**1305 Appendix C—Medical Schools in the United States**

---

**1309 Appendix D—Graduate Medical Education Glossary**

## Preface

The *Graduate Medical Education Directory*, (88th edition) published by the American Medical Association (AMA), lists programs accredited by the Accreditation Council for Graduate Medical Education (ACGME).

The *Directory* provides medical students with a list of accredited graduate medical education (GME) programs in the United States, which aids them in making important professional decisions. State licensing boards, specialty societies, and hospitals refer to the *Directory* to verify the authenticity of programs presented by physicians who wish to qualify for licensure, certification, or hospital privileges. The *Directory* provides a unique historical record of accredited GME programs and background information about the ACGME accreditation process.

## Contents of the Directory

Section I—Graduate Medical Education Information—summarizes the accreditation policies and procedures followed by the ACGME.

Section II—Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements—provides information on the ACGME accreditation process, requirements for institutions sponsoring GME programs, and Program Requirements for each of the medical specialties and subspecialties, including the Common Program Requirements. The Program Requirements describe curricular content for GME programs and may also address program resources and personnel, program length, and other specifications.

Section III—Accredited Graduate Medical Education Programs—lists GME programs accredited by the ACGME. Section III provides program name, sponsoring institution, major participating institution(s), program director name, address, and phone/fax numbers, e-mail address, accredited program length, program size, and program ID number. Specialties and subspecialties are listed in alphabetical order. Programs within each specialty or subspecialty are listed in alphabetical order by state and city. A list of accredited transitional year programs offered by hospitals or groups of hospitals is also included. (Note: The *Directory* may include programs that are on probation. For information on a program's current accreditation status, contact the ACGME, 515 N State St/Ste 2000, Chicago, IL 60610; 312 464-4920; [www.acgme.org](http://www.acgme.org).)

Section IV—New and Withdrawn Programs—lists GME programs newly accredited since the publication of the 2002-2003 edition of the *Directory* and programs that are no longer accredited to offer GME as of June 30, 2003, or earlier.

Section V—Graduate Medical Education Teaching Institutions—lists institutions and organizations that sponsor or participate in GME programs. Teaching institution listings include type of affiliation (sponsor and/or participant) and are listed alphabetically by state and city. Institution listings include the name and address of the institution, medical school affiliations (as verified biennially by the deans of accredited US medical schools), a list of the specialties and subspecialties in which the institution provides training, and the institution identification number.

Appendix A—Combined Specialty Programs—provides information on programs that offer combined specialty training. These combined programs are approved by each respective medical specialty board, and physicians completing combined training programs are eligible for board certification. Although the ACGME has accredited each program separately, neither the ACGME nor the Residency Review Committees have reviewed these combined programs.

Appendix B—Medical Specialty Board Certification Requirements—contains information about the American Board of Medical Specialties (ABMS) and the certification requirements for each of

the 24 member boards of the ABMS. Certification is the process by which a medical specialty board grants recognition to a physician who has met certain predetermined qualifications, as specified by the board. Certification requirements are also published by and available from each medical specialty board. Questions concerning certification requirements should be directed to the particular specialty board office listed in Appendix B.

Appendix C—Medical Schools in the United States—contains a list of US medical schools accredited by the Liaison Committee on Medical Education (LCME), including the identification number, name, and location of each LCME-accredited medical school.

Appendix D—Graduate Medical Education Glossary—defines various terms commonly used in GME.

## Contents of the *GMED Companion*

The following sections, which had been included in previous editions of the *Directory*, are now available in the *GMED Companion: An Insider's Guide to Selecting a Residency Program*:

- Entry of Foreign-born Medical Graduates to the United States
- Fifth Pathway Program
- Appointment to US Armed Services Graduate Medical Education Programs
- Electronic Residency Application Service (ERAS)
- National Resident Matching Program (NRMP)

In addition, the former Appendix C: Medical Licensure Information has been moved to the *GMED Companion*. This information is also available online at [www.ama-assn.org/go/licensure](http://www.ama-assn.org/go/licensure).

## Production of the Directory

The information shown in the program and institution listings in Sections III through V of the *Directory* is a product of two processes: the National GME Census and the transmittal of accreditation data from the ACGME to the AMA.

### National GME Census

The National GME Census is a joint effort of the AMA and the Association of American Medical Colleges (AAMC) and succeeds the AMA Annual Survey of GME Programs. In summer 2002, all programs accredited by the ACGME and combined specialty programs approved by their respective boards were asked to complete this online census, available at [www.aamc.org/gmetrack](http://www.aamc.org/gmetrack).

The census collects data on program characteristics, such as clinical and research facilities and the curriculum and workload residents can expect. GME program directors also provide detailed information about individual residents, which are stored in the AMA Physician Masterfile (see below).

During the 2002 survey cycle, 85% of programs completed the program portion of the census as of January 2003, either online via the AAMC Web site or by completing a hardcopy survey. AMA Medical Education and Data Collection staff ran numerous quality assurance checks to ensure data accuracy. Listings of programs that did not respond to the census may show inaccurate or outdated information; programs interested in providing updated information can contact the AMA at 800 866-6793.

### Role of the Accreditation Council for Graduate Medical Education (ACGME)

The work of the ACGME's Residency Review Committees (RRCs), which review and evaluate programs, provides a basis for program and institution information included in the *Directory*. Through regular electronic data transfers, the ACGME shares with the AMA information about accreditation actions and other changes. Although the AMA, in turn, shares with the ACGME information collected on its annual survey of GME programs, directors of ACGME-accredited

programs are reminded that most RRCs require prompt notification, *in writing*, of changes in the program's leadership. Providing information on program director changes via the National GME Census alone does not meet this requirement. In addition, most RRCs require a current copy of the curriculum vitae for new program directors.

The *Directory*, as the official list of ACGME-accredited programs, generally reflects accreditation actions completed by December of the previous year. Readers are reminded that accreditation actions and related changes can alter the ACGME program population on a daily basis and that the *Directory* serves only as a "snapshot" of this population at a given moment. For updated information on ACGME-accredited programs, consult the ACGME Web site at [www.acgme.org](http://www.acgme.org).

The ACGME also provides the Institutional Requirements, Common Program Requirements, and Program Requirements listed in Section II of this *Directory* ("Essentials of Accredited Residencies in Graduate Medical Education"). Accreditation of a residency program indicates that the program and its sponsoring and affiliated institutions are judged to be in substantial compliance with the Essentials.

### **FREIDA Online (Fellowship and Residency Electronic Interactive Database Access)**

FREIDA Online provides Internet access to extensive information on ACGME-accredited residency programs and combined specialty programs. FREIDA Online allows users to search these programs by program identifier, specialty/subspecialty, state/region, program size, and educational requirements, among other variables. All program listings include program director name, address, and phone number, as well as program length and program start date(s). In addition, the majority of programs listed include expanded variables, such as the number of positions, program benefits (including compensation), resident-to-faculty ratio, work schedule, policies, and educational environment.

FREIDA Online is available through the AMA home page at [www.ama-assn.org/go/freida](http://www.ama-assn.org/go/freida).

### **AMA Physician Masterfile**

The AMA Physician Masterfile is a comprehensive and authoritative database on resident and licensed physicians used to produce portions of the *Directory* as well as of FREIDA Online and AMA Physician Select. Masterfile data track physicians' entire educational and professional careers, from medical school and graduate medical education to practice.

### **Medical Education Data Service**

The AMA Medical Education Data Service provides published information, existing tables, custom tables, electronic data, and mailing labels to educational institutions, professional associations, government agencies, foundations, and others interested in collecting, analyzing, and disseminating medical education data. Written requests for data must state the purpose of the project, describe the specific data service requested, include expected due date for data, and provide the name, address, phone, and fax number of the project contact. When requests require staff contribution or organizational overhead, a fee is assessed. Most data requests require a licensure agreement.

Individuals interested in obtaining medical education data should contact Sarah Brotherton, PhD, AMA, 515 N State St, Chicago, IL 60610; 312 464-4487; [sarah\\_brotherton@ama-assn.org](mailto:sarah_brotherton@ama-assn.org).

### **Disclaimer**

It is the AMA's understanding that all institutions listed in the *Graduate Medical Education Directory* are required by law to include the phrase "EEO, M/F/D/V" (Equal Employment Opportunity, Minority/Female/Disabled/Veteran) on any information distributed for public view.

### **Back issues of the Directory**

Copies of previous editions of the *Directory* are available for purchase at \$25 per copy. For more information or to order, please call 312 464-5333. In addition, the CD-ROM version of the *Directory* contains Adobe Acrobat files of editions from 1996-1997 to the present.

### **Special Acknowledgment to the ACGME**

The AMA gratefully acknowledges the cooperation of the Accreditation Council for Graduate Medical Education (ACGME) in supplying the ACGME accreditation standards, the list of programs accredited by the ACGME, and relevant information about the ACGME accreditation process. Particularly helpful have been the contributions of the RRC executive directors and accreditation administrators, who provided corrected copy of Program Requirements and notification of recent RRC and ACGME actions.

Finally, the AMA thanks ACGME staff Ingrid Philibert, Marvin Dunn, MD, John Nylen, MBA, Rebecca Miller, MS, Jerry Vasilius, PhD, Sylvia Sellers, and Sheri Bellar for their many ongoing contributions to the *Directory*.

### **Acknowledgments**

Many people contributed to the publication of this edition of the *Graduate Medical Education Directory*. In addition to collaborative efforts with the ACGME (see "Special Acknowledgment," above), program directors and medical education and housestaff affairs staff provided updated information on the programs they administer through the National GME Census. The ABMS and the individuals who staff the member boards of the ABMS provided requirements for certification in each of the medical specialties and subspecialties.

Special acknowledgment is also given to the following groups and individuals:

**Association of American Medical Colleges**, for its collaboration with the AMA in collecting data via the National GME Census:

Jennifer Grosky, Jason Cantow, and Charnita Uzzell

**AMA Department of Data Collection**, for data collection and information resources management: Pam Rosinski, Chris Mathews, Patrick Cook, John Wilson, Angelina Martinez, and Charles Fisher.

**AMA Press**, for production support and assistance in disseminating this product: Suzanne Fraker, Jean Roberts, Amy Roberts, J D Kinney, Anne Serrano, Ronnie Summers, Boon Ai Tan, Allison Christie, Al Novak, Mark Daniels, and Lori Hollacher

**AMA Medical Education Group**, for data cleaning, QA, and editorial advising and assistance: Sarah Brotherton, PhD, Frank Simon, MD, Sylvia Etzel, Dorothy Grant, Enza Messineo, and Arcia Washington.

We would also like to recognize the many contributions of Rod Hill of North Coast Associates, the typesetter of this publication.

*Fred Dovini-Lenhoff, MA, Editor*

*Paul H. Rockey, MD, MPH, Director, Division of Graduate Medical Education*

# Section I

## Graduate Medical Education Information

### Review and Accreditation of Graduate Medical Education Programs

*Note:* This summary of the process of review and accreditation of graduate medical education programs was adapted from official policies of the Accreditation Council for Graduate Medical Education (ACGME); for the official Manual of Policies and Procedures for ACGME Residency Review Committees, other information related to the accreditation process, and the current listing of accredited programs, showing their status and length of review cycle, contact the ACGME or consult the ACGME Web site at [www.acgme.org](http://www.acgme.org).

---

#### Introduction

The Accreditation Council for Graduate Medical Education (ACGME) is a separately incorporated organization, responsible for the accreditation of approximately 7,800 allopathic graduate medical education programs. It has five member organizations: the American Board of Medical Specialties, American Hospital Association, American Medical Association, Association of American Medical Colleges, and Council of Medical Specialty Societies. Each member organization nominates four individuals to the ACGME's Board of Directors. In addition, the Board of Directors includes three public representatives, a resident representative, and the chair of the Residency Review Committee Council. A representative for the federal government and the chair of the RRC Resident Council also serve on the Board in a non-voting capacity.

The mission of the ACGME is to improve the quality of health in the United States by ensuring and improving the quality of graduate medical education experience for physicians in training. The ACGME establishes national standards for graduate medical education by which it approves and continually assesses educational programs under its aegis. It uses the most effective methods available to evaluate the quality of graduate medical education programs. It strives to develop evaluation methods and processes that are valid, fair, open, and ethical.

In carrying out these activities the ACGME is responsive to change and innovation in education and current practice, promotes the use of effective measurement tools to assess resident physician competency, and encourages educational improvement.

Under the aegis of the ACGME, the accreditation of graduate medical education programs is carried out by 27 review committees and a committee for the review of sponsoring institutions. These committees have been delegated accreditation authority by the ACGME. A Residency Review Committee (RRC) consists of representatives appointed by the American Medical Association, the appropriate specialty board, and, in some cases, a national specialty organization. The Transitional Year Review Committee is composed of ten members who are appointed by the chair of the ACGME in conjunction with the Executive Committee. The term "review committee" is used to denote a Residency Review Committee, the Transitional Year Review Committee and the Institutional Review Committee. The Institutional Review Committee (IRC) is composed of ten members appointed by the Chair of the ACGME in conjunction with the Executive Committee. The Institutional Review Committee assumes the responsibility for reviewing institutions which sponsor multiple programs. It evaluates institutions for substantial compliance with the Institutional Requirements.

Graduate medical education programs are accredited when they are judged to be in substantial compliance with the *Essentials of Accredited Residencies in Graduate Medical Education*. The *Essentials* consist of (a) the Institutional Requirements, which are prepared by the ACGME and apply to all programs, and (b) the Program Requirements for each specialty and subspecialty. The requirements are developed and periodically revised by a review committee for its area(s) of competence, and are approved by the ACGME. The activities of the ACGME extend only to those institutions within the jurisdiction of the United States of America.

A list of programs accredited by the ACGME, including detailed information about each program, is published by the American Medical Association annually in the *Graduate Medical Education Directory*, using information provided by the ACGME. As this list is periodically updated to add or remove programs or to change their accreditation status, the most current information is always found on the ACGME's web listing of programs ([www.acgme.org](http://www.acgme.org)). With the exception of this listing of programs and their current accreditation status, the contents of program files are confidential, as are all other documents regarding a program used by a review committee.

## Application and Site Visit

The accreditation review process is set in motion in one of two ways, depending upon whether the program under consideration is seeking initial accreditation, re-accreditation, or continued accreditation.

### Application

In the case of a program seeking initial accreditation or re-accreditation, the process begins when the program director sends an application to the executive director of the review committee. Review and evaluation of an application involves several steps and usually requires 8 to 10 months from the time the application is received by the review committee executive director until an accreditation action is taken.

The review committee executive director checks the application for completeness and forwards the document to the director of field activities, who schedules a site visit of the program. The scheduling and completion of the site visit take approximately 6 months. In some specialties, a member of the review committee or a specialist will review the application to identify areas requiring clarification by the site visitor.

Re-accreditation following loss of accreditation involves the same process described above. A program cannot apply for re-accreditation while engaged in the appeals process described in this document. In addition, an institution placed on unfavorable status by the Institutional Review Committee may not apply for any new programs or reapply for programs withdrawn or voluntarily withdrawn until it has once more attained favorable status.

### Review of Accredited Programs

Accredited programs undergo site visits and reviews on cycles determined by the review committee, as described below in the sections on actions regarding accreditation of general specialty and subspecialty programs. Program directors are notified well in advance of the site visit, at which time they receive the appropriate forms for completion. Program directors may request forms earlier.

A review committee may elect to review a program outside the usual cycle. A program director also may request an early review. However, a program will not be reviewed while it is in the appeals process.

### Function of Site Visitor

Annually, approximately 1,900 site visits are conducted by the ACGME Field Staff, and between 100 and 200 visits are conducted by Specialist Site Visitors, who are members of the particular specialty being reviewed. In either case, the site visitor does not participate in the final accreditation decision or recommendation of the review committee beyond providing a written report. It is the site visitor's primary responsibility to verify the information that has been provided by the program director. The site visitor also conducts interviews with administrators, faculty, and residents in order to report accurately on the various aspects of the educational program. The site visitor, whether field staff or specialist, should not be viewed as a consultant to the program and should not be expected to provide feedback to the program or to conduct a formal exit interview.

After the site visit has been completed, the site visitor's report is submitted to the review committee executive director, who prepares the program file for evaluation by the review committee. The site visitor is not present when the review committee evaluates the program.

## Review and Accreditation

The review committee reviews the program information in detail, evaluates the program, and determines the degree to which it meets the published educational standards (*Essentials*). The review committee decides upon an accreditation status for the program and identifies areas of noncompliance with the *Essentials*.

### Actions Regarding Accreditation of General Specialty Programs

The following actions may be taken by a review committee regarding the accreditation status of general specialty programs and by the Transitional Year Review Committee regarding the status of transitional year programs.

#### Withhold Accreditation

A review committee may withhold accreditation when it determines that the proposal for a new program does not substantially comply with the *Essentials*. The review committee will cite those areas in which the proposed program does not comply with the *Essentials*.

#### Provisional Accreditation

Provisional accreditation is granted for initial accreditation of a program or for a previously accredited program that had its accreditation withdrawn and has subsequently applied for re-accreditation. Provisional accreditation may also be used in the unusual circumstance in which separately accredited programs merge into one or an accredited program has been so altered that in the judgment of the review committee it is the equivalent of a new program.

When a program is accredited on a provisional basis, the effective date of accreditation will be stipulated. Under special circumstances, the effective date may be made retroactive; however, unless specifically justified, it should not precede the beginning of the academic year during which the program is accredited.

Provisional accreditation implies that a program is in a developmental stage. It remains to be demonstrated that the proposal for which accreditation was granted will be implemented as planned. A review committee will monitor the developmental progress of a program accredited on a provisional basis. Following accreditation, programs should undergo a site visit in approximately 2 years in preparation for review by the respective committee. The interval between accreditation and the next review of the program should not exceed 3 years. In the course of monitoring a program's

development, a review committee may continue provisional accreditation; however, the total period of provisional accreditation should not exceed 5 years for programs of 4 years' duration or less, or the length of the program plus 1 year for programs of 5 years' duration or longer. With the exception of special cases as determined by a review committee, if full accreditation is not granted within either of these time frames, accreditation of the program should be withdrawn.

### Full Accreditation

A review committee may grant full accreditation in three circumstances:

- A. When programs holding provisional accreditation have demonstrated, in accordance with ACGME procedures, that they are functioning on a stable basis in substantial compliance with the *Essentials*;
- B. When programs holding full accreditation have demonstrated, upon review, that they continue to be in substantial compliance with the *Essentials*; and
- C. When programs holding probationary accreditation have demonstrated, upon review, that they are in substantial compliance with the *Essentials*.

The maximum interval between reviews of a program holding full accreditation is 5 years; however, a review committee may specify a shorter cycle.

### Probationary Accreditation

This category is used for programs holding full accreditation that are no longer considered to be in substantial compliance with the *Essentials*. The normal interval for review of programs holding probationary accreditation is 2 years; however, a review committee may specify a shorter cycle. In reviewing a program holding probationary accreditation, a committee may exercise the following options: grant full accreditation; withdraw accreditation; or, in special circumstances, continue probationary accreditation. A program should not hold probationary accreditation for more than 4 consecutive years until it is returned to full accreditation or the review committee acts to withdraw accreditation. This period may be extended for procedural reasons, as when a program exercises the right to appeal procedures or the review schedule exceeds 4 years. The probationary period is calculated from the date of the initial decision for probation. The *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*, in subsequent text, provide further details on adverse actions.

### Withdrawal of Accreditation

Accreditation of a program may be withdrawn under the following conditions:

- A. Noncompliance with *Essentials*. Accreditation of programs holding either provisional accreditation or probationary accreditation may be withdrawn as follows:
  1. For programs holding provisional accreditation, once a review committee has notified a program director that the program has not developed as proposed to establish and maintain substantial compliance with the *Essentials*, the program will be subject to withdrawal of accreditation for failure to be in substantial compliance with the *Essentials*.
  2. For programs holding probationary accreditation, once a review committee has notified a program director that the program is accredited on a probationary basis, the program will be subject to withdrawal of accreditation for continued failure to be in substantial compliance with the *Essentials*.
  3. In giving notification, as indicated in 1 and 2 above, a review committee must indicate the areas in which the program is judged not to be in substantial compliance with the *Essentials*.
- B. Request of Program. Voluntary withdrawal of accreditation may occur at the request of the program director in the following ways:
  1. A program director may request voluntary withdrawal of accreditation of a program, without prejudice. It is expected that if a program is deficient for one or more of the reasons set forth in E below, the director will seek voluntary withdrawal of accreditation. Normally such requests would come from the program director, with a letter of confirmation from the sponsoring institution's chief executive officer.
  2. Two or more programs may be merged into a single new program. If the review committee accredits the new program, it will take concurrent action for withdrawal of accreditation, without prejudice, of the previously separate programs. The review committee will consider the expressed preference of the program director in establishing the effective date for withdrawal of accreditation of the program(s).
- C. Delinquency of Payment. Programs that are judged to be delinquent in payment of fees are not eligible for review and shall be notified by certified mail, return receipt requested, of the effective date of withdrawal of accreditation. On that date, the program will be removed from the list of ACGME-accredited programs.
- D. Noncompliance with Accreditation Actions and Procedures. A program director may be deemed to have withdrawn from the voluntary process of accreditation and a review committee may take appropriate action to withdraw accreditation if that director refuses to comply with the following actions and procedures:
  1. To undergo a site visit and program review;
  2. To follow directives associated with an accreditation action; and
  3. To supply a review committee with requested information.
- E. Program Inactivity or Deficiency. A review committee may withdraw accreditation from a program, regardless of its current accreditation status, under the following circumstances:
  1. The program has been inactive for 2 or more years, without requesting and being granted official "inactive status."
  2. The program has incurred a catastrophic loss or complete change of resources, e.g., faculty, facilities, or funding, such that the program is judged not accreditable.
  3. The program has incurred an egregious accreditation violation.
- F. Withdrawal of accreditation for reasons noted in the above paragraphs (Delinquency of Payment, Noncompliance with Accreditation Actions and Procedures, and Program Inactivity or Deficiency) is an administrative action and is not subject to the appeals process.
- G. The following policies apply when action is taken to withdraw accreditation (except for establishment of an effective date in the case of voluntary withdrawal of accreditation or withdrawal of accreditation because of inactivity or deficiency):
  1. The effective date of withdrawal of accreditation shall not be less than 1 year from the date of the final action taken in the procedures to withdraw accreditation.
  2. The effective date of withdrawal of accreditation shall permit the completion of the training year in which the action becomes effective.
  3. Once notification has been made of the effective date of withdrawal of accreditation, no residents may be appointed to the program.

4. When action has been taken by a review committee to withdraw accreditation of a residency program and the program has entered into appeal procedures, an application for re-accreditation of the program will not be considered until the appeal action is concluded.

The *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*, provided in this document, contain further details.

#### H. Inactive Status in Lieu of Withdrawal of Accreditation

A program in otherwise good standing that has not been active (had residents) for 2 or more years may request "inactive status" in lieu of withdrawal of accreditation if it is contemplated to reactivate the program within the next 2 years. The RRC may stipulate what assurances must be provided for reactivation to be sure the program continues in substantial compliance. For dependent subspecialty programs, "inactive status" does not exempt from policies related to accreditation status. Unless the general specialty program is in full or continued accreditation the dependent subspecialty is not eligible for "inactive status." Programs with residents may not elect to become inactive until all residents have left the program.

In any event a program may not retain accreditation for more than 4 consecutive years without residents even with "inactive status" for 2 years.

### Actions Regarding Accreditation of Subspecialty Programs

There are two procedural models for the accreditation of subspecialty programs:

- A. When the accreditation status of a subspecialty program is not directly related to, or dependent upon, the status of a general specialty/parent program, the subspecialty programs are accredited in accordance with the same procedures used for general specialty programs as heretofore described.
- B. When the accreditation status of a subspecialty program is directly related to, or dependent upon, the status of a general specialty/parent program, the following accreditation actions are used:
  1. Withhold Accreditation. A review committee may withhold accreditation when it determines that the proposal for a new subspecialty program does not substantially comply with the *Essentials*. The review committee will cite those areas in which the proposed program does not comply with the *Essentials*.
  2. Accreditation. The subspecialty program has demonstrated substantial compliance with the *Essentials* and is attached to a general specialty program that holds full accreditation or is otherwise deemed satisfactory by the review committee.
  3. Accreditation With Warning. The accredited subspecialty program has been found to have one or more areas of noncompliance with the *Essentials* that are of sufficient substance to require correction.
  4. Accreditation With Warning, Administrative. The general specialty program to which the subspecialty program is attached has been granted accreditation on a probationary basis. This action simultaneously constitutes an administrative warning of potential loss of accreditation to any subspecialty program that is attached to the general specialty program.
  5. Withdraw Accreditation. An accredited subspecialty program is considered not to be in substantial compliance with the *Essentials* and has received a warning about areas of noncompliance.
  6. Withdraw Accreditation, Administrative. If a general specialty program has its accreditation withdrawn, simultaneously the

accreditation of any subspecialty program that is attached to the general specialty program is administratively withdrawn.

7. Other Actions by a Review Committee. The policies and procedures on withdrawal of accreditation of general specialty programs, as well as those on deferral of action, resident complement, participating institutions, and progress reports governing general specialty programs, also apply to the actions concerning subspecialty programs.

### Warning Notices

A review committee may use a special procedure to advise a program director that it has serious concerns about the quality of the program and that the program's future accreditation status may be in jeopardy. In keeping with the flexibility inherent in the accreditation process, each review committee may use this procedure in accordance with its own interpretation of program quality and the use of the different accreditation categories. This procedure is not considered an adverse action and therefore is not subject to the appeal procedures.

The warning procedure may be used as follows:

- A. For a program with provisional accreditation. A review committee may elect to continue provisional accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately 1 year, following a site visit, at which time withdrawal of accreditation will be considered if the program has not achieved satisfactory development in establishing substantial compliance with the *Essentials*.
- B. For a program with full accreditation. A review committee may elect to continue full accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately 1 year, following a site visit, at which time probationary accreditation will be considered if the program is not in substantial compliance with the *Essentials*.
- C. Review committees may extend the interval before the next review to 2 years, as in cases where program improvements may be addressed more appropriately within 2 years rather than 1 year.

### Deferral of Accreditation Action

A review committee may defer a decision on the accreditation status of a residency program. The primary reason for deferral of accreditation action is lack of sufficient information about specific issues, which precludes an informed and reasonable decision. When a committee defers accreditation action, the residency program retains its current accreditation status until a final decision is made.

### Size of Resident Complement

The complement of residents in a program must be commensurate with the total capacity of the program to offer each resident an educational experience consistent with accreditation standards; thus, a review committee may indicate that a residency program is accredited to train a specific number of residents as a maximum at any one time. In addition, a committee may indicate the number of residents to be trained in each year of the program. A review committee may also indicate that a minimum number of residents is considered necessary in each program to provide an effective learning environment.

### Participating Institutions

The sponsoring institution of a residency program may utilize one or more additional institutions to provide necessary educational resources. In such cases, a review committee may evaluate whether each participating institution contributes meaningfully to the educational program.

## Progress Reports

A review committee may request a progress report from a program director. The committee should specify the exact information to be provided and a specific due date for the report. The progress report should be reviewed by the sponsoring institution GMEC and signed by the chair of the GMEC.

- e. Units that do not operate under a separate license are not listed as discrete training sites.

## Notification of Accreditation Status

### Letters of Notification

Accreditation actions taken by a review committee are reported to program directors by formal letters of notification. The accreditation status of any program will change only by subsequent action of the review committee. The notification letters usually contain reference to the approximate time of the next site visit and review of the program.

### Notifying Residents and Applicants

All residents in a program, as well as applicants (that is, all candidates invited to come for an interview), should be aware of the accreditation status of the program and must be notified of any change in the accreditation status. When an adverse action is taken, program directors must notify all current residents as well as applicants to the program in writing. For applicants, the information on accreditation status must be provided in writing prior to having candidates come to the program for an interview. Copies of the letters to residents and applicants must be kept on file by the program director and a copy must be sent to the executive director of the review committee within 50 days of receipt of the notification of the adverse action. Additional information regarding notification letters is contained in the *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*.

### Duration of Accreditation

When a residency program is initially accredited, accreditation commences with the date specified in the letter of notification. A program remains accredited until formal action is taken by a review committee to withdraw accreditation. The action to withdraw accreditation will specify the date on which accreditation ends. ACGME accreditation does not lapse merely because of the passage of time. The time interval specified in the letter of notification is the time of the next site visit and review; it does not imply that accreditation will end when the time of next review occurs.

### Identification of Programs in ACGME Records

Because numerous users consult and reference ACGME records, the ACGME retains the right to identify programs in a way that is consistent and will not give unfair advantage to any program.

The following standards are followed:

- a. The program title clearly identifies the sponsoring institution.
- b. Only one sponsoring institution is identified.
- c. Participating institutions are identified in the program listing only if they provide major teaching sites for resident education. This means that, in a 1-year program, residents must spend at least 2 months in a required rotation at the site for it to be listed; in a 2-year program, the rotation must be 4 months, and in a program of 3 years or longer, the rotation must be at least 6 months. Review committees retain the right to grant exceptions to this formula.
- d. Outpatient facilities and ambulatory clinics generally are not listed.

## Procedures for Proposed Adverse Actions and Procedures for Appeal of Adverse Actions

### Procedures for Proposed Adverse Actions (Effective January 1, 1993, Editorial Revision: June 1995)

The following procedures will be implemented when a Residency Review Committee (RRC) determines that a program is not in substantial compliance with the *Essentials of Accredited Residencies in Graduate Medical Education (Essentials)*. [Note: Here and elsewhere in these Procedures for Proposed Adverse Actions, reference to "Residency Review Committee" also includes the ACGME's Transitional Year Review Committee.]

- A. When an RRC determines that an adverse action is warranted, the RRC will first give notice of its proposed adverse action to the program director, the chief administrative officer, and the educational coordinator, if one is identified, of the sponsoring institution. This notice of proposed adverse action will include the citations that form the basis for the proposed adverse action, a copy of the site visitor's report, and the date by which the program may submit, in writing, its response to each of the citations and to the proposed adverse action. [Note: Here and elsewhere in these *Procedures for Proposed Adverse Actions*, the word "action" reflects delegation of accreditation authority to the RRC. In the event of a decision by an RRC not holding delegated authority, read "recommendation of an RRC and action by the ACGME" throughout the procedures.]
- B. The program may provide to the RRC written information revising or expanding factual information previously submitted; challenging the findings of the site visitor; rebutting the interpretation and conclusions of the RRC; demonstrating that cited areas of noncompliance with the published standards did not exist at the time when the RRC reviewed the program and proposed an adverse decision; and contending that the program is in compliance with the standards. The RRC will determine whether the information may be considered without verification by a site visit.
- C. The RRC will complete its evaluation of the program at a regularly scheduled meeting, as indicated to the program director in the notice of proposed adverse action. The RRC may confirm the adverse action or modify its position and take a non-adverse action.
- D. If an RRC confirms the adverse action, it will communicate to the program director the confirmed adverse action and the citations, as described above, including comments on the program director's response to these citations.
- E. The letter of notification, which will include information on the right of the program to appeal the RRC's decision to the ACGME, will be sent to the program director, as well as to the persons or agencies entitled to receive copies. The program director may appeal the decision; otherwise, it is final. If the decision is accepted as final, the program director may subsequently request a new review in order to demonstrate that the program is in compliance with the standards.
- F. Upon receipt of notification of a confirmed adverse accreditation action, the program director must inform, in writing, the residents and any applicants who have been invited to interview with the program that the adverse action has been confirmed, whether or not the action will be appealed. A copy of the written

notice must be sent to the executive director of the RRC within 50 days of receipt of the RRC's letter of notification.

### **ACGME Procedures for Appeal of Adverse Actions (Effective Date: June 10, 1997)**

A. If a Residency Review Committee (RRC) takes an adverse action, the program may request a hearing before an appeals panel.

[*Note:* Here and elsewhere in these *Procedures for Appeal of Adverse Actions*, reference to "Residency Review Committee" also includes the ACGME's Transitional Year Review Committee.]

[*Note:* Here and elsewhere in these *Procedures for Appeal of Adverse Actions*, the word "action" reflects delegation of accreditation authority to an RRC. In the event of a decision by an RRC not holding delegated authority, read "recommendation of an RRC and action by the ACGME" throughout the procedures.] If a written request for such a hearing is not received by the executive director of the ACGME within 30 days following receipt of the letter of notification, the action of an RRC will be deemed final and not subject to further appeal.

Requests for a hearing must be sent express mail to: Executive Director, Accreditation Council for Graduate Medical Education, 515 North State Street, Suite 2000, Chicago, Illinois 60610.

If a hearing is requested, the appeals panel will be appointed according to the following procedures:

1. The ACGME shall maintain a list of qualified persons in each specialty as potential appeals panel members.
  2. For a given hearing, the program shall receive a copy of the list of potential appeals panel members and shall have an opportunity to delete a maximum of one third of the names from the list of potential appeals panel members. Within 15 days of receipt of the list, the program shall submit its revised list to the executive director of the ACGME.
  3. A three-member appeals panel will be constituted by the ACGME from among the remaining names on the list.
- B. When a program requests a hearing before an appeals panel, the program reverts to its status prior to the appealed adverse action until the ACGME makes a final determination on the status of the program. Nonetheless, at this time residents and any applicants who have been invited to interview with the program must be informed in writing as to the confirmed adverse action by an RRC on the accreditation status. A copy of the written notice must be sent to the executive director of the RRC within 50 days of receipt of the RRC's letter of notification.
- C. Hearings conducted in conformity with these procedures will be held at a time and place to be determined by the ACGME. At least 25 days prior to the hearing, the program shall be notified of the time and place of the hearing.
- D. The program will be given the documentation of the RRC action in confirming its adverse action.
- E. The documents comprising the program file, the record of the RRC's action, together with oral and written presentations to the appeals panel, shall be the basis for the recommendations of the appeals panel.
- F. The appeals panel shall meet and review the written record and receive the presentations. The appropriate RRC shall be notified of the hearing and a representative of the RRC may attend the hearing to be available to the appeals panel to provide clarification of the record.

Proceedings before an appeals panel are not of an adversary nature as typical in a court of law, but rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program. The appeals panel shall not be bound by technical rules of evidence usually employed in legal proceedings.

The program may not amend the statistical or narrative descriptions on which the decision of the RRC was based. The appeals procedures limit the appeals panel's jurisdiction to clarification of information as of the time when the adverse action was proposed by the RRC. Information about the program subsequent to that time cannot be considered in the appeal. Furthermore, the appeals panel shall not consider any changes in the program or descriptions of the program that were not in the record at the time when the RRC reviewed the program and confirmed the adverse decision. [*Note:* Option: When there have been substantial changes in a program and/or correction of citations after the date of the proposed action by the RRC, a program may forego an appeal and request a new evaluation and accreditation decision. Such an evaluation will be done in accordance with the ACGME procedures, including an on-site survey of the program. The adverse status will remain in effect until a reevaluation and an accreditation decision have been made by the RRC.] Presentations shall be limited to clarifications of the record, arguments to address compliance by the program with the published standards for accreditation, and the review of the program in the context of the administrative procedures governing accreditation of programs. Presentations may include written and oral elements. The appellant may make oral arguments to the appeals panel, but the oral argument will be limited to 2 hours in duration.

The appellant shall communicate with the appeals panel only at the hearing or in writing through the executive director of the ACGME.

The appeals panel shall make recommendations to the ACGME whether there is substantial, credible, and relevant evidence to support the action taken by the RRC in the matter that is being appealed. The appeals panel, in addition, will make recommendations as to whether there has been substantial compliance with the administrative procedures governing the process of accreditation of graduate medical education programs.

- G. The program may submit additional written material within 15 days after the hearing. The intention to submit such material must be made known to the appeals panel at the hearing.
- H. The appeals panel shall submit its recommendations to the ACGME within 20 days after receipt of additional written material. The ACGME shall act on the appeal at its next regularly scheduled meeting.
- I. The decision of the ACGME in this matter shall be final. There is no provision for further appeal.
- J. The executive director of the ACGME shall, within 15 days following the final ACGME decision, notify the program under appeal of the decision of the ACGME.
- K. Expenses of the appeals panel members and the associated administrative costs shall be shared equally by the appellant and the ACGME.

## **Program Organization**

The organization of a program may involve any of several administrative forms. For example, a program may be conducted within a single institution, that is, the assignment of residents is limited to that institution; or a program may involve more than one institution, that is, the resident assignments are not limited to the sponsoring institution.

Some RRCs have specific requirements relating to program organization. These may be found in the appropriate *Program Requirements* (see Section II). In all cases, however, a single, clearly identified sponsoring organization must exercise oversight over the educational program.

## Institutional Review

Procedures for review of sponsoring institutions for compliance with the Institutional Requirements of the *Essentials* have been established, in addition to the process of review and accreditation of programs in graduate medical education.

The purpose of the review is to determine whether the sponsoring institution provides *the necessary educational, financial, and human resources to support graduate medical education; supports the residents and their work environment through well-established and documented policies and procedures; and provides strong oversight of the residency programs to ensure substantial compliance with the Program Requirements.* Institutions that sponsor programs in two or more different core specialty or subspecialty areas will undergo an institutional site visit and will have formal review by the Institutional Review Committee of the ACGME. Institutions that sponsor only one residency program, one residency program and its related subspecialty(ies), or several residencies in only one specialty, such as Family Practice, will undergo an institutional review as part of their program site visit and will be reviewed by the appropriate RRC.

Results of institutional review evaluation for institutions that undergo a formal institutional review by the IRC are reported as either favorable or unfavorable in a letter of report. The date of the next institutional review will be identified in this letter. Results of institutional review for institutions that do not undergo a formal institutional review by the IRC are incorporated into the letter of notification concerning program accreditation.

An institution that has received an unfavorable evaluation can request another institutional review earlier than the specified review cycle. An unfavorable review of an institution may lead to the withdrawal of accreditation of all the residency programs sponsored by the institution at the time of the institution's next review. An appeals mechanism has been established for the latter contingency.

## Fees for Evaluation and Accreditation

Fees charged for the accreditation of programs are determined annually by the ACGME. As of January 1, 2000, the following fee schedule is in effect.

### Application Fee

A fee is charged for processing applications for programs seeking initial accreditation. This also applies to programs seeking re-accreditation following any withdrawal status. The charge for applications is \$3,000. It is normally billed at the time the application is received.

### Program Fee

An annual accreditation fee is assessed on a per program basis for all accredited programs. This annual fee is \$2,000 for programs with five or fewer residents and \$2,500 for programs with five or more residents. This fee is billed around January 1 of each year and applies to the current academic year.

### Palm Pilot Fee

Programs required to use the ACGME Internet Case log system for tracking resident cases may choose the option of utilizing palm pilots to record and then upload data into the system. Though use of the Internet system is free to all accredited residencies, the palm pilot interface carries a \$25 per resident per year charge. Use of a palm pilot is optional. This is a pass-through charge for software licensing required for palm pilot use.

### Cancelled Site Visit Fee

Should a program cancel or postpone a scheduled site visit, including cancellation of the site visit for a program electing voluntary withdrawal of accreditation or inactive status, if inadequate notice is provided the ACGME may impose a cancellation fee penalty of up to \$2,000. This penalty may be imposed at the discretion of the Director of Field Activities.

### Inactive Fee

Programs with no residents in the current academic year and with a status of continued full accreditation may wish to be placed in a status of Accredited - Inactive. The fee is \$2,000. This fee is for each academic year and is effective starting the academic year in which the RRC approves the change in status.

### Appeal Fee

The fee for an appeal of an accreditation decision is \$10,000 plus expenses of the appeals panel members, and the associated administrative costs shall be shared equally by the appellant and the ACGME.

## Information and Inquiries

Inquiries regarding the accreditation of residency programs should be directed to ACGME staff members listed below. The educational standards (*Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements*) published in this edition of the *Graduate Medical Education Directory* have an effective date as indicated for each document. Please consult with the ACGME for changes in those standards that occur throughout the year. Copies of the Institutional Requirements and of the Program Requirements for each specialty/subspecialty may be obtained through the Internet at [www.acgme.org](http://www.acgme.org). Other documents pertaining to the accreditation process are also available through this source.

The address for the ACGME is as follows:

ACGME  
515 N State St/Ste 2000  
Chicago, IL 60610

Inquiries regarding fees should be directed to:

Barbara J Warren  
ACGME Credit Manager (invoices, vouchers)  
515 N State St/Ste 2000  
Chicago, IL 60610  
312 464-4939

ACGME staff members may be contacted for information as follows:

David C Leach, MD  
Executive Director, ACGME  
312 464-4920

# Section II

## Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements

*Section II—Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements*—begins with a preface containing general information about the three major phases of the education of physicians, the accreditation of graduate medical education programs, and a glossary of selected terms, followed by a copy of the Institutional Requirements effective July 1, 2002. The bulk of Section II consists of Program Requirements organized by specialty/related subspecialty. Because the RRCs meet periodically throughout the year to review programs, the most current list of accredited programs of graduate medical education and relevant Program Requirements can be found at the ACGME Web site at [www.acgme.org](http://www.acgme.org).

*Note:* The ACGME Common Program Requirements were revised in February 2003, after press time for this edition of the *Directory*. At that time, the ACGME Board approved new standards on resident duty hours, for incorporation into the Common Program Requirements. The ACGME Institutional Requirements were changed in February as well, with the addition of duty hour language. In addition, each set of specialty and subspecialty program requirements are being revised to incorporate the Common Program Requirements and will follow a common outline. These revised requirements will be posted to the ACGME Web site as they are completed.

### Preface

#### I. The Education of Physicians

Medical education in the United States occurs in three major phases.

##### A. Undergraduate Medical Education

Undergraduate medical education is the first or “medical school” phase. The medical school curriculum provides instruction in the sciences that underlie medical practice and in the application of those sciences to health care. Students learn basic information-gathering, decision-making, and patient-management skills in rotations through the various clinical services. Students are granted the MD or DO degree on the successful completion of the medical school curriculum and are eligible to undertake the next phase of medical education.

Accreditation of educational programs leading to the MD degree is the responsibility of the Liaison Committee on Medical Education (LCME). Accreditation of educational programs leading to the DO degree is the responsibility of the American Osteopathic Association.

##### B. Graduate Medical Education

Graduate medical education (GME), the second phase, prepares physicians for practice in a medical specialty. GME focuses on the development of clinical skills and general and professional competencies and on the acquisition of detailed factual knowledge in a medical specialty. This learning process prepares the physician for the independent practice of medicine in that specialty. The programs are based in hospitals or other health care institutions and, in most specialties, utilize both inpatient and ambulatory settings, reflecting the importance of care for adequate numbers of patients in the GME experience. GME programs, including Transitional Year programs, are usually called residency programs, and the physicians being educated in them, residents.

The single most important responsibility of any sponsoring institution of GME is to ensure the provision of organized educational programs with guidance and supervision of the resident, facilitating the resident's professional and personal development while

## Residency Review Committee Appointing Organizations

ensuring safe and appropriate care for patients. A resident takes on progressively greater responsibility throughout the course of a residency, consistent with individual growth in clinical experience, knowledge, and skill.

The education of resident physicians relies on an integration of didactic activity in a structured curriculum with diagnosis and management of patients under appropriate levels of supervision and scholarly activity aimed at developing and maintaining life-long learning skills. The quality of this experience is directly related to the quality of patient care, which is always the highest priority. Educational quality and patient care quality are interdependent and must be pursued in such a manner that they enhance one another. A proper balance must be maintained so that a program of GME does not rely on residents to meet service needs at the expense of educational objectives.

A resident is prepared to undertake independent medical practice within a chosen specialty on the satisfactory completion of a residency. Residents in a program accredited by the Accreditation Council for Graduate Medical Education (ACGME) typically

complete educational requirements for certification by a specialty board recognized by the American Board of Medical Specialties (ABMS).

The accreditation of GME programs is the responsibility of the ACGME, its associated Residency Review Committees (RRCs) for the various specialties, and the Transitional Year Review Committee (TYRC). These committees are hereafter referred to as "review committees." In addition, the review of the institutions sponsoring GME programs is carried out by an Institutional Review Committee established specifically for this purpose by the ACGME. Further information on the ACGME and the review committees is provided below.

### C. Continuing Medical Education

Continuing medical education (CME) is the third phase of medical education. This phase continues the specialty education begun in graduate training; it reflects the commitment to life-long learning inherent in the medical profession.

The Accreditation Council for Continuing Medical Education (ACCME) is responsible for accrediting the providers of CME.

## II. Accreditation of GME Programs

### A. Accreditation, Certification, Licensure

In the context of GME, accreditation is the process for determining whether an educational program is in substantial compliance with established educational standards as promulgated in the institutional and program requirements. Accreditation represents a professional judgment about the quality of an educational program. Decisions about accreditation are made by the review committees under the authority of the ACGME.

Certification is the process for determining whether an individual physician has met established requirements within a particular specialty. The standards for certification are determined by the appropriate member specialty board recognized by the ABMS.

Licensure is distinct from both accreditation and certification. Licensure is a process of government through which an individual physician is given permission to practice medicine within a particular licensing jurisdiction. Medical licenses are granted by the Board of Medical Examiners (or the equivalent) in each licensing jurisdiction (the 50 states, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands).

### B. Accreditation of Residency Programs

Accreditation of residency programs is a voluntary process. By participating in the process, residency programs undergo regular review. The review helps programs in their goals of attaining and maintaining educational excellence. The review also serves to inform the public, specialty boards, residents, and medical students whether specific residency programs are in substantial compliance with the standards that have been established for GME.

For a program to become accredited, the sponsoring institution must demonstrate a commitment to GME. The sponsoring institution must be in substantial compliance with the Institutional Requirements and must assume responsibility for the educational quality of its sponsored program(s). (Further information concerning a "sponsoring institution" is provided below.)

The Institutional Requirements, which have been established by the ACGME's Institutional Review Committee (IRC), apply to all institutions that seek to sponsor programs in GME. An assessment of whether institutions fulfill these requirements is made by the IRC through its institutional review process and by the review committees through their program review process.

A program must demonstrate to its RRC that it is in substantial compliance with the Program Requirements for its particular discipline and that it is sponsored by an institution in substantial compliance with the Institutional Requirements. Materials used by the review committees in making this determination include the results of the most recent institutional review conducted by the ACGME.

The Program Requirements are developed by each review committee for programs in its specialty and accredited subspecialties. The Program Requirements specify essential educational content, instructional activities, responsibilities for patient care and supervision, and the necessary facilities of accredited programs in a particular specialty. In developing and updating Program Requirements, a review committee obtains comments on the proposed documents from interested parties and agencies. The review committee then decides on the final proposal to be submitted to the ACGME. The ACGME has final authority for approving all Program Requirements.

Accreditation actions taken by the review committees are based on information submitted by program directors and on the reports of site visitors. Actions of the committees, under the authority of the ACGME, determine the accreditation status of residency programs and are based on the degree to which the programs meet the published educational standards.

The ACGME is responsible for adjudication of appeals of adverse decisions and has established policies and procedures for such appeals.

Current operating policies and procedures for review, accreditation, and appeal are contained in the ACGME *Manual of Policies and Procedures for Graduate Medical Education Review Committees*. The *Manual* is reviewed annually and is revised as appropriate. (A copy of the *Manual*, as well as copies of the Institutional Requirements and of the Program Requirements, may be obtained from the ACGME's Web site at [www.acgme.org](http://www.acgme.org) or the Office of the Executive Director, ACGME, 515 N State St/Ste 2000, Chicago, IL, 60610.)

Information about the accreditation status of a residency program may be obtained by contacting the executive director of the ACGME.

### C. Structure of the ACGME and of the Review Committees

1. The ACGME is an independently incorporated voluntary accreditation organization. Its five member organizations are national professional bodies, each of which has major interests in and involvement with residency education.

The five member organizations of the ACGME are as follows:

- American Board of Medical Specialties (ABMS)
- American Hospital Association (AHA)
- American Medical Association (AMA)
- Association of American Medical Colleges (AAMC)
- Council of Medical Specialty Societies (CMSS)

Each member organization submits nominees to the ACGME Board of Directors for approval. From among the nominees of each member organization, the Board of Directors elects four directors to the ACGME per member organization. The ACGME appoints three public directors.

The Resident and Fellow Section of the AMA, with the advice of other national organizations that represent residents, selects a resident director to the ACGME.

The Chair of the RRC Council, an advisory body of the ACGME, represents that group on the ACGME.

The Secretary of the US Department of Health and Human Services designates a nonvoting representative of the federal government to the ACGME.

2. There is an RRC for each of the specialties in which certification is offered by a specialty board that is a member of the ABMS. Each RRC is sponsored by the AMA's Council on Medical Education, by the board that certifies physicians within that specialty, and in most cases, by the professional college or other professional association within the specialty.

The Transitional Year Review Committee, which accredits 1 year of GME consisting of rotations in multiple clinical disciplines, is appointed directly by the ACGME.

The established RRCs and their respective appointing organizations are listed in the chart on the previous page.

3. There is an Institutional Review Committee (IRC) that assumes the responsibility for reviewing institutions that sponsor multiple programs. It evaluates institutions for substantial compliance with the Institutional Requirements. The IRC is appointed directly by the ACGME.

## III. A Glossary of Selected Terms Used in GME Accreditation

**Applicants:** Persons invited to come for an interview for a GME program.

**Consortium:** Two or more organizations or institutions that have come together to pursue common objectives (eg, GME). A consor-

tium may serve as a "sponsoring institution" for GME programs if it is formally established as an ongoing institutional entity with a documented commitment to GME.

*Desirable:* A term, along with its companion "highly desirable," used to designate aspects of an educational program that are not mandatory but are considered to be very important. A program may be cited for failing to do something that is desirable or highly desirable.

*Essential:* (See "Must.")

*Fellow:* A physician in a program of graduate medical education accredited by the ACGME that is beyond the requirements for eligibility for first board certification in the discipline. Such physicians may also be termed as "resident" as well. Other uses of the term "fellow" require modifiers for precision and clarity, eg, "research fellow."

*Institution:* An organization having the primary purpose of providing educational and/or health care services (eg, a university, a medical school, a hospital, a school of public health, a health department, a public health agency, an organized health care delivery system, a medical examiner's office, a consortium, an educational foundation).

A. Major Participating Institution: An institution to which residents rotate for a required experience and/or those that require explicit approval by the appropriate RRC prior to utilization. Major participating institutions are listed as part of an accredited program in the *Graduate Medical Education Directory*.

B. Participating Institution: An institution that provides specific learning experiences within a multi-institutional program of GME. Subsections of institutions, such as a department, clinic, or unit of a hospital, do not qualify as participating institutions.

C. Sponsoring Institution: The institution that assumes the ultimate responsibility for a program of GME.

*Institutional Review:* The process undertaken by the ACGME to judge whether a sponsoring institution offering GME programs is in substantial compliance with the Institutional Requirements.

*Intern:* Historically, "intern" was used to designate individuals in the first year of GME; less commonly it designated individuals in the first year of any residency program. Since 1975 the *Graduate Medical Education Directory* and the ACGME have not used the term, instead referring to individuals in their first year of GME as residents.

*Internal Review:* The formal process conducted by a sponsoring institution to assess the educational effectiveness of its sponsored residency programs.

*Must (Shall, Essential):* Terms used to indicate that something is required, mandatory, or done without fail. These terms indicate absolute requirements.

*Program:* The unit of specialty education, comprising a series of graduated learning experiences in GME, designed to conform to the program requirements of a particular specialty.

*Resident:* A physician at any level of GME in a program accredited by the ACGME. Participants in accredited subspecialty programs are specifically included.

*Scholarly Activity:* Educational experiences that include active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship; active participation in journal clubs, research conferences, regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals; participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings; offering of guidance and technical support, eg, research design, statistical analysis, for residents involved in research; and

provision of support for resident participation as appropriate in scholarly activities. May be defined in more detail in specific Program Requirements.

*Shall:* (See "Must.")

*Should:* A term used to designate requirements that are so important that their absence must be justified. The accreditation status of a program or institution is at risk if it is not in compliance with a "should."

*Substantial Compliance:* The judgment made by experts, based on all available information, that a sponsoring institution or residency program meets accreditation standards.

*Suggested:* A term, along with its companion "strongly suggested," used to indicate that something is distinctly urged rather than required. An institution or a program will not be cited for failing to do something that is suggested or strongly suggested.

# Institutional Requirements

## I. Institutional Organization and Commitment

The purpose of graduate medical education is to provide an organized educational program with guidance and supervision of the resident, facilitating the resident's ethical, professional and personal development while ensuring safe and appropriate care for patients. Sponsoring institutions, therefore, must be appropriately organized for the conduct of GME in a scholarly environment and be committed to excellence in both education and medical care. This commitment is exhibited by the provision of leadership and resources to enable the institution to achieve substantial compliance with the Institutional Requirements and to enable the educational programs to achieve substantial compliance with Program Requirements. This includes providing an ethical, professional, and educational environment in which the curricular requirements, as well as the applicable requirements for scholarly activity and the general competencies, can be met. The regular assessment of the quality of the educational programs, the performance of its residents, and the use of outcome assessment results for program improvement are essential components of this commitment.

### A. Sponsoring Institution

1. A residency program must operate under the authority and control of a sponsoring institution (see definition for sponsoring institution in the Glossary under "Institution").
2. There must be a written statement of institutional commitment to GME that is supported by the governing authority, the administration, and the teaching staff.
3. Sponsoring institutions must be in substantial compliance with the Institutional Requirements and must ensure that their Accreditation Council for Graduate Medical Education (ACGME)-accredited programs are in substantial compliance with the Program Requirements and the applicable Institutional Requirements.
4. An institution's failure to comply substantially with the Institutional Requirements may jeopardize the accreditation of all of its sponsored residency programs.

### B. Educational Administration

There must be an organized administrative system to oversee all residency programs sponsored by an institution. In addition, there must be a designated institutional official who has the authority and the responsibility for the oversight and administration of the GME programs. Institutional officials, administrators of GME, program directors, faculty, and residents must have access to adequate communication technologies and technological support to include at least computers and access to the Internet.

1. Institutions must have a GME Committee (GMEC) that has the responsibility for monitoring and advising on all aspects of residency education. Voting membership on the committee must include residents nominated by their peers, appropriate program directors, other members of the faculty, and the accountable institutional official or his or her designee.
2. The committee must meet at least quarterly; minutes must be kept and be available for inspection by accreditation personnel.
3. The responsibilities of the committee must include the following:
  - a. Establishment and implementation of policies that affect all residency programs regarding the quality of education and the work environment for the residents in each program
  - b. Establishment and maintenance of appropriate oversight of and liaison with program directors and assurance that program directors establish and maintain proper oversight of and

- liaison with appropriate personnel of other institutions participating in programs sponsored by the institutions
- c. Regular review of all ACGME letters of accreditation and the monitoring of action plans for the correction of areas of noncompliance
- d. Regular internal reviews of all ACGME-accredited programs including subspecialty programs to assess their compliance with the Institutional Requirements and the Program Requirements of the ACGME Residency Review Committees
  - 1) The review must be conducted by the GMEC, or a body designated by the GMEC, which must include faculty, residents, and administrators, from within the institution but from programs other than the one that is being reviewed. External reviewers may also be included on the review body as determined by the GMEC. The review must follow a written protocol approved by the GMEC.
  - 2) Reviews must be conducted at approximately the midpoint between the ACGME program surveys.
  - 3) While assessing the residency program's compliance with each of the program standards, the review should also appraise
    - a) the educational objectives of each program;
    - b) the adequacy of available educational and financial resources to meet these objectives;
    - c) the effectiveness of each program in meeting its objectives;
    - d) the effectiveness in addressing citations from previous ACGME letters of accreditation and previous internal reviews;
    - e) the use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice as defined in the in section II.B, and in the Program Requirements; and,
    - f) the effectiveness of each program in implementing a process that links educational outcomes with program improvement.
  - 4) Materials and data to be used in the review process must include
    - a) Institutional and Program Requirements for the specialties and subspecialties of the ACGME RRCs from the *Essentials of Accredited Residency Programs*;
    - b) letters of accreditation from previous ACGME reviews;
    - c) reports from previous internal reviews of the program; and
    - d) interviews with the program director, faculty, and residents in the program and individuals outside the program deemed appropriate by the committee.
  - 5) There must be a written report of each internal review that is presented to and reviewed by the GMEC for the monitoring of areas of noncompliance and appropriate action. In addition, this report or a succinct summary of each report is required as part of the ACGME institutional review document.
  - 6) Although departmental annual reports are often important sources of information about a residency program, they do not in themselves necessarily meet the requirement for a periodic review.
- e. Assurance that each residency program establishes and implements formal written criteria and processes for the selection, evaluation, promotion, and dismissal of residents in compliance with the Institutional and Program Requirements for the specialties and subspecialties of the ACGME RRCs

- f. Assurance of an educational environment in which residents may raise and resolve issues without fear of intimidation or retaliation. This includes the following:
  - 1) Provision of an organizational system for residents to communicate and exchange information on their working environment and their educational programs. This may be accomplished through a resident organization or other forums in which to address resident issues.
  - 2) A process by which individual residents can address concerns in a confidential and protected manner.
  - 3) Establishment and implementation of fair institutional policies and procedures for academic or other disciplinary actions taken against residents.
  - 4) Establishment and implementation of fair institutional policies and procedures for adjudication of resident complaints and grievances related to actions that could result in dismissal, nonrenewal of a resident's contract, or other actions that could significantly threaten a resident's intended career development.
- g. Collecting of intrainstitutional information and making recommendations on the appropriate funding for resident positions, including benefits and support services
- h. Monitoring of the programs in establishing an appropriate work environment and the duty hours of residents
- i. Assurance that each program provides a curriculum and an evaluation system to ensure that residents demonstrate competence in the general areas listed in section II.B, and as defined in each set of Program Requirements.

### **C. Institutional Agreements**

When resident education occurs in a participating institution, the sponsoring institution continues to have responsibility for the quality of that educational experience and must retain authority over the residents' activities. Therefore, current institutional agreements (ie, master affiliation agreements) must exist with all of its major participating institutions. Institutional agreements generally govern all GME programs that use the major participating institutions for educational experiences.

### **D. Accreditation for Patient Care**

Institutions sponsoring or participating in GME programs should be accredited by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), if such institutions are eligible. If an institution is eligible for JCAHO accreditation and chooses not to undergo such accreditation, then the institution should be reviewed by and meet the standards of another recognized body with reasonably equivalent standards. If the institution is not accredited, it must provide a satisfactory explanation of why accreditation has not been either granted or sought.

### **E. Quality Assurance**

Institutions participating in GME must ensure that formal quality-assurance programs are conducted and that there is a review of complications and deaths.

- 1. All residents should receive instruction in quality-assurance/performance improvement. To the degree possible and in conformance with state law, residents should participate in appropriate components of the institution's performance improvement program.
- 2. As part of the educational program, it is important that autopsies be performed whenever possible and appropriate. A sufficient number of autopsies representing an adequately diverse spectrum of diseases should be performed to provide an adequate educational experience and to enhance the quality of patient care.

### **F. Compliance with ACGME Policies and Procedures**

Sponsoring institutions must ensure that their ACGME-accredited programs are in substantial compliance with ACGME policies and procedures as defined in the *Manual of Policies and Procedures for ACGME Residency Review Committees*. Of particular note are those policies and procedures that govern "Administrative Withdrawal of Accreditation," an action that is not subject to the appeals process:

- 1. A program may be deemed to have voluntarily withdrawn from the ACGME accreditation process, and an RRC may withdraw accreditation, if the program is not in substantial compliance with
  - a. site visit and program review policies and procedures;
  - b. directives associated with an accreditation action; or
  - c. requests by the RRC for information.
- 2. A program that is judged to be delinquent in payment of fees is not eligible for review and will be notified by certified mail, return receipt requested, of the effective date of the withdrawal of accreditation. On that date, the program will be removed from the list of ACGME-accredited programs.

## **II. Residents**

### **A. Resident Eligibility and Selection**

The sponsoring institution must have written policies and procedures for the recruitment and appointment of residents that comply with the requirements listed below, and it must monitor the compliance of each program with these procedures.

- 1. Resident eligibility
  - Applicants with one of the following qualifications are eligible for appointment to accredited residency programs:
    - a. Graduates of medical schools in the United States and Canada accredited by the Liaison Committee on Medical Education (LCME).
    - b. Graduates of colleges of osteopathic medicine in the United States accredited by the American Osteopathic Association (AOA).
    - c. Graduates of medical schools outside the United States and Canada who meet one of the following qualifications:
      - 1) Have received a currently valid certificate from the Educational Commission for Foreign Medical Graduates or
      - 2) Have a full and unrestricted license to practice medicine in a US licensing jurisdiction.
    - d. Graduates of medical schools outside the United States who have completed a Fifth Pathway program provided by an LCME-accredited medical school. [Note: A Fifth Pathway program is an academic year of supervised clinical education provided by an LCME-accredited medical school to students who meet the following conditions: (1) have completed, in an accredited college or university in the United States, undergraduate premedical education of the quality acceptable for matriculation in an accredited United States medical school; (2) have studied at a medical school outside the United States and Canada but listed in the World Health Organization *Directory of Medical Schools*; (3) have completed all of the formal requirements of the Foreign medical school except internship and/or social service; (4) have attained a score satisfactory to the sponsoring medical school on a screening examination; and (5) have passed either the foreign Medical Graduate Examination in the Medical Sciences, Parts I and II of the examination of the National Board of Medical Examiners, or Steps 1 and 2 of the United States Medical Licensing Examination (USMLE).]
- 2. Resident selection
  - a. The sponsoring institution must ensure that programs select from among eligible applicants on the basis of their prepared-

ness, ability, aptitude, academic credentials, communication skills, and personal qualities such as motivation and integrity. Programs must not discriminate with regard to sex, race, age, religion, color, national origin, disability, or veteran status.

- b. In selecting from among qualified applicants, it is strongly suggested that institutions and all of their sponsored programs participate in an organized matching program, such as the National Resident Matching Program (NRMP), where such is available.
3. Enrollment of noneligibles  
The enrollment of noneligible residents may be a cause for withdrawal of accreditation of the involved program.

### B. Resident Participation in Educational and Professional Activities

1. Institutions must ensure that each program has defined, in accordance with the Program Requirements, the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
  - a. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
  - b. Medical knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
  - c. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
  - d. Interpersonal and communication skills that result in effective information exchange and teaming with patients, their families, and other health professionals
  - e. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
  - f. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system for health care and the ability to effectively call on system resources to provide care that is of optimal value.
2. In addition, institutions must ensure that residents achieve the following:
  - a. Develop a personal program of learning to foster continued professional growth with guidance from the teaching staff
  - b. Participate fully in the educational and scholarly activities of their program and, as required, assume responsibility for teaching and supervising other residents and students
  - c. Participate in appropriate institutional committees and councils whose actions affect their education and /or patient care
  - d. Submit to the program director or to a designated institutional official at least annually confidential written evaluations of the faculty and of the educational experiences.

### C. Resident Support, Benefits, and Conditions of Employment

Sponsoring and participating institutions should provide all residents with appropriate financial support and benefits. Compensation of residents and distribution of resources for the support of education should be carried out with the advice of the GMEC.

1. *Financial Support:* Adequate financial support of residents is necessary to ensure that residents are able to fulfill the responsibilities of their educational programs.
2. *Applicants:* Applicants for GME programs must be informed in writing of the terms and conditions of employment and benefits

including financial support; vacations; professional, parental, and sick leave; professional liability, hospital, health, disability, and other insurance benefits for the residents and their families; and the conditions under which living quarters, meals, and laundry services or their equivalents are to be provided.

3. *Contracts:* Sponsoring institutions must provide residents with a written agreement or contract outlining the terms and conditions of their appointment to an educational program, and the institutions must monitor the implementation of these terms and conditions by the program directors. Institutions must ensure that residents adhere to established practices, procedures, and policies of the institution.
  - a. The contract must contain or reference at least the following:
    - 1) Financial support
    - 2) Vacation policies
    - 3) Professional liability insurance in conformity with II.C.5 below
    - 4) Disability insurance and other hospital and health insurance benefits for the residents and their families in conformity with II.C.6 below
    - 5) Professional, parental, and sick-leave benefits in conformity with II.C.7 below
    - 6) Conditions under which living quarters, meals, and laundry services or their equivalents are to be provided
    - 7) Counseling, medical, psychological, and other support services in conformity with II.C.8 and 9 below
    - 8) Institutional policies covering sexual and other forms of harassment
  - b. The contract must also delineate or reference specific policies as follows:
    - 1) Resident's responsibilities
    - 2) Duration of appointment and conditions for reappointment
    - 3) Professional activities outside the educational program in conformity with II.C.11
    - 4) Grievance procedures in conformity with I.B.3.f.4
4. *Nonrenewal of Contracts:* Institutions must ensure that programs provide their residents with a written notice of intent not to renew a resident's contract no later than 4 months prior to the end of the resident's current contract. However if the primary reason(s) for the nonrenewal occurs within the 4 months prior to the end of the contract, institutions must ensure that programs provide their residents with as much written notice of the intent not to renew as the circumstances will reasonably allow prior to the end of the contract. Residents must be allowed to implement the institution's grievance procedures as addressed in section I.B.3.f.4, when they have received a written notice of intent not to renew their contracts.
5. *Liability Insurance:* Residents in GME must be provided with professional liability coverage for the duration of training. Such coverage must provide legal defense and protection against awards from claims reported or filed after the completion of GME if the alleged acts or omissions of the residents are within the scope of the education program. The coverage to be provided should be consistent with the institution's coverage for other medical/professional practitioners. Each institution must provide current residents and applicants for residency with the details of the institution's professional liability coverage for residents.
6. *Disability Insurance:* Institutions sponsoring GME must provide access to insurance, where available, to all residents for disabilities resulting from activities that are part of the educational program.
7. *Leave of Absence:* There must be a written institutional policy on leave (with or without pay) for residents that complies with

applicable laws. The institution must provide residents with a written policy concerning the effect of leaves of absence, for any reason, on satisfying the criteria for completion of a residency program.

8. *Counseling Services:* GME places increasing responsibilities on residents and requires sustained intellectual and physical effort. Therefore, institutions should facilitate resident access to appropriate and confidential counseling, medical, and psychological support services.
9. *Physician Impairment:* Institutions must have written policies that describe how physician impairment, including that due to substance abuse, will be handled. In addition, institutions should provide an educational program for residents regarding physician impairment, including substance abuse.
10. *Residency Closure/Reduction:* All sponsoring institutions must have a written policy that addresses a reduction in size or closure of a residency program. The policy must specify that if an institution intends to reduce the size of a residency program or to close a residency program, the institution must inform the residents as soon as possible. In the event of such a reduction or closure, institutions must allow residents already in the program to complete their education or assist the residents in enrolling in an ACGME-accredited program in which they can continue their education.
11. *Moonlighting:* All sponsoring institutions must have a written policy that addresses professional activities outside the educational program to include moonlighting. The policy must specify that residents must not be required to engage in moonlighting. All residents engaged in moonlighting must be licensed for unsupervised medical practice in the state where the moonlighting occurs. It is the responsibility of the institution hiring the resident to moonlight to determine whether such licensure is in place, whether adequate liability coverage is provided, and whether the resident has the appropriate training and skills to carry out assigned duties. The sponsoring institution must ensure that the program director acknowledges in writing that she/he is aware that the resident is moonlighting, and that this information is made part of the resident's folder.
12. *Restrictive Covenants:* ACGME-accredited residencies must not require residents to sign a noncompetition guarantee.

