of \$600.00 and must be sent by registered mail.*

B. Notifying the Board of Application Changes

It is the responsibility of the applicant to notify the Board office of any change of address, practice association, or hospital affiliation. If an applicant changes practice location or practice association, or acquires new hospital staff affiliations, new references will be solicited by the Board for Part II applicants. An applicant is also required to notify the Board of any denial of any request for hospital privileges, of any action to restrict, suspend, or terminate all or any portion of the applicant's surgical staff privileges; or any request by a hospital to resign all or any portion of the applicant's surgical staff privileges, and of any action by a government agency which would result in the restriction, suspension, or probation of the applicant's license or any right associated with the practice of medicine.

C. Notifying the Applicant of Examination Admission

1. Part I. The applicant will receive examination information, an assigned examination number and an admission card not later than 30 days prior to the examination date.

2. Part II. The decision of the Committee on Credentials is mailed to the applicant not later than 60 days prior to the examination date.

D. Fees

1. Part I. The nonrefundable examination fee is \$600.00 and must be submitted with the application form.

2. Part II. The nonrefundable application and credentialing fee is \$600.00 and must be submitted with the application form.

3. Part II. The candidate must submit a fee of \$600.00 on or before the dates specified in the letter of notification of admission to Part II of the examination. This fee will be forfeited if the candidate fails to appear for the examination or cancels after being scheduled.

FEES:

Part I Examination Fee	\$600.00
Part II Application and Credentialing Fee	\$600.00
Part II Examination Fee	\$600.00

Fees must be sent by registered mail.

E. Falsified Information and Irregular Behavior

1. If it is determined that an applicant has falsified information on the application form or failed to provide material information, the applicant will not be considered for either part of the examination not already passed and must wait for three years before being allowed to file a new application. The applicant will not be considered for admission to either part of the examination during this three-year period.

2. Examination applicants should understand that: (1) the giving or receiving of aid in the examination as evidenced either by observation or by statistical analysis of incorrect answers of one or more participants in the examination; or (2) the unauthorized possession, reproduction, or disclosure of any materials, including, but not limited to, examination questions or answers, before, during, or after the examination; or (3) the offering of any benefit to any agent of the Board in return for any right, privilege, or benefit which is not usually granted by the Board to other similarly situated candidates or persons may be sufficient cause to bar applicants from future examinations, to terminate participation in the examination, to invalidate the results of a candidate's examination, to withhold or revoke a candidate's scores or certificate, or to take other appropriate action.

Applicants should also understand that the Board may or may not require a candidate to retake one or more portions of the examination if presented with sufficient evidence that the security of the examination has been compromised, notwithstanding the absence of any evidence of a candidate's personal involvement in such activities.

Credentials Decisions

A. Determining Admission to Examinations

1. The Committee on Credentials meets at least once each year to consider applications for the examinations. At this meeting a decision will be made approving admission to the next examination or denying admission or the decision may be deferred for further evaluation.

2. A decision approving admission to an examination applies only until the next available examination and does not carry over from one examination until the next. A new application is required for each examination.

B. Deferral of Admission Decision

A decision on an applicant's admission to either Part I or Part II of the examination may be deferred if information is insufficient for the Committee on Credentials to make a judgment. Typically, the committee will defer such a decision for one year to gather further information. If it still has insufficient information to make a judgment, the decision will be deferred for a second year to enable representatives of the Board to conduct a site visit as described in D.5. A deferral of not more than two consecutive years is not viewed by the Board as an adverse action; thus, no appeal from a decision of the Committee on Credentials is permitted unless an applicant has either been denied admission or has been deferred for more than two consecutive years.

C. Appeal of Admission Decision

An applicant denied admission to the examination will be informed of the basis for such action and may request a hearing by an appeals committee of the American Board of Orthopaedic Surgery.

Certification and Recredentialing by the American Board of Orthopaedic Surgery

A. Awarding Certificates

The American Board of Orthopaedic Surgery awards a certificate to a candidate who specializes in orthopaedic surgery, has met the educational requirements of the Board, has demonstrated competence in orthopaedic surgery and adherence to ethical and professional standards, and has passed both parts of the certifying examination. Certificates issued after 1985 are valid for ten years. This portion of the Board's responsibility is discharged by issuance of a certificate to an individual found qualified as of the date of certification.

B. Certificate Revocation

A certificate may be revoked prior to its expiration because of intentional and substantive misrepresentation to the Board with respect to the applicant's education and other requirements for admission to either part of the examination, or because of limitation, suspension, or

termination of the right to practice medicine in any state, province, or country by reason of a violation of a medical practice act or other statute or governmental regulation, or disciplinary action by any medical licensing authority, or voluntary surrender while under investigation. Before a certificate is revoked, the Diplomate will be informed of the basis of such action and will be afforded a hearing according to procedures formulated by the American Board of Orthopaedic Surgery.

C. *Certificate Reinstatement*

Should the circumstances that were considered in justification for revocation or surrender of the Diplomate's certificate be corrected, the Board may reinstate the certificate after appropriate review of the individual's qualifications and performance, using the same standards as applied to other applicants for certification.

D. *Recredentialing Process*

The Board offers a recredentialing process to its Diplomates. Diplomates are encouraged to undertake periodic recredentialing. Information about recredentialing can be obtained from the Secretary of the Board.

Unsuccessful Candidates

Unsuccessful Part I candidates may repeat the examination by submitting a new application form for the examination and again being found admissible. (See preceding pages.)

Unsuccessful Part II candidates may repeat the examination by submitting a new application form for the examination and again being found admissible. Candidates who do not pass the Part II examination within five years of passing Part I must retake and repass the Part I examination before applying to retake Part II. (See preceding pages.)

Appeals Procedure

1. An individual who has received an unfavorable ruling from a Committee of the Board may appeal such determination by mailing a notice of appeal to the office of the American Board of Orthopaedic Surgery within sixty (60) days of the date of such ruling was mailed to him or her; except that decisions of the Examinations Committee that a candidate has failed either part of the certifying examination may be appealed only in the manner and to the extent provided in paragraphs 8 and 9.

2. Upon receipt of a notice of appeal, the concerned Board Committee shall consider any information submitted therewith by the candidate in support of his or her appeal and make such further investigation appropriate to the appealing individual as it deems appropriate. If the committee then decides in a manner favorable to the individual, it shall so notify the individual. If the committee does not so determine, it shall notify the individual and the President of the American Board of Orthopaedic Surgery.

3. The President of the American Board of Orthopaedic Surgery will then appoint an ad hoc appeals committee consisting of three members who did not participate in making the determination being appealed. The Chairman of the ad hoc committee shall convene a meeting of the committee within a reasonable time but no sooner than sixty (60) days from the date of its appointment to conduct a hearing.

4. The committee concerned shall provide the Executive Director with such written information concerning its decisions as it deems appropriate, a list of the witnesses, if any, which it expects will testify, and a list of information and documents which the individual is to produce at the hearing. This material together with a written notice stating the time and place of the hearing shall be sent to the individual not less than thirty (30) days prior to the hearing of the appeals committee. The Executive Director shall, at the request of either the individual concerned or the committee concerned, submit written material provided by the individual or the committee, including the material referred to in the preceding sentence, to the members of the

appeals committee prior to the hearing, provided a copy of such material is submitted to the individual or to the committee no later than the time it is submitted to the appeals committee.

5. At the hearing, the Board committee concerned, and its legal or other representatives shall present such information as it deems appropriate to support its previously made determinations. The individual may be represented by legal counsel or any person of his or her choice, may present such relevant information as he or she deems appropriate in support of his or her position, may call, examine and cross-examine witnesses, and may submit a written statement at the close of the hearing. The failure of the individual to produce information or documents requested by the concerned committee pursuant to paragraph 4 shall be grounds for upholding the determination of the concerned committee. A written record of the hearing will be made and made available to the individual at one-half the cost of its preparation.

6. If a majority of the members of the appeals committee present at the hearing determines, on the basis of the information presented or circulated to them, that the committee determination should not be overruled, it shall so declare, and if a majority determines the committee's determination should be overruled, it shall so declare. The appeals committee shall inform the individual and the concerned committee of its decision and the basis on which it is made in writing within a reasonable time following the hearing. The decision of the appeals committee with respect to the matter being appealed shall be final and binding.

7. The peer review process of the American Board of Orthopaedic Surgery is conducted as part of a professional review action described in the Health Care Improvement Act of 1986. Pursuant to that Act, adverse actions are reported to the appropriate board of medical examiners.

8. A candidate who believes that the Part II examination was administered in an unfair or inaccurate manner or that one or more of his or her oral examiners was acquainted with him or her or was not impartial, may immediately upon completion of the examination, request that he or she be reexamined. The request shall be made to the Chairman of the Oral Examination Committee and reviewed by the President and the Secretary. If after discussing the matter with the candidate and making such other investigation as they may deem appropriate, a majority of the President, the Secretary, and the Chairman of the Oral Examination Committee determines that reasonable grounds exist for the candidate's request, he or she shall be immediately reexamined by another panel of oral examiners. In such event, the first oral examination will be disregarded and only the candidate's performance on the reexamination shall be considered in determining his or her score on the examination.

9. A candidate who fails the Part I examination may request in writing that his or her examination be rescored by hand to certify the accuracy of the results as reported to him or her. Such a request to be made within sixty (60) days of his or her being notified of the results of the examination. The request must be accompanied by a check for \$50.00 payable to the American Board of Orthopaedic Surgery to cover the cost of the hand scoring. There shall be no further appeal from a failure on the Part I examination.

AMERICAN BOARD OF OTOLARYNGOLOGY

- Roger Boles, MD, President, San Francisco, California
- Patrick J. Doyle, MD, Vice President, Vancouver, Canada
- Warren Y. Adkins, MD, Charleston, South Carolina
- Byron J. Bailey, MD, Galveston, Texas

 Paul H. Ward, MD, Los Angeles, California
 Bobby R. Alford, MD, Executive Vice President,
 5615 Kirby Drive, Suite 936
 Houston, TX 77005

Examination Process

The American Board of Otolaryngology (ABO) certification process consists of two phases. All candidates take a written examination which is offered in the fall of each year. There are three possible outcomes of the examination:

1. Candidates who score above a certain point are considered to have passed the examination. These individuals become certified, and are not required to take the oral examination.

2. Candidates who score below a certain point are considered to have failed the examination. These individuals do not become certified and are not eligible to take the oral examination. They may retake the written examination in a subsequent year.

3. Candidates who score between the specified upper and lower points are considered to have neither passed nor failed the examination, and a decision on certification is deferred. These candidates may:

- (a) Take the oral examination when it is offered in either the first or second year subsequent to their taking the written examination. Performance on the oral exam is combined with performance on the written exam, and a decision is then made that candidates have either passed the examination and are certified, or have failed the examination and are not certified.
- (b) Decline the oral examination and instead retake the written examination at a subsequent administration.

Candidates who elect to retake the written examination, either because they took the oral exam and failed or because they chose not to take the oral exam face the same possible outcomes they did when they first took the written examination, and will be required to pay another examination fee.

Certification

A certificate is granted by the American Board of Otolaryngology to a candidate who has met all the requirements and has satisfactorily passed its examination.

In 1986, the Board issued a statement that certificates issued after January 1, 1989 would be valid for a period of seven years. However, the Board, at its June 8, 1987 meeting, decided to defer indefinitely any further planning for implementation of a recertification process in this specialty and the issuance of time limited certificates.

Requirements for Examination

There is no required time interval between completion of the residency program and making application for examination. Applications for the written examination in any given year become available January 1 of that year, and must be completed and returned by May 1 of that year.

The following qualifications are minimal requirements for examination by the American Board of Otolaryngology.

1. The applicant shall possess high moral, ethical and professional qualifications as determined by, and in the sole discretion of, the Board.

2. The applicant must be a graduate of a college of medicine or osteopathy.

3. The applicant must present evidence of a valid license to practice medicine in the United States or Canada. If the applicant is enrolled in a training program in a state not requiring licensure, evidence of licensure shall not be required.

4. The applicant whose post-M.D./D.O. training (accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada) began prior to July 1, 1981 must have satisfactorily completed a minimum of four years of residency training accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. This training must include:

- (a) ONE YEAR of general surgical training in a residency program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada.
- (b) THREE YEARS of residency training in otolaryngology accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The training in otolaryngology must involve increasing responsibility each year and must include a final year of senior experience. This final year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. It is preferred that the year or years of general surgical residency be taken prior to the otolaryngologic training, but it/they *may not* be taken following otolaryngologic training. The residency training must be completed in a manner acceptable to the head of that residency program.

5. The applicant whose post-M.D./D.O. training (accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada) began July 1, 1981 or thereafter must have satisfactorily completed a minimum of five years of residency training accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. This training must include:

- (a) at least ONE YEAR of general surgical training in a residency program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada.
- (b) at least THREE YEARS of residency training in otolaryngology accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The training in otolaryngology must involve increasing responsibility each year and must include a final year of senior experience. This final year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. It is preferred that the year or years of general surgical residency be taken prior to the otolaryngologic training, but it/they *may not* be taken following otolaryngologic training. The residency training must be completed in a manner acceptable to the head of that residency program.
- (c) an ADDITIONAL YEAR of residency training which may be in otolaryngology, general surgery or other residencies accredited

by the ACGME or the Royal College of Physicians and Surgeons of Canada. If this year of training is in other than otolaryngology, it must be taken prior to the final year of otolaryngology residency.

Foreign Training

1. The applicant who has completed otolaryngologic training in the United Kingdom or the Republic of Ireland in a program accredited by the Specialist Advisory Committee, and who has received a certificate of accreditation in otolaryngology from the Joint Committee on Higher Surgical Training in the United Kingdom and the Republic of Ireland may be considered for examination.

2. The applicant who has completed otolaryngologic training under the New Zealand program after January 1, 1984 and has passed the examination leading to Fellowship of the Royal Australasian College of Surgeons or who has completed training under the Australian program after January 1, 1986 and has passed the examination leading to Fellowship of the Royal Australasian College of Surgeons may be considered for examination.

Application for Examination

The applicant must submit the following:

1. Application, signed by the program director and another diplomate of the American Board of Otolaryngology. A current photograph, signed on the front, must be attached to the application. A duplicate photograph, also signed on the front, must be attached to a 5x8 card provided with the application.
2. Verification of Otolaryngology Residency Form, signed by the program director, attesting to satisfactory completion of the training program.
3. Verification of Surgery Residency Form, signed by the Chief of Surgery, attesting to satisfactory completion of the training program.
4. Verification of Additional Residencies, signed by the appropriate program director, attesting to satisfactory completion of the training program or internship.
5. Report of Operative Procedures, which lists procedures assisted in and performed by the candidate during otolaryngology residency up to the date of application.
6. Verification of any and all licenses to practice medicine held by the candidate.
7. Verification of medical degree.

Additional information may be requested by the Board from the following: local medical society, board certified otolaryngologists from the geographical area in which the applicant practices, the director of the applicant's training program, hospital chiefs of staff, and/or other individuals and entities who may have knowledge of the applicant's moral and ethical standing, qualifications or abilities.

Applications are approved by the Credentials Committee in June, and applicants are then notified if they have been approved for examination. An updated operative procedures report, with cumulative totals for the otolaryngology residency program must be submitted by July 10 or within ten days of completion of the program, along with the second half of the examination fee. The Board reserves the right to reject any application.

Reapplication

Applications are considered current for a period encompassing two consecutive examination cycles. At the conclusion of said period, the application will expire. Candidates who reapply for the examination will be required to pay a new examination fee, no part of which is refundable.

Fees

The fee for the examination is \$1,200 (U.S. Funds), subject to change at the discretion of the Board. For new applicants, \$600 must accompany the application and is not refundable. This fee must be paid in full by May 1, and no application will be processed until this fee is received by the Executive Vice President of the Board. The additional \$600 is due and payable upon notification of acceptance for examination. Once the applicant has agreed in writing to participate in the examination, no part of this fee is refundable.

For previous applicants, \$1,200 must accompany the request for reexamination. This fee must be paid in full by May 1, and is not refundable. No application will be processed until this fee is received by the Executive Vice President of the Board.

Board Eligibility and Status Inquiries

The American Board of Otolaryngology does not recognize or use the term "board eligible." When a request is received regarding the status of a physician, the Board will only state whether s/he is or is not certified. The Board feels it is inappropriate to provide any additional information.

Leaves of Absence

Leaves of absence and vacation may be granted to residents at the discretion of the program director in accordance with local rules. Within the four years of graduate medical education, the total of such leaves and vacation time may not exceed six weeks in any one year. If a longer leave of absence is granted in any year, the required period of graduate medical education may be extended accordingly.

Purpose of Examination

The purpose of the examination is to determine the candidate's knowledge, skill and understanding in the following categories:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics and immunology relevant to the head and neck; the respiratory and upper alimentary systems; the communication sciences, including knowledge of audiology and speech-language pathology; the chemical senses and allergy, endocrinology and neurology as they relate to the head and neck.
2. Diagnosis and diagnostic methods including audiologic and vestibular assessments, electrophysiologic techniques and other related laboratory procedures for diseases and disorders of the ears, the respiratory and upper alimentary systems and the head and neck.
3. Therapeutic and diagnostic radiology, including the interpretation of medical imaging techniques relevant to the head and neck and thorax including the temporal bone, skull, nose, paranasal sinuses, salivary and thyroid glands, larynx, neck, lungs and esophagus.
4. Diagnostic evaluation and management of congenital anomalies, allergy, trauma and other diseases in the regions and systems mentioned above.
5. The cognitive management including operative intervention with its preoperative and postoperative care of congenital, inflammatory, endocrine, neoplastic, degenerative and traumatic states, including:
 - (a) Temporal bone surgery;
 - (b) Paranasal sinus and nasal surgery;
 - (c) Skull-base surgery;
 - (d) Maxillofacial surgery including the orbits, jaws and facial skeleton;
 - (e) Esthetic, plastic and reconstructive surgery of the face, head and neck;
 - (f) Surgery of the thyroid, parathyroid, pituitary and salivary glands;

Pathology

- (g) Head and neck reconstructive surgery relating to the restoration of form and function in congenital anomalies and head and neck trauma and associated with ablative operations;
 - (h) Endoscopy, both diagnostic and therapeutic, and;
 - (i) Surgery of the lymphatic tissues of the head and neck.
6. The habilitation and rehabilitation techniques and procedures pertaining to respiration, deglutition, chemoreception, balance, speech and hearing.
7. The current literature, especially pertaining to the areas listed above.
8. Research methodology.

In order to assist directors of residency training programs in otolaryngology in evaluating their programs, the Board will report each applicant's examination results to the director of the program in which the applicant completed his/her senior resident year.

Examination Procedure

The Board intends to vigorously enforce the highest standards of honesty and integrity in the examination and the entire certification process. Accordingly, (a) the giving or receiving of aid in the examination, (b) the unauthorized possession, reproduction, or disclosure of any material, including, but not limited to, examination questions or answers before, during, or after the examination or (c) the offer of any financial or other benefit to any director, officer, employee, proctor, or other agent or representative of the Board in return for any right, privilege or benefit which is not usually granted by the Board to other similarly situated candidates or persons, may be sufficient cause for the Board to terminate an applicant's participation in the examination, to invalidate the results of the examination, to withhold an applicant's scores or certificate, to bar an applicant permanently from all future examinations, to revoke a certificate or to take other appropriate action.

During the course of the written examination, proctors will be circulating among the candidates to observe any irregularities. If there is a suspicion of any irregularity, a candidate may be moved to a more isolated area, or his or her participation in the examination may be terminated. Additionally, in any case of suspected irregularity, the Board's educational consultants may undertake statistical studies of a candidate's answers compared with the answers of other participants in the examination to provide evidence that would support or fail to support the suspected irregularities. If, in the opinion of the Board, there exists a probability that an irregularity has occurred, the Board will afford the suspected individual(s) procedural due process in order to assure fairness in the determination as to whether an irregularity has occurred. The Board will not, however, report scores or grant certification on the basis of scores which it has determined to be invalid.

Certification, Rejection and Revocation From the Bylaws, Article VI

The Board shall issue an appropriate certificate of qualification in otolaryngology (or in a subdivision thereof) to those who show themselves worthy of such certification according to the requirements of training, experience and demonstrated competence as stated in the current ABO Booklet of Information.

No certificate shall be issued, and any certificate issued by the Board shall be subject to revocation at any time by the Board, if it shall determine that the person involved:

1. Did not possess the required qualification and requirements for examination, whether or not such deficiency was known to the Board or any member thereof, or could have been ascertained by the Board prior to examination or at the time of the issuance of a certificate as the case may be.

2. Made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional.

3. Has been convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and in the opinion of the Board, having a material relationship to the practice of medicine.

4. Had a license to practice medicine revoked or shall have been disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

If the Board determines to withhold or revoke any certificate for any reason, the person affected thereby shall be given written notice of the reasons therefor. Such action by the Board shall be regarded as final unless such person requests a review of such action within thirty days after notice thereof has been mailed to him by the Board.

THE AMERICAN BOARD OF PATHOLOGY

Douglas A. Nelson, MD, President, Syracuse, New York

Jack P. Strong, MD, Vice President, New Orleans, Louisiana

Frank B. Walker, MD, Treasurer, Grosse Pointe Farms, Michigan

Charles S. Hirsch, MD, Secretary, Hauppauge, New York

Ramzi S. Cotran, MD, Boston, Massachusetts

Merle W. Delmer, MD, San Antonio, Texas

Thomas J. Gill III, MD, Pittsburgh, Pennsylvania

William H. Hartmann, MD, Nashville, Tennessee

John D. Milam, MD, Houston, Texas

Howard M. Rawnsley, MD, Hanover, New Hampshire

Herbert M. Sommers, MD, Chicago, Illinois

Peter A. Ward, MD, Ann Arbor, Michigan

M. R. Abell, MD, PhD, Executive Director

Office of The American Board of Pathology

Lincoln Center

5401 West Kennedy Boulevard

P. O. Box 25915, Tampa, Florida 33622

Prerequisites for Examination

All applications to take the examination are considered by the Credentials Committee of The American Board of Pathology (ABP) and the following items are evaluated in this process.

I. GENERAL

A. The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

B. The candidate must devote professional time principally and primarily to pathology.

II. PROFESSIONAL EDUCATION

Graduation from a medical school in the United States or Canada accredited by the Liaison Committee on Medical Education, graduation from an osteopathic college of medicine accredited by the Bureau of Professional Education of the American Osteopathic Association, or graduation from a medical school in another country acceptable to the ABP.

III. QUALIFICATION REQUIREMENTS

The ABP recognizes several pathways to qualification for examination and certification, including training, experience, or a combination of training and experience. To acknowledge the diverse activities in the practice of pathology and to accommodate the interests of individuals wishing to enter the field, the ABP offers primary certification through one of four routes (combined anatomic and clinical pathology, anatomic pathology only, clinical pathology only, and combined

anatomic or clinical pathology and a special qualification in pathology), and a variety of special qualification examinations. The special qualification examinations are utilized to indicate expertise in one segment of anatomic and/or clinical pathology.

Only pathology training and/or experience taken in the United States or Canada is acceptable toward meeting the ABP requirements. The training must be in programs that have been inspected and accredited by the (Accreditation Council for Graduate Medical Education (ACGME) or specifically approved by the ABP.

In addition to the pathology training and/or experience requirements, there is a credential requirement of one year for all candidates for primary certification or combined primary and special qualification certification. (See Additional Credential Requirement for Applicants for Primary Certification in 1990 and thereafter.)

A. *Primary Certificates*

1. *Training*—the candidate must complete satisfactorily pathology training in a program accredited by the ACGME as outlined below.

All applicants for primary certification in 1990 and thereafter must meet the credential requirement of one full year of clinical training, clinical experience, or clinically related research.

a. *Combined anatomic and clinical pathology (AP/CP) certification*

Two full years of approved training in anatomic pathology and two full years of approved training in clinical pathology.

b. *Anatomic pathology (AP) certification*

(1) Three full years of approved training in anatomic pathology and one additional full credential year, which may be spent in further training or research in pathology or closely allied disciplines; in the practice of pathology; or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

or

(2) Primary certificate in clinical pathology and two full years of approved training in anatomic pathology. Dual credit is not given for any AP training that may have been used to qualify for CP certification.

c. *Clinical pathology (CP) certification*

(1) Three full years of approved training in clinical pathology and one additional full credential year, which may be spent in further training or research in pathology or closely allied disciplines; in the practice of pathology; or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

or

(2) Primary certificate in anatomic pathology and two full years of approved training in clinical pathology. Dual credit is not given for any CP training that may have been used to qualify for AP certification.

2. *Experience*—only under exceptional circumstances will experience credit or other forms of advanced training credit be given toward the pathology training requirements for primary certification. Two months of pathology experience acceptable to the ABP is equivalent to one month of pathology training credit. The substitution of experience credit or a portion of approved pathology training requires the assessment and approval of the director of the pathology training program to ensure that such will permit a broad and adequate experience in anatomic and/or clinical pathology and that the director will be willing to so verify.

Credit for extensive full-time training or experience in a country other than the United States or Canada may be granted toward the requirements for a primary certificate, provided that the candidate has had a total of eight years of full-time validated experience in pathology acceptable to the ABP with four years having been in the United States or

Canada. For AP qualification the training and experience must have been in AP; for CP, in CP; and for combined AP/CP, four years in AP and four years in CP.

3. *Other credit mechanisms*—the acceptability of other credits as substitutes for approved pathology training toward anatomic and/or clinical pathology certification is not automatic and is evaluated on an individual basis. Credit is given only for activities that have occurred in either the United States or Canada. The total combined period of advanced training credit allowed in this category for sections a, b, c, and d below will not exceed one-third of the required approved training in the respective area of anatomic pathology or clinical pathology.

To avoid any misunderstanding, potential applicants should communicate with the Office of the ABP early in the training period to ascertain if credit may be acceptable.

The training program director will be asked to assess the proposal and to provide a recommendation as to the amount of credit that the director believes the candidate should receive.

The Board will notify the director of the pathology training program of such potential credit and, prior to admission to the certifying examination, the director of the final year of training must certify that the candidate is fully qualified to sit for the examination.

a. *Training during medical school*—credit toward the pathology training requirements for primary certification may be granted for postsophomore medical student fellowship training or research in a department of pathology that has an accredited training program providing that the candidate did not receive credit for such toward graduation from medical school, that the training is validated by the director of the student fellowship activity, and that it is approved as an acceptable experience by the director of the accredited pathology training program in which the candidate is registered. No credit is given for electives or for courses that are part of the medical school curriculum.

b. Candidates holding a master's degree or doctor's degree in a special discipline of pathology or a basic science related to pathology may obtain training credit regardless of whether it was received before or after the medical degree. The evaluation and approval of the amount of training credit will depend on an assessment by the ABP regarding relevance of the subjects to anatomic or clinical pathology.

c. Research with a direct application to the practice of anatomic or clinical pathology may be considered for credit not to exceed one-third of the training time requirement. The ABP encourages research and believes that all candidates should carry on investigation, teaching, and the publication of scientific papers during primary training.

d. The ABP will allow training credit for time spent in a related clinical activity. The evaluation and approval of the amount of credit will depend on an assessment by the ABP and the pathology training director with regard to relevance of the experience. Credit for clinical activity or a combination of research and clinical training (a, b, c, and d) will not exceed one-third of the required approved pathology training.

4. *Additional training or experience*—A candidate for primary certification who has completed the required pathology training five years or more prior to date of submission of an application for examination must have either one year of additional training in pathology in a program accredited for such training by the ACGME or two full years of additional experience in pathology in the United States or Canada in a situation acceptable to the Board. This additional requirement must be met during the five-year period immediately preceding the date of submission of an application. It is effective 1 January 1987.

Pathology

B. *Special Qualification Certificates*

All candidates applying for special qualification certification must hold a primary certificate from the ABP or from another primary specialty board of the American Board of Medical Specialties.

Credit is not given for training outside of the United States and Canada. Also, credit is not given for training in areas of special qualification that was part of the training program leading to the requirements necessary to qualify to sit for the examination in AP and/or CP.

No advanced credit will be granted for special qualification training or experience that has been used to qualify for examinations given by another primary medical specialty board. *No advanced credit will be given toward the requirements for special qualification certification by the mechanisms described in Section III A 3, Other Credit Mechanisms.*

1. *Blood Banking (BB)*

a. Applicants who *hold* a certificate in anatomic and clinical pathology, or clinical pathology only:

- (1) One full year of additional supervised training in blood banking in a program accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in blood banking or its equivalence under circumstances acceptable to the ABP.

b. Applicants *not* holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: *Two full years* or its equivalence of approved training or acceptable experience in blood banking.

2. *Chemical Pathology (Chem P)*

a. Applicants who *hold* a certificate in anatomic and clinical pathology, or clinical pathology only:

- (1) One full year of additional supervised training in chemical pathology in a program accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in chemical pathology or its equivalence under circumstances acceptable to the ABP.

b. Applicants *not* holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: *Two full years* or its equivalence of approved training or acceptable experience in chemical pathology.

3. *Dermatopathology (DP)*

Certification in dermatopathology is a joint and equal function of The American Board of Pathology (ABP) and The American Board of Dermatology (ABD). Such function will relate to qualifications of candidates, standards of examinations, and the form of the certificate.

All candidates applying for examination must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

a. *Prerequisites*

The American Boards of Pathology and Dermatology will admit candidates to examination for certificates of special qualification in dermatopathology who are otherwise qualified and who have met one of the following requirements:

- (1) Applicants who are diplomates of both the ABP and the ABD.

- (2) Applicants already holding a primary certificate from the ABP (anatomic pathology, or combined anatomic and clinical pathology) or the ABD and the addition of one or two years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the *full* training requirements for certification in pathology or dermatology.

b. *Training*

Training programs in dermatopathology will be an equal and joint function of the departments of pathology and dermatology. The pathologist applicant shall have spent one-half of the required training time of the one or two year program in clinical dermatology.

COMMITTEE FOR DERMATOPATHOLOGY:

William H. Hartmann, MD, Chairman, Knoxville, Tennessee

Mark Allen Everett, MD, Vice Chairman, Oklahoma City, Oklahoma

William A. Caro, MD, Chicago, Illinois

Merle W. Delmer, MD, San Antonio, Texas

Thomas J. Gill III, MD, Pittsburgh, Pennsylvania

James H. Graham, MD, Washington, D.C.

Candidates may obtain an application as follows:

Pathologists—M. R. Abell, MD, PhD

Executive Director

American Board of Pathology

Lincoln Center

5401 West Kennedy Boulevard

P. O. Box 25915

Tampa, Florida 33622

Dermatologists—Clarence S. Livingood, MD

Executive Director

The American Board of Dermatology, Inc.

Henry Ford Hospital

2799 West Grand Boulevard

Detroit, Michigan 48202

4. *Forensic Pathology (FP)*

a. Applicants who *hold* a certificate in anatomic and clinical pathology, or anatomic pathology only, or in special instances, clinical pathology only:

- (1) One full year of additional supervised training in forensic pathology in a program accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in forensic pathology or its equivalence in a situation comparable to that of a program accredited for such training by the ACGME.

b. Applicants seeking *combined certification* in anatomic pathology and forensic pathology (AP/FP) see Section III C, Certificate Combinations.

5. *Hematology (HEM)*

a. Applicants who *hold* a certificate in anatomic and clinical pathology or clinical pathology only, or in special instances, anatomic pathology only:

- (1) One full year of additional supervised training in hematology in a program accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in hematology or its equivalence under circumstances acceptable to the ABP.

b. Applicants *not* holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: *Two full years* or its equivalence of approved training or acceptable experience in clinical laboratory hematology.

6. *Immunopathology (IP)*

a. Applicants who *hold* a certificate in anatomic and clinical pathology:

- (1) One full year of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP

or

- (2) Two additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.
- b. Applicants who *hold* a certificate in anatomic pathology only or clinical pathology only:
 - (1) Two full years of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP
 - or
 - (2) Four additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.
- c. Applicants who hold a certificate in anatomic pathology only or clinical pathology only *plus* a certificate of Special Qualification in Blood Banking, Hematology, Medical Microbiology, or Chemical Pathology:
 - (1) One full year of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP
 - or
 - (2) Two additional years of full-time experience in immunopathology or its equivalence under circumstances acceptable to the ABP.
- d. Applicants seeking *combined certification* in anatomic pathology or clinical pathology *and* immunopathology (AP/IP, CP/IP), see Section III C, Certificate Combinations.
- 7. *Medical Microbiology (MMB)*
 - a. Applicants *who* hold a certificate in anatomic and clinical pathology, or clinical pathology only:
 - (1) One full year of additional supervised training in medical microbiology in a program accredited for such training by the ACGME or approved for such training by the ABP
 - or
 - (2) Two additional years of full-time experience in medical microbiology or its equivalence under circumstances acceptable to the ABP.
 - b. Applicants *not* holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: *Two full years* or its equivalence of approved training or acceptable experience in clinical laboratory microbiology.
- 8. *Neuropathology (NP)*
 - a. Applicants who *hold* a certificate in anatomic and clinical pathology, or anatomic pathology only: *Two full years* of additional supervised training in neuropathology in a program accredited for such training by the ACGME or approved for such training by the ABP.
 - b. Applicants who *hold* a certificate in clinical pathology or a primary certificate from another primary medical specialty board:
 - (1) One full year of approved training in anatomic pathology in a program accredited for such training by the ACGME or approved for such training by the ABP
 - plus
 - (2) Two full years of additional supervised training in neuropathology in a program accredited for such training by the ACGME or approved for such training by the ABP.
 - c. Applicants seeking *combined certification* in anatomic pathology and neuropathology (AP/NP), see Section III C, Certificate Combinations.

C. *Certificate Combinations*

Under certain circumstances special qualification training may be arranged in conjunction with the primary training requirements, permitting a candidate to qualify for a combined certificate. All applicants for combined certification in 1990 and thereafter must also

meet the additional credential requirement of one full year of clinical training, clinical experience, or clinically related research. (See Additional Credential Requirement for Primary Certification in Pathology.) Dual credit is not acceptable, i.e., training in an area of special qualification as part of the requirements toward a primary certificate is not acceptable as credit for special qualification.

Advanced credit will not be given toward the requirements for combined certificates (involving primary training and special qualification training) by the mechanisms described in Section III A 3, Other Credit Mechanisms.

The only acceptable combinations of certification and the required training are:

1. *Anatomic pathology and forensic pathology (AP/FP)*—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME and one full year of approved training in forensic pathology in a program accredited for such training by the ACGME and one additional year of approved training in anatomic pathology or in one of the specialty areas of pathology such as neuropathology, toxicology, or chemical pathology.

2. *Anatomic pathology and neuropathology (AP/NP)*—two full years of approved training in anatomic pathology and two full years of approved training in neuropathology in a program accredited for such training by the ACGME with adequate experience in diagnostic neuropathology.

3. *Anatomic pathology and hematology (AP/HEM)*—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME and two full years of approved training in hematology in a program accredited for such training by the ACGME or approved for such training by the ABP with adequate training or experience in the clinical pathology aspects of hematology.

4. *Anatomic pathology and immunopathology (AP/IP)*—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME and two full years of approved training in immunopathology in a program accredited for such training by the ACGME.

5. *Clinical pathology (CP) plus special qualification*—three full years of approved training in clinical pathology in a program accredited for such training by the ACGME plus one full year of approved special qualification training in blood banking, chemical pathology, hematology, or medical microbiology in a program accredited for such training by the ACGME as defined in Section III B, Special Qualification Certificates

or
 Two full years of approved training in clinical pathology plus two full years of approved special qualification training in programs in blood banking, chemical pathology, hematology, immunopathology, or medical microbiology accredited for such training by the ACGME as defined in Section III B, Special Qualification Certificates.

Additional Credential Requirement for Applicants for Primary Certification in 1990 and Thereafter

EFFECTIVE 1 JULY 1985, for residents entering primary pathology training programs and 1990 for all applicants for examination, the requirements for certification in combined anatomic and clinical pathology (AP/CP) and for combined primary pathology and special qualification certification will be five years with one of the five years being clinical training, experience, or research (see below). For certification in anatomic pathology (AP) only or in clinical pathology (CP) only, the primary training requirements are three years with a fourth year being clinical training, experience, or research.

Pathology

The additional clinical requirements for certification may be met by one or a combination of the following three pathways:

1. One full year of approved graduate medical education in a transitional year training program; or in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice in a program accredited for such training by the ACGME.
2. One year of full-time research in pathology or in another clinical discipline providing that the research has clearly defined clinical implications.
3. One year of training in one of the specialty fields of pathology that includes clinical correlation and patient contact. (This year may not be used to meet the requirements both for clinical training and for special qualification certification.)

OR

By the incorporation of the equivalence of one full year of clinical training, clinical experience, or clinical research throughout an anatomic and clinical pathology training program of five years or an anatomic pathology or clinical pathology training program of four years. The training director is responsible for defining and justifying this year of clinical activity.

Credit for Clinical Training Outside of the United States and Canada

Under certain circumstances, clinical training taken outside of the United States and Canada may be acceptable toward meeting the ABP credential requirement of clinical training providing that the following three criteria are fully met and validated:

1. One full year of full-time training in clinical medicine in a multidisciplinary training program (internship) or in a training program in internal medicine, pediatric medicine, general surgery, or obstetrics and gynecology.
2. Proof from the national accreditation body in the respective country that the training program in which the candidate was registered had been inspected and fully accredited. No credit will be granted for clinical training in countries in which training programs are not nationally accredited.
3. Validation from the director of the training program that the candidate was registered in the program, completed the training satisfactorily, and was the physician of record in the diagnosis and treatment of patients throughout the full year.

The acceptability of clinical training toward meeting the ABP requirements is assessed on an individual basis and it is advisable that an opinion be obtained from the ABP well in advance of the submission of an application for certification. The amount of advanced credit for clinical training outside of the United States and Canada toward the ABP requirements for certification cannot exceed a total of 12 months. No assessment of possible credit will be given until all validating and reference information has been received.

Application Form and Fee

Requests for application forms must be made in writing to the Office of the ABP. Completed forms should be returned with the required credentials and the application-examination fee. An application cannot be given consideration unless it is accompanied by the application-examination fee.

The application-examination fee schedule for 1987 is as follows:	
Anatomic pathology only	\$850
Clinical pathology only	\$850
Anatomic pathology portion of combined AP/CP	\$850
Clinical pathology portion of combined AP/CP	\$850
Combined anatomic and clinical pathology	\$950
Special qualification	\$950

Anatomic or clinical pathology combined with special qualification (both parts taken at one sitting at the spring examination)

\$1100

The application-examination fee includes a nonrefundable processing fee of \$100. If the different divisions of the AP/CP and the combined primary and special qualification examinations are taken at separate sittings, there is a separate examination fee for each sitting. If the candidate fails in the examination, admission to a repeat examination is permitted, but any reexamination must occur within the three-year period of qualification described under "Qualification Period for Examination." The applicant must again pay an examination fee according to the current fee schedule before another examination will be given. If after having applied for a specific examination the candidate requests a transfer to a future examination prior to the final filing date, there is a transfer fee of \$100.

In the event of the candidate's illness at the time of the examination, validated by the candidate's attending physician, a major portion of the application-examination fee will be either transferred to the next examination or refunded.

Vacation, Maternity, and Other Leave

Each program may develop individual sick, vacation, and other leave policies for the resident. However, one year of approved training credit toward ABP certification requirements must be 52 weeks in duration and must include at least 48 weeks of full-time pathology training. Furthermore, unused vacation and other leave time may not be accumulated to reduce the overall duration of training.

Irregular Behavior

In the interest of protecting the integrity of the ABP and its certification examinations, the following irregular behaviors may be sufficient to bar a person from future examinations, to terminate one's participation in the examination, to invalidate the results of one's examination, to cause the withholding or revocation of one's scores or certificate, or to merit other appropriate action by the Board:

- (1) The giving or receiving of aid in the examination as evidenced either by observation or by statistical analysis of candidates' answers;
- (2) The unauthorized possession, reproduction, or disclosure of any ABP examination-related materials, including, but not limited to, examination questions or answers, before, during, or after the examination; and/or
- (3) The offering of any benefit to any agent of the Board in return for any right, privilege, or benefit which is not usually granted by the Board to other similarly situated candidates or persons.