#### **D. Resident Supervision, Duty Hours, and Work Environment**

Institutions must ensure that their GME programs provide appropriate supervision for all residents, as well as a duty hour schedule and a work environment, that is consistent with proper patient care, the educational needs of residents, and the applicable Program Requirements.

1. *Supervision:* There must be sufficient institutional oversight to ensure that residents are appropriately supervised. Residents must be supervised by teaching staff in such a way that the residents assume progressively increasing responsibility according to their level of education, ability, and experience. On-call schedules for teaching staff must be structured to ensure that supervision is readily available to residents on duty. The level of responsibility accorded to each resident must be determined by the teaching staff.
2. *Duty Hours:* The sponsoring institution must ensure that each residency program establishes formal written policies governing resident duty hours that foster resident education and facilitate the care of patients. Duty hours must be consistent with the Institutional and Program Requirements of the specialties and subspecialties that apply to each program. These formal policies must apply to all institutions to which a resident rotates.
  - a. The educational goals of the program and learning objectives of residents must not be compromised by excessive reliance on

residents to fulfill institutional service obligations. Duty hours, however, must reflect the fact that responsibilities for continuing patient care are not automatically discharged at specific times. Programs must ensure that residents are provided appropriate backup support when patient care responsibilities are especially difficult or prolonged.

- b. Resident duty hours and on-call time periods must not be excessive. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident.
3. *Work Environment:* Sponsoring institutions must provide services and develop systems to minimize the work of residents that is extraneous to their educational programs, ensuring that the following conditions are met:
    - a. Residents on duty in the hospital must be provided adequate and appropriate food services and sleeping quarters.
    - b. Patient support services, such as intravenous services, phlebotomy services, and laboratory services, as well as messenger and transporter services, must be provided in a manner appropriate to and consistent with educational objectives and patient care.
    - c. An effective laboratory and radiologic information retrieval system must be in place to provide for appropriate conduct of the educational programs and quality and timely patient care.
    - d. A medical records system that documents the course of each patient's illness and care must be available at all times and must be adequate to support the education of residents, support quality-assurance activities, and provide a resource for scholarly activity.
    - e. Appropriate security and personal safety measures must be provided to residents in all locations including but not limited to parking facilities, on-call quarters, hospital and institutional grounds, and related clinical facilities (eg, medical office building).

*ACGME: June 12, 2001 Effective: July 1, 2002*

# Common Program Requirements

## I. Institutional Support

### A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

### B. Participating Institutions

Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.

1. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).
2. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is 1 month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
  - a. identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D and V.A of the Program Requirements;
  - b. outline the educational goals and objectives to be attained by the resident during the assignment;
  - c. specify the period of resident assignment;
  - d. establish the policies and procedures that will govern resident education during the assignment.

## II. Resident Appointment

### A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

### B. Number of Residents

An RRC may approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

### C. Resident Transfer

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section IV.B, prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

## D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

## III. Faculty

The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

### A. Qualifications of the Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
  - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
  - b. be certified in the specialty by the applicable American Board of Medical Specialties (ABMS) Board or possess qualifications judged to be acceptable by the RRC.
  - c. be appointed in good standing and based at the primary teaching site.

### B. Responsibilities of the Program Director

1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
4. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
  - a. The addition or deletion of major participating institution(s) as specified in section I.B.2 of this document.
  - b. Change in the approved resident complement for those specialties that approve resident complement.
  - c. Change in the format of the educational program.
 On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

### C. Faculty Qualifications

1. The physician faculty must
  - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
  - b. be certified in the specialty by the applicable American Board of Medical Specialties (ABMS) Board or possess qualifications judged by the RRC to be acceptable.
  - c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

#### D. Faculty Responsibilities

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section IV.C.1.

#### E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. The Educational Program

The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

#### A. Role of Program Director and Faculty

1. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
  - a. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
  - b. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
  - c. providing residents with direct experience in progressive responsibility for patient management.

#### B. ACGME Competencies

[Note: The ACGME does not require RRCs to add section IV.B to the program requirements for subspecialty programs. If an RRC elects to add the general competencies to its subspecialty program requirements, program directors will be notified and given an opportunity to provide written comments regarding the proposed change.]

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. *Interpersonal and communication skills* that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

#### C. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
  - a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
  - b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
  - c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
  - d. Active participation of the teaching staff in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, eg, research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
2. Adequate resources for scholarly activities for faculty and residents must be available, eg, sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

#### D. Resident Policies

The program director must ensure, direct, and document the implementation of and compliance with appropriate resident policies at all times.

1. *Duty hours*
  - a. Residents must be provided with adequate opportunities to rest and sleep when on duty for 24 hours or more. On-call rooms to permit rest and privacy must be available for each resident on night duty in the hospital.
  - b. The educational goals and objectives of the program and the resident learning objectives must not be compromised by excessive reliance on residents to fulfill service obligations. Duty hours, however, must reflect the fact that responsibility for continuing patient care is not automatically discharged at specific times. Programs must ensure adequate backup support when patient care responsibilities are difficult or prolonged.
  - c. Resident duty hours and on-call periods must not be excessive. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident. Duty hours must be consistent with the Specialty Requirements. The program director is responsible for monitoring resident activities to ensure that resident fatigue does not contribute to diminished learning or performance or detract from patient safety.
2. *Graded Responsibility*

The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability,

manual skills, experience, and the severity and complexity of each patient's status.

3. Supervision
  - a. All patient care services must be supervised by qualified faculty.
  - b. The program director must ensure, direct, and document adequate supervision of residents at all times.
  - c. Residents must be provided with rapid, reliable systems for communicating with supervisors.
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Professional activities: Residency education is a full-time endeavor. The program director must ensure that activities extrinsic to the program, such as moonlighting, do not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

The program director must comply with the sponsoring institution's policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.

## V. Evaluation

### A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
  - a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
  - b. mechanisms for providing regular and timely performance feedback to residents that includes at least
    - 1) written semiannual evaluation that is communicated to each resident in a timely manner and
    - 2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.
2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

### B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle

and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

### C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, ie, at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.
2. Outcome assessment
  - a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
  - b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.

## VI. Experimentation and Innovation

- A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.
- B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.
- C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

*ACGME: February 2002 Effective: July 2003*

## Program Requirements

# Program Requirements for Residency Education in Allergy and Immunology

### I. Introduction

#### A. Definition of the Specialty

Graduate medical education programs in allergy and immunology should be designed to prepare specialists who provide expert medical care for patients with allergic and immunologic disorders and who can serve as consultants, educators, and physician scientists in asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.

#### B. Duration and Scope of Education

1. Residents admitted to allergy and immunology programs should have successfully completed a program in internal medicine or pediatrics accredited by the Accreditation Council for Graduate Medical Education (ACGME).
2. The length of the educational program is 24 months of full-time education. Before entry into the program, each resident must be notified in writing of the required length of the allergy and immunology educational program. The required program may be spread over a longer time period if the program documents the required 24 months of education consistent with the goals, objectives, educational content, and policies, as referenced in these Program Requirements, Section IV.
3. Residents must demonstrate competencies in both children and adults with asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.

### II. Institutional Organization

#### A. Sponsoring Institution

1. Allergy and immunology programs should be conducted principally in institutions with accredited graduate medical education programs in pediatrics and internal medicine.
2. The sponsoring institution must provide sufficient faculty, financial resources, clinical resources, research opportunities, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

#### B. Participating Institutions

1. Affiliations with other institutions may be necessary to ensure graduate education in both pediatric and adult allergy and immunology. Participation by any institution providing more than 4 months of education for each resident during the 2-year program must receive prior approval by the Residency Review Committee (RRC).
2. There must be an appropriately executed interinstitutional agreement between the sponsoring institution and each participating institution in the program that:
  - a. identifies the faculty at the participating institution who will assume the administrative, educational, and supervisory responsibility for the resident with overall coordination by the program director
  - b. outlines the educational goals and objectives to be attained within the participating institutions

- c. specifies the period of assignment of the residents to the participating institution, the financial arrangements, and the details for insurance and benefits
- d. determines the participating institution's responsibilities for teaching, supervision, and formal evaluation of the residents' performances, and
- e. establishes with the participating institution the policies and procedures that govern the residents' education while assigned to the participating institution.

#### C. Resident Appointments

1. The program director must comply with the requirements for resident eligibility, as listed in the ACGME Institutional Requirements.
2. The number of residents appointed must not exceed the sufficiency of resources available for education.

### III. Faculty Qualifications and Responsibilities

The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation. All members of the faculty should give the necessary time and effort to the program, demonstrate a strong interest in the education of residents, evidence sound clinical and teaching abilities, support the goals and objectives of the program, and be committed to their own continuing education.

#### A. Program Director

1. Qualifications
  - a. A single program director with requisite and documented clinical, educational, and administrative experience must be responsible for the program. In a conjoint program, one program director must be designated as the single responsible administrator.
  - b. The program director must be experienced as a clinician, scholar, teacher, and administrator in the specialty.
  - c. The program director must possess leadership qualities and must devote sufficient time and effort to the program to provide day-to-day continuity of leadership and to fulfill all of the responsibilities of meeting the educational goals of the program.
  - d. The allergy and immunology program director must either be certified by the American Board of Allergy and Immunology or be judged by the RRC to possess appropriate educational qualifications.
  - e. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located and must be appointed in good standing to the medical staff of an institution participating in the program.
2. Responsibilities  
The program director must:
  - a. Develop a sound organizational framework and an effective faculty as essential elements of the educational program.
  - b. Create an atmosphere where residents continually strive for excellence.
  - c. Prepare a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of education for each program assignment.
  - d. Select residents for appointment to the program in accordance with institutional and departmental policies and procedures.

- e. Select and supervise faculty and other program personnel at each institution participating in the program.
- f. Supervise residents using explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- g. Implement fair procedures established by the institution regarding academic discipline and resident complaints or grievances.
- h. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. The program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Prepare an accurate statistical and narrative description of the program as requested by the RRC.
- j. Notify the RRC executive director of changes in the program, ie, changes in the program director, faculty appointments, participating institutions, or facilities.

#### B. Faculty

1. Allergy and immunology faculty qualifications
  - a. There must be sufficient faculty with suitable academic and practice qualifications to ensure proper teaching and supervision in the disciplines of the field. The faculty must include a
    1. qualified allergist(s) and immunologist(s) with a background in internal medicine and
    2. qualified allergist(s) and immunologist(s) with a background in pediatrics.
  - b. The allergy and immunology clinical faculty must be licensed to practice medicine in the state where the institutional sponsor is located, must be appointed in good standing to the medical staff of an institution participating in the program, and must be certified by the American Board of Allergy and Immunology or be judged by the RRC to have appropriate educational qualifications.
2. All other program faculty, such as healthcare providers and scientists, must be appropriately qualified in their area of expertise.

#### C. Scholarly Activities

Graduate medical education must take place in an environment of inquiry and scholarship in which the residents and the faculty participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the program director and faculty. The faculty must demonstrate broad involvement in scholarly activity, including:

1. participation in peer-reviewed clinical or scientific publications;
2. participation in research, particularly in projects funded following peer review that result in presentations at regional and national scientific meetings and publication in peer-reviewed journals;
3. participation in regional or national professional and scientific societies;
4. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
5. offering guidance and technical support, eg, research design and statistical analysis, for residents involved in research or other scholarly activities;

6. participation in journal clubs and research conferences; and
7. provision of support for resident participation in scholarly activities.

### IV. The Educational Program

The course of study must include asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases. All residents must be provided with opportunities to apply immunologic theories, principles, and techniques to the investigation, diagnosis, and treatment of a broad spectrum of allergic and immunologic diseases. The required education in the various aspects of the clinical program must involve supervised patient care; rotations through cooperating services; attendance at conferences, lectures, journal clubs, or seminars; and reading and preparation for teaching assignments.

#### A. Program Design

1. The program must provide documentation that each resident is provided with the following components in the 24-month course of study as referenced in Section IV B-D of these Program Requirements:
  - a. Fifty percent of the program must be devoted to direct patient care activities.
  - b. Twenty-five percent of the program must be devoted to research and scholarly activities.
  - c. Twenty-five percent of the program must be devoted to other educational activities.
2. Goals and objectives
  - a. The program director and faculty must prepare and comply with written educational goals and objectives for the program consistent with the institutional mission.
  - b. Goals and objectives must be developed for each resident assignment and for each level in the program, and they must be distributed to residents and faculty.
  - c. The program design and structure must be approved by the RRC as a part of the accreditation process.

#### B. Educational Competencies

1. General competencies
 

Residents must demonstrate the following general competencies to begin the independent practice of this specialty:

  - a. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
  - b. Medical knowledge about established and evolving biomedical, clinical, and cognate (epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
  - c. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
  - d. Interpersonal and communication skills that result in effective information exchange and teaming with patients, their families, and other health professionals
  - e. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
  - f. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value to the patient
2. Allergy and immunology-specific competencies
 

Residents must be able to expertly and appropriately demonstrate the following allergy and immunology specific competencies to begin the independent practice of this specialty:

- a. Conduct a comprehensive and detailed medical interview with children and adults who present with suspected allergic and/or immunologic disorders
  - b. Perform a physical examination appropriate to the specialty
  - c. Select, perform, and interpret diagnostic tests or studies
  - d. Assess the risks and benefits of therapies for allergic and immunologic disorders (eg, drug therapy, allergen immunotherapy, immunomodulatory therapy)
  - e. Counsel and educate patients about diagnosis, prognosis, and treatment
  - f. Consult with and educate other physicians and health care providers
  - g. Apply basic and clinical science to the clinical care of patients
  - h. Coordinate the care of patients, including the use of consultation
  - i. Analyze medical and other scientific literature
  - j. Design, conduct, write, and present research in either laboratory-based or clinical investigation in allergy and/or immunology
3. Personal and professional competencies  
Residents should demonstrate the following personal and professional characteristics:
- a. Caring, altruistic, and compassionate behavior
  - b. Honesty, integrity, and professionalism in relating to patients and other healthcare providers
  - c. Acceptance of the need for a lifelong pursuit of excellence, self-directed learning, and continuing education
  - d. Ethical management of real and perceived conflicts of interest

### C. Clinical Components

1. Required education
- a. Direct patient care experience: Fifty percent of the resident's time must be devoted to direct patient care activities. Direct patient care is defined as both inpatient and outpatient care, clinical case conferences, and record reviews.
    1. Cross-training in internal medicine and pediatrics: Residents must receive cross-training in both pediatric and adult allergy and immunology because specialists in allergy and immunology, whatever their primary specialties, are called on to diagnose and treat individuals of all ages.
      - a. Twenty percent of the required minimum 12-month equivalent direct patient care activity is the required cross-training experience.
      - b. Inpatient experiences, both initially and through follow-up, should be provided as an educational experience in the crossover specialty.
    2. Ambulatory experience: A sufficient number of adult and pediatric ambulatory patients must be provided for each resident during the 24-month program.
    3. Inpatient experience:
      - a. A sufficient number of adult and pediatric inpatients must be provided for each resident during the 24-month program. These inpatient experiences should include direct patient care such as primary patient care, consultation, or teaching rounds.
      - b. Inpatient activities may be accomplished through educational liaisons with other specialties or services. There must be sufficient diversity of patient ages and diagnoses to reflect the breadth of the specialty.
    4. A patient listing consisting of a unique patient identifier, age, and diagnosis for each patient seen by each resident must be available for verification by the site visitor.
    5. Continuity of care: Residents must be provided with continuing responsibility for the care of patients with asthma, al-

lergic disorders, immunologic disorders, and immunodeficiency diseases.

6. Number, variety, and classification of patients: The program must provide a sufficient number of pediatric and adult patients to provide education in asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.
- a. Residents must have direct patient contact with children and adults with the following diagnoses:
    1. Anaphylaxis
    2. Asthma
    3. Atopic dermatitis
    4. Contact dermatitis
    5. Drug allergy
    6. Food allergy
    7. Immunodeficiency
    8. Rhinitis
    9. Sinusitis
    10. Stinging insect hypersensitivity
    11. Urticaria and angioedema
    12. Patch Testing
  - b. Direct contact with patients with the following diagnoses is strongly encouraged:
    1. Autoimmune disease
    2. Bronchopulmonary aspergillosis
    3. Eosinophilic disorders
    4. Hypersensitivity pneumonitis
    5. Mastocytosis
    6. Ocular allergies
    7. Occupational lung disease
    8. Vasculitis
  - c. Residents must demonstrate proficiency with the following procedures:
    1. Allergen immunotherapy
    2. Delayed hypersensitivity skin testing
    3. Drug desensitization and challenge
    4. Immediate hypersensitivity skin testing
    5. IVIG treatment
    6. Performance and interpretation of pulmonary function tests
    7. Physical urticaria testing
  - d. Resident proficiency with the following procedures is highly desirable:
    1. Exercise challenge
    2. Methacholine and other bronchial challenge testing
    3. Nasal cytology
    4. Oral challenge tests
    5. Patch testing
    6. Rhinolaryngoscopy

### D. Didactic Component

The following areas must be included in the educational program:

1. Knowledge of aerobiology; cellular and molecular immunobiology; humoral and cellular immunology; pulmonary physiology; mechanisms of inflammation; pharmacology and pharmacokinetics, drug metabolism, drug side effects, and drug interactions; the scientific basis of the methodology, indications, and interpretation of laboratory tests and imaging procedures used in the diagnosis and follow-up of patients with asthmatic, allergic, immunologic, and other diseases; preparation and standardization of allergen extracts; means to measure indoor allergens and the institution of environmental control measures in the home and other sites; transplantation medicine and tumor immunology; reproductive immunology; the costs of therapy and diagnostic testing; and the psychological effects of chronic illness

2. Knowledge of applied immunology, to include the principles and techniques of clinical immunology laboratory procedures such as tests for humoral immunity, cellular immunity, neutrophil function, cytokines, immune complexes, cryoprecipitable proteins, total serum complement activity and individual complement components, and histocompatibility, as well as procedures for the preparation and use of monoclonal antibodies.
3. Knowledge of the etiology, immunopathogenesis, differential diagnosis, therapy, and complications of those diseases referenced in these Program Requirements.
4. Knowledge of controversial or unproven drug or therapeutic techniques in allergy, asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases

#### E. Resident Research and Scholarly Activities

1. Twenty-five percent of the program must be devoted to research and scholarly activities.
2. Residents must be provided with a structured research experience sufficient to result in an understanding of the basic principles of study design, performance, analysis, and reporting:
  - a. Residents must be able to conduct a comprehensive literature search.
  - b. Residents must have the opportunity to design, write, review, or edit research protocols or plans.
  - c. Residents must demonstrate a working knowledge of research design, statistics, clinical trials, epidemiology, and laboratory research.
  - d. Residents must be able to apply the principles of data collection, data analysis, and data interpretation.
  - e. Residents must conduct the research activity under proper supervision.
  - f. Residents must be able to communicate research findings orally and in writing.
  - g. Presentations at national meetings and publication in peer-reviewed journals are strongly encouraged.

#### F. Resident Policies

1. Supervision: Appropriately qualified faculty must supervise all patient care services. The program director must ensure, direct, and document the proper supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with faculty. Appropriate supervision must be available at all times on site. This is particularly necessary for patients with severe and/or complex disease.
2. Work hours: It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have 1 day out of 7 free of routine responsibilities and be on call in hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at the senior levels, and necessitate flexibility.

### V. Evaluation

#### A. Resident Evaluation

1. The program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for using assessment results to improve resident performance. This plan should include
  - a. the use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice
  - b. a process involving the use of assessment results to achieve progressive improvements in residents' competence and performance

2. Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.
3. The evaluation system should demonstrate that residents have reached the educational goals for each rotation or educational experience. The structured use of checklists and evaluation forms is encouraged. The direct observation of resident interactions with patients should be included. Innovation in resident evaluation is encouraged.
4. Regularity and frequency of evaluations: The program director and faculty must
  - a. semiannually evaluate resident knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician;
  - b. communicate each evaluation to the resident in a timely manner;
  - c. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
  - d. provide a final written evaluation for each resident who completes the program that includes a review of the resident's performance during the final period of education and verifies that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation should be a part of the resident's permanent record maintained by the institution.

#### B. Faculty Evaluation

There must be meaningful evaluation of the faculty. This should include confidential evaluation by the residents. The program director is responsible for the administration and interpretation of the faculty evaluations.

#### C. Program Evaluation

1. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency. The program should use performance and outcome assessment results in evaluation of the educational effectiveness of the residency program.
  - a. The quality of the curriculum and the extent to which the educational goals have been met by the residents, the utilization of resources available to the program, the contribution of each institution participating in the program, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of resident supervision must be evaluated at least annually.
  - b. Written and confidential evaluations by residents should be utilized in this process.
  - c. The program director is administratively responsible for this evaluation.
2. The institution must conduct a meaningful and timely internal evaluation of the program as required by the Institutional Requirements.
3. A review of the performance of program graduates on the American Board of Allergy and Immunology examination will be employed by the RRC as one measure of the program's educational effectiveness.

### VI. Certification

Residents who plan to seek certification by the American Board of Allergy and Immunology should communicate with the executive secretary of the board to ascertain the requirements.

*ACGME: September 2001 Effective: July 1, 2002*

# Program Requirements for Residency Education in Clinical and Laboratory Immunology (Allergy and Immunology)

## I. Introduction

### A. Definition of the Specialty

A graduate medical education program in clinical and laboratory immunology must be designed to educate physicians in the application and interpretation of clinical immunology tests and in the direction of a clinical immunology laboratory, such as infectious disease, oncology, rheumatology, pathology, or nephrology.

### B. Duration

1. Clinical and laboratory immunology educational programs must be 1 year in duration.
2. Applicants to clinical and laboratory immunology programs should have successfully completed an accredited residency program in internal medicine or pediatrics and should have 1 or more years of additional education in an immunologically related subspecialty.

### C. Objectives

A clinical and laboratory immunology educational program must provide a structured educational experience that allows the clinical and laboratory immunology resident to become proficient in the basic science, laboratory procedures, and technical management underlying the operation of the clinical immunology laboratory. In addition, it must provide an appropriate clinical background that will prepare the resident to act as a consultant in the application and interpretation of diagnostic immunology tests.

## II. Institutional Organization

The clinical and laboratory immunology program must be conducted in institutions with accredited graduate medical education programs in allergy and immunology or in the various relevant subspecialties of internal medicine and pediatrics.

### A.

The sponsoring institution must provide sufficient faculty; financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

### B. Participating Institutions

1. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements.
2. Participating institutions providing 2 months or more of the educational program must be approved by the Residency Review Committee (RRC).
3. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.

## III. Faculty

The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling,

evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director
  - a. Competence as a scientist, clinician, and teacher in the field of clinical and laboratory immunology; possession of leadership qualities; and authority to organize and administer the program. The program director must maintain close contact with the clinical and laboratory immunology residents, contributing sufficient time to ensure sufficient teaching and guidance. The program director, or qualified designee, must be available to provide advice and instruction to clinical and laboratory immunology resident(s) on a day-to-day basis.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.
  - c. Certification by the American Board of Allergy and Immunology (ABAI), by a board in an immunologically related subspecialty of internal medicine or pediatrics, or possess suitable equivalent qualifications. In addition, the program director should have an ABAI certificate in clinical and laboratory immunology or must demonstrate suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
  - d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
  - f. The program director, with participation of the faculty, will
    1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
    2. communicate each evaluation to the resident in a timely manner;
    3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
    4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
    5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice compe-

tently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- g. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. The program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Prepare an accurate statistical and narrative description of the program as requested by a review committee.
- j. Notify the RRC of any major programmatic change, eg, change in program director or the addition or deletion of participating institutions. The RRC retains the prerogative to assess the impact of such change(s) upon the quality of the education offered to the residents.

#### B. Faculty

- 1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
- 2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
- 3. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 4. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
- 5. The faculty should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of faculty, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Facilities and Resources

#### A. Laboratory

- 1. Appropriate laboratory space must be available within an ongoing and operational diagnostic immunology laboratory where a wide variety of immunologic tests are routinely performed.
- 2. The laboratory should utilize up-to-date techniques and equipment, including modern record-keeping procedures, to ensure the timely and efficient return of laboratory results and adequate storage and retrieval of data.

#### B. Clinical

Clinical and laboratory immunology residents should be provided with sufficient clinical experience that reflects a variety of immunologic disorders.

#### C. Medical Library

- 1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
- 2. Library services should include the electronic retrieval of information from medical databases.
- 3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### V. The Educational Program

The program director and the faculty must prepare and comply with written educational goals for the program. The program design and/or structure must be approved by the RRC as part of the regular review process. Participation by any institution providing 2 months or more experience must be approved by the RRC. The program design and/or structure must be approved by the RRC as part of the regular review process. Educational goals and objectives must be defined in appropriate documents and must be available to prospective and current clinical and laboratory immunology residents and faculty. Educational goals and objectives must also be provided for individual assignments inside and outside the main teaching laboratory. The program goals must include graded responsibility within the program and methods of resident evaluation and must involve residents in diagnostic immunology consultation.

#### A. Clinical and Laboratory

The course of study should be composed of a combination of practical and didactic training that addresses different areas of clinical and laboratory immunology that include, but not limited to:

- 1. Quantification of immunoglobulins
- 2. Measurement of specific antibodies
- 3. Functional and quantitative complement tests
- 4. Assays of lymphocyte, monocyte, neutrophil, eosinophil, and basophil function and quantification
- 5. Autoantibody assessment
- 6. Rapid tests for infectious diseases
- 7. DNA amplification and binding tests
- 8. Genetic testing and gene therapy
- 9. Histocompatibility testing
- 10. Prenatal diagnosis
- 11. Quality control testing
- 12. Data management and statistical analysis
- 13. Laboratory safety issues
- 14. Regulatory agency interactions

#### B. Academic

- 1. Clinical and laboratory immunology residents must attend seminars and conferences that are conducted regularly. The conferences must be of sufficient number and quality to ensure an educational interchange in the various disciplines of clinical immunology. These conferences must include
  - a. allergic diseases
  - b. primary and secondary immunodeficiency diseases
  - c. autoimmune diseases
  - d. immunologic aspects of bone marrow and organ transplantation
  - e. immunologic aspects of gene replacement therapy

- f. immunologic aspects of organ-specific inflammatory conditions
  - g. immunologic aspects of malignancy and cancer
2. Clinical conferences  
Clinical and laboratory immunology residents should attend appropriate clinical rounds and other didactic teaching sessions at relevant clinical sites. In addition, they should have access to prepared teaching materials on clinical and basic immunology.

### **C. Other Required Components**

1. Resident supervision
- a. Residents must be supervised by appropriately qualified faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
  - b. Residents must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. In no case should residents go off duty until the proper care and welfare of the patients have been assured. When averaged over 4 weeks, residents should spend no more than 80 hours per week in hospital duties; should have, on the average, the opportunity to spend at least 1 full day out of 7 free of hospital duties; and should be on call no more often than every third night. It is the responsibility of the program director to ensure enforcement of reasonable policies with respect to work hours.

2. Scholarly activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

- a. participation of the faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- b. participation in journal clubs and research conferences.
- c. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
- d. participation in research, particularly in projects that are funded following peer review and/or that result in publications or presentations at regional and national scientific meetings.
- e. offering of guidance and technical support, eg, research design and statistical analysis, for residents involved in research.
- f. provision of support for resident participation in scholarly activities.

## **VI. Evaluation**

### **A.**

Residents must be evaluated semiannually as referenced in these Program Requirements III.A.2.

### **B. Faculty**

The faculty should be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in this evaluation.

### **C. Program**

1. The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written confidential evaluations by residents should be utilized in this process.
2. Review of past resident performance on the certification examination for clinical and laboratory immunology will be employed by the RRC as one measure of the quality of the program.

## **VII. Board Subcertification**

Residents who plan to seek subcertification in clinical and laboratory immunology should communicate with the applicable board to ascertain the current requirements for acceptance as a candidate.

*ACGME: February 1999 Effective: July 1999*

# Program Requirements for Residency Education in Anesthesiology

## I. Introduction

### A. Definition and Scope of the Specialty

The Residency Review Committee (RRC) representing the medical specialty of anesthesiology exists in order to foster and maintain the highest standards of training and educational facilities in anesthesiology, which the RRC defines as the practice of medicine dealing with but not limited to the following:

1. Assessment of, consultation for, and preparation of patients for anesthesia
2. Relief and prevention of pain during and following surgical, obstetric, therapeutic, and diagnostic procedures
3. Monitoring and maintenance of normal physiology during the perioperative period
4. Management of critically ill patients
5. Diagnosis and treatment of acute, chronic, and cancer-related pain
6. Clinical management and teaching of cardiac and pulmonary resuscitation
7. Evaluation of respiratory function and application of respiratory therapy
8. Conduct of clinical and basic science research
9. Supervision, teaching, and evaluation of performance of personnel, both medical and paramedical, involved in perioperative care

### B. Duration and Scope of Education

A minimum of 4 years of graduate medical education is necessary to train a physician in the field of anesthesiology. Three years of the training must be in clinical anesthesia. The RRC for Anesthesiology and the Accreditation Council for Graduate Medical Education (ACGME) accredit programs only in those institutions that possess the educational resources to provide 3 years of clinical anesthesia training. The capability to provide the Clinical Base Year within the same institution is desirable but not required for accreditation.

### C. Goals and Objectives

An accredited program in anesthesiology must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently. The program must provide an environment that promotes the acquisition of the knowledge, skills, clinical judgment, and attitudes essential to the practice of anesthesiology.

In addition to clinical skills, the program should emphasize interpersonal skills, effective communication, and professionalism. The residency program must work toward ensuring that its residents, by the time they graduate, assume responsibility and act responsibly and with integrity; demonstrate a commitment to excellence and ethical principles of clinical care, including confidentiality of patient information, informed consent, and business practices; demonstrate respect and regard for the needs of patients and society that supersedes self-interest; and work effectively as a member of a health-care team or other professional group. Further, residents are expected to create and sustain a therapeutic relationship with patients; engage in active listening, provide information using appropriate language, ask clear questions, and provide an opportunity for input and questions; and demonstrate sensitivity and

responsiveness to cultural differences, including awareness of their own and their patients' cultural perspectives.

These objectives can be achieved only when the program leadership, faculty, supporting staff, and administration demonstrate a commitment to the educational program and provide appropriate resources and facilities. Service commitments must not compromise the achievement of educational goals and objectives.

The director and teaching staff of a program must prepare and comply with written educational goals for a program. All educational components of a residency program should be related to the program goals. The program design must be approved by the RRC as part of the regular review process. A written statement of the educational objectives must be given to each resident.

### D. Other Accredited Residencies

The institution sponsoring an accredited program in anesthesiology must also sponsor or be affiliated with ACGME-approved residencies in at least the specialties of general surgery and internal medicine.

## II. Institutional Organization

### A. Participating Institutions

In all cases where more than one institution is involved, a formal written agreement must be developed between the responsible administrative bodies of those institutions. The facilities, clinical experience, supervision, teaching sessions, and duration of the rotation available at the participating institution must be described in writing.

A participating institution may be either integrated or affiliated with the parent institution:

1. An *Integrated Institution* must formally acknowledge the authority of the core program director over the educational program in that hospital, including the appointments of all faculty and all residents. Integrated institutions should be in close geographic proximity to the parent institution to allow all residents to attend joint conferences. If an institution is not in geographic proximity and joint conferences cannot be held, an equivalent educational program in the integrated institution must be fully established and documented. Rotations to integrated institutions are not limited in duration. However, it is expected that the majority of the program will be provided in the parent institution. Prior approval of the RRC must be obtained for participation of an institution on an integrated basis, regardless of the duration of the rotations.
2. An *Affiliated Institution* is one that is related to the core program for the purpose of providing limited rotations that complement the experience available in the parent institution. Assignments at affiliated institutions must be made for educational purposes and not to fulfill service needs. Rotations to affiliated institutions may be no more than 6 months during the first 2 years of clinical anesthesia or a maximum of 12 months during the 3 years of clinical anesthesia. Prior approval of the RRC must be obtained if the duration of the rotation at an affiliated institution will exceed 6 months.
3. A member of the teaching staff of the participating institution, integrated or affiliated, must be designated to assume responsibility for the day-to-day educational activities of the program at that institution, with overall coordination by the core program director.

### III. Faculty Qualifications and Responsibilities

#### A. Program Director

There must be a single program director responsible for the program.

##### 1. Qualifications of the program director:

The program director must be certified by the American Board of Anesthesiology or judged by the RRC to possess appropriate educational qualifications. The program director also must be licensed to practice medicine in the state where the institution that sponsors the program is located (certain federal programs are exempted) and have an appointment in good standing to the medical staff of an institution participating in the program.

The program director must possess faculty experience, leadership, organizational and administrative qualifications, and the ability to function effectively within an institutional governance. The program director must have significant academic achievements in anesthesiology, such as publications, the development of educational programs, or the conduct of research. Frequent changes in leadership or long periods of temporary leadership may adversely affect an educational program and may present serious cause for concern. When a new director, either permanent or acting, has been appointed, the RRC must be notified immediately. The RRC may initiate an inspection of the program in conjunction with this change when it deems it necessary to ensure continuing quality.

##### 2. Responsibilities of the program director:

- a. Preparation, periodic review, and if necessary, revision of a written outline of the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It must be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- f. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### B. Faculty

The faculty should have varying interests, capabilities, and backgrounds, and must include individuals who have specialized expertise in the subspecialties of anesthesiology, which include but are not limited to critical care, obstetric anesthesia, pediatric anesthesia, neuroanesthesia, cardi thoracic anesthesia, and pain management. Didactic and clinical teaching must be provided by faculty with documented interests and expertise in the subspecialty involved. Fellowship training; several years of practice, primarily within a subspecialty; and membership and active participation in national organizations related to the subspecialty may signify expertise.

The faculty should be certified by the American Board of Anesthesiology or be in the process of obtaining certification. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program. The number of faculty must be sufficient to provide each resident with adequate supervision, which shall not vary substantially with the time of day or day of the week. In the clinical setting, faculty members should not direct anesthesia at more than two anesthetizing locations simultaneously.

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

Teaching by residents of medical students and junior residents represents a valid learning experience. However, the use of a resident as an instructor of junior residents must not substitute for experienced faculty.

#### C. Scholarly Activity

The quality of the educational environment of the parent and integrated institutions is of paramount importance to the program. Adequate documentation of scholarly activity on the part of the program director and the teaching faculty at the parent and integrated institutions must be submitted at the time of the program review. Scholarly activity at affiliated institutions cannot account for or substitute for the educational environment of the parent and integrated institutions.

Documentation of scholarly activities is based on:

1. active participation of the faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings.
4. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
5. offering of guidance and technical support (eg, research design, institutional committee protocol approval, statistical analysis) for residents involved in scholarly activities.

While not all members of a teaching faculty can be investigators, clinical and/or basic science research must be ongoing in the department of anesthesiology of the parent and integrated institution(s). The faculty, as a whole, must document active involvement in all phases of scholarly activity as defined above in order to be considered adequate to conduct a program of graduate education in anesthesiology.

#### D. Other Program Personnel

Programs must be provided with the professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

The integration of nonphysician personnel into a department with an accredited program in anesthesiology will not influence the accreditation of such a program unless it becomes evident that such personnel interfere with the training of resident physicians. Interference may result from dilution of faculty effort, dilution of the available teaching experience, or downgrading of didactic material. Clinical instruction of residents by nonphysician personnel is inappropriate, as is excessive supervision of such personnel by resident staff.

## IV. Facilities and Resources

### A. Space and Equipment

There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with visual and other educational aids, study areas for residents, office space for teaching staff, diagnostic and therapeutic facilities, laboratory facilities, and computer support. The institution must provide appropriate on-call facilities for male and female residents and faculty.

### B. Library Resources

There must be a department library. This may be complemented, but not replaced, by private faculty book collections and hospital and/or institutional libraries. Journals, reference books, and other texts must be readily available to residents and faculty during nights and weekends. Residents must also have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions. Library services must include electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals and electronic databases must be readily available during nights and weekends.

## V. The Educational Program

The program must demonstrate a judicious balance between didactic presentations and clinical care obligations. Clinical responsibilities must not prevent the resident from participating in the requisite didactic activities and formal instruction. The ultimate goal is to produce a consultant anesthesiologist who relates confidently and appropriately to other specialists in addition to being a competent clinical anesthesiologist.

### A. Program Design

The continuum of education in anesthesiology consists of 4 years of training: the Clinical Base Year (CBY) and 36 months of clinical anesthesia training (CA-1, CA-2, and CA-3 years).

#### 1. Clinical Base Year

One year of the total training must be the Clinical Base Year, which should provide the resident with 12 months of broad clinical education in medical disciplines relevant to the practice of anesthesiology. The Clinical Base Year usually precedes training in clinical anesthesia. It is strongly recommended that the Clinical Base Year be completed before the resident starts the CA-2 year; however, it must be completed before the resident begins the CA-3 year.

The Clinical Base Year must include at least 10 months of clinical rotations of which at most 1 month may involve training in anesthesiology. Clinical Base Year rotations include training in internal medicine or emergency medicine, pediatrics, surgery or any of the surgical specialties, critical care medicine, obstetrics and gynecology, neurology, family practice, or any combination of these. At most, 2 months of the Clinical Base Year may be taken in electives or in specialties other than those listed above. If an accredited anesthesiology program offers this year of training, the RRC will verify that the content is acceptable. When the parent institution provides the Clinical Base Year, the anesthesiology program director must approve the rotations for individual residents and must have general oversight for rotations on the services that are used for the Clinical Base Year.

#### 2. Clinical Anesthesia Training: CA-1 through CA-3 Years

These 3 years, usually the second through the fourth years of graduate medical education, consist of training in basic and advanced anesthesia. They must encompass all aspects of peri-

operative care to include evaluation and management during the preoperative, intraoperative, and postoperative periods. The clinical training must progressively challenge the resident's intellect and technical skills and must provide experience in direct and progressively responsible patient management. As the resident advances through training, she or he should have the opportunity to learn to plan and to administer anesthesia care for patients with more severe and complicated diseases as well as patients who undergo more complex surgical procedures. The training must culminate in sufficiently independent responsibility for clinical decision making and patient care so that the program is assured that the graduating resident exhibits sound clinical judgment in a wide variety of clinical situations and can function as a consultant in anesthesiology.

#### a. CA-1 and 2 years

Experience in basic anesthesia training must emphasize the fundamental aspects of anesthesia. At least 12 months of the CA-1 and CA-2 years should be spent in basic anesthesia training, with the majority of this time occurring during the CA-1 year. Residents should receive training in the complex technology and equipment associated with the practice of anesthesiology. There must be documented evidence of direct faculty involvement with tutorials, lectures, and clinical supervision of beginning residents.

Anesthesiology encompasses the theoretical background and clinical practice of a variety of subspecialty disciplines. Exposure to these should occupy a minimum of 7 months in the CA-1 and CA-2 years. There must be identifiable 1-month rotations in obstetric anesthesia, pediatric anesthesia, neuro-anesthesia, and cardiothoracic anesthesia. Experiences in perioperative care must include a 2-month rotation in critical care, a 1-month rotation in pain management, and 2 contiguous weeks in the postanesthesia care unit.

The program director may determine the sequencing of these rotations. The resident should be evaluated following each rotation, and the written evaluations should be maintained in each resident's file. There must be a written description of each rotation in the CA-1 and CA-2 years. The goals and objectives for the CA-1 and CA-2 experience must be separate and distinct from those designed for the CA-3 year training.

#### b. CA-3 year

The program must provide 12 months' experience in advanced and complex anesthesia assignments in the CA-3 year. In addition, the resident must complete an academic assignment. A curriculum for the CA-3 year, as well as the specific program for each resident, must be on file in the department.

Clinical assignments in the CA-3 year must include difficult or complex anesthesia procedures and the care of seriously ill patients. Subspecialty rotations are encouraged, but none may be longer than 6 months. A curriculum specific to each of the subspecialty programs offered must be on file in the department. This curriculum must be distinct from the CA-1 and CA-2 years subspecialty curricula and must reflect increased responsibility and learning opportunity. These assignments must not compromise the learning opportunities for the CA-1 and CA-2 residents.

Academic projects may include special training assignments, grand rounds presentations, preparation and publication of review articles, book chapters, manuals for teaching or clinical practice, or similar academic activities. A faculty supervisor must be in charge of each project. The academic project may, at the program director's discretion, occur prior to the CA-3 year.

### 3. Research Track

The program must have the resources to provide a Research Track of up to 6 months devoted to laboratory or clinical investigation. For the residents who elect this track, it is expected that the results of the investigations will be suitable for presentation at a local, regional, or national scientific meeting. The Research Track generally occurs in the CA-3 year, but at the program director's discretion, it may be taken earlier. A curriculum describing the goals and objectives of this track must be on file in the department.

All CA-3 residents must be certified as providers for ACLS.

### B. Clinical Components

A wide spectrum of disease processes and surgical procedures must be available within the program to provide each resident with a broad exposure to different types of anesthetic management. The following list represents the minimum clinical experience that should be obtained by each resident in the program. Although the minimum requirements are for the CA-1 through CA-3 years, the majority of these should be accomplished in the CA-1 and CA-2 years.

1. Forty anesthetics for vaginal delivery; evidence of direct involvement in cases involving high-risk obstetrics, as well as a minimum of 20 cesarean sections.
2. Anesthesia for 100 children under the age of 12, including anesthesia for 15 infants less than 1 year of age, including infants less than 45 weeks postconceptual age.
3. Anesthesia for 20 patients undergoing surgical procedures involving cardiopulmonary bypass.
4. Twenty other major vascular cases (including endovascular cases).
5. Twenty intrathoracic (thoracotomy, thoracoscopy) noncardiac cases.
6. Twenty procedures involving an open cranium, some of which must include intracerebral vascular procedures.
7. Fifty epidural anesthetics for patients undergoing surgical procedures, including cesarean sections.
8. Ten major trauma cases.
9. Fifty subarachnoid blocks performed for patients undergoing surgical procedures.
10. Forty peripheral nerve blocks for patients undergoing surgical procedures.
11. Twenty-five nerve blocks for management of patients with acute, chronic, or cancer pain disorders.
12. Documented involvement in the management of acute postoperative pain, including familiarity with patient-controlled intravenous techniques, neuraxial blockade, and other pain-control modalities.
13. Documented involvement in the systematic process of the preoperative management of the patient.
14. Significant experience with certain specialized techniques for airway management (such as fiberoptic intubation, double lumen endotracheal tube placement, and laryngeal mask airway management), central vein catheter placement, pulmonary artery catheter placement, peripheral artery cannulation, transesophageal echocardiography, evoked potentials, and electroencephalography.
15. A postanesthesia care experience of 2 contiguous weeks, which must involve direct care of patients in the postanesthesia-care unit and responsibilities for management of pain, hemodynamic changes, and emergencies related to the postanesthesia-care unit. Designated faculty must be readily and consistently available for consultation and teaching.
16. Critical care rotation, including active participation in patient care by anesthesia residents in an educational environment in

which participation and care extend beyond ventilatory management, and active involvement by anesthesiology faculty experienced in the practice and teaching of critical care. This training must take place in units in which the majority of patients have multisystem disease. The postanesthesia-care unit experience does not satisfy this requirement.

17. Appropriate didactic instruction and sufficient clinical experience in managing problems of the geriatric population.
18. Appropriate didactic instruction and sufficient clinical experience in managing the specific needs of the ambulatory surgical patient.

### C. Resident Logs

The program director must require the residents to maintain an electronic record of their clinical experience. The record must be reviewed by the program director or faculty on a regular basis. It must be submitted annually to the RRC office in accordance with the format and the due date specified by the RRC.

### D. Didactic Components

Didactic instruction should encompass clinical anesthesiology and related areas of basic science, as well as pertinent topics from other medical and surgical disciplines. Practice management should be included in the curriculum and should address issues such as operating room management, types of practice, job acquisition, financial planning, contract negotiations, billing arrangements, and issues of professional liability. The curriculum should also address systems-based practice, with emphasis on an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value. The material covered in the didactic program should demonstrate appropriate continuity and sequencing to ensure that residents are ultimately exposed to all subjects at regularly held teaching conferences. The number and types of such conferences may vary among programs, but a conspicuous sense of faculty participation must characterize them. The program director should also seek to enrich the program by providing lectures and contact with faculty from other disciplines and other institutions.

### E. Resident Policies

1. Resident complement  
Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Appointment of a minimum of nine residents with, on average, three appointed each year is required. Any proposed increase in the number of residents must receive prior approval by the RRC. In submitting the request, the program director must explain the educational rationale for increasing the number of residents and must document adequate clinical experience, faculty, and educational resources to support an increased number of residents. Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.
2. Duty hours and conditions of work  
While the actual number of hours worked by residents may vary, residents should have sufficient off-duty time to avoid undue fatigue and stress. The program director must monitor on-duty schedules for residents to ensure that these assignments do not interfere with education, performance, or clinical care and judgment. The monitoring should ensure
  - a. 1 full day out of 7 free of program duties;
  - b. on average, on call no more than every third night;

- c. adequate backup if patient care needs create resident fatigue sufficient to jeopardize patient care or resident welfare during or following on-call periods;
- d. that residents do not administer anesthesia on the day after in-house overnight call;
- e. that during on-call hours, residents are provided with adequate sleeping, lounge, and food facilities;
- f. that support services are such that residents do not spend an inordinate amount of time in noneducational activities that can be properly discharged by other personnel.

Written policies on these matters should be established.

Formal educational activity shall have high priority in the allotment of the resident's time and energies.

### 3. Substance abuse

The residency program must have a written policy specifically addressing the needs of anesthesiology and an educational program regarding substance abuse.

The program director should monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

## VI. Internal Evaluation

### A. Resident Evaluation

The program director is responsible for regular evaluation of residents' knowledge, clinical competence, skills specific to anesthesiology management, and overall performance, including the development of professional attitudes consistent with being a physician. Evaluations of each resident's progress and competence must be conducted at the end of each 6-month period of training. The subspecialty evaluations as described above are in addition to this minimum requirement. There must be provision for appropriate and timely feedback of the content of the evaluations to the trainee. The program must maintain a permanent record of the evaluation and counseling process for each resident. Such records must be accessible to only the resident and other authorized personnel. Residents should be advanced to positions of higher responsibility on the basis of their satisfactory progressive scholarship and professional growth. When a resident fails to progress satisfactorily, a written plan identifying the problems and addressing how they can be corrected must be placed in his or her individual file. The plan should be communicated in writing and in a timely manner to the resident and should be signed by the resident.

The program must demonstrate that it has developed an effective plan for assessing resident performance throughout the program and for utilizing evaluation results to improve resident performance. This plan should include use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

A written final evaluation for each resident who completes the program must be provided. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

### B. Program Evaluation

The educational effectiveness of the program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met must be assessed. There must be opportunity for trainees to confidentially evaluate faculty performance and the educational program. Written evaluations by residents should be utilized in this process at least annually. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.

The teaching staff should evaluate periodically the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of the residents.

Resident participation in the periodic evaluation of patient care (continuous quality improvement) is mandatory. Further, the program should emphasize practice-based learning and improvement that involves investigation and evaluation of the resident's own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

The record of its graduates in obtaining certification by the American Board of Anesthesiology represents one measure of the quality of a program. As part of the overall evaluation of the program, the RRC will take into consideration the information provided by the ABA regarding resident performance on the certifying examinations over the most recent 5-year period. The RRC will also take into account noticeable improvements or declines during the period considered. Program graduates should take the certifying examination, and at least 70% of the program graduates should become certified.

### C. Records

A comprehensive anesthesia record must be maintained for each patient as an ongoing reflection of the drugs administered, the monitoring employed, the techniques used, the physiologic variations observed, the therapy provided as required, and the fluids administered. The patient's medical record should contain evidence of preoperative and postoperative anesthesia assessment.

## VII. Additional Information

- A. Accreditation may be withdrawn from a program that has been without a resident for 2 years. Reactivation of a program following withdrawal of accreditation will require a new application.
- B. Questions relating to educational programs and communication for the ACGME should be directed to the Executive Director, Residency Review Committee for Anesthesiology, 515 N State St, Chicago, IL 60610. Inquiries relating to the credentials of individual applicants for certification should be directed to the Executive Vice President of the American Board of Anesthesiology, Inc, 4101 Lake Boone Trail, The Summit/Suite 510, Raleigh, NC 27607-7506.

*ACGME: June 2000 Effective: January 1, 2001*

## Policies and Procedures for Subspecialties of Anesthesiology

Anesthesiology subspecialty programs will be surveyed and reviewed in conjunction with the survey and review of the core anesthesiology programs to which they are attached. In the case of a new application or in special cases determined by the Residency Review Committee (RRC), a subspecialty program may be reviewed separately. For an initial application, a survey will not be required when the application is reviewed without the core program.

Applications for accreditation of new subspecialty programs will not be considered if the core residency program in anesthesiology is accredited on a provisional or probationary basis, or if it has been accredited with a warning that adverse action will be taken if it is not in substantial compliance with the Essentials of Accredited Residencies at the time of the next review.

The RRC will designate the subspecialty programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a subspecialty program will be directly tied to that of the core. If the core program is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program will result in the simultaneous loss of accreditation of the subspecialty program that functions in conjunction with it.

If the core program remains in good standing but the RRC judges a subspecialty program to be in noncompliance with the Program Requirements, a warning will be issued. If suitable improvement is not demonstrated in the time specified by the RRC, accreditation may be withdrawn from the subspecialty program. The *Procedures for Proposed Adverse Actions* and the *Procedures for Appeal of Adverse Actions* may be utilized by subspecialty programs from which accreditation has been withdrawn in an action separate from the core program.

Inquiries about accreditation of anesthesiology subspecialty programs should be addressed to the executive secretary of the RRC for Anesthesiology.

## Program Requirements for Residency Education in the Subspecialties of Anesthesiology

These requirements apply to all of the accredited subspecialty areas and should be consulted along with the individual subspecialty Program Requirements.

### I. General Information

A. A residency education program in a subspecialty of anesthesiology is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area. All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

Completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited anesthesiology residency, or its equivalent, is a prerequisite for entry into a subspecialty program of anesthesiology.

B. Residency education programs in the subspecialties of anesthesiology may be accredited only in an institution that either spon-

sors a residency education program in anesthesiology accredited by the ACGME or is related by formal agreement with the core program. Close cooperation between the subspecialty and residency program directors is required.

C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the anesthesiology residents in the core program.

### II. Faculty Qualifications and Responsibilities

The program director and faculty are responsible for the general administration of a program, including activities related to the recruitment and selection, supervision, counseling, evaluation and advancement of residents and the maintenance of records related to program accreditation.

Subspecialty education programs must provide a scholarly environment for acquiring the necessary cognitive and procedural clinical skills essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program. It is also imperative that appropriate resources and facilities be present. Service obligations must not compromise educational goals and objectives.

#### A. Qualifications of the Program Director

There must be a single program director responsible for the subspecialty program. The director must be an experienced educator and supervisor of residents in the subspecialty. He or she must be certified by the American Board of Anesthesiology or possess equivalent qualifications, and shall have had post residency experience in the subspecialty, preferably fellowship training. (See Program Requirements for Residency Education in the individual subspecialties for subspecialty certification requirements.) The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.) The program director must be a member of the anesthesiology faculty, spend essentially all professional time in the subspecialty, and devote sufficient time to fulfill all responsibilities inherent in meeting the educational goals of the program.

#### B. Responsibilities of the Program Director

It is the responsibility of the subspecialty program director to support the residency education program by devoting his/her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff and should be readily available for review.
2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
4. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
5. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

6. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
7. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
8. Preparation of an accurate statistical and narrative description of the program.
9. Notification of the RRC regarding major programmatic changes. Prior approval of the RRC is required for the addition or deletion of a major participating hospital and for a major change in the program's organization.

### C. Faculty

There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## III. Facilities and Resources

### A. Space and Equipment

(See Program Requirements for Residency Education in the individual subspecialties for space and equipment requirements.)

### B. Library

Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. Access to computerized literature search facilities is necessary. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## IV. Educational Program

The director and teaching staff must prepare and comply with written goals for the program. All educational components of the program should be related to the program goals. The program design must be approved by the RRC as part of the regular review process. A written statement of the educational objectives must be given to each resident.

A postgraduate residency must provide advanced education so that the residents can acquire special skill and knowledge in a specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound judgment, and research creativity. The technical component must provide appropriate opportunity for the residents to acquire the operative and other psychomotor skills required for the practice of the subspecialty.

### A. Clinical Components

A sufficient number of patients must be available to ensure appropriate inpatient and outpatient experience for each subspecialty resident, without adversely affecting the experience of residents in the anesthesiology core program.

The total number of residents is dependent on the program's resources and its capacity to provide an excellent educational experience.

### B. Didactic Components

Subspecialty conferences, including review of all current complications and deaths, seminars, and clinical and basic science instruction, must be regularly scheduled. Active participation of the subspecialty resident in the planning and the production of these meetings is essential.

### C. Supervision

A resident must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for anesthesiology residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

There must be close interaction between the core residency program in anesthesiology and the subspecialty program. Lines of responsibility for the anesthesiology residents and the subspecialty resident must be clearly defined. It is imperative that the educational program for the subspecialty resident not adversely affect the education of the anesthesiology residents, in terms of either experience or patient responsibility.

### D. Duty Hours and Conditions of Work

The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while ensuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night.

During the on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in

noneducational activities that can be discharged properly by other personnel.

#### **E. Substance Abuse**

The program must have a written policy specifically addressing the needs of anesthesiology and an education program regarding substance abuse.

#### **F. Scholarly Activity**

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly activities.

#### **G. Research**

A subspecialty program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity. (Refer to Program Requirements for Residency Education in the individual subspecialties for additional research requirements.)

### **V. Evaluation**

#### **A. Residents**

Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents. The assessment must include cognitive, motor, and interpersonal skills as well as judgment.

The program director, with participation of members of the teaching staff, shall

1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient

professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

#### **B. Faculty**

Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in these evaluations.

#### **C. Program**

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the subspecialty program director, the core anesthesiology program director, and by the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

There must be continuing quality improvement, utilization review, and evaluation.

### **VI. Board Certification**

Questions relating to educational programs and communication for the ACGME should be directed to the Executive Director, Residency Review Committee for Anesthesiology, 515 North State Street, Suite 2000, Chicago, IL 60610. Inquiries relating to the credentials of individual applicants for certification should be directed to the American Board of Anesthesiology, 4101 Lake Boone Trail, Raleigh, NC 27607-7506.

*ACGME: February 1998 Effective: July 1998*

## **Program Requirements for Residency Education in Anesthesiology Critical Care Medicine (Anesthesiology)**

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Anesthesiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

### **I. Scope and Duration of Training**

#### **A. Definition and Scope of the Specialty**

Anesthesiology critical care medicine (ACCM) is a subspecialty of anesthesiology devoted to the acute and long-term care of critically ill patients with multiple organ system derangements.

#### **B. Duration of Training**

Subspecialty training in ACCM shall consist of 12 months of full-time training, beginning after satisfactory completion of a core anesthesiology residency program. At least 9 of the 12 months of training in ACCM must be spent in the care of critically ill patients in intensive care units (ICUs). The remainder may be in clinical activities or research relevant to critical care.

#### **C. Objectives**

The subspecialty program in ACCM must be structured to provide resources necessary to assure optimal patient care while providing its trainees the opportunity to develop skills in clinical care and judgment, teaching, administration, and research.

Exposure should be provided to a wide variety of clinical problems in adult and pediatric patients necessary for the development of broad clinical skills required for a subspecialist in CCM.

## II. Institutional Organization

### A. Relationship to Core Program

Accreditation of a subspecialty training program in ACCM will be granted only when the program is in direct association with a core residency program in anesthesiology accredited by the Accreditation Council for Graduate Medical Education (ACGME). Therefore, subspecialty training in ACCM can occur only in an institution in which there is an ACGME-accredited residency program in anesthesiology, or in an institution related by formal integration agreement to the core program.

If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the ACCM program is conducted. Rotations outside the institution in which the ACCM program is based should not exceed 4 months.

(Refer to the Program Requirements for Residency Education in Anesthesiology for the definitions governing affiliated and integrated institutions.)

The subspecialty program must function in conjunction with the core program in anesthesiology. The lines of responsibility between resident staffs in both the core program and the subspecialty program must be clearly delineated.

In addition, there must be ACGME-accredited core residencies in general surgery and internal medicine.

### B. Institutional Policy: Resources

There should be an institutional policy governing the educational resources committed to critical care programs, ensuring cooperation of all involved disciplines. Where more than one critical care program exists in an institution, it will be the responsibility of the institution to coordinate interdisciplinary requirements.

## III. Program Director/Faculty

### A. Program Director

The program director of subspecialty training in ACCM must be an anesthesiologist who is certified in critical care medicine (CCM) by the American Board of Anesthesiology, or who possesses appropriate educational qualifications in critical care medicine as determined by the Residency Review Committee (RRC). The subspecialty program director has responsibility for the teaching program in ACCM subject to the approval of the director of the core residency training program in anesthesiology.

### B. Medical Director

The director of the critical care program must be the medical director or co-medical director of one or more of the critical care units in which the majority of the clinical training of the critical care program is required to take place, and he or she must be personally involved in clinical supervision and teaching of anesthesiology critical care residents in that unit.

### C. Faculty

There must be evidence of active participation by qualified anesthesiologists with a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty trainees in ACCM must possess expertise in the care of critically ill patients. Recognition that such expertise will often cross specialty boundaries emphasizes the importance of collegial relationships and consultation between the CCM program director and faculty from other

disciplines including, but not limited to, surgery and its subspecialties, internal medicine and its subspecialties, pediatrics, obstetrics and gynecology, pathology, and radiology. Where appropriate, supervision and teaching by faculty in these disciplines should be integrated into the teaching program for subspecialty trainees in ACCM.

Anesthesiology faculty with expertise in critical care must be involved in teaching ACCM residents and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

## IV. Facilities and Resources

### A. ICUs

Subspecialty training in ACCM will occur principally in areas of the hospital commonly characterized as ICUs. Such ICUs are capable of providing acute and long-term life support of patients with multiple organ system derangements. Examples of ICUs include, but are not limited to, multidiscipline, surgical, medical, neonatal and pediatric, high-risk pregnancy, neurosurgical, trauma, and burn units. An ICU must be located in a designated area within the hospital and designed specifically for care of critically ill patients.

### B. Patient Population

To provide sufficient range of exposure, an ICU that averages a census of at least five patients for each subspecialty trainee in ACCM is recommended.

### C. Support Services

1. Adequate numbers of specially trained nurses plus technicians with expertise in biomedical engineering and respiratory therapy must be available.
2. There should be readily available, at all times, facilities to provide laboratory measurements pertinent to care of critically ill patients with multiple organ system derangements. These include, but are not limited to, measurement of blood chemistries, blood gases and pH, culture and sensitivity, toxicology, and analysis of plasma drug concentrations.
3. Facilities for special radiologic imaging procedures and echocardiography are essential.
4. Appropriate monitoring and life-support equipment must be readily available and representative of current levels of technology.

### D. Library

Conveniently located library facilities and space for research and teaching conferences in CCM are essential. There must be a departmental library with adequate material relevant to critical care. This may be supplemented but not replaced by private faculty book collections and hospital and institutional libraries.

### E. Space

Space for research and teaching conferences in critical care must be available.

## V. Educational Program

### A. Clinical Components

The subspecialty trainee in ACCM must gain clinical experience in the following areas:

1. Airway maintenance and management
2. Mechanical ventilation
3. Devices that supply supplemental oxygen
4. Indications of and techniques for emergency and therapeutic treatment of conditions requiring thoracentesis and/or tube thoracotomy

5. Emergency and therapeutic fiber-optic laryngotracheo-bronchoscopy
6. Assessment and evaluation of pulmonary function
7. Cardiopulmonary resuscitation (Residents must be certified in ACLS, ATLS, and PALS prior to completion of their ACCM training. The program must provide access to this training.)
8. Placement and management of arterial, central venous, and pulmonary arterial catheters
9. Emergency and therapeutic placement of pacemakers
10. Pharmacologic and mechanical support of circulation
11. Evaluation and management of central nervous system dysfunction
12. Recognition and treatment of hepatic and renal dysfunction
13. Diagnosis and treatment of sepsis
14. Fluid resuscitation and management of massive blood loss
15. Enteral and total parenteral nutrition
16. Bioengineering and monitoring
17. Interpretation of laboratory results
18. Psychiatric effects of critical illness
19. Transesophageal echocardiography (TEE)
20. Ethical aspects of critical care

### B. Didactic Components

The teaching curriculum for the subspecialty trainee in ACCM must include the following areas:

1. Resuscitation
2. Cardiovascular physiology, pathology, pathophysiology, and therapy
3. Respiratory physiology, pathology, pathophysiology, and therapy
4. Renal physiology, pathology, pathophysiology, and therapy
5. Central nervous system physiology, pathology, pathophysiology, and therapy
6. Pain management of critically ill patients
7. Metabolic and endocrine effects of critical illness
8. Infectious disease physiology, pathology, pathophysiology, and therapy
9. Hematologic disorders secondary to critical illness
10. Gastrointestinal, genitourinary, and obstetric-gynecologic acute disorders
11. Trauma, including burns
12. Monitoring, bioengineering, biostatistics
13. Life-threatening pediatric conditions
14. End of life care
15. Pharmacokinetics and dynamics; drug metabolism and excretion in critical illness
16. Transport of critically ill patients
17. Administrative and management principles and techniques
18. Medical informatics
19. Cost-effective care
20. Ethical and legal aspects
21. Effective interpersonal and communication skills with patients, family members, and other health care providers

### C. Consultation

In preparation for roles as consultants to other specialists, the subspecialty trainee in ACCM must have the opportunity to provide consultation under the direction of faculty responsible for teaching in the ACCM program.

### D. ICU Administration

Subspecialty trainees in ACCM should gain experience in the administration of an ICU as related to appointment and training of nonphysician personnel, establishment of policies regulating functioning of the ICU, and coordination of the activities of the ICU with other in-hospital units.

### E. Conferences

Subspecialty conferences, including mortality and morbidity conferences, journal reviews, and research seminars, must be regularly scheduled. Active participation of the subspecialty trainee in ACCM in the planning and production of these conferences is essential. Attendance at multidisciplinary conferences is encouraged, with particular attention given to those conferences relevant to CCM.

### VI. Scholarly Activity

Refer to the Program Requirements for Residency Education in the Subspecialties of Anesthesiology for requirements concerning scholarly activity.

### VII. Evaluation

Faculty responsible for teaching subspecialty trainees in ACCM must provide critical evaluations of each trainee's progress and competence to the director at the end of 6 months and 12 months of training. These evaluations should include intellectual abilities, manual skills, attitudes, and interpersonal relationships, as well as specific tasks of patient management, decision-making skills, and critical analysis of clinical situations. The subspecialty trainee in ACCM must achieve an overall satisfactory evaluation at 12 months to receive credit for training. There must be written feedback of these evaluations to the subspecialty trainee.

Written and confidential evaluation of CCM faculty performance by the resident must take place once a year.

Written evaluations of patient care and subspecialty training objectives are required annually.

### VIII. Board Certification

One measure of the quality of a program is the record of its graduates in obtaining certification in critical care by the American Board of Anesthesiology. The RRC will consider this information as part of the overall evaluation of the program.

*ACGME: February 2000 Effective: January 2001*

## Program Requirements for Residency Education in Anesthesiology Pain Management (Anesthesiology)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Anesthesiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

### I. Scope and Duration of Training

#### A. Definition and Scope of the Specialty

Pain management is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

#### B. Duration of Training

Subspecialty training in pain management shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of

training must be in clinical pain management. The remainder may be in clinical activities or research relevant to pain management. Assignments must not be made to activities not directly related to pain management.

## II. Institutional Organization

### A. Relationship to Core Program

Accreditation of a subspecialty program in pain management will be granted only when the program is in direct association with a core residency program in anesthesiology accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain management program is conducted. Rotations outside the institution in which the pain management program is based should not exceed 4 months.

### B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the RRC. Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

### C. Institutional Policy: Resources

Because pain management is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain management that ensures cooperation of all involved disciplines.

## III. Program Director/Faculty

### A. Program Director

The program director must be an anesthesiologist who has been certified in pain management by the American Board of Anesthesiology or who has equivalent qualifications in pain management.

The subspecialty program director has responsibility for the teaching program in pain management subject to the approval of the director of the core residency program.

### B. Medical Director

The medical director of the pain management service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain management, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

### C. Faculty

Qualified physicians with expertise in pain management must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain management must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from ABMS-recognized medical specialties other than anesthesiology. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain management.

At least three anesthesiology faculty with expertise in pain management should be involved in teaching pain management residents

and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

## IV. Facilities and Resources

### A. Space and Equipment

A pain management center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of pain patients. Space for research and teaching conferences in pain management must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain management procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

### B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services as indicated (vocational, nursing, pharmacy, dietary, etc)
8. Appropriate electrodiagnostic facilities

### C. Patient Population

For each subspecialty pain resident each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain management.

### D. Library

There must be a departmental library with adequate material relevant to pain management. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries.

## V. The Educational Program

### A. Educational Environment

An accredited program in pain management must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

### B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain management. Subspecialty training in pain management must include experience in the management of both inpatients and outpatients.

The resident must become familiar with the theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques

5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification
10. Physical therapy
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Alternative pain therapies
16. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
17. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain management.

The pain management resident must have significant experience in providing consultation.

#### C. Didactic Components

The pain management curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain
3. Pharmacology of opiates, non-narcotic analgesics, and nonsteroidal anti-inflammatory agents
4. Pharmacology of centrally acting drugs used in pain management
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Principles of diagnostic testing
8. Nerve blocks in pain management
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain management
12. Principles and techniques of cancer pain management, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the chronic pain patient
15. Principles of multidisciplinary approaches to pain management
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain management center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation procedures

#### D. Pain Center Management

Subspecialty residents in pain management must gain experience in the management of a pain center (clinic) with regard to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, and coordination of the activities of the pain center with other inpatient and outpatient services.

#### E. Resident Teaching

The subspecialty resident in pain management must become experienced in teaching principles of pain management to resident physicians, medical students, and other health care professionals.

#### F. Conferences

Pain management conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain management resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

#### VI. Scholarly Activity

(Refer to the Program Requirements for Residency Education in the Subspecialties of Anesthesiology for requirements concerning scholarly activity.)

#### VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in pain management anesthesiology must provide critical evaluations of each resident's progress and competence to the anesthesiology pain management program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in pain management anesthesiology must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in pain management anesthesiology should be involved in continuous quality improvement, utilization review, and risk management.

#### VIII. Board Certification

The record of its graduates in obtaining certification in pain management by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

*ACGME: June 1998 Effective: July 1999*

## Program Requirements for Residency Education in Pediatric Anesthesiology (Anesthesiology)

### I. Introduction

#### A. Definition and Scope of the Specialty

Pediatric anesthesiology is the subspecialty of anesthesiology devoted to the preoperative, intraoperative, and postoperative anesthetic care of pediatric patients.

#### B. Duration and Scope of Education

Subspecialty training in pediatric anesthesiology shall be 12 months in duration, beginning after satisfactory completion of the residency program in anesthesiology as required for entry into the

examination system of the American Board of Anesthesiology. Subspecialty training in pediatric anesthesiology is in addition to the minimum requirements described in the Program Requirements for the core program in anesthesiology.

The clinical training in pediatric anesthesiology must be spent in caring for pediatric patients in the operating rooms, in other anesthetizing locations, and in intensive care units. The training will include experience in providing anesthesia both for inpatient and outpatient surgical procedures and for nonoperative procedures outside the operating rooms, as well as preanesthesia preparation and postanesthesia care, pain management, and advanced life support for neonates, infants, children, and adolescents.

### C. Goals and Objectives

The subspecialty program in pediatric anesthesiology must be structured to ensure optimal patient care while providing residents the opportunity to develop skills in clinical care and judgment, teaching, administration, and research. The subspecialist in pediatric anesthesiology should be proficient not only in providing anesthesia care for neonates, infants, children, and adolescents undergoing a wide variety of surgical, diagnostic, and therapeutic procedures, but also in pain management, critical perioperative care, and advanced life support. To meet these goals, the program should provide exposure to the wide variety of clinical problems in pediatric patients, as outlined in V.B., that are necessary for the development of these clinical skills.

## II. Institutional Organization

### A. Relationship to the Core Residency Program

Accreditation of a subspecialty program in pediatric anesthesiology will be granted only when the program is associated with a core residency program in anesthesiology that is accredited by the Accreditation Council for Graduate Medical Education (ACGME). Therefore, subspecialty training in pediatric anesthesiology can occur only in an institution in which there is an ACGME-accredited residency program in anesthesiology or in an institution related to a core program by a formal integration agreement. The director of the core anesthesiology residency program is responsible for the appointment of the director of the pediatric anesthesiology subspecialty program and determines the activities of the appointee and the duration of the appointment.

There must be close cooperation between the core program and the subspecialty training program. The division of responsibilities between residents in the core program and those in the subspecialty program must be clearly delineated.

### B. Institutional Policy

There should be an institutional policy governing the educational resources committed to pediatric anesthesiology programs.

## III. Faculty Qualifications and Responsibilities

### A. Program Director

#### 1. Qualifications of the Program Director

The program director in pediatric anesthesiology must be an anesthesiologist who is certified by the American Board of Anesthesiology or who has equivalent qualifications. The program director also must be licensed to practice medicine in the state where the institution that sponsors the program is located (certain federal programs are exempted) and have an appointment in good standing to the medical staff of an institution participating in the program. He/she must have training and/or experience in providing anesthesia care for pediatric patients beyond the requirement for completion of a core anesthesiology residency.

The program director in pediatric anesthesiology has responsibility for the training program subject to the approval of the program director of the core residency training program in anesthesiology. He/she must devote sufficient time to provide adequate leadership to the program and supervision for the residents. The clinical director of the pediatric anesthesiology service may be someone other than the program director.

#### 2. Responsibilities of the Program Director

- a. Preparation, periodic review, and, if necessary, revision of a written outline of the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- f. Preparation of an accurate statistical and narrative description of the program, as requested by the Residency Review Committee (RRC).

### B. Faculty

Although the number of faculty members involved in teaching residents in pediatric anesthesiology will vary, it is recommended that at least three faculty members be involved, and that these be equal to or greater than two full-time equivalents, including the program director. A ratio of no less than one full-time equivalent faculty member to one subspecialty resident shall be maintained. The RRC understands that *full-time* means that the faculty member devotes essentially all professional time to the program.

There must be evidence of active participation by qualified physicians with training and/or expertise in pediatric anesthesiology beyond the requirement for completion of a core anesthesiology residency. The faculty must possess expertise in the care of pediatric patients and must have a continuous and meaningful role in the subspecialty training program.

The program should include teaching in multidisciplinary conferences by faculty in pediatric and neonatal intensive care, pediatric medicine, and pediatric surgery.

The pediatric anesthesiology program director and faculty responsible for teaching subspecialty residents in pediatric anesthesiology must maintain an active role in scholarly pursuits pertaining to pediatric anesthesiology, as evidenced by participation in continuing medical education as well as by involvement in research as it pertains to the care of pediatric patients.

## IV. Clinical and Educational Facilities and Resources

The following resources and facilities are necessary to the program:

- A. Intensive care units for both newborns and older children.
- B. An emergency department in which children of all ages can be effectively managed 24 hours a day.

- C. Operating rooms adequately designed and equipped for the management of pediatric patients. A postanesthesia care area adequately designed and equipped for the management of pediatric patients must be located near the operating room suite.
- D. Pediatric surgical patients in sufficient volume and variety to provide a broad educational experience for the program. Surgeons with special pediatric training and/or experience in general surgery, otolaryngology, neurosurgery, GU, ophthalmology, orthopedics, and plastic surgery must be available.
- E. Monitoring and advanced life-support equipment representative of current levels of technology.
- F. Allied health staff and other support personnel.
- G. Facilities that are readily available at all times to provide prompt laboratory measurements pertinent to the care of pediatric patients. These include but are not limited to measurement of blood chemistries, blood gases and pH, oxygen saturation, hematocrit/hemoglobin, and clotting function.
- H. Conveniently located library facilities and space for research and teaching conferences in pediatric anesthesiology.

## **V. Educational Program**

### **A. Goals and Objectives**

The director and teaching staff must prepare and comply with written goals for the program. All educational components of the program should be related to the program goals. The program design must be approved by the RRC as part of the regular review process. A written statement of the educational objectives must be given to each resident.

### **B. Clinical Components**

The subspecialty resident in pediatric anesthesiology should gain clinical experience in the following areas of care of neonates, infants, children, and adolescents:

1. Preoperative assessment of children scheduled for surgery
2. Cardiopulmonary resuscitation and advanced life support
3. Management of normal and abnormal airways
4. Mechanical ventilation
5. Temperature regulation
6. Placement of venous and arterial catheters
7. Pharmacologic support of the circulation
8. Management of both normal perioperative fluid therapy and massive fluid and/or blood loss
9. Interpretation of laboratory results
10. Management of children requiring general anesthesia for elective and emergent surgery for a wide variety of surgical conditions including neonatal surgical emergencies, cardiopulmonary bypass, solid organ transplantation, and congenital disorders
11. Techniques for administering regional anesthesia for inpatient and ambulatory surgery in children
12. Sedation or anesthesia for children outside the operating rooms, including those undergoing radiologic studies and treatment and acutely ill and severely injured children in the emergency department
13. Recognition, prevention, and treatment of pain in medical and surgical patients
14. Consultation for medical and surgical patients
15. Recognition and treatment of perioperative vital organ dysfunction
16. Diagnosis and perioperative management of congenital and acquired disorders
17. Participation in the care of critically ill infants and children in a neonatal and/or pediatric intensive care unit
18. Emergency transport of critically ill patients within the hospital and between hospitals

19. Psychological support of patients and their families

In preparation for roles as consultants to other specialists, subspecialty residents in pediatric anesthesiology should have the opportunity to provide consultation under the direction of faculty responsible for teaching in the pediatric anesthesiology program. This should include assessment of the appropriateness of a patient's preparation for surgery and recognition of when an institution's personnel, equipment, and/or facilities are not appropriate for management of the patient.

### **C. Didactic Components**

The didactic curriculum, provided through lectures and reading, should include the following areas, with emphasis on developmental and maturational aspects as they pertain to anesthesia and life support for pediatric patients:

1. Cardiopulmonary resuscitation
2. Pharmacokinetics and pharmacodynamics and mechanisms of drug delivery
3. Cardiovascular, respiratory, renal, hepatic, and central nervous system physiology, pathophysiology, and therapy
4. Metabolic and endocrine effects of surgery and critical illness
5. Infectious disease pathophysiology and therapy
6. Coagulation abnormalities and therapy
7. Normal and abnormal physical and psychological development
8. Trauma, including burn management
9. Congenital anomalies and developmental delay
10. Medical and surgical problems common in children
11. Use and toxicity of local and general anesthetic agents
12. Airway problems common in children
13. Pain management in pediatric patients of all ages
14. Ethical and legal aspects of care
15. Transport of critically ill patients

Subspecialty conferences, including morbidity and mortality conferences, journal reviews, and research seminars, should be regularly attended. Active participation of the subspecialty resident in pediatric anesthesiology in the planning and production of these conferences is essential. However, the faculty should be the conference leaders in the majority of the sessions. Attendance by residents at multidisciplinary conferences, especially those relevant to pediatric anesthesiology, is encouraged.

### **D. Resident Policies**

#### **1. Duty Hours**

While the actual number of hours worked by subspecialty residents may vary, residents should have sufficient time off to avoid undue fatigue and stress. It is recommended that residents be allowed to spend, on average, at least 1 full day out of 7 away from the hospital and should be assigned on-call duty in the hospital no more frequently than, on average, every fourth night. The program director is responsible for monitoring the residents' activities to ensure adherence to this recommendation.

#### **2. Peer Interaction**

Subspecialty residents in pediatric anesthesiology should become experienced in teaching principles of pediatric anesthesiology to other resident physicians, medical students, and other health-care professionals. This experience should correlate basic biomedical knowledge with clinical aspects of pediatric anesthesiology, including the management of patients requiring sedation outside the operating rooms as well as pain management and life support.

### **E. Scholarly Activities**

The subspecialty training program in pediatric anesthesiology should provide the opportunity for active resident participation in research projects pertinent to pediatric anesthesia. Subspecialty

residents should be instructed in the conduct of scholarly activities and the evaluation of investigative methods and interpretation of data, including statistics; they should have the opportunity to develop competence in critical assessment of new therapies and of the medical literature.

#### F. Additional Required Components

There should be prompt access to consultation with other disciplines, including pediatric subspecialties of neonatology, cardiology, neurology, pulmonology, radiology, critical care, emergency medicine, and pediatric subspecialties of surgical fields. To provide the necessary breadth of experience, an accredited residency training program in pediatrics is required within the institution. Residency programs or other equivalent clinical expertise in other specialties, particularly pediatric general surgery and pediatric surgical subspecialties, such as otolaryngology, GU, neurosurgery, ophthalmology, and orthopedics, and pediatric radiology, are highly desirable.

#### VI. Evaluation

- A. Faculty responsible for teaching subspecialty residents in pediatric anesthesiology must provide critical evaluations of each resident's progress and competence to the pediatric anesthesiology program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in pediatric anesthesiology must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. There must be a regular opportunity for residents to provide written, confidential evaluation of the faculty and program.
- C. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in pediatric anesthesiology should be involved in continuous quality improvement, utilization review, and risk management.
- D. Periodic evaluation of subspecialty training objectives is encouraged.

ACGME: February 1997 Effective: February 1997

## Program Requirements for Residency Education in Colon and Rectal Surgery

### I. Introduction

#### A. Duration and Scope of Training

Institutions offering residencies in colon and rectal surgery must provide the necessary education to qualify the resident as a colon and rectal specialist in the care of patients, in teaching, and in research. Surgeons admitted to each residency are required to have completed a minimum of 5 years of an accredited, graded program in general surgery. Thus, the residents should already have developed a satisfactory level of clinical maturity, technical skills, and surgical judgment that will enable them to begin a residency in colon and rectal surgery for the purpose of specializing in this field of surgery. The period of training must be 1 year, and the program must comply with the institutional requirements for residency training.

#### B. Program Goals and Objectives

1. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
2. The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
  - a. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
  - b. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
  - c. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
  - d. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
  - e. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
  - f. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

#### C. Program Design

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Colon and Rectal Surgery as part of the regular review process.
2. Participation by any institution providing more than 3 months of training must be approved by the RRC.

## II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include the following:
  - a. Requisite and documented clinical, educational and administrative abilities and experience
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
  - c. Certification by the American Board of Colon and Rectal Surgery or appropriate educational qualifications, as determined by the RRC
  - d. Appointment in good standing to the medical staff of an institution participating in the program
2. Responsibilities of the program director include the following:
  - a. Full responsibility for the teaching or work done in the department or section.
  - b. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - c. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - d. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - e. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - f. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

- 1) at least semiannually evaluate the knowledge, skills and professional growth of the residents, using appropriate criteria and procedures;
  - 2) communicate each evaluation to the resident in a timely manner;
  - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
  - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- g. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- h. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

### B. Faculty

1. There should be a minimum of two staff members, including the program director, who are certified by the American Board of Colon and Rectal Surgery or possess appropriate educational qualifications, and who have significant teaching responsibilities. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members must have the necessary interest and ability to perform their teaching duties adequately, have sound clinical and teaching abilities, support the goals and objectives of the program, have a commitment to their own continuing medical education, and participate in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Other Program Personnel

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

## III. Facilities and Resources

- A. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## IV. Educational Program

- A. The program should supply the necessary volume and variety of colon and rectal surgery to assure adequate training of residents. If there is insufficient volume or variety in the primary institutions, arrangements should be made for an affiliation with a participating institution to correct the inadequacy. Each resident

- must have ample opportunity and responsibility for the care of patients with anorectal and colonic diseases.
- B. The educational program must also include training in both diagnostic and therapeutic colonoscopy. The objective is to develop the necessary competence in the use of this procedure to qualify as an expert in the field. Therefore, adequate numbers of both diagnostic and therapeutic colonoscopies must be available either at the colon and rectal training program or through an appropriate institutional affiliation to satisfy this particular need.
  - C. An important aspect of the educational program is training in an outpatient facility to develop skills in patient evaluation, examination, office treatment, and surgical aftercare. Where feasible, such training should include work in the faculty member's office as well as in the outpatient clinic of the hospital.
  - D. Residents in colon and rectal surgery should be given the opportunity to obtain sufficient knowledge of those aspects of anesthesiology, radiology, and pathology that relate to colon and rectal surgery to develop overall competence as a specialist. Such training is best accomplished in cooperation with the departments of anesthesiology, radiology, and pathology.
  - E. Teaching contributes to the educational process, and therefore should be a regular part of the training program. The resident should assist when possible in the instruction of general surgical residents and medical students, as well as nurses and other allied health professionals. It is important to include instruction in the care of intestinal stomas, especially in institutions that do not have enterostomal therapists.
  - F. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:
    1. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
    2. Participation in journal clubs and research conferences.
    3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
    4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
    5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
    6. Encouragement of the trainee to undertake clinical and/or laboratory investigations and to present their research in scientific meetings and to publish them in recognized medical journals.
  - G. Graduate education in colon and rectal surgery requires a commitment to continuity of and excellence in patient care. At the same time, patients have a right to expect an alert, responsible and responsive physician dedicated to delivering effective and appropriate care. The program director, therefore, must ensure supervision of each resident, commensurate with that resident's knowledge, skill and experience and with the complexity of the patient's illness. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of resident responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked and on-call time will vary at this senior level and, therefore, necessitates flexibility.
  - H. The resident's activity outside the educational program should not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and the house officer.
  - I. There should be a documented semiannual evaluation of the resident's performance. Likewise, there should be opportunity for the resident to evaluate the program and the faculty.

## V. Evaluation

### A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include
  - a. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
  - b. mechanisms for providing regular and timely performance feedback to residents; and
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.
2. Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

### B. Program Evaluation

1. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.
2. The residency program should use resident performance and outcome assessment results in its evaluation of the educational effectiveness of the residency program.
3. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

## VI. Other

- A. One measure of the educational quality of a program is the performance of its graduates on the examination of the American Board of Colon and Rectal Surgery.
- B. Those who plan to seek certification by the American Board of Colon and Rectal Surgery should communicate with the Secretary of the Board prior to beginning their residency to be certain that their general surgical training is acceptable as one of the requirements for certification.

*ACGME: September 2000 Effective: July 2001*

# Program Requirements for Residency Education in Dermatology

## I. Duration and Scope of Training

- A. Accredited training programs in dermatology shall be organized to provide trainees with the educational and practical experience that will enable them to deliver superior specialized care to patients with diseases of the skin, hair, nails and mucous membranes. Such experience must be varied and broad, progressive and systematic, and of sufficient duration. Moreover, it must include instruction in the pertinent basic sciences and in all clinical areas that bear upon the specialty of dermatology and training in research and teaching. Accomplishment of these objectives requires a suitable institutional environment; a cooperative and supportive administrative authority; a stable financial base; an enthusiastic, competent, and available staff; an adequate patient population; modern, efficient equipment and space; and satisfactory liaison with other disciplines that relate to dermatology.
- B. A dermatology residency may be accredited to offer either 3 or 4 years of graduate medical education:
1. A 3-year program is preceded by a broad-based clinical year of training (PGY-1) in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program or similar program accredited in Canada.
  2. A 4-year program must provide a broad-based clinical experience during the first year and 3 years of dermatology education in the second through fourth year of the program.
  3. Approximately 75% of the resident's time during the 3 years of dermatology training must be related to the direct care of dermatologic outpatients and inpatients; this includes consultations, clinical conferences and inpatient rounds.
  4. Dermatopathology, microbiology, and other basic science lectures, seminars, and conferences are essential components of the resident's training.
  5. Exceptionally, accreditation of residency programs of less than 3 years is possible, but only under the following conditions:
    - a. This training must represent an unusual and highly specialized experience, in research or in a selected major area of dermatology, in an institution with extraordinary capability in such fields and with multiple accredited training programs in other disciplines.
    - b. Moreover, training under such conditions will provide the trainee with only 1 year of credit to be applied against the necessary 3 years of training in dermatology. This training may not be used in lieu of the first postgraduate year or the first year of residency training in dermatology.
- C. The program director and teaching staff must prepare and comply with written educational goals for the program. All educational components of a program should be related to program goals.
1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 6 months of training in a program must be approved by the RRC.

## II. Institutional Organization

- A. The sponsoring institution must assure the financial, technical, and moral support and provide the necessary space, facilities,

and supply of patients for the establishment and maintenance of an approved residency program in dermatology.

- B. Adequate exposure to both outpatients and inpatients is necessary, as are opportunities to do research, to teach, and to become acquainted with administrative aspects of the specialty.
- C. A cooperative relationship with other disciplines in medicine will result in the most effective implementation of these activities.
- D. When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in dermatology, letters of agreement must be approved by the institutional governing boards.
- E. Affiliations should be avoided with institutions that
1. are at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult, or
  2. do not add to the educational value of the program.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

1. There must be a single program director responsible for the program.
2. Qualifications of the program director include:
  - a. At least 5 years experience (following residency) in the care of dermatology patients and as a teacher in a dermatology residency.
  - b. Requisite and documented clinical, educational and administrative abilities and experience.
  - c. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - d. Certification by the American Board of Dermatology or appropriate educational qualifications as judged by the RRC.
  - e. Appointment in good standing to the medical staff of an institution participating in the program.
3. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. Supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:

- i. At least semi-annually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  - ii. Communicate each evaluation to the resident in a timely manner.
  - iii. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - iv. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel
- f. Provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
  - h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
    - i. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.
    - j. Internal analysis of the training program by the program director and his/her staff is essential in addition to the regular surveys conducted by the RRC for Dermatology.
    - k. The program director must notify the secretary of the RRC of any change in the program, staffing, affiliations, or facilities that might significantly alter the educational experience.
    - l. At times of his or her absence, the program director must designate an interim director. If this period is for 6 months or longer, the RRC must be notified. Appointment of an interim director should not exceed 2 years, as it may have a detrimental effect on the program.
  - m. A log of surgical procedures performed by residents must be kept on file and provided upon request to the RRC or the site visitor. Documentation of resident evaluation, institutional and inter-institutional agreements, resident agreements and departmental statistics should be kept on file and provided upon request to the RRC or site visitor. The accurate and complete execution of application forms, progress reports and replies to other requests from the RRC is the responsibility of the program director. The care and precision given to these responses will be taken into consideration in the assessment of the training program.
  - n. The program director must ensure that residents are adequately supervised by faculty who are on-site and readily available to see patients at all times. Further, resident duty and on-call assignments must be made in a manner that ensures that neither education nor quality of patient care is jeopardized by inappropriate resident stress or fatigue. Physicians must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. In no case should a resident go off duty until the proper care and welfare of the patients have been ensured. Resident duty hours and night and weekend call must reflect the concept of responsibility for patients and provide for adequate patient care. Residents must not be required regularly to perform excessively difficult or prolonged duties. When averaged over 4 weeks, residents should spend no more than 80 hours per week in hospital duties. Residents at all levels should, on average, have the opportunity to spend at least 1 day out of 7 free of hospital duties and should be on call no more often than every third night. There should be opportunity to rest and sleep when on call for 24 hours or more.
    - o. Trainees should be adequately supported to permit their undivided attention to educational and service responsibilities.
    - p. The program director should advise all residents planning to seek certification by the American Board of Dermatology to complete the preliminary registration form of this board and to communicate directly with the executive director of the board to be certain that they are in full compliance with the requirements for certification.
    - q. The program director must have a full-time commitment to the educational program and related activities.

## B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. An instructor-to-trainee ratio of at least one-to-three is desirable, as is a minimum of two geographic full-time members of the clinical faculty, one of whom must be the training director.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. Members of the teaching staff must be actively involved in the planning and presentation of the program's didactic sessions.
6. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
7. At least once a year the teaching staff should evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.
8. Faculty from any and all clinical and basic science departments can and should be utilized to provide a complete educational experience for the trainees.

C.

Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### IV. The Educational Program

A. The training program shall be organized to permit the acquisition of experience and knowledge of dermatology in a graded and systematic fashion and ensure continuity of patient care.

B. Didactic training should complement and, when possible, precede or parallel the clinical activities. Such education should be organized to follow a curriculum that will ensure resident exposure to the complete range of disorders encountered by the dermatologist.

C. Appropriate clinical direction and supervision are necessary throughout the training period. As the experience and confidence of the trainees grow, increasing responsibility for patient management should be assumed; however, the authority and supervisory role of the staff at all levels of training must prevail.

D. An equivalent training experience must be assured for all trainees.

E. Teaching methods throughout the training period should include various combinations of lectures, conferences, seminars, demonstrations, individual or group study of color transparencies and histologic slides, clinical rounds, chart and record reviews, faculty-trainee sessions in small groups and one-to-one settings, book and journal reviews, and attendance at local, regional, and national meetings.

F. Projection equipment and facilities for reviewing and taking clinical photographs should be provided.

G. A library containing the essential texts, journals and other learning resources should be an integral part of each training area.

H. Space should also be made available for dermatology conferences, preferably dedicated for that purpose.

I. A vital part of the residency program is the structured study of the basic sciences related to dermatology, including allergy, anatomy, bacteriology, biochemistry, embryology, entomology, genetics, histology, immunology, molecular biology, mycology, oncology, parasitology, pathology, pharmacology, photobiology, physiology, serology, virology, and basic principles of therapy by physical agents. In addition, the structured study should include the basic medical sciences and principles that underlie dermatologic surgery and therapy by physical agents. Particular emphasis should be placed upon dermatologic microbiology, dermatopathology and immunodermatology. There should be a well-organized course of instruction and range of experience in these three disciplines. The dermatopathology training should be directed by a physician with special qualification, or its equivalent, in dermatopathology.

J. To facilitate clinical and laboratory teaching it is essential that the department have an adequate supply of properly classified anatomic and pathologic materials, including histologic and photographic slides, and that the resident participate actively in the interpretation of histopathologic sections. Clinical laboratory facilities for microscopic analysis of biologic specimens (eg, fungal and ectoparasite scrapings, Tzanck preparations, immunofluorescence), culture for microbes (eg, fungi, bacterial, viruses), and interpretation of histologic specimens by light and electron microscopy should be conveniently available.

K. The training should be sufficient to ensure a knowledge of and competence in the performance of procedures in allergy and immunology, cryosurgery, dermatologic surgery, laser surgery, dermatopathology, clinical pathology, parasitology, patch testing, photobiology, and topical and systemic pharmacotherapy and

microbiology, including sexually transmitted diseases. Among these disciplines, dermatologic surgery should be given special emphasis in the organization of and implementation into the training program. The surgical training should be directed by faculty who have had advanced training in dermatologic surgery. Dermatologic surgical training should include appropriate anesthesia, electrosurgery, cryosurgery, laser surgery, nail surgery, biopsy techniques, and excisional surgery with appropriate closures, including flaps and grafts when indicated.

L. The practice of dermatology is concerned with both ambulatory and hospitalized patients. It is essential that an active outpatient service furnish sufficient clinical material representing the broad array of diseases seen by the dermatologist. Suitable facilities that permit the use of modern diagnostic and therapeutic techniques in the care of these patients should be provided. Inpatient, daycare, or extended care facilities are also essential so that residents may have the opportunity to treat the more serious cutaneous diseases on a daily basis and observe the dermatologic manifestations of systemic disease. Properly supervised experience with appropriate follow-up in the provision of consultation to other services whose patients manifest skin diseases as secondary diagnosis is also necessary. The keeping of complete and accurate consultation records within the dermatology unit should be emphasized throughout this phase of the training. Space and equipment should be provided to permit instruction in dermatologic surgery, electrosurgery, phototherapy, cryosurgery, application of topical medicaments and dressings, and appropriate epicutaneous and intradermal testing, phototesting, and other diagnostic procedures.

M. During training it is necessary for trainees to gain an understanding of many diagnostic procedures and therapeutic techniques, even though they may not personally perform them. Residents should become familiar with hair transplantation, dermabrasion, sclerotherapy, laser resurfacing, liposuction, chemical peel and tissue augmentation. In addition, residents should gain experience with Mohs micrographic surgery. The physical modalities are especially notable, since an understanding of the basic properties of the electromagnetic spectrum is needed for the resident to become knowledgeable about the effects of various forms of this energy in the cause of disease and about their use in dermatologic diagnosis and therapy. Electron beam, x-ray, and laser are among these modalities. Even if some of these modalities are unavailable within a training unit, it is still an obligation of the director to assure that the trainee has received appropriate instruction concerning the disease implication and therapeutic application of these energy sources.

N. Training must be provided in cutaneous allergy and immunology and sexually transmitted diseases. Training should also be provided in appropriate aspects of environmental and industrial medicine, internal medicine, obstetrics and gynecology, ophthalmology, otolaryngology, pathology, pediatrics, physical medicine, preventive medicine, psychiatry, radiology, and surgery.

O. Experience in the teaching of dermatology to other residents, medical students, nurses, and/or allied health personnel is an important element of the residency program. In addition, trainees should, when possible, be given selected administrative responsibility commensurate with their interests, abilities, and qualifications.

#### V. General Competencies

The program must require its residents to develop the competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences

as needed in order for their residents to demonstrate the competencies.

**A. Patient Care**

Residents must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

**B. Medical Knowledge**

Residents must demonstrate knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

**C. Practice-based Learning and Improvement**

Residents must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices.

**D. Interpersonal and Communication Skills**

Residents must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with patients, their patients' families, and professional associates.

**E. Professionalism**

Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

**F. Systems-based Practice**

Residents must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

**VI. Program Research and Scholarly Activity**

**A.** Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

**B.** The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

**C.** Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases.

**D.** There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

**VII. Evaluation**

**A.** Periodic in-training evaluation of trainees should be carried out to insure that the trainee is making satisfactory progress. Both formal examinations and performance ratings by the faculty can be utilized, and the trainee should be personally apprised of his or her strengths and weaknesses at appropriate intervals at least twice annually. Completion by the program director of resident yearly report forms, such as those requested by the American Board of Dermatology and other certifying boards, is an important part of this evaluation process.

**B.** At least once a year the educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

**C.** One measure of the quality of a program is the performance of its graduates on the certifying examination of the American Board of Dermatology.

**D.** The program must demonstrate that it has an effective plan for evaluating residents and providing performance feedback to residents. Each program must develop and use a set of performance measures that produce dependable assessment of a resident's competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice. Programs that do not have in place an acceptable set of measures must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan. Adequacy of progress will be assessed against an implementation timetable determined by the RRC that takes into account availability of acceptable tools and current standards of practice. The program is responsible for obtaining the timetable and related information from the RRC.

*ACGME: February 2002 Effective: April 2002*

**Program Requirements for Fellowship Education in Dermatopathology (Dermatology)**

**I. Duration and Scope of Education**

**A.** Dermatopathology is the subspecialty of dermatology and pathology that is concerned with the study and diagnosis of diseases of the skin and adjacent mucous membranes, cutaneous appendages, hair, nails and subcutaneous tissues by histological, histochemical, immunological, ultrastructural, molecular, microbiological, and other related techniques.

**B.** Graduate medical education programs in dermatopathology must provide an organized educational experience for qualified physicians seeking to acquire the additional competence of a dermatopathologist.

**C.** Programs must provide organized education in all current aspects of dermatopathology, including basic science, laboratory

procedures, laboratory management, quality assurance, and self-assessment.

- D. The dermatopathology program must be an equal and joint function of the Department of Dermatology and of the Department of Pathology in the sponsoring institution that has an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in Dermatology and an ACGME-accredited residency in Anatomic Pathology (AP-3) or Anatomic and Clinical Pathology (APCP-4.)
- E. Dermatopathology programs must offer 12 months of education subsequent to the satisfactory completion of an ACGME-accredited residency in either dermatology or pathology.
- F. For all dermatopathology fellows, 50% of their education should be devoted to the study of dermatopathology as outlined in II.A.1. For those who have completed a pathology residency, 50% of the 1-year program should be education in clinical dermatology provided by the dermatology teaching staff. For those who have completed a dermatology residency, 50% of the program should be education in anatomic pathology provided by the pathology teaching staff.
- G. The director and teaching staff of the program must prepare and comply with written educational goals for the program and distribute them to applicants, fellows, and members of the teaching staff. All educational components of the program should be related to these goals.
- H. The program design and/or structure must be approved by the dermatopathology review committee as part of the regular review process.
- I. Participation by any institution providing more than 2 months of training in the program must be approved by the dermatopathology review committee.
- J. The educational effectiveness of the program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Written evaluations by fellows should be utilized in this process.

## **II. Educational Program**

### **A. Curriculum**

1. Fellows must actively participate in the daily review and diagnosis of current dermatopathology specimens. This experience must extend throughout the 12 months of accredited education and must be equivalent in quantity and quality for all fellows.
2. The program must include didactic instruction and practical experience in the diagnosis of skin disorders by direct inspection, and by histological, histochemical, immunological, molecular, microbiological, and other related techniques.
3. Dermatopathology fellows must be given clearly defined assignments and increasing responsibility as they progress through the program.
4. The program must provide a sufficient volume and variety of dermatopathology specimens (at least 5,000 new accessions per fellow per year) and other educational material for the fellow to acquire the qualifications of a consultant in dermatopathology.
5. The program must provide the fellow with the experience required to set up and to operate a dermatopathology laboratory and to supervise and train laboratory personnel.
6. All dermatopathology fellows should participate in patient examination appropriate to dermatopathology. Fellows who are pathologists must participate in the examination of at least 1,000 dermatology patients.
7. Dermatopathology fellows who are dermatologists must have exposure to surgical pathology. This experience should emphasize contemporary diagnostic techniques and require attendance at

surgical pathology conferences and the review of slide sets of diseases relevant to dermatopathology. Participation in autopsies appropriate to dermatopathology is desirable.

### **B. Educational Activities**

1. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held.
2. Instruction should include the use of and access to study sets and files of usual and unusual cases and other educational materials (eg, the Internet, etc).

## **III. Program Personnel**

### **A.**

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

### **B. Program Director**

1. The program director must be responsible for and have the authority to conduct the training program effectively. He or she must devote sufficient time to the program to ensure the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, fellow staff, and educational resource materials.
2. A program involving two or more participating institutions must have a single director with authority for the supervision and coordination of the portions of the program carried out at each institution.
3. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification in Dermatopathology by the American Board of Dermatology or American Board of Pathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of, and privileged in dermatopathology at, an institution participating in the program.
  - e. At least 5 years of experience (following fellowship) in the practice of dermatopathology.
  - f. Experience as a teacher and/or administrator in a dermatopathology or related program.
4. The program director must demonstrate continuing scholarly activity.
5. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to fellows and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection, supervision, and evaluation of the teaching staff and other program personnel at each institution participating in the program.
  - d. Supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all mem-

bers of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

- e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
  - i. At least semi-annually evaluate the knowledge, skills, and professional growth of the fellows, using appropriate criteria and procedures.
  - ii. Communicate each evaluation to the fellow in a timely manner.
  - iii. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - iv. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
- f. Provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
- g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and fellow complaints or grievances.
- h. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by the dermatopathology review committee.

### C. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications in dermatopathology to instruct and supervise adequately all the fellows in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
5. At least once a year the teaching staff should evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

6. At least once a year the teaching staff must evaluate the educational effectiveness of the program. In particular, the quality of the curriculum and the extent to which educational goals have been met by fellows must be assessed. Written evaluations of the program by fellows should be utilized in the process.

### D. Dermatopathology Fellows

Fellows appointed to an ACGME-accredited dermatopathology fellowship must have completed an ACGME-accredited residency in Anatomic Pathology (AP-3), Anatomic Pathology/Clinical Pathology (AP/CP-4), or Dermatology.

1. The number of positions requested must not exceed the educational resources available in a program.
2. Fellows must have the opportunity to assume increasing responsibility under supervision appropriate to their experience as they progress through the program.
3. Fellows should have the opportunity to become involved in dermatopathologic research and teaching during the program.
4. The program director must ensure that fellows are adequately supervised by faculty at all times. Further, fellow duty and on-call assignments must be made in a manner that ensures that neither education nor quality of patient care is jeopardized by fellow stress or fatigue. Physicians must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day. In no case should a trainee go off duty until the proper care and welfare of the patients have been ensured. Fellow duty hours and night and weekend call must reflect the concept of responsibility for patients and the provision of adequate patient care. Fellows must not be required regularly to perform excessive, prolonged duties. When averaged over 4 weeks, fellows should spend no more than 80 hours per week in hospital duties. Fellows should, on average, have the opportunity to spend at least 1 day out of 7 free of program duties and should be on call no more often than every third night. When on call for 24 hours or more, there should be opportunity to rest and sleep.

### E. Other Personnel

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. There must be a sufficient number of qualified professional, technical, and clerical personnel to support laboratory work and the educational program.

## IV. Institutional Resources

- A. There must be ample case material and supporting facilities to meet the training requirements in dermatopathology, dermatology, and pathology. Each dermatopathology fellow should examine at least 5,000 dermatopathology specimens (ie, inhouse or referred specimens in the institution's accessions file for which reports are generated.)
- B. There must be adequate equipment, laboratory space, office facilities, meeting rooms, classrooms, and research space to support service, teaching, and educational responsibilities.
- C. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- D. Fellows must have ready access to a major medical library either at the institution where the fellows are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or

collections of texts and journals must be readily available during nights and weekends.

## V. Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.

## VI. Evaluation

- A. There must be regular, written evaluation of fellows by teaching staff. Evaluations should be completed and discussed with the fellows at least once every 6 months.
- B. Fellows should submit written evaluations of the program at least once each year for confidential review by the director.

## VII. Certification and Accreditation

- A. The Residency Review Committees for Dermatology and Pathology are responsible for accreditation of graduate medical education programs in dermatopathology.
- B. The American Board of Dermatology and American Board of Pathology are responsible for certification of individual physicians in dermatopathology. Individuals who plan to seek certification should communicate with their respective boards to obtain the latest information regarding certification.

ACGME: February 2002 Effective: July 2002

# Program Requirements for Residency Education in Emergency Medicine

## I. Introduction

### A. General Characteristics of Accredited Programs

Residencies in emergency medicine are designed to prepare physicians for the practice of emergency medicine. These programs must teach the fundamental skills, knowledge, and humanistic qualities that constitute the foundations of emergency medicine practice and provide progressive responsibility for and experience in the application of these principles to enable effective management of clinical problems. Equal opportunity must be provided for the residents, under the guidance and supervision of a qualified faculty, to develop a satisfactory level of clinical maturity, judgment, and technical skill. On completion of the program, residents should be capable of practicing emergency medicine, able to incorporate new skills and knowledge during their careers, and able to monitor their own physical and mental well being and that of others.

### B. Length of the Program

1. The required length of an emergency medicine residency is 36 months in a curriculum under the control of the emergency medicine program director. Accreditation by the Accreditation Council for Graduate Medical Education (ACGME) is required for all years of the educational program.
2. Prior to entry into the program, each resident must be notified in writing of the required length of the program. This period may not be changed for a particular resident during his or her program unless there is a significant break in his or her education or the resident needs remedial education.

## II. Institutions

The institution(s) involved in the program must provide evidence of commitment to graduate medical education, including emergency medicine. While it is recognized that the practice of emergency medicine occurs within a variety of organizational structures, the administrative and academic structure must be organized in a way that facilitates the provision of an adequate educational experience. There must be evidence of an adequate financial commitment to the program.

### A. Medical School Affiliation

Medical school affiliation is desirable. When a medical school affiliation is present, there must be a written affiliation agreement or a letter of understanding documenting the duties and responsibilities of both the medical school and the program. Program core faculty should have appropriate faculty appointments at the medical school.

### B. Affiliation Agreements

1. When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be made explicit in an affiliation agreement with each institution that conforms to ACGME Institutional Requirements Section I.C.1-5.
2. In addition, there must be a current letter of understanding between the program director and the individual responsible for each resident rotation in the program that describes
  - a. the educational objectives and the means by which they will be accomplished and evaluated;

- b. the resources and facilities in the institution(s) that will be available to each resident, including but not limited to library and medical records;
  - c. the duties and responsibilities the resident will have on each rotation;
  - d. the relationship that will exist between emergency medicine residents and residents and faculty in other programs; and
  - e. the supervision emergency medicine residents will receive on each rotation.
3. For emergency medicine rotations, the physician responsible under the authority of the program director for the teaching and supervision of emergency medicine residents must be identified.

### C. Participating Institutions

1. The program should be based at a primary hospital (hereafter referred to as the *primary clinical site*.) More of the didactic and clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.
2. Programs using multiple hospitals must ensure the provision of a unified educational experience for the residents. Each affiliated institution must offer significant educational opportunities to the overall program. The reasons for including each institution must be stated. Affiliations that merely duplicate experiences otherwise available within the program are not desirable.
3. To maintain program cohesion, continuity, and critical mass, as well as to reduce stress on the residents and their families, mandated rotations to affiliated institutions that are geographically distant from the sponsoring institution are acceptable only if they offer special resources, unavailable locally, that significantly augment the overall educational experience of the program.
4. The number and geographic distribution of participating institutions must not preclude the satisfactory participation by all residents in conferences and other educational exercises.

### D. Facilities and Resources

In every hospital in which the emergency department is used as a training site, the following must be provided:

1. Adequate patient care space,
2. Adequate space for clinical support services,
3. Laboratory and diagnostic imaging results, especially those required on a STAT basis, returned on a timely basis,
4. Adequate program support space, including office space for faculty and residents,
5. Current medical library resources, including access to appropriate informational resources and medical databases in the emergency department. In addition, residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions. Services available should include the electronic retrieval of information from medical databases,
6. Adequate and readily accessible instructional space,
7. Information systems,
8. Appropriate security services and systems to ensure a safe working environment.

## III. Personnel

The program leadership and the program faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation. Specific responsibilities are defined below. Frequent changes in leadership or long periods of temporary leadership may adversely affect the accreditation status of the program.

### A. Chair/Chief of Emergency Medicine

The chair/chief of emergency medicine shall

1. be licensed to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.);
2. be a member of the program's core teaching faculty;
3. be qualified and have at least 3 years' experience as a clinician, administrator, and educator in emergency medicine;
4. be certified in emergency medicine by the American Board of Emergency Medicine or have appropriate educational qualifications in emergency medicine;
5. demonstrate active involvement in emergency medicine through
  - a. continuing medical education,
  - b. professional societies, and
  - c. scholarly activities; and
6. demonstrate leadership qualities and be capable of mentoring faculty, residents, administrators, and other health-care professionals.

### B. Program Director

There must be a single program director responsible for the program. The program director must function within a sound administrative organizational framework and have an effective program faculty as essential elements of an approved residency program. The program director must be a member of the program's core teaching faculty. The program director shall

1. be licensed to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.);
2. be qualified and have at least 3 years' experience as a clinician, administrator, and educator in emergency medicine;
3. be certified in emergency medicine by the American Board of Emergency Medicine or have appropriate educational qualifications in emergency medicine;
4. be active full time in emergency medicine, be clinically active, devote sufficient time and effort to the program to provide day-to-day continuity of leadership, and fulfill all of the responsibilities inherent in meeting the educational goals of the program;
5. maintain appointment in good standing, including clinical privileges, and provide clinical supervision at the primary clinical site; he/she should be based at the primary clinical site.
6. demonstrate leadership qualities and the capability to mentor emergency medicine residents;
7. demonstrate active involvement in
  - a. continuing emergency medical education;
  - b. state, regional, or national scientific societies;
  - c. presentations and publications and other scholarly activities;
8. have at least 50% of his or her time protected from clinical service; and
9. have appropriate authority to oversee and to organize the activities of the educational program, including but not limited to
  - a. resident appointments and assignments;
  - b. supervision, direction, and administration of the educational activities; and
  - c. evaluation of the residents, faculty, and residency program.

### C. Responsibilities of the Program Director

Responsibilities of the program director include the following:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the program faculty. It should be readily available for review.

2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Participation in the evaluation of the program faculty and other program personnel at each institution participating in the program.
4. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
5. Regular evaluation of residents' knowledge, skills, and overall performance based on the competency standards listed in this document.
6. Provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
7. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
8. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- and/or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
9. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.

#### **D. Program Faculty**

1. There must be a sufficient number of program faculty with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the program faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. To ensure a sufficient number of faculty to provide adequate on-line 24-hour emergency department attending staff supervision and participation in ongoing scholarly activity and research in support of the emergency medicine residents, there must be a minimum of one core physician faculty member for every three residents in the program. When the total resident complement exceeds 30, the faculty-resident ratio of one core faculty member for every three residents may be altered with appropriate educational justification.
2. A core physician faculty member, a member of the program faculty, is one who provides clinical service and teaching, devotes the majority of his or her professional efforts to the program, and has sufficient time protected from direct service responsibilities to meet the educational requirements of the program. The majority of the core faculty must
  - a. be certified by the American Board of Emergency Medicine or have appropriate educational qualifications in emergency medicine.
  - b. be residency trained in emergency medicine.
  - c. show evidence of participation in a spectrum of professional activities within the institution as well as within local, state, regional, and national associations.
  - d. be engaged in research and have protected time and adequate support services to accomplish these tasks.

- e. be prepared in emergency medicine and actively pursuing certification, according to the guideline of the American Board of Emergency Medicine or its equivalent.
3. All core faculty should be involved in continuing scholarly activity such as publication in peer reviewed journals, textbooks, local publications, formal lectures, and visiting professorships.
4. All members of the program faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
5. A member of the program faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
6. The program faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
7. Program faculty members should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.
8. Other attending staff hired to provide resident supervision in any emergency department where residents rotate must be certified by the American Board of Emergency Medicine or have appropriate educational qualifications.

#### **E. Core Faculty Development**

Each program should encourage the academic growth of its core faculty. Faculty development opportunities should be made available to each core faculty member. A written plan for each member of the core faculty should be prepared in consultation with the core faculty member for whom the plan is being developed. At the time of the program review, an example of a core faculty development plan must be included in the Program Information Forms.

#### **F. Other Program Personnel**

Programs must be provided adequate professional, technical, and clerical personnel needed to support the administration and educational conduct of the program. Clinical support services must be provided on a 24-hour basis. The services must be adequate to meet reasonable and expected demands and must include the following: nursing, clerical, intravenous, EKG, respiratory therapy, messenger/transporter, and phlebotomy services.

### **IV. The Educational Program**

The director and program faculty of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Emergency Medicine as part of the regular review process.

#### **A. Organization and Structure**

1. Patient population
  - a. There must be an adequate number of patients of all ages and both sexes with a wide variety of clinical problems to provide a patient population sufficient to meet the educational needs of emergency medicine residents and other residents who are assigned for training in emergency medicine. Except under unusual circumstances, the primary clinical site and other

emergency departments where residents rotate for 4 months or longer should have at least 30,000 emergency department visits annually.

- b. Pediatric experience, defined as the care of patients less than 18 years of age, should be at least 16% of all resident emergency department encounters, or 4 months of full-time-equivalent experience dedicated to the care of infants and children. The program can balance a deficit of patients by offering dedicated rotations in the care of infants and children. The formula for achieving this balance is a 1-month rotation equals 4% of patients. Although this experience should include the critical care of infants and children, at least 50% of the 4 months should be in an emergency setting.
  - c. The number of critically ill or critically injured patients treated in aggregate by the residents at the primary clinical site should be significant, constituting at least 3% or 1,200 of the emergency department patients per year (whichever is greater) who are admitted to monitored care settings, operative care, or the morgue following treatment in the emergency department. Additional critical care experience is required during off-service rotations.
  - d. There shall be a policy to provide personal and consultant physicians access to the emergency department for patient care. This policy must be consistent with those for physician access to other special care areas. Consultations from other clinical services in the hospital must be available in a timely manner. All consultations must be provided by or under the supervision of a qualified specialist.
2. Supervision
- a. All residents within the emergency department must be under the supervision of emergency medicine faculty in the emergency department at all times, except when residents from other services provide supervised care to patients on their service. In such circumstances, they must be supervised by emergency medicine faculty or by faculty from their services. Sufficient faculty must be present to provide supervision appropriate to the care of each patient.
  - b. All residents assigned to the emergency department must have supervision commensurate to their level of training.
  - c. Allied health professionals, such as physician assistants and nurse practitioners, and residents from other specialties who rotate through the emergency department must not compromise the educational objectives of the emergency medicine program by diluting the training experience or preventing appropriate progressive responsibility for the emergency medicine residents.
  - d. The program director should ensure that all emergency medicine residents, while on rotation on other services, are appropriately supervised and are provided with an educational experience equivalent to that of an ACGME-approved residency in that specialty.
3. Progressive responsibility
- The program director must ensure that the degree of professional responsibility accorded to a resident is progressively increased through the course of training commensurate with skill and experience. Included should be opportunities to develop clinical and administrative judgment in the areas of patient care, teaching, administration, and leadership.
4. Number of residents
- a. There should be a minimum of six residents per year of training to achieve a major impact in the emergency department, to ensure meaningful attendance at emergency medicine conferences, to provide for progressive responsibility, and to foster a sense of residency program and departmental identity.

Exceptions to these standards will require justification based on sound educational principles and must demonstrate substantial compliance with the intent of this requirement.

- b. The program should request a number or range (minimum-maximum) of emergency medicine residents per year. The RRC will approve a range (minimum-maximum) or number of residents per year based on the educational resources of the program.
  5. Presence of other residencies and other educational resources
- The sponsoring institution for emergency medicine education must have a major educational commitment, as evidenced by training programs in other major specialties. The program must demonstrate the availability of residencies in other specialties or educational resources for the education of emergency medicine residents. A lack of such resources will adversely affect the accreditation status of the program.
6. Fellowships
- Programs must notify the RRC if they sponsor any emergency medicine-related fellowships within institutions participating in the program. Documentation must be provided describing the fellowship's relationship to and impact on the residency.
- a. The appointment of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of regularly appointed emergency medicine residents.
  - b. Addition or integration of such individuals into an existing residency program requires a clear statement of the areas of education, clinical responsibilities, duration of training, and overall impact on the educational needs of existing emergency medicine residents.
7. Duty hours
- a. Emergency medicine rotations
    - 1) As a minimum, residents shall be allowed 1 full day in 7 days away from the institution and free of any clinical or academic responsibilities, including planned educational experiences.
    - 2) While on duty in the emergency department, residents may not work longer than 12 continuous scheduled hours. There must be at least an equivalent period of continuous time off between scheduled work periods.
    - 3) A resident should not work more than 60 scheduled hours per week seeing patients in the emergency department and no more than 72 duty hours per week. Duty hours comprise all clinical duty time and conferences, whether spent within or outside the educational program, including all on-call hours.
  - b. Other rotations
- The program director must ensure that all residents have appropriate duty hours when rotating on other clinical services, in accordance with the ACGME-approved program requirements of that specialty.
- c. Extracurricular activities
- Activities that fall outside the educational program may not be mandated, nor may they interfere with the resident's performance in the educational process as defined in the agreement between the institution and the resident.

## B. Curriculum

1. The program director must provide each resident and member of the faculty, in writing and in advance of the experience, a comprehensive curriculum specific to the educational needs of the emergency medicine resident and designed to accomplish the defined goals and core competencies of the emergency medicine training program. The curriculum shall be readily available for review. It shall include

- a. the educational objectives for each rotation or other program assignment;
- b. methods of implementation, including specific educational experiences used to meet each objective;
- c. evaluation processes that are linked to the accomplishment of objectives; and
- d. feedback mechanisms.

2. Goals of education

Residency programs in emergency medicine should produce emergency physicians prepared with the following basic competencies:

- a. Provide the recognition, resuscitation, stabilization, evaluation, and care of the full range of patients who present to the emergency department
- b. Apply critical thinking to determine the priorities for evaluation and treatment of multiple emergency department patients with different complaints and needs
- c. Arrange appropriate follow-up or referral as required
- d. Manage the out-of-hospital care of the acutely ill or injured patient
- e. Participate in the administration of the emergency medical services system providing out-of-hospital care
- f. Provide appropriate patient education directed toward the prevention of illness and injury
- g. Engage in the administration of emergency medicine
- h. Teach emergency medicine
- i. Understand and evaluate research methodologies and their application
- j. Understand and apply the principles and practice of continuous quality improvement
- k. Manage resource utilization effectively
- l. Utilize information resources effectively and apply evidence-based medicine to update their clinical practice
- m. Communicate effectively with patients, families, and health-care professionals
- n. Utilize resources to address domestic violence and other public health issues, including violence prevention
- o. Demonstrate the fundamental qualities of professionalism
- p. Demonstrate how optimal patient care is provided in the context of a larger health-care delivery system by effectively using system resources to support the care of patients

3. Planned educational experiences

- a. Each program must offer its residents an average of at least 5 hours per week of planned educational experiences (not including change of shift report) developed by the emergency medicine residency program.
- b. These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, evidence-based learning, laboratories, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.
- c. Emergency medicine faculty are expected to attend and meaningfully participate in these planned educational experiences. Participation in resident conferences should be one component in the annual evaluation of the core emergency medicine faculty.
4. The program should ensure that residents are relieved of clinical duties to attend these planned educational experiences. Although release from some off-service rotations may not be possible, the program should require that each resident participate in at least 70% of the planned emergency medicine educa-

tional experiences offered (excluding vacations). Attendance should be monitored and documented.

5. The curriculum must include didactic and clinical information to enable the residents to achieve the goals and competencies of the training program. These include knowledge- and skill-based competencies as listed in the Core Content of Emergency Medicine.
6. The curriculum must include at least 2 months of inpatient critical care rotations, during which the residents should have decision-making experience that allows them to develop the skills and judgment necessary to manage critically ill and injured patients who present to the emergency department.
7. The program must develop a system that provides and documents efforts to teach residents the importance of patient follow-up. This should involve a representative sample of patients who are admitted to the hospital and who are discharged from the emergency department. Acceptable methods include but are not limited to
  - a. written documentation of individual resident efforts (ward/ICU visits, telephone calls, and chart review);
  - b. timely provision of patient discharge summaries, operative reports, autopsy summaries, and/or consultation notes; and
  - c. regular case conferences (other than morbidity and mortality conference) that cover a representative sample of patient follow-ups.
8. At least 50% of the training beyond the first year must take place in the emergency department. Excessive clinical time in the emergency department should not preclude adequate experience in off-service areas needed to cover the curriculum.
9. Of the total educational experience, no less than 50% should take place under the supervision of emergency medicine faculty. Such experiences can include emergency medical services, toxicology, pediatric emergency medicine, sports medicine, emergency medicine administration, and research in emergency medicine.
10. Out-of-hospital care  
Since out-of-hospital care is an integral and vital part of emergency medicine, there must be a formal, structured resident experience. This should include participation in paramedic base station communications; emergency transportation and care in the field, including ground units and if possible air ambulance units; teaching and oversight of out-of-hospital personnel; and disaster planning and drills. If residents are required to ride in ground or air ambulance units, they must be notified of this requirement during the resident recruitment process.
11. Resuscitations and procedures  
Each resident must have sufficient opportunities to perform invasive procedures, monitor unstable patients, and direct major resuscitations of all types on all age groups. A major resuscitation is patient care for which prolonged physician attention is needed and interventions such as defibrillation, cardiac pacing, treatment of shock, intravenous use of drugs (eg, thrombolytics, vasopressors, neuromuscular blocking agents), or invasive procedures (eg, cutdowns, central line insertion, tube thoracostomy, endotracheal intubation) that are necessary for stabilization and treatment. The resident must have the opportunity to make admission recommendations and direct resuscitations.
  - a. Programs must maintain a record of all major resuscitations and procedures performed by each resident. The record must document their role, ie, participant or director; the type of procedure(s); the location (ED, ICU, etc); age of patient; and admission diagnosis. Only one resident may be credited with the direction of each resuscitation and the performance of each procedure.

- b. These records should be verified by the residency director and should be the basis for documenting the total number of resuscitations and procedures in the program. They should be available for review by the site visitor and the RRC.
12. Systems-based practices and performance improvement  
Each resident must actively participate in emergency department continuous performance (quality) improvement (PI) programs. Program components should include
- basic principles and application of PI;
  - formal regular clinical discussions, rounds, and conferences that provide critical review of patient care and promote PI and quality care, such as mortality and morbidity conferences that analyze system factors in medical errors; efforts should be made to gain permission for postmortem examinations and to review the results of these examinations;
  - evidence of development, implementation, and assessment of a project to improve care, such as a clinical pathway, a patient satisfaction survey, or improvement of a recognized problem area.
13. Research and scholarly activity  
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the program faculty. The staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:
- Active participation of the program faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - Participation in journal clubs and research conferences.
  - Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  - Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  - Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  - Provision of support for resident participation in scholarly activities. The curriculum should include resident experience in scholarly activity prior to completion of the program. Some examples of suitable resident scholarly activities are the preparation of a scholarly paper such as a collective review or case report, active participation in a research project, or formulation and implementation of an original research project.
  - Residents must be taught an understanding of basic research methodologies, statistical analysis, and critical analysis of current medical literature.
14. Physician wellness  
Physical and mental well being are critical to the emergency physician's ability to provide proper care in a stressful environment. The residents should be taught to balance personal and professional responsibilities. Emergency medicine residencies should include opportunities to address physician wellness within the educational program, as well as to address stress, circadian rhythms, and substance abuse among health-care professionals.
15. Professionalism

Residents should be taught the fundamental qualities of professionalism in emergency medicine. These include

- provision of compassionate emergency medical care with the best interest of the patient as the focus of decision making;
  - respect, regard, integrity, and a responsiveness to the needs of patients and society that supersedes self-interest, that assumes responsibility and acts responsibly, and that demonstrates commitment to excellence and ongoing professional development;
  - commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices; and
  - sensitivity and responsiveness to cultural differences, including awareness of their own and their patients' cultural perspectives.
16. Interpersonal skills and communication  
Residency programs must ensure that residents develop appropriate communication skills to effectively create a therapeutic relationship with patients, to educate and provide useful information to patients and families, and to work collaboratively in health-care teams for the benefit of their patients.
17. Family violence  
There must be instruction on the presentation, detection, and management of domestic violence, including child, partner, and elder abuse (physical and sexual) as well as neglect. Such instruction should promote the understanding of its effects on both victims and perpetrators.

## V. Evaluation

There must be effective, ongoing evaluation of all components of the residency program. This evaluation process must relate to the educational objectives of the program and provide a mechanism to effect change.

### A. Evaluation of Residents

- At least semiannually, there must be an evaluation of the knowledge, skills, and professional growth in emergency medicine of each resident, using appropriate criteria and procedures. Documentation of management of patients with emergency conditions, to include major trauma, medical and pediatric resuscitations, and performance of emergency procedures by each resident in the program, must be kept and reviewed periodically by the program director.
- Formal evaluation of each resident during training is required and must include oral and written examinations. In addition, there must be a mechanism for formal evaluation of the resident on each rotation. A summary of the evaluations must be communicated in writing to and should be signed by the resident. Discussions of these results between the resident and the program director or his or her designee must be held on at least a semiannual basis.
- Residents should be advanced to positions of higher responsibility on the basis of evidence of their satisfactory progressive scholarship and professional growth.
- A plan to remedy deficiencies must be in writing and on file. Progress and improvement must be monitored at a minimum of every 3 months if a resident has been identified as needing a remediation plan.
- A permanent record of evaluation for each resident must be maintained and must be accessible to the resident and other authorized personnel.
- A written final evaluation must be provided for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated

sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

#### **B. Evaluation of Faculty**

1. At least annually, individual faculty members must be formally evaluated by the chair/chief of emergency medicine, who should include information from the program director and the emergency medicine residents. A mechanism for preserving resident confidentiality in the evaluation process must be implemented.
2. Faculty evaluations should include documentation of teaching ability, clinical knowledge, administrative and interpersonal skills, participation and contributions to resident conferences, and scholarly contributions. A summary of the evaluations should be communicated in writing to each faculty member.

#### **C. Evaluation of the Program**

1. At least annually, the educational effectiveness of the entire program, including the quality of the curriculum and the clinical rotations, must be evaluated by residents and faculty in a systematic manner. The extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be used in this process. The results of these evaluations must be kept on file.
2. The RRC will take into consideration information provided by the American Board of Emergency Medicine performance of the program's graduates on the certifying examinations over a period of several years.

### **VI. Other**

#### **A. Notice of Changes in the Program**

1. The program leadership is responsible for notifying the Executive Director of the RRC within 30 days, in writing, of any major changes in the program that may significantly alter the educational experience for the residents, including the following:
  - a. Changes in leadership of the department or the program
  - b. Changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution
  - c. A drop in the core faculty complement below the required minimum number or if one-third or more of the core faculty leave within 1 year
  - d. A drop below the minimum approved number of residents in the program for 2 consecutive years

Should the RRC determine that a significant alteration of the educational resources has occurred, an immediate resurvey of the program may be performed.

2. The program director must obtain prior approval for the following changes in the program in order for the RRC to determine if an adequate educational environment exists to support these changes:
  - a. The addition or deletion of any participating institution to which a resident will rotate for 4 months or longer.
  - b. The addition or deletion of any rotation of 4 months or longer.
  - c. Any change in the approved resident complement of the program. (Prior approval is not required for temporary changes in resident numbers due to makeup or remedial time for currently enrolled residents or to fill vacancies at the same level of education in which the vacancy occurs.)
  - d. Any change in the length or educational format of the program. On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

#### **B. Combined Programs**

The RRC will review combined education program proposals only after the review and approval of the American Board of Emergency Medicine. Review by the RRC will consider only whether the residency has sufficient resources to support combined education without diluting the experience of the regularly appointed residents. The RRC does not accredit the combined education. The proposal must be submitted to the RRC prior to the implementation of required education.

#### **C. Certification**

Residents who plan to seek certification by the American Board of Emergency Medicine should communicate with the Secretary of that Board for information regarding the requirements for certification.

*ACGME: June 2000 Effective: January 1, 2001*

## **Program Requirements for Residency Education in the Subspecialties of Emergency Medicine**

The following requirements pertain to programs in the subspecialties of emergency medicine. Each program must comply with the requirements listed below as well as with the specialty content found in the program requirements for the respective area.

These programs must exist in conjunction with and be an integrated part of an Accreditation Council for Graduate Medical Education (ACGME)-accredited emergency medicine residency program. Their existence should not compromise the integrity of the core program.

Residents appointed to the sports medicine programs should have completed an ACGME-accredited residency in emergency medicine, family practice, internal medicine, or pediatrics. [Note: Those lacking board certification in one of these areas will not be considered eligible for a Certificate of Added Qualifications from any of the corresponding specialty boards.]

### **I. Program Goals and Objectives**

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

#### **A. Program Design**

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Emergency Medicine as part of the regular review process.
2. Participation by any institution providing more than 3 months of training in a program must be approved by the RRC.

#### **B. Program Evaluation**

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

## II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by one of the following boards: American Board of Emergency Medicine, American Board of Family Practice, American Board of Internal Medicine, or American Board of Pediatrics, and possess a Certificate of Added Qualifications in Sports Medicine from that same board. The RRC will determine the adequacy of alternate qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and in-

dependently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## III. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

### A. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

#### B. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

ACGME: September 1994 Effective: September 1994

## Program Requirements for Residency Education in Medical Toxicology (Emergency Medicine)

### I. Introduction

#### A. Definition and Description of the Subspecialty

1. Medical toxicology is a clinical specialty that includes the monitoring, prevention, evaluation and treatment of injury and illness due to occupational and environmental exposures, pharmaceutical agents, as well as unintentional and intentional poisoning in all age groups. A medical toxicology residency must be organized to provide residents with experience in the clinical practice of medical toxicology for all age groups and to provide a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing medical toxicology in academic and clinical settings.
2. Residencies in medical toxicology must teach the basic skills and knowledge that constitute the foundations of medical toxicology practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in medical toxicology.
3. Programs must provide a broad education in medical toxicology to prepare the resident to function as a specialist capable of providing comprehensive patient care.

#### B. Duration and Scope of Education

1. Prerequisite training for entry into a medical toxicology program should include the satisfactory completion of an ACGME-accredited residency. [Note: Candidates who do not meet this criterion should consult the American Board of Emergency

Medicine or the American Board of Preventive Medicine regarding their eligibility for subspecialty certification.]

2. The length of the educational program is 24 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.
3. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

### II. Institutional Organization

#### A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school, a school of public health, and a school of pharmacy or department of pharmacology.
2. Programs in medical toxicology should be based at a primary hospital (hereafter referred to as the primary clinical site). The majority of the didactic and clinical experiences should take place at the primary clinical site.
3. The following services must be organized and provided at the primary clinical site:
  - a. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric intensive care facilities
  - b. Renal dialysis services with 24-hour availability
  - c. Toxicology laboratory services with 24-hour availability
  - d. Inpatient and outpatient facilities with staff who consult the toxicology service
  - e. It is desirable that hyperbaric oxygen therapy is available
4. The program must develop an institutional affiliation to provide residents with clinical experiences not provided at the primary clinical site, other than those listed in II.A.3.a-d.

#### B. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
  - a. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, either as primary physicians or consultants, the entire course of critically poisoned patients in both the pediatric and adult categories.
  - b. Institutional resources must be available to support the provision of clinical experience in adult and pediatric critical care areas for residents without prior experience of at least 1 month in an adult intensive care unit and 1 month in a pediatric intensive care unit.
  - c. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.

- d. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
- e. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
- f. A letter of agreement with each institution participating in the program must be developed to include
  - 1. the educational objectives and the method to accomplish and to evaluate each objective;
  - 2. the resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
  - 3. the resident's duties and responsibilities and duty hours for the assignment; and
  - 4. the relationship that will exist between medical toxicology residents and residents and faculty in other programs.

### C. Library

Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions. Reference material specific to the content of the subspecialty must be available in either text or electronic retrieval form.

### D. Appointment of Residents

The Residency Review Committee (RRC) will approve the number of medical toxicology residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources available to the program.

## III. Faculty Qualifications and Responsibilities

- A. In addition to the qualifications and responsibilities of the program director and faculty described in the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine or the Program Requirements for Residency Education in Preventive Medicine, there must be a minimum of two medical toxicology faculty who each devote a minimum of 5 hours per week of direct teaching time to the residents and whose medical practice makes them available to the residents for consultations on cases.
- B. The program director and faculty must be certified in medical toxicology or possess suitable equivalent qualifications as determined by the RRC.
- C. Consultants from appropriate medical subspecialties including those with special expertise in disaster and mass casualty incident management, hyperbaric medicine, immunology, industrial hygiene, occupational toxicology, pulmonary medicine, biostatistics, epidemiology, public health, botany, cardiology, dermatology, gastroenterology, nephrology, ophthalmology, pathology, pharmacology, surgical subspecialty, zoology, hazardous materials and mass exposure to toxins, laboratory toxicology, forensic toxicology and environmental toxicology, and nonmedical specialties, such as botany, herpetology, and mycology should be available for consultation and academic lectures.

## IV. The Educational Program

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC.

B. The curriculum must include the following academic and clinical content:

- 1. The clinical manifestations, differential diagnosis, and management of poisoning
- 2. The biochemistry of metabolic processes, the pharmacology, pharmacokinetics, and teratogenesis, toxicity, and interactions of therapeutic drugs
- 3. The biochemistry of toxins, kinetics, metabolism, mechanisms of acute and chronic injury, and carcinogenesis
- 4. Experimental design and statistical analysis of data as related to laboratory, clinical, and epidemiologic research
- 5. Laboratory techniques in toxicology
- 6. Occupational toxicology, including acute and chronic workplace exposure to intoxicants and basic concepts of the workplace and industrial hygiene
- 7. Prevention of poisoning, including prevention of occupational exposures by intervention methodologies, that take into account the epidemiology, environmental factors, and the role of regulation and legislation in prevention
- 8. Environmental toxicology, including identification of hazardous materials and the basic principles of management of large-scale environmental contamination and mass exposures
- 9. The function, management, and financing of poison control centers
- 10. Oral and written communication skills and teaching techniques
- 11. Principles of epidemiology and risk communication, analytical laboratory techniques, and research methodologies in toxicology

### C. Clinical Experience

Residents must have a minimum of 12 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation, management, screening, and preventive services.

Residents must be provided with experience in evaluating and managing patients with workplace and environmental exposures and must have experience in workplace evaluation, as well as in an occupational medicine or toxicology clinic.

- D. Residents must have opportunities to evaluate and manage patients with acute and long-term workplace and environmental toxic exposures. Clinical training should include experience in an industrial setting or an occupational medicine clinic or access to occupational medicine patients in a referral setting. The resident should also have the opportunity to evaluate and manage intoxicated patients in both industrial and referral setting, including responsibility for providing bedside evaluation, management, screening, and preventive services for a minimum of 12 months or its full-time equivalent.