In addition, the Board may withhold a candidate's scores and require that the candidate retake one or more portions of the examination if presented with sufficient evidence that the security of the examination has been compromised, notwithstanding the absence of any evidence of the candidate's personal involvement in such activities.

Qualification Period for Examination

The ABP does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." An applicant is declared qualified for examination only after a formal application has been received and approved by the Credentials Committee.

The ABP will permit a candidate who has qualified for examination on the basis of approved training and/or experience to sit for examination during a period not to exceed three years after being declared qualified to take the examination. When this period has expired, additional periods of qualification for examination will be permitted upon submission of documented evidence that the candidate has obtained further training or experience after termination of the

period of qualification in the form of an additional year of approved training in an accredited program or two years of experience acceptable to the ABP.

At any time after declaring a candidate qualified for examination, the Credentials Committee at its discretion may withdraw such qualification or may as a condition require satisfaction by the candidate of specified conditions. In the exercise of its discretion under this regulation, the Credentials Committee shall be entitled to act without reason assigned.

If it be determined that an applicant has falsified information in the application form, the applicant will not be approved for the certifying examination and must wait a period of three years before being permitted to file a new application. The applicant will not be considered qualified to sit for the certifying examination during the three-year interim.

Examination Dates and Sites

Examinations are held at the discretion of the Board. The primary examinations are generally conducted twice annually, in May-June and in November. The tentative schedules for forthcoming examinations are:

- Anatomic and clinical pathology examinations—
- 27, 28, 29 May 1987-Chicago, IL
- 16, 17, 18 November 1987-New Orleans, LA
- 19, 20, 21 May 1988-Columbus, OH
- 9, 10, 11 November 1988-Dallas, TX
- Only one examination will be given in 1989 and 1990.
- 26, 27, 28 September 1989-Chicago, IL
- 28, 29, 30 August 1990-Dallas, TX

Examinations for special qualification are usually held in May of each year; however, dermatopathology is scheduled separately at a time and place mutually agreed upon by The American Board of Pathology and The American Board of Dermatology.

- Examinations for special qualification—
- 26 May 1987-Chicago, IL
- 18 May 1988-Columbus, OH
- 25 September 1989-Chicago, IL
- 27 August 1990-Dallas, TX

Examination for Special Qualification in Pathology:

Immunopathology—

No immunopathology examination will be given in 1987. The next immunopathology examination will be given in May 1988 at the same time as the other special qualification examinations.

Dermatopathology examination—

- 3 November 1987-Chicago, IL
- 12 November 1988-Dallas, TX
- 7 November 1989-Chicago, IL
- 9 November 1990-Tampa, FL

Final Filing and Cut-Off Dates

The final filing date for the receipt of an application or registration for the spring primary and special qualification examinations is 1 February of each year and for the fall primary and special qualification examinations, 1 August of each year.

If the candidate cancels an appearance for the examination after these dates or does not appear for the examination, the entire application-examination fee is forfeited.

Issuance of Certificate

Upon satisfactorily passing the appropriate examination(s), a candidate will be issued a certificate by the ABP in those fields of pathology for which the ABP accepted the credentials. Thus, a candidate who is qualified for the combined examination in anatomic and clinical

pathology, having fulfilled the minimum requirements of 24 months of approved training in anatomic pathology and 24 months of approved training in clinical pathology, will receive a certificate only after both parts (anatomic and clinical pathology) of the examination have been passed. The two parts may be taken at one session or at separate sessions within the three-year qualification period.

Candidates qualified for examination in anatomic or clinical pathology and a specialty area of pathology and claiming qualification on the basis of the required training in each area will receive a certificate only after each of the examinations has been passed.

A candidate who has fulfilled all the prerequisites, including the minimal requirements of 36 months of approved training in anatomic pathology only or clinical pathology only, plus the 12 credential months of activity, will receive a certificate after passing the examination in anatomic pathology or in clinical pathology.

If a candidate's certificate is lost or destroyed, the ABP will issue a duplicate certificate upon written request and justification, together with the necessary engraving and handling charge of \$50.

Limitation of Number of Certificates of Special Qualification (Competence)

As a condition of admission to an examination for Special Qualification in Pathology, an individual holding two or more certificates of Special Competence and/or Special Qualification shall surrender a sufficient number of certificates to reduce their number to one. In the event that the individual fails the examination, the surrendered certificate(s) shall be restored. This action does not include certificates of Special Competence (Qualification) in Radioisotopic Pathology and in Dermatopathology.

Update of ABP Certificate

The ABP will permit diplomates of the Board to retake the examination in the area of pathology in which they are already certified for the purpose of updating their certificate. The application-examination fee and the passing requirements are the same as for initial candidates. Successful candidates will be issued a new, currently dated certificate.

Chemical Dependency

Applications for certification or recertification from persons who have had a history of chemical dependency as reported to the Board will not be accepted unless the applicant submits documented evidence acceptable to the Board that the disease is known to be under control for five years from the time of its most recent occurrence.

Candidates who have been declared qualified to sit for a certifying examination and who have a current problem of chemical dependency as reported to the Board will not be admitted to examination. Denial of admission to examination may result in the loss of opportunities for examination and, ultimately, in the decision to declare the candidate's application void for failure to complete the requirements for certification within the qualification time period allotted to every candidate.

Appeals Procedure

An individual who has received an unfavorable ruling regarding his qualification to take the examination may initiate an appeal of such determination by making a written request for reconsideration to the ABP Office within 90 days of the date such ruling was mailed.

A candidate who fails a certifying examination may request that the examination be rescored to verify the accuracy of the results as reported. Such request must be made in writing within 90 days of the date of mailing of the results of the examination to the candidate and must be accompanied by the fee of \$50 per certifying examination or part thereof. There shall be no further appeal from failure of an examination.

Chapel Hill, North Carolina
- Robert O. Guerin, PhD, Director, Psychometrics and
Computer Systems, Chapel Hill, North Carolina

Requirements for Admission
to Examination

All applicants for examination for certification must meet the following general requirements:

I. THE APPLICANT MUST BE A GRADUATE OF AN APPROVED MEDICAL SCHOOL in the United States or have fulfilled graduated from a recognized Canadian or foreign medical school. (For more detailed information, please read below.)

II. THE APPLICANT MUST HAVE AN UNRESTRICTED LICENSE TO PRACTICE MEDICINE in one of the states, districts or territories of the United States or a province of Canada, or unrestricted privileges to practice medicine in the United States Armed Forces. (For more detailed information, please read below.)

III. APPLICANTS MUST COMPLETE THREE YEARS OF HOSPITAL-BASED PEDIATRIC TRAINING in programs accredited by the Residency Review Committee for Pediatrics or in programs in Canada approved by the Royal College of Physicians and Surgeons of Canada. (For more detailed information, please read below.)

IV. THE BOARD WILL REQUEST PROGRAM DIRECTORS OF HOSPITAL-BASED PROGRAMS TO VERIFY SATISFACTORY COMPLETION OF TRAINING AND TO EVALUATE THE ACCEPTABILITY OF THE APPLICANT AS A PRACTITIONER OF PEDIATRICS. (For more detailed information, please read below.)

V. OTHER CONSIDERATIONS. The American Board of Pediatrics reserves the right to withhold certification and/or permission to take its examinations in the event of exceptional circumstances demonstrating that an applicant is not capable of performing the role of physician and advocate for infants, children, and adolescents. In such instances, the applicant will be notified and may appeal the decision to the Credentials Committee of the Board.

I. GRADUATION FROM MEDICAL SCHOOL

The applicant must be a graduate of an approved medical school in the United States or have graduated from a recognized Canadian or foreign medical school. Graduates of approved medical schools in Canada may apply for examination under the same regulations that apply to those trained in the United States.

Applicants who are graduates of medical schools other than those in the United States or Canada may apply for examination if they hold the standard certificate of the Educational Commission for Foreign Medical Graduates (ECFMG) and if they fulfill the training requirements established for certification by the American Board of Pediatrics. Graduates of foreign medical schools must submit a photocopy of their medical school diploma showing the medical degree and the date it was awarded. A certificate showing that the applicant has passed the final examinations is not acceptable.

Graduates of osteopathic medical schools will be accepted for examination if they satisfy the training requirements of the Board. Training must be completed in programs accredited by the Residency Review Committee for Pediatrics.

II. LICENSE TO PRACTICE MEDICINE

Beginning with the 1986 Written Examination, all applicants must have an unrestricted license to practice medicine in one of the states, districts, or territories of the United States or a province of Canada, or unrestricted privileges to practice medicine in the United States Armed Forces. A temporary license, such as an institutional, educational, or limited permit issued for physicians who are pursuing hospital-based residency training is acceptable for admission to Part I of the certification process (written examination). However, before a candidate is allowed to request an appointment for Part II (oral examination), he/she will be required to submit an actual copy of his/her unrestricted license to practice medicine in one of the states, districts, or territories of the United States or a province of Canada, or unrestricted privileges to practice medicine in the United States Armed Forces.

It is Board policy that, if an applicant has any action pending against him/her regarding the right to have an unrestricted license to practice medicine, he/she may be admitted to the examination, but the certificate will not be awarded until such time as the action pending against him/her has been resolved to the Board's satisfaction.

III. TRAINING REQUIREMENTS

Applicants must complete three years of postgraduate hospital-based pediatric training in programs accredited by the Residency Review Committee for Pediatrics or in programs in Canada approved for general pediatric specialty training by the Royal College of Physicians and Surgeons of Canada. During this period of training, the applicant is expected to assume progressive responsibility for the care of patients. *Credit will not be given for training completed before the medical degree is awarded.*

The Board recognizes five levels of pediatric training (PL-0 through PL-4). The Pediatric Levels are defined as follows:

PL-0 Accredited internships or residencies in fields other than pediatrics, e.g., rotating, flexible, family practice, internal medicine, general surgery, psychiatry. Credit at this level may also be given for extensive pediatric training in countries other than the United States or Canada. Applicants who are graduates of foreign medical schools and who received their degrees prior to July 1, 1975 may request PL-0 credit for hospital-based training in another country, provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics, and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. TRAINING AT THIS LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JULY 1, 1975.

- PL-1 The first postgraduate year in general comprehensive pediatric training in an accredited program.
 - PL-2 The second postgraduate year in general comprehensive pediatric training in an accredited program following PL-1 but with increased responsibility for patient care and for the supervision of junior staff and medical students.
 - PL-3 The third postgraduate year in general comprehensive pediatric training in an accredited program. This year must be an integral part of the total three years of general pediatric training required for all medical school graduates who received their degrees after June 30, 1978. It may be a chief residency or a senior supervising residency.
 - PL-3 An accredited clinical program or subspecialty residency in a pediatric subspecialty area of one year in duration. **SUBSPECIALTY TRAINING AT THE PL-3 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.**
 - PL-4 An accredited program or subspecialty residency in a pediatric subspecialty in which the proportion of time in nonclinical or laboratory activities is so large that a minimum of two years must be spent to gain the equivalent of a year of clinical training. **SUBSPECIALTY TRAINING AT THE PL-4 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS IN GENERAL PEDIATRICS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.**
2. *Between July 1, 1975 and June 30, 1978* must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. These two years of required general comprehensive pediatric training must be taken at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of training by completing one of the following options:
 - a. A supervisory year in general comprehensive pediatrics (PL-3).
 - b. An accredited subspecialty residency in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.
 3. *After June 30, 1978* must complete three years of hospital-based training in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. A year of supervisory experience must be an integral part of the total three year program; this year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Residents should not accumulate more than six months' time in one subspecialty over the total three year program and the total of all such subspecialty rotations should be at least 11 months but not more than 15 months. The rotation in neonatology must be for a minimum of four months, and not more than six months, and must include experience with the normal newborn infant.

Training Requirements by Year of Graduation from Medical School

The requirements for admission to the certifying examinations of the Board vary depending upon the date an applicant received his/her medical school diploma.

Applicants Who Received Their Medical Degrees:

1. *Prior to July 1, 1975*, must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. These two years of required general comprehensive pediatric training must be taken at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of required training by completing one of the following options:
 - a. An accredited internship or residency in a field other than pediatrics (PL-0).
 - b. Hospital-based training in another country. *Applicants requesting PL-0 level credit for hospital-based pediatric training completed in another country must submit a copy of their medical school diploma and a letter from the physician in charge of their training program indicating the dates and the specialty area of their training. The medical school diploma must be a photocopy of the actual document showing the medical degree and the date it was awarded. A certificate showing that the applicant has passed the final examinations is not acceptable.*
 - c. A supervisory year in general comprehensive pediatrics (PL-3).
 - d. An accredited subspecialty residency in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.

The American Board of Pediatrics recognizes that occasionally there will be an exceptional applicant who should be given special consideration to substitute other training for the third year of general comprehensive pediatrics required of medical graduates who received their degrees June 30, 1978. Information concerning special consideration may be obtained by writing to the President. The pediatric department chairman may initiate such a request for prospective review by the Board after the resident has completed one year of general comprehensive pediatric training. The completed petition form (obtained from the Board Office) must be postmarked by September 30 of the resident's PL-2 year. Physicians nominated for special consideration will be asked to take a special screening examination. The score on this examination would be used by the Credentials Committee as one means of evaluating the petition.

TRAINING PROGRAMS: The American Board of Pediatrics approves applicants for admission to its certifying process; the Board does not accredit training programs. Requests by directors for accreditation of their programs by the Residency Review Committee for Pediatrics should be addressed to: Executive Secretary of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, Illinois 60610.

The Residency Review Committee for Pediatrics currently reviews and accredits pediatric subspecialty programs in the following areas: pediatric cardiology, pediatric endocrinology, pediatric hematology-oncology, pediatric nephrology, and neonatal-perinatal medicine. A list of accredited programs are published in the *Directory of Graduate Medical Education Programs*. The Residency Review Committee for Pediatrics has drafted Special Requirements for Training Programs in Pediatric Pulmonology and Special Requirements for Programs in Pediatric Critical Care. When these have been approved, the Residency Review Committee will begin to review and accredit training programs in these two areas. Applicants who received their medical degree prior to July 1, 1978, and who wish to apply the subspecialty training toward

Pediatrics

fulfillment of one of the three years of required training are advised to correspond with the Board regarding the acceptability of their training plans toward certification.

Applicants seeking approval of programs of specialized training that are not accredited are advised to ask their program directors to submit *prospectively* to the American Board of Pediatrics a description of their proposed program for evaluation by the Credentials Committee. A list of the information required for review by the Credentials Committee may be obtained by contacting the Board office. When individualized approval is granted, it does not imply automatic approval for future applicants.

CREDIT FOR TRAINING TAKEN IN ACCREDITED PROGRAMS OTHER THAN PEDIATRICS: Physicians transferring to pediatric residency training from other accredited residencies, e.g., family practice, internal medicine, transitional, are advised to correspond with the Board office to determine whether credit may be awarded for previous training. Requests for credit should be submitted prior to entering pediatric residency training.

SPECIAL AGREEMENTS: There exists a special agreement between the American Board of Pediatrics and the AMERICAN BOARD OF INTERNAL MEDICINE whereby an applicant may fulfill the training requirements of both Boards by completing two years of accredited training in general comprehensive pediatrics and two years of accredited training in internal medicine. The two Boards believe that all four years should be completed in the same combined training program. A list of institutions offering combined programs is published in this *Directory of Graduate Medical Education Programs*. At the present time, applicants may apply for the written examination after they have completed two years of accredited training in general comprehensive pediatrics and one year of accredited training in internal medicine. Applicants who begin combined programs after December 31, 1984, may not appear for the written examination of the Board until after they have satisfactorily completed all four years of accredited training.

A special agreement exists with the AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY whereby an applicant who completes two years of accredited training in general comprehensive pediatrics and the neurology training necessary to meet the requirements for certification in neurology with special competence in Child Neurology fulfills the training requirements of both the American Board of Pediatrics and the American Board of Psychiatry and Neurology. Applicants can apply for the written examination after satisfactory completion of two years of accredited training in general comprehensive pediatrics and two years of accredited training in neurology.

Candidates will not be permitted to appear for the oral examination until after they have completed all of their training.

The American Board of Pediatrics, the American Board of Psychiatry and Neurology, and the Committee on Certification in Child Psychiatry have formed a committee that is overseeing training in six pilot programs. Training includes 24 months of general comprehensive pediatrics, 18 months of child psychiatry, and 18 months of adult psychiatry. Physicians pursuing training in one of these six pilot programs will be permitted to take this Board's written examination after satisfactorily completing 24 months of general comprehensive pediatrics and 12 months of psychiatry. Candidates may proceed to the oral examination after passing the written examination and satisfactorily completing all five years of training. Further information concerning these combined pilot training programs may be obtained by contacting the Board office.

SPECIAL AGREEMENT BETWEEN THE AMERICAN BOARD OF PEDIATRICS AND THE AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION: A special agreement exists with the AMERICAN BOARD OF

PHYSICAL MEDICINE AND REHABILITATION (ABPM&R) whereby a physician interested in pediatric rehabilitation can qualify for admission to the certifying examinations of both Boards. The residency programs may be designed to be completed in approximately 60 months. The non-PM&R 12-month segment of the four-year PM&R residency will be credited on the basis of satisfactory completion of the regular first year of pediatric residency.

The American Board of Pediatrics requires a minimum of 36 months of general comprehensive pediatric training with six months' credit for pediatric rehabilitation within the PM&R training. The American Board of Physical Medicine and Rehabilitation requires a minimum of 36 months accredited PM&R residency with six months' credit for related rotations during the pediatric training. Six months FTE of pediatric rehabilitation is required.

Applicants may apply for the written examination after satisfactory completion of 30 months of general comprehensive pediatrics and six additional months of training in PM&R. Candidates will not be permitted to appear for the oral examination until they have satisfactorily completed their training.

It is recommended that all training be completed at one academic institution; any deviation will require prospective approval by both Boards. At the beginning of the residency, both proposed individual programs must be submitted in detail to the Credentials Committee of each specialty Board for approval. When two separate institutions are involved, there should be evidence of adequate coordination to provide an appropriate educational experience. Vacation is shared pro rata between the training time spent in pediatrics and in PM&R.

Any applicant, regardless of the year of graduation from medical school, may fulfill the training requirements of the Board by completing the training routes outlined in the Special Agreements between the American Board of Pediatrics and the American Board of Internal Medicine and the American Board of Psychiatry and Neurology, or with the American Board of Physical Medicine and Rehabilitation.

GRADUATE SCHOOL COURSES: It is a fundamental concept of the American Board of Pediatrics that a residency training program should provide for properly organized progressive responsibility for the care of sick children. The Board believes further that this purpose can be accomplished best through continuity of clinical experience under supervision of attending physicians who are themselves responsible for the care of the children of that service. The substitution of a formal graduate or postgraduate school course that does not carry the essential ingredient of responsibility for patient care is, in the opinion of the Board, inconsistent with this principle. Accordingly, the Board will not accept such courses in fulfillment of its training requirements.

MILITARY SERVICE: Military assignments will not be accepted in lieu of a year of required training unless served as a regular resident in a military hospital that is accredited by the Residency Review Committee for Pediatrics.

SPECIAL SITUATIONS: The Board recognizes that situations may arise that are not explained by the preceding information. A physician may have worked in a pediatric field for many years, yet be deficient in the formal prerequisites for examination, or a physician may have completed specialized training not explained in the above requirements. In such cases, the individual should present his question to the President of the Board, who may ask the Credentials Committee to review the record and decide whether permission should be given to enter the certification process.

STATEMENT OF ELIGIBILITY: The Board does not issue statements of "eligibility" for its examinations. The Board will verify only whether a physician is certified or is not certified.

IV. VERIFICATION OF TRAINING AND EVALUATION BY DIRECTORS OF HOSPITAL-BASED PEDIATRIC TRAINING PROGRAMS

The Board regards the evaluation of trainee competency as a continuum that begins during training and is completed by the Board examinations following formal training. The Board depends upon program directors and their faculties to provide objective assessments of applicants' clinical competency as demonstrated in the training setting. In the written and oral examinations, candidates have the opportunity to demonstrate to the Board the knowledge and clinical problem solving abilities needed to diagnose and manage the health problems of children.

A. THE BOARD WILL REQUEST PROGRAM DIRECTORS TO VERIFY COMPLETION OF TRAINING AND TO SIGN THE FOLLOWING STATEMENT ON THE VERIFICATION OF CLINICAL COMPETENCE FORMS:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a general pediatrician; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

In recommending a candidate for the examination, a program director should keep in mind the Definition of a Passing Candidate as determined by the Board:

A candidate shall demonstrate the following abilities as they pertain to infants, children, and adolescents:

1. assessment of the clinical issues and formulation of a management plan for any medical or health maintenance problem;
2. execution of the management the plan with the patient and family, without further medical consultation, for all common problems of disease and health maintenance for all medically life-threatening situations;
3. consultation with physicians and other professionals regarding these common problems and life-threatening situations; and
4. arrangement for help for the patient and knowledge of what to anticipate from the consultant, being prepared personally to guide further management with assistance when appropriate, for unusual problems requiring subspecialty, surgical or other specialized skills.

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the written examination. It is the applicant's responsibility to be sure the program director submits all of the required documents by the appropriate deadline. When an applicant has not attained the appropriate knowledge and skills, the program director should sign Statement B on the Verification of Clinical Competence Form. By signing this statement, the program director is recommending that the applicant not be admitted to the examination.

If an applicant's training is not verified and/or he/she is not recommended for admission to the examination, the applicant will be required to satisfactorily complete an additional period of hospital-based training in general comprehensive pediatrics in either an accredited program in the United States or an approved program in Canada before reapplying to the Board. Alternatively the applicant may appeal to the Credentials Committee of the Board. The Credentials Committee will gather additional information about the applicant and decide if permission to take the examination should be given.

For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore,

the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Board must have the program director's assurance that the person meets the standards expected of a certified pediatrician. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program that have not been made up by the applicant such a sick leave, vacation or maternity leave. The Board recommends that absences from a program greater than three months during the three years of required training be made up by additional periods of training.

B. THE PROGRAM DIRECTOR IS ALSO ASKED TO PROVIDE INFORMATION THAT WILL HELP THE BOARD MAKE A FAIR JUDGMENT ABOUT THE CANDIDATE.

The program director is asked to evaluate on a nine-point scale the applicant in the following areas: gathering data by history, by physical examination, and by laboratory studies; assessing data and arriving at a diagnosis; managing problems and maintaining health; interpersonal relationships with patients and families; interpersonal relationships with other members of the health team; work habits and personal qualities.

The program director is asked to rate the applicant's overall clinical competency by indicating which of the following phrases best describes the applicant in terms of his/her ability to care for children in the United States or Canada. In these phrases, the word "manage" is defined as identifying the nature of the problem, determining methods of resolving or alleviating the problem, and carrying out management plans including the appropriate and timely use of consultants.

1—Unable to manage many pediatric problems including the most routine ones

2

3—Able to manage only the most routine problems in pediatrics

4

5—Able to manage the common problems of pediatrics adequately

6

7—Able to manage most pediatric problems in an adequate way

8

9—Able to manage almost any pediatric problem in a highly effective manner

If an applicant receives a rating of 3 or less in any single area or a rating of 4 or less for overall clinical competency, the Credentials Committee asks that the program director submit documentation with the completed Verification of Clinical Competence Form. If the applicant's weaknesses are documented and are in the domain of data gathering, data assessment, or patient management, the applicant must pass a screening examination before being admitted to the written examination. If the applicant is unsuccessful on a screening examination or if the documented weaknesses are in the domain of interpersonal relationships or work habits and personal qualities, the applicant should satisfactorily complete an additional period of hospital-based training in general comprehensive pediatrics in either an accredited program in the United States or an approved program in Canada before reapplying to the Board. Alternatively, the applicant may appeal to the Credentials Committee as described in section IV. A. above.

The Board will review program directors' assessments of applicants and in the future will report data from time to time anonymous data to program directors regarding their assessments of applicants and the applicants' subsequent performance on written and oral examinations.

C. THE BOARD RECOMMENDS THAT EACH PROGRAM ESTABLISH A COMMITTEE OF SUPERVISING FACULTY TO EVALUATE INDIVIDUAL HOUSE OFFICER PROGRESS DURING TRAINING AND AT THE END OF TRAINING.

Pediatrics

Judgments should be made as objectively as possible and on a regular basis. Faculties are encouraged to use their own forms for periodic evaluation or to use forms developed by the Board. It is recommended that program directors maintain files documenting each resident's performance and that the evaluations in these files be discussed periodically with each resident. The Board, through its representatives, recommends to the Residency Review Committee for Pediatrics that when pediatric residency programs are reviewed, the presence of objective, systematically recorded evaluation of resident performance be assessed.

D. RESIDENTS WHO PLAN TO SEEK CERTIFICATION SHOULD BE ENCOURAGED TO TAKE THE IN-TRAINING EXAMINATION AT THE BEGINNING OF THE PL-1 AND PL-2 YEARS AND AGAIN IN THE PL-3 YEAR IF PREVIOUS PERFORMANCE IS NOT SATISFACTORY. Results can be used by the program director to evaluate the program and to indicate to residents areas in which they additional study or training.

Program directors and their faculties may want to explore and develop evaluation procedures for assessment of physician performance. Examples are: medical record audits, rating scales for assessment of work habits, observational checklists for assessment of technical skills, peer reviews, patient-parent simulators for assessment of interpersonal skills, oral examinations, and consumer questionnaires.

The Board will continue to participate in and support research efforts to develop methods for evaluating the day-to-day performance of residents in caring for infants, children, and adolescents.

E. THE PEDIATRIC PROGRAM DIRECTOR HAS RESPONSIBILITIES TO THE RESIDENTS WHO PLAN TO ENTER SUBSPECIALTY TRAINING. Since ultimate certification in a pediatric subspecialty area is contingent upon certification in general pediatrics, program directors should ensure that residents offered pediatric subspecialty residencies have a thorough grounding in general comprehensive pediatrics as an entering qualification, and that the residents meet the training requirements established for certification by the Board.

V. OTHER CONSIDERATIONS.

One such consideration is addressed in the Board's Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol). Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease, currently, is known to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease, currently, is known to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for chemical dependency, as reported to the Board, will not be admitted to examination. Denial of admission to examination may result in the loss of opportunities to take an examination and, ultimately, in the Board's decision to declare the candidate's application void for failure to successfully complete the requirements for certification within the time allotted to every candidate.

Candidates who have had a history of chemical dependency, as reported to the Board, will not be issued a certificate upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

Information Concerning Examinations

The content of the examinations for certification is appropriate to the practice of general comprehensive pediatrics. Emphasis is placed on practical aspects; however, good practice is founded on sound scientific

knowledge and the candidate should be prepared to demonstrate an understanding of basic science. The examinations for certification are given in two sections: Part I is a written examination, Part II is an oral examination.

The Board does not sponsor or maintain records on any courses which claim to be review courses in preparation for the examinations.

It is the candidate's responsibility to keep the Board informed of any changes in mailing address so that information concerning examinations can be sent to the candidate at the appropriate time.

IRREGULARITIES

The validity of the performance of candidates on the written and oral examinations of the Board is secured by every means available. Information is available by contacting the Board office concerning the procedures to be taken by the Board in the event of irregular behavior during the written or oral examinations, such as giving or obtaining unauthorized information or aid before, during, or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board.

APPLICATION TO THE BOARD

Application material for admission to the certifying examinations of the Board may be obtained by contacting the Board office. The registration period for the written examination extends from November through January.

APPLICATIONS MUST BE POSTMARKED BY JANUARY 31 OF THE YEAR IN WHICH THE APPLICANT WISHES TO TAKE THE WRITTEN EXAMINATION. Early application is desirable, as subsequent assignment to sites for the oral examination depends in part upon the date the first application is received by the Board. Those applications received by this deadline will be processed and evaluated and the Board will request Directors of general pediatric training programs to verify completion of training. Those applicants who meet the training requirements of the Board and who are recommended by their program director(s) for examination will be accepted and registered for Part I—the written examination. An applicant who does not receive notification of the acceptance or rejection of his/her application by July 1 should contact the Board office promptly in writing to inquire about the status of the application.

Applicants for the written examination must complete their training by the date of the examination. For example, if the general pediatric written examination is given on September 10, the applicant must complete his/her training by September 10.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of their condition prior to appearing for the written examination. Applicants should notify the Board office at the time the initial application is submitted.

LATE APPLICATIONS

A physician whose application or re-examination registration material is postmarked after the published deadline (January 31 for new applications and February 28 for re-examination registration material) will be assessed an additional fee of \$200 before the application or registration material will be processed. *New applications and re-examination registration material will not be accepted after May 31 of the year of the examination.*

Completion of Certification Process

Beginning with the 1986 Written Examination, new applicants should achieve certification within ten years of their initial acceptance into the certification process. Candidates who were admitted to the certification process prior to 1986 will have ten years, or until December 1995, to complete the certification process. Candidates who have not

been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

When reapplying to the certification process, an applicant is subject to the policies of the Board in effect at that time.

Fees

The cost of certification includes the following fees, payable in United States dollars only:

Processing and Evaluating Fee	\$150.00
Written Examination (one only)	250.00
Total payment at the time of initial application	\$400.00
Oral Examination (one only—fee payable on receipt of appointment)	300.00
TOTAL EXAMINATION FEES	\$700.00

If an applicant is not approved to take the certifying examinations of the Board, the \$250 written examination fee will be refunded. The remaining \$150 is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee (\$400) again.

A reapplication fee (\$300 for the written and \$350 for the oral) will be assessed for each re-examination.

Each of the above fees entitles the applicant to one examination only. These fees are subject to change without notice.

PART I—WRITTEN EXAMINATION

The written examination is given once a year in September, at a number of locations throughout the United States and Canada.

The examination is given in two sessions of four hours' duration each, with a luncheon break between sessions. The examination consists of multiple-choice questions. Examples of the types of questions to be used are mailed to registered candidates prior to the administration of each examination.

Each candidate's written examination score(s) will be reported to his/her general pediatric program director(s).

PART II—ORAL EXAMINATION

A candidate may proceed to the oral examination only after completing the training requirements of the Board and passing the written examination. Site selection forms are sent each year to qualified candidates. Qualified candidates can anticipate an approximate 15-month interim period between completion of these requirements and appointment consideration for oral examination.

Candidates who have not submitted a copy of an unrestricted license to practice medicine to the Board office by December of the year other requirements are completed, will not be given an opportunity to request an appointment until such license is obtained.

Candidates are selected for oral examination appointments according to the following priorities: (1) all candidates who have not taken an oral examination, in descending order (most recent year first) by the year of satisfactory completion of the written examination and (2) all candidates who have taken an oral examination, in ascending order (earliest year first) by the year of satisfactory completion of the written examination, and within years by date of initial application. Oral examinations are held five or more times each year in cities across the United States.

Failure in Examinations

Part I (Written Examination)—Written re-examinations may be taken upon payment of the additional charge stated above. Notification of the next examination date and the appropriate reapplication forms will be sent to all qualified candidates in December of each year.

Part II (Oral Examination)—Candidates who are unsuccessful in the oral examination may request a second examination after a one-year

interim. Site selection forms for the oral examinations to be offered during the next year will be sent automatically to qualified candidates. A third oral examination will not be permitted until the candidate has taken and passed another written examination.

Candidates who are unsuccessful on the written or oral examinations must contact the Board office within one year of the date of that examination if they have questions concerning their performance.

Postponement of Examinations

Part I (Written Examination)—After the Board has accepted an application, the candidate is expected to take the next written examination offered. Such examinations are given annually at the locations announced by notice to qualified candidates. Candidates who withdraw from the written examination after site assignment cards are entitled to a refund of \$125. Candidates who withdraw from the written examination after the admission cards are prepared or who do not appear for the examination will forfeit all fees paid and will be required to submit a reapplication fee (\$300) before being admitted to a future examination.

Part II (Oral Examination)—Appointment letter for the next fiscal year (May 1-April 30) are mailed to qualified candidates in February. Should a candidate withdraw from the oral examination between the time the Board receives written confirmation of his/her acceptance of an appointment and 60 days prior to his/her appointment, the candidate will forfeit all but \$150 of the examination fee. A candidate who cancels from 60 to 30 days prior to their appointment will forfeit all but \$75 of the examination fee. Cancellation within 30 days of administration or not appearing for the examination results in forfeiture of the entire examination fee. A site selection from the oral examinations to be offered during the next year will be sent automatically to qualified candidates in December.

Certification by the Board

A certificate is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examinations.

The duration of original certificates issued after May 1, 1988, will be seven years.

The names of certified pediatricians, but not their scores, will be sent to the appropriate organizations, directories, and journals.

Recertification in Pediatrics

The Board offers a voluntary recertification program that is open to all certified diplomates of the American Board of Pediatrics.

Anyone certified prior to May 2, 1988, will not be affected by the policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification program, contact the Board office.

It should be noted that these criteria and conditions are subject to change. All applicants are advised to consult the President to ascertain any change that may have been made, especially before undertaking any variations in the training program.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

(1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or

(2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or

Pediatrics

(3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or

(4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or

(5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or

(6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Certification in Pediatric Subspecialties

The American Board of Pediatrics has established a procedure for certification in the following subspecialties as areas of special competency: pediatric cardiology, pediatric critical care medicine, pediatric endocrinology, pediatric hematology-oncology, pediatric nephrology, neonatal-perinatal medicine, and pediatric pulmonology.

Sub-Board of Pediatric Cardiology

Amnon Rosenthal, MD, Chairman, Ann Arbor, Michigan

Delores A. Danilowicz, MD, New York, New York

Donald A. Girod, MD, Indianapolis, Indiana

John L. Green, MD, Rochester, New York

James H. Moller, MD, Minneapolis, Minnesota

Charles E. Mullins, MD, Houston, Texas

David C. Schwartz, MD, Cincinnati, Ohio

Roberta G. Williams, MD, Los Angeles, California

Sub-Board of Pediatric Hematology-Oncology

George R. Honig, MD, Chairman, Chicago, Illinois

Gerald Gilchrist, MD, Rochester, Minnesota

William E. Hathaway, MD, Denver, Colorado

Jeanne M. Lusher, MD, Detroit, Michigan

Harold M. Maurer, MD, Richmond, Virginia

Campbell W. McMillan, MD, Chapel Hill, North Carolina

Sharon B. Murphy, MD, Memphis, Tennessee

Thomas C. Peebles, MD, Boston, Massachusetts

Sub-Board of Pediatric Nephrology

Norman J. Siegel, MD, Chairman, New Haven, Connecticut

Russell W. Chesney, MD, Sacramento, California

Robert B. Ettenger, MD, Los Angeles, California

John R. Hoyer, MD, Philadelphia, Pennsylvania

Julie R. Ingelfinger, MD, Boston, Massachusetts

Pedro A. Jose, MD, Washington, DC

Carolyn F. Piel, MD, San Francisco, California

Jean C. Robillard, MD, Iowa City, Iowa

Sub-Board of Neonatal-Perinatal Medicine

Michael A. Simmons, MD, Chairman, Salt Lake City, Utah

Eduardo Bancalari, MD, Miami, Florida

Avroy Fanaroff, MD, Cleveland, Ohio

M. Jeffrey Maisels, MD, Royal Oak, Michigan

William Oh, MD, Providence, Rhode Island

Dale L. Phelps, MD, Rochester, New York

George S. Sturtz, MD, Watertown, New York

Subspecialty Committee of Pediatric Endocrinology

Solomon A. Kaplan, MD, Chairman, Los Angeles, California

Angelo M. DiGeorge, MD, Philadelphia, Pennsylvania

M. Joycelyn Elders, MD, Little Rock, Arkansas

Melvin E. Jenkins, MD, Washington, D.C.

Robert P. Kelch, MD, Ann Arbor, Michigan

Maurice D. Kogut, MD, Dayton, Ohio

Allen W. Root, MD, St. Petersburg, Florida

Robert L. Rosenfield, MD, Chicago, Illinois

Subspecialty Committee of Pediatric Pulmonology

John G. Brooks, MD, Chairman, Rochester, New York

Howard Eigen, MD, Indianapolis, Indiana

Gary L. Larsen, MD, Denver, Colorado

Richard J. Lemen, MD, Tucson, Arizona

Robert B. Mellins, MD, New York, New York

J. Darrell Miller, MD, Coral Gables, Florida

Daniel C. Shannon, MD, Boston, Massachusetts

William W. Waring, MD, New Orleans, Louisiana

Subspecialty Committee of Pediatric Critical Care Medicine

Peter R. Holbrook, MD, Chairman, Washington, DC

Alfred W. Brann, Jr., MD, Atlanta, Georgia

Howard Eigen, MD, Indianapolis, Indiana

Bradley P. Fuhrman, MD, Pittsburgh, Pennsylvania

John F. Griffith, MD, Washington, D.C.

Julien I. E. Hoffman, MD, San Francisco, California

Michael V. Johnston, MD, Ann Arbor, Michigan

Mark C. Rogers, MD, Baltimore, Maryland

Andrew H. Urbach, MD, Pittsburgh, Pennsylvania

Certification in Pediatric Cardiology

The American Board of Pediatrics has established a procedure for certification in pediatric cardiology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric cardiology examination.

2. *Three years of full-time subspecialty residency training in an accredited pediatric cardiology program is required of those physicians entering training on or after January 1, 1988.* Physicians who enter pediatric cardiology training prior to January 1, 1988, may apply for admission on the basis of their completion of two years of subspecialty residency in an accredited pediatric cardiology program. Training must be completed in a pediatric cardiology program accredited by the Residency Review Committee (RRC) for Pediatrics. Applicants should consult the *Directory of Graduate Medical Education Programs* published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric cardiology.

Accredited subspecialty residency programs must adhere to the Special Requirements for Training Programs in Pediatric Cardiology. A minimum of one year of training must involve clinical work with children. The subspecialty resident must have significant involvement in research. No credit for subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States, unless the Credentials Committee of the Sub-Board has given approval

for foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric cardiology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

3. *Verification of training.* Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric cardiology as well as the name(s) of their program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Cardiology Program Director

The role of the pediatric cardiology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric cardiologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric cardiology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of subspecialty residency training in pediatric cardiology before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Sub-Board. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the applicant meets the standards expected of a certified pediatric cardiologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of training required by applicants entering training prior to December 31, 1987, or three months during the three years of training required of those entering training on or after January 1, 1988, be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Sub-Board of Pediatric Cardiology. The Sub-Board recognizes that

situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in pediatric cardiology are accredited by the Residency Review Committee for Pediatrics. The list of accredited programs appears in the *Directory of Graduate Medical Education Programs*.

Special Requirements for Training Programs

Special Requirements for Training Programs in Pediatric Cardiology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610. The Special Requirements are published in the *Directory of Graduate Medical Education Programs*.

Examinations

Candidates must pass both the written and oral examinations in pediatric cardiology to be certified. These examinations are offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of these examinations is to determine a candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where a candidate trained.

Failure in Examinations

Candidates who are unsuccessful on the written examination will be admitted for re-examination at the next written examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on one oral examination will be readmitted to a second oral examination upon specific application and payment of the appropriate fee. Upon failure in two oral examinations, the candidate will be required to take and pass another written examination before being admitted to a subsequent oral examination.

Candidates who are unsuccessful on the written and/or oral examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance on the examination.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next written examination offered. Candidates who withdraw from the written examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future written examination, payment of the reapplication fee will be required. Candidates for the oral examination who postpone after accepting an appointment, or those who do not appear for the examination, will forfeit the entire examination fee. To register for a future oral examination, payment of the appropriate reapplication fee will be required.