### E. Regional Poison Information Center

- 1. The program must provide residents with educational experiences in a regional poison control center certified by the American Association of Poison Control Centers or its equivalent. It is highly desirable that the poison control center be in physical proximity to the primary clinical site.
- 2. Each resident must have 12 months' experience with a referral population of poisoned patients under the supervision of a physician who is certified in medical toxicology or who possesses suitable equivalent qualifications as determined by the RRC.
- 3. The poison control center should have at least 1,500 calls annually that require physician telephone consultation or intervention.

### F. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.

#### G. Additional Educational Experiences

The program curriculum must include pharmacology, pharmacokinetics, and drug interactions. This must be accomplished by (1) an affiliation with a school of pharmacy or department of pharmacology that provides regular didactic experience and consultation to residents or (2) the presence of a Doctor of Pharmacology or PhD pharmacologist as a participating member of the teaching faculty.

#### H. Additional Clinical Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to medical toxicology as a condition of the educational program.

#### I. Communication and Teaching Experience

Residents must have progressive experience and responsibility for the teaching of medical toxicology to health care professionals. Residents in the second year of training should participate in the teaching and supervision of first-year residents and should be responsible for regular contributions to formal didactic experiences within the training program, in other academic departments in the institution(s), and in the community. Research leading to publication should be encouraged.

### V. Board Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

*ACGME: June 1998 Effective: June 1998*

## Program Requirements for Residency Education in Pediatric Emergency Medicine (Emergency Medicine)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics or Emergency Medicine, programs in pediatric emergency medicine must comply with the following requirements.

### I. Introduction

The goal of a residency program in pediatric emergency medicine is to produce physicians who are clinically proficient in the practice of pediatric emergency medicine, especially in the management of the acutely ill or injured child, in the setting of an emergency department that is approved as a 911 receiving facility or its equivalent and has an emergency medical services system.

A program in pediatric emergency medicine must be administered by, and be an integral part of, an ACGME-accredited program in either emergency medicine or pediatrics and must be associated

with an ACGME-accredited residency program in the corresponding discipline.

There must be written agreements between the director of the program in pediatric emergency medicine and the directors of the participating residencies in pediatrics and emergency medicine specifying the experiences that will compose this subspecialty program. These agreements should address appropriate curriculum content, supervision of the resident, amount and distribution of clinical and nonclinical time, conferences, clinical performance criteria, and mechanisms for resolving performance problems.

Prerequisite training should include satisfactory completion of an ACGME-accredited residency program in either emergency medicine or pediatrics.

### II. Duration and Scope of Training

A training period of 2 years is required for all subspecialty residents. [Note: For those planning to seek certification from the American Board of Pediatrics, 3 years of training is required.]

[Note: If a third year is offered, it must be described when the program is reviewed by the Residency Review Committee. Those planning to seek certification should consult with the appropriate certifying board regarding the criteria for eligibility, including duration of training.]

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families while providing residents the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators. The program must emphasize the fundamentals of assessment, diagnosis, and management. Residents also should be exposed to the academic debate, intensive research review, and the interaction between and among the specialties of pediatrics and emergency medicine.

### III. Curriculum

The residents in pediatric emergency medicine must participate in the care of pediatric patients of all ages, from infancy through young adulthood, with a broad spectrum of illnesses and injuries of all severities. At least 12 months of the clinical experience must be obtained seeing children in an emergency department where children, ages 21 years of age or less, are treated for the full spectrum of illnesses and injuries. To provide adequate exposure for selected problems, additional experience with anesthesiologists, intensivists, neurologists, psychiatrists, pre-hospital care providers, orthopedists, surgeons, toxicologists, traumatologists who have training and experience in the care of children and adolescents, and other specialists must be available.

Specialty-specific content must include at least 4 months of training in the reciprocal specialty from which the resident enters the training program. Additional elective months of reciprocal training should be scheduled when deemed appropriate by the program director on the basis of the background of the resident and his/her progress in acquiring the essential skills of a pediatric emergency specialist.

For the emergency medicine graduate, the reciprocal time must include time spent in pediatric subspecialty and ambulatory clinics, inpatient management, neonatal management, and pediatric critical care in an ACGME-accredited residency program in pediatrics.

For the pediatric graduate, this must include 4 months in an adult emergency department that is part of an ACGME-accredited residency program in emergency medicine. One month of that experience may occur off site as approved by the ACGME-accredited program in emergency medicine, in EMS, adult trauma, or toxicology.

Additional experiences may be necessary for residents from both core specialties. For example, adolescents have unique aspects of disease and injury. Experience with blunt and penetrating trauma, and with significant gynecologic and obstetrical emergencies, as well as psychiatric emergencies of the adolescent, must be a part of a resident's training if previous experience in these areas was not adequate. These experiences should be in settings best suited for the resident's training.

The core content must include training in EMS, administration, ethics, legal issues, and procedures. It must also include but not be limited to structured opportunities to develop special competence in such areas as cardiopulmonary resuscitation; trauma; disaster and environmental medicine; transport; triage; sedation; monitoring (biomedical instrumentation); emergencies arising from toxicologic, obstetric, gynecologic, allergic/immunologic, cardiovascular, congenital, dermatologic, dental, endocrine/metabolic, gastrointestinal, hematologic/oncologic, infectious, musculoskeletal, neurologic, ophthalmic, psychosocial, and pulmonary causes; renal/genitourinary and surgical disorders; and physical and sexual abuse.

In addition to achieving an understanding of the pathophysiology, epidemiology, and management of these problems, the resident must learn how to evaluate the patient with an undifferentiated chief complaint such as abdominal pain. The resident must be taught to arrive at a diagnosis, whether it falls in areas traditionally designated medical or surgical, eg, appendicitis, ectopic pregnancy, intussusception, sickle cell anemia; to perform the evaluation rapidly in accordance with any pathophysiologic disturbances in the patient; and to proceed with an appropriate life-saving therapy, such as endotracheal intubation or thoracostomy or administration of antibiotics, before arriving at a definitive diagnosis.

The resident must learn the skills necessary to prioritize and manage the emergency care of multiple patients. Finally, the resident must have supervised experience in a range of technical/procedural skills, as they apply to pediatric patients of all ages.

The resident must be given increasing responsibilities for patient care as she or he progresses through the program. In the final year of training, the resident must be given the opportunities to demonstrate the skills appropriate to a supervisor, teacher, and a decision maker in pediatric emergencies.

There must be an emphasis on developing a compassionate understanding of the stress associated with sudden illness, injury, and death so that the resident may be responsive to the emotional needs of the patients, their families, and the staff of the emergency department. Discussion and appreciation of the many ethical issues involved in pediatric emergency medicine should be part of the educational program.

Residents should be exposed to formal sessions on organizing teaching programs, medical writing, and oral presentation. Residents should have the opportunity to develop teaching skills by conducting lectures, seminars, and clinical conferences and by preparing written reports and teaching materials. These efforts must be reviewed and evaluated by the supervising faculty in light of competency-based objectives developed by the program. The resident must receive instruction and experience in the administrative and management skills necessary to oversee a division or department.

#### IV. Conferences

There should be opportunities to participate in regularly scheduled, multidisciplinary conferences that include lectures, morbidity and mortality conferences, case conferences, general reviews, and research seminars. The program must include instruction in or other educational exposure to related basic sciences, including physi-

ology, growth and development, pathophysiology, and epidemiology, and prevention of pediatric illnesses and injuries.

The program also should provide education on physician wellness and stress management.

#### V. Teaching Staff

There must be at least four members of the teaching staff who have experience and knowledge of the care of acute pediatric illness and injuries to provide adequate supervision of residents and to ensure the educational and research quality of the program. Two of the faculty must be certified in pediatric emergency medicine or have equivalent qualifications. For a subspecialty program that functions as an integral part of a pediatric residency program, there must be adequate exposure to faculty who are certified by the American Board of Emergency Medicine. Conversely, for a subspecialty program based in an emergency medicine residency program, there must be adequate exposure to faculty certified by the American Board of Pediatrics.

The availability of consultant and collaborative faculty in related medical and surgical disciplines, as referred to in Section III, must be ensured.

The pediatric emergency medicine faculty must have an active role in curriculum development and in the supervision and evaluation of the subspecialty residents.

#### VI. Patient Population

A sufficient number of patients must be available to provide adequate opportunity for subspecialty residents to acquire competence in the management of the full spectrum of acutely ill and injured children, adolescents, and young adults. The subspecialty residents must provide the initial evaluation of and treatment to all types of patients.

To meet the educational objectives of the program and to provide both the pediatric and subspecialty residents with an adequate experience to acquire competence in clinical management, there should be a minimum of 15,000 pediatric patient visits per year in the primary emergency department that is used for the program. Patient acuity and the total number of trainees will be considered in assessing the adequacy of the patient population. These must include a sufficient number of patients with major and minor trauma, airway insufficiency, ingestions, obstetric and gynecologic disorders, psychosocial disturbances, and emergent problems from all pediatric medical and surgical subspecialties.

Subspecialty residents should not serve as the only care givers for children seen in the emergency department. They should provide supervision and consultation to other residents who are assigned to the emergency department and will be caring for patients. These subspecialty residents must, however, have the opportunity to manage multiple patients at the same time, to learn the skills necessary to prioritize the evaluation and treatment of these patients. In addition, the program must provide the pediatric emergency medicine residents the opportunity to assume leadership responsibility for the pediatric emergency department.

#### VII. Facilities

There must be an acute care facility that receives patients via ambulance from the prehospital setting, is equipped to handle trauma, and that has a full range of services associated with residencies in pediatrics and emergency medicine. This facility should be accredited by the Joint Commission on Accreditation of Healthcare Organizations.

The emergency department must be adequately staffed, have appropriate bedside monitoring capability, and be capable of resuscitating medical and trauma patients. Facilities and equipment must

meet the generally accepted standards of a modern emergency department and be available within the institution on a 24-hour-a-day basis.

The institution should have comprehensive radiologic and laboratory support systems and readily available operative suites and intensive care unit beds.

### VIII. Board Certification

Residents seeking certification in the subspecialty of pediatric emergency medicine should consult their primary specialty board, ie, the American Board of Pediatrics or the American Board of Emergency Medicine, regarding the criteria for eligibility for certification in this subspecialty.

*ACGME: June 1998 Effective: June 1998*

## Program Requirements for Residency Education in Sports Medicine (Emergency Medicine)

### I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine.

### II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation, as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

### III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical

therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

### IV. Facilities and Resources

The program must include the following:

#### A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

#### B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical trainees must be supervised by a physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

#### C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

#### D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

### V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility.

Residents must spend ½ day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

**A. Preparticipation Evaluation of the Athlete**

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

**B. Acute Care**

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

**C. Sports Medicine Clinic Experience**

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

**D. On-Site Sports Care**

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

**E. Mass-Participation Sports Events**

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

**VI. Specific Knowledge and Skills**

**A. Clinical**

The program must provide educational experiences that enable residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, eg, diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries

10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

**B. Patient Education/Teaching**

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, eg, nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

*ACGME: June 2000 Effective: June 2000*

**Program Requirements for Residency Education in Undersea and Hyperbaric Medicine (Emergency Medicine)**

**I. Introduction**

**A. Definition and Scope of the Specialty**

1. The subspecialty of Undersea and Hyperbaric Medicine is a discipline that deals with the prevention of injury and illness due to exposure to environments in which the ambient pressure is increased, such as in diving or hyperbaric chamber exposure, and the therapeutic use of high environmental pressure and the delivery of oxygen under high pressure to treat disease. The scope of the subspecialty emphasizes the occupational, environmental, safety, and clinical aspects of diving, hyperbaric chamber operations, compressed air work and hyperbaric oxygen therapy. A program in undersea and hyperbaric medicine must provide a broad educational experience and a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing in academic and clinical settings.
2. Training in undersea and hyperbaric medicine must teach the basic skills and knowledge that constitute the foundations of undersea and hyperbaric medicine practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in undersea and hyperbaric medicine.
3. Programs must offer a broad education in undersea and hyperbaric medicine to prepare the resident to function as a specialist capable of providing comprehensive patient care.

**B. Duration and Scope of Education**

1. The length of the educational program must be 12 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.

2. Prior to entry into the program, each prospective resident must be notified in writing of the required length of the program.

## **II. Institutional Organization**

- A. The sponsoring institution must provide sufficient faculty, financial resources, clinical, research, and library facilities to meet the educational needs of the residents and enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school.
- B. The program should be based at a primary hospital (hereafter referred to as the primary clinical site). More of the didactic and clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.
- C. The following services must be organized and provided at the primary clinical site:
  1. Twenty-four hour availability of hyperbaric medicine services, with at least 100 consultations and 1000 patient treatments per year
  2. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric surgical and intensive care facilities
  3. Inpatient and outpatient facilities with staff who consult the hyperbaric medicine service
- D. Participating Institutions
  1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
  2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
  3. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, as appropriate, either as primary physicians or consultants, the entire course of therapy, including critically ill patients in both adult and pediatric categories.
  4. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
  5. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
  6. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
  7. A letter of agreement with each institution participating in the program must be developed to include:
    - a. The educational objectives and the method to accomplish and to evaluate each objective;
    - b. The resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
    - c. The resident's duties, responsibilities, and duty hours for the assignment; and

- d. The relationship that will exist between undersea and hyperbaric medicine residents and the faculty in other programs.
  8. Participation by any institution that provides 3 months or more of education in a program must be approved by the RRC.
- E. Appointment of Subspecialty Residents
1. The Residency Review Committee (RRC) will approve the number of undersea and hyperbaric medicine residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the faculty; the volume and variety of the patient population available for education purposes; and the institutional resources available to the program.
  2. Prerequisite training for entry to an undersea and hyperbaric medicine program is contingent upon completion of an ACGME-accredited residency program involving a minimum of 12 months of preventive, primary, surgical, and/or critical care training.
- F. Resident Policies
1. Supervision
    - a. All patient care services must be supervised by appropriately qualified faculty.
    - b. The program director must ensure, direct, and document proper supervision of residents at all times.
    - c. Residents must be provided with rapid, reliable systems for communicating with faculty. Supervising faculty with appropriate experience for the severity and complexity of patient conditions and treatments must be available at all times.
  2. Duty hours and conditions of work  
It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night.

## **III. Faculty Qualifications and Responsibilities**

The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### **A. Program Director**

There must be a single program director responsible for the program.

1. Qualifications of the program director
  - a. Licensure to practice medicine in the state where the institution that sponsors the program is located.
  - b. Certification in undersea and hyperbaric medicine by the American Board of Emergency Medicine or the American Board of Preventive Medicine or possess appropriate educational qualifications as determined by the RRC.
  - c. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.

- c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. The program director, with participation of the faculty, shall
  - 1) at least quarterly evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
  - 2) communicate each evaluation to the resident in a timely manner;
  - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
  - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
  - 5) provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.
- j. Notification of the RRC regarding major programmatic changes.

#### B. Faculty

1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program at each participating institution. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, one additional faculty member must possess certification by the American Board of Emergency Medicine or the American Board of Preventive Medicine in undersea and hyperbaric medicine or possess appropriate educational qualifications as determined by the RRC.
2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and

maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.

4. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. Consultants from appropriate medical subspecialties should be available for consultation and didactic teaching, including those with experience and understanding of such fields of medicine as preventive medicine, infectious disease, orthopaedics, vascular surgery, plastic surgery, anesthesiology, critical care, emergency medicine, ophthalmology, oral surgery, podiatry, pulmonary medicine, otolaryngology, rehabilitative medicine, and other disciplines as they pertain to the comprehensive treatment of the clinical hyperbaric patient.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### IV. The Educational Program

The program director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency should be related to the program goals. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to the subspecialty must be conducted regularly and as scheduled. The program design and/or structure must be approved by the RRC.

A. The curriculum must include the following academic and clinical content

1. History of undersea and hyperbaric medicine
2. Decompression theory and physiology, including theory and application of decompression tables
3. Oxygen physiology in normobaric, hyperbaric and hypobaric environments; oxygen toxicity
4. Pathophysiology of decompression illness and arterial gas embolism, including iatrogenic gas embolism
5. Diving operations and human performance in the hypo/hyperbaric environments
6. Medical examination/standards for divers and personnel working in hypo/hyperbaric environments
7. Effects of hyperbaric oxygenation on infectious disease
8. Principles of treatment of toxic gas exposures, such as carbon monoxide poisoning
9. Effects of hyperbaric oxygenation on irradiated tissues and ischemic wounds
10. Tissue oxygen measurement
11. Multiplace and monoplace hyperbaric chamber operations, including safety considerations, management of critically ill patients in the hyperbaric environment, clinical monitoring, and mechanical ventilation
12. Evaluation of the patient for clinical hyperbaric treatment, including contraindications and side effects
13. Hazards of standard electrical therapies in hyperbaric environment, eg, electrical defibrillation and precautions
14. Emergency procedures for both monoplace and multiplace installations
15. Saturation diving covering air quality standards and life support requirements, including the physiology and practical (medical) issues associated with heliox, trimix, and hydrogen/oxygen/helium mixtures

16. Systems management, including administrative aspects of chamber operations, such as billing issues, quality assurance, and peer review
- B. Residents must have a minimum of 10 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation and management. A maximum of 2 elective months can be offered in appropriate related areas.
- C. Residents must have opportunities to evaluate and manage patients with both acute and non-emergency indications for hyperbaric oxygen therapy. The resident should have the opportunity to evaluate and manage 100 or more patients, including responsibility for providing bedside evaluation and management. This experience should be organized for a minimum of 10 months or its full-time equivalent and cover IV.C.1 through IV.C.8. Up to 2 months of elective time may be allowed for additional training in areas of relevance to undersea and hyperbaric medicine, such as critical care, surgery, submarine medicine, toxicology, or radiation oncology. Competencies that will be attained at the end of the 12-month training period must include:
1. Assessment of prospective divers for fitness to dive
  2. Assessment of hyperbaric chamber personnel for fitness to participate as a tender in a multiplace hyperbaric chamber
  3. Assessment of patients with suspected decompression sickness or iatrogenic gas embolism and prescription of treatment
  4. Assessment of patients with specific problem wounds with respect to indications for hyperbaric oxygen therapy, fitness for hyperbaric treatment, and prescription of treatment
  5. Assessment and management of patients with complications of hyperbaric therapy
  6. Management of critically ill patients in the hyperbaric environment
  7. Knowledge of the indications for hyperbaric oxygen therapy
  8. Assessment of patients with toxic gas exposure (eg, carbon monoxide)
- D. Planned Educational Conferences  
Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.
- E. Additional Clinical and Educational Experiences  
The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to hyperbaric medicine as a condition of the educational program.
- F. Teaching and Research Experience  
Residents must have progressive experience and responsibility for the teaching of undersea and hyperbaric medicine to health care trainees and professionals, including medical students, interns, residents, and nurses. Residents should participate in the formal didactic teaching program. Research leading to publication should be encouraged.

## **V. Facilities and Resources**

### **A. Space and Equipment**

Adequate space must be available for faculty to perform their educational, research, and administrative functions. A library containing hyperbaric texts and journals must be readily available. Ade-

quate conference and teaching space must be available for didactic and case conferences.

### **B. Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities**

A hyperbaric chamber must be available that is capable of treatment of the full range of conditions amenable to hyperbaric oxygen therapy. A full service clinical laboratory must be available at all times that is capable of measurement of chemist, blood indices, and microbiology of patients needing hyperbaric therapy. Radiologic services must be available within the institution at all times. Inpatient and outpatient facilities, including intensive care units capable of addressing the needs of patients with respiratory poisons, gas forming infections, wound healing problems, gas embolism, and other conditions requiring hyperbaric treatment, must be available.

### **C. Patient Population**

There shall be sufficient patients of all ages and both sexes with medical and surgical conditions requiring hyperbaric therapy. Patients with necrotizing infections, carbon monoxide and cyanide poisoning, diving problems, gas embolism, and osteomyelitis must be present in the patient population.

### **D. Support Services**

Support services must include physical therapy, social services, occupational medicine, and psychologic and psychological testing services.

## **VI. Certification**

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the Board to ascertain the full requirements.

*ACGME: February 2002 Effective: February 2002*

# Program Requirements for Residency Education in Family Practice

## I. Introduction

### A. Duration of Training

Residencies in family practice must be 3 years in duration after graduation from medical school and must be planned so that a coherent, integrated, and progressive educational program with progressive resident responsibility is ensured.

### B. Scope of Training

The programs must be specifically designed to meet the educational needs of medical school graduates intending to become family physicians and must provide experience and responsibility for the residents in those areas of medicine that will be of importance to their future practice. The goal of the family practice training program is to produce fully competent physicians capable of providing care of high quality to their patients.

Toward this end the residents must learn to gather essential and accurate information about the patient and use it together with up-to-date scientific evidence to make decisions about diagnostic and therapeutic intervention. They must learn to develop and carry out patient management plans.

Family practice residency programs should provide opportunity for the residents to learn, in both the hospital and ambulatory settings, those procedural skills that are within the scope of family practice.

The residency program must ensure that its residents, by the time they graduate, provide appropriate, effective, and compassionate clinical care. Residents are expected to gather essential and accurate information about the patient and use it together with up-to-date scientific evidence to make decisions about diagnostic and therapeutic interventions, develop and carry out patient management plans, provide health care services aimed at preventing health problems or maintaining health.

Residents must locate, appraise, and assimilate "best practices" related to their patients' health problems.

### C. Clinical Care

The residency program must ensure that its residents, by the time they graduate, possess knowledge in established and evolving psychosocial biomedical and clinical science domains and apply it to clinical care. Residents are expected to demonstrate rigor in their thinking about clinical situations and to know and apply the basic and clinically supportive sciences which are appropriate to their discipline.

Use of the computer to manage information, access on-line medical information, and support clinical care and patient education is required.

The residency program must ensure that its residents, by the time they graduate, demonstrate the fundamental qualities of professionalism. Residents are expected to demonstrate respect, regard, and integrity and a responsiveness to the needs of patients and society that supersedes self-interest. They must assume responsibility and act responsibly, and demonstrate a commitment to excellence.

Residents must learn to apply knowledge of study designs and statistical methods to the appraisal of clinical studies and other information on diagnostic and therapeutic effectiveness.

The residency program must ensure that its residents are aware that health care is provided in the context of a larger system and can effectively call on system resources to support the care of patients. Residents are expected to understand how their patient-care practices and related actions impact component units of the health care delivery system and the total delivery system, and how delivery systems impact provision of health care. They must be taught systems-based approaches for controlling health care costs and allocating resources and must learn to practice cost-effective health care and resource allocation that does not compromise quality of care.

Residents must learn how to advocate for quality patient care and assist patients in dealing with system complexities. They must be taught how to partner with health care managers and health care providers to assess, coordinate, and improve health care and know how these activities can impact system performance.

The presence of other programs sponsored by the residency, eg, geriatric medicine and/or sports medicine, must not result in significant dilution of the experience available to the family practice residents.

## II. Institutional Organization

### A. Sponsoring Institution

There must be one sponsoring institution for each residency, as mandated by the Institutional Requirements. This entity must be identified at the time of each review of the residency.

The sponsoring institution must ensure the existence and availability of those basic educational and patient care resources necessary to provide the family practice resident with meaningful involvement and responsibility in the required clinical specialties.

Since family practice programs are dependent in part on other specialties for the training of residents, the ability and commitment of the institution to fulfill these requirements must be documented. Instruction in the other specialties must be conducted by faculty with appropriate expertise. There must be agreement with specialists in other areas/services regarding the requirement that residents maintain concurrent commitment to their patients in the Family Practice Center (FPC) during these rotations.

### B. Participating Institutions

When a residency relies on multiple institutions to provide curricular components, the arrangements between the program/primary site and each affiliated facility must be described in a written document that is signed by the appropriate administrators of the respective institutions. These arrangements must be specific to the family practice residency and must address the scope of the affiliation, the content and duration of the rotations involved, the duties and patient care responsibilities of the residents during these rotations and the details of the supervision and resident evaluation that will be provided. These documents should be appended to the program information forms each time there is a site visit and review of the program.

Participation by an institution that provides more than 6 of the 36 months of training in the program must be approved by the Residency Review Committee (RRC).

A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

### C. Appointment of Residents

[Note: Applicants who have had previous graduate training may be considered for admission to family practice residencies. Credit for this other training may be given only in the amount that is compati-

ble with the Program Requirements for Residency Education in Family Practice. Directors should consult with the American Board of Family Practice on each case prior to making a determination regarding the equivalence of such training.]

Programs should appoint only those candidates who intend to complete the full program. As a general rule, programs should appoint residents to the first year of training and those accepted into the first year of training should be assured of a position for the full 4 years, barring the development of grounds for dismissal. A family practice program should endeavor not to function as a transitional year program.

To provide adequate peer interaction a program should offer at least four positions at each level and should retain, on average, a minimum complement of 12 residents. Except for periods of transition, the program should offer the same number of positions for each of the 3 years.

In certain cases, for urban or rural areas serving underserved communities, tracks may be approved that have a smaller resident complement but with at least one resident at the second and third levels or two residents at one of the levels to ensure peer interaction. In such cases, programs are encouraged to arrange opportunities for the residents to interact with other residents, eg, through didactic sessions at the parent program.

The degree of resident attrition and the presence of a critical mass of residents are factors that will be considered by the RRC in the evaluation of a program.

### III. Faculty Qualifications and Responsibilities

The program director and teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation and advancement of residents and the maintenance of records related to program accreditation.

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

#### A. Program Director

There must be a single program director responsible for the residency.

Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program and will be cause for serious concern. The RRC must be notified promptly in writing of any change in the leadership of the program.

In order to provide continuity of leadership and to fulfill the administrative and teaching responsibilities inherent in achieving the educational goals of the program, the director must devote sufficient time to the residency program, ie, at least 1,400 hours per year exclusive of time spent in direct patient care without the presence of residents. Where a program in the 1-2 format operates in conjunction with a 3-year program, there must be a separate rural site director.

##### 1. Qualifications of the Program Director

The following are the requirements for the program director. An acting or interim director should be similarly qualified.

a. Academic and professional qualifications: The director must have demonstrated ability as a teacher, clinician, and administrator; must be capable of administering the program in an effective manner; and must be actively involved in the care of patients. Prior to assuming this position, the program director must have had a minimum of 2 years full-time professional ac-

tivity in family practice and should have had teaching experience in a family practice residency.

- b. Licensure: The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. Certification requirements: The director must be currently certified by the American Board of Family Practice or have appropriate educational qualifications, as so judged by the RRC.
- d. Medical staff appointment: The director must hold an appointment in good standing to the medical staff of an institution participating in the program.

##### 2. Responsibilities of the Program Director

The program director is responsible for the following:

- a. Written educational goals: The director must have responsibility for a written statement outlining the educational goals of the program. These must be provided in a document that outlines the specific knowledge, skills, and other attitudes expected of residents at each level of training and for each major rotation or other program assignment. The goals must be distributed to residents and teaching staff and should be available for review by the site visitor.
- b. Selection of residents: Residents for appointment to the program must be selected in accordance with institutional and departmental policies and procedures.
- c. Teaching staff and other program personnel: The director must have responsibility for selection and supervision of these staff members at each institution participating in the program.
- d. Supervision of residents: Institutional and program policies and procedures must ensure that all residents are adequately supervised in carrying out their patient care responsibilities. It is the responsibility of the program director and faculty to ensure that residents are appropriately supervised. Supervising policies of the residency should be consistent with those of the institution. They must be in writing and be distributed to all members of the program staff.  
Faculty schedules including their time on-call, must be structured to ensure that supervision is readily available to residents on duty.
- e. Resident evaluation: There must be regular and formal evaluation of residents with participation of the teaching staff.
- f. Discipline: The director has responsibility for the implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Resident well-being: The director must monitor resident stress, including mental or emotional conditions that inhibit performance or learning, and dysfunction related to drugs or alcohol. The director and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support service to residents. To promote physician well-being and prevent impairment, residents should be trained to balance personal and professional responsibilities in a way that can be reflected throughout their careers. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- h. Provision of accurate information: The director must submit accurate and complete information as requested by the RRC on the program information forms or in special communication as directed by the committee.
- i. Notification of change: The director must notify the RRC regarding major programmatic changes and obtain approval prior to their implementation.

## B. Family Physician Faculty

The faculty must contain teachers with the diversified interests and expertise necessary to meet the training responsibilities of the program. There must be a sufficient number of hours contributed by a critical mass of family physician faculty to prevent fragmentation of the learning experience. Where part-time faculty are utilized, there must be evidence of sufficient continuity of teaching and supervision.

In addition to the program director, there must be at least one full-time equivalent (FTE) family physician faculty for each six residents in the program. By the time a program offers all 3 years of training with the required minimum number of resident positions, ie, 4-4-4, at least one of the additional family physician faculty should be full time. A full-time commitment is at least 1,400 hours per year devoted to the residency, exclusive of time spent in direct patient care without the presence of residents. Any program in operation must have at least two family physician faculty members, including the director, regardless of resident complement.

The family physician faculty should have a specific time commitment to patient care to enable them to maintain their clinical skills. Some of the family physician teaching staff must see patients in the FPC to serve as role models for the residents. In addition, the program must have family physician faculty with admitting privileges in the hospital(s) where the FPC patients are hospitalized.

The family physician faculty must be currently certified by the American Board of Family Practice or must demonstrate appropriate educational qualifications, as so judged by the RRC. The RRC will determine the acceptability of alternate qualifications.

## C. Other Faculty

Physicians in the other specialties must devote sufficient time to teaching and supervising the family practice residents and providing consultation to ensure that the program's goals for their specialty areas are accomplished.

Additional teaching staff will be needed to provide training in areas such as behavioral science, nutrition, and the use of drugs and their interaction.

## D. Qualifications and Development of Faculty

All of the key members of the teaching staff in the program must demonstrate appropriate qualifications for their specialty areas, eg, certification by a member board of the American Board of Medical Specialties (ABMS) or appropriate educational qualifications for physician faculty, and appropriate credentials for the nonphysician faculty. The RRC will determine the acceptability of alternate qualifications.

There must be an explicit system to develop and maintain academic and clinical skills of the faculty and to foster their continual professional growth and development.

## IV. Facilities

A program must provide the facilities required for the education of residents in sufficient proximity to the primary hospital to allow for the efficient functioning of the educational program.

### A. Primary and Affiliated Hospitals

#### 1. Multiple Hospitals

If the primary facility is unable to provide all of the required experiences, additional facilities may be used. Such arrangements will be considered acceptable only if there is no compromise in the quality of the educational program and no significant reduction in attendance of residents at teaching sessions or of camaraderie and exchange of information among residents and with the faculty. These affiliated hospitals may not be at such a distance

from the primary teaching sites that they require excessive travel time or otherwise fragment the educational experience.

#### 2. Number of Beds

It is essential that the participating hospitals, primary and affiliated, be of sufficient size and have an adequate number of occupied teaching beds to ensure a sufficient patient load and variety of problems for the education of the number of residents and other learners on the services. Inpatient facilities must also provide adequate physical, human, and educational resources for training in family practice. In determining the adequacy of the number of occupied beds in the primary and affiliated hospitals, the patient census, the types of patients, and their availability for residency education will be considered.

#### 3. Medical Staff

The medical staff should be organized so that family physician members may participate in appropriate hospital governance activities on a basis equivalent to that of members in other specialties. Where a hospital is departmentalized, there must be a clinical department of family practice.

### B. Family Practice Center

#### 1. Introduction

The primary setting for training in the knowledge, skills, and attitudes of family practice is the model office or FPC, where each resident must provide continuing, comprehensive care to a panel of patient families. The FPC must be for the exclusive use of the residency, ie, all activities in the FPC must be residency-related and under the direction of the program director. The center must be clearly and significantly identified as a Family Practice Center.

An FPC must be in operation on the date the program begins. If a temporary center is used, it must meet the criteria specified below. If multiple centers are used for training, each must be approved by the RRC and must meet the same criteria as the primary center. All of the FPCs used in a program must provide comparable experiences.

Programs that involve training in Community or Migrant Health Centers (C/MHCs) [Note: See Section 330 of the Public Health Service Act.] must provide assurance that these facilities meet the criteria for an FPC, as outlined below, unless an exception is approved by the RRC.

#### 2. Administration and Staffing

The program director must have administrative responsibility for and control of the FPC and its staff. The director of the FPC must report to the program director. In cases where the facility is not owned by the program, its primary hospital, or its sponsoring institution, eg, a Community Health Center, a letter of agreement must be provided that guarantees the program director's authority over and responsibility for the educational activities that take place in the facility.

The FPC must be appropriately staffed with nurses, technicians, clerks, and administrative and other health professional personnel to ensure efficiency and adequate support for patient care and educational needs.

#### 3. Location and Access

The FPC must be close enough to the hospital to require minimal travel time. It may not be at such a distance as to require travel that interferes with the educational opportunities, efficiency, or patient care responsibility.

When a FPC is at such a distance from the primary hospital that the patients are hospitalized elsewhere, the program director must demonstrate how the residents will efficiently maintain continuity for their hospitalized patients at one hospital while having their required rotations at another and the extent to

which they are able to participate in the program's educational activities, such as attendance at required conferences.

The facility must be designed to ensure adequate accessibility and efficient patient flow, be environmentally sensitive to patient care needs, and provide appropriate access and accommodations for the handicapped.

**4. Required Areas**

Each FPC must have

- a. a reception area and waiting room that is consistent with the patient care and educational needs of the residency;
- b. suitable resident work space and space for individual and small group counseling;
- c. an office library resource, office laboratory, and a business office
- d. two examining rooms that are large enough to accommodate the teaching and patient care activities of the program for each physician faculty member and resident when they are providing patient care
- e. faculty offices, if not in the FPC, then immediately adjacent to the center
- f. a conference room that is conveniently accessible and readily available, as needed, and is large enough to accommodate the full program. Where multiple FPCs are used in a program, there must be a meeting room within or immediately adjacent to each FPC that is large enough for smaller meetings of all faculty, residents, and staff at that site.

When other learners, eg, fellows, residents from other specialties, medical students, and nurses, are being trained by family physicians in the FPC, additional space may be required. Efficiency and education of the family practice residents must not be compromised by the training of other health care professionals.

**5. Equipment**

There must be

- a. appropriate diagnostic and therapeutic equipment in the FPC to meet the basic needs of an efficient and up-to-date family practice office and an acceptable educational program for residents in family practice and
- b. provision for diagnostic laboratory and imaging services so that there is prompt and convenient access by patients and residents for patient care and education.

**6. Patient Access to the Family Practice Center**

The FPC must be available for patient services at times commensurate with community medical standards and practice. When the center is not open, there must be a well-organized plan that ensures continuing access to the patient's personal physician or a designated family physician from the FPC.

Patients of the FPC must receive education and direction as to how they may obtain access to their physician or a substitute physician for continuity of care during the hours the center is closed. Patients should have access to printed policies and procedures of the Center.

**7. Record System**

The FPC patients' records should be maintained in the FPC. However, if a centralized record system is used, easy and prompt accessibility of the records of the FPC patients must be ensured at all times, ie, during and after hours. The record system should be designed to provide information on patient care and the residents' experience. These records must be well maintained, legible, and up-to-date, and should document the patient's primary physician.

The record system must provide the data needed for patient care audit and chart review of all facets of family care, including

care rendered in the FPC, in the hospital, at home, by telephone, through consultations, and by other institutions.

**8. Source of Income**

The fiscal operation of the FPC must reflect a balance between education and service. Service demands must not adversely affect educational objectives. A plan should be in place to ensure fiscal stability of the program.

Residents, faculty, and staff should be educated periodically on the importance of cost-effective quality health care and the importance of efficiency within the FPC.

**C. Library Services**

In addition to the office library in the FPC, residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

Library services should include the electronic retrieval of information from medical databases.

There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program, and these must be readily available during nights and weekends.

**D. Patient Population**

A patient population of adequate size and representing a broad spectrum of problems, various ages and both sexes should be attended in the hospital, in the FPC, at home, and in institutions for long-term care or rehabilitation. A sufficient number of inpatients must be available to provide a broad spectrum of problems in any area listed in these requirements that involves inpatient care. The disease spectrum available for resident education must be that common to the general community. These experiences must include the opportunity to attain expertise in emergency initial care of unusual or life-threatening problems.

**V. The Educational Program**

**A. Introduction**

The curricula and plans for all rotations and experiences must be developed by the family practice faculty. Other specialty faculty should be consulted for assistance as needed. All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, specific methodologies for teaching, and methods of evaluation exist.

While every residency program must have the required core curriculum as contained in this document, curriculum components may vary, with approval of the RRC, to reflect current regional practice patterns and patient care needs and may be flexible enough to utilize the strengths of the program.

Family physicians must be utilized to the fullest extent as teachers consistent with their experience, training, and current competence.

**1. Program design**

The program design and/or structure must be approved by the RRC as part of the regular review process. All components of a residency program should be related to the program goals. Programs utilizing multiple sites and/or tracks must describe a core curriculum of at least 20 months that is participated in by all of the residents. If the remaining months are offered at more than one site they must be comparable in terms of their content, duration, and intensity.

Innovative and experimental educational designs and formats will be considered. For example, programs in family practice may propose utilization of a nonrotational format for providing resident education in areas usually taught in block rotations. Such

proposals must demonstrate that the program provides experience equivalent to that of block rotations for its residents and must include documentation that residents will have all of the required experiences during their training, including experience with an adequate volume and mix of patients, the required continuity of care experiences, and appropriate faculty supervision.

## 2. Approval of Changes

Prior approval of the RRC is required for major changes in the curriculum, format, or design of the program; the addition or deletion of a major participating hospital; and/or the utilization of a new or additional FPC or the alteration of an existing center in any way that might make the facility less suitable.

On review of a proposal for major change in curriculum, facilities, or design of a program, the RRC may determine that a site visit is necessary before a decision can be made.

## B. Principles of Family Practice

Continuity of care and family-oriented comprehensive care must be integral components of all programs. Residents must be taught throughout their training to demonstrate and to articulate clearly the following philosophy and concepts of family practice to patients and colleagues.

### 1. Continuity of Care

The program must instruct residents in the provision of continuity of care and ensure that each resident has experience with the interrelating roles played by the physician, the patient, the patient's family, the health care system, and the community in optimizing the patient's care.

The learning of continuity of care requires stable, protected physician-patient relationships that are structured to enhance both resident learning and patient care. This must occur primarily with a panel of patients in the FPC. Additional continuity patients, who may not be able to visit the FPC, should be enrolled and assigned as needed to provide residents with continuity experience in home care and long-term care settings.

The program must require that each resident maintain continuity of responsibility for his/her patients when such patients require hospitalization or consultation with other providers, both to integrate each patient's care and to optimize each resident's continuity training. The resident must maintain active involvement in management and treatment decisions.

### 2. Family-Oriented Comprehensive Care

The family physician assumes responsibility for the total health care of the individual and family, taking into account social, behavioral, economic, cultural, and biologic dimensions. Therefore, a program must emphasize comprehensive, family-oriented care that must be taught in didactic and clinical settings during the entire period of residency training. Residents must have experience in all patient care contexts, including outpatient, inpatient, home, and long-term care settings.

The resident must be given the opportunity to achieve high levels of competence in health maintenance and in disease and problem management and to develop attitudes that reflect expertise in comprehensive patient management and education.

The program must provide the opportunity for residents to acquire knowledge and experience in the provision of longitudinal health care to families, including assisting them in coping with serious illness and loss and promoting family mechanisms to maintain wellness of its members.

Essential elements to be integrated into the teaching of family care to residents include, for the individual patient, health assessment, health maintenance, preventive care, acute and chronic illness and injury, rehabilitation, behavioral counseling, health education, and human sexuality. Elements for the family include family structure and dynamics, genetic counseling, fam-

ily development, family planning, child rearing and education, aging, end of life issues, epidemiology of illness in families, the role of family in illness care, family counseling and education, nutrition, and safety.

The resident must be taught patterns of record keeping that incorporate a comprehensive information base, retrievable documentation of all aspects of care, and mechanisms for promotion of health maintenance and quality assessment of care.

## C. Family Practice Center Experience

### 1. Orientation

First-year residents must have an orientation period in the FPC to introduce the comprehensive approach to health care and to promote resident identity as a family physician.

### 2. Faculty Supervision

The number of family physician faculty assigned to the FPC must be sufficient to ensure that there is always an appropriate number who, without other obligations, supervise and are immediately available on-site to the residents in the FPC whenever two or more residents are seeing patients. If there is only one resident seeing patients, the preceptor may engage in other activities in the FPC to a maximum of 50%. In addition to their availability when needed by residents, these supervisors must provide active precepting of the residents.

### 3. Patient Population

Each program must document the availability of a stable patient population of sufficient number and variety to ensure comprehensiveness and continuity of experience for the residents in the FPC. Patient populations seeking only episodic care will not satisfy this requirement.

The majority of the scheduled patient visits in the FPC should be from families for whom a resident is responsible. To achieve this, appointments must be scheduled by regular employees of the FPC or by an employee assigned specifically to scheduling family practice patients. These employees must be cognizant of the significance of the appointment policy on continuity of care and patient access to personal physicians. Wherever possible, assignment of family groups to a resident and priority scheduling with the primary provider should be considered.

### 4. Continuity Patient Panels

Residents should develop and maintain a continuing physician-patient relationship with an undifferentiated panel of patients and their families throughout the 3-year period. The program must be structured to ensure that residents maintain such continuity at least throughout their second and third years of training. This continuity may be interrupted for a maximum of 1 month in the first year of training. During the last 2 years of training the resident may not be absent longer than 2 months in each year, and these 2 two-month periods may not be consecutive. After the first interruption, the residents must return to provide continuity care for their patient panels for at least 2 months before interrupting continuity again.

Each resident must be assigned to the same FPC for the minimum number of half days specified below. A half-day session must be at least 3 hours. To gain adequate experience, each resident must see, on average, the following required minimum numbers of patients per year:

- Each first-year resident must be assigned to the FPC at least 1 half day per week and see a total of at least 140 patient visits by the end of the year
- Each second-year resident must be assigned to the FPC at least 2 half days per week and see a total of at least 500 patient visits during the year

- c. Each third-year resident must be assigned at least 3 half days per week in the FPC and see a total of at least 1000 patient visits during the year

#### D. Focused Experiences

The program should implement a plan to ensure that residents retain their identity and commitment to the principles and philosophic attitudes of family practice throughout the training program, particularly while they rotate on other specialty services.

An appropriately qualified member of the program's faculty must be in attendance on site when the services or procedures needed exceed the capability of the most senior supervising resident or when qualified senior residents are unavailable for supervision of more junior residents.

While the content of a rotation is more important than the time assigned to it, it is necessary to establish guidelines for the allocation of time segments to provide an objective measure of the opportunity provided for residents to achieve the cognitive knowledge, psychomotor skills, attitudinal orientation, and practical experience required of a family physician in each of the curricular elements. Time spent in the FPC seeing continuity patients may not be included when calculating the duration of the specialty rotations for which a number of required hours is specified. It is understood, however, that FPC time is included in the required rotations that are specified in months.

The following curricular areas must be included in each program.

##### 1. Human Behavior and Mental Health

Knowledge and skills in this area should be acquired through a program in which behavioral science and psychiatry are integrated with all disciplines throughout the resident's total educational experience. Training should be accomplished primarily in an outpatient setting through a combination of longitudinal experiences and didactic sessions. Intensive short-term experiences in facilities devoted to the care of chronically ill patients should be limited. Instruction must be provided by faculty who have the training and experience necessary to apply modern behavioral and psychiatric principles to the care of the undifferentiated patient. Family physicians, psychiatrists, and behavioral scientists should be involved in teaching this curricular component.

There must be instruction in the following areas:

- a. Diagnosis and management of psychiatric disorders in children and adults
  - b. Emotional aspects of non-psychiatric disorders
  - c. Psychopharmacology
  - d. Alcoholism and other substance abuse
  - e. The physician/patient relationship
  - f. Patient interviewing skills
  - g. Counseling skills
  - h. Normal psychosocial growth and development in individuals and families
  - i. Stages of stress in a family life cycle
  - j. Sensitivity to gender, race, age, sexual orientation and cultural differences in patients
  - k. Family violence including child, partner, and elder abuse (physical and sexual), as well as neglect, and its effect on both victims and perpetrators
  - l. Medical ethics, including patient autonomy, confidentiality, and issues concerning quality of life
  - m. Factors influencing patient compliance
- ##### 2. Adult Medicine

This experience must provide the resident with the opportunity to acquire the knowledge and skills necessary for the diagnosis, treatment, and management of non-surgical diseases of adults. This experience should enhance the resident's understanding of

the pathophysiologic basis for non-surgical diagnostic and therapeutic techniques and promote development of a disciplined, scientific approach to the practice of adult medicine. Faculty must include family physicians and may include internists or other specialists.

There must be a minimum of 8 months of experience in adult medicine. At least 6 months should occur in the inpatient setting, on either a family practice or an internal medicine service. In all cases, experiences should progress from general to specific content areas, with graduated resident responsibilities and supervision.

This training must include a separate defined critical care experience of at least 1 month's duration, or its equivalent, and a structured clinical experience in cardiology.

The curriculum must also provide instruction in endocrinology, pulmonary diseases, hematology and oncology, gastroenterology, infectious diseases, rheumatology, nephrology, allergy and immunology, and neurology through lectures, rotations, or interaction with consultants.

There must be education in the prevention and detection of diseases in women. Instruction on women should also cover social issues of concern to women, including domestic violence, rape, sexual abuse, and the changing role of women in our society. Residents should have the opportunity to develop an understanding of the effect of the community on women's health care, including the epidemiology of infant mortality and prevention of teenage pregnancy. Residents must have the opportunity to learn about the mental health issues of women, including problems that are seen predominantly in women, such as eating disorders and the *sequelae* of sexual abuse.

##### 3. Maternity and Gynecologic Care

###### a. Maternity Care

The resident must be provided instruction in the biological and psychosocial impacts of pregnancy, delivery, and care of the newborn on a woman and her family. There must be a minimum of 2 months of experience in maternity care, including the principles and techniques of prenatal care, management of labor and delivery, and postpartum care. This must involve sufficient instruction and experience to enable residents to manage a normal pregnancy and delivery.

The program must have family physician faculty who are engaged in providing these services and who can supervise the residents and serve as role models for them.

The resident must be trained in the recognition and initial management of the high-risk prenatal patient, including consultation and referral. Additionally, the residents must be taught to recognize and manage complications and emergencies in pregnancy, labor, and delivery. Residents also must receive training in genetic counseling. When appropriate for the resident's future practice and patient care, the resident must be trained in the management of the high risk prenatal patient.

Each resident must perform a sufficient number of deliveries to ensure adequate opportunity for the achievement of competencies appropriate to family physicians. A portion of the maternity care experience must be derived from patients seen in continuity. To accomplish the objectives of the curriculum in maternity care, residents must assume the responsibility of longitudinal provision of antenatal, natal, and postnatal care during their 3 years of training. Whenever possible, these patients should be derived from the residents' panels of patients in the FPC.

Supervision of labor and delivery care must be immediately available. For deliveries, and for labor when risk factors are

present, there must be on-site supervision in the delivery suite/labor deck by a family physician, an obstetrician, a senior resident in an ACGME obstetrics residency or by a senior family practice resident who has had sufficient experience. In determining the supervision that is required, the program director must consider the year of training and previous obstetrical experience of the supervising resident. If supervision is provided by a senior resident it must be documented that s/he has had sufficient maternity care experience to function in this capacity. When the direct supervision is provided by a senior resident, there must be on-site physician faculty supervision immediately available in the hospital.

The program must make available additional training in maternity care as an elective within the 36-month curriculum. This elective experience must include high-risk maternity care, including the opportunity for residents to develop technical proficiency in appropriate operative procedures that may form a part of their future practice.

#### b. Gynecological Care

There must be a minimum of 140 hours of structured experience in the care of the gynecological system in nonpregnant women. This experience must be in addition to the routine care of continuity patients in the FPC and gynecological experience gained during family practice call or during the emergency medicine rotation.

All residents must be provided instruction in normal growth and development; diseases of the female reproductive tract; reproductive physiology including fertility, family planning, and human sexuality; physiology of menopause; and pelvic floor dysfunction. The program also must provide adequate instruction and clinical experience in managing emergency problems of the female reproductive system. This experience should be predominantly ambulatory, but residents must participate in the management of gynecological/surgical emergencies. The training should include some inpatient care, preoperative care, assisting in surgery, and postoperative care. The residents must have the opportunity to learn to perform appropriate procedures.

#### 4. Care of the Surgical Patient

The program must provide instruction with special emphasis on the diagnosis and management of surgical disorders and emergencies and the appropriate and timely referral of surgical cases for specialized care.

Residents must be taught to appreciate the varieties of surgical treatments and the potential risks associated with them to enable them to give proper advice, explanation, and emotional support to patients and their families. The residents should also be taught to recognize conditions that are preferably managed on an elective basis.

The program must provide all residents with training in preoperative and postoperative care, basic surgical principles, asepsis, handling of tissue, and technical skills to assist the surgeon in the operating room. The program should provide the opportunity for residents to develop technical proficiency in those specific surgical procedures that family physicians may be called on to perform. If the residents expect to include surgery as a major aspect of their practice, additional training must be considered.

##### a. General Surgery

The residents must be required to participate in a structured experience in general surgery of at least 2 months, including ambulatory and operating room experience. Experiences in general surgery must be designed to provide opportunity for residents to achieve competency in the diagnosis and man-

agement of a wide variety of common surgical problems typically cared for by family physicians.

##### b. Surgical Subspecialties

The required experiences in surgical subspecialties may occur in a block or longitudinal format and are exclusive of time spent caring for patients in the assigned panel of FPC patients and of the learning acquired through consultations.

A minimum of 140 hours of structured experience in the care of orthopaedic disorders is required. If sports medicine experience is integrated with orthopaedics, the time devoted to it must be in addition to the 140 hours required for experience in orthopaedics.

This experience must include caring for a broad variety of acute and emergency musculoskeletal injuries and illnesses, as well as for chronic disorders. Residents must have the opportunity to develop skills in casting and splinting. The program also must provide experience in the initial evaluation and rehabilitation of adult and pediatric musculoskeletal disorders, including the appropriateness of consultation. This educational experience must include didactic conferences and clinical exposure, and should occur primarily in an outpatient setting. Supervision must be provided by faculty with demonstrated expertise in evaluation and treatment of musculoskeletal disorders.

The curriculum also must include structured experiences in the care of genitourinary disorders and disorders of the eye, ear, nose, and throat. Residents must have the opportunity under appropriate supervision to learn to perform appropriate procedures. Most of these experiences should occur in outpatient settings and must be in addition to the experiences residents have during the care of their continuity patients in the FPC.

##### 5. Sports Medicine

The sports medicine experience must include didactic and clinical experience in the areas of preparticipation assessment, injury prevention, evaluation, management, and rehabilitation related to athletic and recreational injuries.

The orthopaedic aspects of sports medicine training may be integrated into the orthopaedic curriculum, but the time devoted to sports medicine should be in addition to the minimum requirement of 140 hours for orthopaedics.

##### 6. Emergency Care

There must be a structured educational experience of at least a 1-month block rotation in the delivery of emergency care. Additional required or elective emergency care experiences may be in either a block or longitudinal format. There must be on-site supervision by qualified physicians whenever residents are on the service.

A sufficient volume and variety of patient visits, adequate numbers and types of support personnel, and suitable facilities must be available to ensure the residents an adequate experience in the initial management of serious illnesses and injuries.

The emergency care training should include didactic as well as clinical experiences. Residents should receive training in all standard current life support skills and procedures for both trauma and medical emergencies in patients of all ages.

##### 7. Care of Neonates, Infants, Children, and Adolescents

There must be a structured educational experience in the care of children that is at least 4 months in duration and involves pediatric ambulatory clinic and inpatient experience with a sufficient volume of patients in each setting. This must include the newborn nursery as well as clinical experience in management of the distressed neonate who may need resuscitation, stabilization, and preparation for transport. The resident should have

the opportunity to develop an understanding of the prenatal period, the growth and development of the newborn through adolescence, child rearing, and emotional problems of children and their management. In addition, the resident should be taught to recognize and manage behavioral, medical, and surgical problems of children and adolescents in home, school, ambulatory, and hospital settings.

8. Community Medicine

Residents must be taught to assess and understand the important health needs of the community in which they work. Instruction and clinical experiences in the following areas must be provided:

- a. Occupational medicine, including disability assessment, employee health, and job-related injury and illness
- b. Community health resources that may be utilized in the care of patients and their families, including school health services and public health (including environmental health) services
- c. Disease prevention/health promotion, including appropriate strategies and behaviors such as immunizations and healthful lifestyle changes that will protect children, adults, and families from illness or injury.

9. Care of the Older Patient

Educational experience must be provided in the common and complex clinical problems of the older patient and must include the preventive aspects of health care, functional assessment, the physiological and psychological changes of senescence, the sociocultural parameters of the patient and his or her greater community, the nutritional and pathological (acute and chronic) entities of aging, and the effective utilization of all members of the health care team.

There must be experience with the older adult patient in the hospital, the FPC, a long-term care facility, and the home.

10. Care of the Skin and Associated Organs

The curriculum must include a required educational experience of at least 60 hours, most of which should be in an outpatient setting and be supplementary to the learning that results from consultations. The experience should be supervised by a physician with competence in this area.

11. Diagnostic Imaging and Nuclear Medicine

The program must provide the residents with a structured opportunity to learn the appropriate application of techniques and specialty consultations in the diagnostic imaging and nuclear medicine therapy of organs and body systems. Instruction should include the limitations and risks attendant to these techniques. The format of the instruction should be adapted to the resources available, but must include radiographic film/diagnostic imaging interpretation and nuclear medicine therapy pertinent to family practice.

12. Conferences

Conferences should be offered to cover the breadth of the specialty of family practice.

There should be a core curriculum that is based in the residency and that is specifically directed to the residents as learners. This core curriculum should be supplemented by conferences during other rotations. Residents and faculty should periodically be presenters at conferences, but residents should not be used excessively in this role. Resident and faculty attendance at conferences must be monitored and documented, and these records should be reviewed periodically by the program director and they should also be available for review by the site visitor.

13. Resident Research and Scholarly Activity

Each program must provide opportunity for residents to participate in research or other scholarly activities. Instruction in the critical evaluation of medical literature, including assessing study validity and the applicability of studies to the residents' patients, must be provided.

The participation of each resident in an active research program should be encouraged as preparation for a lifetime of self-education after the completion of formal training. Generally, this activity should be concurrent with other assignments, provided that the responsibilities of the resident are adjusted to permit a reasonable time for research activity. This experience should be designed to give the residents an awareness of the basic principles of study design, performance, analysis, and reporting, as well as of the relevance of research to patient care.

Other acceptable forms of scholarly activity include presentations at national, regional, state, or local meetings, and presentation and publication of review articles and case presentations.

14. Practice Management

There must be at least 60 hours of formal instruction in practice management in both the didactic and the practical setting. A practice management curriculum should include but not be limited to the areas of personal finance, office and personnel management, business planning, use of computers in practice, managed care, alternative practice models, professional liability, and risk management.

The FPC should be considered a primary site for teaching practice management and should serve as an example on which residents may model their future practice.

15. Electives

Electives are intended primarily to enrich the residents' training with experiences relevant to their plans for future practice or their interests as family physicians. There must be a minimum of 3 and a maximum of 6 months of appropriately supervised electives available to all residents. The choice of electives by the resident, including those for remedial purposes, must be made with the approval of the program director.

**E. Resident Workload and Impairment**

Each program must ensure an appropriate working environment and a duty hour schedule that are consistent with proper patient care and the educational needs of the residents. The educational goals of the program and the learning objectives of the residents must not be compromised by excessive reliance on residents to fulfill institutional service obligations.

There must be formal written policies on the following matters that demonstrate compliance with these requirements. These documents must be available to the RRC, if requested.

1. Moonlighting

It is the responsibility of the program to see that residents provide patient care in the pursuit of their education without additional remuneration based on productivity. Residency training is a full-time responsibility. The program director should monitor the effects of outside activities, including moonlighting inside or outside the participating institutions, to ensure that the quality of patient care and the resident's educational experience are not compromised.

2. Workload/Duty Hours

Resident assignments must be made in such a way as to prevent excessive patient loads, excessive new admission workups, inappropriate intensity of service or case mix, and excessive length and frequency of call contributing to excessive fatigue and sleep deprivation. The program must also ensure the following:

- a. At least 1 day out of 7, averaged monthly, away from the residency program
  - b. On-call duty no more frequently than every third night, averaged monthly
  - c. Adequate backup if sudden and unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods
- Programs must have formal mechanisms specifically designed for promotion of physician well-being and prevention of impairment. There also should be a structured and facilitated group designed for resident support that meets on a regular schedule.

#### F. Faculty Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. Active participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship.
2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
3. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
4. Provision of guidance and technical support (eg, research design, statistical analysis) to residents involved in research.

### VI. Evaluation

#### A. Evaluation of Residents

There must be adequate, ongoing evaluation of the knowledge, skills, and performance of the residents. Entry evaluation assessment, interim testing, and periodic reassessment, as well as other modalities for evaluation, should be utilized. There must be a method of documenting the procedures that are performed by the residents. Such documentation must be maintained by the program, be available for review by the site visitor, and be used to provide documentation for future hospital privileges.

The program must demonstrate that it has developed an effective plan for evaluation and provision of feedback to the residents and that it uses specific performance measure in each resident's evaluation. These must include, at a minimum, the assessment of the resident's competence in patient care, clinical science, practice-based learning and improvement, interpersonal skills and communication, professionalism, and systems-based practice.

The faculty must provide a written evaluation of each resident after each rotation, and these must be available for review by the residents and site visitor. Written evaluation of each resident's knowledge, skills, professional growth, and performance, using appropriate criteria and procedures, must be accomplished at least semiannually and must be communicated to and discussed with the resident in a timely manner.

Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship, and professional growth.

The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other

authorized personnel. The program director and faculty are responsible for provision of a written final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record that is maintained by the institution.

#### B. Evaluation of Faculty

All teaching faculty must be formally evaluated at least annually. Documentation of faculty evaluation should include teaching ability, clinical knowledge, attitudes, and communication skills. There should be a mechanism for confidential input by the residents.

#### C. Evaluation of the Program

The family practice residency must incorporate all elements of these Program Requirements. The educational effectiveness of a program must be evaluated in a systematic manner at least annually. The program should engage in self-evaluation within the context of the educational goals and objectives, the needs of the residents, teaching responsibilities of the faculty, and the availability of administrative and financial support and of adequate health care resources within the community. This evaluation should include an examination of the balance among education, research, and service. The teaching staff must hold regular, documented meetings to accomplish these reviews. At least one resident representative should participate in these reviews and written evaluations by residents and feedback from the program's graduates should be utilized in the process.

#### D. Evaluation of Patient Care

A mechanism must be in place to evaluate the care provided in both inpatient and outpatient settings. There should be evidence that this evaluation is used to improve education and the provision of care.

The residency program must ensure that its residents, by the time they graduate, are able to investigate, evaluate, and improve their patient care practices. Residents are expected to analyze practice experience and perform practice-based improvement activities using a systematic methodology.

#### E. Evaluation of the Graduates

Each program must maintain a system of evaluation of its graduates. The residency should obtain feedback on demographic and practice profiles, licensure and board certification, the graduates' perceptions of the relevancy of training to practice, suggestions for improving the training, and ideas for new areas of curriculum. The suggested format is a written survey after 1 year and every 5 years thereafter.

The data from the evaluation of the graduates should be used as part of the program's determination of the degree to which the program's stated goals are being met.

### VII. Evaluation of the Program by the RRC

The program will be evaluated by the RRC at regular intervals, at which times the RRC will judge the degree of its compliance with the Program Requirements.

One measure of the quality of a residency program is the performance of its graduates on the certifying examination of the American Board of Family Practice. In its evaluation of residency programs, the RRC will take into consideration the information provided by ABFP regarding resident performance on the certifying examinations over a period of several years.

The committee will use scores for a minimum of 3 and a maximum of 5 years and will take into consideration noticeable improvements or declines during the period considered. Poor performance will be cited if more than 10% of a program's candidates fail on the first examination over a period of consecutive years and/or the program's composite score is consistently at or below the 25th percentile in the nation.

ACGME: September 26, 2000 Effective: July 1, 2001

## Program Requirements for Residency Education in Family Practice Geriatric Medicine and Family Practice Sports Medicine

The following generic requirements pertain to programs in Family Practice Geriatric Medicine and Family Practice Sports Medicine. Each program must comply with the requirements listed below as well as with the specialty content found in the Program Requirements for the respective area.

These programs must exist in conjunction with and be an integrated part of an Accreditation Council for Graduate Medical Education (ACGME)-accredited family practice residency program. Their existence should not compromise the integrity of the core program.

Residents who are appointed to programs in geriatric medicine must have satisfactorily completed an ACGME-accredited residency in family practice or internal medicine. Residents appointed to the sports medicine programs should have completed an ACGME-accredited residency in emergency medicine, family practice, internal medicine, or pediatrics. [Note: Those lacking board certification in one of these areas will not be considered eligible for a Certificate of Added Qualifications from any of the corresponding specialty boards.]

### I. Program Organization

#### A. Program Design

The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of the residency program must be related to these goals and should be structured educational experiences for which a specific methodology and method of evaluation exist.

The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

#### B. Participating Institutions

Participation by any institution providing more than 3 months of training in a program must be approved by the RRC.

A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

### II. Program Personnel

The program director and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

There must be a single program director responsible for the program, who is based primarily at the teaching center. The director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. She or he must have sufficient authority to manage, control, and direct the program.

##### 1. Qualifications

The program director must possess the following qualifications:

- a. Requisite and documented clinical, educational, and administrative abilities and experience.
- b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. Certification by the specialty board in the discipline of the program or demonstrate suitable equivalent qualifications. For directors of programs in geriatric medicine this means certification by the American Board of Family Practice or the American Board of Internal Medicine and a Certificate of Added Qualification in Geriatric Medicine from the same board. Directors of programs in sports medicine may be certified by any of the following boards: American Board of Emergency Medicine, American Board of Family Practice, American Board of Internal Medicine, or American Board of Pediatrics, and must possess a Certificate of Added Qualification in Sports Medicine from that same board. The RRC will determine the adequacy of alternate qualifications.
- d. Appointment in good standing to the medical staff of an institution participating in the program.

##### 2. Responsibilities

The responsibilities of the program director include:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff and be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications, ie, board certification for the physician faculty and appropriate credentials for the nonphysician teaching staff, to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### III. Workload/Call Schedule

The schedule for the residents should allow them to make full utilization of their educational experiences without resultant counterproductive stress, fatigue, and depression. There should be adequate staff to prevent excessive patient loads and excessive length and frequency of call. On-call duty should occur no more frequently than every third night, averaged monthly, and residents must be permitted to spend a monthly average of at least 1 day out of 7 away from program duties. Formal written policies on these matters must be established and available for review.

There must be attention given to monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

### IV. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

#### A. Teaching Staff Research/Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
3. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.

#### B. Resident Research/Scholarly Activity

The residents must be exposed to and take part in research programs that provide an environment conducive to a questioning attitude and critical analysis. The program must provide support for resident participation in scholarly activities and offer guidance and technical support, eg, research design, statistical analysis, for residents involved in research. Residents must participate in journal clubs and research conferences.

#### C. Library

Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

The library services should include the electronic retrieval of information from medical databases.

There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a

residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### V. Evaluation

#### A. Evaluation of Residents

There must be regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall

1. Evaluate the knowledge, skills, and professional growth of the residents at least semiannually, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. Provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
6. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

#### B. Evaluation of the Teaching Staff

Formal mechanisms for annual evaluation of the teaching staff must exist and must include confidential resident participation.

#### C. Program Evaluation

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. At least one resident representative should participate in these reviews, and written evaluations by residents should be utilized in this process.

There should also be periodic evaluation of the utilization of resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

One measure of the quality of a program will be the performance by its graduates on the examinations of the certifying board.

### VI. Certification

Those planning to seek a Certificate of Added Qualifications from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

*ACGME: September 1994 Effective: July 1995*

## Program Requirements for Residency Education in Family Practice Geriatric Medicine

In addition to complying with the Program Requirements for Residency Education in Family Practice Geriatric Medicine and Family Practice Sports Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

### I. Educational Program

An educational program in geriatric medicine must be organized to provide a well-supervised experience at a sufficient level for the resident to acquire the competence of a physician with added qualifications in the field. It shall be 12 months in duration. The program must be conducted by an accredited residency program in internal medicine or family practice.

Clinical experience must include opportunities to manage elderly patients with a wide variety of medical problems on an inpatient and outpatient basis. Residents must be given the opportunity to provide both primary care and consultation for patients in acute, ambulatory, community, and long-term care settings in order to understand the interaction of natural aging and disease as well as the techniques of assessment, therapy, and management. Additionally, residents must be given the opportunity to care for persons who are generally healthy and require primarily preventive health-care measures.

The program should include an emphasis on the physiology of aging, the pathophysiology that commonly occurs in older persons, atypical presentations of illnesses, functional assessment, cognitive status and affective assessment, and concepts of treatment and management in both the acute and long-term care settings, as well as in the community and in the home.

Attention also should be directed to the behavioral aspects of illness, socioeconomic factors, and ethical and legal considerations that may impinge on medical management.

The program must provide the opportunity for residents to maintain their basic primary skills during the course of this training. At least ½ day per week must be spent in a continuity of care experience in the resident's primary discipline.

### II. Faculty and Staff

#### A. Program Director

The program director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. The director must have demonstrated experience in geriatric medicine and must have demonstrated experience in education and scholarly activity and have a career commitment to academic geriatric medicine. The director must be primarily based at the teaching center.

#### B. Other Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program. For programs with more than two residents, there must be 0.5 additional faculty member for each additional resident. Some of these faculty may be part-time in geriatric medicine or drawn wholly from collaborating programs. The faculty commitment must not attenuate the quality of the core residency training program. The program must ensure that interdisciplinary relationships with

the following specialties occur: physical medicine and rehabilitation, neurology, and psychiatry. Appropriate relationships with other disciplines including but not limited to general surgery, orthopedics, ophthalmology, otolaryngology, urology, gynecology, emergency medicine, dentistry, pharmacy, audiology, physical and occupational therapy, speech therapy, and nursing and social services should be maintained. Additionally, a liaison with the physician assistants, when available, should be established.

#### C. Geriatric Care Team

The resident must have experience with physician-directed interdisciplinary geriatric teams in an acute-care hospital, in a nursing home, that includes subacute and long-term care, in a home care setting, and in a family practice center or other outpatient settings. Essential members include a geriatrician, a nurse, and a social worker. Additional members may be included in the team as appropriate, including representatives from disciplines such as neurology, psychiatry, physical medicine and rehabilitation, physical therapy, occupational therapy and speech therapy, dentistry, pharmacy, psychology, and pastoral care. Regular team conferences must be held as dictated by the needs of the individual patient.

### III. Facilities/Resources

A patient population adequate to meet the needs of the training program must be available in the facilities in which the educational experiences take place. Elderly patients of both sexes with a variety of chronic illnesses, at least some of whom have potential for rehabilitation, must be available. At all facilities utilized by the program the resident must be given opportunities to assume meaningful patient responsibility. At each setting certain activities are mandated and must be supervised and taught by the appropriate clinician. The program must include the following:

#### A. Acute-Care Hospital

The acute-care hospital central to the geriatric medicine program must be an integral component of a teaching center. It must have the full range of services usually ascribed to an acute-care general hospital, including intensive care units, emergency medicine, operating rooms, diagnostic laboratory and imaging services, and a pathology department.

#### B. Long-term Care Institution

One or more long-term care institutions, such as a skilled nursing facility or chronic care hospital, is a necessary component of the geriatric medicine program. Exposure to subacute care and rehabilitation care in the long-term care setting is desirable. The total number of beds available must be sufficient to permit a comprehensive educational experience. The institutions must be approved by the appropriate licensing agencies of the state, and the standard of facilities and care in each must be consistent with those promulgated by the Joint Commission on Accreditation of Healthcare Organizations.

#### C. Long-term Noninstitutional Care

Noninstitutional care service, for example, home care, day care, residential care, or assisted living, is a major component of the geriatric medicine program. A home care program or home health agency is a necessary resource to permit residents to learn to provide care for patients who are homebound but not institutionalized. Day care or day hospital centers, life care communities, and residential care facilities for the elderly are also desirable training sites.

#### D. Ambulatory Care Program

The ambulatory care program must comprise a minimum of 33% of the resident's time. Each resident should evaluate approximately 1 to 3 new geriatric patients and 4 to 8 follow-up geriatric patients

each week. This must include at least  $\frac{1}{4}$  day per week spent in a continuity of care experience. This experience must be designed to provide care in a geriatric clinic or family practice center to elderly patients who may require the services of multiple medical disciplines (including but not limited to neurology, gynecology, urology, psychiatry, podiatry, orthopedics, physical medicine and rehabilitation, dentistry, audiology, otolaryngology, and ophthalmology, as well as nursing, social work, and nutrition, among other disciplines). The opportunity to provide continuing care and to coordinate the implementation of recommendations from these medical specialties and disciplines is mandatory. In addition, experiences in relevant ambulatory specialty and subspecialty clinics (eg, geriatric psychiatry and neurology) and those that focus on geriatric syndromes (eg, falls, incontinence, osteoporosis) are highly desirable.

#### E. Additional Educational Environment

Peer interaction is essential for residents. To achieve this goal, an accredited training program in at least one relevant specialty other than family practice must be present at the teaching center sponsoring the training program in geriatric medicine. This may be accomplished by affiliation with another educational institution for the enrichment of the educational experience.

Involvement in other health care and community agencies is desirable. There must be a formal affiliation agreement between each long-term care facility included in the program and the sponsoring institution, in which each institution must acknowledge its responsibility to provide high-quality care, adequate resources, and administrative support for the educational mission. In addition, there must be a letter of agreement between each long-term care facility and the office of the director of the geriatric medicine program that guarantees the director appropriate authority at the long-term care institution to carry out the training program.

### IV. Specific Program Content

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching, and a method of evaluation exist. A written curriculum that describes the program comprehensively, including sites, educational objectives for each component, and topics to be covered in didactic sessions, should be available to residents and faculty. The curriculum must ensure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of a physician who specializes in the care of the aged.

Didactic as well as clinical learning opportunities must be available to the resident. Conferences or seminars/workshops in geriatric medicine should be specifically designed to augment the residents' clinical experiences. Journal club or other activities that foster interaction and develop skills in interpreting the medical literature are necessary.

All deaths of patients who receive care by residents should be reviewed and autopsies performed whenever possible.

As the residents progress through their training, they must have the opportunity to teach personnel such as nurses, allied health personnel, medical students, and residents. Appropriate experiences designed to refine educational and teaching skills of the residents and to develop the necessary administrative skills must be provided.

Appropriate faculty supervision of the residents must be provided during all of their educational experiences.

The following components must be provided:

#### A. Geriatric Medicine Consultation Program

This program must be formally available in the ambulatory setting, the inpatient service, and/or emergency medicine in the acute-care

hospital or at an ambulatory setting administered by the primary teaching institution.

#### B. Long-term Care Experience

In the long-term care institutional setting each resident must have 12 months of continuing longitudinal clinical experience with an assigned panel of patients for whom the resident is the primary provider. Additional block time to provide long-term care experience is encouraged. Emphasis during the longitudinal experience should be focused on (1) the approaches to diagnosis and treatment of the acutely and chronically ill, frail elderly in a less technologically sophisticated environment than the acute-care hospital; (2) working within the limits of a decreased staff-patient ratio compared with acute-care hospitals; (3) a much greater awareness of and familiarity with subacute care physical medicine and rehabilitation; (4) the challenge of the clinical and ethical dilemmas produced by the illness of the very old; and (5) administrative aspects of long-term care.

Experience with home visits and hospice care must be included. The resident must be exposed to the organizational and administrative aspects of home health care. Continuity of care with an assigned panel of home or hospice care patients for whom the resident is the primary provider is essential.

#### C. Geriatric Psychiatry

Identifiable structured didactic and clinical experiences in geriatric psychiatry must be included in the program of each resident. Behavioral sciences such as psychology/social work and others must be included in the curriculum.

#### D. Curriculum

The training program must provide opportunities for the residents to develop clinical competence in the overall field of geriatric medicine. The curriculum of the program must exhibit, as a minimum, the following content and skill areas:

1. Current scientific knowledge of aging and longevity, including theories of aging, the physiology and natural history of aging, pathologic changes with aging, epidemiology of aging populations, and diseases of the aged.
2. Aspects of preventive medicine, including nutrition, oral health, exercise, screening, immunization, and chemoprophylaxis against disease. Instruction about and experience with community resources dedicated to these activities should be included.
3. Geriatric assessment, including medical, affective, cognitive, functional status, social support, economic, and environmental aspects related to health; activities of daily living (ADL); the instrumental activities of daily living (IADL); the appropriate use of the history; physical and mental examination; and laboratory.
4. Appropriate interdisciplinary coordination of the actions of multiple health professionals, including physicians, nurses, social workers, dietitians, and rehabilitation experts, in the assessment and implementation of treatment.
5. Topics of special interest to geriatric medicine, including but not limited to cognitive impairment, depression and related disorders, falls, incontinence, osteoporosis, fractures, sensory impairment, pressure ulcers, sleep disorders, pain, senior (elder) abuse, malnutrition, and functional impairment.
6. Diseases that are especially prominent in the elderly or that have different characteristics in the elderly, including neoplastic, cardiovascular, neurologic, musculoskeletal, metabolic, and infectious disorders.
7. Pharmacologic problems associated with aging, including changes in pharmacokinetics and pharmacodynamics, drug interactions, overmedication, appropriate prescribing, and adherence.

8. Psychosocial aspects of aging, including interpersonal and family relationships, living situations, adjustment disorders, depression, bereavement, and anxiety.
9. The economic aspects of supporting services, including Title III of the Older Americans Act, Medicare, Medicaid, capitation, and cost containment.
10. Ethical and legal issues especially pertinent to geriatric medicine, including limitation of treatment, competency, guardianship, right to refuse treatment, advance directives, wills, and durable power of attorney for medical affairs.
11. General principles of geriatric rehabilitation, including those applicable to patients with orthopedic, rheumatologic, cardiac, and neurologic impairments. These principles should include those related to the use of physical medicine modalities, exercise, functional activities, assistive devices, environmental modification, patient and family education, and psychosocial and recreational counseling.
12. Management of patients in long-term care settings, including palliative care, knowledge of the administration, regulation, and financing of long-term institutions, and the continuum from short- to long-term care.
13. Research methodologies related to geriatric medicine, including clinical epidemiology, decision analysis, and critical literature review.
14. Perioperative assessment and involvement in management.
15. Iatrogenic disorders and their prevention.
16. Communication skills with patients, families, professional colleagues, and community groups, including presenting case reports, literature searches, and research papers, when appropriate, to peers and lectures to lay audiences.
17. The pivotal role of the family in caring for many elderly and the community resources (formal support systems) required to support both patient and family.
18. Cultural aspects of aging, including knowledge about demographics, health care status of older persons of diverse ethnicities, access to health care, cross-cultural assessment, and use of an interpreter in clinical care. Issues of ethnicity in long-term care, patient education, and special issues relating to urban and rural older persons of various ethnic backgrounds should be covered.
19. Home care, including the components of a home visit, and accessing appropriate community resources to provide care in the home setting.
20. Hospice care, including pain management, symptom relief, comfort care, and end-of-life issues.

## V. Certification

Those planning to seek a Certificate of Added Qualifications from the American Board of Internal Medicine or the American Board of Family Practice should communicate with the administrative officer of the board as listed in the *Graduate Medical Education Directory* to ascertain the full requirements.

ACGME: February 1998 Effective: July 1998

# Program Requirements for Residency Education in Family Practice Sports Medicine

## I. Introduction

In addition to complying with the Program Requirements for Residency Education in Family Practice Geriatric Medicine and Family Practice Sports Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

## II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation, as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

## III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

## IV. Facilities and Resources

The program must include the following:

### A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

## B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical trainees must be supervised by a physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

## C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

## D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

## V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility.

Residents must spend ½ day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

### A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

### B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

## C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

## D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

## E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

## VI. Specific Knowledge and Skills

### A. Clinical

The program must provide educational experiences that enable residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, eg, diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

### B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, eg, nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of pa-

tients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

*ACGME: June 2000 Effective: June 2000*

## Program Requirements for Residency Education in Internal Medicine

### I. Introduction

#### A. Definition and Scope of Specialty

Internal medicine is the discipline encompassing the study and practice of health promotion, disease prevention, diagnosis, and treatment of men and women from adolescence to old age, during times of health and through all stages of acute and chronic illness. Intrinsic to the discipline are the application of the scientific method of problem solving, decision making, and an attitude of caring driven by humanistic and professional values. The practice of internal medicine requires comprehensive knowledge of human biology, behavior, and spirit; an understanding of the epidemiology and pathophysiology of disease; and the mechanisms of treatment. Internal medicine requires a mastery of clinical skills in interviewing, physical examination, differential diagnosis, diagnostic testing strategies, therapeutic techniques, counseling, and disease prevention.

#### B. Duration and Scope of Education

1. An accredited residency program in internal medicine must provide 36 months of supervised graduate education.
2. The educational program must include core clinical experiences in general internal medicine, the subspecialties of internal medicine, and other specialties. The clinical settings in which these experiences occur must include a minimum of one-third of the time in ambulatory sites and a minimum of one-third of the time in inpatient sites. Over the 36 months of training, at least ½ day each week must be spent managing a panel of general internal medicine patients in continuity.
3. The program must include a schedule of prescribed learning experiences accomplished through teaching rounds, conferences, lectures, and discussions that ensure the residents' mastery of the knowledge, skills, and attitudes needed to practice general internal medicine or to progress into a subspecialty, research, or a teaching career in internal medicine. The training program must include a written evaluation of clinical competence, medical knowledge, skills, and professional attitudes throughout the educational experience.
4. The internal medicine component of special educational tracks must be conducted under the auspices of the Department of Internal Medicine. Although such tracks may differ in educational content, the core experience of residents must provide training in both inpatient and ambulatory general internal medicine to enable the graduates of such special tracks to function as general internists. The Residency Review Committee (RRC) evaluates special educational tracks as part of internal medicine programs in the accreditation process.

### II. Institutional Organization

#### A. Sponsoring Institution

1. Each internal medicine residency must have a single sponsoring institution. It must
  - a. provide an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate and apply research findings, and develop habits of inquiry as a continuing professional responsibility;

- b. establish the internal medicine residency within a department of internal medicine or an administrative unit whose mission is the advancement of internal medicine education and patient care;
  - c. have an affiliation with a Liaison Committee on Medical Education-accredited medical school, or demonstrate that the primary clinical site has a commitment to education and research similar to that of a medical school;
  - d. have affiliations with community-based institutions if the sponsoring institution lacks sufficient diversity in faculty, facilities, and resources in the inpatient and/or ambulatory settings;
  - e. provide adequate faculty, resident compensation, facilities, and resources for education, clinical care, and research required for accreditation;
  - f. designate a single program director within the internal medicine administrative unit to lead the internal medicine residency program and its subspecialty residencies at all sites and in all special tracks or combined specialty training with internal medicine; and
  - g. notify the RRC promptly of
    - 1) major changes in leadership, governance, affiliation, or fiscal arrangements that affect the educational program and
    - 2) a change in the program director. The qualifications and the curriculum vitae of the new program director must be submitted to the RRC.

The RRC may schedule a site visit when notified about either of the above changes.
2. A sponsoring institution must not place excessive reliance on residents to meet the service needs of the participating training sites. To this end, the sponsoring and participating institutions must have institutional written policies or procedures that address the following:
- a. Residents must not routinely be required to provide intravenous, phlebotomy, or messenger/transporter services.
  - b. Residents' service responsibilities must be limited to patients for whom the training program bears major diagnostic and therapeutic responsibility.
  - c. On inpatient rotations, residents should have continuing responsibility for most of the patients they admit.
  - d. Supervision by faculty members must be provided for all patient care activities in which residents are engaged.
  - e. Educational experiences must include interactions with attending physicians and other residents, as well as teaching rounds, conferences, evaluation, and formative feedback.
  - f. For each rotation or major clinical assignment, the teaching ratio must not exceed a total of 8 residents or students to one teaching attending.
  - g. Total required emergency medicine experience must not exceed 3 months in 3 years of training for a resident.
  - h. Total required critical care experience must not exceed 6 months in 3 years of training for a resident. [*Note:* When elective experience is added in the critical care unit, it must not result in more than a total of 8 months in 3 years of training for any resident.]
  - i. When averaged over any 4-week rotation or assignment, residents must not spend more than 80 hours per week in patient care duties.
  - j. Residents must not be assigned on-call in-house duty more often than every third night.
  - k. When averaged over any 4-week rotation or assignment, residents must have at least 1 day out of 7 free of patient care duties.
- l. During emergency medicine assignments, continuous duty must not exceed 12 hours.
  - m. Emergency medicine or night float assignments must be separated by at least 8 hours of non-patient care duties.
  - n. During ambulatory assignments, a first-year resident's patient load, on average, must not exceed two new patients or more than six return patients per ½-day session.
  - o. On inpatient rotations or assignments [*Note:* These limits may be increased by 2 in special rotations where each admission does not require a full workup, providing it is educationally justified.]
    - 1) a first-year resident must not be responsible for more than five new patients per admitting day.
    - 2) a first-year resident must not be assigned more than eight new patient admissions in a 48-hour period.
    - 3) a first-year resident must not be responsible for the ongoing care of more than 12 patients.
    - 4) When supervising more than one first-year resident, the second- or third-year resident must not be responsible for the ongoing care of more than 24 patients.
    - 5) The second- or third-year resident must not be responsible for admitting more than a total of 10 new patients per admitting day or more than 16 new patients in a 48-hour period, which includes the first-year resident's patients being supervised.

### B. Participating Institutions

1. Participation by any institution that provides more than 6 months of the training in the program must be approved by the RRC.
2. When two or more institutions affiliate to participate in residency education, a written agreement, signed by the authorities of each institution, must document the following:
  - a. Purpose and scope of the affiliation for internal medicine residency education
  - b. Financial, faculty, and facility resources involved
  - c. An administrative relationship between the institutions that ensures the program director's authority to accomplish the goals and objectives of the clinical and didactic curriculum at all training sites
  - d. Delegation of the authority and responsibility for the day-to-day program operations at the participating institution to a key faculty member who reports to the program director
  - e. Assurance that residents assigned to all training sites will attend their continuity clinics and core conferences
3. At each participating training site, the program must be provided with the necessary professional, technical, and clerical personnel needed to support the residency.

### C. Residents

1. Appointment of residents
  - a. The program must select residents in accordance with institutional and departmental policies and procedures. The program should demonstrate the ability to retain qualified residents by graduating at the end of the residency at least 80% of the enrolled, first-year, categorical residents.
  - b. No resident who has satisfactorily completed a preliminary training year may be appointed to 1 or more additional years as a preliminary resident in that program.
  - c. Before accepting a resident in transfer from another program, the program director should receive a written evaluation of the resident's past performance from the previous program director(s).

2. Resident complement

The RRC will stipulate the maximum total number of residents that can be supported by the educational resources for the program. The program director must obtain approval from the RRC before changing the number of approved residency positions. [Note: The resident complement is the total number of resident positions offered in the 3-year training program. The number includes all preliminary, categorical, and special track residents. For programs that offer combined internal medicine and another specialty training, the number added to the total resident complement is half of the total complement for the full term of the combined training.]

3. Resident advancement

The program director, with participation of members of the teaching staff, must advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

### III. Program Director and Faculty Qualifications and Responsibilities

#### A. General Qualifications and Responsibilities

1. Qualifications

The program director and all faculty members

- a. must be licensed to practice medicine in the state where the sponsoring institution is located. (Certain federal programs are exempted.)
- b. must have an appointment in good standing to the medical staff of an institution participating in the training program.
- c. should be certified by the specialty board or present equivalent credentials or experience acceptable to the RRC.
- d. must meet professional standards of ethical behavior.

2. Responsibilities

The program director and all faculty members

- a. must have a commitment to the goals and objectives of the teaching program, including development of the residents' medical knowledge; clinical, technical, and management skills; and clinical judgment.
- b. should be able to nurture the attributes of the scholar, scientist, teacher, and humanist in residents.
- c. should be available to residents for advice and counseling.
- d. must comply with the written curriculum that describes both patient-based and educational elements of the residency.
- e. should review the written learning objectives and expectations for each rotation or assignment with residents at the beginning of the rotation or assignment.
- f. must be sensitive to the need for timely provision of confidential counseling and psychological support services to residents.
- g. must provide written and verbal feedback to residents at the end of each rotation or assignment.

#### B. Program Director

1. Qualifications

The program director must

- a. be an institutionally based appointee, ie, his or her home office must be at the principal clinical training institution. The program director also must bear responsibility to the sponsoring institution.
- b. have at least 5 years of participation as an active faculty member in an accredited internal medicine residency program.
- c. be certified by the American Board of Internal Medicine or present equivalent credentials acceptable to the RRC.

2. Responsibilities

The program director

- a. must dedicate the majority of his or her professional effort, ie, an average of at least 20 hours per week throughout the year, to the internal medicine training program.
- b. must be primarily responsible for the organization, implementation, and supervision of all aspects of the training program, including the selection and supervision of the faculty members and other program personnel at each institution participating in the program.
- c. must select residents for appointment to the program in accordance with institutional and departmental policies and procedures, evaluate the quality of care rendered by the residents, have the authority to ensure effective teaching, and obtain teaching commitments from other departments involved in the education of internal medicine residents.
- d. must prepare written learning objectives and expectations outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment.
- e. must ensure that the written learning objectives and expectations are readily available for review and are distributed to residents and faculty members.
- f. must ensure that the residency does not place excessive reliance on service as opposed to education. [Note: See Section IIA.2. for examples of excessive service.]
- g. must notify the RRC promptly of
  - 1) any change in the number of residents in the training program and
  - 2) major changes in the structure of the educational program.The RRC may schedule a site visit when notified about either of the above changes.
- h. must prepare an accurate statistical and narrative description of the program, as required by the RRC.
- i. must monitor the residents' stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction.
- j. must evaluate and modify training situations that consistently produce undesirable stress on residents.
- k. must be responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.
- l. must establish and use educational standards that determine the residents' competence in procedures and skills.
- m. should monitor any internal medicine subspecialty training programs sponsored by the institution to ensure compliance with the Accreditation Council for Graduate Medical Education (ACGME) accreditation standards.
- n. should ensure that there is a rapid and reliable system for residents to communicate with supervising attending physicians and residents.
- o. must establish a system that ensures that attending physicians are available to participate in the residents' diagnostic and management decisions in a timely manner.
- p. should outline in written policies the lines of responsibility and supervision for the care of patients on all inpatient and ambulatory settings, including all clinical sites for all members of the teaching teams and program staff.

### C. Key Clinical Faculty Members

The residency program must include four institutionally based faculty members, not including the program director and chief residents.

#### 1. Qualifications

Key clinical faculty members must

- be certified by the American Board of Internal Medicine or present equivalent credentials acceptable to the RRC.
- have documented clinical, academic, and administrative experience to ensure effective implementation of the Program Requirements.
- be clinicians with broad knowledge of, experience with, and commitment to internal medicine, whether trained as general internists or as subspecialists.

#### 2. Responsibilities

Key clinical faculty members

- must dedicate the majority of their professional effort, ie, an average of at least 20 hours per week throughout the year, to the internal medicine training program.
- should participate in prescribed faculty development programs designed to enhance their teaching effectiveness.
- should assist in the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.
- must assist in the preparation of a written curriculum that describes both patient-based and educational elements of the residency and outlines the goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment.
- must demonstrate that they share with the program director a commitment to the goals and objectives of the curriculum.
- must assist in nurturing the attributes of the scholar, scientist, teacher, and humanist in the residents.
- must assist in monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction.

### D. Other Faculty

#### 1. Qualifications

- Qualified individuals (Division Chiefs) must be certified by the American Board of Internal Medicine in their internal medicine subspecialty or present equivalent credentials acceptable to the RRC.
- Each division chief should have a term of office to achieve the educational goals and objectives of the residency.
- Internal medicine subspecialty support should include adequate professional and teaching staff.
- PhD faculty members not holding an MD may be included as other teaching faculty, but they may not be regarded as key clinical faculty members.

#### 2. Responsibilities

- Division chiefs or their designates must be appointed to be responsible for teaching activities in the recognized internal medicine subspecialties.
- Division chiefs must organize, supervise, and implement the clinical and educational subspecialty training as specified in the curriculum.
- Each consultative service must be headed by a qualified individual who ensures that consultants participate in the education of residents on the medical teaching services.
- Supervisors of special educational tracks must report directly to the internal medicine program director.

### IV. Facilities and Resources

Modern hospital facilities (ie, diagnostic, therapeutic, and laboratory) to fulfill the curriculum must be available and functioning. Adequate facilities, support services, and space for outpatient teaching and patient care must be available. Residents must have clinical experiences in efficient, effective ambulatory care settings.

#### A. Space and Equipment

There must be space and equipment for the educational program, including meeting rooms, classrooms, examination rooms, computers, visual and other educational aids, and office space for teaching staff.

#### B. Facilities

- To ensure that a spectrum of cardiovascular disorders is available for resident education, cardiac catheterization facilities should be present at the site(s) where the residents see the majority of their acutely ill, hospitalized patients with a range of cardiovascular diseases. If such facilities are not present, the program must demonstrate that all residents care for patients with a similar range of cardiovascular disorders.
- Facilities should be available to the program to ensure that residents become proficient in the effective use of current and evolving technologies, that the involved institution(s) has an appropriate patient mix, and that related educational goals and objectives are achieved. These facilities should include but not be limited to those for bronchoscopy; coagulation studies; gastrointestinal motility and endoscopy; noninvasive cardiology studies; pulmonary function studies; hemodialysis; and imaging studies including radionuclide, ultrasound, fluoroscopy, plain films, angiography, computer tomography, and magnetic resonance.
- Internal medicine subspecialty resources should include specialized laboratory and technical facilities.
- Residents must have sleeping, lounge, and food facilities during assigned duty hours. When residents are assigned night duty in the hospital, they must be provided with on-call facilities that are convenient and that afford privacy, safety, and a restful environment. The safety of residents at all times while on duty is essential. Residents must be instructed regarding fire protocols, electrical safety, protocols and dangers relating to hazardous materials, and assault safeguards. Security personnel must be available as necessary.
- It is desirable that the program use community resources such as physicians' offices, neighborhood health centers, or home-care and/or managed-care facilities to broaden the base of residents' clinical experiences with ambulatory patients.

#### C. Medical Records

- A medical records department that facilitates both patient care and residents' education must be available.
- Clinical records that document both inpatient and ambulatory care must be maintained such that prompt accessibility is ensured at all times.

#### D. Medical Library

- A medical library under the direction of a qualified medical librarian must be readily accessible.
- There must be a means of access to an on-site library or to reference material in each participating institution during those times when the library is not open or staffed.
- The library must contain a representative selection of books and journals on internal medicine.
- At all training sites, residents should have access to a computerized literature search system and electronic medical databases.

### E. Patient Population

1. Patients must be available in sufficient numbers for training purposes in general internal medicine in inpatient, ambulatory, and other settings.
2. Patients must exhibit a variety of clinical problems to provide broad experience in general internal medicine in inpatient, ambulatory, and other settings.
3. There must be patients of both sexes, with a broad range of age from adolescent to geriatric patients.
4. The clinical experience should include opportunities to have exposure to patients of a disadvantaged socioeconomic status.

### F. Pathology Material

1. All deaths of patients who received care by residents must be reviewed and autopsies performed whenever possible.
2. Residents should review the gross pathological and/or histological specimens soon after autopsies are performed on their patients and should review the autopsy reports.

### G. Support Services

1. Inpatient clinical support services must be available on a 24-hour basis to meet reasonable and expected demands, including intravenous services, phlebotomy services, messenger/transporter services, and laboratory and radiologic information retrieval systems that allow prompt access to results.
2. At all training sites, medical records, x-ray films, and results of diagnostic studies must be readily available.
3. Consultations from other clinical services in the hospital should be available in a timely manner. All consultations should be by or under the supervision of a qualified specialist.

## V. Educational Program

### A. ACGME Competencies

The residency program must require its residents to obtain competencies in the 6 areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. Interpersonal and communication skills that result in effective information exchange and teaming with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

### B. Program Goals and Objectives (Written Curriculum)

All educational components of the residency should be related to the program's goals and objectives and set down in a written curriculum. For each rotation or major learning experience, the written curriculum

1. should include the educational purpose; teaching methods; the mix of diseases, patient characteristics, and types of clinical encounters, procedures, and services; reading lists, pathological material, and other educational resources to be used; and a method of evaluation of resident performance.
2. must include all required educational and clinical experiences specified in the Program Requirements.
3. must include the clinical experience in inpatient or outpatient settings.
4. must define the level of residents' supervision by faculty members in all patient care activities.
5. must integrate medical problems; health promotion; and cultural, socioeconomic, ethical, occupational, environmental, and behavioral issues in most rotations or major learning experiences.
6. must be approved as part of the regular review process by the RRC, along with the program design and/or structure.
7. must include teaching rounds and conferences during which residents
  - a. apply knowledge of the etiology, pathogenesis, clinical presentation, and natural history of the diseases treated by interns to demonstrate skills in diagnosis, mature judgment, and resourcefulness in therapy;
  - b. receive instruction and feedback to master the interviewing, communication, and interpersonal skills that are necessary to elicit and record a thorough and accurate history, establish and maintain a therapeutic physician-patient relationship, and initiate or motivate the patient to implement optimal medical management;
  - c. receive instruction and feedback to develop expertise in physical examination skills that include training in bimanual female pelvic examination, PAP smears, and speculum examination of the vagina; and
  - d. demonstrate the humanistic treatment of patients.
8. must indicate that residents care for patients with a wide range of clinical problems in all stages of illness.
9. should include rotations or assignments during which residents learn to work with other members of the health-care team and learn to become leaders in the organization and management of patient care.
10. should be revised by faculty members and residents to keep it current and relevant.

### C. Presence of Other Residents

For each year of training, the percentage of resident-months on (those inpatient services used for training internal medicine residents that can be assigned to residents other than those enrolled in internal medicine in categorical (3-year), preliminary (1-year), and special tracks (ie, primary care, combined internal medicine-specialty training) and transitional-year program residents sponsored by internal medicine must be less than 25%. [Note: Excluded entirely from this limitation are residents from any program who receive training in internal medicine on services to which no internal medicine residents at any level of training are concurrently assigned.]

### D. Peer Interaction

1. A program must have a minimum of 12 residents enrolled and participating in the training program at all times.
2. Inpatient rotations must have first-year residents interacting with more senior internal medicine residents in the care of patients.

**E. Meaningful Patient Responsibility**

1. Each resident must be assigned for a minimum of 24 months to internal medicine inpatient and ambulatory rotations or assignments during which the resident has primary responsibility for patient care. These inpatient and ambulatory assignments must include development of diagnostic strategies, planning, record keeping, order or prescription writing, management, discharge summary preparation, and decision-making commensurate with residents' abilities and with appropriate supervision by the attending physician.
2. On inpatient rotations, second- or third-year residents with documented experience appropriate to the acuity, complexity, and severity of patient illness should be available at all times on-site to supervise first-year residents.
3. Residents must write all orders for patients under their care, with appropriate supervision by the attending physician. In those unusual circumstances when an attending physician or subspecialty resident writes an order on a resident's patient, the attending or subspecialty resident must communicate his or her action to the resident in a timely manner.

**F. Progressive Responsibility**

1. The program must ensure, with each year of training, that each resident has increasing responsibility in patient care, leadership, teaching, and administration.
2. Residents from other specialties must not supervise internal medicine residents on any internal medicine inpatient rotation.

**G. Individual Responsibility**

1. During rotations or assignments where meaningful patient responsibility occurs, there must be a resident schedule, including check-out and check-in procedures, so residents will learn to work in teams to ensure proper care and welfare of the patients.
2. The on-call system must include a plan for backup to ensure that patient care is not jeopardized during or following assigned periods of duty.
3. The residency is a full-time responsibility. Activities outside the training program should not interfere with the resident's educational performance.

**H. Formal Teaching Program****1. Rounds****a. Teaching rounds**

Teaching rounds must be patient-based sessions in which a few cases are presented as a basis for discussion of such points as interpretation of clinical data, pathophysiology, differential diagnosis, specific management of the patient, the appropriate use of technology, and disease prevention.

- 1) Inpatient and ambulatory teaching rounds must be regularly scheduled and formally conducted.
- 2) In addition to morning report, inpatient teaching rounds must occur at least 3 days of the week for a minimum of 4½ hours per week.
- 3) Teaching rounds must include direct resident and attending interaction with the patient. The teaching sessions must include demonstration and evaluation of each resident's interview and physical examination skills.
- 4) Inpatient teaching rounds must include bedside teaching.

**b. Management rounds by the physician of record**

- 1) Each physician of record has the responsibility to interact at intervals with his or her patients and to communicate effectively and frequently with the resident staff participating in the care of these patients. It is desirable that this communication be achieved by the physician of record

making management rounds on his or her patients at least daily with at least one member of the resident team.

- 2) To avoid interference with the resident's educational experience, the resident should not be required to relate to excessive numbers of physicians.
  - 3) Although management rounds may offer many educational opportunities, they are not to be confused with or to take the place of teaching rounds. Also, management rounds by the physician of record should not interfere with resident work rounds. [*Note:* Work rounds are rounds in which a senior resident supervises a junior resident's patient care activities, without an attending physician present.] Management rounds by the physician of record are not time-specific and should be commensurate with the needs of the patient.
2. Conferences and seminars
    - a. Departmental conferences, seminars, and literature-review activities covering both general medicine and the internal medicine subspecialties should be conducted regularly and sufficiently often to fulfill educational goals.
    - b. The conference schedule must have a core conference series dealing with the major topics in general internal medicine (including issues arising in ambulatory and extended care settings) and the internal medicine subspecialties.
    - c. The core conference series should be repeated often enough to afford each resident an opportunity to complete the curriculum.
    - d. Conferences should include information from the basic medical sciences, with emphasis on the pathophysiology of disease and reviews of recent advances in clinical medicine and biomedical research.
    - e. Conferences correlating current pathological material, including material from autopsies, surgical specimens, and other pathology material, with the clinical course and management of patients must be held at least monthly. Faculty members and attending physicians from other disciplines should be involved.
    - f. Conferences should include a journal club that emphasizes a critical appraisal of the medical literature.
    - g. Residents and faculty members should participate in the planning, production, and presentation of conferences.
    - h. It is desirable that each resident attend at least 60% of those conferences designated as required by the program director.
  3. Self-assessment
 

It is desirable that the program director have each resident use prescribed self-assessment techniques as an educational tool for monitoring his or her own progress toward the program's educational objectives. [*Note:* For example, the program director could have residents participate in in-training examinations or self-study courses.]
  4. Basic sciences
    - a. The basic sciences should be integrated into the daily clinical activities by clearly linking the pathophysiologic process and findings to the diagnosis, treatment, and management of clinical disorders.
    - b. Residents should acquire an in-depth understanding of the basic mechanisms of normal and abnormal human biology and behavior and the application of current knowledge to practice.

**I. Specific Patient Care Experiences****1. Experience with ambulatory patients**

- a. At least one-third of the residency training must be in the ambulatory care setting. [*Note:* In assessing the contribution of various clinical experiences with ambulatory patients to the 33% minimum, the following guidelines can be used: ½ day

- per week assigned to an ambulatory setting throughout all 3 years of training is equivalent to 10%; a 1-month block rotation is equivalent to 3%; 1 full day per week throughout a single year of training is equivalent to 7%. Examples of settings that may be counted toward this requirement are general medicine continuity clinics, subspecialty clinics, ambulatory block rotations, physicians' offices, managed health care systems, emergency medicine, "walk-in" clinics, neighborhood health clinics, and home-care visits.]
- b. Residents' clinical experiences with ambulatory patients must occur in each of the 3 years of residency training.
  - c. The residents' clinical experiences with ambulatory patients must include first-contact, comprehensive, and continuing care covering a broad spectrum of disease.
  - d. No more than 2 months (6%) of emergency medicine experience will count toward the required ambulatory experience.
  - e. In an ambulatory setting, one faculty member must be responsible for no more than five residents.
  - f. On-site faculty members' primary responsibilities must include the supervision and teaching of residents. On-site supervision as well as the quality of the educational experience must be documented.
  - g. The patient volume in the ambulatory environment must be large enough to provide adequate numbers of new patients. In general medicine settings, patient loads should, on average, be not less than one new patient and not less than three return patients per ½-day session for each resident.
  - h. Residents must be able to obtain appropriate and timely consultation from other specialties for their ambulatory patients.
  - i. There should be services available from and collegial relationships with other health-care professionals such as nurses, social workers, and dietitians.
  - j. Training in ambulatory care of patients should take place in an environment similar to an office practice.
  - k. The residents' clinical experiences with ambulatory patients should include the opportunity to develop diagnostic and therapeutic skills and professional attitudes in the care of general internal medicine patients.
  - l. It is desirable that supervision be provided by physicians experienced in the broad field of general internal medicine. [Note: The program director may assign experienced and qualified (ie, board certified or equivalent) practitioners from other specialties (eg, family practice) to participate as teachers in the ambulatory setting.]
  - m. It is desirable that block rotations in the ambulatory setting in subspecialty experiences be utilized to increase the residents' ambulatory experience.
  - n. It is desirable that 50% of the ambulatory experience take place in a general internal medicine setting.
2. Experience with continuity ambulatory patients
    - a. The residents must have continuing patient care experience (continuity clinic) in an ambulatory care setting at least ½ day each week over each of the 3 years of training. [Note: Preliminary year residents are excluded from this requirement.]
    - b. Residents may be excused from attending their continuity clinic when they are assigned to an intensive care unit or to emergency medicine. The continuing patient care experience should not be interrupted by more than 1 month, excluding a resident's vacation.
    - c. The residents' clinical experiences with ambulatory patients must provide residents the opportunity to observe and to learn the natural course of disease.
    - d. During the continuity experience, arrangements should be made to minimize interruptions of the experience by residents' inpatient duties.
    - e. Each resident must have the opportunity to follow patients on a long-term basis. It is desirable that such long-term observation include following patients from the ambulatory to the inpatient environment as well as from the inpatient to the ambulatory environment.
  3. Experience with hospitalized patients
    - a. It is desirable that 50% of the inpatient experience occur on general internal medicine services.
    - b. There must be a minimum of 6 months of internal medicine teaching service assignments in the first year, and over the second and third years of training combined, a minimum of 6 months of such training.
    - c. Geographic concentration of inpatients assigned to a given resident is desirable because such concentration promotes effective teaching and fosters interaction with other health personnel.
  4. Emergency medicine experience
    - a. Internal medicine residents assigned to emergency medicine must have first-contact responsibility for a sufficient number of unselected patients to meet the educational needs of internal medicine residents. Triage by other physicians prior to this contact is unacceptable.
    - b. Internal medicine residents must be assigned to emergency medicine for at least 4 weeks of direct experience in blocks of not less than 2 weeks.
    - c. Residents must have meaningful responsibility for patients, including participation in diagnosis, management, and admission decisions across the broad spectrum of medical and surgical illnesses such that the residents learn how to determine which patients require hospitalization.
    - d. Internal medicine residents assigned to rotations on emergency medicine must have on-site, 24-hour, daily supervision by qualified faculty members.
    - e. The rotations should be conducted in accordance with a written curriculum. Both the written curriculum and the faculty members should be acceptable to the program director in internal medicine.
    - f. Consultations from other specialties should be readily available.
  5. Critical care unit experience
    - a. Residents must participate directly in the care of patients with various illnesses in critical care units (eg, intensive care units, cardiac care units, respiratory care units).
    - b. The assignment must have supervision by trained internists with consultation by internal medicine subspecialists and other specialists.
    - c. The assignment must have critical care unit teaching rounds and conferences acceptable to the program director in internal medicine.
    - d. The experience must not be less than 3 months in 3 years of training for any resident.
    - e. The assignment should be conducted in accordance with a written curriculum. Both the written curriculum and the faculty members should be acceptable to the program director in internal medicine.
  6. Subspecialty Experience
    - a. Education in the various subspecialties of internal medicine should be part of the training program and should be gained in both inpatient and ambulatory settings.
    - b. Although it is not necessary that each resident be assigned to every subspecialty, it is important that each resident should

have exposure to the diagnostic and therapeutic methods of each of the recognized internal medicine subspecialties.

- c. At a minimum, residents should acquire knowledge sufficient to diagnose, follow, and treat patients with common disorders of the various organ systems covered by the internal medicine subspecialties and to recognize those disorders that should be referred to, or managed jointly with, the appropriate subspecialists.
7. Consultative experience
    - a. Residents should have sufficient knowledge and experience to act, under supervision, as consultants to physicians in other specialties.
    - b. It is desirable that the principles involved in consultation be included in the core conference series.
  8. Geriatric medicine
    - a. Residents must have formal instruction and regular, supervised clinical experience in geriatric medicine.
    - b. The written curriculum must include experiences in the care of a broad range of elderly patients.
    - c. Geriatric clinical experiences must be offered. They may occur at one or more specifically designated geriatric inpatient units, geriatric consultation services, long-term care facilities, geriatric ambulatory clinics, and/or in home-care settings.
  9. Adolescent medicine
    - a. Residents should be formally instructed in adolescent medicine, which may include the following topics: health promotion, family planning and human sexuality, sexually transmitted diseases (STDs), chemical dependency, sports medicine, and school health issues.
    - b. Structured patient care experiences directed by faculty in advising young patients on these topics is desirable.
  10. Gender-specific health care
 

Residents should receive instruction in the prevention, counseling, detection, and diagnosis and treatment of diseases of women and men, as well as opportunities for clinical experience. [Note: This can occur in women's health clinics, obstetric or gynecologic clinics, STD clinics, general medicine clinics, urology clinics, or other specialty clinics.]
  11. Experiences in other specialties
    - a. Residents should have sufficient experience in neurology, psychiatry, dermatology, medical ophthalmology, otorhinolaryngology, orthopedics, and rehabilitation medicine to become familiar with those aspects of care in each specialty area that are diagnosed and managed by general internists and with those that should be referred to, or managed jointly with, other specialists.
    - b. It is desirable that some of the residents' clinical experiences with ambulatory patients include these specialties.
  12. Procedures and technical skills
    - a. Procedures
      - 1) All residents must be instructed in indications, contraindications, complications, limitations, and interpretations of findings. They must develop technical proficiency in performing the following procedures: advanced cardiopulmonary resuscitation, access techniques to obtain venous and arterial blood, abdominal paracentesis, thoracentesis, arthrocentesis of the knee, central venous line placement, lumbar puncture, and nasogastric intubation.
      - 2) Residents should be instructed in additional procedural skills that will be determined by the training environment, residents' practice expectations, the availability of skilled teaching faculty, and privilege delineation. These proce-

dures may include but are not limited to arterial line placement; bone marrow aspiration; bladder catheterization; elective cardioversion; endotracheal intubation; flexible sigmoidoscopy; pulmonary artery balloon flotation catheter placement; skin biopsy (punch); temporary pacemaker placement; ambulatory electrocardiographic interpretation; treadmill exercise testing, supervision, and interpretation; fitting vaginal diaphragms; topical chemotherapy for external genital warts; endometrial biopsy; and insertion and removal of IUDs.

#### b. Interpretative skills

All residents should be given an opportunity to develop competency in interpretation of electrocardiograms, chest roentgenograms, Gram stains of sputum, microscopic examinations of urine, spirometry, and KOH and wet prep examinations of vaginal discharge for clue cells, candida, and trichomonas.

### J. Professional Ethical Behavior

#### 1. Physician accountability

- a. The training program must have mentors, role-model clinicians, and a resident culture that demonstrates the values of professionalism, such as placing the needs of patients first, maintaining a commitment to scholarship, helping colleagues meet their responsibilities, a commitment to continued improvement, and being responsive to society's health-care needs.
- b. Residents should be given the opportunity to participate in community service, professional organizations, and institutional committee activities.

#### 2. Humanistic qualities

Physicians must have the welfare of their patients as their primary professional concern. Thus, the resident, faculty members, and program must demonstrate humanistic qualities that foster the formation of patient/physician relationships. These qualities include integrity, respect, compassion, professional responsibility, courtesy, sensitivity to patient needs for comfort and encouragement, and a professional attitude and behavior toward colleagues. The written curriculum must emphasize the importance of humanistic qualities throughout the residency.

#### 3. Physician impairment

The residency program must instruct residents and faculty members in physician impairment, to include the recognition of, intervention in, and management of impairment such as alcohol and other substance abuse; depression; dementia; and other mental, emotional, and physical disorders in their peers, as well as the principles and methods of active intervention.

#### 4. Professional ethics

The training program must foster a commitment to professional ethics in residents that is demonstrated by a spirit of collegiality and a high standard of moral and ethical behavior within the clinical setting in the care of patients, in the education of residents, in conducting research, and in interacting with pharmaceutical companies and funding organizations.

### K. Special Educational Requirements

#### 1. Clinical ethics

The program must include education in the principles of bioethics as applied to medical care, and the residents must participate in decision making involving ethical issues that arise in the diagnosis and management of their patients.

#### 2. Quality assessment, quality improvement, risk management, and cost effectiveness in medicine

- a. Residents should receive instruction in the social and economic impact of medical decisions on patients and society and the need to be the primary advocate for patients' needs.
- b. It is desirable that all residents receive formal instruction regarding the principles, objectives, and processes of quality assessment and improvement and of risk management.
3. Preventive medicine
  - a. Screening for disease, disease prevention, maintenance of general health, and health promotion should be emphasized in the curriculum.
  - b. It is desirable that all residents receive instruction in occupational and environmental disease processes and in methods for their control.
4. Medical informatics and decision-making skills
  - a. Residents should receive instruction in the critical assessment of medical literature, in clinical epidemiology, in biostatistics, and in clinical decision theory.
  - b. Each resident should receive instruction in basic computer skills. Instruction should include an introduction to computer capabilities and medical applications, basic techniques for electronic retrieval of medical literature, computer-assisted medical instruction, and electronic information networks.
5. Law and public policy  
Residents must receive instruction in the basic legal principles inherent in the practice of internal medicine, including issues of informed consent, advance medical directives, "do not resuscitate" orders, organ donation, living wills, patient advocacy, and related state laws concerning patients' rights.
6. Pain management  
Each resident should receive instruction in the principles and practice of pain management, including symptom assessment and control.
7. End-of-life care
  - a. Each resident should receive instruction in the principles of palliative care for terminally ill patients, including the role of the health-care team. Instruction should include psychosocial, cultural, and religious issues related to death and dying.
  - b. It is desirable that residents participate in hospice and home care.
8. Principles of managed care  
It is desirable that each resident receive instruction in the principles of managed care, including but not limited to the development and use of critical pathways and cost-efficient use of medical resources.
9. Violence  
It is desirable that all residents receive instruction in the principles of recognition and management of domestic violence and of sexual, family, and elder abuse.
10. Substance use disorders  
All residents should receive instruction in diagnosis and management of alcoholism and other substance abuse. The instruction should include the principles of addiction medicine and interventional techniques. Residents should have clinical experience in managing patients with alcoholism and substance abuse disorders.
11. Sports medicine and school health  
It is desirable that all residents receive instruction in the areas of preparticipation sports assessment, injury prevention, evaluative management, and rehabilitation related to athletic and recreational injuries.

## L. Research and Scholarly Activities

1. Faculty  
The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty members. While not all faculty members must be investigators, key clinical faculty members must demonstrate broad involvement in scholarly activity. Collectively, their activity must include all of the following:
  - a. Active participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - b. Participation in journal clubs that emphasize a critical appraisal of the medical literature.
  - c. Active participation in regional or national professional and scientific societies.
  - d. Provision of support for resident participation in scholarly activities.
  - e. Regular interaction of residents with clearly identified faculty members (preferably key clinical faculty members)
    - 1) who participate in research conferences that emphasize the presentation of original research.
    - 2) who participate in research that leads to publication or to presentations at regional and national scientific meetings. [Note: For example, key clinical faculty member participation in original research projects subject to peer review, case reports, or single- or multi-institution clinical trials.]
    - 3) who offer guidance and technical support such as research design and statistical analysis to residents involved in research.
2. Residents  
Prior to the completion of training, each resident
  - a. must demonstrate acceptable scholarly activity such as original research, comprehensive case reports, or review of assigned clinical and research topics and
  - b. should have basic science literacy and understand the fundamental principles of clinical study design and evaluation of research findings.

## VI. Evaluation

### A. Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
2. mechanisms for providing regular and timely performance feedback to residents; and
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.

### B.

Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

#### 1. Formative evaluation

- a. The program director must evaluate the clinical competence of the residents on a regular basis. The evaluation must include intellectual abilities, clinical skills, interpersonal skills and relationship building, and the development of professional

attitudes consistent with being a physician. The resident must be closely observed performing specific tasks of patient management such as the interview and physical examination, choice of diagnostic studies, formulation of differential diagnosis or problem lists, development of plans for short-term and long-term medical management, communication of treatment plans, invasive procedures, and (when on inpatient services) discharge planning. A structured clinical evaluation must be conducted at least once during the first 2 years of the training program for each resident. [Note: For example, a mini-clinical evaluation exercise, such as that described in publications by the American Board of Internal Medicine.]

- b. Residents' humanistic qualities must be evaluated by faculty members, peers, and others during all observed clinical encounters.
  - c. Chart auditing for format and quality of data entry should be done on a representative sample of resident inpatient and outpatient records (including inpatient discharge summaries) during each rotation, with feedback to the residents. The program director should ensure that the auditing of medical records is incorporated into evaluation components of the program.
  - d. Records must be maintained by documentation logbook or by an equivalent method to demonstrate that residents have had experience with invasive procedures. These records must state the indications and complications and include the names of the supervising physicians. Such records must be of sufficient detail to permit use in future credentialing.
  - e. Residents must be evaluated in writing and their performance reviewed with them verbally on completion of each rotation period.
  - f. Formal evaluations of knowledge, skills, and professional growth of residents and required counseling by the program director or designee must occur at least semiannually.
  - g. Permanent records of the evaluation and counseling process for each resident must be maintained for each resident.
  - h. Such records must be available in the resident's file and must be accessible to the resident and other authorized personnel.
2. Summative evaluation
    - a. The program director must prepare an evaluation (eg, the American Board of Internal Medicine's tracking form) of the clinical competence of each resident annually and at the conclusion of the resident's period of training in the program. Such evaluations stipulate the degree to which the resident has mastered each component of clinical competence (ie, clinical judgment, medical knowledge, clinical skills, humanistic qualities, professional attitudes and behavior, and provision of medical care) and has acquired proficiency in each of the various procedural skills identified in the program's curriculum. They should verify that the resident has demonstrated sufficient professional ability to practice competently and independently.
    - b. A record of the evaluations must be maintained in the program files to substantiate future judgments in hospital credentialing, board certification, agency licensing, and in other bodies' actions.
    - c. In the event of an adverse annual evaluation, a resident must be offered an opportunity to address a judgment of academic deficiencies or misconduct before a constituted clinical competence committee.
    - d. There must be a written policy that ensures that academic due process provides fundamental fairness to the resident and protects the institution by ensuring accurate, proper, and definitive resolution of disputed evaluations.

### C. Faculty Members and Program

1. The educational effectiveness of a program must be evaluated at least annually in a systematic manner. Specifically, the quality of the curriculum and the extent to which the educational goals and objectives have been met by residents must be assessed.
  - a. Written evaluations by residents must be utilized in developing programmatic changes.
  - b. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
  - c. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
2. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them.
3. At least one resident representative should participate in these reviews of the training program.
4. The faculty should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of faculty members, and the quality of supervision of residents.
5. Provision should be made for residents to evaluate the faculty members annually. The results of the evaluations should be used for faculty-member counseling and for selecting faculty members for specific teaching assignments.
6. Certifying examination
  - a. A program's graduates must achieve a pass rate on the certifying examination of the American Board of Internal Medicine of at least 60% for first-time takers of the examination for the most recent defined 3-year period.
  - b. At least 80% of those completing their training in the program for the most recent defined 3-year period must have taken the certifying examination.

### VII. Certification

Residents who plan to seek certification by the American Board of Internal Medicine should communicate with the registration section of the board regarding fulfillment of requirements for certification. Residents must be certified in internal medicine prior to seeking certification in a subspecialty.

*ACGME: June 2000 Effective: July 2001*

## Policies and Procedures for Residency Education in the Subspecialties of Internal Medicine

1. As a general rule, subspecialty programs will be surveyed and reviewed in conjunction with the parent residency program in internal medicine. In the case of applications, or as determined by the Residency Review Committee (RRC), a subspecialty program may be surveyed and reviewed separately.
2. Subspecialty program information forms will be distributed to the director of the parent internal medicine residency program, who will coordinate the collection of information, completion of the forms, and submission of required materials to the RRC for all subspecialty programs to be reviewed.

3. The survey may be conducted by a member of the Field Staff or by a specialist selected by the RRC. The surveyor will submit a report on the internal medicine residency program as well as on each of the subspecialty programs under review.
4. Subspecialty programs will be designated as "accredited" or "non-accredited." No other delineation of accreditation categories will be used. The accreditation status of subspecialty programs will be directly related to that of the parent internal medicine program as follows:
  - a. Applications for accreditation of new subspecialty programs will be considered only if the parent residency program in internal medicine carries the status of full accreditation.
  - b. Applications for accreditation of new subspecialty programs will not be considered if the parent residency program in internal medicine is (1) accredited on a provisional or probationary basis; or (2) involved in the process of implementing appeal procedures.
  - c. Application for combined subspecialty training programs such as hematology and oncology or pulmonary disease and critical care medicine will not be considered if the application is based on an existing subspecialty program accredited with warning.
  - d. When a subspecialty program is found not to be in substantial compliance with the *Essentials of Accredited Residencies*, the program director will be warned that accreditation will be withdrawn if the program is found not to be in substantial compliance with the *Essentials* at the time of the next scheduled review, regardless of the accreditation status of the parent internal medicine program.
  - e. If the parent internal medicine program is accredited on a probationary basis, or accredited on a provisional basis with a warning that adverse action will be taken if the program is not in substantial compliance with the *Essentials of Accredited Residencies* at the time of the next scheduled review, the subspecialty programs will be informed that their accreditation status is in jeopardy.

In addition, if the primary subspecialty program is accredited with a warning that an adverse action will be taken if the program is not in substantial compliance with the *Essentials of Accredited Residencies* at the time of the next scheduled review, the linked secondary subspecialty program (eg, cardiovascular disease and clinical cardiac electrophysiology) will be informed that its accreditation status is in jeopardy. Further, accreditation of the secondary subspecialty program will be administratively withdrawn if the RRC withdraws accreditation of the primary subspecialty program.

Thereafter, accreditation of the subspecialty programs will be administratively withdrawn if the RRC (1) continues accreditation of the parent residency program in internal medicine on a probationary basis beyond 2 years; (2) withdraws accreditation of the parent residency program in internal medicine.
  - f. Withdrawal of accreditation of the parent internal medicine residency program under circumstances other than those described above will also result in simultaneous withdrawal of all subspecialty programs.
5. In case of withholding accreditation or withdrawing accreditation of subspecialty programs, the Procedures for Proposed Adverse Actions and the Procedures for Appeal of Adverse Actions apply.

## Program Requirements for Residency Education in the Subspecialties of Internal Medicine

### I. General Information

- A. Subspecialty training in internal medicine is a voluntary component in the continuum of the educational process; such training should take place on satisfactory completion of an accredited program in internal medicine. A minimum of 75% of residents in each subspecialty program should be graduates of an Accreditation Council for Graduate Medical Education (ACGME)-accredited internal medicine training program. [Note: The minimum of 75% of residents in the subspecialty of geriatric medicine should be graduates of either an ACGME-accredited internal medicine or family practice training program.]
- B. To be eligible for accreditation, a subspecialty program must function as an integral part of an accredited residency program in internal medicine. There must be a reporting relationship, to ensure compliance with the ACGME accreditation standards, from the program director of the subspecialty program to the program director of the parent internal medicine residency program. The discipline must be one for which a certificate of special qualifications or a certificate of added qualifications is offered by the American Board of Internal Medicine. (The information herein applies to subspecialty disciplines in internal medicine as well as to disciplines for which a certificate of added qualifications is offered by the American Board of Internal Medicine. For editorial purposes, the term subspecialty is used throughout the document for both types of training programs.)
- C. Applications for accreditation of new subspecialty programs will not be considered if the parent residency program in internal medicine is accredited on a provisional or probationary basis.
- D. Sponsoring institutions must have an affiliation with a Liaison Committee on Medical Education-accredited medical school or demonstrate that the primary clinical site has a commitment to education and research similar to that of a medical school. In addition, the sponsoring institution must provide adequate faculty, resident compensation, facilities, and resources for education, clinical care, and research required for accreditation.
- E. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
- F. Graduate education in the subspecialties of internal medicine requires a major commitment to education by the sponsoring institution. Evidence of such a commitment includes each of the following:
  1. The minimum number of resident positions in each training program must not be less than the number of accredited training years in the program.
  2. The institution must sponsor significant research in each subspecialty for which it sponsors a training program.
  3. The institution should sponsor a minimum of three accredited subspecialty programs, including three programs based at the primary training site of the parent internal medicine residency program. [Note: Internal medicine training programs in geriatric medicine and sports medicine are exempt.]

### II. Educational Program

- A. Subspecialty programs must provide advanced training to allow the resident to acquire expertise as a consultant in the subspecialty.

- B. All educational components of the program should be related to the program's goals and objectives and set down in a written curriculum. The curriculum must ensure the opportunity for residents to achieve the cognitive knowledge, procedural skills, interpersonal skills, professional attitudes, humanistic qualities, and practical experience required of a subspecialist. The written curriculum should
1. include for each rotation or major learning experience the educational purpose; teaching methods; the mix of diseases, patient characteristics, and types of clinical encounters, procedures, and services; reading lists, pathological material, and other educational resources to be used; and a method of evaluation of resident performance.
  2. include a description of all required educational and clinical experiences specified in the Program Requirements.
  3. include a description of the clinical experience in inpatient or outpatient settings.
  4. define the level of residents' supervision by faculty members in all patient care activities.
  5. integrate medical problems, health promotion, and cultural, socioeconomic, ethical, occupational, environmental, and behavioral issues in most rotations or major learning experiences.
  6. include teaching rounds and conferences.
  7. indicate that residents care for patients with a wide range of clinical problems in all stages of illness.
  8. emphasize the importance of humanistic qualities throughout the residency.
  9. document explicit methods of evaluation of residents' performance and the educational effectiveness of the program.
  10. be revised by faculty members and residents to keep it current and relevant.
  11. be approved as part of the regular review process by the RRC.
- C. The program should provide residents adequate opportunity to become leaders in the organization and management of patient care.
- D. The program must emphasize scholarship, self-instruction, development of critical analysis of clinical problems, and the ability to make appropriate decisions.
- E. Appropriate faculty supervision of the residents must be provided during all of their educational experiences.
- F. Participation by any institution providing more than 3 months of training in a program of less than 3 years in duration or more than 6 months of training in a program of 3 years in duration must be prior approved by the RRC. The principles of education enumerated in the Program Requirements for Residency Education in Internal Medicine [Note: Specifically, paragraphs V.E., and V.G.] and the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education* also apply to subspecialty programs. The following principles require special emphasis:
1. Educational environment  
Refer to the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education* (I. Institutional Organization and Commitment) and the Program Requirements for Residency Education in Internal Medicine, Sections I and II.A.
  2. Duty hours
    - a. When averaged over any 4-week rotation or assignment, residents must not spend more than 80 hours per week in patient care duties.
    - b. Residents must not be assigned on-call in-house duty more often than every third night.
  3. When averaged over a year, excluding vacation, residents must be provided with a minimum of 48 days free of patient care duties, including home-call responsibility.
3. Professionalism and ethical behavior
- a. Physician accountability
    1. The training program must have mentors, role-model clinicians, and a resident culture that demonstrates the values of professionalism, such as placing the needs of patients first, maintaining a commitment to scholarship, helping colleagues meet their responsibilities, establishing a commitment to continuous quality improvement, and being responsive to society's health-care needs.
    2. Residents should be given the opportunity to participate in community service, professional organizations, and institutional committee activities.
  - b. Humanistic qualities  
Physicians must have the welfare of their patients as their primary professional concern. Thus, the residents, faculty members, and program must demonstrate humanistic qualities that foster the formation of empathetic, constructive, and effective patient/physician relationships. These qualities include integrity, respect, compassion, professional responsibility, courtesy, sensitivity to patient needs for comfort and encouragement, and a professional attitude and behavior toward colleagues.
  - c. Physician impairment  
The training program must instruct residents and faculty members in physician impairment, to include the recognition of, intervention in, and management of impairment such as alcohol and other substance abuse; depression; dementia; and other mental, emotional, and physical disorders in their peers, as well as in the principles and methods of active intervention.
  - d. Professional ethics  
The training program must foster a commitment to professional ethics in residents that is demonstrated by a spirit of collegiality and a high standard of moral and ethical behavior within the clinical setting in the care of patients, in the education of residents, in conducting research, and in interacting with medical device and pharmaceutical companies and funding organizations.
4. Responsibility and professional relationships  
Lines of responsibility must be clearly delineated for residents in subspecialty programs and for residents in internal medicine training programs. Subspecialty programs must contribute to the general internal medicine program without diluting the overall experience of the internal medicine resident. In addition, it is highly desirable that residents have a meaningful working relationship with residents in accredited programs in other disciplines. Where appropriate, qualified faculty in other disciplines should provide instruction and supervision for subspecialty residents.
- G. Peer interaction  
To ensure adequate peer interaction, the total number of residents enrolled in the program must at all times be equal to or greater than the number of years of accredited training.

### III. Program Director and Faculty Qualifications and Responsibilities

#### A. General Qualifications and Responsibilities

1. Qualifications  
The program director and all key clinical faculty members

- a. must be licensed to practice medicine in the state where the sponsoring institution is located. (Certain federal programs are exempted, as appropriate.)
- b. must have appointments in good standing to the medical staff of an institution participating in the training program.
- c. should be certified by the specialty board or present equivalent credentials acceptable to the RRC.
- d. must meet professional standards of ethical behavior.

2. Responsibilities

The program director and all faculty members

- a. must have a commitment to the goals and objectives of the teaching program, including development of the residents' medical knowledge; clinical, technical, and management skills; and clinical judgment.
- b. should be able to nurture the attributes of the scholar, scientist, teacher, and humanist in residents.
- c. must be available to residents for advice and counseling.
- d. must comply with the written curriculum that describes both patient-based and educational elements of the residency.
- e. should review the written learning objectives and expectations for each rotation or assignment with residents at the beginning of the rotation or assignment, when designated to a rotation or assignment.
- f. must be sensitive to the need for timely provision of confidential counseling and psychological support services to residents.
- g. should participate actively in the clinical practice of the subspecialty, as appropriate.
- h. should participate in their own continuing education.
- i. should participate in the activities of regional and national scientific societies.
- j. must provide written and verbal feedback to residents at the end of each rotation or assignment, when designated as a supervisor of residents during a rotation or assignment.

**B. Program Director**

1. Qualifications

There must be a single program director responsible for the program. The program director must

- a. be an institutionally based appointee, ie, his or her home office must be at the primary training site.
- b. have at least 5 years of participation as an active faculty member in an accredited subspecialty residency program.
- c. be subspecialty certified by the American Board of Internal Medicine or present equivalent credentials acceptable to the RRC.

2. Responsibilities

The program director

- a. must devote an average of at least 20 hours per week throughout the year to the training program.
- b. must be primarily responsible for the organization, implementation, and supervision of all aspects of the training program, including the selection and supervision of the faculty members and other program personnel at each institution participating in the program.
- c. must select residents for appointment to the program in accordance with institutional and departmental policies and procedures, evaluate the quality of care rendered by the residents, have the authority to ensure effective teaching, and obtain teaching commitments from other departments involved in the education of internal medicine residents.
- d. must prepare written learning objectives and expectations outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment.

- e. must ensure that the written learning objectives and expectations are readily available for review and are distributed to residents and faculty members.
- f. must ensure that the residency does not place excessive reliance on service.
- g. must notify the RRC promptly of
  1. any change in the total number of residents in the training program and
  2. major changes in the structure of the educational program.The RRC may schedule a site visit when notified about either of the above changes.
- h. must prepare an accurate statistical and narrative description of the program, as required by the RRC.
- i. must monitor the residents' stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction.
- j. must evaluate and modify training situations that consistently produce undesirable stress on residents.
- k. must be responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.
- l. must establish and use educational standards that determine the residents' competence in procedures and skills.
- m. should ensure that there is a rapid and reliable system for residents to communicate with supervising attending physicians and residents.
- n. must establish a system that ensures that attending physicians are available to participate in the residents' diagnostic and management decisions in a timely manner.
- o. should outline in written policies the lines of responsibility and supervision for the care of patients on all inpatient and ambulatory settings, including all clinical sites for all members of the teaching teams and program staff.

**C. Key Clinical Faculty Members**

The training program must include a minimum of three institutionally based key faculty members, including the program director. [Note: Subspecialty programs in clinical cardiac electrophysiology, interventional cardiology, internal medicine-geriatric medicine, and internal medicine-sports medicine are exempt from this requirement.] For programs with more than five residents enrolled during the accredited portion of the training program, a ratio of such faculty to residents of at least 1:1.5 must be maintained. (These minimums may be exceeded in certain subspecialties.) Each resident must have, on average, a minimum of 10 hours per week of direct clinical faculty teaching hours.

1. Qualifications

Key clinical faculty members must

- a. be certified by the American Board of Internal Medicine or present equivalent credentials acceptable to the RRC.
- b. have documented clinical, academic, and administrative experience to ensure effective implementation of the Program Requirements.
- c. be clinicians with broad knowledge of, experience with, and commitment to the subspecialty.

2. Responsibilities

Key clinical faculty members

- a. must dedicate, on average, 10 hours per week throughout the year to the training program.
- b. should participate in activities designed to enhance their teaching effectiveness.
- c. should assist in the general administration of the program, including those activities related to the recruitment, selection,

instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

- d. must assist in the preparation of a written curriculum that describes both patient-based and educational elements of the residency and outlines the goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment.
- e. must assist in nurturing the attributes of the scholar, scientist, teacher, and humanist in the residents.
- f. must assist in monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction.

#### D. Other Faculty

PhD faculty members not holding an MD may be included as other teaching faculty but they may not be regarded as key clinical faculty members.

### IV. Facilities and Resources

- A. The Program Requirements for Residency Education in Internal Medicine governing the provision of appropriate facilities also apply to subspecialty training. Unique facilities required for a particular subspecialty will be found in the Program Requirements for that subspecialty.
- B. As used in this document, the primary training site shall mean the health-care facility that provides the required services, is the location of the program director's major activity, is the location where the resident spends the majority of clinical time, and is ordinarily the primary location of the core program in internal medicine.
- C. Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program. In addition, refer to the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education*, II.D.
- D. A sufficient number of new and follow-up patients, including the geriatric age group, and patients of both sexes must be available to ensure adequate inpatient and ambulatory experience for each subspecialty resident without diluting the experience of the residents in the general internal medicine residency program.

### V. Specific Program Content

#### A. Patient Care Experience

The available inpatient and ambulatory care patient population must provide experience with those illnesses that are encompassed by, and help to define, the subspecialty. Such experience should include sufficient numbers of patients over the age of 70 to provide substantial opportunities in the management of the complex physical, social, and psychological problems prevalent in elderly patients. Subspecialty programs must include the following educational components:

1. Experience with ambulatory patients
  - a. Consultative as well as continuing care must occur at least  $\frac{1}{2}$ -day each week throughout the length of the training program. [Note: Training programs in critical care medicine are exempt from this requirement.]
  - b. On-site faculty members' primary responsibilities must include the supervision and teaching of residents. On-site supervision as well as the evaluation of the educational experience must be documented.
  - c. The patient volume in the ambulatory environment must be large enough to provide adequate numbers of new and return

patients. Residents should, on average, be responsible for from one to three new patients and three to six return patients during each  $\frac{1}{2}$ -day session.

2. Experience with continuity ambulatory patients
  - a. The residents should have an opportunity to follow a panel of patients with a diversity of disease.
  - b. The resident's clinical experiences with ambulatory patients must provide residents the opportunity to observe and to learn the course of disease.

#### B. Consultation Experience

Subspecialty residents must have the appropriate supervised experience to develop skills in providing consultation services on inpatient and ambulatory services, communicating with referring physicians and other members of the health-care team, and ensuring support for continuous care by the patient's primary physician.

#### C. Teaching Experience

The program must provide subspecialty residents with the opportunity to teach general internal medicine residents, medical students, physicians, and other professional personnel.

#### D. Conferences

1. Core conferences must be conducted regularly as scheduled and must be attended faculty and residents. At a minimum, these must include at least one clinical conference weekly and one basic science conference, one literature review conference (journal club), and one research conference monthly.
2. Residents must participate in formal review of gross and microscopic pathological material from patients who have been under their care.
3. Residents must participate in planning and in conducting conferences.
4. Faculty and resident attendance and participation at multidisciplinary conferences is also expected.