Pediatrics**Time in Which to Complete Certification Process**

Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric cardiology. Active candidates who were admitted to the certification process in pediatric cardiology prior to January 1, 1986, will have ten years, or until December 31, 1995, to complete the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

\$275 processing and evaluating fee

\$25 written examination fee for one examination

\$800 TOTAL payment at time of initial application

Plus oral examination fee for one examination—payable when an appointment is received.

Reapplication:

\$575 reapplication fee for one written examination

If an applicant is not approved to take the pediatric cardiology examination, the \$525 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written and oral examinations of the Sub-Board is secured by every means available. Information concerning the procedures to be taken by the Sub-Board in the event of irregular behavior during the written or oral examinations, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examinations of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified are sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to *Marquis Who's Who for publication in the Directory of Medical Specialists*, and various pediatric journals for publication. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

(1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or

(2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or

(3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or

(4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or

(5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or

(6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Recertification

The Sub-Board offers a recertification program that is open to all certified diplomates of the Sub-Board of Pediatric Cardiology. The pediatric cardiology recertification examination is given every three years; the next examination will be given in May 1989.

The duration of original certificates issued after April 30, 1988, will seven year. Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification process, contact the Board office at the address given below.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514-1651. Telephone (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certificate upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Certification in Pediatric Endocrinology

The American Board of Pediatrics has established a procedure for certification in pediatric endocrinology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric endocrinology examination.

2. *Three years of full-time subspecialty residency training in pediatric endocrinology is required of those physicians entering training on or after January 1, 1988.* Physicians who enter pediatric endocrinology training prior to January 1, 1988, may apply for admission on the basis of their completion of two years of subspecialty residency in pediatric endocrinology. Physicians who enter their training in pediatric endocrinology on or after January 1, 1987, will be required to complete their subspecialty residency in a program accredited for training in pediatric endocrinology by the Residency Review Committee (RRC) for Pediatrics. Applicants should consult the *Directory of Graduate Medical Education Programs* published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric endocrinology.

Accredited subspecialty residency programs must adhere to the Special Requirements for Training Programs in Pediatric Endocrinology. A minimum of one year of training must involve clinical work with children. The subspecialty resident must have significant involvement in research. No credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States, unless the Credentials Committee of the Subspecialty Committee has given approval for foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric endocrinology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Subspecialty Committee.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Subboards/Subspecialty Committees.

3. *Verification of training.* Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric endocrinology as well as the name(s) of their program director(s). The Subspecialty Committee will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Endocrinology Program Director

The role of the pediatric endocrinology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric endocrinologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric endocrinology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of subspecialty residency training in pediatric endocrinology, before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Subspecialty Committee. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director's assurance that an applicant meets the standards expected of a certified pediatric endocrinologist. Program directors are urged not to issue certificates of successful completion of training when a resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by an applicant. The Subspecialty Committee recommends that absences from a program beyond two months during the two years of training required of applicants entering training prior to December 31, 1987, or three months of the three years of training required of those entering on or after January 1, 1988, be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Endocrinology. The Subspecialty Committee recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in pediatric endocrinology are accredited by the Residency Review Committee for Pediatrics (RRC). The list of accredited programs appears in the *Directory of Graduate Medical Education Programs*. A physician entering subspecialty residency training in pediatric endocrinology on or after January 1, 1987 must train in a program accredited for pediatric endocrinology by the RRC in order to qualify for admission to the certifying examination of the Subspecialty Committee.

Residents who entered subspecialty training in pediatric endocrinology prior to January 1, 1987, are not required to complete their training

Pediatrics

in accredited programs. They are required, however, to complete their training only in those pediatric endocrinology training programs which are operated in association with general comprehensive pediatric programs accredited by the Residency Review Committee for Pediatrics.

Special Requirements for Training Programs

Special Requirements for Training Programs in Pediatric Endocrinology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610. The Special Requirements are published in the *Directory of Graduate Medical Education Programs*.

Examinations

A written examination in pediatric endocrinology is offered every three years. The next examination will be given in 1989. Please contact the American Board of Pediatrics for the exact date of each examination.

The 1992 examination will be the last examination for which applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine a candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director, at the institution(s) where a candidate trained.

Failure in Examinations

Candidates who are unsuccessful on an examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on an examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examination

After the Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponement will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric endocrinology. Active candidates who were admitted to the certification process in pediatric endocrinology prior to January 1, 1986, will have ten years, or until December 31, 1995, to complete the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

\$275 processing and evaluating fee

\$25 written examination fee for one examination
\$800 TOTAL payment at time of initial application

Reapplication:

\$575 reapplication fee for one written examination

If an applicant is not approved to take the pediatric endocrinology examination, the \$525 examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the examination of the Subspecialty Committee is secured by every means available. Information concerning the procedures to be taken by the Subspecialty Committee in the event of irregular behavior during the examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Subspecialty Committee, is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examination of the Subspecialty Committee. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified are sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

(1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or

(2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or

(3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or

(4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or

(5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or

(6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Recertification

The Subspecialty Committee offers a recertification program that is open to all certified diplomates of the Subspecialty Committee of Pediatric Endocrinology. The pediatric endocrinology recertification examination is given every three years; the next examination will be given in May 1989.

The duration of original certificates issued after April 30, 1988, will be seven years. Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification process, contact the Board office at the address given below.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514-1651. Telephone: (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependence or who are still in active treatment for a problem of chemical dependence as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certificate upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Certification in Pediatric Hematology-Oncology

The American Board of Pediatrics has established a procedure for certification in pediatric hematology-oncology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in

general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric hematology-oncology examination.

2. *Three years of full-time subspecialty residency training in pediatric hematology-oncology*, is required of those physicians entering training on or after January 1, 1986, in a program under the supervision of a director who is certified in pediatric hematology-oncology or lacking such certification, possesses equivalent credentials. Physicians who enter training in pediatric hematology-oncology on or after January 1, 1987, will be required to complete their three years of subspecialty residency in a program accredited for training in pediatric hematology-oncology by the Residency Review Committee for Pediatrics (RRC). Applicants should consult the *Directory of Graduate Medical Education Programs* published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric hematology-oncology. Physicians who entered pediatric hematology-oncology training prior to January 1, 1986, may apply for admission to the examination on the basis of their completion of two years of subspecialty residency training in pediatric hematology-oncology; such physicians are not required to complete their two years of required training in an accredited subspecialty program.

Accredited subspecialty residency programs must adhere to the Special Requirements for Training Programs in Pediatrics Hematology-Oncology. A minimum of one year of training must involve clinical work with children. The subspecialty resident must have significant involvement in research. No credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States unless the Credentials Committee of the Sub-Board has given approval for foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric hematology-oncology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

3. *Verification of training.* Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric hematology-oncology as well as the name(s) of their program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Hematology-Oncology Program Director

The role of the pediatric hematology-oncology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric hematologist-oncologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric hematology-oncology examination. If an applicant's training

Pediatrics

is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of subspecialty residency training in pediatric hematology-oncology before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Sub-Board. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the physician meets the standards expected of a certified pediatric hematologist-oncologist.

Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by an applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of training required of applicants entering training prior to December 31, 1985, or three months during the three years of training required of those entering training on or after January 1, 1986, be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Sub-Board of Pediatric Hematology-Oncology. The Sub-Board recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in pediatric hematology-oncology are accredited by the Residency Review Committee for Pediatrics (RRC). The list of accredited programs appears in the *Directory of Graduate Medical Education Programs*. A physician entering subspecialty residency training in pediatric hematology-oncology on or after January 1, 1987, must train in a program accredited for training in pediatric hematology-oncology by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who entered subspecialty training in pediatric hematology-oncology prior to January 1, 1986, are not required to complete training in an accredited program. They are required, however, to complete their pediatric hematology-oncology training in programs which are operated in association with general comprehensive pediatric programs accredited by the Residency Review Committee for Pediatrics, or associated with pediatric programs approved by the Royal College of Physicians and Surgeons of Canada.

Special Requirements for Training Programs

Special Requirements for Training Programs in Pediatric Hematology-Oncology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610. The Special Requirements are published in the *Directory of Graduate Medical Education Programs*.

Examinations

A written examination in pediatric hematology-oncology is offered every three years. Please contact the American Board of Pediatrics for the exact date of the next examination.

The 1993 examination will be the last examination for which applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful on an examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on an examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examinations

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponement will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which To Complete Certification Process

Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric hematology-oncology. Active candidates who were admitted to the certification process prior to January 1, 1986, will have ten years, or until December 31, 1995, to complete the certification process in pediatric hematology-oncology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

\$275 processing and evaluating fee

\$25 written examination fee for one examination

\$800 TOTAL payment at the time of initial application

Reapplication:

\$575 reapplication fee for one written exam

If an applicant is not approved to take the pediatric hematology-oncology examination, the \$25 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the examination of the Sub-Board is secured by every means available. Information

concerning the procedures to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The name of those certified will be sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

(1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or

(2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or

(3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or

(4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or

(5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or

(6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Recertification

The Sub-Board offers a recertification program that is open to all certified diplomates of the Sub-Board of Pediatric Nephrology. The pediatric nephrology recertification examination is given every three years; the next examination will be given in May 1989.

The duration of original certificates issued after April 30, 1988, will be seven years. Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification process, contact the Board office at the address given below.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain the information they have is current.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certification upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Certification in Neonatal-Perinatal Medicine

The American Board of Pediatrics has established a procedure for certification in neonatal-perinatal medicine.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the neonatal-perinatal medicine examination.

2. *Two years of full-time subspecialty residency training in neonatal-perinatal medicine,* in a program under the supervision of a director who is certified in neonatal-perinatal medicine or lacking such certification, possesses equivalent credentials. Physicians who enter training in neonatal-perinatal medicine *on or after January 1, 1986,* are required to complete their training in a program accredited for training in neonatal-perinatal medicine by the Residency Review Committee for Pediatrics. Applicants should consult the *Directory of*

Pediatrics

Graduate Medical Education Programs published by the American Medical Association for a listing of programs accredited for subspecialty residency training in neonatal-perinatal medicine.

The Sub-Board will require three years of training in neonatal-perinatal medicine in the future. The date this will become effective will be announced, but it will not be in 1988.

Accredited subspecialty residency programs must adhere to the Special Requirements for Training Programs in Neonatal-Perinatal Medicine. A minimum of one year of training must involve clinical work with infants. The subspecialty resident must have significant involvement in research. No credit for subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be in the United States unless the Credentials Committee of the Sub-Board has given approval for foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their neonatal-perinatal medicine training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different Boards/Sub-Boards/Subspecialty Committees.

3. *Verification of training.* Applicants will be asked to list the program(s) where they completed subspecialty residency training in neonatal-perinatal medicine as well as the name(s) of their program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Neonatal-Perinatal Medicine Program Director

The role of the neonatal-perinatal medicine program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a subspecialist in neonatal-perinatal medicine; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the neonatal-perinatal medicine examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of subspecialty residency training in neonatal-perinatal medicine before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Sub-Board. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board

must have the program director's assurance that an applicant meets the standards expected of a certified neonatologist-perinatologist. Program directors are urged not to issue certificates of successful completion of training when a resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by an applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of required training be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Sub-Board of Neonatal-Perinatal Medicine. The Sub-Board recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in neonatal-perinatal medicine are accredited by the Residency Review Committee for Pediatrics (RRC). The list of accredited programs appears in the *Directory of Graduate Medical Education Programs*. A physician entering subspecialty residency in neonatal-perinatal medicine on or after January 1, 1986, must train in a program accredited for training in neonatal-perinatal medicine by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who entered subspecialty training in neonatal-perinatal medicine prior to January 1, 1986, are not required to complete their training in an accredited program. They are required, however, to complete their training in programs which are operated in association with general comprehensive pediatric programs accredited by the Residency Review Committee for Pediatrics. Also, only those programs which are part of an institution which offers residency or fellowship training in obstetrics and gynecology and includes experience in fetal-maternal-perinatal medicine will be considered.

Special Requirements for Training Programs

Special Requirements for Training Programs in Neonatal-Perinatal Medicine have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610. The Special Requirements are published in the *Directory of Graduate Medical Education Programs*.

Examinations

A written examination in neonatal-perinatal medicine is offered every two years. The next examination will be given in 1989. Please contact the Board Office for the exact date of the each examination.

The 1991 examination will be the last examination for which applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine a candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful on an examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on the written examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of their initial acceptance into the certification process for neonatal-perinatal medicine. Active candidates who were admitted to the certification process for neonatal-perinatal medicine prior to January 1, 1986, will have ten years, or until December 31, 1995, to complete the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

- \$275 processing and evaluating fee
- 525 written examination fee for one examination
- \$800 TOTAL payment at the time of initial application

Reapplication:

- \$575 reapplication fee for one written examination.

If the applicant is not approved to take the neonatal-perinatal medicine examination, the \$525 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Sub-Board is secured by every means available. Information concerning the procedures to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified will be sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals. Scores will not be sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

- (1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or
- (2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or
- (3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or
- (4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or
- (5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or
- (6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Recertification

The Sub-Board offers a recertification program that is open to all certified diplomates of the Sub-Board of Neonatal-Perinatal Medicine. The neonatal-perinatal medicine recertification examination is given every three years; the next examination will be given in May 1989.

The duration of original certificates issued after April 30, 1988, will be seven years. Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification process, contact the Board office at the address given below.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

Pediatrics

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certification upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Nephrology

The American Board of Pediatrics has established a procedure for certification in pediatric nephrology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric nephrology examination.

2. *Three years of full-time subspecialty residency training in pediatric nephrology* is required of those physicians entering training on or after January 1, 1987. This training must be completed in a program that is accredited for pediatric nephrology by the Residency Review Committee for Pediatrics (RRC). Applicants should consult the *Directory of Graduate Medical Education Programs* published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric nephrology. Physicians who entered pediatric nephrology training prior to January 1, 1987, may apply for admission on the basis of their completion of two years of subspecialty residency in pediatric nephrology; such physicians are not required to complete their two years of required training in an accredited subspecialty program.

Accredited subspecialty residency programs must adhere to the Specialty Requirements for Training Programs in Pediatric Nephrology. A minimum of one year of training must involve clinical work with children. The subspecialty resident must have significant involvement in research. No credit toward subspecialty qualification will be allowed to elective time spent in subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States unless the Credentials Committee of the Sub-Board has given approval for foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric nephrology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Board/Subspecialty Committees.

3. *Verification of training.* Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric nephrology as well as the name(s) of their program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Nephrology Program Director

The role of the pediatric nephrology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric nephrologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric nephrology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of subspecialty residency training in pediatric nephrology before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Sub-Board. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the physician meets the standards expected of a certified pediatric nephrologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by an applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of training required of applicants entering training prior to December 31, 1986, or three months during the three years of training required of those entering training on or after January 1, 1987, be made up by completing an additional period of training.

Each application is considered individually and must be acceptable to the Sub-Board of Pediatric Nephrology. The Sub-Board recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in pediatric nephrology are accredited by the Residency Review Committee for Pediatrics (RRC). The list of accredited programs appears in the *Directory of Graduate Medical Education Programs*. A physician entering subspecialty residency in pediatric nephrology on or after January 1, 1987, must

train in a program accredited for training in pediatric nephrology by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who entered subspecialty training in pediatric nephrology prior to January 1, 1987, are not required to complete three years of training nor are they required to complete their training in an accredited program. They are required, however, to complete their pediatric nephrology training in programs which are operated in association with general comprehensive pediatric programs accredited by the Residency Review Committee for Pediatrics.

Special Requirements for Training Programs

Special Requirements for Training Programs in Pediatric Nephrology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610. The Special Requirements are published in the *Directory of Graduate Medical Education Programs*.

Examinations

A written examination in pediatric nephrology is offered every three years. The next examination will be given in 1988. Please contact the American Board of Pediatrics for the exact date of the next examination.

The 1994 examination will be the last examination that applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where a candidate trained.

Failure in Examinations

Candidates who are unsuccessful on an examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on the written examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examinations

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric nephrology. Active candidates who were admitted to the certification process in pediatric nephrology prior to January 1, 1986, will have ten years, or until December 31, 1995, to complete the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New Application:

- \$275 processing and evaluating fee
- 525 written examination fee for one examination
- \$800 TOTAL payment at the time of initial application

Reapplication:

- \$575 reapplication fee for one written examination

If an applicant is not approved to take the pediatric nephrology examination, the \$525 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Sub-Board is secured by every means available. Information concerning the procedure to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified will be sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

- (1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or
- (2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or
- (3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or
- (4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or
- (5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or
- (6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

Pediatrics

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Recertification

The Sub-Board offers a recertification program that is open to all certified diplomates of the Sub-Board of Pediatric Nephrology. The pediatric nephrology recertification examination is given every three years; the next examination will be given in May 1989.

The duration of original certificates issued after April 30, 1988, will be seven years. Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification process, contact the Board office at the address given below.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain the information they have is current.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certification upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

Certification in Pediatric Pulmonology

The American Board of Pediatrics has established a procedure for certification in pediatric pulmonology:

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric pulmonology examination.

2. *Subspecialty Training or Experience.* Prior to the examination, the applicant must have COMPLETED one of the following to qualify for admission to the examination:

A. *Three years of full-time subspecialty residency training in pediatric pulmonology* in a program under the supervision of a director who is certified in pediatric pulmonology, or lacking such certification, possesses equivalent credentials. All subspecialty training must be broadly based.

A minimum of 14 months of training must involve clinical work with children. A minimum of 16 months of research training in pediatric pulmonology is required.

No credit toward subspecialty qualification will be allowed for elective time spent in the subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States, unless the Credentials Committee of the Subspecialty Committee has granted approval for foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain prospective approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric pulmonology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Subspecialty Committee.

B. *Five years of broadly based pediatric pulmonology.* Broadly based pediatric pulmonology encompasses the majority of the clinical components which are included in the 1978 Guidelines for Pediatric Pulmonary Training (Mellins RB, Chernick V, Doershuk CF, et al: Report of the task force to establish guidelines for pediatric pulmonary training. *Pediatrics* 62: 256-257, 1978). A minimum of 50% of full-time professional activities must be spent in pediatric pulmonology to receive credit. It is assumed that night and weekend time would be distributed in the same manner as regular time. These five years should be of such type and quality that they substitute for the clinical exposure one might have encountered during subspecialty residency training. *All pediatric pulmonology experience must be accrued before December 31, 1990.* No foreign pediatric pulmonology experience will be accepted by the Credentials Committee in fulfillment of the requirements.

C. *Subspecialty residency training/pediatric pulmonology experience* to equal five years as outlined in one of the three methods below:

- (1) Those applicants who completed less than 12 months of subspecialty residency training in pediatric pulmonology may receive credit on a month-for-month basis. For example, a nine-month subspecialty residency would be credited as nine months of pediatric pulmonology experience; this, added to four years and three months of pediatric pulmonology experience would total 60 months or five years. These five years must be accrued prior to December 31, 1990.
- (2) Those applicants completing 12 to 23 months of subspecialty residency training in pediatric pulmonology may receive credit on a two-for-one basis. For example, an 18-month subspecialty residency would be credited as 36 months of pediatric pulmonology; this, added to 24 months of pediatric pulmonology experience would total 60 months or five years. These five years must be accrued prior to December 31, 1990.

- (3) Those applicants who completed 24 or more months of subspecialty residency training in pediatric pulmonology prior to January 1, 1986, may receive credit on a two and a half-for-one basis. For example, a 24-month subspecialty residency would be credited as the 60 months needed to qualify for admission. These physicians must make application and be approved for the examination given in or prior to 1992.

Applicants completing 24 months of subspecialty residency training after January 1, 1986, will receive credit on a two-for-one basis. Such applicants would be credited with 48 months of pediatric pulmonology; this, supplemented by 12 months of pediatrics pulmonology experience, would total 60 months or five years. These five years must be accrued prior to December 31, 1990.

Those entering pediatric pulmonology training after January 1, 1986, must complete three years of training to qualify for admission to the examination.

Applicants seeking certification in more than one subspecialty area on the basis of practice alone may not apply the same practice period toward fulfillment. Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

Those applicants entering the examination via the *pediatric pulmonology experience or subspecialty residency/experience* routes must make application, be approved for, and sit for the examination given in or prior to 1992. The Credentials Committee will evaluate these applicants based upon the pediatric pulmonology experience accrued during the five years prior to the date of the examination.

3. *Verification of Training and/or Experience.* A. For those utilizing the *subspecialty residency training route*, Verification of Clinical Competence Form(s) will be required from the director(s) of the applicant's pediatric pulmonology training program(s).

B. For those utilizing the *pediatric pulmonology experience route*, Evaluation Form(s), will be required from the pediatric pulmonology program director (if there is a subspecialty training program) or the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been involved in pediatric pulmonology.

C. For those utilizing the *combination subspecialty residency training/pediatric pulmonology experience route*, Verification Forms will be required from the director of the applicant's pediatric pulmonology training program(s) AND Evaluation Form(s) will be required from the pediatric pulmonology program director(s) (if there is a subspecialty training program) OR the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been involved in pediatric pulmonology.

The completed Verification and Evaluation Form(s) should be sent by the program director, chief of pediatrics, or department chairman directly to the American Board of Pediatrics.

Role of the Pediatric Pulmonology Program Director

The role of the pediatric pulmonology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric pulmonologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and/or pediatric pulmonology experience and verification of clinical competence on file in the Board office to be admitted to the pediatric

pulmonology examination. If the Subspecialty Committee is unable to obtain this verification, the applicant will be required to complete an additional period of subspecialty residency training in pediatric pulmonology before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Subspecialty Committee's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director's assurance that the physician meets the standards expected of a certified pediatric pulmonologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Subspecialty Committee recommends that absences from a program beyond three months during the three years of required training be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Pulmonology. The Subspecialty Committee recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no accredited training programs in pediatric pulmonology. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics (RRC) the authority to review and accredit subspecialty training programs. Physicians entering subspecialty training in pediatric pulmonology prior to completion of the accreditation process by the RRC are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric pulmonology or possesses equivalent credentials.

Only those pediatric pulmonology training programs which are operated in association with general comprehensive pediatric programs accredited by the Residency Review Committee for Pediatrics will be considered.

Special Requirements for Training Programs

Special Requirements for Training Programs in Pediatric Pulmonology have been drafted but not yet approved by the RRC or the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as suggested criteria for training programs in pediatric pulmonology until the RRC begins to accredit training programs. The Credentials Committee of the Subspecialty Committee will be guided by these requirements in evaluating an applicant's qualifications.

Examinations

A written examination in pediatric pulmonology is offered every three years. The next examination will be given in 1989. Please contact the American Board of Pediatrics for the exact date of each examination.

Pediatrics

The purpose of the examination is to determine the candidate's competency in the subspecialty of pediatric pulmonology. Since such competency is founded on knowledge of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where a candidate trained.

Failure in Examinations

Candidates who are unsuccessful on an examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on an examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examinations

After the Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponement will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Applicants should achieve certification within ten years of initial acceptance into the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

- \$275 processing and evaluating fee
- 525 written examination fee for one examination
- \$800 TOTAL payment at the time of initial application

Reapplication:

- \$575 reapplication fee for one written examination

If an applicant is not approved to take the pediatric pulmonology examination, the \$525 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Subspecialty Committee is secured by every means available. Information concerning the procedure to be taken by the Committee in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during, or after the examination, offering financial or other benefit to a proctor, employee, or agent of the Board or Subspecialty Committee, is available by contacting the Board office.

Certification

A certificate of special qualifications, valid for seven years, is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee.

The names of those certified will be sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals for publication. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

- (1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or
- (2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or
- (3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents; or
- (4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or
- (5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or
- (6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone: (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certification upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Certification in Pediatric Critical Care Medicine

The American Board of Pediatrics has established a procedure for certification in pediatric critical care medicine.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric critical care medicine examination.

2. *Subspecialty Training or Experience.* Prior to the examination, the applicant must have COMPLETED one of the following to qualify for admission to the examination.

A. *Three years of full-time subspecialty residency training in pediatric critical care medicine is required of those physicians entering training on or after January 1, 1988,* in a program under the supervision of a director who is certified in pediatric critical care medicine or, lacking such certification, possesses equivalent credentials. Physicians who enter pediatric critical care medicine training prior to January 1, 1988, may apply for admission on the basis of their completion of two years of subspecialty residency in pediatric critical care medicine.

A minimum of one year of training must involve clinical work with children. The subspecialty residency must have significant involvement in research. No credit toward subspecialty qualification will be allowed for elective time spent in the subspecialty areas during the usual general pediatric residency years (PL 1, 2, 3).

All subspecialty training must be completed in the United States unless the Credentials Committee of the Subspecialty Committee has given approval for foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain prospective approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric critical care medicine training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Subspecialty Committee.

B. *Certification* in pediatric cardiology, neonatal-perinatal medicine, pediatric pulmonology or anesthesiology (by the American Board of Anesthesiology) based on completion of the full-time residency training requirements in a program providing experience in pediatric critical care medicine relevant to the area in which the applicant is certified *plus* two years of subspecialty residency training in pediatric critical care medicine in a program under the supervision of a director who is certified in pediatric critical care medicine or, lacking such certification, possesses equivalent credentials.

C. *Five years in the practice of comprehensive pediatric critical care medicine.* A minimum of 50% of full-time professional activities must be spent in the practice of pediatric critical care medicine to receive credit. It is assumed that night and weekend practice time would be distributed in the same manner as regular practice time. These five years of practice should be of such type and quality that they substitute for the clinical exposure one might have encountered during pediatric critical care medicine residency training. *All practice time must be accrued before December 31, 1991.* No foreign practice time will be accepted by the Credentials Committee in fulfillment of the requirements.

D. *A combination of subspecialty residency training in pediatric critical care medicine and practice of comprehensive pediatric critical care medicine* to equal five years as outlined in one of the two methods below:

- (1) Applicants who have completed less than 12 months of subspecialty residency training in pediatric critical care medicine may receive credit on a month-for-month basis. For example, a nine-month subspecialty residency would be credited as nine months of practice time; this, added to four years and three months of practice time would total 60 months or five years. These five years must be accrued prior to December 31, 1991.
- (2) Applicants completing 12 to 23 months of subspecialty residency training in pediatric critical care medicine may receive credit on a two-for-one basis. For example, an 18-month subspecialty residency would be credited as 36 months of practice time; this, added to 24 months of practice would total 60 months or five years. These five years must be accrued prior to December 31, 1991.

Applicants entering the examination via the *practice or combination* routes must make application, be approved for, and sit for the examination given in or prior to 1993.

Applicants seeking certification in more than one subspecialty area on the basis of practice alone may not apply the same practice period toward fulfillment of the requirements of two different certifying Sub-Boards/Subspecialty Committees. Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees except as outlined under Item 2B.

3. *Verification of Training and/or Practice.*

A. For those utilizing the *subspecialty residency training route*, Verification of Clinical Competence Form(s) will be required from the director(s) of the applicant's pediatric critical care medicine training program(s).

B. For those utilizing the *subspecialty certification by the American Board of Anesthesiology and one year of pediatric critical care medicine training routes*, Verification of Clinical Competence Forms will be required from:

- (1) the director(s) of the applicant's pediatric cardiology, neonatal-perinatal medicine, pediatric pulmonology or anesthesiology training program(s);

AND

- (2) the director(s) of the applicant's pediatric critical care medicine training program(s).

Pediatrics

C. For those utilizing the *practice route*, Evaluation Form(s) will be required from the pediatric critical care medicine program director (if there is a subspecialty training program) OR the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been practicing pediatric critical care medicine.

D. For those utilizing the *combination subspecialty residency-practice route*:

(1) Verification Form(s) will be required from the director(s) of the applicant's pediatric critical care medicine training program(s).

AND

(2) Evaluation Form(s) will be required from the pediatric critical care medicine program director (if there is a subspecialty training program) OR the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been practicing pediatric critical care medicine.

The completed Verification and Evaluation Form(s) should be sent by the program director, chief of pediatrics, or department chairman directly to the American Board of Pediatrics.

Role of the Pediatric Critical Care Medicine Program Director

The role of the pediatric critical care medicine program director in the certification process is to verify completion of training and sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a critical care medicine specialist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have verification of training and/or practice and verification of clinical competence on file in the Board office to be admitted to the pediatric critical care medicine examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to satisfactorily complete an additional period of subspecialty residency training in pediatric critical care medicine before applying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Subspecialty Committee. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director's assurance that the applicant meets the standards expected of a certified critical care medicine specialist. Program directors are urged not to issue certificates of successful completion of training when a resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Subspecialty Committee recommends that absences from a program beyond two months during the two years of training required of applicants entering training prior to December 31, 1987, or three

months during the three years of training required of those entering training on or after January 1, 1988, be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Critical Care Medicine. The Subspecialty Committee recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no accredited training programs in pediatric critical care medicine. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics (RRC) the authority to review and accredit subspecialty training programs. Physicians entering subspecialty training in pediatric critical care medicine prior to completion of the accreditation process by the RRC are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric critical care medicine or possesses equivalent credentials.

Only those pediatric critical care medicine training programs which are operated in association with general comprehensive pediatric residency programs accredited by the Residency Review Committee for Pediatrics will be considered.

Special Requirements

Special Requirements for Training Programs in Pediatric Critical Care Medicine have been drafted but not yet approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. These Special Requirements are thought of as suggested criteria for training programs in pediatric critical care medicine until the RRC begins to accredit training programs. The Credentials Committee of the Subspecialty Committee will be guided by these requirements in evaluating an applicant's qualifications.

Examinations

A written examination in pediatric critical care medicine will be offered every three years. The next examination will be given in 1990. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of the examination is to determine a candidate's competency to practice the subspecialty. Therefore emphasis is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, biochemistry, etc.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where a candidate trained.

Failure in Examinations

Candidates who are unsuccessful in an examination will be admitted for re-examination at the next examination upon specific application and payment of a reapplication fee.

Candidates who are unsuccessful on an examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examinations

After the Subspecialty Committee has accepted an application, a candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who

withdraw after the date set for postponement will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric critical care medicine. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

- \$275 processing and evaluating fee
- \$25 written examination fee for one examination
- \$800 TOTAL payment at the time of initial application

Reapplication:

- \$575 reapplication fee for one written examination.

If an applicant is not approved to take the pediatric critical care medicine examination, the \$525 written examination fee will be refunded. The remaining \$275 processing and evaluating fee is not refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (US funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Subspecialty Committee is secured by every means available. Information concerning the procedure to be taken by the Committee in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Subspecialty Committee, is available by contacting the Board office.

Certification

A certificate of special competence, valid for seven years, is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee.

The name of these certified are sent to the American Board of Medical Specialties (ABMS) for publication in its *Directory of Certified Pediatricians*, to Marquis Who's Who for publication in the *Directory of Medical Specialists*, and to various pediatric journals. Scores are not sent to ABMS, Marquis, or the journals.

Revocation of Certificates

All certificates issued by the American Board of Pediatrics are subject to the provisions of the certificate of incorporation and the bylaws of the Board. Each certificate is subject to revocation in the event that:

- (1) the issuance of such certificate or its receipt by the physician so certified shall have been contrary to or in violation of any of the provisions of the Board's certificate of incorporation or bylaws; or
 - (2) the physician so certified shall not have been eligible in fact to receive such certificate, irrespective of whether or not the fact constituting him/her so ineligible were known to any or all of the members of the Board at the time of the issuance of such certificate; or
 - (3) the physician so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the Board, its members, representatives, or agents;
- or

(4) the physician so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in connection with his/her practice of medicine; or

(5) the physician so certified shall have had his/her license to practice medicine revoked by any court or other body having proper jurisdiction and authority; or

(6) the physician so certified has repeatedly made statements contrary to sound medical science and practice, raising such fundamental questions about his/her competency that the certificate should be revoked.

If the Board obtains probable cause to believe that a certificate should be revoked for any of the reasons set forth above, it may institute proceedings for revocation thereof by mailing written notice to the holder of such certificate that a hearing will be held to determine whether or not the certificate should be revoked.

Details concerning steps to be taken to appeal a decision to revoke a certificate may be obtained by writing to the Board office.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone: (919) 929-0461.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of his/her condition prior to appearing for the examination. Applicants should notify the Board office at the time the initial application is submitted.

Late Applications

A physician whose application or re-examination material is postmarked after the published deadline will be expected to pay an additional fee of \$200 before the application or registration material will be processed.

Policy Regarding Chemical Use and Dependency (Including Drugs and Alcohol)

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted into the examination system and to the examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease is known currently to be under control will be admitted to the examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to the certification process.

Candidates who have had a history of chemical dependence as reported to the Board will not be issued a certification upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the time of the most recent occurrence of their disease.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Physical Medicine and Rehabilitation**AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION**

B. Stanley Cohen, MD, Chairman, Baltimore, Maryland
 Phala A. Helm, MD, Vice Chairperson, Dallas, Texas
 Robert P. Christopher, MD, Memphis, Tennessee
 Victor Cummings, MD, Toledo, Ohio
 Barbara J. deLateur, MD, Seattle, Washington
 Arthur E. Grant, MD, San Antonio, Texas
 Catherine N. Hinterbuchner, MD, New York, New York
 Malcolm C. McPhee, MD, Scottsdale, Arizona
 John L. Melvin, MD, Milwaukee, Wisconsin
 John W. B. Redford, MD, Kansas City, Kansas
 Gordon M. Martin, MD, Executive Director,
 Suite 674, Norwest Center,
 21 First Street, S.W., Rochester,
 Minnesota 55902

General Requirements for Certification

A. Graduates of Educational Institutions in the United States and Canada.

1. Graduation from a medical school approved by the Liaison Committee on Medical Education, or graduation from a Canadian medical school approved by the Canadian Medical Association, or graduation from an osteopathic medical school approved by the American Osteopathic Association.

2. Satisfactory completion of the requirements of the Board for graduate education and experience in physical medicine and rehabilitation as set forth below.

3. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

B. Graduates of Educational Institutions NOT in the United States and Canada:

1. Graduation from a school which, in the opinion of the Board, offers medical education equivalent to a medical school approved by the Liaison Committee on Medical Education.

2. Possession of a valid certificate from the Educational Commission for Foreign Medical Graduates (ECFMG) and, optionally, a certificate from the Federation Licensing Examination (FLEX), or the Fifth Pathway. Foreign medical graduates (both alien and U.S. citizens) will be expected to complete the ECFMG examination format, FMGEMS (Foreign Medical Graduate Examination in Medical Science), including basic and clinical examinations, and, when indicated, English proficiency. This is required by the Accreditation Council on Graduate Medical Education (ACGME) before a resident can enter accredited graduate medical education programs in the United States.

3. Satisfactory completion of the Board's requirements for graduate education and experience in physical medicine and rehabilitation as set forth below.

4. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

C. Having a full and unrestricted license to practice in one or more of the 50 United States or Puerto Rico, or holding the Federation Licensing Examination (FLEX) certificate, may be supportive, but not required, of an application submitted by an American and/or non-American graduate.

Residency Training Requirements

Applicants for the certifying examinations must have satisfactorily completed 48 months (4 years) of training in a physical medicine and

rehabilitation residency approved by the ACGME on recommendation of the Residency Review Committee for Physical Medicine and Rehabilitation. The program must include 36 months of training in physical medicine and rehabilitation. Twelve of the 48 months of training should consist of a coordinated program of experience in fundamental clinical skills which includes six months in family practice, internal medicine, pediatrics, or general surgery, or a combination of these. The other six months of the year of experience may include no less than one month in any of the following more specific categories: cardiology, radiology, neurology, urology, rheumatology, nephrology, vascular medicine, pediatrics, pulmonary medicine, neurosurgery, orthopedic surgery, family practice, general surgery, general internal medicine, emergency medicine, psychiatry, oncology, critical care medicine, and anesthesiology.

The program director and the Credentials Committee of the Board, at the beginning of the residency, will make the decision regarding the acceptability for credit for the year of non-physical medicine and rehabilitation training of an ACGME-approved year of residency in family practice, internal medicine, pediatrics, neurology, orthopedics, or general surgery or an accredited "transitional" year as defined by the ACGME.

This new format is mandatory for all residents who enter training in 1985 or subsequently. In some instances, three years of physical medicine and rehabilitation residency may be acceptable on recommendation of the program director, with one year of credit being granted on the basis of training criteria described above, such as a nonintegrated transitional year or other residency training. Residents who entered training in 1984 or earlier are not required to conform to the new training requirements.

Credit for Other Specialty Training

Candidates who have had one year or more of residency training (up to and including certification) in a residency approved by the ACGME or by the Royal College of Physicians and Surgeons of Canada or an osteopathic internship approved by the American Osteopathic Association, in related relevant specialties, including internal medicine, neurology, orthopaedics, pediatrics, family practice, and surgery, may receive up to 12 months of non-physical medicine and rehabilitation training credit on recommendation of the program director and at the discretion of the Board. However, completion of 36 months of the physical medicine and rehabilitation training requirement is mandatory. The maximum of 12 months of training credit will be considered for approval by the Board only upon recommendation of the residency training program director.

No credit will be given towards shortening the basic required four year program for internships; for non-ACGME approved residencies or fellowships; for Fifth Pathway in a United States AMA designated training institution; or for hospital house physician experience.

A resident entering or beginning the required four year program in physical medicine and rehabilitation with previous approved graduate training or educational experience may qualify for an *institutional* appointment at the second year level. However, such an appointment may not be interpreted to mean that the resident is in the second year of a physical medicine and rehabilitation residency. Such a resident will be considered by the Board to be in the first year of the required four year residency training program as stated above, unless other arrangements are made by the program director and the specialty Board.

Essentially all of the required training and experience as stated above must have been taken in the United States or Canada. However, a candidate who received graduate medical education beyond an internship in a foreign country may, at the discretion of the Board, and recommended by the program director, be granted limited credit for such training but not more than six months.

Program Director Procedures

The procedure required by the Board for approval of the first year and subsequent years of graduate training as a resident is:

1) At the beginning of a residency in physical medicine and rehabilitation, the director of the residency program will submit to the Executive Director of the Board a registration form that outlines the proposed residency training program that meets the requirements outlined in the next section. Any anticipated credit for previous training (which may not be for more than 12 months) should be indicated at the time of submittal of the proposed preliminary outline of education. If the recommendation is approved by the Board, it should be reconfirmed by the program director at the time of submittal of the first evaluation form.

2) Following review by the Board, the Executive Director shall then notify the program director by letter of the approval or disapproval of the proposed program of training.

3) The program director should confirm the authenticity of the medical degree and list its source along with any ECFMG or FLEX certification numbers and state licensure number.

4) An annual evaluation form is to be submitted to the Board office on each resident at the end of each year of training indicating quality of performance and number of months of residency training satisfactorily completed in physical medicine and rehabilitation including elective services.

5) If a resident transfers to another program in physical medicine and rehabilitation, the Board is to be notified by the resident and each program director involved regarding the circumstances relative to the change, the amount of credit being given in the program being terminated and the outline of the program content and time in the continuing program. A resident is expected to complete training in a single program except when significant extenuating circumstances make a change advisable.

6) When a candidate applies for admissibility to the certifying examinations, the program director certifies satisfactory completion of the required residency training (or anticipated completion by August 31 of the year of examination) and also provides an indication of the candidate's competence to enter independent clinical practice in the specialty. In case of subsequent change in status or recommendation regarding a candidate, the Board office should be notified promptly.

7) For residents completing training between January and August 31 of the year of examination, the program director must complete the evaluation form for the final residency year in April and send it to the Board office by May 1 prior to the written examination. This is in lieu of submitting a final-year evaluation form in the fall of the year when the candidate is submitting the application for admissibility to the certifying examinations. This evaluation form must include the final grading and listing of months of training satisfactorily completed according to designated categories. In addition, statements that the candidate is deemed qualified to enter independent practice of physical medicine and rehabilitation and should be admitted to the certifying examination are to be included.