#### E. Procedures

1. Residents must develop a comprehensive understanding of indications, contraindications, limitations, complications, techniques, and interpretation of results of those diagnostic and therapeutic procedures integral to the discipline. Residents must acquire knowledge of and skill in educating patients about the technique, rationale, and complications of procedures and in obtaining procedure-specific informed consent.
2. Faculty supervision by key clinical faculty or other designated physicians of procedures performed by each resident is required until proficiency has been acquired and documented for the program director. Each program must
  - a. identify key procedures.
  - b. define a standard for proficiency.
  - c. document achievement of proficiency.

#### F. Occupational Safety and Health Administration (OSHA) and Health-Care Regulations

Residents must have formal instruction in current OSHA regulations and universal precautions and protection of health-care workers.

#### G. Medical Informatics and Decision-Making Skills

1. Residents should receive instruction in the critical assessment of medical literature, in clinical epidemiology, in biostatistics, and in clinical decision theory.
2. Each resident should have the opportunity to learn basic computer skills, including an introduction to computer capabilities and medical applications, basic techniques for electronic

retrieval of medical literature, computer-assisted medical instruction, and electronic information networks.

#### **H. Quality Assessment, Quality Improvement, Risk Management, and Cost Effectiveness in Medicine**

1. Residents should receive instruction in the social and economic impact of medical decisions on patients and society and the need to be the primary advocate for patients' needs.
2. It is desirable that all residents receive formal instruction regarding the principles, objectives, and processes of quality assessment and improvement and of risk management.

#### **I. Clinical Ethics**

The program must include education in the principles of bioethics as applied to medical care, and the residents must participate in decision making involving ethical issues that arise in the diagnosis and management of their patients.

#### **J. Educational and Counseling Skills**

Residents should have instruction and experience in patient counseling skills and community education. This training should emphasize effective communication techniques for diverse populations, as well as organizational resources useful for patient and community education.

#### **K. End-of-Life Care**

1. Each resident should receive instruction in the principles of palliative care for terminally ill patients, including the role of the health-care team. Instruction should include psychosocial, cultural, and religious issues related to death and dying.
2. It is desirable that residents participate in hospice and home care.

#### **L. Research**

As part of the academic environment, an active research component must be included within each accredited subspecialty program. The program must ensure a meaningful, supervised research experience with appropriate protected time—either in blocks or concurrent with clinical rotations—for each resident, while maintaining the essential clinical experience. Evidence of recent productivity by both the program faculty and by the residents as a whole, will be required, including publication in peer-reviewed journals. Residents must learn the design and interpretation of research studies, responsible use of informed consent, and research methodology and interpretation of data. The program must provide instruction in the critical assessment of new therapies and of the medical literature. Residents should be advised and supervised by qualified faculty members in the conduct of research. [Note: Training programs in internal medicine-geriatric medicine are exempt from this requirement relative to research productivity by residents.]

#### **M. Other Scholarly Activities**

The resident should make presentations at lectures, medical grand rounds, journal clubs, and research and other conferences.

### **VI. Evaluation**

#### **A. Residents**

1. Formative Evaluation
  - a. Subspecialty program directors must establish procedures for evaluating and documenting the clinical and technical competence of subspecialty residents. These procedures must include observation, assessment, and substantiation of residents' comprehensive and specialized medical knowledge and provision of medical care, including advanced skills in his-

tory-taking, physical examination, clinical judgment, management, and consultation, and their ability to critically analyze clinical situations and make medical decisions. The program must also evaluate residents' technical proficiency, teaching skills, communication, humanistic qualities, professional attitudes and behavior, and commitment to scholarship as demonstrated within the clinical setting.

- b. Records must be maintained by documentation logbooks or an equivalent method to demonstrate that subspecialty residents have had adequate experience with invasive and noninvasive procedures. Records should state the indications and complications and include the name of the supervising physician. Such records must be kept in sufficient detail to permit use in future credentialing.
  - c. Regular and meaningful feedback to subspecialty residents about their performance is essential to their continuing growth and development as subspecialty internists. There must be regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
  - d. Residents must be evaluated and their performance reviewed with them on completion of each rotation period.
  - e. At least semiannually, the program must provide to the resident structured feedback on performance, including appropriate counseling and other necessary remedial effort.
  - f. Adequate records of the evaluation and counseling process must be maintained for each resident. Such records must be available in the resident's file and must be accessible to the resident.
2. Summative Evaluation
    - a. The program director must prepare a written evaluation (eg, the American Board of Internal Medicine's tracking form) of the clinical competence of each subspecialty resident annually and at the conclusion of the resident's period of training in the program. Such evaluations must stipulate the degree to which the resident has mastered each component of clinical competence (ie, clinical judgment, medical knowledge, clinical skills, humanistic qualities, professional attitudes and behavior, research and scholarship, and provision of medical care) and has acquired proficiency in each of the various procedural skills identified in the program's curriculum.

The program director must verify whether the resident has demonstrated sufficient professional ability to practice competently and independently by the end of the residency program.
    - b. A record of the evaluation must be maintained in the program files to substantiate future judgments provided to hospital credentialing and privileging, board certification, and agency licensing bodies, and to support other bodies' actions.
    - c. Residents must be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth. In the event of an adverse annual evaluation, residents must be offered the opportunity to address judgments of academic deficiencies or misconduct before an independent, appropriately constituted clinical competence committee.
    - d. There must be a written policy to ensure that academic due process provides fundamental fairness to the resident and protects the institution by ensuring accurate, proper, and definitive resolution of disputed evaluations.

#### **B. Faculty Members and Program**

1. Resident evaluation of faculty members and program
  - a. The educational effectiveness of a program must be evaluated in a systematic manner. Specifically, the quality of the curriculum and the extent to which the educational goals and objec-

tives have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

- b. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them.
- c. At least one resident representative must participate in these reviews of the training program.
- d. The faculty should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty members, and the quality of supervision of residents.
- e. Provision must be made for residents to evaluate the faculty and the training program in writing at least annually. The results of such evaluations should be used for faculty counseling and for selecting faculty members for specific teaching assignments.

### C. Evaluation of the Graduates

Each program must maintain a system of evaluation of its graduates. The residency should obtain feedback on demographic and practice profiles, licensure and board certification, the graduates' perceptions of the relevancy of training to practice or other career pathways, suggestions for improving the training, and ideas for new areas of curriculum. The suggested format is a written survey after 1 year and every 5 years thereafter. The data from the evaluation of the graduates should be used as part of the program's determination of the degree to which the program's stated goals are being met.

## VII. Program Requirements

The Program Requirements for training programs in a specific subspecialty may exceed the minimum requirements set forth above.

*ACGME: June 1998 Effective: July 1999*

# Program Requirements for Residency Education in Cardiovascular Disease (Internal Medicine)

## I. Educational Program

A subspecialty educational program in cardiology must be organized to provide training and supervised experience in the evaluation and management of a wide variety of patients with acute and chronic cardiovascular conditions including chronic coronary heart disease, congestive heart failure, arrhythmias, acute myocardial infarction and other acute ischemic syndromes, lipid disorders, hypertension, cardiomyopathy, valvular heart disease, pulmonary heart disease, peripheral vascular disease, infections and inflammatory heart disease, and adult congenital heart disease. The training and experience must be at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 3 years in duration.

## II. Key Clinical Faculty

The program must provide a minimum of four institutionally based faculty members, including the program director. In programs with a total of more than six residents enrolled, a ratio of such faculty to residents of at least 1:1.5 must be maintained.

## III. Facilities and Resources

Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. These include inpatient, ambulatory care, and clinical and research laboratory resources. Specifically, there must be laboratories in which cardiac hemodynamics, angiography, percutaneous transluminal coronary angioplasty, invasive electrophysiologic studies, and other interventional procedures are performed. There must be laboratories that provide resources for electrocardiography, ambulatory electrocardiogram (ECG) recording, exercise testing, echocardiography (including Doppler and transesophageal studies), and radionuclide techniques. Other hospital resources should include facilities for assessment of peripheral vascular disease and pulmonary physiology. Critical care units must include a cardiac care unit and a cardiac surgery intensive care unit. Resources must be available for implantation of pacemakers, implantable cardioverter/defibrillator, and follow-up. There must be a cardiac catheterization laboratory and active cardiac surgery at the primary training site.

## IV. Specific Program Content

The goal of the training program is to provide opportunities for the residents to develop clinical competence in the field of adult cardiovascular disease.

### A. Clinical Experience

#### 1. Special Clinical Experiences

There must be at least 24 months of clinical training, including inpatient and special experiences. The program must provide a minimum of

- a. Four months in the cardiac catheterization laboratory
- b. Six months in noninvasive cardiac evaluations, consisting of
  1. three months of echocardiography;
  2. two months of nuclear cardiology; and
  3. one month of other noninvasive cardiac evaluations, which includes at least
    - a. exercise stress testing,
    - b. ECG interpretation, and
    - c. ambulatory ECG recording.

These rotations may be done in conjunction with other block rotations or concurrently with other clinical rotations.

- c. Two months devoted to electrophysiology, pacemaker follow-up and ICDs.

#### 2. Inpatient Experience

There must be at least 8 months of nonlaboratory clinical practice activities (eg, consultations, cardiac care units, postoperative care of cardiac surgery patients).

### B. Technical and Other Skills

1. The program must provide sufficient experience for the resident to acquire skill in the performance and interpretation of
  - a. history and physical examination
  - b. basic and advanced cardiac life support
  - c. elective cardioversion
  - d. bedside right heart catheterization
  - e. insertion and management of temporary pacemakers, including transvenous and transcutaneous

- f. right and left heart catheterization including coronary arteriography; residents must participate in a minimum of 100 catheterizations
  - g. exercise stress testing; residents must perform a minimum of 50 ECG tests
  - h. echocardiography; residents must perform and interpret a minimum of 150 studies, including transesophageal and esophageal cardiac studies
  - i. pericardiocentesis
  - j. programming and follow-up surveillance of permanent pacemakers and ICDs
  - k. cardiovascular rehabilitation
2. The program must provide opportunities for residents to acquire experience with the performance and (where applicable) interpretation of
- a. intracardiac electrophysiologic studies
  - b. intra-aortic balloon counterpulsation
  - c. percutaneous transluminal coronary angioplasty and other interventional procedures
3. The program must provide sufficient experience for residents to acquire skill in the interpretation of
- a. chest x-rays
  - b. a minimum of 3500 electrocardiograms
  - c. a minimum of 75 ambulatory ECG recordings
  - d. radionuclide studies of myocardial function and perfusion
  - e. cardiovascular literature

### **C. Formal Instruction**

The program must provide instruction in the following:

- 1. Basic science, including
  - a. cardiovascular anatomy
  - b. cardiovascular physiology
  - c. cardiovascular metabolism
  - d. molecular biology of the cardiovascular system
  - e. cardiovascular pharmacology, including drug metabolism, adverse effects, indications, the effects on aging, relative costs of therapy, and the effects of noncardiovascular drugs upon cardiovascular function
  - f. cardiovascular pathology
- 2. Prevention of cardiovascular disease, including
  - a. epidemiology and biostatistics
  - b. risk factors
  - c. lipid disorders
- 3. Evaluation and management of patients with
  - a. coronary artery disease and its manifestations and complications
  - b. arrhythmias
  - c. hypertension
  - d. cardiomyopathy
  - e. valvular heart disease
  - f. pericardial disease
  - g. pulmonary heart disease, including pulmonary embolism
  - h. peripheral vascular disease
  - i. cerebrovascular disease
  - j. heart disease in pregnancy
  - k. adult congenital heart disease
  - l. cardiovascular trauma
- 4. Management of
  - a. acute and chronic congestive heart failure
  - b. acute myocardial infarction and other acute ischemic syndromes
  - c. acute and chronic arrhythmias
  - d. preoperative and postoperative patients
  - e. cardiac transplant patients
  - f. geriatric patients with cardiovascular disease

- 5. Diagnostic techniques, including
  - a. magnetic resonance imaging
  - b. fast computed tomography
  - c. positron emission tomography

*ACGME: June 1998 Effective: July 1999*

## **Program Requirements for Residency Education in Clinical Cardiac Electrophysiology (Internal Medicine)**

### **I. Educational Program**

- A. A subspecialty educational program in clinical cardiac electrophysiology (CCEP) must function as an integral component of an accredited subspecialty fellowship in cardiovascular disease and must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field.
- B. During training in CCEP, the resident's clinical experience must include opportunities to observe, diagnose, manage, and judge the effectiveness of treatment for inpatients and outpatients with palpitations, syncope, and bradyarrhythmias and with both supraventricular and ventricular tachyarrhythmias. The resident should be given opportunities to assume continuing and increasing responsibility for both acutely and chronically ill patients to learn the natural history of a wide variety of cardiac arrhythmias and how to treat them.
- C. The CCEP program must be 1 year in length, following completion of an accredited cardiovascular disease residency program.

### **II. Key Clinical Faculty**

Faculty responsible for training must be board certified in CCEP or possess equivalent qualifications. In addition, there must be a minimum of two key clinical CCEP faculty members, including the program director. In programs with a total of more than two residents enrolled, a ratio of such faculty to residents of at least 1:1 must be maintained.

### **III. Facilities and Resources**

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. Specifically, there must be a clinical cardiac electrophysiologic laboratory for invasive intracardiac electrophysiologic studies and catheter ablation and laboratories to provide the noninvasive diagnostic and therapeutic techniques detailed below.
- B. The electrophysiology laboratory must contain appropriate cardiac fluoroscopic equipment, programmable stimulator, recording devices, and resuscitative equipment. An outpatient follow-up program must exist to care for patients with pacemakers and implantable cardioverters/defibrillators (ICDs). Clinical care units must include cardiac care units (CCUs), cardiac surgical intensive care units, and outpatient clinics. A cardiac surgery program must be at the primary training site.

### **IV. Specific Program Content**

#### **A. Clinical Experience**

- 1. Residents must have clinical experiences with the required procedures and skills, which includes the knowledge of their

indications, contraindications, risks, and limitations. Residents must be instructed in the sensitivity, specificity, and the positive and negative predictive accuracy of any test employed. They must be instructed in the appropriate techniques for evaluating patients with

- a. a variety of rhythm disorders, including but not limited to
    1. sinus node dysfunction,
    2. atrioventricular (AV) and intraventricular block, and
    3. supraventricular and ventricular tachyarrhythmias.
  - b. clinical conditions such as
    1. unexplained syncope,
    2. aborted sudden cardiac death,
    3. palpitations,
    4. Wolff-Parkinson-White (WPW) syndrome, and
    5. long QT syndrome.
  - c. conditions that make them candidates for nonpharmacological therapy such as ablation, surgery, and ICD implantation.
2. Clinical experiences involving
    - a. consultation to physicians in other disciplines
    - b. care of patients in the cardiac care unit, emergency room, or other intensive care settings.
    - c. care of the patient before and after an electrophysiologic procedure.
    - d. care of patients with postoperative arrhythmias.
    - e. outpatient follow-up of patients treated with drugs, devices, or surgery.
    - f. electrocardiography—proficiency in the interpretation of the standard 12-lead ECG, stress testing, ambulatory ECG recording, signal-averaged ECG, and telephone-transmitted ECGs.
    - g. care of patients with temporary and permanent pacemakers.
    - h. care of patients with ICDs.

#### B. Technical and Other Skills

1. To become proficient in CCEP, residents must have the opportunity to acquire a broad knowledge base of cardiac electrophysiology. There must be opportunity to develop a high level of performance in such areas as interpretation of results of noninvasive testing relevant to arrhythmia diagnoses and treatment, performance and interpretation of invasive electrophysiologic testing, performing therapeutic catheter ablation procedures, and performing or assisting in the implantation of cardioverter/defibrillators and pacemakers.
2. The program must ensure that residents have the necessary opportunities to acquire skill in the interpretation of
  - a. activation sequence mapping recordings.
  - b. invasive intracardiac electrophysiologic studies, including endocardial electrogram recording.
  - c. relevant imaging studies, including chest radiography.
  - d. tilt testing.
  - e. electrocardiograms and ambulatory ECG recordings.
  - f. continuous in-hospital ECG recording.
  - g. signal-averaged ECG recordings.
  - h. stress test ECG recordings.
  - i. transtelephonic ECG readings.
3. The program must ensure that residents have the necessary opportunities to acquire skill in the performance of clinical cardiac electrophysiologic studies.
  - a. The resident is expected to perform an average of three or more electrophysiology invasive diagnostic/interventional catheter procedures per week as the primary operator or as an assistant closely involved with data collection and analysis.
  - b. A minimum of 150 intracardiac procedures in at least 75 patients will be required.
4. The program director of the CCEP training program will be expected to ensure the competency of the resident in the following:

- a. Electrode catheter introduction
  - b. Electrode catheter positioning in atria, ventricles, coronary sinus, His bundle area, and pulmonary artery
  - c. Stimulating techniques to obtain conduction times and refractory periods and to initiate and terminate tachycardias
  - d. Recording techniques, including an understanding of amplifiers, filters, and signal processors
  - e. Measurement and interpretation of data
5. A minimum of 75 catheter ablative procedures, including post-diagnostic testing, will be required for each resident. These cases must include a mix of AV nodal reentrant tachycardia and accessory pathway modification, atrial tachycardia and atrial flutter, AV junctional ablation and modification and ventricular tachycardia ablation.
  6. Participation in a minimum of 25 initial ICD procedures, including pacemaker and ICD programming, will be required for each resident. The program must assure that the residents acquire skill in the following:
    - a. Device programming
    - b. Noninvasive programmed stimulation for arrhythmia induction through the device
    - c. Defibrillation threshold testing
    - d. Final prescription of antitachycardia pacing and defibrillation therapies

#### C. Formal Instruction

The program must provide instruction in

1. basic cardiac electrophysiology, including but not limited to genesis of arrhythmias, normal and abnormal electrophysiologic responses, autonomic influences, effects of ischemia, drugs, and other interventions.
2. clinical cardiac electrophysiology.
3. arrhythmia control device management
4. the genetic basis of pathological arrhythmias.
5. epidemiology of arrhythmias.
6. clinical trials of arrhythmia management and their impact on clinical practice.

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Critical Care Medicine (Internal Medicine)

### I. Educational Program

- A. A subspecialty educational program in critical care medicine must be organized to provide training and supervised experience at a sufficient level for the resident to acquire competency in managing critically ill patients and in supervising critical care units.
- B. Critical care medicine training programs may be 1 or 2 years in duration.
  1. Programs that accept only those who have completed training in an accredited program in one of the subspecialties of internal medicine may be organized to offer a single year of training.
  2. Programs organized to provide critical care medicine training in association with an accredited program in one of the subspecialties of internal medicine may fulfill training requirements by devoting 12 months to critical care out of a total of 36 months of training.

3. Otherwise, a program must provide training of 2 years in duration.
- C. To provide evidence of substantial institutional support in those disciplines most relevant to critical care medicine, the sponsoring institution's primary training site should sponsor accredited subspecialty programs in cardiovascular disease, pulmonary disease, and infectious diseases and must have an accredited residency program in general surgery. The presence of training programs in these disciplines ensures the extensive educational, patient care, and research resources that are essential to the learning environment for critical care medicine residents. Furthermore, peer interaction is essential in the education of critical care medicine residents.
- D. The sponsoring institution(s) must provide service for the care of patients with major trauma and must have an active open heart surgery program.
- E. Institutional policies should be established to govern the educational resources committed to critical care training programs and to ensure cooperation of all involved disciplines.

## **II. Key Clinical Faculty**

- A. The program director and the critical care teaching staff must have privileges regarding the admission, treatment, and discharge of patients on the critical care unit(s).
- B. The director shall have administrative responsibility for the critical care teaching program, subject to the approval of the director of the parent internal medicine training program.
- C. The key clinical teaching faculty at the primary training site must include each of the following:
  1. For each resident there must be no less than one key clinical faculty member.
  2. There must be at least two key clinical faculty members each in nephrology, gastroenterology, pulmonary, cardiology, infectious disease, and hematology who must devote substantial effort to the education of critical care medicine residents.
  3. There must be key clinical faculty members in geriatric medicine and oncology who are available to participate in the education of residents in critical care medicine.
- D. Faculty members in anesthesiology, neurology, and neurosurgery who are certified by an American Board of Medical Specialties member board in their respective disciplines or who have equivalent training and experience must also participate at the primary training site in the education of residents in critical care medicine.
- E. Because critical care training is multidisciplinary in nature, faculty from several related disciplines such as general surgery, thoracic surgery, pediatrics, urology, orthopedic surgery, emergency medicine, and obstetrics-gynecology must be available to participate in the training program.
- F. A collegial relationship must exist between the director of the critical care training program and the teaching staff, to enhance the educational opportunities for all residents.

## **III. Facilities and Resources**

- A. Modern facilities to accomplish the educational program must be available and functioning.
  1. The critical care unit(s) must be located in a designated area within the hospital and must be constructed and designed specifically for the care of critically ill patients.
  2. Whether operating in separate locations or in combined facilities, the program must provide the equivalent of a medical intensive care unit (MICU), a surgical intensive care unit, and a coronary intensive care unit (CICU).

3. The MICU must be at the primary training site and should be the focus of a teaching service in which the program director in critical care medicine is responsible for the educational program.
- B. Available facilities must be adequate to care for patients with acute myocardial infarction, severe trauma, shock, recent open heart surgery, recent major thoracic or abdominal surgery, and severe neurologic and neurosurgical conditions.
- C. In units to which a resident is assigned, an average census of at least five patients per resident is required.
- D. A sufficient number of knowledgeable personnel and the necessary equipment to care for critically ill patients must be available. Personnel must include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine.
- E. A supporting laboratory must be available to provide complete and prompt laboratory evaluation.
- F. Modern imaging services and an active emergency service must be available.
- G. Nutritional support services also must be available.

## **IV. Specific Program Content**

### **A. Clinical Experience**

1. Ultimate integration and application of the necessary knowledge, skills, and attitudes are best experienced in the intensive care environment. The program must be structured to provide adequate and meaningful patient responsibility in critical care unit(s), at least 6 months of which must be devoted to the care of critically ill medical patients (ie, MICU/CICU or equivalent).
2. Residents must be given opportunities to assume responsibility, under appropriate supervision, for the care of patients throughout their stay in the critical care unit(s) and to monitor the subsequent course of patients throughout the remainder of their hospital stay. To assess the various aspects of critical care, the resident must also have organized opportunities to learn about former critical care patients after hospital discharge, including clinical pathological correlations when appropriate.
3. Because critical care medicine is multidisciplinary in nature, clinical experience must include opportunities to manage adult patients with a wide variety of serious illnesses and injuries requiring treatment in a critical care setting. Therefore, residents must obtain additional clinical experience with other critically ill patients, which may include surgical, shock/trauma, and neurologic/neurosurgical intensive care units; pediatric intensive care unit; burn unit; dialysis unit; anesthesia service; cardiac catheterization laboratory; high-risk pregnancy intensive care unit; and transplant unit.

### **B. Technical and Other Skills**

1. The program must be structured to permit all critical care residents to develop the requisite procedural and technical skills, including the ability to interpret data derived from various bedside devices commonly employed to monitor patients in the critical care setting.
2. The training program must provide opportunities for residents to learn the indications, contraindications, complications, and limitations of the following critical care procedures and the technical skills necessary to perform them. This experience may ordinarily occur in a pulmonary function laboratory or respiratory care service.
  - a. Establishment and maintenance of open airway in non-intubated, unconscious, paralyzed patients
  - b. Pressure-cycled, volume-cycled, time-cycled, and flow-cycled mechanical ventilation

- c. Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
- d. Management of pneumothorax (needle insertion and drainage systems)
- e. Maintenance of circulation with
  - 1. Arterial puncture and blood sampling
  - 2. Insertion of central venous, arterial, and pulmonary artery balloon flotation catheters
  - 3. Basic and advanced cardiopulmonary resuscitation
  - 4. Cardioversion
- f. Thoracentesis
- 3. The training program must provide opportunities for residents to learn the indications, contraindications, limitations, and complications of the following critical care procedures and the technical skills necessary to perform them:
  - a. Parenteral nutrition
  - b. Monitoring/bioengineering
    - 1. Utilization, zeroing, and calibration of transducers
    - 2. Use of amplifiers and recorders
- 4. The program also must provide opportunities to learn the indications, contraindications, complications, and limitations of the following procedures; practical experience is recommended.
  - a. Pericardiocentesis
  - b. Transvenous pacemaker insertion
  - c. Peritoneal dialysis
  - d. Peritoneal lavage
  - e. Insertion of chest tubes
  - f. Percutaneous needle aspiration
  - g. Intracranial pressure monitoring
- 5. Experience also must be provided in the analysis of data pertaining to the following:
  - a. Cardiac output determinations by thermodilution and other techniques
  - b. Evaluation of oliguria
  - c. Management of massive transfusions
  - d. Management of hemostatic defects
  - e. Interpretation of antibiotic levels and sensitivities
  - f. Monitoring and assessment of metabolism and nutrition
  - g. Calculation of oxygen content, intrapulmonary shunt and alveolar arterial gradients
  - h. Pharmacokinetics
- 6. Opportunities also must be available for residents to acquire those skills required to organize, administer, and direct a critical care unit and to work effectively as a member of a multidisciplinary team.

### C. Formal Instruction

The training program must provide opportunities for the residents to acquire knowledge of and to develop clinical competence in the following content areas:

- 1. Physiology, pathophysiology, diagnosis, and therapy of disorders of the cardiovascular, respiratory, renal, gastrointestinal, genitourinary, neurologic, endocrine, hematologic, musculoskeletal, and immune systems as well as of infectious diseases
- 2. Electrolyte and acid-base physiology, pathophysiology, diagnosis, and therapy
- 3. Metabolic, nutritional, and endocrine effects of critical illnesses
- 4. Hematologic and coagulation disorders associated with critical illness
- 5. Critical obstetric and gynecologic disorders
- 6. Management of the immunosuppressed patient
- 7. Management of anaphylaxis and acute allergic reactions
- 8. Trauma

- 9. Pharmacokinetics, pharmacodynamics, and drug metabolism and excretion in critical illness
- 10. Use of paralytic agents
- 11. Ethical, economic, and legal aspects of critical illness
- 12. Principles and techniques of administration and management
- 13. Psychosocial and emotional effects of critical illnesses on patients and their families
- 14. Iatrogenic and nosocomial problems in critical care medicine
- 15. Occupational Safety and Health Administration (OSHA) regulations and universal precautions and protection of health-care workers

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Endocrinology, Diabetes, and Metabolism (Internal Medicine)

### I. Educational Program

A subspecialty educational program in endocrinology, diabetes, and metabolism must be organized to provide training and experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration.

### II. Facilities and Resources

Modern facilities must be available and functioning. Specifically, there must be a complete biochemistry laboratory and facilities for radioimmunoassay. Available imaging services must include nuclear, ultrasonic, and radiologic facilities and expertise to conduct studies for all types of endocrine disease. There must be available endocrine surgical services and a pathology laboratory for the interpretation of surgical and cytologic specimens. There should be access to karyotyping and immunohistologic studies. In addition, there must be a close working relationship with dietary and/or nutrition services, as well as specialists in surgery, nephrology, neurology and neurosurgery, obstetrics and gynecology, ophthalmology, pediatrics, podiatry, and urology.

### III. Specific Program Content

#### A. Clinical Experience

- 1. The training program must provide opportunities for the resident to develop clinical competence in the field of endocrinology, diabetes, and metabolism. Clinical experience must include opportunities to diagnose and manage inpatients and outpatients representing adolescent and adult patients of both sexes and representing variable acuity and who have a wide variety of endocrine and metabolic diseases. The program also must include opportunities to function in the role of an endocrinology consultant for patients and other physicians and services in both inpatient and outpatient settings.
- 2. The residents must be given opportunities to assume responsibility for and follow patients throughout the training period in both inpatient and outpatient settings to observe the evolution and natural history of these disorders, as well as the effectiveness of therapeutic interventions. To accomplish these goals, the educational program must have at least 30% of the training in endocrine subspecialty related ambulatory care settings. Residents

- must have experience representing variable acuity and the full spectrum of endocrine and metabolic diseases.
3. The curriculum must emphasize biochemistry and physiology, including cell and molecular biology, as they relate to endocrinology, diabetes, and metabolism. The appropriate utilization and interpretation of clinical laboratory, radionuclide, and radiologic studies for the diagnosis and treatment of endocrine and metabolic diseases must be stressed.
  4. Residents must have clinical experience in a multidisciplinary diabetes education and treatment program.
  5. Residents must have formal instruction, clinical experience, or opportunities to acquire expertise in the evaluation and management of the following disorders:
    - a. Thyroid disorders, including
      1. hyperthyroidism and hypothyroidism
      2. nodular thyroid diseases
      3. thyroid cancer
      4. goiter, and
      5. thyroiditis, including chronic, silent, subacute, and autoimmune
    - b. Hypothalamic and pituitary tumors, including
      1. pituitary tumors of all types, with particular experience in the diagnosis and management of prolactinoma, acromegaly, Cushing's disease, and clinically nonfunctioning tumors
      2. craniopharyngeoma and other space occupying and infiltrative disorders of the pituitary and hypothalamic region
      3. hypopituitarism
      4. growth hormone disorders
      5. hypothalamic insufficiency
      6. SIADH
      7. diabetes insipidus (primary and nephrogenic), and
      8. galactorrhea
    - c. Type 1 and Type 2 diabetes mellitus, including
      1. patient monitoring and treatment objectives in adolescents and adults
      2. acute and chronic complications, including
        - a. diabetic ketoacidosis
        - b. hyperosmolar non-ketotic syndromes
        - c. hypoglycemia, and
        - d. microvascular and macrovascular disease, including
          - i. diabetic retinopathy
          - ii. diabetic nephropathy
          - iii. diabetic neuropathy
          - iv. dermatologic aspects of diabetes
          - v. coronary heart disease
          - vi. peripheral vascular disease, and
          - vii. cerebral vascular disease
        - e. infections in the diabetic patient
      3. gestational diabetes mellitus
      4. diabetes mellitus in the pregnant patient
      5. the surgical patient with diabetes mellitus
      6. patient education
      7. psychosocial issues
      8. genetics and genetic counseling as it relates to patients with endocrine and metabolism disorders
      9. dietary principles
    - d. Hypoglycemic syndromes, including the spectrum of insulinoma and other causes
    - e. The diagnosis and management of lipid and lipoprotein disorders
    - f. The diagnosis and management of primary and secondary hypertension
    - g. Disorders of bone and mineral metabolism, including
      1. hyperparathyroidism and other causes of hypercalcemia
      2. hypoparathyroidism and other causes of hypocalcemia
      3. metabolic bone diseases, with particular emphasis on the diagnosis and management of osteoporosis
      4. evaluation and prevention of kidney stones
      5. Paget's disease
      6. osteomalacia and disorders of vitamin D and phosphorus metabolism
      7. disorders of magnesium metabolism
    - h. Disorders of the adrenal cortex and medulla including:
      1. benign and malignant adrenal tumors
      2. adrenogenital syndromes
      3. Cushing's syndrome, including drug-induced
      4. adrenal cortex hypofunction—cause and therapy.
      5. pheochromocytoma
      6. primary aldosteronism
    - i. Disorders of fluid, electrolyte, and acid-base metabolism, including
      1. hyponatremia and hyponatremia
      2. hyperkalemia and hypokalemia
      3. metabolic acidosis
      4. metabolic alkalosis
    - j. Disorders of magnesium and phosphorous metabolism
    - k. Endocrine aspects of psychiatric diseases
      - l. Endocrine aspects of aging, with particular emphasis on the care of geriatric patients with endocrine disease and diabetes and the endocrine changes associated with aging
    - m. Autoimmune polyglandular failure syndrome
    - n. Endocrine emergencies, including
      1. hypercalcemia and hypocalcemia
      2. severe hypo- and hyperthyroidism
      3. adrenal insufficiency
      4. pituitary apoplexy
    - o. Parenteral nutritional support
    - p. Nutritional disorders
      1. obesity-pathophysiology, diagnosis and management
      2. anorexia nervosa and bulimia
    - q. Hormone-producing neoplasms, particularly carcinoid syndromes, ectopic hormone production, islet cell tumors and multiple endocrine neoplasia syndromes
    - r. Female and male reproduction, including
      1. primary and secondary amenorrhea
      2. hirsutism/virilization
      3. dysfunctional uterine bleeding
      4. infertility
      5. menopause
      6. testicular tumors
      7. erectile dysfunction
      8. gynecomastia
      9. hypogonadism
    - s. Endocrine adaptations and maladaptations to systemic diseases, including effects on the thyroidal, adrenal, and gonadal axes.

## B. Technical and Other Skills

Residents should have experience in the performance of endocrine clinical laboratory and radionuclide studies and basic laboratory techniques, including quality control, quality assurance, and proficiency standards.

Provision must be made for the residents to acquire experience and skill in the following areas:

1. The interpretation of laboratory tests; immunoassays; and radionuclide, ultrasound, radiologic, and other imaging studies for the diagnosis and treatment of endocrine and metabolic disease.

2. The effects of a variety of nonendocrine disorders on laboratory and imaging studies and performance and interpretation of stimulation and suppression tests.
3. Performance and cytologic interpretation of fine needle aspiration of the thyroid.
4. Indication and interpretation of quantitative digital radiography and other tests used in the management of osteoporosis and other metabolic bone diseases.
5. Management of adolescent and adult patients of all ages with diabetes mellitus, including but not limited to the following aspects of the disease:
  - a. The utilization and interpretation of autoimmune markers of Type 1 diabetes in patient management and counseling
  - b. Prescription of exercise programs
  - c. Rationale for and calculation of diabetic diets
  - d. Oral antidiabetic therapy
  - e. The use of intravenous insulin in acute decompensated diabetes mellitus
  - f. Chronic insulin administration, including the use of all varieties of insulin delivery systems
  - g. Glucose monitoring devices
  - h. Fundoscopic examination, recognition, and appropriate referral of patients with diabetic retinopathy
  - i. Foot care
  - j. Psychosocial effects of diabetes mellitus on patients and their families
  - k. Patient and community education

### C. Formal Instruction

The formal curriculum of the program must, as a minimum, provide instruction in the following:

1. Pathogenesis and epidemiology of diabetes mellitus
2. Genetics as it relates to endocrine diseases
3. Developmental endocrinology, including growth and development, sexual differentiation, and pubertal maturation
4. Endocrine physiology and pathophysiology in systemic diseases and principles of hormone action
5. Biochemistry and physiology, including cell and molecular biology and immunology, as they relate to endocrinology and metabolism
6. Signal transduction pathways and biology of hormone receptors

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Gastroenterology (Internal Medicine)

### I. Educational Program

A subspecialty education program in gastroenterology must be organized to provide training and experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 3 years in duration.

### II. Key Clinical Faculty

The program must provide a minimum of four institutionally based faculty members, including the program director. In addition, at least one key clinical faculty member should have demonstrated expertise and primary focus in hepatology.

### III. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. Specifically, there must be a procedure laboratory completely equipped to provide modern capability in gastrointestinal procedures. This equipment must include an up-to-date array of complete diagnostic and therapeutic endoscopic instruments and accessories plus esophageal motility instrumentation. Facilities for parasitology testing should be provided. Supporting services including pathology, diagnostic radiology, interventional radiology, medical imaging and nuclear medicine, general surgery, and oncology also must be available.
- B. Facilities for the intensive care of critically ill patients with gastrointestinal disorders must be provided, including a working relationship with surgery, oncology, pediatrics, radiology, and pathology services.

### IV. Specific Program Content

#### A. Clinical Experience

1. The training program must provide opportunities for residents to develop clinical competence in the field of gastroenterology, including hepatology, clinical nutrition, and gastrointestinal oncology.
2. At least 18 months of the clinical experience should be in general gastroenterology, including hepatology, which should comprise approximately 30% of this experience. The additional 18 months of training must be dedicated to elective fields of training oriented to enhance competency.
3. Residents must have formal instruction, clinical experience, or opportunities to acquire expertise in the evaluation and management of the following disorders:
  - a. Diseases of the esophagus
  - b. Acid peptic disorders of the gastrointestinal tract
  - c. Motor disorders of the gastrointestinal tract
  - d. Irritable bowel syndrome
  - e. Disorders of nutrient assimilation
  - f. Inflammatory bowel diseases
  - g. Vascular disorders of the gastrointestinal tract
  - h. Gastrointestinal infections, including retroviral, mycotic, and parasitic diseases
  - i. Gastrointestinal and pancreatic neoplasms
  - j. Gastrointestinal diseases with an immune basis
  - k. Gallstones and cholecystitis
  - l. Alcoholic liver diseases
  - m. Cholestatic syndromes
  - n. Drug-induced hepatic injury
  - o. Hepatobiliary neoplasms
  - p. Chronic liver disease
  - q. Gastrointestinal manifestations of HIV infections
  - r. Gastrointestinal neoplastic disease
  - s. Acute and chronic hepatitis
  - t. Biliary and pancreatic diseases
4. Residents must have formal instruction, clinical experience, and opportunities to acquire expertise in the evaluation and management of patients with the following clinical problems:
  - a. Dysphagia
  - b. Abdominal pain
  - c. Acute abdomen
  - d. Nausea and vomiting
  - e. Diarrhea
  - f. Constipation
  - g. Gastrointestinal bleeding
  - h. Jaundice

- i. Cirrhosis and portal hypertension
- j. Malnutrition
- k. Genetic/inherited disorders
- l. Depression, neurosis, and somatization syndromes
- m. Surgical care of gastrointestinal disorders

**B. Technical and Other Skills**

1. The program must provide for instruction in the indications, contraindications, complications, limitations, and (where applicable) interpretation of the following diagnostic and therapeutic techniques and procedures:
  - a. Imaging of the digestive system, including
    1. Ultrasound
    2. Computed tomography
    3. Magnetic resonance imaging
    4. Vascular radiography
    5. Nuclear medicine
  - b. Percutaneous cholangiography
  - c. Percutaneous endoscopic gastrostomy
  - d. Gastric, pancreatic, and biliary secretory tests
  - e. Other diagnostic and therapeutic procedures utilizing enteral intubation and bougienage
  - f. Enteral and parenteral alimentation
  - g. Liver transplantation
  - h. Pancreatic needle biopsy
  - i. ERCP, including papillotomy and biliary stent placement
2. Opportunities also must be provided for the resident to gain competence in the performance of the following procedures. A skilled preceptor must be available to teach and to supervise them. The performance of these procedures must be documented in the resident's record, giving indications, outcomes, diagnoses, and supervisor(s).
  - a. Esophagogastroduodenoscopy; residents should perform a minimum of 100 supervised studies.
  - b. Esophageal dilation; residents should perform a minimum of 15 supervised studies.
  - c. Proctoscopy
  - d. Flexible sigmoidoscopy; residents should perform a minimum of 25 supervised studies.
  - e. Colonoscopy with polypectomy; residents should perform a minimum of 100 supervised colonoscopies and 20 supervised polypectomies.
  - f. Percutaneous liver biopsy; residents should perform a minimum of 20 supervised studies.
  - g. Percutaneous endoscopic gastrostomy; residents should perform a minimum of 10 supervised studies.
  - h. Biopsy of the mucosa of esophagus, stomach, small bowel, and colon
  - i. Gastrointestinal motility studies
  - j. Nonvariceal hemostasis (upper and lower); residents should perform 20 supervised cases, including 10 active bleeders.
  - k. Variceal hemostasis; residents should perform 15 supervised cases, including five active bleeders.
  - l. Enteral and parenteral alimentation
  - m. Liver biopsy

**C. Formal Instruction**

The program must include emphasis on the pathogenesis, manifestations, and complications of gastrointestinal disorders, including the behavioral adjustments of patients to their problems. The impact of various modes of therapy and the appropriate utilization of laboratory tests and procedures should be stressed. Additional specific content areas that must be included in the formal program (lectures, conferences, and seminars) include the following:

1. Anatomy, physiology, pharmacology, and pathology related to the gastrointestinal system, including the liver
2. The natural history of digestive diseases
3. Factors involved in nutrition and malnutrition
4. Surgical procedures employed in relation to digestive system disorders and their complications
5. Prudent, cost-effective, and judicious use of special instruments, tests, and therapy in the diagnosis and management of gastroenterologic disorders
6. Liver transplantation
7. Sedation and sedative pharmacology
8. Interpretation of abnormal liver chemistries

*ACGME: June 1998 Effective: July 1999*

## **Program Requirements for Residency Education in Internal Medicine Geriatric Medicine**

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Internal Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

### **I. Educational Program**

An educational program in geriatric medicine must be organized to provide a well-supervised experience at a sufficient level for the resident to acquire the competence of a physician with added qualifications in the field. It shall be 12 months in duration. The program must be conducted by an accredited residency program in internal medicine or family practice.

Clinical experience must include opportunities to manage elderly patients with a wide variety of medical problems on an inpatient and outpatient basis. Residents must be given the opportunity to provide both primary care and consultation for patients in acute, ambulatory, community, and long-term care settings in order to understand the interaction of natural aging and disease as well as the techniques of assessment, therapy, and management. Additionally, residents must be given the opportunity to care for persons who are generally healthy and require primarily preventive health-care measures.

The program should include an emphasis on the physiology of aging, the pathophysiology that commonly occurs in older persons, atypical presentations of illnesses, functional assessment, cognitive status and affective assessment, and concepts of treatment and management in both the acute and long-term care settings, as well as in the community and in the home.

Attention also should be directed to the behavioral aspects of illness, socioeconomic factors, and ethical and legal considerations that may impinge on medical management.

The program must provide the opportunity for residents to maintain their basic primary skills during the course of this training. At least ½ day per week must be spent in a continuity of care experience in the resident's primary discipline.

### **II. Faculty and Staff**

#### **A. Program Director**

The program director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. The director must have demonstrated experience in geriatric medicine and must have demonstrated ex-

perience in education and scholarly activity and have a career commitment to academic geriatric medicine. The director must be primarily based at the teaching center.

### B. Other Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program. For programs with more than two residents, there must be 0.5 additional faculty member for each additional resident. Some of these faculty may be part-time in geriatric medicine or drawn wholly from collaborating programs. The faculty commitment must not attenuate the quality of the core residency training program. The program must ensure that interdisciplinary relationships with the following specialties occur: physical medicine and rehabilitation, neurology, and psychiatry. Appropriate relationships with other disciplines, including but not limited to general surgery, orthopedics, ophthalmology, otolaryngology, urology, gynecology, emergency medicine, dentistry, pharmacy, audiology, physical and occupational therapy, speech therapy, and nursing and social services should be maintained. Additionally, a liaison with the physician assistants, when available, should be established.

### C. Geriatric Care Team

The resident must have experience with physician-directed interdisciplinary geriatric teams in an acute-care hospital, in a nursing home that includes subacute and long-term care, in a home care setting, and in a family practice center or other outpatient settings. Essential members include a geriatrician, a nurse, and a social worker. Additional members may be included in the team as appropriate, including representatives from disciplines such as neurology, psychiatry, physical medicine and rehabilitation, physical therapy, occupational therapy and speech therapy, dentistry, pharmacy, psychology, and pastoral care. Regular team conferences must be held as dictated by the needs of the individual patient.

## III. Facilities/Resources

A patient population adequate to meet the needs of the training program must be available in the facilities in which the educational experiences take place. Elderly patients of both sexes with a variety of chronic illnesses, at least some of whom have potential for rehabilitation, must be available. At all facilities utilized by the program the resident must be given opportunities to assume meaningful patient responsibility. At each setting certain activities are mandated and must be supervised and taught by the appropriate clinician. The program must include the following:

### A. Acute-Care Hospital

The acute-care hospital central to the geriatric medicine program must be an integral component of a teaching center. It must have the full range of services usually ascribed to an acute-care general hospital, including intensive care units, emergency medicine, operating rooms, diagnostic laboratory and imaging services, and a pathology department.

### B. Long-term Care Institution

One or more long-term care institutions, such as a skilled nursing facility or chronic care hospital, is a necessary component of the geriatric medicine program. Exposure to subacute care and rehabilitation care in the long-term care setting is desirable. The total number of beds available must be sufficient to permit a comprehensive educational experience. The institutions must be approved by the appropriate licensing agencies of the state, and the standard of facilities and care in each must be consistent with those promulgated

by the Joint Commission on Accreditation of Healthcare Organizations.

### C. Long-term Noninstitutional Care

Noninstitutional care service, for example, home care, day care, residential care, or assisted living, is a major component of the geriatric medicine program. A home care program or home health agency is a necessary resource to permit residents to learn to provide care for patients who are homebound but not institutionalized. Day care or day hospital centers, life care communities, and residential care facilities for the elderly are also desirable training sites.

### D. Ambulatory Care Program

The ambulatory care program must comprise a minimum of 33% of the resident's time. Each resident should evaluate approximately one to three new geriatric patients and four to eight follow-up geriatric patients each week. This must include at least ½ day per week spent in a continuity of care experience. This experience must be designed to provide care in a geriatric clinic or family practice center to elderly patients who may require the services of multiple medical disciplines (including but not limited to neurology, gynecology, urology, psychiatry, podiatry, orthopedics, physical medicine and rehabilitation, dentistry, audiology, otolaryngology, and ophthalmology), as well as nursing, social work, and nutrition, among other disciplines. The opportunity to provide continuing care and to coordinate the implementation of recommendations from these medical specialties and disciplines is mandatory. In addition, experiences in relevant ambulatory specialty and subspecialty clinics (eg, geriatric psychiatry and neurology) and those that focus on geriatric syndromes (eg, falls, incontinence, osteoporosis) are highly desirable.

### E. Additional Educational Environment

Peer interaction is essential for residents. To achieve this goal, an accredited training program in at least one relevant specialty other than internal medicine must be present at the teaching center sponsoring the training program in geriatric medicine.

Involvement in other health care and community agencies is desirable. There must be a formal affiliation agreement between each long-term care facility included in the program and the sponsoring institution, in which each institution must acknowledge its responsibility to provide high-quality care, adequate resources, and administrative support for the educational mission. In addition, there must be a letter of agreement between each long-term care facility and the office of the director of the geriatric medicine program that guarantees the director appropriate authority at the long-term care institution to carry out the training program.

## IV. Specific Program Content

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching, and a method of evaluation exist. A written curriculum that describes the program comprehensively, including sites, educational objectives for each component, and topics to be covered in didactic sessions, should be available to residents and faculty. The curriculum must ensure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of a physician who specializes in the care of the aged.

Didactic as well as clinical learning opportunities must be available to the resident. Conferences or seminars/workshops in geriatric medicine should be specifically designed to augment the residents' clinical experiences. Journal club or other activities that foster interaction and develop skills in interpreting the medical literature are necessary.

All deaths of patients who receive care by residents should be reviewed and autopsies performed whenever possible.

As the residents progress through their training, they must have the opportunity to teach personnel such as nurses, allied health personnel, medical students, and residents.

Appropriate faculty supervision of the residents must be provided during all of their educational experiences.

The following components must be provided:

#### **A. Geriatric Medicine Consultation Program**

This program must be formally available in the ambulatory setting, the inpatient service, and/or emergency medicine in the acute-care hospital or at an ambulatory setting administered by the primary teaching institution.

#### **B. Long-term Care Experience**

In the long-term care institutional setting each resident must have 12 months of continuing longitudinal clinical experience with an assigned panel of patients for whom the resident is the primary provider. Additional block time to provide long-term care experience is encouraged. Emphasis during the longitudinal experience should be focused on (1) the approaches to diagnosis and treatment of the acutely and chronically ill, frail elderly in a less technologically sophisticated environment than the acute-care hospital; (2) working within the limits of a decreased staff-patient ratio compared with acute-care hospitals; (3) a much greater awareness of and familiarity with subacute care physical medicine and rehabilitation; (4) the challenge of the clinical and ethical dilemmas produced by the illness of the very old; and (5) administrative aspects of long-term care.

Experience with home visits and hospice care must be included. The resident must be exposed to the organizational and administrative aspects of home health care. Continuity of care with an assigned panel of home or hospice care patients for whom the resident is the primary provider is essential.

#### **C. Geriatric Psychiatry**

Identifiable structured didactic and clinical experiences in geriatric psychiatry must be included in the program of each resident. Behavioral sciences such as psychology/social work and others must be included in the curriculum.

#### **D. Curriculum**

The training program must provide opportunities for the residents to develop clinical competence in the overall field of geriatric medicine. The curriculum of the program must exhibit, as a minimum, the following content and skill areas:

1. Current scientific knowledge of aging and longevity, including theories of aging, the physiology and natural history of aging, pathologic changes with aging, epidemiology of aging populations, and diseases of the aged.
2. Aspects of preventive medicine, including nutrition, oral health, exercise, screening, immunization, and chemoprophylaxis against disease. Instruction about and experience with community resources dedicated to these activities should be included.
3. Geriatric assessment, including medical, affective, cognitive, functional status, social support, economic, and environmental aspects related to health; activities of daily living (ADL); the instrumental activities of daily living (IADL); the appropriate use of the history, physical and mental examination, and laboratory.
4. Appropriate interdisciplinary coordination of the actions of multiple health professionals, including physicians, nurses, social workers, dietitians, and rehabilitation experts, in the assessment and implementation of treatment.
5. Topics of special interest to geriatric medicine, including but not limited to cognitive impairment, depression and related dis-

orders, falls, incontinence, osteoporosis, fractures, sensory impairment, pressure ulcers, sleep disorders, pain, senior (elder) abuse, malnutrition, and functional impairment.

6. Diseases that are especially prominent in the elderly or that have different characteristics in the elderly, including neoplastic, cardiovascular, neurologic, musculoskeletal, metabolic, and infectious disorders.
7. Pharmacologic problems associated with aging, including changes in pharmacokinetics and pharmacodynamics, drug interactions, overmedication, appropriate prescribing, and adherence.
8. Psychosocial aspects of aging, including interpersonal and family relationships, living situations, adjustment disorders, depression, bereavement, and anxiety.
9. The economic aspects of supporting services, including Title III of the Older Americans Act, Medicare, Medicaid, capitation, and cost containment.
10. Ethical and legal issues especially pertinent to geriatric medicine, including limitation of treatment, competency, guardianship, right to refuse treatment, advance directives, wills, and durable power of attorney for medical affairs.
11. General principles of geriatric rehabilitation, including those applicable to patients with orthopedic, rheumatologic, cardiac, and neurologic impairments. These principles should include those related to the use of physical medicine modalities, exercise, functional activities, assistive devices, environmental modification, patient and family education, and psychosocial and recreational counseling.
12. Management of patients in long-term care settings, including palliative care, knowledge of the administration, regulation, and financing of long-term institutions, and the continuum from short- to long-term care.
13. Research methodologies related to geriatric medicine, including clinical epidemiology, decision analysis, and critical literature review.
14. Perioperative assessment and involvement in management.
15. Iatrogenic disorders and their prevention.
16. Communication skills with patients, families, professional colleagues, and community groups, including presenting case reports, literature searches, and research papers, when appropriate, to peers and lectures to lay audiences.
17. The pivotal role of the family in caring for many elderly and the community resources (formal support systems) required to support both patient and family.
18. Cultural aspects of aging, including knowledge about demographics, health care status of older persons of diverse ethnicities, access to health care, cross-cultural assessment, and use of an interpreter in clinical care. Issues of ethnicity in long-term care, patient education, and special issues relating to urban and rural older persons of various ethnic backgrounds should be covered.
19. Home care, including the components of a home visit, and accessing appropriate community resources to provide care in the home setting.
20. Hospice care, including pain management, symptom relief, comfort care, and end-of-life issues.

#### **V. Certification**

Those planning to seek a Certificate of Added Qualifications from the American Board of Internal Medicine or the American Board of Family Practice should communicate with the administrative officer of the board as listed in the *Graduate Medical Education Directory* to ascertain the full requirements.

*ACGME: February 1998 Effective: July 1998*

# Program Requirements for Residency Education in Hematology (Internal Medicine)

## I. Educational Program

A subspecialty educational program in hematology must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration.

## II. Faculty

See Section III, Program Requirements for Residency Education in the Subspecialties of Internal Medicine.

## III. Facilities and Resources

Modern facilities to accomplish the overall educational program must be available and functioning. Specifically, the resources that must be available to the program include hematology and coagulation laboratories; advanced pathology services, including immunopathology; a blood bank; transfusion and apheresis facilities; diagnostic and therapeutic radiology services; and nuclear medicine services. The program must also participate in a multidisciplinary tumor conference that includes discussion of neoplastic blood disorders and hematologic-oncology protocol studies. In addition, there should be a medical oncology program with which hematology residents can interact formally in an educational experience.

It is highly desirable to have the support of the nursing, rehabilitation medicine, pain management, dietetic, and social services in the care of patients with neoplastic blood disorders so that the resident may see the role of other specialties in the total care of patients with hematologic and/or neoplastic diseases.

## IV. Specific Program Content

### A. Clinical Experience

Clinical experience must include opportunities to observe and manage patients with a wide variety of blood diseases on both an inpatient and an outpatient basis. The resident must be given opportunities to assume continuing responsibility for acutely and chronically ill patients in order to observe the evolution of blood diseases as well as the benefits and adverse effects of therapy. Inpatient assignments should be of sufficient duration to permit continuing care of a majority of the patients throughout their hospitalization.

### B.

The program must provide residents with experiences in an ambulatory care setting at least ½ day each week over the 24 months of training. In addition, the program must provide residents with continuity experiences, each at least 6 months in duration, throughout the residency program.

### C. Technical and Other Skills

1. The program must provide residents with the opportunity to develop competence to work effectively as part of a multidisciplinary team.
2. The program must provide the opportunity for residents to gain competence or expertise in the performance and (where applicable) interpretation of the following:
  - a. Bone marrow aspiration and biopsy, including preparation, staining, examination, and interpretation of blood smears, bone marrow aspirates, and touch preparations and interpretation of bone marrow biopsies

- b. Use of chemotherapeutic agents and biological products through all therapeutic routes
  - c. Correlation of clinical information with the findings of cytology, histology, immunodiagnostic and imaging techniques
3. The program should provide experience or observation of the following:
    - a. Apheresis procedures
    - b. Performance and interpretation of partial thromboplastin time, prothrombin time, platelet aggregation, and bleeding time and other standard coagulation assays
    - c. Fine needle aspiration and biopsy
  4. The program should provide the following:
    - a. Clinical experience in bone marrow or peripheral stem cell harvest for transplantation
    - b. Formal instruction and at least 1 month of clinical experience in allogeneic and autologous bone marrow or peripheral blood stem cell transplantation and the nature and management of posttransplant complications

### D. Specific Program Content

The residents must have formal instruction, clinical experience, or opportunities to acquire knowledge in the following:

1. Morphology, physiology, and biochemistry of blood, marrow, lymphatic tissue, and the spleen
2. Related basic fields, including immunology, basic and clinical pharmacology and pharmacokinetics, cell and molecular biology, tumor immunology, molecular genetics, and prenatal diagnosis
3. Basic molecular and pathophysiologic mechanisms, diagnosis, and therapy of diseases of the blood, including anemias, diseases of white blood cells and stem cells, and disorders of hemostasis and thrombosis
4. Etiology, epidemiology, natural history, diagnosis, pathology, staging, and management of neoplastic diseases of the blood, blood-forming organs, and lymphatic tissues
5. Measurement of the complete blood count, including platelets and white cell differential, using automated or manual techniques with appropriate quality control
6. Immunophenotyping, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders of blood, blood-forming organs, and lymphatic tissues
7. Molecular mechanisms of hematopoietic and lymphopoietic malignancies, including the nature of oncogenes and their products
8. Relevant chemotherapeutic drugs, biologic products, and growth factors and their mechanisms of action, pharmacokinetics, clinical indications, and limitations
9. Multiagent chemotherapy protocols and combined modality therapy for hematopoietic and lymphopoietic malignancies
10. Management and care of indwelling venous access catheters
11. Principles and application of radiation medicine to hematopoietic and lymphopoietic malignancies
12. Management of the neutropenic and the immunocompromised patient
13. Effects of systemic disorders and drugs on the blood, blood-forming organs, and lymphatic tissues
14. Tests of hemostasis and thrombosis for both congenital and acquired disorders and regulation of antithrombotic therapy
15. Treatment of patients with disorders of hemostasis and the biochemistry and pharmacology of coagulation factor replacement therapy
16. Transfusion medicine, including the evaluation of antibodies, blood compatibility, and the use of blood-component therapy and apheresis
17. Indications and application of imaging techniques in patients with blood disorders

18. Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically ill patients
19. Pain management in patients with blood disorders
20. Rehabilitation and psychosocial aspects of clinical management of patients with hematologic disorders
21. Hospice and home care
22. Recognition and management of paraneoplastic disorders
23. Clinical epidemiology and medical statistics, including clinical study and experimental protocol design, data collection, and analysis
24. Participation in a tumor board
25. Human immunodeficiency virus-related malignancies
26. Care and management of geriatric patients with hematologic disorders

ACGME: September 2000 Effective: July 2001

## Program Requirements for Residency Education in Hematology and Oncology (Internal Medicine)

### I. Educational Program

A subspecialty educational program in combined hematology and oncology must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 3 years in duration.

### II. Key Clinical Faculty

- A. The combined subspecialty program faculty must include a minimum of six (three for each discipline) qualified key clinical teaching faculty members, including the program director.
- B. At least two of the key clinical faculty must be certified in hematology and at least two must be certified in oncology.
- C. Faculty members who are certified in infectious diseases, pulmonary diseases, endocrinology, and gastroenterology by the American Board of Internal Medicine or who have obtained equivalent training and experience must be available to participate in the education of residents in hematology/oncology. The program also must have the support of other clinical specialties, including psychiatry, neurology, dermatology, gynecology, nuclear medicine, pathology, radiation therapy, and surgical specialties.

### III. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary site. Specifically, there must be advanced pathology services, including immunopathology, resources for nuclear medicine imaging, blood banking, transfusion and apheresis facilities, coagulation laboratories, and radiation oncology facilities. A modern diagnostic radiologic service and a general surgical service and its support must be available. The program also must participate in a multidisciplinary tumor conference and cancer protocol studies.
- B. It is highly desirable to have the support of oncologic nursing, rehabilitation medicine, dietetic, and social services so that the resident may see the role of other specialists in the total care of the cancer patient.

## IV. Specific Program Content

### A. Clinical Experience

Clinical experience must include opportunities to observe and manage both inpatients and outpatients with a wide variety of blood and neoplastic disorders. The resident must be given opportunities to assume continuing responsibility for acutely and chronically ill patients in order to observe the evolution of blood diseases and the natural history of cancer as well as the benefits and adverse effects of therapy. Inpatient assignments should be of sufficient duration to permit continuing care of a majority of the patients throughout their hospitalization. At least 18 months of the program must be devoted to clinical training.

### B. Ambulatory Medicine Experience

The program must provide residents with experiences in an ambulatory care setting for at least ½ day each week over the 36 months of training. In addition, the program must provide residents with continuity experiences, each at least 6 months in duration throughout the residency program.

### C. Technical and Other Skills

1. The program must provide residents with the opportunity to develop competence to work effectively as part of a multidisciplinary team.
2. The program must provide the opportunity for residents to gain competence or expertise in the performance and (where applicable) interpretation of the following:
  - a. Bone marrow aspiration and biopsy, including preparation, staining, examination, and interpretation of blood smears, bone marrow aspirates, and touch preparations and interpretation of bone marrow biopsies
  - b. Use of chemotherapeutic agents and biological response modifiers by all therapeutic routes
  - c. Serial measurement of palpable tumor masses
  - d. Assessment of tumor imaging by computed tomography, magnetic resonance, and nuclear imaging techniques
  - e. Correlation of clinical information with cytology, histology, and immunodiagnostic imaging techniques
3. The program should provide experience or observation of the following:
  - a. Apheresis procedures
  - b. Performance and interpretation of partial thromboplastin time, prothrombin time, platelet aggregation, and bleeding time and other standard coagulation assays
  - c. Fine needle aspiration and biopsy
4. The program should provide the following:
  - a. Clinical experience in bone marrow or peripheral stem cell harvest for transplantation
  - b. Formal instruction and at least 1 month of clinical experience in allogeneic and autologous bone marrow or peripheral blood stem cell transplantation and the nature and management of posttransplant complications.

### D. Specific Program Content

The residents must have formal instruction, clinical experience, or opportunities to acquire knowledge in the following:

1. Morphology, physiology, and biochemistry of blood, marrow, lymphatic tissue, and the spleen
2. Basic molecular and pathophysiologic mechanisms, diagnosis, and therapy of diseases of the blood, including anemias, diseases of white cells, and disorders of hemostasis and thrombosis
3. Etiology, epidemiology, natural history, diagnosis, pathology, staging, and management of neoplastic disorders

4. Measurement of the complete blood count, including platelets and white cell differential, using automated or manual techniques with appropriate quality control
5. Immune markers, immunophenotyping, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders
6. Molecular mechanisms of neoplasia, including the nature of oncogenes and their products
7. Chemotherapeutic drugs, biologic products, and growth factors and their mechanisms of action, pharmacokinetics, clinical indications, and limitations, including their effects, toxicity, and interactions
8. Multiagent chemotherapy protocols and combined modality therapy in the treatment of neoplastic disorders
9. Management and care of indwelling venous access catheters
10. Principles and application of surgery and radiation therapy in the treatment of neoplastic disorders
11. Management of the neutropenic and the immunocompromised patient
12. Effects of systemic disorders, infections, solid tumors, and drugs on the blood, blood-forming organs, and lymphatic tissues
13. Indications and application of imaging techniques in patients with blood and neoplastic disorders
14. Pathophysiology and patterns of solid tumor metastases
15. Principles of multidisciplinary management of organ-specific cancers, in particular, gynecologic malignancies
16. Pain management in the cancer patient
17. Rehabilitation and psychosocial management of patients with hematologic and neoplastic disorders
18. Hospice and home care for the cancer patient
19. Recognition and management of paraneoplastic disorders
20. The etiology of cancer, including predisposing causal factors leading to neoplasia
21. Cancer prevention and screening, including competency in genetic testing and counseling as they relate to hereditary cancers and hematologic disorders for high-risk individuals
22. Participation in a tumor board
23. Tests of hemostasis and thrombosis for both congenital and acquired disorders and regulation of antithrombotic therapy
24. Treatment of patients with disorders of hemostasis and the biochemistry and pharmacology of coagulation factor replacement
25. Transfusion medicine, including the evaluation of antibodies, blood compatibility, and the use of blood component therapy and apheresis procedures
26. Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically ill patients
27. Human immunodeficiency virus-related malignancies
28. Care and management of the geriatric patient with malignancy and hematologic disorders

ACGME: September 2000 Effective: July 2001

## Program Requirements for Residency Education in Infectious Disease (Internal Medicine)

### I. Educational Program

A subspecialty educational program in infectious disease must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration.

### II. Facilities and Resources

Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. Specifically, there must be access to a laboratory for clinical microbiology, including diagnostic bacteriology, immunology, mycology, parasitology, and virology. Facilities for the isolation of patients with infectious diseases must be available. It is highly desirable that the training program be conducted in a setting in which training programs in surgery, obstetrics, gynecology, pediatrics, and other medical and surgical specialties and subspecialties are available.

### III. Specific Program Content

#### A. Clinical Experience

Clinical experience must include opportunities to observe and manage adult patients with a wide variety of infectious diseases on both an inpatient and an ambulatory basis. Such opportunities must encompass longitudinal experiences in a continuum of care to observe the course of illness and the effects of therapy. Therapeutic modalities should include management of antibiotic administration in such settings as the hospital, the office, or in conjunction with home-care services. Experience with pediatric infectious diseases is encouraged.

#### B. Ambulatory Medicine Experience

Ambulatory care experience to provide both consultative services and continuing care in infectious disease including human immunodeficiency virus (HIV) must be included in the training program. Ambulatory training must include longitudinal care of patients with HIV infection.

#### C. Specific Program Content

Residents must have clinical experience or formal instruction in the prevention, evaluation, and management of the following disorders:

1. The febrile patient; specifically presenting in association with rash or as fever of unknown origin
2. Upper respiratory tract infections
3. Pleuropulmonary and bronchial infections
4. Urinary tract infections
5. Peritonitis and other intra-abdominal infections
6. Cardiovascular infections
7. Central nervous system infections
8. Skin and soft tissue infections
9. Infections related to trauma, including burns and animal and human bites
10. Gastrointestinal infections and food poisoning
11. Bone and joint infections
12. Infections of the reproductive organs
13. Sexually transmitted diseases
14. Infections of the eye
15. Viral hepatitis
16. Sepsis syndromes
17. Nosocomial infections
18. HIV infection and acquired immunodeficiency syndrome
19. Infections in the immunocompromised or neutropenic host
20. Infections in patients with acute leukemia and lymphomas
21. Infections in transplant recipients
22. Infections in solid organ transplant recipients
23. Infections in geriatric patients
24. Infections in travelers
25. Infections in parenteral drug abusers

#### D. Technical and Other Skills

The program must provide for practical experience or instruction in the cognitive aspects of the following:

1. Mechanisms of action and adverse reactions of antimicrobial agents; the conduct of pharmacologic studies to determine absorption and excretion of antimicrobial agents; methods of determining antimicrobial activity of a drug; techniques to determine concentration of antimicrobial agents in the blood and other body fluids; the appropriate use and management of antimicrobial agents in a variety of clinical settings, including the hospital, ambulatory practice, and the home
2. The utility of procedures for specimen collection relevant to infectious disease, including but not limited to bronchoscopy, thoracentesis, arthrocentesis, lumbar puncture, and aspiration of abscess cavities, including soft-tissue infections
3. Principles and practice of hospital infection control
4. Principles of chemoprophylaxis and immunoprophylaxis to enhance resistance
5. Mechanisms of actions of biological products, including monoclonal antibodies, cytokines, interferons, interleukins, and colony-stimulating factors, and their applications in the treatments of infectious diseases or their role in enhancing the immune response

#### E. Formal Instruction

Additional specific content areas that must be included in the formal program (lectures, conferences, and seminars) include

1. the factors that determine the outcome between host and parasite, including microbial virulence factors and host defense mechanisms.
2. basic concepts of immunology.
3. the epidemiology, clinical course, manifestations, diagnosis, treatment, and prevention of major infectious agents including viruses, chlamydiae, mycoplasma and ureaplasma, rickettsioses, and bacteria including spirochetes and mycobacteria, mycoses, protozoa, and helminths.
4. quality assurance and cost containment in the clinical practice of infectious diseases.

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Interventional Cardiology (Internal Medicine)

### I. Educational Program

- A. Interventional cardiology encompasses the special knowledge and skill required of cardiologists to care for patients receiving cardiac interventional procedures. Interventional cardiology is the practice of techniques that improve coronary circulation and alleviate valvular stenosis.
- B. A subspecialty educational program in interventional cardiology must function as an integral component of an accredited subspecialty residency in cardiovascular disease and must be organized to provide training and experience at a sufficient level for the resident to acquire the competency of a specialist in the field.
- C. During training in interventional cardiology, the resident's clinical experience must include opportunities to diagnose, select

therapies, perform interventional procedures, and manage and judge the effectiveness of treatment(s) for inpatients and outpatients with chronic coronary artery disease, acute coronary syndromes, and valvular heart disease. The resident should be given opportunities to assume continuing responsibility for both acutely and chronically ill patients to learn the natural history of these cardiac conditions.