Requirements for Admissibility to Part I of the Board Examination

To be admissible to Part I of the Board examination, candidates are required to complete satisfactorily at least 48 months of postgraduate residency training of which at last 36 months are spent in supervised education and clinical practice in physical medicine and rehabilitation and 12 months in internal medicine or an acceptable alternative in an ACGME accredited training program.

Satisfactory completion of educational and training requirements in force at the beginning of the resident's training in an accredited program will be considered acceptable for application for admissibility to the certifying examination. Residents in approved physical medicine

and rehabilitation training programs in Canada, on satisfactory completion of *all* the requirements for certification in that country, may apply for admissibility to Part I of the American Board.

Final admissibility is contingent upon receipt of the final-year evaluation by the program director by May 1 in the examination year.

If a resident is placed on probationary status during the final year of his or her residency program, this status must be rescinded by the program director before May 1 for the resident to be admissible.

Requirements for Admissibility to Part II of the Board Examination

At least a full year of broadly based clinical practice of physical medicine and rehabilitation following completion of residency training is required. The clinical practice should provide evidence of professional, ethical, and humanistic standards attested to by two Fellows of the American Academy of Physical Medicine and Rehabilitation. In rare instances in which a physiatrist is not geographically available, two licensed physicians may support the candidate's application for Part II.

Alternately, a candidate may take Part I and II together if all residency training and the practice time requirement are completed. However, if the candidate fails Part I, Part II will not count or be recognized in any way.

An optional fifth year in a physical medicine and rehabilitation residency which includes at least six months of advanced clinical practice of physical medicine and rehabilitation with essentially full patient responsibility, and also includes teaching experience, plus opportunities for time in research or relevant clinical or basic science electives may qualify such resident for admissibility to Part II of the certifying examinations upon the recommendation of the training program director. An optional fifth year may be valuable for those anticipating a full or part time academic career.

Dual Specialty Certification

For those desiring to pursue double specialty certification the Board will participate with the other Boards provided there is completion of 36 months of accredited training in general comprehensive physical medicine and rehabilitation. The proposed program agreed to by the respective training program directors should be submitted to both Boards for approval before or during the first quarter of training. Admissibility to Part I of the certification examinations may be sought at the end of training.

Special Agreement Between the American Board of Pediatrics and The American Board of Physical Medicine and Rehabilitation

There exists a special agreement between the American Board of Pediatrics (ABP) and the American Board of Physical Medicine and Rehabilitation (ABPM&R) whereby a physician interested in pediatric rehabilitation can qualify for admission to the certifying examinations of both Boards. The residency programs may be designed to be completed in approximately 60 months. The non-PM&R 12-month segment of the four-year PM&R residency will be credited on the basis of satisfactory completion of the regular first year of pediatric residency.

The American Board of Pediatrics requires a minimum of 36 months of general comprehensive pediatric training with six months' credit for pediatric rehabilitation within the PM&R training. The American Board of Physical Medicine and Rehabilitation requires a minimum of 36 months accredited PM&R residency with six months' credit for related rotations during the pediatric training. Six months of full-time equivalent (FTE) of pediatric rehabilitation is required.

It is recommended that all training be completed at one academic institution but any deviation will require prospective approval by both

Physical Medicine and Rehabilitation

Boards. At the beginning of the residency, both proposed individual programs must be submitted in detail to the Credentials Committee of each specialty Board for approval. When two separate institutions are involved, there should be evidence of adequate coordination to provide an appropriate educational experience. Vacation is shared pro rata between the training time spent in pediatrics and physical medicine and rehabilitation.

Application

The application form which must be submitted by a candidate applying for the examination leading to certification can be obtained *only* by writing to the Executive Director of the Board. The completed application shall contain a record of the candidate's undergraduate and postgraduate training and a copy of the medical degree diploma or certificate, the program director's statement that the candidate has or will have satisfactorily completed an approved graduate program, other graduate study, hospital staff appointments, teaching positions, length of time in a practice which has been limited to physical medicine and rehabilitation, medical papers published, and any other information the candidate deems relevant to the determination of his admissibility for examination.

In addition, there must be submitted with the application the names of three physiatrists or other physicians to whom the Board may write for professional and character references. At the option of the applicant, he or she may include the names of any additional physicians. The candidate will submit to the program director a form requesting him/her to rate the professional ability of the applicant which they will promptly return to the Board office. No decision regarding admissibility to the examination will be made until the physicians from whom references are requested have replied.

All information submitted to the Board by the physician from whom a reference has been requested shall remain confidential and will not be disclosed to the candidate without the permission of the said physician. Strict confidentiality of references submitted is required to assure that the Board receives complete and accurate evaluations of all candidates.

A candidate who plans to take Part I only must submit a fee of three hundred fifty dollars (\$350), fifty dollars (\$50) of which is a processing fee and not refundable nor reassessed. The fees must accompany the application. The candidate who is applying for Part II must write a letter of application which includes a brief description of his/her year of broadly based clinical practice and send an examination fee of three hundred dollars (\$300), and must also submit a statement from a physician, preferably a Board certified physiatrist, verifying that the candidate has practiced physical medicine and rehabilitation full-time for one year. A candidate who plans to take both Parts I and II, initially the same year, must send with the application, the fee of six hundred fifty dollars (\$650). Fifty dollars (\$50), as heretofore mentioned, is an evaluation fee and not refundable. Fees for re-examination are three hundred dollars (\$300) for either Part I or II, or if both Parts I and II are retaken the same year, the fee is six hundred dollars (\$600).

The completed application form or letter of application, as applicable, and appropriate fee must be submitted by November 15 of the year before the scheduled examination. A penalty fee of one hundred dollars (\$100) will be required before consideration of applications post-marked after November 15 and before December 15. Once a candidate is declared admissible, fees are forfeited if the candidates withdraws for any reason or does not appear for the examination.

The candidate must have completed his graduate education or clinical practice requirements on or before August 31 following the scheduled examination date for which he has applied in order to have his application considered for the examination of that year. Except as hereafter provided, no fees paid hereunder will be refunded. Only in the event that a candidate withdraws his application prior to the meeting of

the Board to act thereon or in the event that a candidate is declared not admissible to the examination, will the Board return to the candidate the refundable portion of his fee.

The Board is a non-profit organization and the fees of the candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. The Board reserves the right to change the fees when necessary.

Designation of Admissibility

Board admissible is a term used by the Board to define the status of the candidate who has been accepted by the Board to take the examination for which the candidate has applied; designation of "Board admissible" does not continue beyond the date such examination is given, regardless of results.

A. For those candidates who have not previously applied or who have previously applied and withdrawn their application or who have previously applied and have been declared not admissible, the procedures required of candidates to be designated board admissible are as follows:

1. Timely filing of the application form and educational credentials with the Executive Secretary of the Board by the applicant.
2. Payment of the fee for the examination by the applicant.
3. Receipt of the program directors and other requested references.
4. Transmission of a letter of confirmation from the Executive Director of the Board to the candidate verifying that the applicant has fulfilled all requirements, and by Board action has been declared admissible.

B. For those candidates who are reapplying for Part I, having failed Part I; or who are applying for Part II, having successfully completed Part I, or who are reapplying for Part II, having failed Part II but who have successfully passed Part I, the procedures required of candidates to be designated Board admissible are as follows:

1. Submitting a letter of reapplication for Part I of the examination by the applicant to the Executive Director of the Board or, as requested, the resubmission of an application form.
2. Submitting a letter of application for Part II of the examination by the applicant to the Executive Director of the Board. The letter should contain a statement describing the one year of full-time broadly based clinical practice.
3. Payment of the examination fee by the applicant.
4. At least a full year of broadly based clinical physical medicine and rehabilitation following completion of residency training is required. The clinical practice should provide evidence of professional, ethical, and humanistic standards attested to by two Fellows of the American Academy of Physical Medicine and Rehabilitation. In rare instances in which a physiatrist is not geographically available, two licensed physicians may support the candidate's application for Part II.
5. Transmission of a letter of confirmation from the Executive Director of the Board to the candidate verifying that the applicant has fulfilled all requirements, and by Board action has been declared admissible.

Following the establishment of Board admissibility, the candidate will be notified of the time and place for the examination.

A candidate who fails Part I or Part II or both Parts of the examination may re-apply for admissibility for re-examination, if done before November 15th of the year before the scheduled examination.

Absence from Training

The Board stipulates that a resident should not be absent from the residency training for more than six weeks yearly. Any leave time or absence beyond six weeks would need to be made up by arrangement with the program director. "Leave time" includes sick leave, vacation, maternity leave, leave for locum tenens, clinical trips or work in

another institution that is not an ACGME accredited residency. Leave time or vacation may not be accumulated to reduce the overall duration of training. Institutional policies regarding absences will be respected.

Forfeiture of Fees

Once a candidate is declared admissible, the fees are forfeited if the candidate withdraws for any reason or does not appear for the examination.

Examinations

As part of the requirements for certification by the American Board of Physical Medicine and Rehabilitation, candidates must demonstrate satisfactory performance in an examination conducted by the Board covering the field of physical medicine and rehabilitation.

The examination for certification is given in two parts. Part I is written, Part II is oral.

Part I (written) may be taken after the satisfactory completion of the specialized graduate education required by the Board outlined above.

Part II (oral) may be taken only after one year of full-time broadly based practice in physical medicine and rehabilitation, following residency training.

In the event a candidate taking both Part I and Part II in the same year fails Part I of the examination, results of Part II shall not be considered or disclosed.

Both the written and oral examinations will cover certain aspects of the basic sciences as well as clinical physical medicine and rehabilitation. Those basic sciences will include:

1. *Anatomy*, including kinesiology and functional anatomy.
2. *Physics*, related to the field
3. *Physiology*, including physiology of nerve, muscle, and bone and physiologic effects of the various physical agents used in physical medicine and rehabilitation.

4. *Pathology*

5. *Other fundamental sciences*: The applicant may be examined concerning his knowledge of other subjects related to physical medicine and rehabilitation.

The clinical aspects will include:

1. Those diseases and conditions that come within the field of physical medicine and rehabilitation including those of children. These include various rheumatic diseases; neuromuscular diseases; cerebral and spinal cord injuries and diseases (e.g. cerebral vascular accidents, postoperative sequelae of surgery of the brain and spinal cord, cerebral palsy and paraplegia) and musculoskeletal diseases, including the large group of traumatic and orthopedic conditions.

2. The clinical use of such physical agents as heat, water, electricity, ultraviolet radiation, massage, exercise, and rehabilitation techniques.
3. Diagnostic procedures including electromyography and electrodiagnosis.

4. A knowledge of the roles of allied personnel within or associated with the field of physical medicine and rehabilitation, such as the physical therapist, occupational therapist, clinical psychologist, speech pathologist and therapist, medical social worker, and vocational counselors; and the ability to coordinate the services of such personnel.

5. An understanding of the basic principles of physical medicine and rehabilitation, and the ability to prescribe and supervise specific treatment to be executed by allied health personnel.

Method of Examination

Part I and Part II of the Board examination are given once each year, usually in May or June, at such time and place as the Board shall designate.

Part I is a written examination. This examination is divided into morning and afternoon periods of approximately three hours each. The

questions are designed to test the candidate's knowledge of basic sciences and clinical management as related to physical medicine and rehabilitation, and will be in the form of objective testing.

Part II is an oral examination. The oral examinations are given by the members of the Board with the assistance of selected guest examiners.

Candidates will be expected to present in a concise, orderly fashion evidence of their proficiency in the management of various clinical conditions which come within the field of physical medicine and rehabilitation. During the oral examination, questions will be asked about diagnostic procedures, therapeutic procedures and patient management. The candidate should be prepared to demonstrate his ability to interpret roentgenologic, electrodiagnostic and other material related to patient management. The candidate should demonstrate familiarity with the literature of basic and clinical research. Conciseness and clarity of statement is expected. Evidence of the maturity of the candidate in a clinical procedure and of factual knowledge will be sought.

Unethical Behavior

The Board believes that the ethics of candidates for certification is a proper matter for its concern. Scores on the Part I examination may be invalidated for reasons of irregular behavior that indicates cheating. Reports of irregular behavior may be checked by statistical methods, and if they are confirmed, sanctions may be imposed. If the examination score is invalidated because of irregular behavior, the Board will not consider the candidate's application for a period of at least three years. A repeat application and Part I examination fee will be required.

Certificate

Upon approval of the candidate's application and successful completion of the examinations, the Board will grant a certificate to the effect that the candidate has met the qualifications required by the Board for the specialty of Physical Medicine and Rehabilitation. The recipient of a certificate shall be known as a certificant or a diplomate of the American Board of Physical Medicine and Rehabilitation.

The Board will issue ten-year time-limited diplomate certificates in 1993 and subsequently. Recertification procedures and requirements are to be determined and will be published four years prior to the first anticipated recertification in 2002. Certification issued prior to 1993 will have no time-limited stipulations nor will there be requirements for recertification. Residents entering a training program in 1988 and subsequently are hereby informed and must be aware regarding time-limited certification beginning in 1993.

A certificate granted by this Board does not of itself confer or purport to confer any degree or legal qualifications, privileges, or license to practice physical medicine and rehabilitation. The Board does not limit or interfere with the professional activity of any duly licensed physician who is not certified by this Board. Privileges granted physicians in the practice of physical medicine and rehabilitation in any hospital or clinic are the prerogatives of that hospital or clinic, not of this Board.

The chief aim of the Board is to establish the training requirements, to standardize qualifications for specialists in physical medicine and rehabilitation and to certify as specialists those who voluntarily appear before the Board for such recognition and certification, according to its regulations and requirements; and thereby provide assurance to the public and the medical profession that certificants possess particular competence in physical medicine and rehabilitation.

The names of consenting Diplomates of the Board appear in the ABMS Directory of Certified Physiatrists published by the American Board of Medical Specialties, of Evanston, Illinois, and in the Directory of Medical Specialists by Marquis Who's Who, Inc. of Chicago, Illinois.

Prerequisite Training

A minimum of five (5) years prerequisite and requisite training in plastic surgery will be required.

PRELIMINARY EVALUATION OF PREREQUISITE TRAINING

As noted on the first page of this booklet, preliminary evaluation of prerequisite training by the Board is required prior to the initiation of residency training in plastic surgery. This simple preliminary step will prevent later disappointment. It is the responsibility of all prospective trainees in plastic surgery to secure this evaluation. Each prospective trainee should obtain a Preliminary Evaluation of Training form for the purpose of evaluating his or her prerequisite training. This should be obtained from the office of the Board either prior to or immediately following the completion of the prerequisite training described below.

Directors of accredited residency training programs in plastic surgery must require all prospective trainees to have an official evaluation and approval of their prerequisite training by The American Board of Plastic Surgery, Inc. before they begin training.

Approval for residency training in plastic surgery will be provided to those individuals who clearly meet the Board's stated requirements. Further information for detailed credential review will be obtained on all other individuals where training was in other than accredited programs. Official evaluations will be made by the Committee on Credentials and Requirements. Individual officers or members of the Board cannot and will not make such estimates or rulings. It should be emphasized that the answers to many questions require a decision by one or more of the committees of the Board. This applies particularly to evaluation of training and questions of admissibility. Decisions are referred to the entire Board at the next scheduled Board meeting. The process of reaching a final decision may require several months, since the full Board meets only twice annually.

The Board will issue neither a letter verifying prerequisite training nor an Application for Examination and Certification form until the Preliminary Evaluation of Training form has been received and approved.

LICENSURE

All candidates must have a currently registered full and unrestricted license to practice medicine granted by a state or other United States jurisdiction, or by a Canadian province, and must continue to be

licensed throughout the certification process. A temporary limited license such as an educational, institutional, or house permit is not acceptable. Candidates must be actively engaged in the practice of plastic surgery as indicated by holding active operating privileges in an approved hospital.

Commissioned officers of the medical service of the armed forces of the United States or Canada on active duty need not present evidence of current registration of licensure, but must provide appropriate information regarding their status.

UNDERGRADUATE MEDICAL OR OSTEOPATHIC EDUCATION

Before beginning prerequisite training, candidates must have graduated from an accredited school of medicine in the United States or Canada which grants an M.D. degree, or from an osteopathic school accredited by the American Osteopathic Association. Graduates of medical schools in other countries must either (1) be certified by the ECFMG, or (2) have completed a Fifth Pathway program in an accredited school of medicine in the United States or Canada.

GRADUATE EDUCATION IN SURGERY

Effective July 1, 1986, the prerequisite graduate education in surgery is as follows.

For U.S. or Canadian Doctors of Medicine

A candidate with an M.D. degree from the United States or Canada must have completed one of the following:

1. A minimum of three years of clinical training with progressive responsibility in the same program in general surgery. This program must be approved by the Residency Review Committee for Surgery and accredited in the United States by the Accreditation Council for Graduate Medical Education (ACGME) or in Canada by the Royal College of Physicians and Surgeons for full training. The entire general surgery residency training must be completed before the candidate enters a plastic surgery residency. The general surgery program director must verify in writing the successful completion of a minimum of three years of progressive residency in his or her program. Each case will be evaluated by the Board on its own merits.

OR

2. An accredited residency training program in orthopaedic surgery. The satisfactory completion of this training must be verified in writing by the orthopaedic surgery program director. All orthopaedic surgery residency training must be completed before the candidate enters a plastic surgery residency.

OR

3. Certification by the American Board of Otolaryngology. Prospective candidates may initiate residency training in plastic surgery following satisfactory completion of the entire course of training as prescribed for certification by the American Board of Otolaryngology, but they may sit for the examination(s) of The American Board of Plastic Surgery, Inc. only after becoming certified in that specialty. Satisfactory completion of training must be verified in writing by the appropriate program director.

For Doctors of Osteopathy

Effective July 1, 1984, a doctor of osteopathy must satisfactorily complete an entire general surgery program approved by the Residency Review Committee for Surgery and accredited by the Accreditation Council for Graduate Medical Education (ACGME), including the year of senior responsibility. The entire general surgery residency must be completed before the candidate enters a plastic surgery residency. The program director must verify in writing the successful completion of the entire program in general surgery.

For Doctors of Medicine with Medical Degrees Outside of the U.S. or Canada

Effective July 1, 1986, candidates entering the PGYI level in general surgery must satisfactorily complete an entire program in general

surgery approved by the Residency Review Committee for Surgery and accredited in the United States by the Accreditation Council for Graduate Medical Education (ACGME) or in Canada by the Royal College of Physicians and Surgeons for full training, including the year of senior responsibility. The entire general surgery residency must be completed before the candidate enters a plastic surgery residency. The program director must verify in writing the successful completion of the entire program in general surgery.

The Board grants no credit for training/residency and/or experience in other disciplines other than those named above.

Graduate Education in Plastic Surgery

Training in plastic surgery for not less than two years is required, and the final year must be at the senior level. Prospective candidates entering a plastic surgery residency accredited for three years of training must complete the entire three years, with one year of senior responsibility.

Training in plastic surgery must be obtained in either the United States or Canada. The American Board of Plastic Surgery, Inc. recognizes training in those programs in the United States that have been approved by the Residency Review Committee for Plastic Surgery and accredited by the Accreditation Council for Graduate Medical Education (ACGME) or those programs in Canada approved by the Royal College of Physicians and Surgeons of Canada.

CONTENT OF TRAINING

A candidate must hold positions of increasing responsibility for the care of patients during these years of training. For this reason major operative experience and senior responsibility are essential to surgical education and training. An important factor in the development of a surgeon is an opportunity to grow, under guidance and supervision, by progressive and succeeding stages to complete responsibility for the surgical care of the patient.

It is imperative that a resident hold positions of increasing responsibility when he or she receives training in more than one institution, and one full year of experience must be at the senior level. The normal training year for the program must be completed. No credit is granted for part of a year of training.

The Board considers a residency in plastic surgery to be a full-time endeavor and looks with disfavor upon any other arrangement. The minimum acceptable training year is 48 weeks. Should leave of absence exceed four weeks per annum and result in overlap or duplication of resident positions, specific documentation that the training was approved by the Residency Review Committee for Plastic Surgery, must be provided to the Board by the program director.

Training in plastic surgery must cover the wide field of plastic surgery. It should include experience in both the functional and aesthetic (cosmetic) management of congenital and acquired defects of the head and neck, trunk, and extremities. Sufficient material of a diversified nature should be available to prepare the trainee to pass the examination(s) of the Board after the prescribed period of training. If the available material on a service is inadequate, the program director may correct the deficiency by establishing an affiliation with one or more surgeons on other services within that hospital or by regular rotation of residents on other approved affiliated services in order that a broad experience might be obtained. The trainee should be provided an opportunity to operate independently on suitable cases under more remote supervision.

This period of specialized training should emphasize the relationship of basic science—*anatomy, pathology, physiology, biochemistry, microbiology*—to surgical principles fundamental to all branches of surgery and especially to plastic surgery. In addition, the training program must provide in-depth exposure to the following subjects: the

care of emergencies, shock, wound healing, blood replacement, fluid and electrolyte balance, pharmacology, anesthetics, and chemotherapy.

ACCREDITED RESIDENCY PROGRAMS

Information concerning approved training programs may be found in the *Directory of Graduate Medical Education Programs* ("the green book") published by the American Medical Association (AMA) under the aegis of the Accreditation Council for Graduate Medical Education. Copies of this directory are available at many medical schools and libraries. Or the candidate may order "the green book" directly from the AMA by calling 312-280-7168 or writing to AMA Order Department, P.O. Box 10946, Chicago, IL 60610-0946. Candidates should inquire of the office of the Board before initiating training if there is any question whether a residency is approved.

The American Board of Plastic Surgery, Inc. does not inspect or approve residencies. The Residency Review Committee for Plastic Surgery (RRC) inspects and makes recommendations for or against approval of a residency training program in plastic surgery only after the director of the residency has filed an application for approval with the secretary of the Residency Review Committee for Plastic Surgery, 535 North Dearborn Street, Chicago, IL 60610. The RRC consists of nine members, three representatives from each of the following: the American Board of Plastic Surgery, Inc., the American College of Surgeons, and the American Medical Association.

Neither the Board nor its individual members can be responsible for the placement of applicants for training. The Board does not maintain a list of available openings in programs. Prospective candidates seeking accredited training in plastic surgery should correspond directly with the directors of those training programs in which they are interested.

For additional information candidates may contact Director, Registry of Residency, Plastic Surgery Academic Advisory Council, University of Louisville, Division of Plastic Surgery, Louisville, KY 40292.

Applying for Examination and Certification

The prime purpose of the Board is to pass judgment on the education, training, and knowledge of broadly competent and responsible plastic surgeons. Certification by the Board indicates qualification of a specialist at a superior level of excellence. The quality of training of a surgeon, as shown by his or her successful completion of the Board examinations, will be reflected in his or her ability to achieve good results in practice.

In order to be admitted to the examinations leading to Board certification, a candidate should submit to the office of the Board a formal Application For Examination and Certification immediately following completion of his or her residency training in plastic surgery. The Board will issue no letters attesting to admissibility for its examinations to any person, institution, or organization until this formal application, along with the required supporting documents, has been received and approved.

THE APPLICATION PROCESS

Prospective candidates desiring certification by The American Board of Plastic Surgery, Inc. should write to the office of the Board immediately following completion of required training in plastic surgery requesting application materials. This first contact with the Board should be initiated no later than June 30. At this time, a copy of this Booklet of Information and an Application for Examination and Certification form will be provided.

DEADLINE

You must complete the application form and return it to the office of the Board as soon as possible. Applications must be received by the Board

Plastic Surgery

no later than December 1 if they are to be reviewed and approved in time for assignment to the Qualifying Examination to be given the following spring.

REQUIRED SIGNATURES

The application must be completed accurately and signed by you. It must also be signed twice by your program director, once acknowledging the completion of your residency in plastic surgery and once recommending you for examination. Accompanying forms must be completed properly, and the required photographs must be provided.

FEES

The required registration fee must also accompany the application.

LETTERS OF RECOMMENDATION

It is your responsibility to obtain letters of recommendation as requested in the application. If you have been involved in more than one program in plastic surgery, the director of each such program must verify completion of that program and recommend you for examination. Additionally, the Board may require favorable evaluations and recommendations from other surgeons.

NOTIFICATION

If your application is approved, you will be notified of the time and place of the Qualifying Examination. If it appears that the stated requirements have not been met, further details will be requested, and the information will be reviewed by the Committee on Credentials and Requirements. The Committee on Credentials and Requirements meets only twice yearly and decisions are not rendered at other times.

Until the application has been received and approved, the Board will not inform any person, institution, or organization that a candidate is admissible to examination.

GENERAL REQUIREMENTS

The following requirements for admissibility are in agreement with those promulgated by the American Board of Medical Specialties.

1. The Board will accept only those persons whose major professional activity is limited to the field of plastic surgery.

2. Moral and ethical fitness must be satisfactory to the Board and in conformity with the Code of Ethics of the American Society of Plastic and Reconstructive Surgeons, Inc. Practices contrary to ethical public relations may result in rejection of the application for examination or in deferral of examination until such matters have been resolved satisfactorily.

The Board may deny a candidate the privilege of sitting for an examination, or may refuse issuance of a certificate, if it is found by additional disclosures or a recent change in status that the candidate no longer meets the general or professional requirements.

PROFESSIONAL REQUIREMENTS

The Board considers the requirements detailed in Prerequisite Training and Graduate Education in Plastic Surgery to be minimal. Candidates are encouraged to take advantage of broadening experiences in other fields.

The Board reserves the right:

1. To request lists of operations performed solely by the candidate for one or more years.

2. To request special and extra examinations, written or oral and practical.

3. To request any specific data concerning the candidate that may be deemed necessary before making a final decision for certification.

4. At the Board's discretion it may give consideration to exceptional individuals who did not conform to all of the stipulations concerning the prerequisite and requisite training requirements.

ADMISSIBILITY TO THE EXAMINATIONS

Each qualified candidate shall be entitled to take an examination or examinations as required by the Board.

All candidates must comply with the Board regulations in effect for the year in which the examination is taken regardless of the time when the original application was approved.

All candidates taking an examination of The American Board of Plastic Surgery, Inc. must complete the entire examination.

Certification by another medical or surgical specialty Board does not exempt a candidate from any part of the examination(s).

QUALIFYING EXAMINATION (WRITTEN)

If you are a candidate approved for admission to the examination, you may take the Qualifying Examination immediately after successful completion of your residency in plastic surgery. However, those candidates approved after July 1, 1986 must have completed the Qualifying Examination and have been in the independent practice of plastic surgery for at least a two year period before becoming admissible to the Certifying Examination.

If you have not passed the Qualifying Examination within five (5) years after initial approval, you will no longer be considered admissible to the examination. To be admitted again to examination, you must:

1. Submit documented evidence of completion of not less than 150 hours of accredited Category 1 continuing medical education in plastic surgery within the 24-month period prior to requesting readmission to examination. Acceptable sources of continuing medical education credits are those offered by the 13 sponsoring organizations of the American Board of Plastic Surgery, Inc.

2. Provide an evaluation acceptable to the Board as to your surgical capabilities from the chief of surgery and chief of plastic surgery in the hospitals in which you exercise surgical privileges or from such others as the Board may request.

3. Submit a new formal re-application and all attendant fees.

4. Be approved by the Board for readmission to examination after all of the above documented evidence has been received.

CERTIFYING EXAMINATION (ORAL)

Candidates approved for admission to the examinations of The American Board of Plastic Surgery, Inc., prior to July 1, 1986, will be offered seven (7) consecutive opportunities to appear for the Certifying (oral) Examination beginning with the calendar year of successful completion of the Qualifying (written) Examination. The admissibility expiration date shall be established as December 31 of the seventh calendar year after successful completion of the Qualifying Examination.

Candidates approved for admission to the examinations of The American Board of Plastic Surgery, Inc., July 1, 1986 and thereafter, will be offered seven (7) consecutive opportunities to appear, beginning with the calendar year of admissibility to the Certifying Examination. Before becoming admissible to the Certifying Examination, the candidate must have successfully completed the Qualifying Examination and have been in the independent practice of plastic surgery for at least a two (2) year period. A Fellowship is not considered independent practice. The admissibility expiration date shall be December 31 of the seventh calendar year after completion of the two year independent practice period.

If a candidate has not passed the Certifying Examination within seven (7) years after notification of admissibility, or if a candidate fails the Certifying Examination five (5) times, he or she will no longer be a candidate for certification.

FEES

Registration—U.S. \$200.00 (not refundable)

Qualifying Examination—U.S. \$600.00

Certifying Examination—U.S. \$750.00

Fees must be submitted in U.S. currency only. Foreign currencies, including Canadian, are unacceptable.

Fees are subject to change by the Board. The fee schedule applicable to current examinations will apply regardless of when you are approved for admission to examination.

The Board is a nonprofit organization, and the fees of candidates are used solely for defraying the actual expenses of the Board. The directors of the Board serve without remuneration. Because of the may be necessary to request a voluntary annual contribution from diplomates.

REGISTRATION FEE

The registration fee (\$200.00) must be submitted with the application and is not refundable.

QUALIFYING EXAMINATION FEE

The fee for the Qualifying Examination (\$600.00) must be submitted when the reply card requesting examination is returned to the office of the Board. The fee for the Qualifying Examination must accompany the card only if you wish to be scheduled for examination.

CERTIFYING EXAMINATION FEE

The fee for the Certifying Examination (\$750.00) must be submitted when the reply card requesting examination is returned to the office of the Board. The fee for the Certifying Examination is to accompany the card only if you wish to be scheduled for examination.

REFUNDS

For both the Qualifying and Certifying Examinations, candidates who notify the office of the Board in writing that they wish to withdraw from the examination four weeks or more before the date of the examination will be refunded the examination fee, less a processing charge of \$100.00.

Candidates who notify the office of the Board less than four weeks prior to the examination of their intent to withdraw, or who fail to appear for examination, will forfeit the entire fee. The Board may waive this rule if the circumstances warrant.

REPEAT EXAMINATIONS

Fees for repeat examinations are the same as for the current original examinations.

The Qualifying Examination

The Qualifying Examination of The American Board of Plastic Surgery, Inc. will be conducted in the spring each year or at any other time deemed suitable by the Board. The examination will be given on the date specified and at the time specified. No exceptions will be made, and no special examinations will be given.

ADMISSION PROCEDURES

An announcement of examination and a reply card will be sent to each admissible candidate approximately three months before the date of the Qualifying Examination. When you receive the announcement, you must signify your intent to take the examination by completing and returning the reply card and examination fee (page 14) immediately.

Be sure to complete both sides of the reply card. You will not be scheduled for examination if your hospital appointments are not recorded.

The final deadline for the return of the reply card for the Qualifying Examination is March 1. If the reply card is not received in the office by the Board more than 60 days before the examination, you will not be admitted to the examination.

(The names of candidates who are late returning the reply cards will be kept on file. If openings develop by the withdrawal of other candidates, the late candidates will be admitted in the order of the receipt of the cards. No candidate will be admitted less than four weeks preceding the examination.)

If you wish to withdraw from the examination, you must notify the office of the Board in writing at least four weeks before the date of the examination. The examination fee will be refunded less a processing

charge of \$100.00. Candidates who withdraw from the examination after this date or who fail to appear for the examination will forfeit the entire fee. The Board may waive this rule if the circumstances warrant.

Once you have been scheduled for the Qualifying Examination, you will be sent an admission card five to six weeks before the date of the examination. You must present this card when you register for the examination at both the morning and afternoon sessions. On this card will be printed your name; your candidate number; the date, time, and location of the test; the specific room in which you are to take the examination; and the "date results to be mailed." You must use your candidate number throughout the examination. Late arrival may result in denial of admission to the examination.

If your address as shown on the card is incorrect or will change before the "date results to be mailed," print the change on the back of the card before you turn it in to the proctor at the end of the afternoon session. Admission cards will be collected from all candidates at the conclusion of the examination.

Each candidate is responsible for his or her own travel, hotel accommodations, and expenses. A hotel reservation card will be included with the admission card. You may use this if you wish to stay at the hotel in which the examination is to be given.

Advise the office of The American Board of Plastic Surgery, Inc. immediately by telephone (215-568-4000) if your admission card is lost prior to the examination.

REGISTRATION AND ADMINISTRATION OF THE EXAMINATION

All candidates must take the entire examination on the same day and at the same time.

Candidates must register for the morning and afternoon sessions at the date, time, and location specified on their admission cards. If for any reason you are delayed or cannot arrive on time, you must notify the proctor or the office of the Board. If you are unable to attend the examination, you must notify the office of the Board either by letter or by telephone prior to the time of registration for the morning session. Anyone who is more than 30 minutes late will not be admitted to the examination.

The office of the Board will provide each candidate lead pencils for use during the examination. No other writing implements may be used.

Candidates are not permitted to bring any notes, textbooks, or other reference materials into the examination. Scratch paper is not permitted, but space for notes and calculations is provided in the examination test book.

Examination booklets are copyrighted and are the sole property of The American Board of Plastic Surgery, Inc. They must not be removed from the test area or reproduced. Reproduction of copyrighted material is a federal offense.

CONTENT OF THE EXAMINATION

The Qualifying Examination will consist of a morning session and an afternoon session, as follows.

Morning Session

This part of the examination is a three-hour multiple-choice written test covering the spectrum of clinical plastic reconstructive surgery and the body of basic science pertinent to it. It shall include:

1. Basic techniques, wound healing, microsurgery, transplantation.
2. Burns, sepsis, metabolism, trauma, resuscitation, nutrition, endocrinology, shock, hematology.
3. Pre- and postoperative care, anesthesia, cardiorespiratory care, complications, clinical pharmacology.
4. Tumors of head and neck, skin, and breast; including treatment by radiation therapy, immunotherapy, chemotherapy, and surgery.
5. Trunk, lower extremity, musculoskeletal system, pressure ulcers, rehabilitation.
6. Hand, peripheral nerves, rehabilitation.

Plastic Surgery

7. Maxillofacial and craniofacial surgery and microsurgery.
8. Congenital anomalies, genetics, teratology, facial deformity, speech pathology, gynecology, and genitourinary problems.
9. Aesthetic (cosmetic) surgery, psychiatry, and legal medicine.

Afternoon Session

In the afternoon there will be a multiple-choice written examination covering pertinent:

1. Gross and microscopic pathology as well as basic knowledge of pathology, e.g., the biologic behavior of neoplasms, inflammation, and repair.

2. Gross, microscopic, and functional anatomy, and embryology.

The questions for the examination cover subjects considered to be of fundamental importance to competent performance in the field of plastic surgery. Every effort is made to avoid "trick" questions, ambiguity, and questions involving irrelevant facts. All questions are analyzed by psychometric techniques to assure their quality.

The candidate will pass or fail on the strength of his or her performance on the entire Qualifying Examination.

IRREGULARITIES

The validity of scores on the examination is protected by every means available. The Board will not report a score which it has determined to be invalid, i.e., which does not represent a reasonable assessment of the candidate's knowledge or competence sampled by the examination. The performance of all candidates is monitored and may be analyzed for the purpose of detecting invalid scores.

Candidates are not permitted to bring any notes, textbooks, or other reference materials into the examination. Scratch paper is not permitted, but space for notes and calculations is provided in the written examination test book so that notes and calculations can be made as necessary.

The Examination will be supervised by proctors to insure that the examination is properly conducted. If evidence by observation or analysis suggests that a candidate's scores may be invalid because of irregular behavior, the Board will withhold those scores pending further investigation and the affected candidate will be notified.

Examples of irregularities affecting the validity of scores would include (but not limited to) the following: using notes; sharing information or discussing the examination in progress; copying answers from another candidate; permitting one's answers to be copied; or unauthorized possession, reproduction, or disclosure of examination questions or answers or other specific information regarding the content of the examination before, during, or after the examination.

In such circumstances, upon analysis of all available information, the Board will make a determination as to the validity of the scores in question. If the Board determines that the scores are invalid, it will not release them, and notification of that determination may be made to legitimately interested third parties.

Candidates or other persons who are directly implicated in an irregularity are subject to additional sanctions. For example, the Board may bar the persons permanently from all future examinations, terminate a candidate's participation in an ongoing examination, invalidate the results of the candidate's examination, and withhold or revoke a certificate or take other appropriate action. Candidates or other persons subject to additional sanctions will be provided with a written notice of the charges and an opportunity to respond to such charges in accordance with the reconsideration and appeal procedure established by the Board.

Grades

Letters of notification of the results of the Qualifying Examination will be mailed on the date indicated on your admission card. The time

period between administration of the examination and notification is necessary to allow for extensive analysis and to assure that individual results are reliable and accurate.

Pass

If you pass the Qualifying Examination, you will be informed of this fact. You will also be notified approximately three months in advance of the date and place of the next Certifying Examination. Note, however, that the Board requires that a candidate for certification be in the independent practice of plastic surgery for at least two (2) years before he or she may take the Certifying Examination, ONLY if their application was approved after July 1, 1986.

Fail

If you fail the Qualifying Examination, you will be informed of this fact. In case of failure, you must repeat the entire Qualifying Examination.

You will receive a single final grade for the entire examination. To complete the Qualifying Examination successfully, you must achieve a passing grade for the entire examination rather than for each specific section separately.

You will be judged to have successfully completed the Qualifying Examination if your grade is at or above the mean score of a peer reference group. The characteristics of the peer reference group will be determined by the Board and will set the standard of performance. You will receive an individual computer-generated letter concerning your performance and a histogram of total scores for all candidates.

The American Board of Plastic Surgery, Inc. will obtain from an appropriate contractor a report, which will be sent to candidates' plastic surgery residency training directors and to the Residency Review Committee for Plastic Surgery, concerning the performance of the candidates on the Qualifying and Certifying Examinations.

Hand scoring of the Qualifying Examination will be performed upon written request. To request hand scoring, write to the office of the Board. You will be responsible for an extra charge for hand scoring of the examination; this charge will be determined by the secretary-treasurer of the Board.

A candidate may review his or her Qualifying Examination, administered within the past twelve months, by writing to the Board Office for an appointment within 90 days from notification of the results, and payment of the fee.

The Certifying Examination

The Certifying Examination will be conducted each fall or at such other time as deemed suitable by the Board.

ADMISSION PROCEDURES

An announcement of examination and a reply card will be sent to each admissible candidate approximately three months before the date of the Certifying Examination. When you receive the announcement, you must signify your intent to take the examination by completing and returning the reply card and examination fee immediately. Be sure to complete both sides of the reply card. You will not be scheduled for examination if your hospital appointments are not recorded.

The final deadline for the return of the reply card for the Certifying Examination is September 1. If the reply card is not received in the office of the Board more than 60 days before the examination, you will not be admitted to the examination.

(The names of candidates who are late returning the reply cards will be kept on file. If openings develop by the withdrawal of other candidates, the late candidates will be admitted in the order of the receipt of the cards. No candidate will be admitted less than four weeks preceding the examination.)

Once you have been scheduled for the Certifying Examination, you will be sent an admission card five to six weeks before the date of the

examination. On this card will be printed your name, your assigned candidate number, the date and time to report, the location of the testing center, the specific room in which candidates are to assemble, and the "date results to be mailed."

You must keep your admission card and bring it to the examination. You will be responsible for delivering the admission card to the temporary Board office at the examination center before 11:00 a.m. on the day of registration for the Certifying Examination. ONLY if your address as printed on the admission card is incorrect, or if your address will change before the "date results to be mailed," please enter your new (or corrected) address on the card in the space provided. The office of the Board will also send you nine (9) plastic folders for binding your case reports. It is imperative that you place your assigned candidate number (which appears on your admission card) on the cover of each one of the case reports, along with the other required information.

If you wish to withdraw from the examination, you must notify the office of the Board in writing at least four weeks before the date of the examination. The examination fee will be refunded less a processing charge of \$100.00. Candidates who withdraw from the examination after this date or who fail to appear for the examination will forfeit the entire fee. The Board may waive this rule if the circumstances warrant.

SCHEDULE FOR THE CERTIFYING EXAMINATION

The oral examination for each candidate will occupy one full day. Late arrival may result in denial of admission to the examination. The Board office will assign the day (second or third day) on which you will be examined.

First Day

8:00 a.m. to 9:00 a.m. All candidates hand deliver case reports to the room designated on their admission cards.

Candidates should be available in their hotel rooms (or reachable by telephone) between 1:00 p.m. and 6:00 p.m. and between 7:30 p.m. and 10:00 p.m. on the first day in case the Board wishes to contact them.

Second Day

7:00 a.m.—Candidates assemble for instructions

8:00 a.m. to 12:00 noon—Oral examinations

1:00 p.m. to 5:00 p.m.—Oral examinations

3:00 p.m. to 7:00 p.m.—Reexaminations

9:00 p.m. to 10:00 p.m.—Debriefing

Third Day

7:00 a.m.—Candidates assemble for instructions

8:00 a.m. to 12:00 noon—Oral examinations

1:00 p.m. to 5:00 p.m.—Oral examinations

3:00 p.m. to 7:00 p.m.—Reexaminations

9:00 p.m. to 10:00 p.m.—Debriefing

INSTRUCTIONS AND PROCEDURE

You will receive specific instructions concerning the examination at the assembly on the morning of the day of your examination. You will also be given a schedule showing the time and the place of each examination session. Failure to appear on time for any section of your examination will lead to a grade of Fail on that section. You should be outside the examination room five (5) minutes before your assigned time. It is not necessary for you to announce your presence. If, however, you have not been invited into the examination room by the examiners by ten (10) minutes after the scheduled time, you should notify the temporary Board office immediately.

If you find that one of the examiners to whom you have been assigned played a role in your training, is a close friend or relative, is a close professional associate, or has examined you previously, you must inform the Board staff immediately.

The candidate numbers of those who have completed the two parts of the examination will be posted outside the temporary Board office by

5:15 p.m. each day. The Candidates who are "cleared" (not scheduled for a re-examination) are free to leave the examination center after their numbers are posted. Candidates who have a re-examination may leave the examination center upon its completion.

DEBRIEFING

On the evenings of the second and third days, there will be voluntary debriefing sessions. The Board encourages candidates to attend for the purpose of evaluating the examination just completed.

DESCRIPTION OF THE EXAMINATION

Each examination session is designed to evaluate the candidate's breadth and depth of knowledge and his or her ability to apply it in the solution of a wide range of clinical problems. Each session is structured in that the examiners are given a scheme to be followed. This approach assures uniformity and prevents duplication. Each of the examiners on each team is expected to pose problems and questions to the candidate.

All examiners are diplomates of The American Board of Plastic Surgery, Inc., are active in the practice and/or teaching of plastic surgery, and have been certified by the Board for more than five years. They are respected members of the profession known for their surgical knowledge, expertise, and scientific contributions. They have been instructed in the technique and purposes of the examination process. Ordinarily, each team includes a present or past director of the Board.

The Certifying Examination is given on one day. It consists of two parts:

1. A 45-minute oral examination on eight major cases submitted by the candidate and indicative of the candidate's work in the field of plastic surgery.

2. A 45-minute oral examination on the theory and practice of plastic surgery on material prepared by the Board.

Each Candidate will be examined by at least two teams of examiners. You may be examined by a third team under one of two circumstances. (a) In the first instance, you may petition the chairman of the Certifying Examination Committee or his designee for re-examination immediately following the examination, if you feel that you have been unfairly or inadequately examined by one of the two teams. If your petition is judged to have merit and if its outcome can affect your final grade, you will be given one additional 45-minute oral examination. (b) Secondly, if your performance has been judged marginal by the original two teams, you may, at the direction of the chairman of the Certifying Examination Committee, be required to undergo examination by a third team. In either of the above circumstances, your performance as judged by all three examining teams shall be considered in determining your grade.

CASE REPORTS

Every candidate must assemble eight (8) case reports in the plastic folders provided by the Board and bring the reports to the Certifying Examination. Each case report will be judged on the basis of degree of difficulty as well as on the quality of execution.

When you bring your case reports before the examiners, you must be prepared to defend your choice of operation, to present alternate treatment plans, and to discuss pertinent literature on the subject. The Board, at its discretion, may request certification of your case reports by the hospital(s) where you performed the operations.

You may bring a ninth case to the examination. This case may be substituted for one that is deemed unacceptable by a representative of the Certifying Examination Committee. The total of eight cases must comply with the requirements spelled out below.

All cases must have been performed by you as the independent, responsible surgeon.

Plastic Surgery

Patients managed by the candidate within the context of a residency, fellowship or other similarly supervised training program are not acceptable as Case Reports and no cases from that time period may be used for the Board's Certifying Examination.

Hospital and office records must clearly identify you as the attending physician and surgeon.

However, you need not necessarily be the admitting physician, so long as you are clearly the responsible surgeon. No significant portion of submitted operative procedures may have been performed by any individual other than you.

You will not be admitted to the examination if preliminary review of your cases suggests the possibility that you received supervision or guidance.

If you received assistance on a case from anyone other than a resident, intern, physician's assistant, medical student, or nurse, the following disclaimer statement must be signed by the person(s) who helped you and included in the case report:

"Patient's name:

This is to certify that I did not provide supervision or guidance in the planning and execution of the operative treatment of this patient.

Signed:"

The Board recommends, but does not require, that you bring new case reports if you are presenting yourself for a repeat examination after previous failure.

REQUIREMENTS FOR CASE REPORTS

The following materials, collated in this order, must be present in each of the eight case reports you submit:

1. A brief narrative summary of preoperative, operative, and postoperative course of the patient.
2. Candidates are responsible for obtaining appropriate releases from patients for material submitted to the Board. Properly authorized pre- and postoperative photographs: approximately 3 1/2" x 5" black-and-white or color prints mounted on 8 1/2" x 11" paper. Descriptive legends and dates of the photos must be placed adjacent to each photo. Transparencies will not be accepted.
3. Photocopies of the original operative reports.
4. Photocopies of original anesthetic records.
5. Photocopies of pertinent laboratory data.
6. Photocopies of the pathologist's reports.
7. Photographs of pertinent x-rays or scans. (Actual x-rays are unacceptable.) Each x-ray or scan should be dated in a manner that is easily seen.
8. Drawings, if they would clarify a presentation.
9. Photocopies of the original progress notes (including patient's history and physical examination) both from the hospital and from the office records, including the initial consultation. These records should include evidence of informed consent for operation. If legibility is a problem include a typewritten copy also.
10. Information indicating the final outcome of the treatment.

Note: If the records are not in English, an accurate and complete English translation must accompany them.

The diversified nature of the case material submitted is evidence of the candidate's expertise in the representative areas of plastic surgery. Case material should be drawn from the following nine surgical categories. You must have cases in seven of the nine categories. The cases may have been performed in the hospital or in an ambulatory setting. All cases except those in category 9 must have had operative treatment.

1. Congenital facial clefts.
2. Defects requiring reconstructive surgery.
3. Acute burns.
4. Facial bone fractures (simple nasal fractures are not acceptable).

5. Aesthetic (cosmetic) operations (reduction mammoplasty is not considered aesthetic for purposes of this examination).

6. Malignancies or conditions prone to malignancy.

7. Hand surgery.

8. Congenital anomalies. Examples: syndactyly, microtia, prominent ears, hypospadias, congenital cysts, extensive nevi, congenital constriction bands, and craniofacial dysostosis.

9. Operative or nonoperative treatment of complications following surgical treatment previously rendered to the patient by the candidate.

The eight cases must include at least three of the following five anatomical regions:

1. Head and neck.
2. Upper extremity.
3. Trunk.
4. Lower extremity.
5. Genitourinary system.

TRIVIAL (INADEQUATE) CASES

Each of your cases should represent your best achievement in the specific clinical area during your practice to date. These case reports are the only means by which your clinical skills can be judged. A case report that does not demonstrate clinical judgment and skills equal to or beyond that reasonably expected of an individual completing the requisite training for a plastic surgical residency will be considered inadequate and judged trivial. Examples of trivial (inadequate) cases are: Excision of benign skin lesions of less than two centimeters in diameter on the thigh with primary closure; treatment of a second-degree burn of less than 50 percent of the surface of the forearm; excision and reclosure of an abdominal scar without tissue rearrangement.

PRESENTATION OF CASE REPORTS

Each report must be typed or reproduced on standard, letter-sized paper (8 1/2" x 11") with your name and candidate number, the number of the case, the hospital case number, the principal diagnosis, and the primary operation listed on the title page. Bind the cases singly in the folders supplied by the Board.

You must also supply two copies of a list of your cases. Type the list on a single sheet of paper. Identify this list, with your name and candidate number. For each case, include the following information:

1. Category
2. Patient's hospital number
3. Primary diagnosis
4. Procedure(s) done by you

Bind one copy of this list at the beginning of the first case in its folder. The second copy should be separate and unbound to be handed in with the case reports.

Include the following signed statement in the front of the folder containing your first case. (Only one statement is necessary for the entire group of cases.) "I hereby certify that the planning and essential surgical procedures herein were performed by me as an independent operator.

The American Board of Plastic Surgery, Inc. regards the case reports submitted as important evidence of your basic ability to carry out plastic surgical procedures and to organize and present information in a succinct and complete fashion.

Improper or disorganized preparation of this material will be sufficient cause to disqualify you for continued examination. If you are disqualified for continuation in the examination process because your case reports are judged unacceptable, for whatever reason, you are considered to have not taken the examination and it is not recorded as a failure. However, because the Board has incurred expenses to provide you with an examination, your examination fee less the processing fee of \$100.00 will be refunded.

IRREGULARITIES

The provisions regarding irregularities described in the section on the Qualifying Examination are applicable also to the Certifying Examination.

GRADES

Each candidate will be evaluated by each member of his or her examining teams, and performance may be discussed in detail by the entire Board. The final decision regarding certification will be rendered by the entire Board at its meeting following the completion of the Certifying Examination.

Do not call the Board office for information. Do not call your examiners. Results will be provided in the letter you will receive after the "Result Mailing Date" shown on your admission card. Regardless of your reason, the results of the examination will be divulged to no one until after the Board has had time to reach you.

If you wish to discuss your performance after you have received your letter of notification you may correspond in writing with the secretary of The American Board of Plastic Surgery, Inc., at the Board office.

The Board is determined that the examination shall be as comprehensive and objective as practical. Its intention is that every candidate be provided an equal opportunity to become Board certified. The same standard is applied to each candidate insofar as is possible.

Certification

After a candidate has met the requirements for admissibility and passed the examinations of the Board, a certificate attesting to his or her qualifications in plastic surgery will be issued by the Board. A surgeon who is granted certification by the Board is known as a diplomate of the board.

It shall be the prerogative of the Board to determine the fitness, professionally and ethically, of any candidate for a certificate; and the Board, for cause, may defer or deny certification to any candidate.

CERTIFICATES

Certificates issued by the Board shall be in such form as the directors may from time to time determine. They shall be signed by the chairman, the vice-chairman, and the secretary-treasurer of the Board and shall have placed upon them the official seal of the Board.

Certificates of the Board shall state that the holder has met the requirements of the Board and is certified by the Board as a medical specialist in plastic surgery and is entitled to be known as a "diplomate of The American Board of Plastic Surgery, Inc." Diplomates will have their names reported to the American Board of Medical Specialties and Marquis Who's Who, Inc. for publication in their directories unless they notify the Board in advance that they do not wish to be listed.

REVOCATION

Any certificate issued by the Board shall be subject to revocation at any time that the Board determines that an individual was not properly qualified to receive it. The Board may revoke the certificate of any diplomate who, after opportunity for full and fair hearing by the medical staff or other appropriate body of a hospital, state or county medical society, government licensing body, professional specialty society, or court of law, has been found guilty of or pleaded guilty to a felony, professional incompetence, professional misconduct, unethical conduct, or harmful, deceptive, or fraudulent advertising.

The American Board of Plastic Surgery, Inc. shall have the jurisdiction and right to determine whether or not the information placed before it is sufficient to constitute grounds for the revocation of any certificate. The individual will be provided with a copy of the appeals policy of the Board, and the policy will be observed in pursuing resolution of the problem.

Each certificate issued by the Board shall be subject to revocation if the physician so certified has made any misstatement of material fact, or

has failed to make any statement of material fact, in his or her application for such certificate or in any other statement or representation to the Board or its representatives, or has otherwise acquired the certificate by deception. Upon revocation the certificate shall be returned to the Board.

FOREIGN CERTIFICATES

Persons holding the foreign certificate issued prior to June 30, 1973 by The American Board of Plastic Surgery, Inc., must relinquish their certificates to the Board in the event that they return to the United States for the purpose of practicing plastic surgery. Such individuals may apply for examination and certification in the manner described herein.

INQUIRIES AS TO STATUS

The Board considers a candidate's record not to be in the public domain. When an inquiry is received by the Board regarding an individual's status with the Board, a general—but factual—statement is provided which indicates that person's location within the process of certification. The Board provides this information only to individuals, organizations, and institutions with a reasonably valid "need to know" for professional reasons.

The Board does not use or recognize the terms Board "eligible" or Board "qualified" and does not condone the use of those terms by candidates or any other persons or organizations.

The directors may adopt such further rules and regulations governing examinations and issuance and revocation of certification as they may from time to time determine.

AMERICAN BOARD OF PREVENTIVE MEDICINE

- Eugene W. Fowinkle, MD, Chairman, Nashville, Tennessee
- Terence R. Collins, MD, Vice Chairman for Public Health and General Preventive Medicine, Gainesville, Florida
- Lloyd B. Tepper, MD, Vice Chairman for Occupational Medicine, Allentown, Pennsylvania
- Roy L. DeHart, MD, Vice Chairman for Aerospace Medicine, Edmond, Oklahoma
- Joan M. Altekruze, MD, Columbia, South Carolina
- George K. Anderson, MD, Bolling AFB, D.C.
- Constance C. Conrad, MD, Atlanta, Georgia
- Robert W. Day, MD, Seattle, Washington
- William R. Elsea, MD, Atlanta, Georgia
- John C. Hodgson, MD, Rochester, Minnesota
- Thomas A. Lincoln, MD, Knoxville, Tennessee
- A. Marshall McBean, MD, Baltimore, Maryland
- Pauline O. Roberts, MD, Los Angeles, California
- George Roush, Jr., MD, St. Louis, Missouri
- Hugh H. Tilson, MD, Research Triangle Park, North Carolina
- Stanley R. Mohler, MD, Secretary-Treasurer, Department of Community Medicine, Wright State University School of Medicine, P.O. Box 927, Dayton, Ohio 45401

Eligibility Requirements for Examination

Each applicant for a certificate in public health and general preventive medicine, aerospace medicine, or occupational medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the By-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the By-laws, as from time to time in force, by which alone such requirements are governed:

Preventive Medicine

General Requirements

- 1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education of the American Medical Association, or from a school of osteopathic medicine which was at the time approved by the American Osteopathic Association, or from a foreign school satisfactory to the Board;
- 2. A year of postgraduate clinical training developed as part of an approved residency program in preventive medicine or in a clinical program approved by one or more Residency Review Committees and comprising experience involving direct patient care; or service or training deemed by the Board to be equivalent to such training;
- 3. An unrestricted license to practice medicine in a State, Territory, Commonwealth or possession of the United States or in a Province of Canada.
- 4. Residency of not less than one year which shall have provided supervised experience in the practice of public health, aerospace medicine, occupational medicine or general preventive medicine including planned instruction, observation and active participation in a comprehensive organized program in one of the specialty areas, approved by the Accreditation Council for Graduate Medical Education on the recommendation of the Joint Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and the American Board of Preventive Medicine; or a period of experience deemed by the Board to be substantially equivalent to such residency.
- 5. A period of academic training consisting of completion of a course of study leading to a master's degree in preventive medicine or public health, the content of which shall include biostatistics, epidemiology, health services administration and environmental health; or successful completion of post-baccalaureate study of the extent, depth, content and rigor generally required in such master's degree program.

Special Requirements in Public Health and General Preventive Medicine

- 1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, preventive medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
- 2. The applicant must have been engaged in training for, or the practice of, public health for at least two of the five years preceding application for certification.

Special Requirements in Aerospace Medicine

- 1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, aerospace medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
- 2. The applicant must have been engaged in training for, or the practice of aerospace medicine for at least two of the five years preceding application for certification.

Special Requirements in Occupational Medicine

- 1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, occupational medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
- 2. The applicant must have been engaged in training for, or the practice of, occupational medicine for at least two of the five years preceding application for certification.

Equivalencies for Eligibility Determination

Individuals who have not formally completed all of the components previously described may be considered eligible if their training and experience is considered by the Board to provide suitable equivalency for that formal training.

The Board will consider granting certain credit toward satisfying requirements for eligibility for such factors as:

- 1. certification by one of the American specialty boards with significant preventive medicine components in their practice (e.g. internal medicine, pediatrics, family practice) plus a minimum of two years of full-time practice of preventive medicine;
- 2. teaching or research experience in fields relevant to preventive medicine; and
- 3. suitable periods of practice, research or teaching in preventive medicine.

An applicant who is lacking a formal academic year may substitute four additional years of practice in the special area of aerospace medicine, occupational medicine, general preventive medicine or public health.

Each applicant is considered individually by the Board in accordance with the existing guidelines.

Applications for Examination and Re-examination

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine). It must be accompanied by the required documentation, application fee, and two recent, clear, autographed photographs of the applicant. An official transcript of all graduate academic training in preventive medicine should be sent directly to the Board from the registrar of the institution where the training was undertaken.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the full Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his or her application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination but who fails to submit to examination within three years of the date of the first examination for which he or she is declared eligible, is required to file a new application, and to pay a new application fee.

Candidates failing the examination, may, upon timely application and payment of appropriate fee, be admitted to re-examination within a three-year period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

Multiple Certification

An individual may establish eligibility for certification in multiple fields of preventive medicine by submitting separate applications and fees for each field. Eligibility determination will be carried out independently and candidates may be given credit for any period of appropriate training or experience, regardless of its having been used to establish eligibility in another field.

Fees

Application fee	\$150
Must be submitted with application; is not refundable.	
Examination fee	\$700

Fee is payable 45 days prior to the examination date.

Examination

The examination is a one, one-day examination. It is a multiple choice examination covering all of preventive medicine but weighted in those areas for which candidate is declared.

Certification

Upon satisfactory completion of the examination and proof to the satisfaction of the Board that the applicant is eligible for certification, a certificate will be issued to the effect that the applicant has been found to be possessed of special knowledge in the field specified. The certificate will be signed by officers of the Board and will have its seal affixed. Each certificate remains the property of the Board, but the person to whom it is issued is entitled to its possession unless and until it is revoked. Any certificate issued by the Board may be revoked if evidence, satisfactory to the Board, is presented that the applicant was not eligible to receive it at the time of application or issuance, or that any pertinent fact had been misstated, misrepresented, or concealed. The issuance of a certificate to any person does not constitute such person a member of the Board.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

- Robert Michels, MD, President, New York, New York
- Jack Whisnant, MD, Vice President, Rochester, New York
- Elliott L. Mancall, MD, Secretary, Philadelphia, Pennsylvania
- Maurice J. Martin, MD, Treasurer, Rochester, Minnesota
- Layton McCurdy, MD, Executive Committee Member-at-Large, Philadelphia, Pennsylvania
- William E. Bell, MD, Iowa City, Iowa
- J. Donald Easton, MD, Providence, Rhode Island
- Robert Fishman, MD, Morgantown, West Virginia
- Ludwig Gutmann, MD, Morgantown, West Virginia
- John F. McDermott, Jr., MD, Honolulu, Hawaii
- N. Paul Rosman, MD, Boston, Massachusetts
- Stuart A. Schneck, MD, Denver, Colorado
- James L. Shore, MD, Denver, Colorado
- Lenore C. Terr, MD, San Francisco, California
- Gary Tucker, MD, Seattle, Washington
- William L. Webb, Jr., MD, Hartford, Connecticut
- Stephen C. Scheiber, MD, Executive Secretary,
500 Lake Cook Road, Suite 335,
Deerfield, Illinois 60015

Please note that this is not an official document of the American Board of Psychiatry and Neurology Inc. The Board cannot accept responsibility for errors made in the printing of this material. Please contact the Board's Executive Office for official policies and procedures of the Board.

Certificates

The Board currently issues four types of certificates: (1) in psychiatry, (2) in neurology, (3) in child and adolescent psychiatry, and (4) in neurology with special qualification in child neurology. An applicant may be certified in more than one area. The applicant shall receive a separate certificate for each area in which he or she qualifies. Each certificate shall be in such form and for such period of time as may be specified by the Board.

Revocation of Certificates

The Board shall have authority to revoke any certificate issued by it or to place a certificate holder on probation for a fixed or indefinite time if:

(a) The certificate was issued contrary to or in violation of the Bylaws or any rule or regulation of the Board.

(b) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his or her application or otherwise.

(c) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended.

Board Eligibility

The American Board of Psychiatry and Neurology, in accord with the policy of the American Board of Medical Specialties, does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." The Board informs an applicant of admissibility to examination only when the applicant has an *active*, approved application on file in the Board office.

Application

ALL LICENSING AND TRAINING REQUIREMENTS MUST BE MET PRIOR TO MAKING APPLICATION FOR EXAMINATION.

An applicant who wishes to be examined by the Board shall complete, sign and file with the Executive Secretary a current application on the current official form, together with the required Part I examination fee and supporting data. Photocopies of applications are not acceptable. Application forms may be obtained from the Executive Secretary. Part I examination fees are not refundable.

Deadline for receipt of completed applications in the Executive Office of the Board is the September 1 preceding the scheduled date of the Part I examination.

Applications which are not accompanied by the Part I examination fee will not be processed. Part I examination fees unaccompanied by the formal current application will be returned.

An acknowledgement postcard accompanies each application. That card, when stamped, self-addressed, and enclosed with the application, will be returned to the candidate as acknowledgment that the application has been received by the Board office.

Once the card is returned to the candidate, it will be a minimum of ten weeks before the candidate will receive information regarding the status of the application. Applications received on the deadline date may take longer because of the volume received at that time.

An application who does not receive notification from the Board office by December 31 of the acceptance or rejection of his or her application may contact the Board office. Only one application per candidate is considered at any one time. For example, if an application is being considered for psychiatry, an application for neurology will not be considered until certification is achieved in psychiatry or unless the application for psychiatry is withdrawn.

Appeal Procedure for Negative Determinations Regarding Applications

The rejection of credentials for admission to an examination is considered a "negative determination." An applicant who receives a negative determination may appeal by complying with the following procedures.

1) Within thirty (30) days after date of notice of a negative determination, the applicant must give written notice of appeal to the Review Committee of the Board at the address specified below. Information tending to rebut the negative determination must be received within fifty-five (55) days after date of notice of a negative determination.

2) There is a fee attached to the appeal procedure. The fee for appeal of a credentials matter is equal to the re-examination fee. This fee must accompany the information tending to rebut the negative determination.

3) The Review Committee will review the written information required in (1) above and the applicant will be notified in writing of a decision. If the Review Committee decides to affirm the negative

Psychiatry and Neurology

determination in question, the applicant right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after date of notice of the Committee's original decision. At any such appearance, the applicant will be given an opportunity to present his or her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the applicant requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee less than ten (10) days before the scheduled date of the proceeding that he or she cannot or will not appear at the proceeding, the Review Committee may decide to notify the applicant in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the applicant appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand that matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the applicant.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and
Neurology, Inc.
500 Lake Cook Road
Suite 335
Deerfield, Illinois 60015

General Requirements

At the time of submission of the application, the applicant must establish that:

- (a) He or she has an unlimited license to practice medicine in a state, commonwealth, or territory of the United States, or a province of Canada. All applicants are required to submit copies of licenses with current registrations and expiration dates with their Part I applications.
- (b) He or she has satisfactorily completed the Board's specialized training requirements in psychiatry, neurology, or neurology with special qualifications in child neurology.

**Training Requirements
Certificate in Psychiatry**

An applicant who seeks admission to examination for certification in psychiatry must have satisfactorily completed an approved PGY-1 and three full years of postgraduate, specialized training in a program accredited by the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada. This training must be in the specialty of psychiatry. No residency training credit can be given for time spent in a residency program in another specialty. Training programs approved by the Residency Review Committees and accredited by the Accreditation Council for Graduate Medical Education can be found in the current issue of the *Directory of Graduate Medical Education Programs* published by the American Medical Association. This directory includes the "Essentials of Accredited Residencies."

Training may be completed on a part-time basis, provided that it is no less than half-time, and credit will not be given for less than one-year blocks of training except under special circumstances which must be approved by the ABPN Credentials Committee for Psychiatry.

To ensure continuity of training, the Board requires that two years of the three years of residency following the PGY-1 be spent in a single program. On occasion, the Board will consider alternate patterns of training that have not included the required two years spent in a single program, provided that the total residency permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered. In such cases, it is the responsibility of the applicant to provide detailed documentation from the respective training directors outlining training content, duties, and responsibilities. Each case will be considered on an individual basis. In rare instances, the Board may consider the credentials of exceptional individuals who have made outstanding contributions to the field of psychiatry.

Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977 and before July 1, 1985 for psychiatry.

TWO PATTERNS OF TRAINING ARE ACCEPTABLE:**1) THREE YEARS TRAINING FOLLOWING A FIRST POSTGRADUATE YEAR:**

Prior to entering an approved three-year training program in psychiatry, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of Osteopathy. This year of clinical experience should emphasize internal medicine, pediatrics or family practice. The following programs would be acceptable:

The categorical first year, categorical* first year, and the flexible first year are in accord with those defined by the Department of Graduate Medical Education, American Medical Association. These were in effect from 1977 through 1981. Effective July, 1982, ACGME-approved first postgraduate year training programs include only categorical and transitional programs.

"Categorical First Year—These are first-year programs planned, sponsored, and conducted by a single, approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program."

The categorical first year (beginning after 1977 and before 1985 for psychiatry candidates) must be completed in internal medicine, family practice, pediatrics, surgery or obstetrics and gynecology.

"Categorical* First Year—The asterisk designates a first-year program that was planned, sponsored, and supervised by a single, approved residency program as part of that residency's program of graduate medical education, the content of which was not limited to the single specialty of the sponsoring residency program but may have included experience in two or more specialty fields."

The categorical* first year in psychiatry must have included at least four months with direct patient care responsibility in internal medicine, family practice or pediatrics.

"Flexible First Year—The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for: (a) students who feel the need for this type of first year; (b) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (c) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student.

"Transitional Programs—Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty."

The criteria for a transitional year are outlined in the *Directory of Graduate Medical Education Programs* published by the American Medical Association.

Physicians entering psychiatry training as of July 1, 1985, may enter programs at the second postgraduate year level in July, 1986 ONLY after a broad-based clinical year of accredited training in the United States or Canada in internal medicine, family practice, or pediatrics; or after an ACGME-approved transitional year program; or after one year of an ACGME-approved residency in a clinical specialty requiring comprehensive and continuous patient care.

Beginning July 1, 1988, all osteopathic physicians entering a PGY-2 year in psychiatry must have successfully completed an ACGME-approved first postgraduate year as described above.

2) FOUR-YEAR TRAINING PROGRAMS:

A four-year program in psychiatry would be acceptable with the provision that no less than four months during the first year be spent in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults. For the candidate who spends 12 or more months in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults this may come at any time in the four years.

Certificate in Neurology

An applicant who seeks admission to examination for certification in neurology must have satisfactorily completed an approved PGY-1 and three full years of postgraduate, specialized training in a program accredited by the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada. The training must be in the specialty of neurology. No residency training credit can be given for time spent in a residency program in another specialty. Training programs approved by the Residency Review Committees and accredited by the Accreditation Council for Graduate Medical Education can be found in the current issue of the *Directory of Graduate Medical Education Programs* published by the American Medical Association. This directory includes the "Essentials of Accredited Residencies."

Training may be completed on a part-time basis, provided that it is no less than half-time, and credit will not be given for less than on-year blocks of training except under special circumstances which must be approved by the ABPN Credentials Committee for Neurology.

To ensure continuity of training, the Board requires that two years of the three years of residency following the PGY-1 be spent in a single program. On occasion, the Board will consider alternate patterns of training that have not included the required two years spent in a single program, provided that the total residency permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered. In such cases, it is the responsibility of the applicant to provide detailed documentation from the respective training directors outlining training content, duties, and responsibilities. Each case will be considered on an individual basis. In rare instances, the Board may consider the credentials of exceptional individuals who have made outstanding contributions to the field of neurology.

Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977 and before July 1, 1986 for neurology.

TWO PATTERNS OF TRAINING ARE ACCEPTABLE:

1) THREE YEARS TRAINING FOLLOWING A FIRST POSTGRADUATE YEAR:

Prior to entering an approved three-year training program in neurology, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of

Osteopathy. This year of clinical experience should emphasize internal medicine, pediatrics or family practice. The following programs would be acceptable:

The categorical first year, categorical* first year, and the flexible first year are in accord with those defined by the Department of Graduate Medical Education, American Medical Association. These were in effect from 1977 through 1981. Effective July, 1982, ACGME-approved first postgraduate year training programs include only categorical and transitional programs.

"Categorical First Year—These are first-year programs planned, sponsored, and conducted by a single, approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program."

The categorical first year (beginning after 1977 and before 1986 for neurology candidates) must be completed in internal medicine, family practice, pediatrics, surgery or obstetrics and gynecology.

"Categorical* First Year—The asterisk designates a first-year program that was planned, sponsored, and supervised by a single, approved residency program as part of that residency's program of graduate medical education, the content of which will not be limited to the single specialty of the sponsoring residency program but may have included experience in two or more specialty fields."

The categorical* first year in neurology must have included at least four months with direct patient care responsibility in internal medicine, family practice or pediatrics.

"Flexible First Year—The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for: (a) students who feel the need for this type of first year; (b) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (c) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student."

"Transitional Programs—Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty."

The criteria for a transitional year are outlined in the *Directory of Graduate Medical Education Programs* published by the American Medical Association.

Beginning July 1, 1988, all osteopathic physicians entering a PGY-2 in neurology must have successfully completed an ACGME-approved first postgraduate year as described above.

Physicians entering neurology training as of July 1, 1986, may enter programs at the second postgraduate year level in July, 1987 ONLY after an initial first year of graduate training in accredited programs in the United States or Canada in internal medicine or ACGME-approved transitional programs which include at least six months experience in internal medicine.

2) FOUR-YEAR TRAINING PROGRAMS:

A neurology residency program approved by the ACGME for four years of training would be acceptable.

Certificate in Neurology With Special Qualification in Child Neurology

Proper preparation for the practice of child neurology requires that the practitioner be a qualified neurologist who has had additional training in pediatrics and child neurology. To qualify for this certificate

Psychiatry and Neurology

a different type of preparation and certifying examination are required. The same diploma will be used, the only difference being that instead of certifying qualification in "neurology," it certifies qualification in "neurology with special qualification in child neurology." Training may be completed on a part-time basis, provided that it is no less than half-time, and credit will not be given for less than one-year blocks of training except under special circumstances which must be approved by the ABPN Credentials Committee for Neurology. To ensure continuity of training, the Board requires that two years of the three years of Neurology residency be spent in a single program. An applicant seeking admission to examination for certification in neurology with special qualification in child neurology must have completed the following training in ACGME-approved programs.

1. Two (2) years of residency training in general pediatrics.
2. Three (3) years of residency training in neurology which includes:
 - a) One (1) year of adult clinical neurological residency.
 - b) One (1) year of neurological residency devoted to clinical child neurology.
 - c) One (1) year in neurology in which the trainee may be offered experience in (a) basic neurological sciences such as: neuroanatomy, neurophysiology, neuropathology, neuropharmacology, and neurochemistry; (b) closely related specialties such as neuroradiology, neurosurgery, neuro-ophthalmology, child psychiatry, and child psychology; and (c) special studies and laboratory procedures; and (d) clinical and/or laboratory research, all relevant to the training of an effective practitioner and investigator in the field of child neurology.

Certificate in Child and Adolescent Psychiatry

Each applicant for certification in Child Psychiatry must be certified by the Board in the specialty of general psychiatry prior to applying for examination in child psychiatry. The general policies regarding training, application and examination in child psychiatry are contained in the pamphlet "Information for Applicants for Certification in Child and Adolescent Psychiatry," which is available from the Executive Office.

Dual Certification in Psychiatry and Neurology

For applicants seeking certification both in psychiatry and neurology who have begun postgraduate training prior to January 1, 1987, a total of five years of ACGME-approved postgraduate training is required:

- A PGY-1 which meets requirements for either psychiatry or neurology,
- two years of approved residency in psychiatry in a single training program, and
- two years of approved residency in neurology in a single training program.

Applicants seeking certification both in psychiatry and neurology who begin postgraduate training after January 1, 1987, must complete a PGY-1 which meets the requirements for entry into a neurology program. Additionally, applicants must complete (a) six full years of postgraduate training in approved programs in the United States or Canada including three full years in psychiatry and three full years in neurology, or, (b) at the discretion and approval of both training directors and in accordance with Residency Review Committee requirements, the applicant may complete five full years of postgraduate training in approved programs in the United States or Canada, including two full years in psychiatry, two full years in neurology, and a fifth full year that is jointly sponsored and coordinated by the psychiatry

and neurology training directors to allow the resident to successfully complete all of the essentials for an approved residency program in psychiatry and an approved residency program in neurology.

Dual Certification in Child and Adolescent Psychiatry and in Neurology with Special Qualification in Child Neurology

An applicant who wishes to obtain certificates both in child and adolescent psychiatry and in neurology with special qualification in child neurology must meet the following requirements. He or she must be certified by the Board in the specialty of general psychiatry prior to applying for examination in child psychiatry. The applicant must also meet the requirements for certification in neurology with special qualification in child neurology. One year of training in neurology may be substituted for one year of the required psychiatric training.

SUPPLEMENTARY CERTIFICATION

A candidate who has been certified in psychiatry, neurology or neurology with special qualification in child neurology may apply for supplementary certification in another specialty upon submission of a new Part I application and Part I examination fee. If the credentials for such other certificate are acceptable to the Board, the candidate will be scheduled for the next available Part I examination in the supplementary subject.

Candidates who have achieved certification in neurology and are desirous of gaining certification in neurology with special qualification in child neurology shall be required to take two one-hour examinations in child neurology during the Part II examinations. Such candidates will not be required to re-take the Part I examination in neurology.

It is Board policy to maintain only one active application per candidate at any time.

Applicants with Non-U.S. Training

The following criteria pertain to all applicants whose residency training was undertaken at a center located outside the United States or Canada. The candidate must possess an unlimited license to practice medicine in a state, commonwealth, or territory of the United States or province of Canada.

For Neurology

Only training completed in programs approved by the Accreditation Council for Graduate Medical Education (ACGME) in the United States, or the Royal College of Physicians and Surgeons in Canada, will be considered.

For Psychiatry

These criteria also apply to applicants who completed residency training in the United Kingdom prior to July 1, 1976.

(1) The candidate must have had full-time specialty training in a manner equivalent in length of time and content to that required for U.S. training and

(2) The candidate must successfully complete a comparable national certification examination in the country of training in the specialty in which the physician is seeking admission to examination and

(3) The candidate must have achieved certification within the past seven (7) years. If certification was achieved earlier, then the candidate must have had one year of clinical practice in a setting in which his or her professional work has been observed by at least two ABPN diplomates in that specialty and documented by two letters of sponsorship from such diplomates.

At present, the only certifications recognized by the Board as clearly equivalent for psychiatry are the United Kingdom's MRCPsych (Member of the Royal College of Psychiatrists), Australia and New Zealand's

MRANZCP (Member of the Royal Australian and New Zealand College of Psychiatrists), the South African Medical and Dental Council's F.F. Psych (S.A.) (Fellowship of the Faculty of Psychiatry of the College of Medicine of South Africa) and Israel's Specialty Certification of the Scientific Council of the Israel Medical Association.

As of July 1, 1985, all applicants for admission to examination, with the exception of those who have a certificate and training in its entirety in one of the above-mentioned countries, must have an approved year of primary care training in the United States or Canada.

Training Credit for Applicants in Psychiatry from the United Kingdom

The following criteria apply to all applicants for Psychiatry who began their psychiatric residency training on or after July 1, 1976.

For each year of psychiatric residency training completed in an approved hospital program in the United Kingdom, one year of training credit will be given toward eligibility for examination by the Board in psychiatry.

The hospital program must be among those approved by the Visiting Inspecting Specialty Committee in Psychiatry of the Royal College of Physicians.

In order to obtain credit for two or three years of approved training in the United Kingdom, at least two years of the training must be spent at the same training center in psychiatry.

The applicant will be responsible for sending the details of his or her training to the American Board of Psychiatry and Neurology's Executive Office, along with verification of this training from the approved hospital or hospitals in the United Kingdom. The applicant's program director must certify that the applicant was engaged in full-time residency training.

As of July 1, 1985, all applicants for admission to examination must have an approved year of primary care training in the United States or Canada.

Applicants who have completed residency training in the United Kingdom prior to July 1, 1976, must meet the criteria outlined in the section "Applicants With Non-U.S. Training."

Examinations

Though the purpose of the examination is to test the qualification of the candidate in psychiatry or neurology, or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires proficiency in neurology on the part of those it certifies in psychiatry and vice versa, but examines the candidate in accordance with the certificate he or she seeks.

The Board uses DSM-III-R as its primary authority in psychiatric diagnostic nomenclature.

Each candidate must pass both Part I and Part II of the examinations given by the Board. Each examination shall cover such subjects as the Board may determine.

The Board may conduct such examinations at such times and places as it deems appropriate. The Board reserves the right to limit the number of candidates admitted to any scheduled examination. The administration and grading of all examinations shall be at the sole discretion of the Board. After completion of such examinations, the candidate will be notified by the Executive Secretary as to the results.

Rules on Forfeiture of Part II Examination Fees

A candidate who is unable to attend the Part II examination to which he or she has been admitted and who fails to notify the Executive Secretary in writing at least three (3) months before the start of such examination shall forfeit the examination fee. All fees may be modified from time to time as necessary.

Part I Examination Content

Successful completion of the Part I written examination in psychiatry and neurology is required of candidates seeking certification in either psychiatry, neurology, or neurology with special qualification in child neurology.

Examination for Psychiatry Candidates

The psychiatric portion of the examination will include questions on the following areas in psychiatry: normal and abnormal growth and development through the life cycle, biological dimensions of psychiatry, psychosocial dimensions, and clinical psychiatry (phenomenological, diagnosis and treatment).

The neurologic portion of the examination will include questions on the following areas in neurology: clinical neurology, neuroanatomy, neuropathology, neuropharmacology and clinical diagnostic procedures (including questions on cerebrospinal fluid, neuro-ophthalmology, electroencephalography and neuroimaging) and therapy and management of patients with neurologic disorders.

Examination for Neurology Candidates

The neurological portion of the examination will include questions on the following areas in adult and child neurology: neuroanatomy, neuropathology, neurochemistry, neurophysiology, basic and applied, neuropharmacology, neuroimmunology, neurovirology, neurogenetics, neuroendocrinology, neuroimaging, neuro-ophthalmology, neuro-otology and cerebrospinal fluid.

The psychiatric portion of the examination will include questions on the following areas in psychiatry:

AS OF THE APRIL 1982 PART I EXAMINATION, NEUROLOGY AND CHILD NEUROLOGY CANDIDATES WHO SUCCESSFULLY COMPLETE THE PART I EXAMINATION WILL BE REQUIRED TO TAKE THE PART II EXAMINATION IN CLINICAL NEUROLOGY AND CLINICAL CHILD NEUROLOGY ONLY.

Part I Examination Procedures

The Part I examination is given once a year, in the spring, on a regional basis throughout the United States and Canada, as well as in selected sites outside the continental limits of the United States. Applicants will be expected to indicate, in order of preference, their choice of three examination sites. Every effort is made to accommodate candidates in the locale of their choice, but transfer to another site cannot be made during the three-month period preceding the Part I examination.

An applicant will be advised by the Board of acceptance for examination.

All candidates are required to sit for Part I examination for which they have applied. Applicants who fail to do so will be required to request and submit a new application, supporting documentation and Part I examination fee.