- D. The interventional cardiology program is accredited for 1 year of training. All applicants entering interventional cardiology must have completed an Accreditation Council for Graduate Medical Education (ACGME)-accredited cardiovascular disease program or its equivalent.
- E. The principles enumerated in the Program Requirements for Residency Education in Internal Medicine and the General Information Section of the Program Requirements for Residency Education in the Subspecialties of Internal Medicine are also applicable to training in this subspecialty.

### II. Faculty

Faculty responsible for training should be board certified in interventional cardiology or possess equivalent qualifications. There should be a minimum of two key clinically active interventional cardiology faculty members and no fewer than one key clinically active interventional cardiology faculty member per 1.5 residents. [Note: Clinically active is defined as a minimum of 75 interventions performed per year.] Access to faculty with expertise in cardiac surgery, radiation safety, hematology, pharmacology, congenital heart disease in adults, and research laboratories is desirable.

### III. Facilities and Resources

- A. Modern clinical inpatient and ambulatory care and research facilities to accomplish the overall educational goals and objectives of the program must be available and functioning.
- B. There must be a cardiac catheterization laboratory at each training site wherein a minimum of 400 interventional procedures of the heart are performed per year.
  1. It must contain appropriate cardiac fluoroscopic equipment, recording devices, and resuscitative equipment.
  2. An outpatient follow-up program must exist to care for patients.
- C. Clinical care units must include cardiac care units (CCUs), cardiac surgical intensive care units, and outpatient clinics.
- D. Cardiac surgery must be located at the primary training site.

### IV. Specific Program Content

#### A. Clinical Experience

1. Residents should have clinical experiences that provide the opportunity to acquire knowledge of the indications, contraindications, risks, limitations, sensitivity, specificity, predictive accuracy, and appropriate techniques for evaluating patients with a variety of cardiac disease disorders, including but not limited to
  - a. chronic ischemic heart disease
  - b. acute ischemic syndromes
  - c. valvular heart disease
2. Residents must have the opportunity to acquire experience in the management of the bleeding complications associated with percutaneous intervention, including but not limited to
  - a. bleeding after thrombolytic usage
  - b. heparin usage
  - c. glycoprotein IIb/IIIa inhibitor usage
3. Residents must have clinical experiences involving
  - a. consultation

- b. care of patients in the cardiac care unit, emergency department, or other intensive care settings
  - c. care of the patient before and after interventional procedures
  - d. outpatient follow-up of patients treated with drugs, interventions, devices, or surgery
4. The program must provide sufficient experience for the residents to acquire knowledge in clinical decision making, including but not limited to
- a. the role of randomized clinical trials and registry experiences in clinical decision making
  - b. the clinical importance of complete vs incomplete revascularization in a wide variety of clinical and anatomic situations
  - c. strengths and limitations, both short- and long-term, of percutaneous vs surgical and medical therapy for a wide variety of clinical and anatomic situations related to cardiovascular disease
  - d. strengths and limitations, both short- and long-term of differing percutaneous approaches for a wide variety of anatomic situations related to cardiovascular disease
  - e. the role of emergency coronary bypass surgery in the management of complications of percutaneous intervention
  - f. the use and limitations of intra-aortic balloon counterpulsation (IABP) and other hemodynamic support devices (as available)
  - g. strengths and weaknesses of mechanical vs lytic approach for patients with acute myocardial infarction
  - h. The use of pharmacologic agents appropriate in the post-intervention management of patients
  - i. strengths and limitations of both noninvasive and invasive coronary evaluation during the recovery phase after acute myocardial infarction
  - j. understanding the clinical utility and limitations of valvuloplasty of both the mitral and aortic valves
  - k. the assessment of plaque composition and response to intervention

**B. Technical and Other Skills**

1. To become proficient in interventional cardiology, residents must have the opportunity to acquire a broad-based knowledge of interventions. Toward that end, residents must have opportunities to acquire skill in the interpretation of
  - a. coronary arteriograms
  - b. ventriculography
  - c. hemodynamics
  - d. intravascular ultrasound
  - e. Doppler flow and intracoronary pressure monitoring
2. Each resident must have opportunity to acquire skill in the performance of a minimum of 250 coronary interventions, to include the following: [Note: A single coronary intervention is defined as all coronary interventions performed during one hospitalization.]
  - a. Management of mechanical complications of percutaneous intervention, including but not limited to
    1. coronary dissection
    2. thrombosis
    3. spasm
    4. perforation
    5. "slow reflow"
    6. cardiogenic shock
    7. left main trunk dissection
    8. cardiac tamponade
    9. peripheral vessel occlusion, and retained components
    10. pseudoaneurysm
  - b. Femoral and brachial/radial cannulation of normal and abnormally located coronary ostia

- c. Application and usage of balloon angioplasty, stents, and other commonly used interventional devices
  - d. Use of adjunctive imaging techniques such as intravascular ultrasound, angiography, coronary flow reserve, and pressure measurement
3. Resident experience should meet the following criteria:
- a. Participation in preprocedural planning, including the indications for the procedure and the selection of the appropriate procedure or instruments
  - b. Performance of the critical technical manipulations of the procedure
  - c. Substantial involvement in postprocedure care
  - d. Supervision by teaching faculty responsible for the procedure
4. Residents also must have opportunities to acquire skill in the following:
- a. Use of antiarrhythmic drugs, including knowledge of pharmacokinetics and pharmacodynamics related to acute ischemic events occurring during and after interventional cardiac procedures
  - b. Cardiopulmonary resuscitation
  - c. Advanced cardiac life support
  - d. Use of thrombolytic and antithrombolytic agents
  - e. Use of vasoactive agents for epicardial and microvascular spasm

**C. Formal Instruction**

- The program must provide instruction and opportunities to acquire knowledge in the following:
1. Role of platelets and the clotting cascade in response to vascular injury
  2. Pathophysiology of restenosis
  3. Strengths and limitations of various animal models used to evaluate the problem of restenosis in humans
  4. Role and limitations of gene transfer and therapy for treatment of restenosis
  5. Physiology of coronary flow and detection of flow-limiting conditions
  6. Detailed coronary anatomy
  7. Radiation physics, biology, and safety related to the use of x-ray imaging equipment
  8. Critical analysis of published interventional cardiology data in laboratory and clinical research
  9. Role of randomized clinical trials and registry experiences in clinical decision making

ACGME: September 1998 Effective: September 1998

**Program Requirements for Residency Education in Nephrology (Internal Medicine)**

**I. Educational Program**

A subspecialty educational program in nephrology must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration.

**II. Facilities and Resources**

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. Specifically, there must be facilities for acute and chronic

hemodialysis, continuous renal replacement therapy, acute and chronic peritoneal dialysis, and renal biopsy. The following must be available: a radiology service that can provide modern renal-related procedures, including ultrasound and computerized tomography, and a diagnostic radionuclide laboratory; electron microscopy for renal biopsy material; biochemistry and serologic laboratories; a nutrition support service; and relevant social services. A meaningful working relationship must exist with other services, including surgery, urology, obstetrics, gynecology, pediatrics, psychiatry, pathology, and radiology.

- B. The sponsoring institution must be approved to perform renal transplantation or have a formal written agreement with such an institution ensuring that nephrology residents receive the requisite experience with renal transplantation. The training program must have access to at least ten new renal transplants per year per clinical resident and be responsible for the longitudinal follow-up of at least 20 patients with transplants per resident.
- C. The training program should be of sufficient size to ensure adequate exposure of residents to patients with acute renal failure and a chronic dialysis patient population, including patients who utilize home dialysis treatment modalities, to ensure adequate training in chronic dialysis.
- D. The training program must afford the residents the opportunity to care for patients with renal and other disorders in the intensive care unit setting.

### III. Specific Program Content

#### A. Clinical Experience

A minimum of 12 months should be devoted to clinical experiences.

#### B. Specific Program Content

- 1. Residents must have formal instruction, clinical experience, and opportunities to acquire expertise in the prevention, evaluation, and management of the following disorders:
  - a. Disorders of mineral metabolism, including nephrolithiasis and renal osteodystrophy
  - b. Disorders of fluid, electrolyte, and acid-base regulation
  - c. Acute renal failure
  - d. Chronic renal failure and its management by conservative methods, including nutritional management of uremia
  - e. End-stage renal disease
  - f. Hypertensive disorders
  - g. Renal disorders of pregnancy
  - h. Urinary tract infections
  - i. Tubulointerstitial renal diseases, including inherited diseases of transport, cystic diseases, and other congenital disorders
  - j. Glomerular and vascular diseases, including the glomerulonephritides, diabetic nephropathy, and atheroembolic renal disease
  - k. Disorders of drug metabolism and renal drug toxicity
- 1. Genetic and inherited renal disorders
- m. Geriatric aspects of nephrology, including disorders of the aging kidney and urinary tract
- 2. Residents must have special experiences in renal transplantation and dialysis and extracorporeal therapy.
  - a. Renal transplantation: Each resident must have a minimum of 2 months of clinical experience, preferably consecutively, on an active renal transplant service. Clinical experience must entail supervised involvement in the decision making for patients during the pre- and post-transplant care. This experience must include
    - 1. evaluation and selection of transplant candidates;
    - 2. preoperative evaluation and preparation of transplant recipients and donors;
  - 3. immediate postoperative management of transplant recipients, including administration of immunosuppressants;
  - 4. clinical diagnosis of all forms of rejection including laboratory, histopathologic, and imaging techniques;
  - 5. medical management of rejection, including use of immunosuppressant drugs and other agents;
  - 6. recognition and medical management of the surgical and nonsurgical complications of transplantations; and
  - 7. long-term follow-up of transplant recipients in the ambulatory setting
- b. Dialysis and extracorporeal therapy: Each resident should have exposure to dialysis and extracorporeal therapies during the equivalent of at least 4 months of the training program. Clinical experience must entail supervised involvement in decision making for patients undergoing these therapies. This experience must include
  - 1. evaluation and selection of patients for acute hemodialysis or continuous renal replacement therapies;
  - 2. evaluation of end-stage renal disease patients for various forms of therapy and their instruction regarding treatment options;
  - 3. drug dosage modification during dialysis and other extracorporeal therapies;
  - 4. evaluation and management of medical complications in patients during and between dialyses and other extracorporeal therapies, including dialysis access, and an understanding of the pathogenesis and prevention of such complications;
  - 5. long-term follow-up of patients undergoing chronic dialysis, including their dialysis prescription and modification and assessment of adequacy of dialysis;
  - 6. an understanding of the principles and practice of peritoneal dialysis, including the establishment of peritoneal access, the principles of dialysis catheters, and how to choose appropriate catheters;
  - 7. an understanding of the technology of peritoneal dialysis, including the use of automated cyclers;
  - 8. assessment of peritoneal dialysis efficiency, using peritoneal equilibration testing and the principles of peritoneal biopsy;
  - 9. an understanding of how to write a peritoneal dialysis prescription and how to assess peritoneal dialysis adequacy;
  - 10. the pharmacology of commonly used medications and their kinetic and dosage alteration with peritoneal dialysis;
  - 11. an understanding of the complications of peritoneal dialysis, including peritonitis and its treatment, exit site and tunnel infections and their management, hernias, plural effusions, and other less common complications and their management; and
  - 12. an understanding of the special nutritional requirements of patients undergoing hemodialysis and peritoneal dialysis

#### C. Technical and Other Skills

- 1. The procedural skills in which residents must be given sufficient experience to gain expertise, including the performance of such procedures; their indications, and complications; and interpretation of their results, are
  - a. urinalysis
  - b. percutaneous biopsy of both autologous and transplanted kidneys
  - c. placement of temporary vascular access for hemodialysis and related procedures
  - d. peritoneal dialysis
  - e. acute and chronic hemodialysis
  - f. continuous renal replacement therapy

2. The program must ensure that residents have the necessary knowledge and are familiar with the following procedures, including their indications, contraindications, complications, and interpretations of results, as well as their cost-effectiveness and application to patient care:
  - a. Radiology of vascular access
  - b. Balloon angioplasty of vascular access
  - c. Therapeutic plasmapheresis
  - d. Bone biopsy
  - e. Placement of peritoneal catheters
  - f. Renal ultrasound
  - g. Lithotripsy

#### D. Formal Instruction

1. Specific content areas that must be included in the formal program (lectures, conferences, seminars, and journal clubs) include the following:
  - a. renal anatomy, physiology, and pathology
  - b. pathogenesis, natural history, and management of congenital and acquired diseases of the kidney and urinary tract and renal diseases associated with systemic disorders such as diabetes, collagen-vascular diseases, and pregnancy
  - c. normal mineral metabolism and its alteration in renal diseases, metabolic bone disease, and nephrolithiasis
  - d. normal and abnormal blood pressure regulation
  - e. clinical pharmacology, including drug metabolism and pharmacokinetics and the effects of drugs on renal structure and function
  - f. nutritional aspects of renal disorders
  - g. immunology, including
    1. basic principles;
    2. immunologic mechanisms of renal disease; and
    3. fundamental aspects of diagnostic laboratory immunology relevant to renal diseases
  - h. transplantation—the structured curriculum for renal transplantation must, as a minimum, include
    1. biology of transplantation rejection;
    2. indications for and contraindications to renal transplantation;
    3. principles of transplant recipient evaluation and selection;
    4. principles of evaluation of transplant donors, both live and cadaveric, including histocompatibility testing;
    5. principles of organ harvesting, preservation, and sharing;
    6. psychosocial aspects of organ donation and transplantation;
    7. the pathogenesis and management of urinary tract infections;
    8. the pathogenesis and management of acute renal failure; and
    9. disorders of fluids and electrolytes and acid-base balance
  - i. indications for and interpretations of radiologic tests of the kidney and urinary tract
  - j. dialysis and extracorporeal therapy, including
    1. the kinetic principles of hemodialysis and peritoneal dialysis;
    2. the indication for each mode of dialysis;
    3. the short-term and long-term complications of each mode of dialysis and their management;
    4. the principles of dialysis access (acute and chronic vascular and peritoneal), including indications, techniques, and complications;
    5. urea kinetics and protein catabolic rate;
    6. dialysis modes and their relation to metabolism;
    7. nutritional management of dialysis patients;

8. dialysis water treatment, delivery systems, and reuse of artificial kidneys;
9. the artificial membranes used in hemodialysis and biocompatibility; and
10. the psychosocial and ethical issues of dialysis
- k. geriatric medicine
  1. physiology and pathology of the aging kidney and
  2. drug dosing and renal toxicity in elderly patients

ACGME: September 2000 Effective: July 2001

## Program Requirements for Residency Education in Oncology (Internal Medicine)

### I. Educational Program

A subspecialty educational program in oncology must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration.

### II. Key Clinical Faculty

- A. See Section III, Program Requirements for Residency Education in the Subspecialties of Internal Medicine.
- B. Faculty members who are subspecialty certified by the American Board of Internal Medicine in their respective disciplines or who have obtained equivalent training and experience in infectious disease, pulmonary disease, endocrinology, gastroenterology, and hematology must be available to participate in the education of residents in oncology. The program also must have the support of other clinical specialties, including psychiatry, gynecology, nuclear medicine, pathology, neurology, neurosurgery, radiation therapy, neurology, dermatology, and surgical specialties.

### III. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning. Specifically, there must be advanced pathology services, including immunopathology resources for nuclear medicine imaging, blood banking, transfusion and apheresis facilities, and radiation oncology facilities. A modern diagnostic radiologic service, and a general surgical service and its support, must be available. The program must also participate in a multidisciplinary tumor conference and cancer protocol studies.
- B. It is highly desirable to have the support of oncologic nursing, rehabilitation medicine, pain management, dietetic, and social services so that the resident may see the role of other specialties in the total care of the cancer patient.

### IV. Specific Program Content

#### A. Clinical Experience

Clinical experience must include opportunities to observe and manage patients with a wide variety of neoplastic diseases on an inpatient and outpatient basis. The resident must be given opportunities to assume continuing responsibility for both acutely and chronically ill patients to learn the natural history of cancer as well as the effectiveness of therapeutic programs. Inpatient assignments should be of sufficient duration to permit continuing care of a majority of the patients throughout their hospitalization.

### B. Ambulatory Medicine Experience

The program must provide residents with experiences in an ambulatory care setting at least ½ day each week over the 24 months of training. In addition, the program must provide residents with continuity experiences, each at least 6 months in duration, throughout the residency program.

### C. Technical and Other Skills

1. The program must provide residents with the opportunity to develop the competence needed to work effectively as part of a multidisciplinary team.
2. The program must provide the opportunity for residents to gain competence or expertise in the performance and (where applicable) interpretation of the following:
  - a. Serial measurement of palpable tumor masses
  - b. Assessment of tumor imaging by computed tomography, magnetic resonance, and nuclear imaging techniques
  - c. Bone marrow aspiration and biopsy and their interpretation
  - d. Use of chemotherapeutic agents and biological products through all therapeutic routes
  - e. Correlation of clinical information with the findings of cytology, histology, and immunodiagnostic techniques

### D. Specific Program Content

The residents must have formal instruction, clinical experience, or opportunities to acquire knowledge in the following:

1. The etiology of cancer, including predisposing causal factors leading to neoplasia
2. Fundamental concepts of cellular and molecular biology, cytogenetics, immunology, basic and clinical pharmacology, pharmacokinetics, toxicity, and tumor immunology
3. Etiology, epidemiology, and natural history of cancer
4. Diagnosis, pathology, staging, and management of neoplastic disorders
5. Measurement of the complete blood count, including platelets and white cell differential, by means of automated or manual techniques, with appropriate quality control
6. Immune markers, immunophenotyping, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders
7. Molecular mechanisms of neoplasia, including the nature of oncogenes and their products
8. Principles of multidisciplinary management of organ-specific cancers, in particular, gynecologic malignancy
9. Pathophysiology and patterns of tumor metastases
10. Indications and application of imaging techniques in patients with neoplastic disorders
11. Chemotherapeutic drugs, biologic products, and growth factors and their mechanisms of action, pharmacokinetics, clinical indications, and limitations, including their effects, toxicity, and interactions
12. Multiagent chemotherapeutic protocols and combined modality therapy of neoplastic disorders
13. Management and care of indwelling access catheters
14. Principles of, indications for, and limitations of surgery and radiation therapy in the treatment of cancer
15. Principles of, indications for, and complications of autologous and allogeneic bone marrow or peripheral blood stem cell transplantation and peripheral stem cell harvests, including the management of posttransplant complications
16. Fine needle aspiration biopsy
17. Concepts of supportive care, including hematologic, infectious disease, and nutritional
18. Management of the neutropenic and the immunocompromised patient
19. Pain management in the cancer patient

20. Rehabilitation and psychosocial aspects of clinical management of the cancer patient
21. Hospice and home care for the cancer patient
22. Recognition and management of paraneoplastic disorders
23. Cancer prevention and screening, including competency in genetic testing and for high-risk individuals
24. Clinical epidemiology and medical statistics, including clinical study and experimental protocol design, data collection, and analysis
25. Participation in a tumor board
26. Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically ill patients
27. Human immunodeficiency virus-related malignancies
28. Care and management of the geriatric patient with malignancy

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Pulmonary Disease (Internal Medicine)

### I. Educational Program

- A. A subspecialty educational program in pulmonary disease must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in the field. It must be 2 years in duration, of which a minimum of 12 months must be devoted to clinical training.
- B. Clinical experience must include opportunities to observe and manage inpatients and outpatients with a wide variety of pulmonary disease. The residents must be given opportunities to assume continuing responsibility for both acutely and chronically ill patients in order to learn the natural history of pulmonary disease as well as the effectiveness of therapeutic programs.

### II. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. These include inpatient and ambulatory care facilities, a laboratory for pulmonary function tests and exfoliative cytology, and extensive pathology services. Appropriate space and staffing for pulmonary procedures must be available. Finally, special facilities for intensive care, postoperative care, and respiratory care services also must be provided at the primary training site.
- B. There should be a close liaison with other services, including pediatrics, radiology, pathology, thoracic surgery, microbiology, laboratory medicine, occupational medicine, immunology, physical medicine, and rehabilitation. In addition, there should be a working relationship with the otolaryngology and anesthesiology services. A sleep laboratory also must be available.

### III. Specific Program Content

The training program must provide the environment, patient population, and resources for residents to develop clinical competence in the field of pulmonary disease. All elements of the specific content must be provided either by clinical experience or by didactic instruction.

#### A. Clinical Experience

The program must provide the environment and resources for residents to acquire knowledge of and have clinical experience with a

broad spectrum of pulmonary disease, including but not limited to the following:

1. Obstructive lung diseases, including asthma, bronchitis, emphysema, bronchiectasis, and cystic fibrosis
2. Pulmonary malignancy—primary and metastatic
3. Pulmonary infections, including tuberculous, fungal, and those in the immunocompromised host, eg, human immunodeficiency virus-related infections
4. Diffuse interstitial lung disease
5. Pulmonary vascular disease, including primary and secondary pulmonary hypertension and the vasculitis and pulmonary hemorrhage syndromes
6. Occupational and environmental lung diseases
7. Iatrogenic respiratory diseases, including drug-induced disease
8. Acute lung injury, including radiation, inhalation, and trauma
9. Pulmonary manifestations of systemic diseases, including collagen vascular disease and diseases that are primary in other organs
10. Respiratory failure, including the adult respiratory distress syndrome, acute and chronic respiratory failure in obstructive lung diseases, and neuromuscular respiratory drive disorders
11. Disorders of the pleura and the mediastinum
12. Genetic and developmental disorders of the respiratory system
13. Sleep disorders

#### B. Technical and Other Skills

1. The program must provide the environment and resources for the resident to acquire knowledge (indications, contraindications, complications, and limitations) of and competence in performing the following:
  - a. Pressure-cycled, volume-cycled, time-cycled and flow-cycled mechanical ventilation
  - b. Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
  - c. Weaning and respiratory care techniques
  - d. Management of pneumothorax (needle insertion and drainage system)
  - e. Maintenance of circulation
    1. Arterial puncture and blood sampling
    2. Insertion of central venous, arterial, and pulmonary artery balloon flotation catheters
    3. Basic and advanced cardiopulmonary resuscitation
    4. Cardioversion
  - f. Pulmonary function tests to assess respiratory mechanics, gas exchange, and respiratory drive, including spirometry, flow volume studies, lung volumes, diffusing capacity, arterial blood gas analysis, and exercise studies
  - g. Diagnostic and therapeutic procedures, including thoracentesis, pleural biopsy, flexible fiber-optic bronchoscopy and related procedures, endotracheal intubation, percutaneous arterial puncture and cannulation, central venous catheterization, and pulmonary artery balloon flotation catheterization
  - h. Calibration and operation of hemodynamic recording systems
  - i. Ventilatory support, weaning, and respiratory care techniques
  - j. Examination and interpretation of sputum, bronchopulmonary secretions, pleural fluid/tissue, and lung tissue for infectious agents, cytology, and histopathology
2. The program should provide the environment and resources for the resident to develop clinical competence in performing the following:
  - a. Inhalation challenge studies
  - b. Thoracostomy tube insertion and drainage
  - c. Insertion of chest tubes
  - d. Percutaneous needle biopsy

3. The program must provide the environment and resources for the resident to acquire knowledge of and ability to interpret the following:
  - a. Imaging procedures, including
    1. chest roentgenograms
    2. computed axial tomograms
    3. radionuclide scans
    4. pulmonary angiograms
    5. other radiologic procedures
  - b. Sleep studies
4. The program must provide the environment and resources for residents to develop expertise in monitoring and supervising special services, including
  - a. Critical care or respiratory care units
  - b. Pulmonary function laboratories
  - c. Respiratory physical therapy and pulmonary rehabilitation
  - d. Respiratory care techniques and services

#### C. Basic Sciences

The program must provide instruction in the basic sciences with particular emphasis on

1. Molecular biology
2. Pulmonary physiology
3. Pulmonary immunology

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Pulmonary Disease and Critical Care Medicine (Internal Medicine)

### I. Educational Program

- A. A combined subspecialty program in pulmonary disease and critical care medicine must be organized to provide training and supervised experience at a sufficient level for the resident to acquire the competency of a specialist in both disciplines. Because of some degree of congruity in the knowledge base, the clinical skills, and the patient populations for each of these subspecialty areas, it is possible to compress the duration of the educational experience and still ensure these competencies. However, the combined training program must be 3 years in duration (of which a minimum of 18 months is devoted to clinical training), and all of the educational experiences and program content explicitly required for a training program in each area must be present in the combined program.
- B. With respect to pulmonary disease, clinical experience must include opportunities to observe and manage inpatients and outpatients with a wide variety of pulmonary disease. The residents must be given opportunities to assume continuing responsibility for both acutely and chronically ill patients in order to learn the natural history of pulmonary disease as well as the effectiveness of therapeutic programs. There should be an educational emphasis on pulmonary physiology and its correlation with clinical disorders.
- C. With respect to critical care medicine, the program must be structured to provide at least 12 months of meaningful patient care responsibility in critical care units; at least 6 of these months must be devoted to the care of critically ill medical patients (ie, MICU/CICU or equivalent).

- D. To provide evidence of substantial institutional support in those disciplines most relevant to critical care medicine, the sponsoring institution's primary site should sponsor accredited subspecialty programs in cardiovascular disease and infectious disease and must have an accredited residency program in general surgery. The presence of training programs in these disciplines ensures the extensive educational, patient care, and research resources that are essential to the learning environment for critical care medicine residents. Furthermore, peer interaction is essential in the education of critical care medicine residents.
- E. The sponsoring institution(s) must provide services for the care of patients with major trauma and must have an active open heart surgery program.
- F. Institutional policies should be established to govern the educational resources committed to critical care training programs and to ensure cooperation of all involved disciplines.

## II. Key Clinical Faculty

- A. A training program must be under the direction of an internist who is certified in pulmonary disease and/or critical care medicine by the American Board of Internal Medicine or who has obtained equivalent training and experience. If the program director does not have appropriate credentials in both specialties, an appropriately credentialed full-time key clinical faculty member must be identified as responsible for the education program in the second specific area.
- B. The combined subspecialty program faculty must include a minimum of six (three for each discipline) qualified key clinical teaching faculty members, including the program director. At least two of these key clinical faculty members must be certified in pulmonary disease (or possess equivalent qualifications), and at least two must be certified in critical care medicine (or possess equivalent qualifications). For programs with more than six residents enrolled, a ratio of such faculty to residents of at least 1:1 must be maintained.

At least two key clinical teaching faculty members each in nephrology, gastroenterology, cardiology, infectious disease, and hematology must devote substantial effort to the education of critical care medicine residents, and there must be key clinical faculty members in geriatric medicine and oncology who participate in the education of residents.

Faculty members in anesthesiology, neurology, and neurosurgery who are certified by an American Board of Medical Specialties member board in their respective disciplines or who have equivalent training and experience also must participate at the primary training site in the education of residents in critical care medicine.

- C. The critical care teaching staff must have privileges regarding the admission, treatment, and discharge of patients on critical care units.
- D. Because critical care training is multidisciplinary in nature, faculty from several related disciplines such as general surgery, thoracic surgery, urology, orthopedic surgery, and obstetrics-gynecology must be available to participate in the training program. A collegial relationship must exist between the director of the critical care training program and the teaching staff to enhance the education opportunities for all internal medicine residents and subspecialty residents.

## III. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. These include inpatient and ambulatory care facilities, a

laboratory for pulmonary function tests and exfoliative cytology, and extensive pathology services.

Appropriate space and staffing for pulmonary procedures must be available at the primary training site. Facilities for training in microbiology procedures, pulmonary rehabilitation, and a sleep laboratory also must be available.

- B. The critical care unit(s) must be located in a designated area within the hospital and must be constructed and designed specifically for the care of critically ill patients. Whether operating in separate locations or in combined facilities, the program must provide the equivalent of a medical intensive care unit, a surgical intensive care unit, and a coronary care unit. Available facilities must be adequate to care for patients with acute myocardial infarction, severe trauma, shock, recent open heart surgery, recent major thoracic or abdominal surgery, and severe neurologic and neurosurgical conditions.
- C. In units to which a resident is assigned, an average census of at least five patients per resident is required. A sufficient number of knowledgeable personnel and the necessary equipment to care for critically ill patients must be available. Personnel should include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine. A supporting laboratory should be available to provide complete and prompt laboratory evaluation. Modern imaging services and an active emergency service must be available. Nutritional support services also must be available.

## IV. Specific Program Content

- A. The training program must provide the environment, patient population, and resources for residents to develop clinical competence in the fields of pulmonary disease and critical care medicine. It must include a minimum of 6 months of clinical training specific to pulmonary disease and 6 months of clinical training specific to critical care medicine.
- B. The program must provide residents with pulmonary experiences in an ambulatory care setting at least ½ day each week for 30 months of training.
- C. Because critical care medicine is multidisciplinary in nature, clinical experience must include opportunities to manage adult patients with a wide variety of serious illnesses and injuries requiring treatment in a critical care setting. Therefore, residents must obtain additional clinical experience with other critically ill patients, which may include surgical, shock/trauma, and neurologic/neurosurgical intensive care units; pediatric intensive care unit; cardiac catheterization laboratory; burn unit; dialysis unit; anesthesia service; high-risk pregnancy intensive care unit; and transplant unit.
- D. The resident must be given opportunities to assume responsibility, under appropriate supervision, for the care of patients throughout their stay in the critical care unit(s) and to monitor the subsequent course of patients throughout the remainder of their hospital stay. To assess the various aspects of critical care, the resident also must have organized opportunities to learn about former critical care patients after hospital discharge, including clinical pathological correlations when appropriate.
- E. Opportunities also must be available for residents to acquire those skills required to organize, administer, and direct a critical care unit and to work effectively as a member of a multidisciplinary team.
- F. For training in pulmonary disease, the program must provide the environment and resources for residents to acquire knowledge of and have clinical experience with a broad spectrum of pulmonary disease, including but not limited to the following:

1. Obstructive lung diseases, including asthma, bronchitis, emphysema, bronchiectasis, and cystic fibrosis
  2. Pulmonary malignancy—primary and metastatic
  3. Pulmonary infections, including tuberculous, fungal, and those in the immunocompromised host
  4. Diffuse interstitial lung disease
  5. Pulmonary vascular disease, including primary and secondary pulmonary hypertension and the vasculitis and pulmonary hemorrhage syndromes
  6. Occupational and environmental lung diseases
  7. Iatrogenic respiratory diseases, including drug-induced disease
  8. Acute lung injury, including radiation, inhalation, and trauma
  9. Pulmonary manifestations of systemic diseases, including collagen vascular diseases that are primary in other organs
  10. Respiratory failure, including the adult respiratory distress syndrome, acute and chronic respiratory failure in obstructive lung diseases, and neuromuscular respiratory drive disorders
  11. Disorders of the pleura and the mediastinum
  12. Genetic and developmental disorders of the respiratory system
  13. Sleep disorders
- G. The program must provide the environment and resources for the resident to acquire knowledge (indications, contraindications, complications, and limitations) of and competence in performing the following:
1. Establishment and maintenance of open airway in nonintubated, unconscious, paralyzed patients
  2. Pressure-cycled, volume-cycled, time-cycled and flow-cycled mechanical ventilation
  3. Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
  4. Weaning and respiratory care techniques
  5. Management of pneumothorax (needle insertion and drainage systems)
  6. Maintenance of circulation, including
    - a. Arterial puncture and blood sampling
    - b. Insertion of central venous, arterial, and pulmonary artery balloon flotation catheters
    - c. Basic and advanced cardiopulmonary resuscitation
    - d. Cardioversion
  7. Pulmonary function tests to assess respiratory mechanics, gas exchange, and respiratory drive, including spirometry, flow volume studies, lung volumes, diffusing capacity, arterial blood gas analysis, and exercise studies
  8. Diagnostic and therapeutic procedures, including thoracentesis, pleural biopsy, flexible fiber-optic bronchoscopy, and related procedures
  9. Calibration and operation of hemodynamic recording systems
  10. Ventilatory support, weaning, and respiratory care techniques
  11. Examination and interpretation of sputum, bronchopulmonary secretions, pleural fluid/tissue, and lung tissue for infectious agents; cytology; and histopathology
- H. The program must provide the environment and resources for the resident to acquire knowledge of and ability to interpret the following:
1. Imaging procedures, including
    - a. chest roentgenograms
    - b. computed axial tomograms
    - c. radionuclide scans
    - d. pulmonary angiograms
    - e. other radiologic procedures
  2. Sleep studies
- I. The program must provide the environment and resources for residents to develop expertise in monitoring and supervising special services, including
1. critical and respiratory care units
  2. pulmonary function laboratories
  3. respiratory physical therapy and pulmonary rehabilitation services
  4. respiratory care techniques and services
- J. The program must provide instruction in the basic sciences with particular emphasis on
1. molecular biology
  2. pulmonary physiology
  3. pulmonary immunology
- K. The program should provide the environment and resources for the resident to develop clinical competence in performing the following:
1. Inhalation challenge studies
  2. Thoracostomy tube insertion and drainage
  3. Percutaneous needle biopsy
- L. In addition to the educational experience listed above, the training program must provide opportunities for the residents to acquire knowledge of and to develop clinical competence in the following content areas:
1. Physiology, pathophysiology, molecular biology, diagnosis, and therapy of disorders of the cardiovascular, respiratory, renal, gastrointestinal, genitourinary, neurologic, endocrine, hematologic, musculoskeletal, and immune systems as well as of infectious diseases
  2. Electrolyte and acid-base physiology, pathophysiology, diagnosis, and therapy
  3. Metabolic, nutritional, and endocrine effects of critical illnesses
  4. Hematologic and coagulation disorders secondary to critical illnesses
  5. Critical obstetric and gynecologic disorders
  6. Management of the immunosuppressed patient
  7. Management of anaphylaxis and acute allergic reactions
  8. Trauma
  9. Pharmacokinetics, pharmacodynamics, and drug metabolism and excretion in critical illness
  10. Use of paralytic agents
  11. Ethical, economic, and legal aspects of critical illness
  12. Principles and techniques of administration and management
  13. Psychosocial and emotional effects of critical illnesses
  14. Iatrogenic and nosocomial problems in critical care medicine
  15. Occupational Safety and Health Administration (OSHA) regulations and universal precautions and protection of health-care workers
- M. The training program must provide opportunities for residents to learn the indications, contraindications, limitations, and complications of the following critical care procedures and the technical skills necessary to perform them:
1. Parenteral nutrition
  2. Monitoring/bioengineering
    - a. Utilization, zeroing, and calibration of transducers
    - b. Use of amplifiers and recorders
- N. The program also must provide opportunities to learn the indications, contraindications, limitations, and complications of the following procedures; practical experience is recommended.
1. Pericardiocentesis
  2. Transvenous pacemaker insertion
  3. Peritoneal dialysis
  4. Peritoneal lavage

5. Percutaneous needle aspiration and/or cutting lung biopsy
6. Intracranial pressure monitoring
- O. Experience also must be provided in the analysis of data pertaining to the following:
  1. Cardiac output determinations by thermodilution and/or other techniques
  2. Evaluation of oliguria
  3. Management of massive transfusions
  4. Management of hemostatic defects
  5. Interpretation of antibiotic levels and sensitivities
  6. Monitoring and assessment of metabolism and nutrition
  7. Calculation of oxygen content, intrapulmonary shunt, and alveolar arterial gradients
  8. Pharmacokinetics

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Rheumatology (Internal Medicine)

### I. Educational Program

A subspecialty educational program in rheumatology must be organized to provide training and supervised experience at a level sufficient for the resident to acquire competence in the field. It must be 2 years in duration.

### II. Facilities and Resources

- A. Modern facilities to accomplish the overall educational program must be available and functioning at the primary training site. These include inpatient facilities for acute and chronic care at primary, secondary, and tertiary levels; imaging facilities, including computerized tomography and magnetic resonance imaging; and a fully equipped clinical laboratory providing service on a 24-hour basis and equipped with a compensated polarized light microscope for use by residents. Rehabilitation medicine facilities and ambulatory care facilities also must be available. Resources for specialized tests used by rheumatologists must be available on the premises or by contract arrangement.
- B. There must be a meaningful working relationship, including availability for teaching and consultation at the primary site, with faculty in radiology and orthopedic surgery and also with allied health professionals in physical therapy and occupational therapy.

### III. Specific Program Content

#### A. Clinical Experience

Clinical experience as a multidisciplinary team member must include supervised opportunities to manage both inpatients and outpatients with a wide variety of rheumatic and musculoskeletal diseases and other illnesses with rheumatologic musculoskeletal manifestations.

#### B. Ambulatory Medicine Experience

The residents must be given opportunities to assume responsibility for and follow patients throughout the training period in both inpatient and outpatient settings to observe the evolution and natural history of these disorders, as well as the effectiveness of therapeutic interventions. To accomplish these goals, the educational pro-

gram must include a minimum of 3 half-days of ambulatory care per week averaged over the 2 years of training.

#### C. Specific Program Content

1. The training program must provide the environment and resources for the residents to gain experience in the diagnosis and treatment of patients with
  - a. diffuse connective tissue diseases
  - b. rheumatoid arthritis
  - c. systemic lupus erythematosus
  - d. scleroderma
  - e. polymyositis
  - f. spondyloarthropathies
  - g. vasculitis
  - h. crystal-induced synovitis
  - i. osteoarthritis
  - j. regional musculoskeletal pain syndromes
  - k. nonarticular rheumatic diseases, including fibromyalgia
  - l. nonsurgical, exercise-related (sports) injury
  - m. systemic diseases with rheumatic manifestations
  - n. metabolic diseases of bone
  - o. osteoporosis
  - p. infection of joints
  - q. joint surgery
  - r. acute and chronic musculoskeletal pain
2. It is desirable that programs with the qualified faculty and facilities provide training in pediatric rheumatic disease.

#### D. Technical and Other Skills

1. The program must provide sufficient experience for the resident to acquire skill in the
  - a. use of nonsteroidal anti-inflammatory drugs, disease-modifying drugs, biologic response modifiers, glucocorticoids, cytotoxic drugs, antihyperuricemic drugs, and antibiotic therapy for septic joints.
  - b. examination of patients, to include a specific examination of structure and function of all joints, both axial and peripheral, as well as periarticular structure and muscle units.
  - c. construction of differential diagnosis for complexes of symptoms and signs related to rheumatologic diseases.
  - d. diagnostic aspiration and analysis by light and compensated polarized light microscopy of synovial fluid.
  - e. therapeutic injection of diarthrodial joints, bursae, tenosynovial structures, and entheses.
2. The program must provide sufficient experience for the resident to acquire skill in the performance or interpretation of
  - a. biopsies of tissues relevant to the diagnosis of rheumatic diseases.
  - b. bone and joint imaging techniques.
  - c. bone density measurements.
  - d. controlled clinical trials in rheumatic diseases.
  - e. nailfold capillary microscopy.
  - f. indications for arthroscopy.
  - g. electromyography and nerve conduction studies.

#### E. Formal Instruction

In the study of rheumatic diseases, musculoskeletal disorders, metabolic diseases of bone, osteoporosis, and acute and chronic musculoskeletal pain, the following specific content areas as a minimum, must be included in the formal program (lectures, conferences, and seminars).

1. Anatomy, pathology, genetics, immunology, biochemistry, and physiology of connective tissue, bone, and muscle, including purine metabolism

2. The scientific basis of the methodology, indications, and interpretations of laboratory tests and imaging procedures used in diagnosis and management
3. Indications for and interpretation of electromyograms, nerve conduction studies, and muscle/nerve biopsy
4. Pharmacology and pharmacokinetics, including drug metabolism, adverse effects, interactions, and relative costs of therapy
5. Principles of physical medicine and rehabilitation in patients with rheumatologic disorders
6. Evaluation, management, and rehabilitation of exercise-related (sports) illnesses
7. Indications for surgical and orthopedic consultation
8. Geriatric and aging influences

ACGME: June 1998 Effective: July 1999

## Program Requirements for Residency Education in Internal Medicine Sports Medicine

### I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Internal Medicine.

### II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 1 year in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

### III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and

clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

## IV. Facilities and Resources

The program must include the following:

### A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

### B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical residents must be supervised by a physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

### C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

### D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

## V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility.

Residents must spend ½ day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

### A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

### B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

### C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

### D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

### E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

## VI. Specific Knowledge and Skills

### A. Clinical

The program must provide educational experiences for the residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as it relates to exercise
8. Effects of disease, eg, diabetes, cardiac conditions, and arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs

11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

### B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, eg, nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There also must be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

ACGME: June 2000 Effective: June 2000

# Program Requirements for Residency Education in Medical Genetics

## I. Duration and Scope of Accredited Programs in Medical Genetics

### A. Description of the Specialty

1. Clinical medical geneticists are physicians who provide comprehensive diagnostic, management, and genetic counseling services for patients with genetic, or possibly genetic, disorders. They also plan and coordinate large-scale screening programs for inborn errors of metabolism, hemoglobinopathies, chromosome abnormalities, neural tube defects, and other genetically influenced conditions.
2. Clinical medical geneticists are able to (a) diagnose and manage genetic disorders; (b) provide patient and family counseling; (c) use their knowledge of heterogeneity, variability and natural history of genetic disorders in patient-care decision making; (d) elicit and interpret individual and family medical histories; (e) interpret clinical genetic and specialized laboratory testing information; (f) explain the causes and natural history of genetic disorders and genetic risk assessment; and (g) interact with other health-care professionals in the provision of services for patients with genetically influenced disorders.

### B. Scope of Education

Accredited graduate medical education programs in medical genetics must provide the formal instruction and appropriately supervised clinical experience necessary for residents to develop the knowledge, skills, and attitudes essential to the practice of clinical medical genetics.

Programs must provide (a) opportunities for residents to become involved in research and teaching and (b) education in the basic sciences and clinical areas pertinent to medical genetics, including mendelian genetics, cytogenetics, diagnosis and treatment of inborn errors of metabolism, molecular diagnosis, syndrome identification and dysmorphology, teratology, reproductive genetics, congenital malformations, multifactorial disorders, mental retardation and developmental disabilities, genetic screening, social and ethical issues in medical genetics, genetic counseling, and quantitative human genetics.

### C. Program Length

1. A clinical medical genetics residency may be accredited to provide 2 and/or 4 years of graduate medical education:
  - a. Physicians who have completed an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency are eligible for appointment to a 2-year medical genetics residency.
  - b. A medical genetics program director may appoint a resident to a 2-year program following 2 or more years of ACGME-accredited residency education.
  - c. A 4-year program must include 2 years of pregenetics education in other ACGME-accredited residencies followed by 2 years of education in clinical medical genetics. A 4-year program must be designed prospectively by the director of the medical genetics residency and the directors of the programs to which residents will be assigned during the 2 years of pregenetics education.

2. In both 2-year and 4-year programs, the 24 months of genetics education must include at least 18 months of broad-based, clinically oriented medical genetics activities.

### D. Program Goals and Objectives

1. Program Description
  - a. The director and teaching staff must prepare and comply with written educational goals for the program.
  - b. A written description of the educational program must be prepared and distributed to residents and teaching staff.
  - c. The program description must include:
    - i. A summary of the program's educational goals.
    - ii. A listing and description of all required rotations and other assignments.
    - iii. The goals and objectives of each rotation/assignment.
    - iv. The duration of each rotation/assignment.
    - v. A description of resident opportunities for teaching and research.
    - vi. A description of the manner in which residents are supervised.
2. Program Design
  - a. All educational components of the program should be related to program goals.
  - b. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  - c. Participation by any institution providing more than 3 months of training in a 2-year program or 6 months of training in a 4-year program requires prior approval by the RRC.

## II. Institutional Resources

- A. Graduate medical education in medical genetics must be sponsored by institutions that are able to provide sufficient faculty, administrative support, financial resources, comprehensive medical library services, research facilities, office space, support staff, and clinical facilities to meet the educational needs of residents and enable the residency to comply with accreditation requirements. Affiliations may be made with other institutions/laboratories to meet educational needs.
- B. Institutions sponsoring medical genetics programs should also sponsor ACGME-accredited programs in pediatrics, internal medicine, and obstetrics/gynecology.
- C. Program institutions should have a clinical cytogenetics laboratory, a clinical biochemical genetics laboratory, and a clinical molecular genetics laboratory, each of which provides an appropriate volume and variety of medical genetics-related services and has an adequate number of qualified staff. If a laboratory is not located in a program institution, a written letter of agreement from the laboratory director detailing the laboratory's contributions to the education of medical genetics residents must be prepared and kept on file by the program director.
- D. Program institutions must provide a sufficient number and variety (eg, pregnant and non-pregnant, all ages) of inpatients and outpatients to permit residents to gain experience with the natural history of a wide range of genetic disorders.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

1. There must be a single program director who has the authority to direct the entire clinical medical genetics program and is able to devote sufficient time to fulfill the responsibilities required to meet the educational goals of the program, including the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, resident staff, support staff, and other educational resources.
2. The program director must be:
  - a. A physician who has a valid license to practice medicine in the state where the institution that sponsors the program is located.
  - b. Certified in Clinical Genetics by the American Board of Medical Genetics (ABMG) or possess suitable equivalent qualifications.
  - c. A member in good standing of the medical staff of the institution that sponsors the program.
  - d. Experienced in medical education in general and graduate medical education in genetics in particular and possess the requisite clinical, educational and administrative abilities needed to direct a medical genetics program.
3. Responsibilities of the Program Director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection, supervision and evaluation of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - i. At least semiannually evaluate the knowledge, skills and professional growth of the residents, using appropriate criteria and procedures.
    - ii. Communicate each evaluation to the resident in a timely manner.
    - iii. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - iv. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has completed the program and demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
  - h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations which consistently produce undesirable stress on residents must be evaluated and modified.
    - i. Continuing involvement in scholarly activities, participation in key national scientific human genetics meetings, and contribution to medical education both locally and nationally.
    - j. Communication with the RRC, including the program information that is prepared for periodic accreditation site visits and reviews. The director must also notify the committee secretary of significant changes in the program, including:
      - i. Change of program director.
      - ii. Major changes in institutional affiliation. Any change in formal affiliation with institutions where residents are assigned for required educational experiences requires prior approval from the RRC.
      - iii. An increase in the RRC-approved maximum number of residents in the program. Requests for increases in a program's resident complement require the prior approval of the RRC.
    - k. Ensuring that residents are clearly informed in writing of program requirements, including the duration of the resident's course of study.
4. As continuity of the leadership of a residency is crucial to educational quality, frequent changes in the directorship and extended periods of temporary leadership have been found to have an adverse impact on programs. Therefore, institutions must develop and implement policies and procedures to ensure continuity when the program director departs, is on sabbatical, or is unable to meet his or her duties for any other reason.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. There must be at least three members of the teaching staff (including the program director), who are certified by the ABMG (or possess equivalent qualifications) and are members of the medical staffs at program institutions. At least two of these individuals must be certified in Clinical Medical Genetics.
3. The individual responsible for resident education in biochemical genetics must be ABMG-certified in biochemical genetics. The person responsible for resident education in molecular genetics must be ABMG-certified in molecular genetics. The individual responsible for resident education in clinical cytogenetics must be ABMG-certified in clinical cytogenetics.
4. There must be a sufficient number of teaching staff so that program faculty are readily available to residents and able to meet effectively their patient care, educational and research responsibilities.
5. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

6. Members of the teaching staff must regularly and actively participate in program rounds, conferences, and journal clubs.
7. Members of the teaching staff must participate in appropriate scientific societies (particularly through presentations at meetings) and pursue their own continuing education.
8. Members of the teaching staff must demonstrate an active interest in genetics research (particularly in projects that are funded following peer review and/or result in publications in peer-reviewed journals), and provide guidance and technical support (eg, research design, statistical analysis) for residents who are involved in research or other scholarly activities.
9. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
10. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
11. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Number of Residents

When reviewing a program for accreditation, the RRC will approve a maximum total number of residents to be appointed to a program. That number will be based primarily upon the number, qualifications and commitment of the teaching staff; volume and variety of genetics patients available for educational purposes; and program facilities, finances and organization.

#### D. Other Program Personnel

There must be a sufficient number of appropriately qualified patient care, administrative, technical, clerical, and other staff to support all the educational activities of the program.

### IV. Program Facilities

- A. Adequate space and equipment must be available to meet the educational goals of the program. In addition to space for patient care activities, this requires meeting rooms, classrooms, office space, research facilities, and facilities for record storage and retrieval.
- B. Office and laboratory space must be provided for the residents for both patient-care work and participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. The institutional library should contain standard journals and texts in genetics and related fields of medicine and provide services for the electronic retrieval of information from national medical databases to permit timely literature review.
- D. Residents must have access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.
- E. Residents should have access to computer-based genetic diagnostic systems.

- F. The audiovisual resources available for educational purposes should be adequate to meet the goals and objectives of the program.

### V. The Educational Program

The residency must be organized to provide a well structured, integrated and progressive educational experience in clinical medical genetics. The residents must have the opportunity to develop the abilities to diagnose genetic disorders, counsel patients, and manage the broad range of clinical problems that are encompassed within medical genetics. Because of the complex nature and multiple system involvement of genetic disorders, residents must be exposed to multidisciplinary and interdisciplinary models during the program and must become proficient at organizing teams of health-care professionals in order to provide the necessary resources for their patients. As medical genetics involves families and individuals of all ages, residents must be competent to work with adults and children and must have an opportunity to gain an understanding of family dynamics as they relate to issues of diagnosis, counseling and management.

#### A. Clinical Components

1. Patient Population
 

Residents must have the opportunity to care for a number of patients and families sufficient to permit them to develop an understanding of the wide variety of medical genetic problems, including mendelian disorders, inborn errors of metabolism, diseases of chromosome number and structure, multifactorial disorders, syndromes, congenital malformations, other birth defects, and other genetically influenced conditions. Typically, this will mean that programs will care for at least 100 different patients or families per year for each resident. These patients and families must be seen in outpatient and inpatient settings.
2. Correlation of Laboratory and Clinical Experiences
 

Clinical biochemical genetic, molecular genetic, and cytogenetic laboratories must be integral components of each program. Residents must spend a minimum of 2 continuous weeks in each type of laboratory so that they will be able to develop their abilities to understand and critically interpret laboratory data. Residents must develop an understanding of the appropriate use of laboratories during diagnosis, counseling, and management of patients with genetic disorders. Toward this end, resident education must include participation in the working conferences of laboratories as well as ongoing discussion of laboratory data during other clinical conferences.
3. Other Health Care Professionals
 

Residents must have regular opportunities to work with genetic counselors, nurses, nutritionists and other health care professionals who are involved in the provision of clinical medical genetics services.
4. Responsibilities for Patient Care
 

The development of mature clinical judgement requires that residents, properly supervised, be given responsibility for patient care commensurate with their ability. This can be achieved only if the resident is involved in the decision-making process and in the continuity of patient care. Residents must be given the responsibility for direct patient care in all settings, including planning and management, both diagnostic and therapeutic, subject to review and approval by the attending physician.

  - a. Supervision
 

Residents must be supervised by appropriately qualified faculty at all times. Residents must be provided with rapid and reliable systems for communicating with supervising residents and attendings. Attending physicians or supervising residents with appropriate experience for the severity and complexity of

the patient's condition must be available to residents at all times and must be able to respond in a timely fashion.

**b. Progressive Responsibility**

The responsibility given to residents for patient care should depend on their knowledge, skill, experience, and the complexity of the patient's counseling or medical problems. The degree of responsibility accorded to a resident, both professional and administrative, must be increased progressively. This includes responsibility in such areas as patient care, leadership, teaching, organization, and administration. The program must provide residents with experience in direct and progressively responsible patient management as they advance through the program so that those completing the program will have developed sound clinical judgment.

**c. Duty Hours and Personal Responsibility**

The physician's responsibilities for continuing patient care transcend normal working hours. To fulfill this obligation, provisions for night and weekend call must be established. However, residents must not be regularly required to perform difficult or prolonged duties. Therefore, the program director must ensure assignment of reasonable in-hospital duty hours. Residents at all levels should be able to spend, on average, at least 1 full day out of 7 free of hospital duties and should be on call in the hospital no more often than every third night, except in the maintenance of continuity of care. There should be adequate opportunity to rest and to sleep when on duty for 24 hours or more. On-call rooms arranged to permit adequate rest and privacy should be available for each resident on night duty in the hospital. There should be adequate backup support if needed to maintain appropriate patient care.

**B. Academic Components**

**1. Basic Sciences**

- a. Each resident must participate formally, through lectures or other didactic sessions, in the equivalent of a 1-year graduate level course in basic, human, and medical genetics, including but not limited to population and quantitative genetics, mendelian and non-mendelian genetics, cytogenetics, biochemical genetics, and molecular genetics. (An introductory medical genetics course for medical students does not satisfy this requirement.)
- b. Research seminars should be a part of the training experience but shall not be considered an acceptable alternative to this basic science didactic component.

**2. Research and Scholarly Activity**

- a. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- b. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of the faculty must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  - i. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - ii. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.

- iii. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- iv. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
- v. Provision of support and facilities for resident participation in scholarly activities. In addition to direct research involvement, residents and faculty should participate in journal clubs, research seminars, work-in-progress sessions, and reviews of intradepartmental and interdepartmental research activity.

**3. Clinical Conferences**

Clinical teaching conferences must be organized by the faculty for the residents, and attendance by the residents and the faculty must be documented. These conferences must be distinct from the basic science lectures and didactic sessions. Clinical teaching conferences may include formal didactic sessions on clinical laboratory topics, medical genetics rounds, journal clubs, and follow-up conferences for genetic clinics.

**4. Presence of Other Learners**

- a. The presence of other learners in medical genetics and in other specialties within program institutions is essential to the maintenance of a stimulating educational environment.
- b. The appointment of other individuals for special training or education, such as fellows, residents from other specialties, and medical students, must not dilute or detract from the educational opportunities of the medical genetics residents.

**C. General Competencies**

**1. Patient Care**

Residents must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Residents are expected to

- a. gather essential and accurate information about the patient using the following clinical skills:
  - i. medical interviewing, including the taking and interpretation of a complete family history, including construction of a pedigree
  - ii. physical examination
  - iii. diagnostic studies, including the interpretation of laboratory data generated from biochemical genetic, cytogenetic, and molecular genetic analyses
- b. make informed decisions about diagnostic and therapeutic interventions based on patient and family information and preferences, up-to-date scientific evidence, and clinical judgment by
  - i. demonstrating effective and appropriate clinical problem-solving skills
  - ii. understanding the limits of one's knowledge and expertise
  - iii. appropriate use of consultants and referrals
- c. develop and carry out patient management plans
- d. prescribe and perform medical interventions essential for the care of patients with heritable disorders
- e. counsel and educate patients and their families
  - i. to take measures needed to enhance or maintain health and function and prevent disease and injury
  - ii. by encouraging them to participate actively in their care and providing information that will contribute to their care
  - iii. to empower patients to make informed decisions, interpret risk assessment, and to use predictive testing for themselves and family members
- f. use information technology to support patient care decisions and patient education

- g. assist patients in accomplishing their personal health goals
  - h. work with health care professionals, including those from other disciplines, to provide patient-focused care
2. Medical Knowledge  
Residents must
- a. know, critically evaluate and use current medical information and scientific evidence for patient care, including
    - i. results from genetics laboratory tests
    - ii. quantitative risk assessment
    - iii. available bioinformatics
  - b. be able to locate, appraise, and assimilate evidence from scientific research studies related to their patients' health problems
3. Interpersonal Skills and Communication  
Residents must be able to
- a. communicate effectively and demonstrate caring and respectful behaviors when interacting with patients and their families
  - b. communicate effectively with patients and families to create and sustain a professional and therapeutic relationship
  - c. communicate effectively with physicians, other health care professionals, health-related agencies, and the general public
  - d. work effectively as a member or leader of a health care team or organization
  - e. maintain comprehensive, timely and legible medical records
4. Practice-Based Learning and Improvement  
Residents must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices. Residents are expected to:
- a. obtain and use information about their own patients and the larger population from which their patients are drawn
  - b. use information technology to manage information, access on-line medical information, and support their own education
  - c. facilitate the education of patients, families, students, residents, other health care professionals, and the general public
5. Professionalism  
Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, such as beneficence and non-maleficence, and sensitivity to a diverse patient population. Residents are expected to:
- a. demonstrate respect, compassion, and integrity; a responsiveness to the needs of patients and society that supersedes self-interest; accountability to patients, society, and the profession, and a commitment to excellence and on-going professional development
  - b. demonstrate a commitment to ethical principles pertaining to patient privacy and autonomy, the provision or withholding of clinical care, confidentiality of patient information, informed consent, conflict of interest, and business practices
  - c. demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities
6. Systems-Based Practice  
Residents must be able to
- a. advocate for quality patient care and assist patients in dealing with system complexities
  - b. work effectively in various health care delivery settings and systems
  - c. provide optimal value for the patient by incorporating the considerations of cost-awareness and risk-benefit analysis
  - d. promote health and function and prevent disease and injury in populations
  - e. possess the basic economic and business knowledge necessary to function effectively in one's practice setting

## VI. Evaluation

### A. Evaluation of Residents

1. The program must demonstrate that it has an effective plan for evaluating residents and providing performance feedback to residents. Each program must develop and use a set of performance measures that produce dependable assessment of a resident's competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice. Programs that do not have in place an acceptable set of measures must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan. Adequacy of progress will be assessed against an implementation timetable determined by the RRC that takes into account availability of acceptable tools and current standards of practice. The program is responsible for obtaining the timetable and related information from the RRC.
2. Regular oral and written evaluations of residents must include comment on both clinical and academic work. Evaluations of residents' patient care activities must address their abilities to carry out clinical genetic evaluations, perform appropriate clinical procedures, understand the methodologies involved in genetic laboratory tests, interpret test results, and counsel patients and families.
3. There must be formal evaluation by the faculty of each resident's knowledge, performance, and growth at least twice each year, and residents must have the opportunity to review confidential, written evaluations of their performance with the program director.

### B. Evaluation of Faculty

1. Individual members of the teaching staff must be confidentially evaluated by the program director and the residents at least once each year.
2. Faculty evaluations should include comment on teaching ability, research and other scholarly activity, availability to the residents, and commitment to the training program, as well as clinical knowledge and skill.

### C. Evaluation of the Program

1. The educational effectiveness of the program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed.
2. There must be regular written, confidential evaluation of the program by the sponsoring institution, program director, and teaching staff.
3. At least once each year, residents and members of the teaching staff should provide the director with written evaluations of the program that give particular attention to the program's success in meeting its educational goals and objectives as well as accreditation requirements.
4. One measure of the quality of a medical genetics residency is the performance of its residents on certifying examinations of the ABMG.

## VII. Certification and Accreditation

- A. The RRC for Medical Genetics is responsible for accreditation of graduate medical education programs in clinical medical genetics. The ABMG is responsible for certification of individual physicians in medical genetics.
- B. Questions about accreditation of residency programs should be directed to the Executive Director of the RRC.

C. Questions about certification in medical genetics should be directed to the office of the ABMG.

*ACGME: June 1999 Effective: September 1999  
General Competencies Implementation Date: July 1, 2001*

## Program Requirements for Residency Education in Molecular Genetic Pathology (Medical Genetics)

### I. Introduction

- A. Molecular Genetic Pathology (MGP) is the subspecialty of Medical Genetics and Pathology in which the principles, theory, and technologies of molecular biology and molecular genetics are used to make or confirm clinical diagnoses of Mendelian genetic disorders, disorders of human development, infectious diseases and malignancies, to assess the natural history of those disorders, and to provide the primary physician with information by which to improve the ability to provide optimal care for individuals affected with these disorders. Molecular Genetic Pathology includes a body of knowledge and techniques necessary to study diseases associated with alterations in genes, provides information about gene structure, function, and alteration, and applies laboratory techniques for the diagnosis, treatment, and prognosis of individuals with these disorders.
- B. Educational programs in molecular genetic pathology must be 1 year in length and provide a structured educational experience for qualified physicians seeking to acquire additional competence in all current aspects of the discipline including basic science, diagnostic laboratory procedures, laboratory management, and consultation. Programs must be designed to teach trainees to integrate molecular genetic pathology into medical consultations with clinicians in the diagnosis and care of patients.
- C. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- D. All educational components of a residency program should be related to program goals.
  1. The Molecular Genetic Pathology Residency Review Subcommittee (MGPRRC) as part of the regular review process must approve the program design and structure.
  2. Participation by any institution providing training in the program must be approved by the MGPRRC.

### II. Institutional Organization

#### A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources and clinical, research, and library facilities to meet the educational needs of the residents for accreditation.
2. Postgraduate fellowships in molecular genetic pathology will be accredited in institutions that also sponsor ACGME-accredited residencies in medical genetics and pathology. Requests for exceptions to this policy will be reviewed on a case by case basis.

#### B. Participating Institutions

If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be ap-

proved (prospectively) by the Subcommittee for Molecular Genetic Pathology. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.

### III. Program Personnel

#### A. Program Director

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Unrestricted licensure to practice medicine in the state where the institution that sponsors the program is located.
  - c. Certification by the American Board of Pathology or the American Board of Medical Genetics (in clinical medical genetics) or appropriate educational qualifications as judged by the Subcommittee, and certification in molecular genetic pathology or appropriate educational qualifications as judged by the Subcommittee.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. A program involving two or more participating institutions must have a single director who has the authority to supervise and coordinate the portions of the program carried out at each institution.
3. Responsibilities of the program director include:
  - a. In association with the teaching staff, the general administration of a program; including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, advancement of residents, and the maintenance of records related to program accreditation.
  - b. Conducting the training program effectively. He or she must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices, evaluation procedures, and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - e. Selection, supervision, and evaluation of the teaching staff and other program personnel at each institution participating in the program.
  - f. The supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the performance/interpretation of laboratory tests and care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - i. At least semiannually evaluate the knowledge, skills, and personal growth of the residents, using appropriate criteria and procedures.
    - ii. Communicate each evaluation to the resident in a timely manner.

- iii. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
- iv. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and authorized personnel.
- h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- i. Implementation of fair procedures, as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- j. The monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. Preparation of an accurate statistical and narrative description of the program as requested by the MGPRRC.
- l. To demonstrate his/her own continuing scholarly activity.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications in MGP to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically review the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of the supervision of residents.

#### C. Molecular Genetic Pathology Residents

1. The resident should have completed training in an ACGME-accredited residency in either Medical Genetics or Pathology, or be a physician who is certified by the American Board of Medical Genetics.
2. The number of positions requested must not exceed the educational resources available in a program.
3. Residents must have the opportunity to assume increasing responsibility under supervision appropriate to their experience as they progress through the program.

4. Residents should have the opportunity to become involved in Molecular Genetic Pathology research and teaching during the program.
5. The residents must maintain a logbook of MGP cases in which they were involved in sufficient detail to ascertain the residents' involvement in establishing the primary diagnosis and the transmittal of this information. A "case" is defined as the complete laboratory evaluation of an individual or an individual specimen (eg, for tumor specimens). If a family study is involved, the entire family is considered as a single case. Completion of the case will involve appropriate communication of the results (eg, written report, verbal communication to referring physician and/or counseling of the individual/family). The logbook should contain sufficient information to demonstrate experience with the breadth of techniques and variety of diseases necessary to direct an MGP diagnostic laboratory service.
6. The program director must ensure that residents are adequately supervised by faculty at all times. Further, resident duty and on-call assignments must be made in a manner that ensures that neither education nor quality of patient care is jeopardized by resident stress or fatigue. Residents should, on average, have the opportunity to spend at least 1 day out of 7 free of program duties and should be on call no more often than every third night. When on call for 24 hours or more, there should be opportunity to rest and sleep.

#### D. Other Personnel

There must be a sufficient number of qualified, professional, technical and clerical personnel to support the administration, laboratory work, and the educational program.

#### IV. Institutional Resources

- A. The sponsoring institution must provide sufficient faculty, administrative, financial, and library services, as well as technical personnel, laboratory space and equipment, meeting rooms, classrooms, research space, and resident office space to support service, teaching, and educational responsibilities in molecular genetic pathology.
- B. The molecular genetic pathology program must be jointly sponsored by the Department of Pathology and the Department of Medical Genetics. Further, the sponsoring institution must ensure that activity is supported by other disciplines, including internal medicine, pediatrics, and obstetrics-gynecology.
- C. A sufficient volume and variety of current specimens from adult and pediatric patients must be available to provide MGP residents a broad exposure to consultation regarding medical genetic testing for congenital and acquired diseases without diluting the educational experience of residents in affiliated Pathology and Medical Genetics residencies.
- D. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- E. Residents must have ready access to a major medical library. Library services should include electronic retrieval of information from national medical databases.
- F. Residents must have ready on-site access to appropriate texts and journals in each institution participating in the program.

#### V. Educational Program

##### A. Curriculum

1. The curriculum for the program must be based upon written, clearly defined educational goals and objectives prepared by the program director and teaching staff.
2. Programs should be structured so that residents are involved in MGP throughout the year. The program must include didactic

instruction and practical experience with the molecular biology and the biochemistry of nucleic acids and proteins including structure, function, replication mechanisms, in vitro synthesis, and the roles of DNA and various RNA classes and proteins in cellular biology. Programs should instruct residents in an understanding of the mechanism of regulation of gene expression in prokaryotes and eukaryotes, and the biochemical mechanisms of mutations. The program should instruct residents in the detailed knowledge of disease processes at the molecular level and the methods used for their detection. These diseases include but are not limited to: solid tumors, leukemia-lymphomas, infectious diseases, inherited Mendelian diseases, non-Mendelian and acquired genetic diseases (eg, mitochondrial disorders, triplet repeats, expansion disorders, cytogenetic aberrations, and imprinting disorders). In addition, residents should be instructed in tissue typing/identity testing and the principles of linkage analysis. The program should instruct residents in their role as a consultant and the application of molecular techniques and interpretation of results with regard to diagnosis, prognosis, treatment and recurrence risk in patient care decision making.

3. MGP residents must be given clearly defined assignments and increasing responsibility as they progress through the program.
4. The program must provide a sufficient volume and variety of MGP specimens and other educational material for the resident to acquire the qualifications of a consultant in MGP. The resident must be instructed to create and must keep a logbook of each accession in which they are involved.
5. Residents must gain experience as consultants in clinical decision making in collaboration with professionals from related disciplines and in the cost-effective use of molecular genetic pathology testing.
6. The program must provide the resident with the experience required to set up and to operate a MGP laboratory and to supervise and train laboratory personnel in other advanced techniques as they are developed.
7. MGP residents who are pathologists must participate in the diagnosis, management, and treatment of patients with genetic disorders and in the counseling of the patient and the family. MGP residents who are medical geneticists must have exposure to autopsy and surgical pathology. This experience should emphasize contemporary diagnostic techniques and require involvement in autopsies, surgical pathology, the review of slide sets of diseases relevant to Molecular Genetic Pathology, and other relevant pathology activities.