A candidate who passes Part I shall, upon request, submit to the Executive Secretary a check payable to the Board to cover the fee for Part II. The Part II examination is given three to four times a year at selected locations in the United States. Candidates who pass Part I will automatically be assigned to a Part II examination with a specific date and location. The limited space available and the complicated logistics involved in administering the Part II examination make it impossible for the Board to allow candidates to select either the site or the date for Part II examination. Candidates assigned to Part II examination are expected to be present as scheduled. All candidates will be scheduled for the Part II within one year following notification of successful completion of Part I.

A candidate who fails the initial Part I examination may, upon payment of the Part I re-examination fee, repeat the examination the following year. Re-examinees who do not sit for re-examination as

Psychiatry and Neurology

scheduled will be required to request and submit a new application, all supporting documentation and Part I examination fee. Two failures necessitate re-application (request for a new application, all supporting documentation and Part I examination fee).

Through April, 1986, a passing grade on the Part I examination will be valid for a period of seven (7) years from the date of passing. All individuals holding such a grade may apply or re-apply for the Part II examination. Effective March, 1987, a passing grade on the Part I examination dated March, 1987 or thereafter, will be valid for a period of six (6) years or three (3) attempted to complete the Part II examination successfully, whichever comes first.

Appeal Procedure for Negative Determinations Regarding Part I Examinations

A candidate who has received a failing grade on the Part I examination may request in writing to have his or her examination hand-scored by the National Board of Medical Examiners within thirty (30) days after date of notice of a negative determination. The fee for this procedure would be \$250.00. The fee must accompany the request. All requests should be directed to the following address:

American Board of Psychiatry and Neurology, Inc.
500 Lake Cook Road
Suite 335
Deerfield, Illinois 60015

Part II Examination Content

Part II, an oral examination, will include the examination of patients under the supervision of one or more examiners. The manner of examining patients, and the reasoning and deductions therefrom will constitute an important part of the examination. Knowledge of basic science principles, special diagnostic procedures, and management recommendations and risks are also essential parts of this examination, which is focused upon evaluation of clinical skills.

Candidates are expected to discuss the patient and their findings with their examiners. Questions frequently cover such areas as diagnosis, treatment, prognosis and management. Reference to the basic sciences of psychiatry and neurology may be made.

Psychiatry candidates will take two examinations:

- 1 one-hour examination in clinical psychiatry (patient)
- 1 one-hour examination in clinical psychiatry (audio-visual)

In the patient section, the psychiatry candidate will be given 30 minutes to examine a patient under the supervision of one or more examiners. Following the examination of the patient, the candidate will be examined by one or more examiners. This section will stress physician-patient interaction, conduct of the clinical examination, capacity to elicit clinical data, formulation, differential diagnosis and prognosis, therapeutic management and knowledge of therapies. Additional questions may be addressed to the basic science of psychiatry.

The psychiatry audio-visual section will consist of a 20-minute video-taped psychiatric examination which the candidate will observe. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape. This discussion may also include other clinical topics.

Neurology candidates who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

- 1 one-hour examination in clinical psychiatry (audio-visual)
- 1 one-hour examination in clinical neurology (patient)
- 1 one-hour examination in clinical neurology (without patient)

- 1 one-hour examination in clinical child neurology (without patient)

Neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

- 1 one-hour examination in clinical neurology (patient)
- 1 one-hour examination in clinical neurology (without patient)
- 1 one-hour examination in clinical child neurology (without patient)

Child neurology candidates who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

- 1 one-hour examination in clinical psychiatry (audio-visual)
- 1 one-hour examination in clinical neurology (without patient)
- 1 one-hour examination in clinical child neurology (patient)
- 1 one-hour examination in clinical child neurology (without patient)

Child neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

- 1 one-hour examination in clinical neurology (without patient)
- 1 one-hour examination in clinical child neurology (patient)
- 1 one-hour examination in clinical child neurology (without patient)

Since candidates in child neurology are to be "Certified in Neurology with Special Qualification in Child Neurology," it is agreed that those candidates will be expected to pass a one-hour oral examination in clinical neurology (without patient) which is set at the same level of difficulty established for neurology candidates. The pass/fail standards for that hour in clinical neurology (without patient) will be the same whether the candidate is seeking certification in neurology or in neurology with special qualification in child neurology.

Those neurology and child neurology candidates who successfully completed the Part I examination prior to April 1, 1982 who have not yet taken, or did not successfully complete the psychiatry portion of the Part II examination are required to take a one-hour psychiatry audio-visual examination at a regularly scheduled Part II examination. The Psychiatry audio-visual section will follow the same format as outlined for the audio-visual section for psychiatry candidates.

In the neurology and child neurology patient sections, the candidate will be given 30 minutes to examine the patient under the supervision of one or more examiners. During the conduct of the examination, the candidate's ability to obtain an adequate history and perform a neurological examination will be observed. Following examination of the patient, the 30-minute discussion with examiners will focus on the evaluation of the findings and discussion of the diagnosis, treatment and management. This discussion may not be limited to the patient examined and may also include other clinical topics. The examiners may also ask additional questions concerning the basic science of the particular section. Multiple written simulated patient encounters will be utilized as a basis for discussion of diagnosis and treatment in those sections in which there is no patient present.

Part II Examination Procedures

All successful Part I candidates will receive a notice of assignment to a Part II examination together with a request to submit the required examination fee. Scheduling for the Part II examination will be made on

a regional basis as much as is possible. Candidates who fail to take Part II as scheduled by the Board will be required to reapply for the Part II examination.

The limited space available and the complicated logistics involved in administering the Part II make it impossible for the Board to allow candidates to select either the site or the date for examination. It is the candidate's privilege to decline the assigned examination, but there is no guarantee that another date or location will be available within the year's examination cycle.

Candidates who do not pay the Part II examination fee for their scheduled examination by the deadline specified, will be removed from the roster of candidates for that examination. Such candidates will be required to request and submit a Part II application in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

Candidates who pay their Part II examination fee but fail to appear at their scheduled Part II examination, will forfeit the fee. Such candidates will be required to request and submit a Part II application in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

One month prior to the date of the assigned Part II examination, a candidate will receive informational materials and an admission notice specifying the time and date to report for registration. Candidates are requested to report for registration only at the time indicated on the admission notice. Registration schedules are arranged to accommodate candidates in accordance with their examination schedules.

The Board office is unable to provide information concerning specific examination schedules prior to registration.

Policy for Retaking of Part II Examination

Through April 1986 a passing grade on the Part I examination will be valid for a period of seven (7) years from the date of passing.

Effective March, 1987, a passing grade on the Part I examination dated March, 1987, or thereafter, will be valid for a period of six (6) years, or three (3) attempts to complete the Part II examination successfully, whichever comes first.

In order to complete the Part II examination successfully, a candidate must pass both major and minor subjects.

(1) A candidate who passes both sections of the major subject of the Part II examination need not repeat this portion of the examination. To pass the major subject, the candidate must achieve final passing grades on both sections of the major subject at the same examination. A candidate who fails one or both sections of the major subject must take both hours of examination in the major subject at each subsequently scheduled examination until he or she passes both sections at the same examination.

(2) Candidates who pass the Part II examination in the minor subject(s) need not repeat this portion of the examination.

(3) Candidates who are unsuccessful in the Part II examination during the time period allotted to complete the Part II examination will be required to request and submit a new Part I application, documentation and Part I examination fee.

Procedures for Retaking of Part II Examination

Candidates who have failed the Part II examination are automatically assigned to another Part II examination and are required to be present as scheduled. Candidates who fail to take the re-examination at the time specified are required to request and submit a Part II application. Candidates submitting the Part II application will be scheduled for examination within one year, if possible, from the date the Part II application is received in the Board office. Candidates will be scheduled for examination based on space availability and order of

receipt of application. Invitations will be sent at least two months prior to the scheduled examination. A request for the examination fee will be made at that time. The examination fee should not be sent with the application.

Candidates who have submitted a Part II application may choose to decline two invitations to Part II examinations. If the third invitation is declined, the candidate will be required to request and submit a new Part II application and will be placed at the end of the waiting list once the application is received in the Board office.

Candidates should be aware of the examination date of their passing the Part I examination and the number of times they have taken the Part II examination.

Appeal Procedure for Negative Determinations Regarding Part II Psychiatry Examinations

A failing grade on a Part II Psychiatry examination is considered a "negative determination." A candidate who receives a negative determination may appeal by complying with the following procedures:

1) Within thirty (30) days after date of notice of a negative determination, the unsuccessful candidate may, by writing, indicate his/her request for a preliminary review of this negative determination. After such request, the candidate will be provided information concerning his/her performance. This is considered the only feedback provided to the candidate. Fee for this preliminary review will be \$100.00. This fee must be received before information is provided.

2) Following this, the unsuccessful candidate may, by writing, indicate his/her request for a formal appeal for the Psychiatry Review Committee. Information tending to rebut the negative determination should be forwarded with three additional copies for members of the Review Committee, along with the fee, and must be received within fifty-five (55) days after date of notice of a negative determination. No additional feedback will be provided to the candidate. The fee for this formal appeal will be equal to the candidate's re-examination fee and is separate from the fee in 1) above.

3) The Psychiatry Review Committee will review the written information required in (2) above and the candidate will be notified in writing of the decision. If the Review Committee decides to affirm the negative determination in question, the candidate has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after date of notice of the Committee's original decision. At any such appearance, the candidate will be given the opportunity to present his or her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the candidate requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee in writing less than ten (10) days before the scheduled date of the proceeding that he or she cannot or will not appear at the proceeding, the Review Committee may decide to notify the candidate in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the candidate appeals the decision of the Review Committee to the Board written notice of this must be received within twenty (20) days from the date of the letter of the Review Committee's decision. The Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with

Psychiatry and Neurology

precise instructions as to the basis for such reconsideration. The candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the candidate.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and Neurology, Inc.
500 Lake Cook Road, Suite 335
Deerfield, Illinois 60015

Appeal Procedure for Negative Determinations Regarding Part II Neurology Examinations

The failing grade on a Part II neurology examination is considered a "negative determination." A candidate will be advised of which sections were failed in the initial grade letter sent from the Board office. This is considered the first level of feedback. A candidate who receives a negative determination may appeal by complying with the following procedures.

1) Within thirty (30) days after date of notice of a negative determination, the unsuccessful candidate may, by writing, indicate his/her request for a preliminary review of this negative determination. After such request, the candidate will be provided information concerning his/her performance. This is considered the second and final level of feedback provided to the candidate. Fee for this preliminary review will be \$100. This fee must be received before information is provided.

2) Following this, the unsuccessful candidate may, by writing, indicate his/her request for a formal appeal to the Neurology Review Committee. Information tending to rebut the negative determination should be forwarded with three additional copies for members of the Review Committee, along with the fee, and must be received within fifty-five (55) days after date of notice of a negative determination. No additional feedback will be provided to the candidate. The fee for this formal appeal will be equal to the candidate's re-examination fee and is separate from the fee in (1) above.

3) The Neurology Review Committee will review the written information in (2) above and the candidate will be notified in writing of the decision. If the Review Committee decides to affirm the negative determination in question, the candidate has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after date of notice of the Committee's original decision. At any such appearance, the candidate will be given the opportunity to present his/her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the candidate requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee in writing less than ten (10) days before the scheduled date of the proceeding that he/she cannot or will not appear at the proceeding, the Review Committee may decide to notify the candidate in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the candidate appeals the decision of the Review Committee to the Board written notice of this must be received within twenty (20) days from the date of the letter of the Review Committee's decision. The Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with

precise instructions as to the basis for such reconsideration. The candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the candidate.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and Neurology, Inc.
500 Lake Cook Road, Suite 335
Deerfield, Illinois 60015

Unethical Behavior of Candidates

Since the Board believes that the ethics of candidates for certification is a matter for its proper concern, it has adopted the following rules:

1) The falsification of credentials will be cause for the Board's refusal to admit a candidate to examination for at least four (4) years.

2) The Board will consider legal action against anyone who forges an ABPN certificate, copies ABPN examinations or otherwise uses them in conflict with copyright laws, or in any other way violates the legal prerogatives of the Board. Such activities will also be cause for the Board's refusal to admit a candidate to examination for at least four (4) years.

3) Scores on the Part I examination may be invalidated for reasons of irregular behavior that indicates cheating. Statistical analyses may be used to confirm such behavior. If the examination score is invalidated because of irregular behavior, the Board will not consider the candidate's application for a period of at least four (4) years. A repeat application and Part I examination fee will be required.

4) Irregular behavior that indicates cheating on the Part II examination may be considered sufficient reason to invalidate the candidate's score. In that event, the Board will not consider the candidate's repeat application for Part II for a period of at least four (4) years. Another Part II examination fee will be required.

5) "Irregular behavior that indicates cheating" shall include, but not be limited to, the following conduct: (i) copying of answers from another candidate's examination; (ii) knowingly permitting another candidate to copy one's answers on an examination; (iii) unauthorized possession, reproduction, or disclosure of materials, including examination questions or answers, before, during or after the examination; (iv) use of audio equipment to record any part of the Part II examination; (v) offering any financial or other benefit to any Director, officer, employee, proctor, diplomate, or other agent or representative of the Board in return for any right, privilege or benefit which is not granted by the Board to other similarly situated candidates or persons.

6) Notification of the Board's action may be sent to legitimately interested third parties, including the American Medical Association, state medical societies, and appropriate specialty societies.

7) A proposal to impose upon a candidate one of the penalties identified in paragraphs 1, 2, 3, 4 and 6 hereof shall constitute a "negative determination" subject to the "Appeal Procedure for Negative Determinations Regarding Application or Part II Examinations," or the "Appeal Procedure for Negative" Determinations Regarding Part I Examinations."

8) Upon the expiration of the four-year period cited in paragraphs 1, 2, 3 and 4 hereof, the candidate may send to the Board a written request for lifting of the ban, together with a written explanation of the reasons for lifting of the ban. The Board will then hold a hearing on whether the ban should be lifted.

Committee on Certification in Child and Adolescent Psychiatry

Joseph Fischhoff, MD, Chairman
Joel P. Zrull, MD, Vice Chairman
Donald S. Gair, MD, Secretary-Treasurer
Iris F. Litt, MD

William H. Sack, MD
Lois T. Flaherty, MD
Theodore Shapiro, MD

Application and Fees

An applicant who wishes to be certified in child psychiatry shall complete, sign and file with the Executive Secretary of the Board an application on the official form together with the required supporting data. Applications may be obtained from the Executive Secretary. The application shall be accompanied by a check payable to the Board for the application fee of \$200 and the examination fee of \$650. The application fee is not refundable.

No application will be considered until the fee and all required data have been received by the Executive Secretary. *The application, supporting data and fee must be received by the Board no later than the May 1 preceding the Fall examination for which the candidate is applying.*

Determinations of applicants' acceptability will be made in accordance with the rules and regulations of the Board.

Those applicants accepted for examination will be notified and scheduled for examination.

Applicants denied admission to the examination will be notified of their deficiencies in meeting the standards of the Committee.

Applications will remain active for one examination year only. Candidates who fail to present themselves for the next scheduled examination following the date of acceptance of the applications will be required to submit a new application and all documentation and pay a new application fee and examination fee.

The number of spaces available for examination may be limited. After the quota is filled, applications will be placed on a waiting list in order of receipt in the Board office. In the event that a candidate is not accepted for the examination for which he or she applied due to space limitations, his or her application will be held over for the following year's examination.

All completed applications must be received in the Board office no later than May 1 preceding the date of examination for which the candidate is applying. Applicants who do not receive notification from the Board office by July 1 of acceptance or rejection of their application must contact the Board office promptly in writing to inquire about the status of the application. Failure to contact the Board office in writing by July 15 will result in such applicant's removal from the examination roster.

General Requirements

Each applicant for certification in child psychiatry must comply with the following requirements:

(a) He or she must have been certified by the Board in the specialty of general psychiatry prior to submitting an application for examination in child psychiatry. He or she must at all times continue to meet all requirements of the Board for certification in general psychiatry.

(b) He or she must have satisfactorily completed the Board's specialized training requirements in child psychiatry.

Training Requirements

All candidates beginning their specialized training in child psychiatry must have two years of training in child psychiatric centers approved by the Committee in conjunction with the Residency Review Committee for Psychiatry. All training must be completed in the U.S. No credit will be given for training done less than half-time.

The exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatric curriculum will not qualify for this credit.

The two years of specialized training in child psychiatry are usually taken at one center, but may be taken at no more than two centers. If training is taken at two centers, the training director of each center must evaluate the candidate's training in that center.

The training director of the second center is responsible for ensuring that the total *two years* of the candidate's specialized child psychiatry training in the *combined program* is balanced to meet the essentials of the second training program as these have been described and submitted to the Board. A minimum of one year of training must be taken at the second center.

Candidates who have completed at least one year of approved pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year) may be granted up to six months' credit toward child psychiatry training requirements. The six months' credit may be granted if the director of the child psychiatry training program recommends such credit, and if the candidate completes a minimum of one year of training in that child psychiatry program (in the event that training is split between two child psychiatry training programs). This recommendation should be set forth in the form of a letter from the director of the training program to the child psychiatry trainee. A copy should be attached to the application for examination in child psychiatry. This letter should specify the following:

(1) The exact dates of the pediatric training for which child psychiatry training credit is being granted and the pediatric residency program in which this training was obtained;

(2) The exact number of months of credit being granted toward child psychiatry training.

Thus, the following patterns of specialized training in child psychiatry are acceptable:

(1) Two years of training in basic psychiatry, plus two years of training in child psychiatry;

(2) Two years of training in basic psychiatry and at least 18 months of training in child psychiatry, plus up to (but not more than) six months of child psychiatry training credit for one year of pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year). The total minimum amount of child psychiatry training is TWO FULL YEARS.

Any trainee or potential trainee in child psychiatry who contemplates a training program at variance with one of the above training patterns is advised to submit his or her proposed training sequence to the Executive Secretary of the Board. This should be done before beginning child psychiatry training, in order to allow for an advisory opinion of the Committee as to whether the proposed training is likely to meet requirements for admission to examination.

The applicant should obtain from his or her training director(s) a statement certifying satisfactory completion of the training requirements during the period for which training credit was granted.

The Committee may require, at its discretion, submission of the publications of the applicant and/or a series of case reports of children treated by the applicant, as part of the qualifications of acceptability for examination for certification in child psychiatry.

In rare instances, alternate training pathways will be individually considered by the Credentials Committee for those exceptionally qualified individuals who have made outstanding contributions to the field of child psychiatry. A candidate must be nominated by a director of a training program approved by the Residency Review Committee for Psychiatry. The program director must be from the institution where the candidate had a substantial portion of his or her training experience, or where he or she has a current professional appointment. The director must justify the unique but adequate character of the candidate's training program in child psychiatry, and must describe in detail the candidate's clinical experience and qualifications, as well as his or her professional goals and accomplishments. The candidate must have

Psychiatry and Neurology

completed at least five years of training, and evidence must be submitted showing that he or she has had satisfactory direct responsibility for patient care in the field of child psychiatry. In addition to the usual application form, the candidate's curriculum vitae, bibliography, and publications should be submitted for consideration. Each inquiry will be considered on an individual basis by the Credentials Committee and the Committee on Certification in Child and Adolescent Psychiatry. Applicants admitted under this plan must sit for the next scheduled examination and are restricted to an initial examination and one re-examination. Candidates who are unsuccessful in completing the examination process within this period will be required to meet the Committee's current training requirements.

Examinations

The Committee on Certification in Child and Adolescent Psychiatry does not endorse or recommend any texts or other teaching aids identified as "Board preparation" material. Furthermore, this Committee does not have any affiliation with or responsibility for programs identifying themselves as "Board Review Courses."

Examinations are given once a year. The Committee reserves the right to limit the number of candidates admitted to any scheduled examination. There will be oral and written examinations which will include examination in all areas relating to normal personality development and pathological deviations from infancy through adolescence. The examinations will cover any area of developmental disturbance, etiological mechanisms, and therapeutic measures and planning. Knowledge and critical understanding of the history and literature of child psychiatry as they apply to practice in the field will constitute a part of the examination. The utilization of psychological testing, contributions of collaborative personnel, and types of social planning will be included in the examination. A major part of the examination will assess the candidate's ability to make use of their observations and of material presented, to formulate a differential diagnosis, and to organize a practical program of therapy and management from these data. The focus of the written examination is on the general literature in child psychiatry, including history, theory, child development and child psychopathology. The majority of questions are from the literature of the past ten years, with emphasis on the past five years. The written examination is not designed to test primarily for clinical skill, since this is done in the oral examination sections.

The examination consists of a written examination, covering all areas of child psychiatry noted above; plus the following three oral examinations:

- 1) A 75-minute examination on the preschool/grade school child;
- 2) A 60-minute examination on the adolescence;
- 3) A 45-minute examination on child psychiatry consultation.

The examination covering the preschool and grade school age children will be given as one continuous examination lasting 75 minutes. During this time the candidate will be presented with one videotape segment and one typewritten vignette, each depicting a clinical case example. In the instance where the videotape is of a preschool age patient, the written vignette will be based on the case of a grade school aged child, and vice versa. Candidates are evaluated on their ability to observe and describe the most significant behaviors of the child and to determine the additional data needed to define the clinical situation, formulate a differential diagnosis and treatment plan.

The examination in adolescence will include the psychiatric examination of an adolescent under the supervision of an examiner. The manner and process of interviewing the adolescent and the reasoning and deductions therefrom, including differential diagnosis and treatment plan, will constitute an important part of the examination.

The examination on consultation will include short vignettes focusing on consultation with medical colleagues, schools, courts, and

social agencies. The examination allows time for candidates to show their familiarity with community resources and how to facilitate their utilization. The candidate should demonstrate understanding of the principles of consulting and working appropriately with other professional disciplines. Questions may also be asked about consultative problems such as child abuse, psychophysiological disorders, delinquency and learning disabilities.

Certification requires successful completion of all sections of the examination.

The current regulations for failure or conditional pass (condition) of the examination for certification in child psychiatry are as follows:

Failure: Fails two (2) or more oral sections of examination

Fails two (2) or more oral sections and the written examination
A candidate who fails the examination must upon re-examination repeat the entire oral examination. The written examination must be repeated only if it has been specified that the written examination has been failed.

Condition: Fails one (1) oral section of the examination and/or the written examination

A candidate who fails only one section of the oral examination must repeat only that section. If only one oral section and the written examination are failed then only that section and the written examination must be repeated.

Effective with the February 1978 examination passage of the written examination is valid for a period of seven (7) years.

Effective with the February 1980 examination passage of *all portions* of the oral examination is valid for a period of four (4) years.

Candidates who are unsuccessful in their initial examination must appear for the next child psychiatry examination as scheduled.

Candidates electing to decline the scheduled re-examination are required to request and submit a new completed application and application fee.

Candidates who are unsuccessful in completing any portion of the oral examination in their re-examination, must repeat all section of the oral examination. Those candidates who are unsuccessful in their re-examination must then request and submit a new completed application and application fee.

Candidates who fail only the written examination may be re-examined. Such examinations are given on the same day as the written examination for all other child psychiatry candidates. If the examination for all candidates is held in the midwest, no alternate sites will be offered. Candidates who decline the written examination to which they have been will automatically be assigned to the written examination for the following year. A written examination fee will be requested at the appropriate time. This option applies solely to candidates who must repeat only the written examination.

Any candidate who is unable to attend an examination and who fails to notify the Executive Secretary of the Board in writing at least two (2) months before the date of the examination will forfeit the examination fee and the application fee. Such candidates must request and submit a new application and application fee and examination fee.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations in Child Psychiatry

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures.

(1) Within thirty (30) days after date of notice of a negative determination, the applicant or candidate must give written notice of

appeal to the Review Committee of the Committee on Certification in Child and Adolescent Psychiatry (hereafter called the "Committee") at the address specified in (4) below. Information tending to rebut the negative determination and the appeal fee (see 5 below) must be received within fifty-five (55) days after date of notice of a negative determination.

(2) There is a fee attached for appeal of negative determinations. The fee for appeal of a negative determination of credentials is equal to the application fee. The fee for appeal of an oral examination failure is equal to the oral examination fee. The fee for hand-scoring is equal to the written examination fee.

(3) The Review Committee will review the documentation required in (1) above. If the Review Committee decides to affirm the negative determination in question, the appellant will be notified in writing of the decision, and the reasons thereafter. The appellant has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received by the ABPN within thirty (30) days after date of notice of the Committee's original decision. At any such appearance the appellant will be given an opportunity to present his or her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. Appellants who request to appear personally or with counsel before the Review Committee, and subsequently, without good cause, fail to appear at the proceeding or advise the Review Committee in writing less than thirty (30) days before the scheduled date of the proceeding that they cannot or will not appear at the proceeding may forfeit the opportunity for a personal appearance before the Review Committee.

(4) If the appellant appeals the decision of the Review Committee to the Committee, the Committee will review all of the evidence considered by the Review Committee; however, the Committee will not consider any evidence that was not presented to the Review Committee. Written notice of intent to proceed with this step must be received within twenty (20) days after date of notice of the Review Committee's decision resulting from the personal appearance. If the Committee disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The appellant will be informed in writing of the Committee's decision which, in all events, will be final and binding on the Committee and on the applicant or candidate.

(5) All notices or other correspondence directed to the Review Committee or to the Committee should be sent to the following address:
 Committee on Certification in Child and Adolescent Psychiatry,
 American Board of Psychiatry and Neurology, Inc.,
 500 Lake Cook Road, Suite 335
 Deerfield, Illinois 60015

Amendment of Rules and Regulations

The Board of Directors has authority to issue and amend from time to time, rules and regulations relating to the issuance and revocation of certificates in child psychiatry.

Revocation of Certificates

All certificates issued by the Board shall be issued subject to the provisions of its Certificate of Incorporation, Bylaws and Rules and Regulations. The Board has authority to revoke any certificate issued by it or to place a certificate-holder on probation for a fixed or indefinite time, in accordance with the rules and regulations of the Board, on the following grounds:

(a) The certificate was issued contrary to or in violation of its Bylaws or Rules and Regulations;

(b) The person to whom the certificate was issued was not eligible to receive, or has since become ineligible to hold, the certificate;

(c) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his/her application or otherwise;

(d) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended.

AMERICAN BOARD OF RADIOLOGY

- M. Paul Capp, MD, President, Tucson, Arizona
- Robert G. Parker, MD, Vice President, Los Angeles, California
- Thomas F. Meaney, MD, Treasurer, Cleveland, Ohio
- Jerome F. Wiot, MD, Assistant Secretary, Cincinnati, Ohio
- Franklin L. Angell, MD, Baltimore, Maryland
- Thomas C. Beneventano, MD, Bronx, New York
- Robert E. Campbell, MD, Philadelphia, Pennsylvania
- Lawrence W. Davis, MD, Bronx, New York
- Gerald D. Dodd, MD, Houston, Texas
- Jack Edeiken, MD, Philadelphia, Pennsylvania
- Milton Elkin, MD, Bronx, New York
- Thomas S. Harle, MD, Houston, Texas
- Eugene C. Klatte, MD, Indianapolis, Indiana
- Jack S. Krohmer, MD, Detroit, Michigan
- Seymour H. Levitt, MD, Minneapolis, Minnesota
- C. Douglas Maynard, MD, Winston-Salem, North Carolina
- Rodney R. Million, MD, Gainesville, Florida
- Carlos A. Perez, MD, St. Louis, Missouri
- William E. Powers, MD, Detroit, Michigan
- Lee F. Rogers, MD, Chicago, Illinois
- Joseph F. Sackett, MD, Madison, Wisconsin
- Melvyn H. Schreiber, MD, Galveston, Texas
- Kenneth L. Krabbenhoft, MD, Secretary/Executive Director,
 300 Park, Suite 440
 Birmingham, Michigan 48009

Certificates

A certificate will be issued to each candidate who has finished a prescribed and approved period of training and study and has passed a written and oral examination demonstrating an adequate level of knowledge and ability in diagnostic radiology and/or diagnostic radiology with special competence in nuclear radiology, or radiation oncology in accordance with the definitions as stated in the Bylaws and Rules and Regulations of The American Board of Radiology.

A certificate granted by the Board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice radiology.

Definitions

1. *DIAGNOSTIC RADIOLOGY* is that branch of radiology which deals with the utilization of all modalities of radiant energy in medical diagnosis and therapeutic procedures utilizing radiologic guidance. This includes, but is not restricted to imaging techniques and methodologies utilizing radiations emitted by x-ray tubes, radionuclides, thermographic devices, ultrasonographic devices, and radiofrequency electromagnetic radiation emitted by atoms.

2. *NUCLEAR RADIOLOGY* is a clinical subspecialty involving the imaging by external detection of the organ localized and/or physiological distribution of radionuclides in the body for the diagnosis of disease and for therapeutic applications.

Radiology

3. **RADIATION ONCOLOGY** is that branch of radiology which deals with the therapeutic applications of radiant energy and its modifiers and the study and management of disease, especially malignant tumors.

Qualifications of Applicants for Certification by the American Board of Radiology

Each applicant for admission to an examination for a certificate to be issued by The American Board of Radiology in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, and/or radiation oncology shall be required to present evidence satisfactory to the Board that the applicant has met the following standards:

A. General Qualifications

That the applicant is a specialist in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, and/or radiation oncology as outlined in Article II, Section 2, of the Rules and Regulations, AND IS RECOGNIZED BY HIS/HER PEERS TO HAVE HIGH MORAL AND ETHICAL STANDARDS IN HIS/HER PROFESSION.

B. General Professional Education

Graduation from a medical school accredited at the date of graduation by the Liaison Committee on Medical Education of the American Medical Association; or the Canadian Medical Association or from a College of Osteopathic Medicine approved by the American Osteopathic Association. If the applicant is a graduate of a medical school outside the United States or Canada, the applicant must be screened with approval by an agency approved by the Board of Trustees.

C. Special Training

This period of special training shall be as the Board of Trustees by resolution or motion shall determine from time to time.

Effective for candidates beginning their training July 1, 1981 and thereafter, the Board of Trustees shall require a written statement from the program director, attesting that the applicant will have satisfactorily completed the prescribed special training at the time of the written examination and is prepared to take that examination.

D. In special instances these requirements may be modified by majority vote of the entire Board of Trustees, or by the Executive Committee acting in its stead.

E. If the program director fails to indicate in writing that the applicant is adequately trained and prepared for the examination, documentation of the reason(s) must be submitted along with evidence that the candidate has been appropriately apprised of his deficiencies. The Executive Committee of the Board will notify the applicant in writing that an appeals mechanism exists as outlined in paragraphs (F) and (G) below.

F. In utilizing the appeals mechanism, the applicant must provide the Executive Committee of the Board with the written statement describing the reasons which he/she believes will support his/her appeal. The Executive Committee may ask the program director to submit a written response to the applicant's appeal.

G. The Executive Committee must reach a final decision with the least possible delay in order that the applicant who wins his/her appeal does not lose the opportunity to be accepted for the examination for which he/she has applied.

Diagnostic Radiology

1. Candidates beginning their training in diagnostic radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved post-graduate training. Three of these years must be spent in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the

Accreditation Council for Graduate Medical Education). The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year of another approved specialty. No credit will be allowed for a foreign internship.

2. Candidates beginning their training in diagnostic radiology after June 30, 1984 will be required to have four years of approved postgraduate training in that field, exclusive of an internship or clinical year (if the latter is required by the program director). A minimum of six months but no more than twelve months must be spent in nuclear radiology in the four-year program. Candidates will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they complete this amount by September 30 of the year in which the examination is given.

A maximum of three months may be spent in therapeutic radiology.

Diagnostic Radiology with Special Competence in Nuclear Radiology

1. The American Board of Radiology will give a special examination leading to a certificate in diagnostic radiology with special competence in nuclear radiology to those diplomates in radiology, roentgenology, diagnostic radiology or diagnostic roentgenology who have fulfilled the requirement of one full year of formal training in nuclear radiology in an approved department of diagnostic radiology, nuclear medicine, or diagnostic radiology with special competence in nuclear radiology. This examination will consist of three examiners. The categories to be covered are: (1) bone, bone marrow, genitourinary tract, tumor and abscess localization; (2) central nervous system, endocrinology, gastrointestinal tract, hepatobiliary tract, and spleen, and (3) cardiopulmonary systems.

2. Continuing its policy adopted in June 1979, the Board will give an oral examination to candidates for the certificate in diagnostic radiology with special competence in nuclear radiology. This examination will consist of eleven examiners (twelve if candidate previously failed physics in the written examination in diagnostic radiology). The categories to be covered are: bones and joints, chest, gastrointestinal tract, genitourinary tract, neuroradiology, cardiovascular radiology, nuclear radiology (three examiners) (see above), ultrasound, and pediatric radiology. This examination will be given to candidates who have not been previously certified, who have passed the written examination in diagnostic radiology, and who will have completed four years of approved postgraduate education in the United States or Canada, four years of which have been spent in residency training comprising at least thirty-six months of diagnostic radiology and its subspecialties and twelve months in nuclear radiology.

3. Candidates beginning their training in diagnostic radiology with special competence in nuclear radiology July 1, 1981 or thereafter will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The fourth year must be spent in nuclear radiology in an accredited training program for diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or for nuclear medicine.

Radiation Oncology

Candidates beginning their training in radiation oncology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in radiation oncology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical

Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year in another approved specialty. No credit will be allowed for a foreign internship.

The three-year residency training period must include training in Pathology and training in the therapeutic aspects of nuclear medicine. Credit may not exceed three months for time spent in either subject. A maximum of three months' training in diagnostic radiology will be allowed.

Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will complete this amount by September 30 of the year in which the examination is given.

Candidates beginning their training July 1, 1987 and thereafter must have completed 48 months of approved training by September 30 of the year in which they may be admitted to the written examination.

Application and Fee

Application for examination must be made in exact duplicate (2 original copies on prescribed forms which may be obtained from the Secretary). No xerox or any other kind of copy will be accepted. The data summary form enclosed with the application is an integral part that must be completed. These forms shall be forwarded with the required data, two unmounted photographs autographed on the front, and the current application fee (U.S. Currency) by the deadline established for filing. A certified check or money order is required to be made payable to THE AMERICAN BOARD OF RADIOLOGY, INC. APPLICATIONS FOR EITHER THE WRITTEN OR THE ORAL EXAMINATION TO BE GIVEN IN ANY YEAR WILL NOT BE ACCEPTED PRIOR TO JULY 1 OF THE PRECEDING YEAR AND MUST BE FILED NO LATER THAN THE DEADLINE OF SEPTEMBER 30 OF THE PRECEDING YEAR. The application fee (noted above) will cover both the written and the oral examinations provided the candidate is successful on his/her first attempt in both the written and oral examinations.

Incomplete applications will not be accepted. The postmark affixed to the last item received to complete the application must be on or before the deadline date.

All applications must be typed or neatly printed (in ink).

In the event of withdrawal of an application, only a portion of the fee can be refunded.

Beginning July 1, 1981:

A candidate will have three consecutive opportunities to pass the written examination beginning with the written examination for which he/she is first declared admissible. If a candidate fails to accomplish this, he/she must submit a new application and the fee in effect at that time. Failure to accept an appointment, cancellation of an appointment or failure to appear for a scheduled written examination will be regarded as one of the three opportunities.

A candidate who fails the written examination after three attempts must submit a new application together with the fee in effect at that time.

A candidate who has passed the written examination will have three consecutive opportunities to appear for and pass the oral examination beginning with the oral examination for which he/she is first declared admissible. If a candidate fails to accomplish this, he/she must submit a new application and the fee in effect at that time and reinitiate the examination process, including the written examination. Failure to accept an appointment, cancellation of an appointment or failure to appear for a scheduled oral examination will be regarded as one of the three opportunities.

A candidate who finds it necessary for any reason to cancel after acceptance of an appointment for either the written or oral examination shall be required to submit an additional fee of \$100.00. This amount represents administrative costs to the Board. A candidate who FAILS TO APPEAR for an examination without notifying the office of the ABR at least twenty (20) days prior to the first date of the examination will be charged the full examination fee in existence at the time of payment. (Under certain circumstances, the ABR, entirely at its discretion, may excuse such a candidate from this penalty, provided the reason for such absence is substantiated in writing.

Objectives of the Written Examination

In 1965 it became apparent to the Board of Trustees of The American Board of Radiology that the then current oral examination could not cover the entire burgeoning field of Radiology without the addition of more segments, and in turn more examiners. This would not only impose a further burden on candidates but also on the Board itself. It was decided, therefore, to search for other methods of examination. At that time, it was agreed to adopt a written examination to be given annually as a prerequisite for the oral examination. The content of the examination will include the basic sciences of anatomy, pathology, physiology and pharmacology as these subjects relate to its clinical practice. Also to be included are radiological techniques, radiological physics, and radiation biology.

The content of the examination in radiation oncology will include the basic sciences of physics, radiation biology, and clinical oncology as well as anatomy, pathology, physiology and chemotherapy as these subjects relate to the clinical practice of radiation oncology.

With the help of many radiologists in addition to Trustees of the Board, a pool of multiple-choice questions was developed and the first examination was given in 1969 to all candidates seeking certification in diagnostic radiology and in radiation oncology.

Content of Written Examination in Each Field

Each examination consists of between 320 and 375 multiple-choice questions to be administered over a period of approximately eight hours. About one-half of the questions are distributed on the afternoon of one day and the other half distributed on the morning of the following day.

New written examinations are formulated each year in all categories of radiology and the content of the examinations is carefully evaluated in order to keep pace with new information and developments. Even the number of questions in each category may be changed as necessity dictates from year to year.

Beginning in 1984, a candidate who takes the written examination in diagnostic radiology and fails the diagnostic portion but PASSES physics must repeat the diagnostic portion but will NOT be required to repeat physics.

Beginning in 1984, a candidate who takes the written examination in radiation oncology and passes the clinical portion but FAILS EITHER physics or radiation biology must repeat ONLY the portion which he/she failed. Those candidates who fail the physics AND the radiation biology portions of the examination OR the clinical oncology portion of the examination must repeat the entire examination.

Candidates in diagnostic radiology may expect to be asked questions on magnetic resonance imaging in the written and oral examinations.

Oral Examination

Oral examinations are given at a time designated by the Board of Trustees. At the present time the oral examinations are conducted yearly in May and/or June.

Surgery

Admissibility to the oral examination is determined by the Executive Committee. Experience has shown that to delay taking the oral examination does not benefit the candidate.

No recording device of any kind may be brought to the examination.

Content of Oral Examination

In general, the examination consists of film interpretation, problems regarding the clinical application of radionuclides, and questions in pathology, physiology, and radiological physics.

The examination in radiation oncology is primarily on the management of malignant diseases, radiation physics and radiation biology.

Re-examinations

Failures

A candidate who fails or conditions the oral examination in diagnostic radiology or in radiation oncology may be scheduled for re-examination. The re-examination fee in effect at that time must be submitted by certified check or money order.

Candidates who have conditioned one or two categories in the oral examination will be re-examined by two examiners in each conditioned category. The candidate must pass the re-examination by both examiners in each category to remove the condition.

Effective July 1, 1981 a candidate who has failed the oral examination three times must start the examination procedure from the beginning with the submission of a new application, pay the fee in effect at that time and retake the entire written examination.

Status of a Physician

The Board will reply to an inquiry concerning the status of a physician with one of the following statements:

1. The physician is Board certified.
2. The physician is in the examination process.
3. The physician is neither certified nor in the examination process.

NOTE: No official status of "Board Qualified" or "Board Eligible" is recognized by the Board.

Final Action of the Board

The final action of the Board is based on the applicant's professional record, training, and attainment in the field of diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or in radiation oncology, as well as on the results of his examination. This Board has been organized to assist qualified radiologists to become recognized in their communities as men and women competent to practice diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or radiation oncology.

Revocation of Certificates

Certificates issued by this Board are subject to the provisions of Articles of Incorporation and the Bylaws. According to Article IX, Section 4, of the Bylaws, "Any certificate issued by the Board of Trustees shall be subject to revocation in the event that:

- (a) The issuance of such certificate or its receipt by the individual so certified shall have been contrary to or in violation of any provision of the Certificate of Incorporation of this, The American Board of Radiology, or of these Bylaws or rules and regulations adopted by the Board of Trustees; or
- (b) The individual so certified shall not have been eligible in fact to receive such certificate; or
- (c) The individual so certified shall have made any misstatement of fact in the application or in any other communication to the Corporation or its representatives; or

(d) The individual so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in the opinion of the Board of Trustees, moral turpitude; or

(e) The license to practice medicine of the individual so certified shall be revoked.

Before any such certificate shall be revoked a notice shall be sent by registered or certified mail to the last known address of the holder of such certificate, as it appears on the records of this Corporation, setting forth the act, omission or conduct alleged or complained of, and giving the holder of such certificate a reasonable opportunity to answer in writing thereto. Such certificate holder shall have not less than 30 days in which to reply thereto. The Board of Trustees may at its discretion make such further investigation as it deems necessary and proper.

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this Corporation, and the decision of such Board of Trustees in the premise shall be final."

All correspondence should be addressed to the Secretary:

Specialty of Surgery ("General Surgery") Defined

The Board interprets the term "general surgery" in a comprehensive but specific manner, as a discipline having a central core of knowledge embracing anatomy, physiology, metabolism, immunology, nutrition, pathology, wound healing, shock and resuscitation, intensive care and neoplasia, which are common to all surgical specialties.

The general surgeon is one who has specialized knowledge and skill relating to the diagnosis, preoperative, operative, and postoperative management in the following *areas of primary responsibility*:

—*Alimentary Tract*

—Abdomen and its Contents

—Breast, Skin and Soft Tissue

—Head and Neck

—Vascular System, excluding the intracranial vessels, the heart and those vessels intrinsic and immediately adjacent thereto.

—*Endocrine System*

—Comprehensive Management of Trauma, including musculoskeletal, hand and head injuries. The responsibility for all phases of care of the injured patient is an essential component of general surgery.

—*Complete Care of Critically Ill Patients* with underlying surgical conditions, in the emergency room, intensive care unit and trauma/burn units.

Additionally, the general surgeon is expected to have significant preoperative, operative and postoperative experience in pediatric, plastic and general thoracic surgery. Also, he must have understanding of the management of the more common problems in cardiac, gynecologic, neurologic, orthopedic and urologic surgery, and of the administration of anesthetic agents.

The general surgeon must be capable of employing endoscopic techniques, particularly proctosigmoidoscopy and operative choledochoscopy, and must have experience with a variety of other endoscopic techniques such as laryngoscopy, bronchoscopy, esophago-gastroduodenoscopy, colonoscopy and peritoneoscopy.

The Meaning of Certification

The Board considers certification to be based upon a process which includes the educational and evaluation phases and an examination phase. It holds that undergraduate and graduate education are of the utmost importance and requires the program director's endorsement, attesting that the applicant has had an appropriate educational experience and has attained a sufficiently high level of knowledge, judgment and skills to be prepared for designation, by the Board's Certificate as a specialist in surgery, upon successful completion of the examinations, and to enter into independent practice of the specialty.

Graduate Education in Surgery

I. GENERAL INFORMATION

The purpose of graduate education in surgery is to provide the opportunity to acquire a broad understanding of human biology as it

relates to disorders of a surgical nature and the technical knowledge and skills appropriate to be applied by a specialist in surgery. This goal can best be attained by means of a progressively graded curriculum of study and clinical experience under guidance and supervision of senior surgeons and which provides progression through succeeding stages of responsibility for patient care up to the final one of complete management. Major operative experience and senior/chief responsibility at the final stage of the program are essential components of surgical education. The Board will not accept into the process of certification anyone who has not had such an experience in the specialty of surgery, as previously defined, regardless of the number of years spent in educational programs.

The graduate educational requirements set forth in these columns are considered to be the minimal requirements of the Board and should not be interpreted to be restrictive in nature. The Board recognizes that the time required for the total educational process should be sufficient to provide adequate clinical experience for the development of sound surgical judgment and adequate technical skill. The requirements do not preclude additional desirable educational experience and program directors are encouraged to retain residents in a program as long as is required to achieve the necessary level of qualifications.

The integration of basic sciences with clinical training is considered to be superior to formal courses in such subjects. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept such courses in lieu of any part of the required clinical years of surgical education.

The Board may at its discretion require that a member of the Board or a designated Diplomate observe and report upon the clinical performance of a candidate before establishing his admissibility to examinations or awarding him certification.

While a program may develop individual sick, vacation and other leave policies for the resident, one year of approved training toward the Board's requirements must be fifty-two (52) weeks in duration and must include at least forty-eight (48) weeks of full-time surgical training. Furthermore, unused vacation and other leave time may not be accumulated to reduce the overall duration of training expected by the Board.

All phases of the graduate educational process must be completed in a manner satisfactory to the Board.

II. ACCEPTABLE PROGRAMS

The residency programs in surgery in the United States which are reviewed and approved by the Residency Review Committee for Surgery or the Accreditation Council for Graduate Medical Education (ACGME) are acceptable to the Board as an adequate educational experience.

In Canada, those University residency programs in surgery which bear accreditation by the Royal College of Physicians and Surgeons are an acceptable educational experience. Applicants from such programs must meet the Board's specific requirements and cannot receive credit for training in countries other than the United States or Canada.

Except as mentioned above, participation in surgical training programs in countries other than the United States is not creditable toward the Board's educational requirements unless under the specific conditions set forth in the section "Credit for Foreign Graduate Education."

To provide flexibility and the opportunity for experimentation in surgical education, proposed programs at variance with the requirements outlined will be considered upon request by program directors to the Residency Review Committee for Surgery (535 North Dearborn Street, Chicago, Illinois 60610).

Surgery

Listings of accredited programs in the United States may be found in the *Directory of Graduate Medical Education Programs*, published annually under the aegis of the Accreditation Council for Graduate Medical Education (ACGME).

Requirements for General Certification in Surgery

I. GENERAL

A. Must have demonstrated to the satisfaction of the authorities of the graduate educational program in surgery, to their peers and to the Board, that one has attained the level of qualifications in surgery required by the Board.

B. Must have an ethical standing in the profession and a moral status in the community acceptable to the Board.

C. Must be actively engaged in the practice of surgery as indicated by holding active operating privileges in a hospital approved by the Joint Commission on Accreditation of Hospitals, or be currently engaged in pursuing additional graduate education in a component of surgery or one of the other recognized surgical specialties.

D. Must have a currently registered full and unrestricted license to practice medicine granted by a state, or other United States jurisdiction, or by a Canadian province. The license must be valid at the time of examination. A temporary limited license such as an educational, institutional or house staff permit is not acceptable to the Board.

II. EDUCATIONAL

A. Undergraduate Medical

1. Must have graduated from an accredited school of medicine in the United States or Canada.

2. Graduates of schools of medicine from countries other than the United States or Canada must present evidence of (a) final certification by the Educational Commission for Foreign Medical Graduates (ECFMG), or (b) successful passing of the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS).

B. Graduate Education in Surgery

1. Must have satisfactorily completed a MINIMUM OF FIVE YEARS of progressive education, following graduation from medical school, in a program in surgery (general surgery) accredited by the ACGME. Exceptions may be considered by the Board on an individual basis upon request by a program director.

2. Must have completed ALL PHASES of graduate education in surgery in a program in surgery accredited by the ACGME. Training received in accredited programs in other recognized specialties, although containing some exposure to surgery, is not acceptable. A FLEXIBLE or TRANSITIONAL first year is NOT creditable toward the Board's requirements as a PGY-1 unless it is accomplished in an institution having an accredited program in surgery and at least six months of the year is spent in surgical disciplines and under the jurisdiction of the surgery program director.

3. Must successfully complete the ENTIRE PROGRAM as accredited. If an accredited program is lengthened by one year, residents in the final year of the program as previously accredited may be acceptable upon completion of that year. All others would be required to complete all years of the program under the new accreditation status.

4. Must have, in a program accredited for a minimum of five years, at least four years of clinical surgical experience with progressively increasing levels of responsibility. There must be no less than thirty-six months devoted to the primary components of surgery (general surgery) as previously defined. The ENTIRE FINAL "CHIEF RESIDENT" YEAR MUST BE DEVOTED TO THE PRIMARY COMPONENTS OF THE SPECIALTY OF SURGERY. No more than four months of the chief residency year may be devoted to any one of the primary components of surgery. During junior years a total of six months may be assigned to non-surgical disciplines such as medicine, gastroenterology, pediatrics, etc. No more than a total

of twelve months during junior years may be allocated to training in any ONE surgical specialty other than general surgery. Training in anesthesiology, surgical pathology and endoscopy is considered to be surgical, but obstetrics and ophthalmology are not. One year of the minimal five may be allocated to non-clinical activities such as laboratory research or basic sciences.

5. Must have a FINAL YEAR in the capacity of CHIEF RESIDENT in general surgery. The Board considers the terms chief resident and senior resident to be synonymous and to mean the final clinical year in the program in which the resident assumes the ultimate responsibilities for patient care under the supervision of the teaching staff. A chief residency may not be served prior to the final year. The chief residency year must be spent only in the parent or an integrated institution unless rotation to an affiliated institution has been specifically approved by the Residency Review Committee for Surgery.

6. The Board expects a training year to include no less than forty-eight (48) weeks of full-time surgical training.

7. All phases of the graduate educational process must be in accordance with the Special Requirements for Residency Training in General Surgery as promulgated by the Accreditation Council for Graduate Medical Education and approved by the Residency Review Committee for Surgery.

8. The Board believes that optimal surgical education requires that the resident remain in the same program for at least the final two years of his training.

III. OPERATIVE EXPERIENCE

Applicants for examination must have had an operative experience of such breadth and depth as may be deemed adequate by the Board and this must include operative experience in each of the areas of primary responsibility included in the "Definition of Surgery (General Surgery)" set forth previously.

Each applicant must submit a tabulation of the operative procedures he has performed and those on which he has been first assistant or teaching assistant. The Board provides an *Operative Experience* form for this purpose when application material is obtained by the applicant. The *Resident's Record from, available to program directors for residents' use through the Residency Review Committee for Surgery, may be submitted in lieu of the Board's Operative Experience* form.

In tabulating cases for credit toward Board requirements a resident may claim a case "As Surgeon" when he has actively participated in the patient's care so that he has made or confirmed the diagnosis; participated in selection of the appropriate operative procedure; has either performed or has been responsibly involved in performing the critical portions of the operative procedure; and has been a responsible participant in both pre- and post-operative care.

Credit may be claimed as a "teaching assistant" only when the resident has actually been at the table, scrubbed, and has guided a more junior resident through at least the critical parts of an operation. All this must be accomplished under the supervision of the responsible member of the senior staff.

An individual cannot claim credit as both "surgeon" and as "teaching assistant."

Failure to submit a complete and properly authenticated list of operative procedures will constitute an incomplete application.

Applicants are advised to keep a copy of the lists of operative work they submit, for their records, as the Board cannot furnish copies.

IV. SPECIAL INFORMATION FOR PROGRAM

DIRECTORS

A. Program directors are cautioned that appointment of residents at advanced levels without being certain that their previous training is in accordance with the Board's requirements, may result in the affected

residents not being accepted by the Board upon completion of the program. In any case in which there is question, it would be prudent to make inquiry of the Board prior to taking action.

B. According to the Special Requirements for Residency Training in General Surgery promulgated by the Accreditation Council for Graduate Medical Education, special approval of the Residency Review Committee for Surgery must be obtained (1) if a chief resident is assigned to an institution other than the parent one or an "integrated" one; (2) if rotations to any one approved "affiliate" exceed six months; (3) if more than one year of the total program is spent away from the parent and integrated institutions; and (4) if more than six months' total is spent in any assignment outside the parent, the integrated and approved affiliated institutions. The Board concurs in this and will find any violations of these requirements to be non-acceptable training.

C. Since the Residency Review Committee does not act upon the adequacy of training outside the United States, program directors must request the Board's approval, in advance, if they wish periods of training abroad to be creditable toward the Board's requirements. The Board will rule on individual requests.

Credit for Military Service

Credit will not be granted toward the minimum requirements of the Board for service in the Armed Forces, the Public Health Service, the National Institutes of Health or other governmental agencies unless the service was as a duly appointed resident in an accredited program in surgery.

Credit for Foreign Graduate Education

Acceptance for examination and certification by the American Board of Surgery is based upon satisfactory completion of the stated requirements in accredited residency programs in surgery in the United States. Regardless of the individual's professional attainments here or abroad, no credit will be granted directly to a candidate for surgical education in a foreign country. The Board will consider granting partial credit only upon the request of the director of an accredited program who has observed the candidates as a junior resident for nine to twelve months and wishes to advance the candidate to a higher level in that program. The credit granted will not be valid until the candidate has successfully completed that program. If the candidate moves to another program the credit is not transferable and must again be requested by the new program director.

Applicants from approved Canadian programs must have completed *all* of the requirements in the Canadian program or in combination with an accredited U.S. program. No credit for training outside the U.S. and Canada will be granted to those applicants seeking certification who completed a Canadian program. Applicants from Canadian programs must complete the Board's stipulated requirements.

Rules Governing Admissibility to Examinations for General Certification in Surgery

1) An applicant is admissible to the examinations only when all of the preliminary and graduate educational requirements of the Board, currently *in force at the time of receipt of the formal application*, have been satisfactorily fulfilled; his operative experience has been reviewed and deemed acceptable; his general credentials are in order; the program director has certified to the Board in writing that he has attained the required clinical skills; and the formal application has been reviewed and approved. The applicant then must successfully complete the cognitive qualifying examination before becoming a "candidate for certification." When all of the above requirements have been met, the applicant will be notified that he has become a "candidate for certification" and will be scheduled for appearance at the appropriate certifying examination.

2) Applicants approved in 1987 or thereafter will be offered five opportunities for taking the Qualifying Examination within the five-year period following approval of the formal application. Examinees will be assigned to a specified center designated by the Board based upon the last recorded address of the applicant. If an applicant does not take the examination within two years following approval of the application or does not participate in at least three examinations within the five-year period of admissibility he will no longer have any status with the Board and will not be considered for readmission to the examination.

If an applicant participates in three or more examinations within the five-year period of admissibility without success, he may request a review of his credentials. The Board will then advise the applicant of the requirements for readmission to the examination.

3) The certifying examination will be offered to those who have passed the qualifying examination and have thus become "candidates for certification," at the earliest practicable time consistent with the Board's geographical examination policy. Candidates will be assigned to centers as designated by the Board. Candidates will be offered three (3) and only three opportunities to appear for examination during the five academic years following completion of the qualifying examination. The *admissibility expiration date* shall be established as *June 30th of the fifth calendar year after the qualifying examination*, but an opportunity offered which is refused or not taken will be counted as one of the three available. If a candidate fails the examination three times or fails to accept or to appear at the opportunities offered, his admissibility date will be revised to indicate that he is no longer a "candidate for certification." He will not again be considered by the Board until after satisfactory completion of at least one year of residency in surgery at an advanced level in an accredited program and receipt of a favorable endorsement to the Board from the program director. If the Board approves the candidate's application for readmission to the certifying examination upon his completion of an additional year of residency in surgery, he will be offered three further opportunities within the ensuing five years. If he is not successful within that time, he cannot again be considered unless he then completes a minimum of three (3) years of residency in surgery, including a chief year, in an accredited program and receive a favorable endorsement by the program director. The candidate must then reapply as a "new applicant." Such "new applicants" will be required to submit a reapplication for admission to examination and all supporting documents, pay all established fees and again successfully complete the qualifying examination before advancing to the status of "Candidate for Certification."

4) Those persons who, ten years after approval of their original application or re-application, have not become certified and *who are not actively pursuing completion of the appropriate above-stated requirements applicable in each case* will have their files disposed of and no longer have any status with the Board. If they wish later to be considered they must fulfill the requirements then in place for "new applicants."

5) The Board, on the basis of its judgment, may deny or grant an "applicant" or "active candidate" for certification the privilege of examination whenever the facts in the case are deemed by the Board to so warrant.

The Board, does not use or sanction the terms "board eligible" or "board qualified." The standing of an individual with the Board varies according to the current status of his credentials and will be so reported.

Special Certification

The Board has been authorized by the American Board of Medical Specialties to award Certification of Special or Added Qualifications in certain disciplines pertinent to the overall specialty of surgery, to those

Surgery

Diplomates of this Board who meet the agreed-upon requirements. These disciplines include general vascular surgery, pediatric surgery and surgical critical care.

The Board considers all the above disciplines to be an integral part of the specialty of surgery and expects that all surgeons certified in surgery by this Board will be qualified to practice in these areas if they so desire and demonstrate the capability. The Certificates of Special or Added Qualifications are designed to recognize those Diplomates who have acquired, through advanced education and training and other activities, special qualifications in these disciplines beyond those expected of the well-trained general surgeon.

Those seeking the American Board of Surgery's Certification of Special or Added Qualifications must have been certified on surgery by this Board; must have completed the required additional training in the discipline beyond that required for General Certification; and operative experience and/or patient care data acceptable to the Board; must show evidence of dedication to the discipline by the means specified by the Board and receive favorable peer review by recognized Diplomates in the particular discipline. Finally, successful completion of the prescribed examinations is required.

Those who are interested in obtaining information regarding certification in pediatric surgery, general vascular surgery, or surgical critical care, may obtain it from the Board upon request.

The Examinations Offered by the Board

The Board offers examinations leading to Certification in Surgery, Certification of Special Qualifications in Pediatric Surgery, and in General Vascular Surgery; Certification of Added Qualifications in General Vascular Surgery and in Surgical Critical Care; and an In-Training Examination.

The examinations leading to certification are offered to individuals, but the in-training examination is offered to program directors for their use as an educational tool, for the assessment of the individual resident's grasp of surgical fundamentals.

The Board notifies each candidate for general and special certification of his performance on examinations. Beginning with candidates whose formal applications were approved in 1975, the Board reports their performance on the Board's examinations to the director of the program in which the candidate completed his final year of residency. All reports pertaining to the in-training examination are provided only to the program director.

All examinations are composed by members of the American Board of Surgery with participation by invited Examination Consultants.

Any written examination may be reviewed by a candidate at the Board office within one year upon request, by appointment and payment of the fee.

I. EXAMINATIONS FOR GENERAL CERTIFICATION IN SURGERY

A. THE QUALIFYING EXAMINATION

This examination is written and is offered once a year in the fall. It is given simultaneously in a number of locations in the United States.

Applicants whose applications have been approved by the Board are sent annually, throughout their period of admissibility, an announcement of the examination. With the announcement is a reply card which must be returned to the Board if the applicant wishes to be scheduled for this examination. Shortly before the date of examination he is sent an admission card indicating the specific location of the examination center, and reporting times, and a pamphlet describing the examination and the types of questions to be expected.

The one-day Qualifying Examination consists of multiple-choice questions designed to evaluate knowledge of general surgical principles and the basic sciences applicable to surgery.

Successful completion of the qualifying examination is a requirement for all, to attain the status of "active candidate for certification" and admission to the certifying examination.

B. CERTIFYING EXAMINATIONS

Examinations are ordinarily held six times a year, within the continental United States. Candidates for certification will receive an announcement of the examination to which they may be assigned, based on their geographic location, approximately two months prior to the examination session, with a reply card which must be returned at once if a candidate wishes to be included in that examination. Failure to return or late return of the card will result in that examination being counted as one of the three opportunities to be offered. If the Board cannot accommodate a candidate at that particular examination it will not be counted as an opportunity. A candidate assigned to an examination will be sent an admission card indicating the specific time and place to report for examination.

The examinations are conducted by members of the American Board of Surgery and certain selected Associate Examiners who are Diplomates of the Board and usually from the local geographic area.

The examinations consist of three oral sessions conducted by teams of two examiners each, directed toward determining the candidate's understanding of clinical entities, his level of surgical judgment, and his problem solving ability. During all sessions, the ability to apply knowledge of anatomy, physiology, pathology, biochemistry, and bacteriology to clinical problems is also evaluated.

II. EXAMINATIONS FOR CERTIFICATION OF SPECIAL OR ADDED QUALIFICATIONS

The Board offers examinations for "Certification of Special Qualifications in Pediatric Surgery," "Certification of Special Qualifications in General Vascular Surgery," and for "Certification of Added Qualification in General Vascular Surgery and in Surgical Critical Care." These examinations are described in the separate pamphlets pertaining to the respective disciplines, which may be obtained from the Board Office upon request.

III. IN-TRAINING EXAMINATION

The Board offers annually to program directors of accredited residency programs in surgery, a written "in-training examination" which is designed to test the general level of knowledge which has been attained by residents regarding the fundamentals and the basic sciences related to surgery. This examination is constructed to evaluate the knowledge of the resident who has completed two years of graduate education in surgery, but at the program director's discretion, may be administered to any one. It is also designed to meet the first milestone which is required by the "Essentials" for residencies in general surgery.

The Board will normally furnish pertinent information to the directors of all accredited programs in surgery several months in advance of each year's examination and ascertain the number of test booklets desired.

The examination, administered by the participating program director, takes place each winter.

Program directors should take note of the fact that the Board does not contact each institution in which residents are located, but depends upon the director of the program to order an adequate number of test booklets for residents in his total program which includes not only his own institution but also all those included under his program designation in the *Directory of Residency Training Programs*.

It is important to note that the in-training examination is not offered to individuals, but to program directors only.

The in-training examination is not required by the Board as part of the certification process.

Even though the in-training examination is prepared by the Board as a convenience to program directors, it is to be used as an assessment of

residents' progress and not as a pool of questions for study or other purposes. Duplication and improper use of the examination material defeats the purpose of the examination and will not be tolerated by the Board. The examination is protected under the copyright laws.

Application for Examination for General Certification in Surgery

A prospective candidate for examination by the Board should carefully read the requirements set forth in its booklet. If he needs advice about his plans for graduate education in surgery, or believes that he has met or is within six months of meeting the requirements, he should write the Board and request an *Evaluation Form*. This form must be completed precisely and returned to the Board. The candidate will then be advised as to whether or not it appears that he has met or will meet the requirements, or what will be necessary. Candidates should not submit documents, testimonials, letters of recommendation, case reports or other information unless requested by the Board.

Candidates should communicate with the Board at least four months before completion of their educational requirements and not later than May 1st if they wish to receive the formal *Application for Examination* and be considered for the qualifying examination to be given in that year. The application for examination form will not be sent to candidates until they are within several months of completing the educational requirements and appear to have met all other requirements.

The application for examination form must be completed and returned to the Board *no later than July 31st* or the candidate will not be considered for the qualifying examination to be given in that year.

Candidates who complete the educational requirements after September 30th will not be considered for admission to the qualifying examination in that year, but must wait until the following year.

The acceptability of a candidate does not depend solely upon the completion of an approved program of education, but also upon information available to the Board regarding his professional maturity, surgical judgment, technical capabilities and ethical standing.

A candidate who has submitted an application for examination form will be notified as to his admissibility to examination.

Fees (General Certification)

Registration—payable with	
<i>Application Form</i>	U.S. \$150.00
Qualifying Examination	U.S. \$350.00
Certifying Examination	U.S. \$500.00
(Both examination fees payable with the Reply Card.)	

Fees for a re-examination are the same as shown above, for each Examination.

Each fee for examination or re-examination includes a U.S. \$100.00 processing charge which is not refunded if the candidate withdraws after he has been scheduled for an examination.

A candidate who withdraws must notify the Board Office at least ten (10) business days before the examination for which he is scheduled. A candidate who fails to appear for examination or who withdraws without giving at least ten (10) days' notice as defined above, may forfeit the *entire fee* for examination.

Fees are subject to change as directed by the Board.

The Board is a non-profit organization. The members of the Board, except those who are on the Executive Staff, serve without remuneration.

Issuance of Certificates

A candidate who has met all the requirements and has successfully completed the examinations of the American Board of Surgery in one or another of the areas of certification will then be issued a certificate by this Board, signed by its Officers, attesting to his qualifications in that area.

The Board issues Certificates in Surgery, Certificates of Special Qualifications in Pediatric Surgery, Certificates of Special Qualification in General Vascular Surgery, and Certificates of Added Qualifications in General Vascular Surgery and in Surgical Critical Care.

Recertification

The American Board of Surgery offers recertification to its Diplomates in surgery and in all the disciplines in which it offers Certificate in Surgery or Added Qualifications. The Board considers recertification to be voluntary in the same connotation as is original certification.

The purpose of recertification is to demonstrate to the profession and the public, through periodic evaluations, that the surgical specialist has maintained continuing qualifications on a currently acceptable level in his chosen area of practice. The American Board of Surgery believes that such periodic evaluation of its Diplomates is in their own interest as well as the public interest.

Those persons certified in surgery prior to December 31, 1975 were issued a certificate with no indication of time limited validity. All Certificates issued on or after January 1, 1976, both general and special, bear a limiting date of ten years, after which they are no longer valid.

Those whose certificates have expired will no longer be listed in Diplomate directories unless they have acquired recertification.

A Diplomate can initiate the recertification process when certification has been held at least seven years. Pamphlets outlining requirements for recertification in the various disciplines may be obtained from the Board upon request. To facilitate receiving the Board's mailings pertaining to the recertification process, it is important for all Diplomates to notify the Board promptly whenever their addresses change.

Recertification in Special Disciplines

Recertification is offered to Diplomates holding Certificates of Added Special Qualifications, in general vascular surgery, in pediatric surgery, and in surgical critical care.

Diplomates hold Certificates of Special Qualifications in General Vascular Surgery or in Pediatric Surgery may become recertified in these disciplines without having been recertified in surgery.

Details concerning requirements for recertification in the disciplines mentioned above are similar to those for recertification in surgery, and pertinent pamphlets may be obtained from the Board upon request.

Inquiry as to Status

The Board considers an individual's record *not* to be in the public domain. When an inquiry is received by the Board regarding an individual's status, a general but factual statement is provided which indicates the person's location within the examination process. The information will be provided *only* to individuals, organizations, and institutions with a "need to know" for professional reasons.

Irregularities

The furnishing of false information to the Board or examination irregularities may result in the rejection of an application, the barring of a candidate from examination, the denial or revocation of a certificate, or other appropriate sanctions, all as more fully set forth in the Application for Admission to Examination and the Instructions to Examinees.

Reconsideration and Appeals

The Board has adopted a policy with regard to reconsideration and appeals of decisions adverse to applicants regarding their individual credentials and admissibility to the examinations and questions regarding the form, administration and results of examinations. A copy of that policy is available from the Board Office to anyone considering a request for reconsideration or an appeal. A request made for reconsideration, which is the first step, must be made in writing to the Board office within 90 days of receipt of notice from the Board of the action in question.

Thoracic Surgery

Revocation of Certificate

Any certificate issued by the American Board of Surgery, Inc. shall be subject to revocation at any time that the Directors shall determine, in their sole judgment, that a candidate who has received the certificate was in some respect not properly qualified to receive it.

AMERICAN BOARD OF THORACIC SURGERY

Richard J. Cleveland, Md, Chairman, Boston
Massachusetts
Paul A. Ebert, MD, Vice Chairman, Chicago,
Illinois
James V. Maloney, Jr., MD, Secretary-Treasurer,
Los Angeles, California
W. Gerald Austen, MD, Boston, Massachusetts
Harvey W. Bender, Jr., MD, Nashville, Tennessee
John R. Benfield, MD, Los Angeles, California
James A. DeWeese, MD, Rochester, New York
L. Penfield Faber, MD, Chicago, Illinois
George J. Magovern, MD, Pittsburgh, Pennsylvania
Martin F. McKneally, MD, Albany, New York
John L. Ochsner, MD, New Orleans, Louisiana
W. Spencer Payne, MD, Rochester, Minnesota
Richard M. Peters, MD, San Diego, California
W. Gerald Rainer, MD, Denver, Colorado
Andrew S. Wechsler, MD, Durham, North Carolina
Benson R. Wilcox, MD, Chapel Hill, North Carolina
Glennis Lundberg, Executive Assistant,
One Rotary Center, Suite 803
Evanston, Illinois 60201

General Requirements

1. Certification by the American Board of Surgery.
2. Adequate training in thoracic and cardiovascular surgery.
3. Satisfactory performance on the American Board of Thoracic Surgery examination.

Training Requirements

Candidates must fulfill all the training requirements of the Board in force at the time their applications are received.

Candidates for certification must complete a minimum of 24 months of identifiable training in thoracic and cardiovascular surgery in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada. Training in both general thoracic surgery and cardiovascular surgery is an essential part of any approved program no matter what area of thoracic surgery a candidate may choose for his/her practice.

Candidates who have satisfactorily completed a minimum of two years of training in thoracic surgery and are recommended by their program director are eligible for examination subject to the following conditions:

Candidates for certification will be accepted for examination only if they have completed two years of training in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada.

Candidates who apply for examination more than five years after the satisfactory completion of their residency must have an additional year of training in an approved program before they will be eligible to apply for examination.

Operative Experience Criteria

1. The application of candidates whose supervised operative experience falls below the minimal numerical acceptable standard based on 1 standard deviation of the mean value of the number of operations

performed by each candidate for the previous year will be referred to the Credentials Committee for review. For candidates applying in 1988, 175 major operative cases are required.

2. The applications of candidates whose supervised operative experience for full credit in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery is below minimal acceptable standards for one or more *areas* within thoracic and cardiovascular surgery will be referred to the Credentials Committee for review. The numerical criterion of the minimal acceptable standard for each area is based on 1 standard deviation of the mean of the number of operations in that area of all candidates for the previous year. Based on the candidates for 1987, the number of procedures required to meet minimal acceptable standards in the various areas for 1988 are:

Lungs, pleura, chest wall	50
Pneumonectomy, lobectomy, segmentectomy	30
Other	20
Esophagus, mediastinum, diaphragm	15
Esophageal operations	8
Other	7
Congenital heart	25
Open operations	10
Other	15
Acquired valvular heart	20
Myocardial revascularization	35
Pacemaker implantations	10
Bronchoscopy and esophagoscopy	25

Endoscopic procedures may also be counted for credit when they are performed immediately preceding a thoracic operation.

Major vascular operations outside the thorax should be listed.

The Board recognizes that supervised operative experience in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery protects the patient who, in most instances, is the personal and identifiable responsibility of a faculty surgeon. This supervised experience optimally prepares the candidate to begin the independent practice of cardiothoracic surgery after the completion of his/her residency.

The Credentials Committee has been authorized by the Board to reject candidates from approved programs if their training is considered to be inadequate. The candidate, the program director, and the Residency Review Committee for Thoracic Surgery will be notified if such actions are taken by the Credentials Committee.

Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the candidate's training experience, a candidate is nevertheless held accountable for knowledge concerning all phases of the field. This includes a knowledge of extracorporeal perfusion (physiologic concepts, techniques, and complications). In addition, a candidate should have had responsibility for the care of pediatric general thoracic surgical patients. The candidate should also be skilled in the management of acutely ill patients in the intensive care unit. This requires a knowledge of respirators, blood gases, metabolic alterations, cardiac output, hyperalimentation, and of many other areas.

By virtue of their training in cardiothoracic surgery, candidates are expected to be fully qualified in the care of critically ill patients.

Criteria for Credit

Credit will be allowed for supervised operative experience in a well-organized teaching setting only when the following criteria are met:

- a. The resident participated in the diagnosis, pre-operative planning and selection of patient for operation or surgical indication;

b. The resident performed under appropriate supervision in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery those technical manipulations that constituted essential parts of the procedure itself;

c. The resident was substantially involved in post-operative care.

Supervision and active participation by the cardiothoracic faculty is required in preoperative, intraoperative, and postoperative care.

The Board wishes to emphasize, in addition, that first-assisting at operations is considered an important part of resident training, particularly in complex or relatively uncommon cases such as certain kinds of congenital heart surgery and certain operations to correct disorders of the esophagus.

Credit for Foreign Graduate Education

Candidates receiving training outside the United States or Canada may be considered for examination by the Credentials Committee regardless of when the training occurred when the following conditions have been met:

1. The candidate has obtained certification by the American Board of Surgery.
2. The candidate has been allowed no more than one year's credit by the Credentials Committee for training outside the United States and Canada.
3. The candidate has obtained one year of thoracic residency training at the senior level in an approved United States or Canadian program.

Applications

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the office of the Secretary of the Board, outlining briefly their training and experience in thoracic surgery.

An application blank will be sent to those candidates who have completed residency training programs which have been approved by the Residency Review Committee for Thoracic Surgery. Candidates who have completed their training in other than approved programs will be sent an Evaluation Form, which, when completed and returned, will be considered by the Credentials Committee of the Board. If the candidate's training is potentially acceptable, an application blank will be sent.

Candidates are notified of their eligibility for examination when their applications have been approved. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration fee.

Examinations

It is the policy of the American Board of Thoracic Surgery to examine candidates only upon completion of their thoracic surgery residency.

Separate written and oral examinations are held annually at times and places determined by the Board. Information regarding the dates and places of the examinations is published in the Examination and Licensure column of the Journal of the American Medical Association, the Journal of Thoracic and Cardiovascular Surgery, and the Annals of Thoracic Surgery.

Part I—Written Examination

The examination consists of an objective multiple choice written examination designed primarily to assess cognitive skills.

Part II—Oral Examination

Successful completion of the Part I (written) examination will be a requirement for admission to the Part II (oral) examination. The oral examination must be taken within three years after the candidate has

passed the written examination, or the candidate will be required to submit a new application for approval by the Board and pay a new registration and examination fee. The oral examination is designed to test the candidate's knowledge, judgment, and ability to correlate information in the management of clinical problems in thoracic and cardiovascular surgery.

Re-examinations

Candidates who fail an examination (Part I or Part II) are eligible to repeat the examination the following year.

Candidates who fail an examination (Part I or Part II) three times must complete an additional year of training, preferably in a program approved by the Residency Review Committee for Thoracic Surgery, before they will be considered for examination again. If training in an approved program cannot be obtained, training may take place in an unapproved program if the training has been reviewed and approved in advance by the Credentials Committee.

Candidates who are eligible for re-examination and who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application blank, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration and examination fee.

Fees

Registration fee	\$100.00
Part I examination fee	\$550.00
Part I re-examination fee	\$550.00
Part II examination fee	\$350.00
Part II re-examination fee	\$350.00

Candidates who do not appear for the examination (Part I or Part II) or who cancel less than six weeks before either examination may forfeit their examination fee.

The Board is a non-profit corporation, and the fees from candidates are used solely for defraying actual expenses incurred in office administration and conducting examinations and the business of the Board. The directors of the Board serve without compensation.

Appeals

Individuals who receive an unfavorable ruling from the Credentials Committee of the Board may appeal such determination by mailing a notice of appeal to the office of the American Board of Thoracic Surgery within 30 days of the date such ruling was mailed. Copies of the appeals procedures of the American Board of Thoracic Surgery may be obtained from the office of the Board. Under the appeals procedures of the American Board of Thoracic Surgery, the only appeal permitted from a failure of the written examination is a hand rescoring to verify the accuracy of the score as reported. The request for re-scoring must be made within 30 days of the time the examination results are received by the candidate. The only appeal with respect to the oral examination is the opportunity to request a re-examination immediately following the completion of the oral examination.

Certification

After a candidate has met the requirements for eligibility and passed the examination, a certificate attesting to his qualifications in thoracic surgery will be issued by the Board.

Recertification

Applicants who are certified in thoracic surgery after December 31, 1975, will be issued certificates valid for ten years from the date of certification, after which the certificates will no longer be valid. Certificates can be renewed prior to expiration by fulfilling the requirements for recertification specified by the American Board of Thoracic Surgery at that time. A Recertification Booklet is available upon request.

Urology

Revocation of Certificate

No certificate shall be issued and any certificate may be revoked by the Board if it shall determine that:

(a) the candidate for certification did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any Committee thereof prior to examination or at the time of the issuance of the certificate as the case may be,

(b) the candidate for certification withheld information in his/her application, made a material misstatement or any other representation to the Board or any Committee thereof, whether intentional or unintentional,

(c) the candidate for certification or certified physician was convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine, or

(d) the candidate for certification or certified physician had his license to practice medicine revoked or was disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

Requirements for All Applicants

Every applicant for certification by The American Board of Urology must meet certain basic requirements.

The applicant must have been appointed to an accredited residency program as designated in the *AMA Directory of Graduate Medical Education Programs*, Section II, General Essentials of Accredited Residencies, "Eligibility and Selection of Residents".

A. APPLICATION

1. A special application form, provided by the Executive Secretary shall be completed by applicant and returned to the Board office by registered or certified mail with return card requested. Application must be in the Board office by January 1 in order to permit the applicant to be admitted for the Qualifying Examination (Part I), written, the following May or June. Applications and documentation material postmarked before, but not received in the Board office by January 1 will incur a late fee of \$100. NO APPLICATIONS WILL BE ACCEPTED AFTER JANUARY 1.

2. The application must be accompanied by a *notarized* copy of a graduation certificate from a medical school approved by the Liaison Committee on Medical Education or from a school of osteopathy approved by the Bureau of Professional Education of the American Osteopathic Association and by specific verification of successful completion of the pre-urology postgraduate training program requirement, completed in a program approved by ACGME. Two years of pre-urology must be documented separately and may not be included in the description of the urology program. (See Section C.)

Foreign medical graduates (except those from an approved Canadian urologic residency who have passed the Royal College of Physicians and Surgeons fellowship examination) must furnish a notarized copy of an ECFMG certificate (or Fifth Pathway) and/or VQE or FMGEM.

3. A portion of the examination fee shall be paid at the time the application is submitted, as specified in section B, FEES.

4. The application from a senior resident must be accompanied by a letter of recommendation from the program director confirming that the applicant will have successfully completed at least six months of training in the capacity of a senior or chief resident by May or June of the year in which the qualifying or written examination is to be taken.

Also, for each senior resident applicant, the program director must complete an evaluation form supplied by the Board and return it to the Board Office where it must be received by *March 1* preceding the Qualifying Examination (Part I) in May or June. The applicant is responsible for ensuring that these supporting documents reach the Board of Urology at the indicated time.

5. Applications for certification must be approved by the Credentials Committee and by the Board. Additional information may be requested by the Executive Secretary.

6. An applicant must take the Qualifying Examination (Part I) within three years after completing residency. Applications received after this period must include documentation of completion of 200 hours of continuing urologic education (See NOTE).

7. An applicant failing the Qualifying Examination (Part I) must repeat it the next year unless excused by the Executive Secretary or the Board for exceptional reasons such as illness or a death in the family.

8. Applicants failing the Qualifying Examination (Part I) on two occasions must complete 200 hours of continuing urologic education. (See NOTE.) The applicant must also successfully complete a preliminary written examination before requesting reinstatement for the Qualifying Examination (Part I).

9. A candidate who passes the preliminary written examination and subsequently fails the *Qualifying Examination (Part I)* must complete another urologic residency accredited by the ACGME.

10. A candidate failing the preliminary written examination must complete another 200 hours of continuing urologic education (See NOTE) and successfully complete another preliminary written examination, before being admissible to retake the Qualifying Examination (Part I).

11. If the applicant has not successfully passed the Qualifying Examination within five years after starting his examinations, he must complete another urologic residency, accredited by ACGME.

12. An applicant who *does not apply* for or does not take the Qualifying Examination (Part I) within *five years* after completion of a residency program must file an application and complete 200 hours of continuing urologic education. (See NOTE.) The applicant must also satisfactorily complete a preliminary written examination prior to requesting permission to take the Qualifying Examination (Part I).

13. A candidate applying for reexamination after failing the Qualifying Examination (Part I) or any portion of the Certifying Examination (Part II) will be held to the requirements as set forth in the current *Information for Applicants and Candidates* guidebook when they are reexamined. A candidate who entered the examination process

prior to 1987 may, on approval of the Board, receive waiver of the requirements for an additional urologic residency as stated in paragraphs 9, 11, and 16.

14. A candidate not under review by the Credentials Committee must take the Certifying Examination (Part II) within three years after notification of passing the Qualifying Examination (Part I). Failure to do so within three years will require documentation of 200 hours of continuing urologic education. (See NOTE).

15. A candidate who fails either pathology, x-ray or the standardized oral examination of the Certifying Examination (Part II) must repeat that/those portion(s) the following year and successfully complete the entire Certifying Examination (Part II) within three years. A candidate failing to meet this requirement must file a new application (with fee then current) after completing an additional urologic residency accredited by ACGME.

NOTE: The urologic credit hours must be approved by the Office of Education of the American Urologic Association or by a program director, be acquired within 18 months of the date of the application, and be acceptable in writing by the Executive Secretary of the Board.

B. FEES

The current examination fee is \$1050 and may be changed without notice. This fee reimburses the Board for expenses incurred in preparing and processing the applications and examinations of the candidate. No fees are returnable or refundable. Unused fees will be credited for the next available examination only, and if they are not utilized at the first available opportunity, credit will be disallowed.

Applications will be considered inactive if two successive examination appointments are cancelled by the applicant. To regain active status, the applicant will be required to pay a reinstatement fee of \$400 plus an additional \$100 for an excused absence; \$200 for an unexcused absence; \$250 for a non appearance, unless candidate exceeds time limit (or see admissibility requirements #10).

Payment of \$600 must accompany the initial application, except in the case of senior residents who shall pay \$450 at the time of initial application to take the Qualifying examination (Part I). In all cases, the balance of the examination fee shall be paid by the candidate when notified of successful completion of the Qualifying Examination (Part I) and admissibility to take the Certifying Examination (Part II). An applicant secures no vested right to certification as a result of paying an examination fee.

A \$100 late filing fee will be assessed for any application and/or documentation required by the Board and *not received in the Board office* by the prescribed deadlines. *Certified or express mail is recommended.*

The fee for recertification application is \$1000.

C. EDUCATION PREREQUISITES

1. Applicants must submit a notarized copy of a graduation certificate from a medical school approved and recognized by the Liaison Committee on Medical Education, or from a school of osteopathy approved by the Bureau of Professional Education of the American Osteopathic Association, or from a medical school deemed by the Board to provide equal or superior medical educational opportunities and experience.

2. Effective July 1, 1984, before beginning the final year of residency in an approved urology program, the applicant must complete two years of postgraduate clinical training in areas other than urology. One of these two years—preferably both—should be in surgical training in a residency approved by the Accreditation Council for Graduate Medical Education. Neither of the two years may be substituted for time required in a urology residency program of three or four years. (Specifically, one year of other training and four years of urologic residency cannot fulfill this requirement.) Applicants must satisfactorily complete a urologic residency of at least three clinical years in a program approved by the

Accreditation Council on Graduate Medical Education and the Residency Review Committee for Urology. The last year must be served as a senior or chief resident with appropriate clinical responsibility. PGY-1 and PGY-2 must be completed in programs accredited by the Accreditation Council for Graduate Medical Education and the Residency Review Committee for Urology.

3. Within a formally integrated urologic residency program, variations in preliminary and urologic training may be permitted by the Board at its discretion, provided the basic minimum intervals of training are observed.

4. The Board urges applicants to seek more than minimal training opportunities, and encourages them to acquire additional experience in both surgical, and urologic residency programs.

5. Applications that do not indicate that the candidate has satisfied these basic requirements will be judged on individual merit and the Board may, at its discretion, permit some variation from these requirements when suitable and satisfactory documentation of equivalent or superior education and training is provided.

6. The term "Board eligible" is no longer recognized. A candidate is either inadmissible, in the certifying track or a Diplomate of the Board. Requests for verification of status of a candidate must be accompanied by a signed Release of Information form (except if the physician is a Diplomate of the Board) and a \$25 fee.

ANY VARIATION FROM THE ABOVE DESCRIBED BASIC REQUIREMENTS MUST BE APPROVED BY THE BOARD *BEFORE* AN APPLICANT STARTS A PRE-UROLOGY OR UROLOGY RESIDENCY PROGRAM.

D. LICENSURE AND PRACTICE

1. Applicants for the Qualifying Examination (Part I) may be practicing urologists or senior residents as specified in section A.

2. Candidates for the Certifying Examination (Part II) having met all other requirements and having passed the Qualifying Examination (Part I) must have engaged in 18 months in practice of urology in a community, or in association with an academic appointment or in the Armed Forces.

3. Candidates requesting a waiver of all or a portion of the 18-month clinical practice requirement as a consequence of involvement in fellowship training must provide a supporting letter from their program director to be reviewed by the Credentials Committee.

4. The standard requirement for certification is full time practice in urology or research, subject to the approval of the Credentials Committee.

5. It is the purpose of The American Board of Urology to ascertain and document the qualifications of any candidate for certification. This is a responsibility to the public. The Board is authorized by the candidate to make and will be held harmless for such investigations of professional ethics and reputation. The Credentials Committee of the Board may discuss with the applicant the substance of any peer review letter it receives. Under no condition will the source of peer review letters be revealed to any person other than the members of the Board of Trustees.

The applicant must provide documentation of licensure to practice medicine and must have completed satisfactorily the educational prerequisites and practice requirements. The Board must be satisfied that the candidate has ethical, moral and professional stature. Following is the Policy of The American Board of Urology as adopted in 1981:

"Additional peer comments including those from physicians other than urologists are solicited by The American Board of Urology to identify candidates whose practice patterns may deviate significantly from those judged adequate by colleagues. The purpose of peer review is to alert The American Board of Urology to possible irregularities involving practice patterns or standards of performance. A significant indication of concern as determined by the review of two or more Board members will be a basis for Board action.

Urology

The purpose of the case log is to allow the Board to review the volume and diversity of practice and to assess the appropriateness of those procedures. The information provided in the log allows the examiners to focus the oral examination apparently questionable areas as indicated by numbers or types of procedures and to question the applicant regarding practices and their appropriateness. If, on review of the log, the initial reviewer is concerned about practice procedures, the log will be reviewed by at least one other Board member. If there is agreement among the interviewers, this assessment of practice activity may be a basis for Board action.

The log material and peer comments may be cause for deferment of Board action until the questionable areas are clarified.

Actions of the Board to achieve clarification may include:

1. Inquiry into questionable practices at the time of examination.
2. Inquiry into questionable practices at a requested appearance before the Credentials Committee of the Board.
3. Request for certified copies of candidate's hospital records for review.
4. A site visit at the candidate's expense.
5. Other appropriate measures that may be deemed necessary to assess apparent deviations from standard urologic practice."

Requirements for Certification

The requirements for certification include:

A. EVIDENCE FROM HOSPITAL PRACTICE

1. The candidate must mail so it is *received* in the Board Office by DECEMBER 1, prior to the examination the following year, a list of all major and minor surgical cases performed since completing residency. In the case of candidates in practice more than 18 months, lists for the most current 18 months are required. These surgical logs must be prepared in accordance with the form provided by The American Board of Urology and must be verified by the hospital administrator in each of the hospitals where the procedures were performed. Overall hospital urology mortality rate must be verified by the hospital administrator. *Express mail is recommended.*

2. Photostatic copies of the complete hospital record of any one or more of the above cases may be requested by the Board office. The candidate is expected to furnish this within one month of the request.

B. EXAMINATIONS

1. Qualifying Examination (Written) Part I.

This examination will be given in May or June of each year, simultaneously at various locations. It is available upon application and approval to any physician who has completed a urologic residency qualified under "Requirements for All Applicants" or who has completed six months of training in the capacity of a chief or senior resident. The examination, conducted in writing, is designed to assess knowledge of the entire field of urology and allied subjects. Beginning in 1987, The American Board of Urology has adopted criterion reference testing. Following is a concise outline of the areas which may be included in the examination:

Anatomy—Gross anatomy, structural relations, blood and nerve supply, and lymphatic drainage of all of the organs involved in urology, including the adrenal gland.

Physiology and Immunology—Physiology of the pituitary (as related to urology), adrenal gland, kidney, organs of urinary transport, prostate, seminal vesicle, testis, epididymis, and penis.

Embryology—Growth and development of the genitourinary system and of its physiology peculiar to the infant and child. This area includes endocrinology, sex differentiation, and ambiguous sex, pediatric endocrinology and genitourinary physiology.

Neoplasms—Diagnosis, surgical and non-surgical treatment, and prognosis of all benign and malignant neoplasms, including those of the adrenal gland, in pediatric and adult urology.

Calculous disease—All aspects of calculous disease including etiology, diagnostic techniques, and all forms of medical and surgical treatment.

Obstructive uropathy and urinary diversion—(Congenital and acquired) in pediatric and adult patients, pathophysiology, etiology and diagnosis of obstruction, and varieties diversion.

Trauma and fistula—Etiology, diagnosis, and treatment of all such lesions involving genitourinary strictures.

Neurogenic bladder, incontinence, priapism, impotency and endocrinology related infertility.

Fluid and electrolyte problems, transplantation, renovascular lesions, and nephrology that is essential to urology—Comprehensive fluid and electrolyte matters, parenchymal diseases of the kidney treated by nephrologist about which the urologist should be familiar.

Infectious disease—The diagnosis and treatment of all infections of the genitourinary tract, including basic bacteriology, immunology related to urology.

Congenital anomalies—All such disorders of the genitourinary system.

Female urology—Comprehensive history and physical examination of the female patient; familiarity with diagnosis and treatment of the wide range of disorders and diseases involving the anatomy and physiology of the female genitourinary organs; anatomic structures common to urology and gynecology.

The urologist should demonstrate competence in the performance and interpretation of urodynamic studies for vesical and urethral dysfunction. The candidate must demonstrate knowledge of the indications for a technique necessary to perform voiding cystourethrography, urethral profile studies, cystometrography, and sphincter electromyography.

The trained urologist must be competent in the endoscopic, pharmacologic and surgical management of female incontinence. The candidate must demonstrate knowledge of diagnosis, localization and treatment of female genital urinary infections.

The urologist must be familiar with the indications for intermittent catheterization and the technique.

The candidate must be familiar with the diagnosis and treatment of genitourinary neoplasms in the female.

2. Certifying Examination—Part II

This examination is given annually in late January or February and consists of a standardized oral and a written pathology and radiology examination. Any candidate who have passed Qualifying Examination (Part I), who has or will have a minimum of 18 months in private, academic, or military practice, may apply to the Credentials Committee for admissibility to take Certifying Examination (Part II) by completing the Supplemental Application. *It must be returned by registered or certified mail with return card requested, must be in the Board office by JULY 1.*

Before the Certifying Examination (Part II) is taken, the Board will investigate the professionalism of each candidate in an attempt to assess ethical conduct and attitude toward patients and fellow practitioners. A candidate may be delayed or denied taking the Certifying Examination (Part II) if he does not satisfactorily pass peer review.

Objectives of the Certifying Examination (Part II):

The oral examination is an interactive process between examiner and candidate during which an assessment can be made of the ability of the candidate to diagnose and manage urologic problems.

Inasmuch as the Qualifying Examination (Part I) has been passed by the candidate, the examiner presumes in the oral examination that the candidate has a satisfactory degree of cognitive knowledge of urology.

Therefore, this section of the Certifying Examination, will be devoted to the following considerations of the candidate:

A. Problem solving ability. Evaluation is made of the candidate's ability to collect pertinent information systematically, integrate it, assess the problem and propose an appropriate solution.

B. Response to a change in clinical situation. The candidate's ability to deal with changing clinical conditions is evaluated through the flexible interaction between the examiner and the candidate. Changed clinical conditions may be posed arbitrarily by the examiner in order to assess various responses of the candidate, or may be developed by the examiner from the outcome of recommendations offered by the candidate during the interview.

C. Professional behavior in his role as a urologist. The candidate's attitude, interaction with the examiner, and expression of patient management concerns contribute to the assessment of professional behavior.

Final Action of the Board

Final action regarding each applicant is taken by the entire Board and is based on the applicant's training, professional record, attainments in the field of urology, and the results of the examination. However, an appeals procedure is available to all applicants at any stage of the certification proceedings. Details of this procedure are available upon request from the Board office.

IF AN APPEAL PROCEDURE IS INITIATED, IT MUST BE FILED WITHIN 90 DAYS FROM THE TIME THE CANDIDATE WAS NOTIFIED OF A BOARD DECISION.

THE ACTIVITIES DESCRIBED IN ARTICLES OF THIS GUIDEBOOK PROCEED FROM THE CERTIFICATE OF INCORPORATION AND BYLAWS WHICH STATE THE NATURE OF THE BUSINESS, OBJECTS, AND PURPOSES PROPOSED TO BE TRANSACTED AND CARRIED OUT BY THIS CORPORATION.

Guidelines for Special Training

Although certificates of special qualifications in certain areas of urology are not offered by the Board, it is recognized that special expertise in some aspects of the discipline may be achieved through an organized program of study, observation, and practice additional to formal residency training. The Board has established guidelines for such special training programs in the fields of pediatric urology, renal transplantation, urologic oncology, and male and female reproductive surgery. These guidelines and others to be developed in the future can be obtained by program directors and prospective trainees from the office of The American Board of Urology, Inc.

Recertification

Recertification on a voluntary basis has been available since 1981. Certificates issued by the Board on or after January 1, 1985, are valid for 10 years. A physician who fails to be recertified by the expiration date is no longer a Diplomate of the Board. It is recommended that Diplomates possessing a time-limited certificate plan to recertify at least one year before expiration. Recertification accomplished before the date of expiration of the certificate will be granted for a period of 10 years beyond the date of expiration of the previous certification, not the date of recertification. Recertification depends upon the assessment of the continuing competence of the practicing urologist. At present the following evidence is required:

- a. A current certificate issued by The American Board of Urology.
- b. A current license to practice medicine issued by a State Board of Medical Licensure.
- c. Current privileges to practice urology in a hospital accredited by the Joint Commission on Accreditation of Hospitals (JACH) or such other hospital as may be judged acceptable by the Board.
- d. Current engagement in practice, teaching, research or administration of urology.

e. A satisfactory evaluation of urological qualifications by the hospital administrator, the medical director, chief of urology, the chief of medical staff, or similar officials in all hospitals where the applicant exercises practice privileges.

f. Documentation of good standing in the medical profession.

g. Verified participation during the three years preceding application in at least 150 hours of continuing education in urology. At least 60 hours must have been earned in Category I activities accredited by the Accreditation Council for Continuing Medical Education (ACCME), and the other 90 hours may be accrued through Categories II-VI activities, as designated currently by the Council of Medical Education of the AMA. These requirements may be met by submitting any current valid certificate which document such CME credits.

h. A list submitted by the applicant of three to five local physicians, preferably urologists, who will provide a letter of reference on request.

i. Peer review by The American Board of Urology.

j. Agreement for an evaluation by a site visit to the applicant's community by a representative of the Board, if necessary.

k. Attainment of a performance level determined by the Board to demonstrate acceptable knowledge of the specialty of urology on an examination for recertification given by the Board. Diplomates may select either a self-assessment examination or a closed-book and oral examination.

Revocation of Certificate

"Certificates issued by this Board are the property of the Board and are issued pursuant to the rules and regulations of the Board. Each certificate is subject to revocation in the event that:

"A. The issuance of such certificate or its receipt by the physician so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation, Bylaws or rules and regulations of the Board in force at the time of issuance; or

"B. The physician or party certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting ineligibility were known to, or could have been ascertained by, the directors of the Board at the time of issuance of such certificate; or

"C. The physician or party so certified shall have made a material misstatement of fact in application for such certificate or in any other statement or representation to the Board or its representatives; or

"D. The physician so certified shall at any time have neglected to maintain the degree of competency in the practice of the specialty of urology as set up by the Board, and shall refuse to submit to re-examination by the Board; or

"E. The physician so certified has been found to be guilty of unethical practices or immoral conduct or of conduct leading to revocation of his license. These objective standards include conduct that violates state medical laws, rules and regulations of local and state urologic Boards and relevant American Medical Association guidelines, and conduct leading to revocation of license.

"The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether the evidence or information before it is sufficient to constitute grounds for revocation of any certificate issued by this Board. When the Board is made aware of facts possibly constituting grounds for revocation, the Board will give the physician written notification identifying the specific facts that have come to its attention. The Board may require any physician so certified to appear before the Board of Trustees or before any one or more of them, or before any individual designated by the Board, upon not less than 20 days written notice, and to show cause at the time and place specified in the notice why the certificate may not be revoked upon any one of the grounds specified in such notice. The certificatee may bring to this hearing persons or documents in support of any actions. The failure of any physician so notified to appear as required in such notice, without

Urology

excuse deemed sufficient to the Board of Trustees, shall constitute, *ipso facto*, cause for revocation of the certificate. The decisions of the Board of Trustees relating to all matters under this Section 4 shall be final and binding.

"The undersigned hereby acknowledges that he has read and understands the above provision regarding the grounds for revocation

of certificates issued and the procedures to be followed in determining whether or not a certificate should be revoked and agrees to hold the Board, its officers and agents harmless from any damage, claim or complaint by reason of any action taken in good faith and consistent with such procedures."

APPENDIX C
MEDICAL LICENSURE REQUIREMENTS

MEDICAL LICENSURE REQUIREMENTS

The following information has been provided by Catherine M. Bidese of the staff of the AMA Department of Data Planning and Evaluation in cooperation with Arthur Osteen, Ph.D. of the Office of Physician Credentials and Qualifications. The tables are taken (with publication corrections) from "U.S. Medical Licensure Statistics 1986 and Licensure Requirements 1987," published by the AMA.

Policies for Initial Medical Licensure for Graduates of U.S. Medical Schools

The initial medical license of most U.S. medical school graduates is granted by endorsement of their National Board Certificates. All licensing jurisdictions, except Louisiana, Texas, and the Virgin Islands, will endorse certificates from the National Board. The Texas licensing board will endorse National Board certificates when Part III of the examination was passed before January 1, 1978, and will endorse state licenses based on the National Board certificate when Part II of the National Board examination was passed after January 1, 1978, if the candidate passes Component 2 of the Federation Licensing Examination (FLEX). Louisiana will endorse the National Board certificate for reciprocal candidates only. Candidates who graduated from approved US or Canadian medical schools on or after January 1, 1978 must also pass the clinical competence portion of FLEX. Those graduates who are not licensed by endorsement of a National Board certificate, must pass the FLEX which is used by all states as the medical licensing examination. In many states the certificate of the National Board of Examiners for Osteopathic Physicians and Surgeons can be endorsed for licensure. Boards of medical examiners in Guam, Massachusetts, New Jersey, South Carolina, and West Virginia will endorse U.S. specialty board certificates for licensing purposes in specific circumstances as delineated by the licensure regulations of those states.

Policies for Licensure of Graduates of Foreign Medical Schools

Most of the state medical boards will accept graduate training in Canada as equivalent to training undertaken in the U.S. Forty states will issue a medical license to a graduate of a Canadian medical school who holds a license in one of the provinces of Canada. Thirty licensing boards will, under certain specified conditions, endorse a Licentiate of the Medical Council of Canada certificate held by a foreign medical graduate.

In the most recent survey (September, 1987) conducted by the AMA Department of Data Planning and Evaluation, 40 states have indicated they will license foreign medical graduates who hold a Fifth Pathway certificate, but do not hold a standard ECFMG certificate.

Foreign educated candidates for licensure are permitted by three state boards to take the FLEX before they have had graduate training if they have the standard ECFMG certificate. Candidates are not awarded a license until they have undertaken one or more years of training in the U.S. and have met other specific requirements of the individual boards, e.g., an Educational Commission for Foreign Medical Graduates

(ECFMG) certificate, personal interview, etc. Six licensing boards, those in Florida, Illinois, Maryland, Ohio, Puerto Rico, and Virginia maintain lists of foreign medical schools; only graduates of these schools can be licensed.

Tables 1, 2, 3, 4, and 5 on the following pages summarize the licensure policies of state boards. It is strongly recommended that candidates contact the specific state board for the most current information on licensure requirements in that state. Names and addresses of the corresponding officers are listed in Table 6 of this Appendix.

Restricted Licenses and Educational Permits

Forty-nine boards provide for the issuance of educational permits, limited and temporary licenses, or other certificates for the restricted practice of medicine. The terms for the issuance of such certificates vary. Such certificates may be issued (1) for hospital training of those eligible for licensure, (2) for supervised employment in state or private hospitals, and (3) for full-time practice until the next regular session of the licensing board. These permits must generally be renewed once a year with a stipulated maximum number of renewals allowed (usually five years).

Amendments to the Immigration and Nationality Act made through Public Law 94-484, the Health Professions Educational Assistance Act of 1976, establish requirements for the admission of alien physicians to the United States, whether for permanent residency or for participation in graduate medical education training programs. The amendments require that alien graduates of foreign medical schools pass an examination determined by the Secretary of Health and Human Services to be the equivalent to Parts I and II of the National Board of Medical Examiners examination. The amendments also require that alien medical graduates demonstrate competence in oral and written English.

The Secretary of Health and Human Services has determined that the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS), which is prepared by the National Board of Medical Examiners and administered by the Educational Commission for Foreign Medical Graduates, is the equivalent of Parts I and II of the National Board of Medical Examiners examination for purposes of the amendments to the Immigration and Nationality Act. This examination, which lasts for two days and is composed of equal proportions of clinical science and basic science questions in a multiple choice format, is given twice a year at examination centers abroad and in the United States. Applications for the examination and questions should be addressed to the Educational Commission for Foreign Medical Graduates, 3624 Market Street, Philadelphia, PA 19104, U.S.A.

Graduates of foreign medical schools who are citizens of the United States and lawful permanent residents of the United States must pass the FMGEMS Examination in order to be provided with the ECFMG Certificate.

NL—Indicates no limit.

¹—0-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.

²—Applicant must pass an oral examination if 10 years have elapsed since last licensure examination.

³—Oral examination required.

⁴—Not required of University of Arkansas students.

⁵—Before taking Component II.

⁶—Or 5 years licensed practice.

⁷—Applicant must be "board-eligible" by an American Specialty Board.

⁸—If graduated *before* 1970 (*before* July 28, 1985 for Washington), only one year of graduate training is required.

⁹—At discretion of the board.

¹⁰—At board discretion, years of licensed practice may be substituted for training requirement.

¹¹—Two years are required for graduates of Canadian medical schools.

¹²—First year of residency in pathology and psychiatry not accepted.

¹³—After July 1, 1987 two years will be required.

.. —Did not respond.

¹—Must be endorsed by provincial licensing board.

²—Training not required.

³—Two years formal postgraduate training required. (Or its equivalent, Ohio only.)

⁴—Regulations pending

⁵—Applicant must have received LMCC in or after May, 1970. (After Dec. 31, 1969, Washington.)

⁶—By vote of board.

⁷—Must be endorsed by provincial licensing board. If Medical Council of Canada examination was taken after January 1, 1978, candidate must also pass Component II of FLEX.

⁸—If taken after January, 1, 1978.

NOTE: This summary should be verified by direct communication with the corresponding officer of the licensing board in the state in which the physician is interested. *IN ALL STATES* licenses based on the endorsement/acceptance of a physician's credentials are granted to those physicians meeting all state requirements—*AT THE DISCRETION OF THE LICENSING BOARD*. Additional information provided by the state follows.

Yes—Implies yes.

No—Implies no or no requirement.

..—Indicates that states did not respond to the question.

1.—0-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.

2.—After completion of an additional 12-month medical postgraduate program.

3.—With three years postgraduate training in an accredited US and/or Canadian training institution.

4.—Must include four months of general medicine.

5.—University of Colorado Fifth Pathway only.

6.—Before taking Component II.

7.—One year accredited graduate medical education or five years licensed practice in state or country is required.

8.—If passed the ECFMG examination or FMGEMS.

9.—Applicant must be "board-eligible" by an American Specialty Board.

10.—Or Visa Qualifying Examination.

11.—Only if graduate of state-approved medical education program.

12.—With required medical postgraduate training.

13.—Provided all other licensure requirements are met.

14.—May be counted as one year of required postgraduate training.

15.—ECFMG certification (subsequent to July, 1984) obtained on a basis of FMGEMS only. VQE, if successfully passed, accepted as a substitute for FMGEMS.

16.—At board discretion, years of licensed practice may be substituted for training requirement.

17.—Must have passed ECFMG examination or FMGEMS.

18.—For candidates receiving a medical degree on or after July 1, 1985, three years of accredited postgraduate training is required.

19.—An ECFMG certificate can be waived by unanimous vote of the entire Board, if the physician is American Board certified.

20.—The 5th Pathway Program is not accepted as an approved residency training program, therefore, the 5th Pathway student must complete (if an FMG) three additional years of postgraduate training in the U.S. or Canada. If graduate from U.S. or Canada, one additional year of postgraduate training is required. The ECFMG may be waived for the 5th Pathway student.

21.—But does not count as part of three years required U.S. residency training.

22.—If passed in or after May, 1970 (Pennsylvania); January 1, 1978 (Wisconsin). If passed before January 1, 1978 (Tennessee); December 31, 1969 (Washington).

23.—Oral examination is required.

24.—Graduate education must be in US.

25.—After July 1, 1987 two years will be required.

26.—Up to three years at board discretion.

27.—If passed the ECFMG examination. If the Medical Council of Canada was passed after January 1, 1978, candidate must also pass FLEX Component II.

28.—FMGs must complete three years of ACGME approved residency program to be eligible for licensure.

29.—One year if graduated before July 28, 1985.

30.—With valid ECFMG certificate.

31.—Oral examination may be required.

X—Indicates yes.

1—In many cases there is an additional recording or registration fee.

2—Plus \$175 application fee. Oral examination fee is \$400.

3—May vary.

4—Available under certain conditions.

5—Plus cost of examination books.

6—Plus cost of FLEX and oral examination.

7—Plus \$200 application fee.

8—If graduate of foreign medical school, add \$25.

9—Active, \$5 inactive (Montana); \$150 inactive (Nevada); \$65 inactive or out-of-state (Oregon).

10—These fees will all be raised by January 1, 1988, but must go through the administrative rule process first.

11—\$65 inactive.

12—\$250 if partial retest.

13—Plus \$25 if initial applicant.

14—Active; \$50 inactive.

15—Reciprocity is \$50; endorsement is \$40.

NOTE: ALL BOARDS REQUIRE THAT EACH COMPONENT MUST BE PASSED WITH A SCORE OF 75 OR BETTER. IN ALL STATES, licenses are granted to physicians meeting all state requirements—AT THE DISCRETION OF THE BOARD. This summary should be verified by direct communication with the corresponding officer of the licensing board in the state in which the physician is interested.

X—Indicates yes.

..—Indicates no answer or rules pending.

¹—Penalties vary from state to state. In some, once the maximum has been reached, the candidate is ineligible for licensure. In other states, the candidate will be required to show evidence of additional study or meet other board regulations.

²—Not required of University of Arkansas students.

³—0-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.

⁴—Before taking Component II.

⁵—If graduated before July 1, 1970, only one year is required.

⁶—Three years (two years of some specialty) if the school is "new" or "unapproved".

⁷—Candidate must pass component within two years of commencement of postgraduate training.

⁸—If graduated after July 1, 1985, three years are required.

⁹—FLEX no longer administered in North Dakota after December, 1986 administration.

¹⁰—Two years for graduates of Canadian medical schools.

¹¹—FLEX may be taken three times only, regardless of components taken together or separately.

¹²—Up to three years at discretion of board.

¹³—If graduated before July 28, 1985, only one year is required.

Table 6.—Corresponding Officers of Boards of Medical Examiners in the United States and Possessions

Alabama: Larry D. Dixon, Executive Director, Alabama State Board of Medical Examiners, P.O. Box 946, Montgomery 36102.	Kansas: Charlene Abbot, Executive Secretary, State Board of Healing Arts, Landon State Office Bldg., 900 S.W. Jackson, Suite 553, Topeka 66603.	New York: Thomas S. Monahan, Associate Executive Secretary, State Board for Medicine, Cultural Education Center, #2039, Empire State Plaza, Albany, 12230.
Alaska: Kurt West, Examiner, Division of Occupational Licensing, Alaska Board of Medical Examiners, P.O. Box D-LIC, Juneau 99811.	Kentucky: C. Wm. Schmidt, Executive Director, Board of Medical Licensure, 400 Sherman Lane, #222, Louisville 40207.	North Carolina: Bryant D. Paris, Jr., Executive Director, North Carolina Board of Medical Examiners, P.O. Box 26808, Raleigh 27611.
Arizona: Douglas N. Cerf, Executive Director, Arizona Board of Medical Examiners, 1990 W. Camelback Rd., Suite 401, Phoenix 85015.	Louisiana: Dr. Elmo John Laborde, Secretary-Treasurer, Louisiana State Board of Medical Examiners, 830 Union St., Suite 100, New Orleans 70112.	North Dakota: Rolf P. Sletten, Executive Secretary and Treasurer, Board of Medical Examiners, 418 E. Broadway Ave, Suite C-10, Bismarck 58501.
Arkansas: Joe Verser, MD, Secretary, Arkansas State Medical Board, P.O. Box 102, Harrisburg 72432.	Maine: Executive Secretary, Maine Board of Registration in Medicine, State House Station, 137, Augusta 04333.	Ohio: Ray Q. Baumgarner, Executive Director, Ohio State Medical Board, 65 S. Front St., Suite 510, Columbus 43266.
California: Kenneth Wagstaff, Executive Director, California Board of Medical Quality Assurance, 1430 Howe Ave., Sacramento 95825.	Maryland: Patricia Carrington, Executive Director Board of Medical Examiners, 201 W. Preston Street, Baltimore 21201.	Oklahoma: Carole A. Smith, Administrator, Oklahoma State Board of Licensure and Sup., P.O. Box 18256, Oklahoma City 73154.
Colorado: Thomas J. Beckett, Program Administrator, Board of Medical Examiners, 132 State Services Bldg., 1525 Sherman Street, Denver 80203.	Massachusetts: Barbara Neumann, Executive Director, Massachusetts Board of Registration in Medicine, 10 West St., 2nd Fl., Boston 02111.	Oregon: John J. Ulwelling, Executive Secretary, Board of Medical Examiners, 317 S. W. Alder St., #1002, Portland 97204.
Connecticut: Elise Gaulin-Kremer, PhD, Connecticut Department of Health Services, Medical Quality Assurance, 150 Washington St., Hartford 06106.	Michigan: Marcia L. Malouin, Licensing Supervisor, Michigan Board of Medicine, 611 W. Ottawa St., P.O. Box 30018, Lansing 48909.	Pennsylvania: Loretta M. Frank, Administrative Assistant, Pennsylvania State Board of Medicine, P.O. 2649, Harrisburg 17105.
Delaware: Rosemarie S. Perez, Administrative Assistant, Board of Medical Practice, O'Neill Bldg., 3rd Fl., Box 1401, Dover 19901.	Minnesota: David Ziegenhagen, Executive Director, Board of Medical Examiners, 2700 University Ave., West., #106, St. Paul 55114.	Puerto Rico: Pablo Valentin, Executive Director, Puerto Rico Board of Medical Examiners, Office of Registration and Certification of Professional Health, Call Box 13969, Santurce 00908.
District of Columbia: John P. Jopkins, Executive Director, Board of Medicine, P.O. Box 37200, Washington, D.C. 20001.	Mississippi: Frank Jay Morgan, Jr., MD, Executive Officer, Mississippi State Board of Medical Licensure, 2688-D Insurance Center Dr., Jackson 39216.	Rhode Island: Milton Hamolsky, MD, Chief Administration Officer, Rhode Island Department of Health, 75 Davis Street, Rm. 410, Providence 02908.
Florida: Dorothy J. Faircloth, Executive Director, Board of Medical Examiners, 130 N. Monroe Street, Tallahassee 32301.	Missouri: Gary R. Clark, Executive Secretary, Missouri State Board of Reg. Healing Arts, P.O. Box 4, Jefferson City 65102.	South Carolina: Stephen S. Seeling, Executive Director, South Carolina Board of Medical Examiners, 1220 Pickens St., Columbia 29201.
Georgia: Andrew Watry, Executive Director, Composite Board of Medical Examiners, 166 Pryor Street, S.W., Atlanta 30303.	Montana: Carol C. Berger, Administration Assistant, Montana State Board of Medical Examiners, 1424 9th Ave., Helena 59620.	South Dakota: Robert D. Johnson, Executive Secretary, South Dakota Department of Medical Examiners, 1323 S. Minnesota Ave., Sioux Falls 57104.
Guam: Flora D. Duenas, Board Secretary, Board of Medical Examiners, P.O. Box 2816, Agana 96910.	Nebraska: Leland C. Lucke, Executive Secretary, Nebraska State Board of Examiners in Medicine and Surgery, P.O. Box 95007, Lincoln 68509.	Tennessee: Louise Blair, Reg. Board Administrator, Tennessee State Board of Medical Examiners, 283 Plus Park Blvd., Nashville 37219.
Hawaii: John M. Tomashiro, Executive Secretary, Board of Medical Examiners, P.O. Box 3469, Honolulu 96801.	Nevada: Kathleen Lewis, Executive Director, Nevada State Board of Medical Examiners, P.O. Box 7238, Reno 89510.	Texas: G. Walter Brindley, Jr., MD, Executive Director, Texas State Board of Medical Examiners, P. O. Box 13562, Capitol Station, Austin 78711.
Idaho: Donald L. Deleski, Executive Director, Idaho Board of Medicine, 500 S. 10th, Suite 103, Statehouse, Boise 83720.	New Hampshire: William T. Wallace, Jr., MD, Executive Secretary, Board of Registration in Medicine, H & W Building, 6 Hazen Dr., Concord 03301.	Utah: David E. Robinson, Utah Physicians and Licensing Board, P.O. Box 45802, Salt Lake City 84145.
Illinois: Gary L. Clayton, Director, Department of Registration and Education, 320 W. Washington, Springfield 62786.	New Jersey: Charles A. Janousek, Executive Secretary, New Jersey Board of Medical Examiners, 28 W. State St., Room 602, Trenton 08608.	Vermont: Vera A. Jones, Executive Director, Vermont Board of Medical Practice, Redstone Building, 26 Terrace St., Montpelier 05602.
Indiana: William S. Keown, Executive Director, Indiana Health Professions Service Bureau, One American Square, Suite 1020, Box 82067, Indianapolis 46282.	New Mexico: Christine Romero, Bureau Chief, New Mexico Board of Medical Examiners, P.O. Drawer 1388, Santa Fe 87504.	Virginia: Eugenia Dorson, Reg. Board Administrator, Virginia State Board of Medicine, 1601 Rolling Hills Dr., Richmond 23229.
Iowa: William S. Vanderpool, Executive Director, Board of Medical Examiners, Capitol Complex, Executive Hills West, 1209 E. Court Ave., Des Moines 50319.		

Virgin Islands: Secundina Mercado, MD, Secretary, Virgin Islands Board of Medical Examiners, P.O. Box 7309, St. Thomas 00801.

Washington: Gloria Westerfield, Executive Director, Washington Department of Licensing, Div. of Professional Licensure, P.O. Box 9649, Olympia 98504.

West Virginia: Ronald D. Walton, Executive Director, West Virginia Board of Medicine, 100 Dee Dr., Suite 104, Charleston 25311.

Wisconsin: Deanna Zychowski, Administrative Assistant, Wisconsin Board of Medical Examiners, P.O. Box 8935, Madison 53708.

Wyoming: Beverly Hacker, Executive Secretary, Wyoming Board of Medical Examiners, Hathaway Bldg., 4th Fl., Cheyenne 82002.

APPENDIX E
ABBREVIATIONS USED IN DIRECTORY LISTING

ABBREVIATIONS USED IN DIRECTORY LISTING

TYPE OF HOSPITAL CONTROL

A	Army
AF	Air Force
CH	Church
CITY	City
CO	County
CORP	Corporation
CYCO	City/County
HDA	Hospital District Authority
IO	Individual Owned
MISC	Miscellaneous
N	Navy
NP	Other Not-for-Profit
OF	Other Federal
P	Partnership
PHS	Public Health Service
ST	State
VA	Veterans Administration

MEDICAL SCHOOL AFFILIATION

M	Major
L	Limited
G	Graduate

SPECIALTIES

AIM	Allergy and Immunology
AM	Aerospace Medicine
AN	Anesthesiology
BBK	Blood Banking (Pathology)
CD	Cardiovascular Disease (Internal Medicine)
CHP	Child Psychiatry
CRS	Colon and Rectal Surgery
D	Dermatology
DP	Dermatopathology
DR	Diagnostic Radiology
EM	Emergency Medicine
END	Endocrinology and Metabolism (Internal Medicine)
FOP	Forensic Pathology
FP	Family Practice
GE	Gastroenterology (Internal Medicine)
GPM	Preventive Medicine-General
GS	Surgery-General
HMI	Hematology (Internal Medicine)
HMP	Hematology (Pathology)
ID	Infectious Diseases (Internal Medicine)
IM	Internal Medicine
MM	Medical Microbiology (Pathology)
MPH	Combined General Preventive Medicine/Public Health
N	Neurology
NEP	Nephrology (Internal Medicine)
NM	Nuclear Medicine
NP	Neuropathology (Pathology)
NPM	Neonatal-Perinatal Medicine (Pediatrics)
NR	Diagnostic Radiology-Nuclear
NS	Neurosurgery
OBG	Obstetrics/Gynecology
OM	Occupational Medicine
ONM	Medical Oncology (Internal Medicine)
OPH	Ophthalmology
ORS	Orthopedic Surgery
OTO	Otolaryngology
P	Psychiatry
PCH	Chemical Pathology
PD	Pediatrics

PDC	Pediatric Cardiology
PDE	Pediatric Endocrinology
PDS	Pediatric Surgery
PH	Public Health
PHO	Pediatric Hemato-Oncology
PM	Physical Medicine and Rehabilitation
PN	Pediatric Nephrology
PS	Plastic Surgery
PTH	Pathology
PUD	Pulmonary Diseases (Internal Medicine)
RHU	Rheumatology (Internal Medicine)
RO	Radiation Oncology
TRN	Transitional Year
TS	Thoracic Surgery
U	Urology
VS	Vascular Surgery

ALPHABETIC LISTING OF ABBREVIATIONS FOR SPECIALTY DATA

AA	Annual Admissions
AC	Anatomic/Clinical Pathology
ACP	Annual New Cancer Patients
ADC	Average Daily Census
ADPWH	Accessions Dermatopathology Within Hospital
AE	Area of Emphasis
AN	Total Anesthetics
AP	Anatomic Pathology
ARH	Accessions Referred to Hospital
ATT	Annual Teletherapy Treatment
CNP	Consultation on Nonsurgical Patients
CP	Clinical Pathology
GPPS	Gross Photos Patients or Specimens
IIC	Interstitial, Intra Cavity Treatments
IVTP	Total In Vitro Procedures
IVVP	Total In Vivo Procedures
LE	Total Laboratory Examinations
MN	Total Medicolegal Necropsies
N	Number of Necropsies
NB	Necropsies on Bodies Examined at Scene
NCNS	Necropsies With CNS Examinations
NH	Necropsies on Homicides
NNI	Number of Nuclear Images
NP	Average Daily Census-Newborn
NS	Neurosurgical Specimens
NT	Necropsies, Toxicological Tests Made
NXE	Number of X-Ray Examinations
OPV	Annual Outpatient Visits
OPV-A	Outpatient Visits-Adult
OPV-CI	Outpatient Visits-Clinical Immunology
OPV-M	Outpatient Visits-Mixed
OPV-P	Outpatient Visits-Pediatric
PS	Photomicrographs of Specimens
PT	Number of Patients Treated
SP	Special Pathology
SS	Total Surgical Specimens
SSEM	Surgical Specimens Examined Microscopically
T	Number of Treatments
TP	Total Therapeutic Procedures
TSP	Total Special Procedures
TT	Type of Training
UBC	Units of Blood Collected
UBP	Units of Blood Processed
UBT	Units of Blood Transfused