#### B. Educational Activities

1. There must be regularly scheduled inter-departmental MGP conferences as well as intra-departmental conferences, lectures, seminars, journal clubs and other structured educational activities. Both teaching staff and residents must attend and actively participate in these sessions on a regular basis.
2. Instruction should include the use of study sets and files of usual and unusual cases and other educational materials.

#### VI. Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal club and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

#### VII. Evaluation

- A. There must be regular, written evaluation of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. Residents should submit written evaluations of the program at least once during the year for review by the director and teaching staff.
- C. Residents should submit written evaluations of program teaching staff at least once during the year for confidential review by the program director.

#### VIII. Certification and Accreditation

- A. The Residency Review Committees for Medical Genetics and Pathology are responsible for accreditation of graduate medical education programs in MGP.
- B. The American Board of Medical Genetics and The American Board of Pathology are responsible for certification of individual physicians in MGP. Individuals who plan to seek certification should communicate with their respective Boards to obtain the latest information regarding certification.

*ACGME: June 2001 Effective: June 12, 2001*

# Program Requirements for Residency Education in Neurological Surgery

## I. Introduction

### A. Definition of Discipline

Neurological surgery is a discipline of medicine and that specialty of surgery which provides the operative and nonoperative management (ie, prevention, diagnosis, evaluation, treatment, critical care, and rehabilitation) of disorders of the central, peripheral, and autonomic nervous systems, including their supporting structures and vascular supply; the evaluation and treatment of pathological processes which modify the function or activity of the nervous system, including the hypophysis; and the operative and nonoperative management of pain. As such, neurological surgery encompasses treatment of adult and pediatric patients with disorders of the nervous system: disorders of the brain, meninges, skull, and their blood supply, including the extracranial carotid and vertebral arteries; disorders of the pituitary gland; disorders of the spinal cord, meninges, and vertebral column; and disorders of the cranial and spinal nerves throughout their distribution.

### B. Duration and Scope of Education

1. The educational program must be diversified and well-balanced.
2. The training program in neurological surgery must include a minimum of 1 year of training in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program in general surgery or at least 1 year of a program accredited for the acquisition of fundamental clinical skills, which must include at least 6 months of surgical disciplines other than neurological surgery. This training should be completed prior to the third year of neurological surgery training.
3. The neurological surgery training program is 60 months in duration, in addition to the year of acquisition of fundamental clinical skills, and must provide 36 months of clinical neurological surgery at the sponsoring institution or one of its approved participating institutions.
4. Twenty-one months of the total 60 months should be devoted to any of several aspects of the training program, depending on the needs of the resident. It may be spent in the study of the basic sciences, neuroradiology, neuropathology, or other appropriate subject matter related to the neurosciences as agreed on by individual residents and the program director. [Note: The program director should consult the American Board of Neurological Surgery for certification requirements concerning any training conducted outside the approved institutions of the program.]
5. A block of training of 3 months minimum in an ACGME-accredited neurology training program must be arranged for all residents, unless they have previously had a minimum of 1 year of formal residency training in an accredited neurology training program. This training may be taken during the year of fundamental clinical skills.
6. There must be a 12-month period of time as chief resident on the clinical service of neurological surgery in the sponsoring institution or its approved participating institutions. This is considered an essential component in each resident's planned program. The program must provide the residents with experience in direct and progressively responsible patient management as they advance through training.
  - a. The chief resident must have major or primary responsibility for patient management with faculty supervision.

- b. The chief resident should also have administrative responsibility as designated by the program director.

The specific portion of the clinical training that constitutes the 12 months of chief residency must be specifically designated as the chief residency experience and must be identified at the time of program review.

7. Residents must be introduced to the practice of neurosurgery in an outpatient setting where nonemergency patients are seen by the resident for evaluation before and after surgical procedures. A crucial element of this experience is the clear understanding by the patient that the resident is involved in making decisions concerning diagnosis and participates in operative procedures and follow-up care.
8. Prior to entry into the program, each resident must be notified in writing of the length of training. The prescribed length of training for a particular resident may not be changed without mutual agreement during his or her program unless there is a break in his or her training or the resident requires remedial training. Any training added to the accredited residency must be based on a clear educational rationale and must not interfere with the education and training of the residents enrolled in the program.

### C. Accreditation Guidelines

1. Training programs in neurological surgery are accredited by the Residency Review Committee (RRC) by authority of the ACGME. A list of accredited training programs in neurological surgery is published annually in the *Graduate Medical Education Directory*.
2. To be accredited by the ACGME, an educational program in neurological surgery must be in substantial compliance with both the Program Requirements for Residency Education in Neurological Surgery and the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education*. Programs must be able to demonstrate their compliance with these requirements at the time of their site visit and subsequent review by the RRC.
3. When a change in leadership occurs within an accredited neurological surgery residency, the program must be site-visited within 18 months and reviewed by the RRC within approximately 2 years following the appointment of the new program director.

## II. Institutional Organization

### A. Sponsoring Institution

An educational program in neurological surgery must have one sponsoring institution in a single geographic location with primary responsibility for the entire program. Appropriate institutions include medical schools, hospitals, and medical foundations. The institution must demonstrate commitment to the program in terms of financial and academic support, including timely appointment of a permanent department or division chairperson of Neurological Surgery.

### B. Participating Institutions

Participating institutions include the sponsoring institution and other integrated and/or affiliated institutions approved by the RRC for training purposes (see Program Requirements for Residency Education in General Surgery, II.B.1). Participating institutions must promote the educational goals of the program rather than simply enlarge the program and must not be added primarily for the purpose of meeting service needs.

1. An integrated institution must function as a single neurological surgery service with the sponsoring institution or, in exceptional circumstances, with an approved affiliate of the sponsoring institution. The program director must demonstrate to the RRC that

the clinical service operates as a single unit in the assignment of residents and their faculty supervisors, the formulation of call and backup schedules, and the convening of teaching conferences and related educational activities.

2. An affiliated institution functions as a separate neurological surgical service with a local training director under the direction of the program director and should be sufficiently close to the sponsoring institution to ensure peer interaction and regular attendance at joint conferences and other activities. Appropriate exceptions may be considered for special resource hospitals (eg, pediatrics, trauma, and spine).
3. Training at an additional institution, proposed for affiliated status, may be approved on a provisional basis for a maximum of 2 years, at which time such training must be either fully approved or withdrawn at the discretion of the RRC. Ordinarily, a site visit will not be necessary to confirm the permanent approval of a provisionally approved participating institution.
4. The number and distribution of participating institutions must not preclude satisfactory participation by residents in teaching and training exercises.
5. Affiliated institutions that are geographically separated from the sponsoring institution are not desirable and are acceptable only if they offer special resources that significantly augment the overall educational experience of the training program.
6. Rotations to affiliated and integrated institutions must be based on a clear statement of the value of such institutions to the teaching program as a whole.

### C. Number and Quality of Residents

1. One of the measures of a training program is the quality of residents chosen and the ability of the program to ensure a steady increase in the resident's knowledge and skills.
2. The RRC will review the selection process of residents and seek evidence that the program evaluates the progression of the residents during training.
3. Where there is demonstrated excellence in providing educational experience for the residents, as determined by the RRC, a program may be authorized to enroll more than one resident per year. The ability to do so does not depend on any multiplication of the minimum requirements as established by the Program Requirements for Residency Education in Neurological Surgery. In determining the size of a resident complement, the RRC will consider the following:
  - a. Presence of a faculty of national stature in neurological surgery
  - b. Quality of the educational program
  - c. Quality of clinical care
  - d. Total number and distribution of cases
  - e. Quality of clinical and basic research
  - f. Quality of residents trained by the program, including numbers of residents starting and finishing the program, number of graduates who take written and oral examinations of the American Board of Neurological Surgery, and the number of graduates passing these written and oral examinations
  - g. Facilities
4. The number of residents at each year of training in a given program, except as provided below, shall not exceed the number approved by the most recent accreditation review of that program. Should a vacancy occur at any level of training in a program, the program director has the option of appointing a new resident at a level that might overlap with that of another resident in training, provided that such appointments do not adversely affect the training experience of residents already in the program. Furthermore, over a 5-year period, commencing at the time when the resident whose departure created the vacancy would have

completed training, the average number of residents graduating yearly must not exceed the number approved by the RRC.

## III. Faculty Qualifications and Responsibilities

The chairperson, program director, and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director Qualifications

1. There must be a single program director responsible for the program.
2. The program director shall be a neurological surgeon who possesses and practices the necessary administrative, teaching, and clinical skills and has experience to conduct the program.
3. The program director shall be certified by the American Board of Neurological Surgery or possess suitable equivalent qualifications in neurological surgery satisfactory to the RRC.
4. The program director shall be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
5. The program director shall have an appointment in good standing to the medical staff of an institution participating in the program.

### B. Program Director Responsibilities

The program director must assume responsibility for all aspects of the training program and devote sufficient time to the educational program, including the following:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
4. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
5. Regular evaluation of each resident's knowledge, skills, operative experience, and overall performance, including the development of professional attitudes consistent with being a physician.
6. The provision of a written final evaluation for each resident who completes the program, as specified in paragraph VI.I.
7. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
8. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
9. Preparation of an accurate statistical and narrative description of the program as requested by the RRC for Neurological Surgery.

10. Notifying the executive director of the RRC in writing of any major change in the program that may significantly alter the educational experience for the residents, including
  - a. changes in leadership of the department, such as the appointment of a permanent or acting program director and/or departmental chairman.
  - b. changes in administrative structure, such as alteration in the hierarchical status of the program/department within the institution.
11. The director of the program must obtain prior approval of the RRC for the following changes in the program to determine if an adequate educational environment exists to support these changes:
  - a. The addition or deletion of any participating institution to which residents rotate
  - b. The addition or deletion of any institutional rotation
  - c. Any change in the resident complement of the program
  - d. Any change in the format of the training program (including fellowships within the program)
  - e. Any change in the period of time defined as the chief resident experience

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

#### C. Other Teaching Faculty Qualifications and Number

1. All clinical faculty members shall possess the necessary experience and administrative, teaching, and clinical skills to conduct the program.
2. All clinical faculty members who are neurological surgeons shall be certified by, or be in the certification process of, the American Board of Neurological Surgery or possess equivalent qualifications in neurological surgery satisfactory to the RRC.
3. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. Under most circumstances, there should be a minimum of three neurological surgeons associated with the training program.
4. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. Neurological surgery faculty participation in undergraduate medical education is desirable.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### D. Training Directors at Participating Institutions

1. The training director shall be a qualified neurological surgeon appointed by and responsible to the program director in each geographically separate institution. This individual must be responsible for the education of the residents and also will supervise the educational activities of other neurological surgeons relating to resident education in that institution. Appropriate exceptions may be considered for special resource hospitals.

2. These appointments will generally be for a 1-year period and can be renewable to ensure continuity of leadership.
3. The training director in neurological surgery at each participating institution must have major clinical responsibilities at that institution.

#### E. Scholarly Activity of Faculty

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

#### F. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Facilities and Resources

#### A. Inpatient Facilities

1. Inpatient facilities available for training programs in neurological surgery should be geographically identifiable and have an adequate number of beds, support personnel, and proper equipment to ensure quality education.
2. Inpatient facilities may vary from one participating institution to another but should support essential prerequisites for excellence in patient care and teaching.
3. The presence of a neurological surgery operating room with microsurgical capabilities and an intensive care unit specifically for the care of neurological surgery patients is desirable to a training program, as are other units for specialized neurological surgery care.
4. Similarly, neurological surgery beds should be on a unit designated for the care of neurosurgery patients.

#### B. Outpatient Facilities

Residents must have available appropriate outpatient facilities, clinic, and office space for training purposes in the regular preoperative evaluation and postoperative follow-up for cases for which the resident has responsibility.

#### C. Research Facilities

1. There should be space and support personnel for research identifiable in the neurological surgery division or department, and some activity should be ongoing in this area.
2. Clinical and/or basic research opportunities should be available to the neurological surgery resident with appropriate faculty supervision.

#### D. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

#### V. Educational Program

The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC for Neurological Surgery as part of the regular review process.

##### A. ACGME Competencies

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
4. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and systems resources to provide care that is of optimal value

##### B. Clinical Components

A current, well-organized, written plan for rotation of residents among the various services and institutions involved must be maintained and must be available to the residents and faculty.

###### 1. Patient Requirements

There shall be sufficient patients admitted each year to ensure that the resident participates in the care of patients suffering from the full spectrum of neurosurgical diseases.

2. This participation must include substantial experience in the management (including critical care) and surgical care of adult and pediatric patients and should include disorders of the spine and of the peripheral nerves, cerebrovascular disease including extracranial vascular disease, trauma, and tumors of the nervous system.
  - a. A program must demonstrate to the satisfaction of the RRC that it has both the volume of patients under neurological care and the breadth and depth of academic support to ensure that it has the capability of providing excellent neurological surgery training to residents.

- b. The former must be substantiated in part by a compilation of annual institutional operative data and resident operative data (including that from residents rotating on the service from other programs) provided in a fashion prescribed by the RRC. Under some circumstances, the program may be required to include data for a period of up to 3 years prior to the date of the submitted program information forms for accreditation or reaccreditation. The entire surgical experience of the most recently graduating resident(s) must be submitted each time the program has its periodic review.
  - c. The profile of clinical experience reported to the RRC must be limited to that utilized in the resident's educational program. It also is understood that the educational requirements of the resident must be considered at all times, and assignment to a clinical service that limits or precludes educational opportunities will be adversely considered in evaluation of the program.
  - d. Within the total clinical facilities available to the training program, there should be a minimum of 500 major neurological surgery procedures per year per finishing resident. It must be understood that achievement of this minimum number of clinical procedures will not ensure accreditation of a training program.
  - e. The minimum number of clinical procedures (see paragraph V.A.2.d) is suggested with the understanding that the majority of the procedures must occur at the sponsoring institution.
  - f. The presence within a given training program of this neurological surgery workload and the distribution of the surgical experience are equally important. For instance, the cases should be appropriately distributed among cranial, extracranial, spinal, and peripheral nerve surgical procedures and should represent a well-balanced spectrum of neurological surgery in both adults and children. This spectrum should include craniotomies for trauma, verified neoplasms, aneurysms, and vascular malformations; extracranial carotid artery surgery; transsphenoidal and stereotaxic surgery (including radiosurgery); pain management; and spinal procedures of a sufficient number and complexity using modern techniques that encompass a variety of disorders (such as trauma, neoplasia, infection, and degenerative disorders).
  - g. No affiliated hospital unit in the training program should be a component of a training program unless there are a minimum of 100 major neurological surgery procedures per year distributed appropriately among the spectrum of cases as described in paragraph f, above. Exception may be made if a hospital offers special clinical resources, eg, stereotaxic surgery, trauma, or pediatric neurological surgery, that significantly augment the resources of the training program as a whole.
3. Residents must have opportunities to evaluate patients referred for elective surgery in an outpatient environment. Under appropriate supervision, this experience should include obtaining a complete history, conducting an examination, ordering (if necessary) and interpreting diagnostic studies, and arriving independently at a diagnosis and plan of management. Consonant with their skills and level of experience, residents should be actively involved in preoperative decision making and subsequent operative procedures under the supervision of the attending physician who has ultimate responsibility for the patient. Residents should similarly be actively involved in postsurgical care and follow-up evaluation of their patients to develop skills in assessing postoperative recovery, recognizing and treating complications, communicating with referring physicians, and developing the physician-patient relationship. Preoperative interview and examination of patients already scheduled for a surgical procedure will not satisfy these requirements.

### C. Didactic Components

There must be a well-coordinated schedule of teaching conferences, rounds, and other educational activities in which both the neurological surgery faculty and the residents participate. Conferences must be coordinated among institutions in a training program to facilitate attendance by a majority of staff and residents. A conference attendance record for both residents and faculty must be maintained.

### D. Resident Policies

#### 1. Supervision

The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians. Attending physicians or supervising residents with appropriate experience for the severity and complexity of the patient's condition must be available at all times on site. The responsibility or independence given to residents in patient care should depend on their knowledge, their technical skill, their experience, the complexity of the patient's illness, and the risk of the operative procedures.

#### 2. Progressive Responsibility

Resident participation in and responsibility for operative procedures embracing the entire neurosurgical spectrum should increase progressively throughout the training period.

#### 3. Continuity of Care

Graduate training in neurological surgery requires a commitment to continuity of patient care, as practiced by qualified neurological surgeons. This continuity of care must take precedence—without regard to the time of day, day of the week, number of hours already worked, or on-call schedules. At the same time, patients have a right to expect a healthy, alert, responsible, and responsive physician dedicated to delivering effective and appropriate care.

#### 4. Duty Hours

a. The program director must establish an environment that is optimal for both resident education and patient care, while ensuring that undue stress and fatigue among residents are avoided. It is his or her responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly. It is desirable that residents' work schedules be designed so that, on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night. Different rotations may require different working hours and patterns. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.

b. A distinction must be made between on-call time in the hospital and on-call availability at home vis-a-vis actual hours worked. The ratio of hours worked to on-call time will vary, particularly at the senior levels, and therefore necessitates flexibility.

c. During these hours residents must be provided with adequate sleeping, lounge, and food facilities. Support services must be such that the resident does not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

#### 5. Extracurricular Activities

Residency training in neurological surgery is a full-time responsibility. Activities outside the educational program must not interfere with the residents' performance in the educational process, as determined by the program director, and must not interfere with the residents' opportunities for rest, relaxation, and study.

### E. Other Required Educational Components

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

1. Educational experience in neuroradiology and neuropathology must be an integral part of the training program designed for the education of the neurological surgery residents. Such experience should be under the direction of qualified neuroradiologists and neuropathologists.
2. The program must provide opportunities for experience and instruction in the basic neurosciences.
3. The residents should participate in scholarly activities such as ongoing clinical and/or basic research projects with which appropriate faculty are involved.
4. Resident participation in undergraduate medical education is desirable.
5. Related Disciplines
  - a. Recognizing the nature of the specialty of neurological surgery, it is unlikely that a program can mount an adequate educational experience for neurological surgery residents without approved training programs in related fields. Clinically oriented training programs in the sponsoring institution of the neurological surgery program should include accredited training programs in neurology, general surgery, internal medicine, pediatrics, and radiology.
  - b. There should be clinical resources for the education of neurological surgery residents in anesthesiology, critical care, emergency medicine, endocrinology, ophthalmology, orthopedics, otolaryngology, pathology, and psychiatry. A lack of such resources will adversely affect the accreditation status of the neurological surgery program.
6. Appointment of Fellows
  - a. The appointment of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of regularly appointed residents.
  - b. Programs must notify the RRC when they sponsor or participate in any clinical fellowships to take place within institutions participating in the program. This notification must occur before the commencement of such training and at each subsequent review of the program. Documentation must be provided describing the fellowship's relationship to and impact on the residency.
  - c. If fellows so appointed will, in the judgment of the RRC, detract from the education of the regularly appointed residents, the accreditation status of the program may be adversely affected.

### VI. Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

#### A. Evaluation of Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice

2. mechanisms for providing regular and timely performance feedback to residents
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance

Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

**B. Program Evaluation**

1. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
  2. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
- C.** The program director is responsible for the annual collection, compilation, and retention of the number and types of neurological surgery operative procedures performed in all institutions and facilities utilized in the clinical education of residents. This information must be provided on request in the format and form specified by the RRC.
- D.** Annually, the program director must ensure the compilation of a comprehensive record of the number and type of operative procedures performed by each resident completing the program. This record must include all of the procedures in which the neurological surgery resident was either surgeon or assistant and must be signed by both the resident and the program director as a statement of its accuracy. This information must be provided upon request in the format specified by the RRC. These records must be accurately maintained by the program director.
- E.** The knowledge, skills, operative experience, professional growth, and progress of each resident, including professional conduct, must be evaluated by the program director in consultation with the teaching staff in a semiannual, written review. These evaluations must be provided to and discussed with each resident in a timely manner. Appropriate criteria and procedures must be used.
- F.** Residents must be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
- H.** The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- I.** At least annually, all individual faculty members must be formally evaluated by the program director of neurological surgery as well as by the residents. A mechanism for sharing the results of such evaluations with the faculty that preserves individual resident confidentiality must be employed.
- J.** At least annually, the program rotations and conferences must be evaluated by both residents and faculty. The results of these evaluations should be kept on file.
- K.** The thoroughness of resident, faculty, and program evaluations, as well as the accurate and timely provision of program-related information to the RRC, will be monitored in the overall review of the residency program.
- L.** The program director must provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

## VII. Board Certification

### A. Performance on Examination

One measure of the quality of a program is the participation in and performance of its graduates on the examinations of the American Board of Neurological Surgery. The number of residents completing training and taking and passing the certification examinations will be part of the RRC's evaluation of the program. All residents must pass the ABNS primary examination before completing the program.

### B. Certification Requirements

Residents who seek certification by the American Board of Neurological Surgery should communicate with the secretary of the board to be sure that the requirements for certification have been fulfilled. The current address of this office is published in each edition of the *Graduate Medical Education Directory*. Requests regarding evaluation of educational programs in neurological surgery and all related program inquiries should be addressed to the Executive Director of the Residency Review Committee for Neurological Surgery, 515 N State St/Ste 2000, Chicago, IL 60610.

*ACGME: June 2001 Effective: July 2001*

## Program Requirements for Residency Education in Endovascular Surgical Neuroradiology (Neurological Surgery)

### I. Definitions and Objectives

Endovascular surgical neuroradiology is a subspecialty that uses catheter technology, radiologic imaging, and clinical expertise to diagnose and treat diseases of the central nervous system. The unique clinical and invasive nature of this subspecialty requires special training and skills. The program must include training and experience in the following:

- A. Signs and symptoms of disorders amenable to diagnosis and treatment by endovascular surgical neuroradiology techniques
- B. Neurological examinations to evaluate patients with neurological disorders
- C. Pathophysiology and natural history of these disorders
- D. Indications and contraindications to endovascular surgical neuroradiology procedures
- E. Clinical and technical aspects of endovascular surgical neuroradiology procedures
- F. Medical and surgical alternatives
- G. Preoperative and postoperative management of endovascular patients
- H. Neurointensive care management
- I. Fundamentals of imaging physics and radiation biology
- J. Interpretation of radiographic studies pertinent to the practice

In this subspecialty, the objective of training is to give residents an organized, comprehensive, supervised, full-time educational experience in endovascular surgical neuroradiology. This experience includes the management of patients with neurological disease, the performance of endovascular surgical neuroradiology procedures, and the integration of endovascular surgical neuroradiology therapy into the clinical management of patients.

Training in endovascular surgical neuroradiology must be conducted in an environment conducive to investigative studies of a clinical or basic science nature.

A program in endovascular surgical neuroradiology must be jointly administered by Accreditation Council for Graduate Medical Education (ACGME)-accredited programs in neurological surgery, diagnostic radiology, and neuroradiology, which must be present within the same institution. Exceptions to this requirement will be subject to the review and approval, on a case-by-case basis, by the Residency Review Committees (RRCs) for Neurological Surgery and Diagnostic Radiology. The program is not intended to replace or duplicate the ACGME-accredited program in neuroradiology.

## II. Duration of Training

The program shall offer 1 year of graduate medical education in endovascular surgical neuroradiology.

## III. Program Director

The program director must be certified by either the American Board of Radiology or the American Board of Neurological Surgery or possess appropriate educational qualifications as determined by the RRC. The program director must have special expertise in endovascular surgical neuroradiology techniques and concentrate at least 50% of his/her practice in endovascular surgical neuroradiology therapy. In addition, the program director must devote sufficient time to the program to fulfill all the responsibilities inherent in meeting its educational goals. The program director should hold appointments to the teaching staff in both neurological surgery and radiology. The program director is responsible for establishing and maintaining the curriculum, selecting and supervising the residents, and selecting faculty members. The program director must have adequate support from the institution and both departments to carry out the mission of the program.

The director of the endovascular surgical neuroradiology training program must be appointed by and be responsible to the program director of the sponsoring training program.

## IV. Faculty

Besides the program director, the program faculty must include at least one full-time member with expertise in endovascular surgical neuroradiology techniques, who (1) is certified by either the American Board of Radiology or the American Board of Neurological Surgery or (2) possesses appropriate educational qualifications as determined by the RRC. The faculty must provide didactic teaching and direct supervision of residents' performance in clinical patient management and in the procedural, interpretive, and consultative aspects of endovascular surgical neuroradiology therapy. The faculty also should stimulate scholarly activities and be able to direct residents in the conduct of such activities. Faculty members should hold appointments jointly in radiology and neurological surgery departments. Evaluation of the faculty should be accomplished at least annually.

## V. Faculty-to-Resident Ratio

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in endovascular surgical neuroradiology therapy. To ensure adequate teaching supervision and evaluation of a resident's academic progress, the faculty-to-resident ratio must be at least one full-time faculty person for every resident enrolled in the program.

## VI. Educational Program

### A. Curriculum

The training program must offer didactic and clinical experiences that encompass the full clinical spectrum of endovascular surgical neuroradiology therapy.

#### 1. Preparatory requirements

- a. Common requirements: All endovascular surgical neuroradiology residents must have completed at least 12 months, preferably consecutive, in neuroradiology. In addition, all endovascular surgical neuroradiology residents must have skills and knowledge in catheter techniques.
- b. Trainees accepted into an ACGME-accredited program in endovascular surgical neuroradiology who do not come from a radiology training program shall have access to a 1-year period of training in neuroradiology in the institution sponsoring the endovascular surgical neuroradiology program.
- c. Residents entering from a neurosurgery background must have fulfilled the following preparatory requirements, in addition to the common requirements:
  - 1) Completed an ACGME-accredited residency in neurological surgery;
  - 2) Completed a course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurological surgery residency.
- d. Residents entering from a radiology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
  - 1) Completed an ACGME-accredited residency in diagnostic radiology;
  - 2) Completed 3 months of clinical experience in an ACGME-accredited neurological surgery program, which may be acquired during elective time in diagnostic radiology and/or neuroradiology training.
- e. Specifically, the preparatory training must provide residents skills and knowledge in the following areas:
  - 1) The use of needles, catheters, guidewires, and angiographic devices and materials
  - 2) The basic radiological sciences, including radiation physics, radiation protection, and the pharmacology of radiographic contrast materials
  - 3) Angiography and image interpretation
  - 4) The proper use and interpretation of laboratory tests and methods that are adjunctive to endovascular surgical neuroradiology procedures, such as physiological monitoring, noninvasive neurovascular testing, and noninvasive neurovascular imaging
  - 5) The evaluation of patients with neurological disease
  - 6) The basic and clinical neurosciences, including neuroanatomy, neurobiology, and the pathophysiology and natural history of neurologic disorders, especially cerebrovascular and neoplastic conditions
  - 7) The clinical aspects of patient assessment, treatment planning, and patient management related to endovascular surgical neuroradiology therapy, including the fundamentals of invasive monitoring and neurointensive care management
  - 8) The clinical indications, risks, and limitations of endovascular surgical neuroradiology procedures
  - 9) The use and administration of analgesics, antibiotics, anticoagulation agents, neuroanesthetic agents, and other drugs commonly used in endovascular surgical neuroradiology procedures

- f. The director of the Endovascular Surgical Neuroradiology Program is responsible for documenting that the applicant has completed the appropriate preparatory training.
2. Endovascular surgical neuroradiology clinical training  
A period of 12 continuous months must be spent in clinical endovascular surgical neuroradiology training, during which the resident has the opportunity to carry out all of the following under close supervision: perform clinical preprocedure evaluations of patients, interpret preliminary diagnostic studies, consult with clinicians on other services, perform diagnostic and therapeutic endovascular surgical neuroradiology procedures, generate procedural reports, and participate in short-term and long-term postprocedure follow-up care, including neurointensive care. The continuity of care must be of sufficient duration to ensure that the resident is familiar with the outcome of all endovascular surgical neuroradiology procedures. Residents should serve as consultants under the supervision of staff endovascular surgical neuroradiology practitioners. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record.

The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad spectrum of endovascular procedures in adults, children, and neonates. Specific training should be provided in the following areas:

- a. Anatomical and physiologic basic knowledge:
- 1) Basic knowledge in arterial angiographic anatomy of the brain, spine, spinal cord, and head and neck
  - 2) Venous angiographic anatomy of the brain, spine, spinal cord, and head and neck
  - 3) Collateral circulation
  - 4) Dangerous anastomosis
  - 5) Cerebral blood flow
  - 6) Autoregulation
  - 7) Pharmacology of CNS vasculature
- b. Technical aspects of endovascular surgical neuroradiology, including:
- 1) Catheter and delivery systems
  - 2) Embolic agents in cerebral, spinal, and head and neck embolization
  - 3) Flow-controlled embolization
  - 4) Complication of cerebral embolization
  - 5) Flow control between the extracranial and intracranial circulation
  - 6) Electrophysiology
  - 7) Provocative testing (pretherapeutic evaluation)
  - 8) Complications of brain, spine, spinal cord, and head and neck embolization
  - 9) Imaging of vascular system
- c. Pharmacology
- 1) Contrast materials
  - 2) Provocative testing with anesthetics and sedatives
  - 3) Anticoagulants
  - 4) Thrombolytics
- d. Coagulation cascade
- e. Brain arteriovenous malformation, spinal cord, arteriovenous fistulas of the brain, spine, spinal cord, head and neck vascular malformations, ischemic stroke, and cerebral aneurysms
- 1) Classification
  - 2) Clinical presentation

- 3) Natural history
  - 4) Epidemiology
  - 5) Hemodynamic basis
  - 6) Indications for treatment
  - 7) Contraindication for treatment
  - 8) Therapeutic modalities
  - 9) Combined therapies
- f. Tumors of the head, neck, spine, and central nervous system
- g. Revascularization for occlusive vascular diseases
- 1) Arteriopathies
  - 2) Atherosclerotic lesions
  - 3) Techniques of revascularization: balloon angioplasty, thrombolytics, and stenting
- h. Embolization for epistaxis or other causes of hemorrhage
- i. Invasive functional testing
- j. Balloon test occlusions
3. Conferences and didactic training  
Residents must make daily rounds with the attending faculty during which patient management decisions are discussed and made. Conferences should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the field of endovascular surgical neuroradiology. Specifically, teaching conferences should embrace the scope of endovascular surgical neuroradiology as outlined in Section I (Definitions and Objectives) of these Program Requirements. Conferences should include journal clubs, pathology meetings, and neuroanatomy dissection courses related to endovascular surgical neuroradiology.

There must be didactic and interactive conference time, including interdepartmental meetings with neurosurgeons and neuroradiologists.

Regular review of all mortality and morbidity related to the performance of endovascular surgical neuroradiology procedures must be documented. Residents must participate actively in these reviews, which should be held at least monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in endovascular surgical neuroradiology therapy while in training.

## **VII. Patient Population**

The institution's patient population must have a diversity of illnesses from which broad experience in endovascular surgical neuroradiology therapy can be obtained. The case material should encompass a range of neurological diseases, including neurovascular. An adequate variety and number of endovascular surgical neuroradiology procedures must be available for each resident. Each program must perform at least 100 therapeutic endovascular surgical neuroradiology procedures per year. These procedures include the treatment of aneurysms, brain arteriovenous malformations, arteriovenous fistulas of the brain, tumors of the central nervous system, occlusive vascular diseases, revascularization, traumatic injury, maxillofacial vascular malformation, and tumors. In addition, the program must provide adequate training and experience in invasive functional testing.

Each resident must maintain a personal case log, which the program director must certify at the completion of training.

The program director must submit the entire clinical experience of the endovascular surgical neuroradiology program and the residents in the format prescribed by the RRC. The list of procedures and the logs must be made available to the RRC at the time of its review of the core program and the endovascular neuroradiology training program.

The subspecialty program in endovascular surgical neuroradiology must not have an adverse impact on the educational experience of diagnostic radiology, neuroradiology, neurological surgery, or vascular surgery residents in the same institution.

### VIII. Equipment and Facilities

Modern imaging/procedure rooms and equipment must be available and must permit the performance of all endovascular surgical neuroradiology procedures. Rooms in which endovascular surgical neuroradiology procedures are performed should be equipped with physiological monitoring and resuscitative equipment. The following state-of-the-art equipment must be available: MRI scanner, CT scanner, digital subtraction angiography equipment, ultrasound, and a radiographic-fluoroscopic room(s) with a tilt table. Facilities for storing catheters, guidewires, contrast materials, embolic agents, and other supplies must be next to or within procedure rooms. There must be adequate space and facilities for image display and interpretation and for consultation with other clinicians.

The institutions where endovascular surgical neuroradiology training is conducted must include appropriate inpatient, outpatient, emergency, and intensive care facilities for direct resident involvement in providing comprehensive endovascular surgical neuroradiology care.

### IX. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly activities

### X. Research

A subspecialty program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity.

### XI. Research Facilities

The institution should provide laboratory facilities to support research projects pertinent to endovascular therapies.

### XII. Interchange With Residents in Other Specialties and Students

Residents should be encouraged to participate in research activities with residents and staff in other related specialties. They also should be encouraged to attend and participate in clinical conferences. It is desirable that they participate in the clinical teaching of neurological surgery and radiology residents and medical students.

### XIII. Duty Hours and Conditions of Work

The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while ensuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night.

During the on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

### XIV. Evaluation

#### A. Residents

Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as judgment.

The program director, with participation of members of the teaching staff, shall

1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

#### B. Faculty

Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in these evaluations.

#### C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by resi-

dents must be assessed by the subspecialty program director, the core diagnostic radiology program director, and the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

ACGME: June 26, 2000 Effective: June 27, 2000

## Program Requirements for Residency Education in Neurology

### I. Introduction

#### A. Definition

Neurology is a medical specialty concerned with the diagnosis and treatment of all categories of disease involving the central, peripheral, and autonomic nervous systems, including their coverings, blood vessels, and all effector tissue, such as muscle. For these diseases, the neurologist is often the principal care physician and may render all levels of care commensurate with his or her training.

#### B. Duration and Scope of Training

A complete neurology residency is 48 months. Approved residencies in neurology must provide at least 36 months of this education. The program meeting these requirements may be of two types:

1. Those that provide 4 years of residency training, the first year of which training (accredited in the United States or Canada) must include a broad clinical experience in general internal medicine. This year must include at least one of the following: (a) 8 months in internal medicine with primary responsibility in patient care or (b) 6 months in internal medicine with primary responsibility in patient care and a period of at least 2 months total time in pediatrics or emergency medicine or both. Residents must spend no more than 2 months in neurology during this year.
2. Those that provide 3 years of residency training but accept only residents who have had an initial first year of graduate training in the United States or Canada. This first year must meet the minimum requirements as noted in I.B.I, above.

#### C. Goals and Objectives for Residency Education

1. The purpose of the training program is to prepare the physician for the independent practice of clinical neurology. This training must be based on supervised clinical work with increasing responsibility for outpatients and inpatients. It must have a foundation of organized instruction in the basic neurosciences.
2. The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
  - a. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
  - b. Medical knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
  - c. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
  - d. Interpersonal and communication skills that result in effective information exchange and teaming with patients, their families, and other health professionals
  - e. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
  - f. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger con-

text and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

#### D. Program Design

1. All educational components of a residency program must be related to program goals. The program design and structure must be approved by the RRC for Neurology as part of the regular review process.
2. Programs that cosponsor combined training in neurology and another specialty must so inform the RRC. Residents in such training must be informed of the necessary requirements of the specialty boards in question.

## II. Administration and Organization

### A. Participating Institutions

Participation by any institution providing 6 months or more of training in a program of 3 or more years must be approved by the RRC.

### B. Appointment of Residents

1. The exact number of residents that may be appointed to a given program is not specifically designated. However, the number of residents appointed to the program must be commensurate with the educational resources specifically available to the residents in terms of faculty, the number and variety of patient diagnoses, and the availability of basic science and research education.
2. The program director will establish the maximum number of resident positions that can be supported by the educational resources for the program, subject to the approval of the RRC. The program director must report any increase or decrease in the resident complement (at the beginning of the academic year), and any resulting change in the structure of the program, to the RRC. (The resident complement is the total number of resident positions offered in the training program. The number includes all PG-1 and categorical positions and one-half of the positions for combined training in neurology and another specialty.) Programs that fail to recruit any new residents for 2 consecutive years may be subject to adverse action because of inactivity in the educational program.
3. All additional trainees in the program other than regularly appointed residents must be identified and designated as such and must not compromise resident education.

### C. Leave and Vacation Policy

Each program must have an equitable leave and vacation policy for residents, in accordance with overall institutional policy.

## III. Faculty Qualifications and Responsibilities

The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include
  - a. requisite and documented clinical, educational, and administrative abilities and experience;
  - b. licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.);
  - c. certification by the American Board of Psychiatry and Neurology (ABPN) or appropriate educational qualifications; and
  - d. appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include
  - a. devotion of sufficient time to provide leadership to the program and supervision of the residents.
  - b. monitoring the content and ensuring the quality of the program.
  - c. preparation of a written statement outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. These goals and objectives must be consistent with and linked to the program's overall goals and objectives, to the educational experiences in the curriculum (both didactic and clinical), and to the program requirements. This statement must be distributed to residents and members of the teaching staff as they begin the program. It should be readily available for review. The program director also must develop criteria to use in the assessment of the extent to which the program's goals and objectives are met.
  - d. selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - e. selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - f. supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - g. regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes and ethical behavior consistent with being a capable neurologist. The program director, with participation of members of the teaching staff, shall
    - 1) at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
    - 2) communicate each evaluation to the resident in a timely manner;
    - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
    - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - h. provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation must be part of the resident's permanent record maintained by the institution.
  - i. implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
  - j. monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff must be sensitive to the need for timely provision of confiden-

tial counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

- k. preparation of an accurate statistical and narrative description of the program, as requested by the RRC.
- l. notification in writing to the Executive Director of the RRC within 60 days of any major change in the program that may significantly alter the educational experience for the residents, including but not limited to
  - 1) changes in the program directorship or the departmental leadership and
  - 2) changes in administrative structure, such as a change in the hierarchical status of the program and/or department within the institution.

Notification of a change in the program directorship must include a copy of the new director's curriculum vitae, including details of his/her experience and qualifications in graduate medical education.

### B. Teaching Staff

1. Besides the program director, there must be a minimum of five neurology faculty, in addition to child neurology faculty, fully committed to the residency program, who devote sufficient time to the program to ensure basic and clinical education for the residents. Within the department or section of neurology, a faculty-to-resident ratio of at least 1:1 in the total program is required. The program director may be counted as one of the faculty in determining the ratio.
2. Neurologists with teaching responsibilities must be certified by the ABPN or have appropriate educational qualifications.
3. There must be faculty who have diverse interests and skills in an appropriate range of teaching and research; who ensure adequate clinical opportunities for residents; and who provide continued instruction through seminars, conferences, and teaching rounds.
4. The program must have a sufficient number of qualified faculty involved in the teaching of residents in each of the component institutions of the program.
5. Faculty with special expertise in all the disciplines related to neurology, including neuro-ophthalmology, neuromuscular disease, cerebrovascular disease, epilepsy, movement disorders, critical care, clinical neurophysiology, behavioral neurology, neuroimmunology, infectious disease, neuro-otology, neuro-imaging, neuro-oncology, pain management, neurogenetics, child neurology, the neurology of aging, and psychiatry must be available on a regular basis to neurology residents.
6. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, and a commitment to their own continuing medical education.
7. The teaching staff must actively pursue scholarly activity in the neurosciences and encourage residents to engage in scholarly activity.
8. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
9. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
10. The teaching staff must periodically evaluate the use of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of

patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

### A. Patient Population

It is the program director's responsibility to ensure that the number of patients is appropriate. They must be diversified as to age and sex, short-term and long-term neurological problems, and inpatients and outpatients. Neurology residents must have management responsibility for patients with neurological disorders. Neurology residents must be involved in the management of patients with neurological disorders who require emergency and intensive care.

### B. Facilities

There must be adequate inpatient and outpatient facilities, examining areas, conference rooms, and research laboratories. There must be adequate space for offices for faculty members. Space for study, chart work, and dictation must be available for the residents. There must be adequate contemporary clinical laboratory facilities that report rapidly the results of necessary laboratory evaluations, including clinical-pathological, electrophysiological, imaging, and other studies needed by neurological services. Adequate chart and record-keeping systems must be in use for patient treatment.

### C. Library

Residents must have access to an adequate medical library. Library services must include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries, collections of texts and journals, and electronic retrieval of information from medical databases must be readily available during nights and weekends.

## V. Educational Program

### A. Basic Curriculum

1. Patient care, teaching, and research must be present in every training program. Patient care responsibilities must ensure a balance between patient care and education that achieves for the trainee an optimal educational experience consistent with the best medical care. Patient care responsibilities must include inpatient, outpatient, and consultation experiences.
2. The program must include a minimum of 18 months (full-time equivalent) of clinical adult neurology with management responsibility for patient care. This must include at least 6 months (full-time equivalent) of outpatient experience in clinical adult neurology. The outpatient experience also must include a resident longitudinal/continuity clinic with attendance by each resident ½ day weekly throughout the program. (The resident may be excused from this clinic when a rotation site is more than 1 hour travel time from the clinic site.)
3. Residents in neurology must have experience with neurological disorders in children under the supervision of a child neurologist with ABPN certification or suitable equivalent qualifications. This must consist of a minimum of 3 months (full-time equivalent) in clinical child neurology with management responsibility in patient care.

**B. Teaching Rounds**

Clinical teaching rounds must be supervised by faculty. They must occur at least 5 days per week. Residents must present cases and their diagnostic and therapeutic plans.

**C. Clinical Teaching**

1. The resident must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in conducting a thorough general and neurological examination, and in organizing and recording data. The training must include the indications for and limitations of clinical neurodiagnostic tests and their interpretation. The resident must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan.
2. Residents must participate in the evaluation of and decision making for patients with disorders of the nervous system requiring surgical management. The existence of a neurosurgical service with close interaction with the neurology service is essential.
3. The residents must participate in the management of patients with psychiatric disorders. They must learn about the psychological aspects of the patient-physician relationship and the importance of personal, social, and cultural factors in disease processes and their clinical expression. Residents must learn the principles of psychopathology, psychiatric diagnosis, and therapy and the indications for and complications of drugs used in psychiatry.
4. Residents must learn the basic principles of rehabilitation for neurological disorders.
5. The resident must participate in the management of patients with acute neurological disorders in an intensive care unit and an emergency department.
6. Residents in neurology must have experience in neuroimaging that ensures familiarity and knowledge with all relevant diagnostic and interventional studies necessary to correlate findings with other clinical information for the care of patients.
7. The resident must receive instruction in the principles of bioethics and in the provision of appropriate and cost-effective evaluation and treatment for patients with neurological disorders.
8. The resident must receive instruction in appropriate and compassionate methods of end-of-life palliative care, including adequate pain relief and psychosocial support and counseling for patients and family members about these issues.

**D. Progressive Responsibility**

Programs must provide opportunities for increasing responsibility and professional maturation of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place the resident in a position of taking increased responsibility for patients. Night call is essential in accomplishing these goals. Adequate faculty supervision is essential throughout the program. Neurological training must include assignment on a consultation service to the medical, surgical, obstetric and gynecologic, pediatric, rehabilitation medicine, and psychiatry services.

**E. Basic and Related Science**

Residents must learn the basic sciences on which clinical neurology is founded, including neuroanatomy, neuropathology, neurophysiology, neuroimaging, neuropsychology, neural development, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, epidemiology and statistics. Concentrated training in one or more of these areas, accomplished with a full-time equiva-

lent experience of at least 2 months total, is required for each resident. Specific goals and objectives must be developed for this experience.

**F. Electives**

Resident assignments need not be identical for each resident, and elective time should accommodate individual resident interests and previous training. Elective time should be a minimum of 3 months.

**G. Seminars and Conferences**

Residents must regularly attend seminars and conferences in the following disciplines: neuropathology, neuroradiology, neuro-ophthalmology, neuromuscular disease, cerebrovascular disease, epilepsy, movement disorders, critical care, clinical neurophysiology, behavioral neurology, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neuro-oncology, pain management, neurogenetics, rehabilitation, child neurology, the neurology of aging, and general neurology. There must be gross and microscopic pathology conferences and clinical pathological conferences. The resident must have increasing responsibility for the planning and supervision of the conferences.

The resident must learn about major developments in both the basic and clinical sciences relating to neurology. Residents must attend periodic seminars, journal clubs, lectures in basic science, didactic courses, and meetings of local and national neurological societies.

**H. Educational Policies**

The program must provide for the following:

1. Residents must be allowed to spend an average of at least 1 full day out of 7 away from the hospital.
2. Residents must provide on-call duty in the hospital, but no more frequently than an average of every third night.
3. There must be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

**I. Resident Participation in Research**

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, training must be conducted by neurology departments in centers in which there is active research in both clinical and basic neuroscience. This activity must include

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in research, particularly in projects that are funded following peer review and result in publications or presentations at regional and national scientific meetings.
3. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
4. provision of support for research opportunities for residents.

**J. Resident Responsibility for Teaching**

Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, is a required aspect of the resident's education in neurology.

## VI. Evaluation

### A. Resident Evaluation (See also Section III.A.2.)

The program must have an evaluation system that provides information about each resident's educational progress and the extent to which each resident has accomplished the program's learning and performance objectives.

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include
  - a. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
  - b. mechanisms for providing regular and timely performance feedback to residents; and
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.
2. Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.
3. Formative evaluation
  - a. Resident performance must be monitored and feedback provided on an ongoing basis.
  - b. A written evaluation of the resident's attainment of objectives specific to the rotation must be made after each rotation and reviewed with the resident so that areas of weakness and strength can be communicated to the resident.
  - c. The program director or his or her designee must meet with each resident semiannually in a formal feedback session to discuss the resident's standing in relation to specific learning and performance objectives. Plans to correct any deficiencies must be discussed. Each resident must be an active participant in formulating plans for his or her development. Evaluation data should be used to advise the resident and to make decisions regarding the progression in the resident's level of responsibility.
4. Final evaluation  
At the conclusion of the resident's period of training in the program, the program director must prepare a detailed, written evaluation of the resident's performance in relation to the program's learning and performance objectives and discuss this evaluation with the resident.

### 5. Records

- a. A written record of the contents of the semiannual review session must be prepared and filed in the resident's permanent record. The written record of the evaluation and the review must be signed by the resident. The resident must have the opportunity to append a written response to the written record of the evaluation and review.
- b. Each resident's permanent record must include the written evaluations completed for each defined educational experience, the written records from the semiannual reviews, results of formal assessments, and the resident's final evaluation. Written descriptions of any deficiencies and problem areas, plans for correcting the deficiencies, disciplinary actions, and commendations, where appropriate, should be included.

### B. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by resi-

dents must be assessed. Confidential written evaluations by residents must be used in this process.

1. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
2. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
3. Evaluations of residents' attainment of the program's learning and performance objectives must be used as the basis for program evaluation. Comparisons of these data against the program's own criteria, performance criteria set by the RRC, and attainment levels of residents at comparable levels of training should be performed as a primary means of assessing attainment of goals and objectives. In this context, a suitable in-service examination, such as the RITE examination, must be used.
4. Residents must evaluate the program at least annually.

### C. Board Certification

One measure of the quality of a training program is the proportion of its residents who take the examinations of the ABPN and the proportion who pass those examinations. This information must be used in the evaluation of the educational effectiveness of the program. A program will be judged deficient by the RRC if during the most recent 5-year period fewer than 60% of its graduates who take the examinations pass either the written (Part I) or oral (Part II) examination on the first try.

*ACGME: February 11, 2002 Effective: February 12, 2002*

## Policies and Procedures for Residency Education in the Subspecialties of Neurology

1. The initial application for a subspecialty program will not require a site visit, but will require submission of all application materials and information and must be signed by the director of the subspecialty program and the director of the core program in neurology. (Applications for programs in child neurology must be cosigned by the directors of the accredited programs in both pediatrics and neurology.) The Residency Review Committee (RRC) for Neurology will take initial action based on a "paper review" of the program, namely, a review without a site visit.
2. Subsequent review of subspecialty programs will be in conjunction with the survey and review of the core program in neurology. The subspecialty program director will complete a separate set of forms for review of the subspecialty program. In special cases determined by the RRC, a subspecialty program may be surveyed and reviewed separately. The RRC will also entertain interim requests and, on occasion, ask for interim progress reports.
3. The RRC will designate programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a program will be directly tied to that of the core. If the core program (either neurology or pediatrics for child neurology programs) is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program (either neurology or pediatrics for child neurology programs) will result in a simultaneous loss of accreditation of the subspecialty program.
4. If the core program (either neurology or pediatrics for child neurology programs) remains in good standing but the RRC judges

the subspecialty program to be in noncompliance with the applicable program requirements, a warning will be issued. If the areas of noncompliance are not corrected, accreditation may be withdrawn from the subspecialty program. The Procedures for Proposed Adverse Actions and the Procedures for Appeal of Adverse Actions may be utilized by programs from which accreditation has been withdrawn in an action separate from withdrawal of accreditation of a core program.

5. Inquiries about accreditation of subspecialty programs should be directed to the Executive Secretary of the RRC for Neurology.

## Program Requirements for Residency Education in Child Neurology (Neurology)

[*Note:* This material constitutes the Program Requirements for Residency Education in Child Neurology. The reader should refer as well to the Program Requirements for Residency Education in Neurology for information on requirements for core programs, to which programs in child neurology must be attached. The reader is also referred to the Institutional Requirements of the Essentials of Accredited Residencies in Graduate Medical Education and to other publications of the Accreditation Council for Graduate Medical Education (ACGME), which outline the composition and function of all Residency Review Committees (RRCs); indicate the actions that any RRC may take, as well as the actions that the ACGME may take; and describe the appeals procedure, types of programs, and the relationships among the RRCs, their parent organizations, and the ACGME.

Requests to have a program accredited to train residents in child neurology (or related inquiries regarding residency programs) should be addressed to Executive Director, RRC for Neurology, 515 N State St, Suite 2000, Chicago, IL 60610. All inquiries concerning prerequisite training or whether a physician is qualified to be examined for certification in neurology with special qualification in child neurology should be addressed to Executive Vice President, American Board of Psychiatry and Neurology (ABPN), 500 Lake Cook Rd, Ste 335, Deerfield, IL 60015.]

### I. Introduction

#### A. Duration and Scope of Training

Training in child neurology shall encompass a total of 3 years. One year of training must be in clinical adult neurology. One year of training shall be referred to as flexible, and the resident must learn the principles of neurophysiology, neuropathology, neuroradiology, neuro-ophthalmology, psychiatry, rehabilitation, neurological surgery, neurodevelopment, and the basic neurosciences. One year of training shall be in clinical child neurology.

#### B. Prerequisite Training

The training can be initiated following one of three options: (1) 2 years of residency training in pediatrics in the United States or Canada; (2) 1 PG-1 year (as described in the Program Requirements for Residency Education in Neurology, Section I.A.1) and 1 year of residency training in pediatrics; or (3) 1 year of pediatrics plus 1 year of basic neuroscience training. The program director must review and determine the acceptability of these initial 2 years of training.

#### C. Goals and Objectives for Residency Training

The purpose of the training program is to prepare the physician for the independent practice of clinical child neurology. This training

must be based on supervised clinical work with increasing responsibility for outpatients and inpatients. It must have a foundation of organized instruction in the basic neurosciences.

#### D. Program Design

All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC for Neurology as part of the regular review process.

### II. Administration and Organization

#### A. Relation to Core Programs

The 3 years of training in child neurology must take place in a center in which there are accredited residency programs in both pediatrics and neurology and with the approval and support of the program directors of both of these departments.

#### B. Participating Institutions

Participation by any institution providing 6 months or more of training in a program must be approved by the RRC.

#### C. Appointment of Residents

The exact number of residents that may be appointed to a given program is not specifically designated. However, the number of residents appointed to the program must be commensurate with the educational resources specifically available to the residents in terms of faculty, the number and variety of patient diagnoses, and the availability of basic science and research education.

All additional trainees in the program other than regularly appointed residents must be identified and designated as such and must not compromise resident education.

#### D. Leave and Vacation Policy

Each program must have an equitable leave and vacation policy for residents, in accordance with overall institutional policy.

### III. Faculty Qualifications and Responsibilities

The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation.

#### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. requisite and documented clinical, educational, and administrative abilities and experience.
  - b. licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. certification by the American Board of Psychiatry and Neurology (ABPN) with Special Qualification in Child Neurology or suitable equivalent qualifications.
  - d. appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the program director include:
  - a. devotion of sufficient time and full commitment to provide leadership to the program and supervision of the residents.
  - b. monitoring the content and ensuring the quality of the program.

- c. preparation of a written statement outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. These goals and objectives must be consistent with and linked to the program's overall goals and objectives, the educational experiences in the curriculum (both didactic and clinical), and the program requirements. This statement must be distributed to residents and members of the teaching staff as they begin the program. It should be readily available for review. The program director also must develop criteria to use in the assessment of the extent to which the program's goals and objectives are met.
- d. selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- e. selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- f. supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- g. regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall
  1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  2. communicate each evaluation to the resident in a timely manner.
  3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- h. provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- i. implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- j. monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. preparation of an accurate statistical and narrative description of the program as requested by the RRC.
- l. notification in writing of the Executive Director of the RRC within 60 days of any major change in the program that may significantly alter the educational experience for the residents, including but not limited to

1. changes in the program directorship or the departmental leadership and
2. changes in administrative structure, such as a change in the hierarchical status of the program and/or department within the institution.

Notification of a change in the program directorship must include a copy of the new director's curriculum vitae, including details of his or her experience and qualifications in graduate medical education.

#### B. Teaching Staff

1. In addition to the program director, the program providing training in child neurology must have at least two child neurology faculty, in addition to the adult neurology faculty, fully committed to the residency program who devote sufficient time to the training program to ensure adequate clinical training of the child neurology residents. Within the section of child neurology, a faculty-to-resident ratio of at least 1:1 in the total program is required. The program director may be counted as one of the faculty in determining the ratio.
2. Neurologists with teaching responsibilities must be certified by the ABPN in neurology with Special Qualification in Child Neurology or possess equivalent qualifications.
3. There must be enough faculty with diverse interests and skills to make the breadth of teaching and research appropriate to a program meeting these program requirements; to ensure adequate clinical opportunities for residents; and to provide continued instruction through seminars, conferences, and teaching rounds.
4. The program must have a sufficient number of qualified staff involved in the teaching of residents in each of the component institutions of the program.
5. Faculty with special expertise in the disciplines related to child neurology, including cognitive development, neuro-ophthalmology, neuromuscular disease, epilepsy, movement disorders, critical care, clinical neurophysiology, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neurogenetics, neuro-oncology, and pain management must be available to child neurology residents.
6. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
7. The staff must actively pursue scholarly activity in the neurosciences and encourage residents to engage in scholarly activity.
8. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
9. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
10. The teaching staff should periodically evaluate the use of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

### A. Patient Population

During the year of training in clinical child neurology, the resident must work in the outpatient clinic and on the inpatient service on a regular basis. The number and type of patients must be appropriate. The patient population must be diversified as to age and sex, short-term and long-term neurologic problems, and inpatients and outpatients. Child neurology residents must have management responsibility for hospitalized patients with neurological disorders. Neurology residents must be involved in the management of patients with neurological disorders who require emergency and intensive care.

### B. Facilities

1. The department or division of child neurology shall be part of the department of pediatrics and/or the department of neurology.
2. There must be adequate inpatient and outpatient facilities, examining areas, conference rooms, and research laboratories. There must be adequate space for offices for faculty members. Space for study, chart work, and dictation must be available for the residents. There must be adequate contemporary clinical laboratory facilities that report rapidly the results of necessary laboratory evaluations, including clinical-pathological, electrophysiological, imaging, and other studies needed by neurological services. Adequate chart and record-keeping systems must be in use for patient treatment.

### C. Library

Residents must have access to an adequate medical library. Library services must include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries, collections of texts and journals, and electronic retrieval of information from medical databases must be readily available during nights and weekends.

## V. Educational Program

### A. Basic Curriculum

1. Patient care, teaching, and research must be present in every training program. Patient care responsibilities must ensure a balance between patient care and education that achieves for the trainee an optimal educational experience consistent with the best medical care. Patient care responsibilities must include inpatient, outpatient, and consultation experiences.
2. In the program there must be a minimum of 12 months (full-time equivalent) of clinical child neurology with management responsibility for patient care. This must include at least 4 months (full-time equivalent) of outpatient experience in clinical child neurology. The outpatient experience also must include a resident longitudinal/continuity clinic with attendance by each resident at least 1-half day weekly throughout the program. (The resident may be excused from this clinic when a rotation site is more than 1 hour travel time from the clinic site.)

### B. Teaching Rounds

Clinical teaching rounds must be supervised and directed by the faculty of the child neurology department or division. They must occur at least 5 days per week. The resident in child neurology must present cases and their diagnostic and therapeutic plans.

### C. Clinical Teaching

1. The resident must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in

conducting a thorough general and neurological examination, and in organizing and recording data. The training must include the indications for neurodiagnostic tests and their interpretation. The resident must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan.

2. Residents must participate in the evaluation of and decision making for patients with disorders of the nervous system requiring surgical management. This experience must be part of the clinical child neurology experience. The existence of a neurosurgical service with close interaction with the neurology service is essential.
3. The residents must participate in the management of children and adolescents with psychiatric disorders. They must learn about the psychological aspects of the patient-physician relationship and the importance of personal, social, and cultural factors in disease processes and their clinical expression. Residents must become familiar with the principles of psychopathology, psychiatric diagnosis and therapy, and the indications for and complications of drugs used in psychiatry. This must be accomplished by at least a 1-month experience (full-time equivalent) under the supervision of a qualified child and adolescent psychiatrist.
4. Residents must learn the basic principles of rehabilitation for neurological disorders, including pediatric neurological disorders.
5. The resident must participate in the management of pediatric patients with acute neurological disorders in an intensive care unit and an emergency department.
6. The resident must receive instruction in the principles of bioethics and in the provision of appropriate and cost-effective evaluation and treatment for children with neurologic disorders.
7. The resident must receive instruction in appropriate and compassionate methods of terminal palliative care, including adequate pain relief, and psychosocial support and counseling for patients and family members about these issues.

### D. Progressive Responsibility

Programs must provide opportunities for increasing responsibility and professional maturity of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place the resident in a position of taking increased responsibility for patients and in a liaison relationship with staff and referring physicians. Night call is essential in accomplishing this goal. Adequate faculty supervision is essential throughout the program. Neurological training must include assignment on a consultation service to the medical, surgical, and psychiatric services.

### E. Basic and Related Science

Residents must learn the basic sciences on which clinical child neurology is founded, including neuroanatomy, neural and behavioral development, neuropathology, neurophysiology, neuroimaging, neuropsychology, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, and epidemiology and statistics. Concentrated training in one or more of these areas, accomplished with a full-time equivalent experience of at least 2 months total, is required for each resident. Specific goals and objectives must be developed for this experience.

### F. Electives

Resident assignments need not be identical for each resident. Elective time should accommodate individual resident interests and previous training. Elective time should be a minimum of 3 months.

### G. Seminars and Conferences

1. Residents must regularly attend seminars and conferences in the following disciplines: neuropathology, clinical neurophysiology, neuroradiology, neuro-ophthalmology, cognitive development, neuromuscular disease, epilepsy, movement disorders, critical care, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neurogenetics, neuro-oncology, pain management, and general and child neurology. There must be gross and microscopic pathology conferences and clinical pathological conferences. The resident must have increasing responsibility for the planning and supervision of the conferences.
2. The resident must learn about major developments in both the basic and clinical sciences relating to child neurology. Residents must attend periodic seminars, journal clubs, lectures, didactic courses, and meetings of local and national neurological societies.

### H. Educational Policies

The program must provide for the following:

1. Residents must be allowed to spend an average of at least 1 full day out of 7 away from the hospital.
2. Residents must provide on-call duty in the hospital, but no more frequently than an average of every third night.
3. There must be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

### I. Resident Participation in Research

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and child neurology training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity must include:

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. participation in research, particularly in projects that are funded following peer review and result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. provision of support and encouragement for resident participation in scholarly activities.

### J. Resident Responsibility for Teaching

Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, are required aspects of the resident's education in neurology.

## VI. Evaluation

### A. Resident Evaluation (See also Section III.A.2.)

The program must have an evaluation system that provides information about each resident's educational progress and the extent to which each resident has accomplished the program's learning and performance objectives.

1. Formative Evaluation
  - a. Resident performance must be monitored and feedback provided on an ongoing basis.
  - b. A written evaluation of the resident's attainment of objectives specific to the rotation must be made after each rotation and reviewed with the resident so that areas of weakness and strength can be communicated to the resident. This evaluation must incorporate evaluations obtained from faculty in the department of neurology during the resident's rotation on the adult clinical service and flexible year experiences, together with evaluations obtained from other faculty in the department or division of child neurology.
  - c. The program director or his or her designee must meet with each resident semiannually in a formal feedback session to discuss the resident's standing in relation to specific learning and performance objectives. Plans to correct any deficiencies must be discussed. Each resident must be an active participant in formulating plans for his or her development. Evaluation data should be used to advise the resident and to make decisions regarding the progression in the resident's level of responsibility.
2. Final Evaluation

At the conclusion of the resident's period of training in the program, the program director must prepare a detailed, written evaluation of the resident's performance in relation to the program's learning and performance objectives and discuss this evaluation with the resident.
3. Records
  - a. A written record of the contents of the semiannual review session must be prepared and filed in the resident's permanent record. The written record of the evaluation and the review must be signed by the resident. The resident must have the opportunity to append a written response to the written record of the evaluation and review.
  - b. Each resident's permanent record must include the written evaluations completed for each defined educational experience, the written records from the semiannual reviews, results of formal assessments, and the resident's final evaluation. Written descriptions of any deficiencies and problem areas, plans for correcting the deficiencies, disciplinary actions, and commendations, where appropriate, should be included.

### B. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents must be used in this process.

1. Evaluations of residents' attainment of the program's learning and performance objectives must be used as the basis for program evaluation. Comparisons of these data against the program's own criteria, performance criteria set by the RRC, and attainment levels of residents at comparable levels of training should be performed as a primary means of assessing attainment of goals and objectives.
2. The residents must have an opportunity to evaluate the program in writing at least annually.

**C. Board Certification**

One measure of the quality of a training program is the proportion of its graduates who take the examinations of the ABPN and their performance on those examinations.

*Editorial Revisions: Effective September 1999*

## Program Requirements for Residency Education in Clinical Neurophysiology (Neurology)

[*Note:* This material constitutes the program requirements for residency education in clinical neurophysiology. The reader should refer as well to the Program Requirements for Residency Education in Neurology for information on requirements for core programs, to which programs in clinical neurophysiology must be attached. The reader is also referred to the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education* and to other publications of the Accreditation Council for Graduate Medical Education (ACGME), which outline the composition and function of all Residency Review Committees (RRCs); indicate the actions that any RRC may take, as well as the actions that the ACGME may take; and describe the appeals procedure, types of programs, and the relationships among the RRCs, their parent organizations, and the ACGME.

Requests to have a program accredited to train residents in clinical neurophysiology (or related inquiries regarding residency programs) should be addressed to Executive Director, RRC for Neurology, 515 N State St, Suite 2000, Chicago, IL 60610. All inquiries concerning prerequisite training or whether a physician is qualified to be examined for certification in clinical neurophysiology should be addressed to Executive Vice President, American Board of Psychiatry and Neurology (ABPN), 500 Lake Cook Rd, Ste 335, Deerfield, IL 60015.]

**I. Introduction****A. Definition**

1. Clinical neurophysiology is an area of medicine in which selected neurological disorders involving central, peripheral, and autonomic nervous systems and muscles are assessed, monitored, and treated using a combination of clinical evaluation and electrophysiological testing. A derangement of the normal physiology of the nervous system underlies these selected disorders, and an assessment of the electrophysiological abnormalities is an integral part of the evaluation process. Clinical neurophysiology requires a detailed knowledge of the normal physiology of the nervous system; the altered, abnormal electrophysiology; and the disease states involved.
2. Clinical neurophysiology is not confined to diagnostic techniques but includes the application of electrical, magnetic, and mechanical methods to the evaluation and treatment of a wide range of diseases, including
  - a. epilepsies,
  - b. cerebrovascular disease,
  - c. dementia and encephalopathies (coma, stupor, confusion, developmental delay, regression),
  - d. multiple sclerosis (including other demyelinating disorders),
  - e. movement disorders,
  - f. brain tumors and other mass lesions,
  - g. encephalitis/meningitis,
  - h. sleep disorders,

- i. traumatic disorders,
- j. myelopathies,
- k. motor neuron disease,
- l. radiculopathies and plexopathies,
- m. mononeuropathies,
- n. polyneuropathies, and
- o. myopathies and neuromuscular transmission disorders.

Another application of increasing importance is the use of intraoperative monitoring to guide surgical interventions.

**B. Duration and Scope of Training**

Training in neurophysiology shall encompass a total of 1 year, which must be preceded by the completion of a residency program in neurology, child neurology, or general psychiatry accredited in the United States or Canada. The training must be separate and distinct from all training required for certification in neurology, child neurology, or general psychiatry. The training must include significant didactic and clinical experience in two of the following:

1. Electroencephalography
2. Electromyography and nerve conduction studies
3. Polysomnography and assessment of disorders of sleep

The 1 year in clinical neurophysiology should be in a program that provides training in the broad area of clinical neurophysiology. The training must cover this broad area, with clinical or didactic experience in the following:

1. Electroencephalography
2. Electromyography and nerve conduction studies
3. Polysomnography and assessment of disorders of sleep
4. Movement disorder assessment, including tremor, spasticity, and dystonia
5. Evoked potential studies
6. Single fiber electromyography
7. Video EEG monitoring
8. Intraoperative monitoring and analysis
9. Testing of autonomic function

**C. Objective**

The objective of the total training outlined above is to provide the resident with the opportunity to develop the expertise necessary to evaluate and manage patients using the procedures and techniques of clinical neurophysiology.

**D. Program Design**

All educational components of a residency program should be related to program goals.

1. The program design and structure must be approved by the RRC for Neurology as part of the regular review process.
2. Participation by any institution providing 2 months or more of training in a program must be approved by the RRC.

**II. Personnel**

The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

**A. Program Director**

There must be a single program director responsible for the program.

1. Qualifications of the program director include the following:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.

- b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Psychiatry and Neurology (ABPN) in Clinical Neurophysiology or appropriate educational qualifications, as determined by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include the following:
- a. Full commitment to the residency program and devotion of sufficient time to provide leadership to the program and supervision of the residents in the program.
  - b. Monitoring the content and ensuring the quality of the program.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - f. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall

    - 1) at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
    - 2) communicate each evaluation to the resident in a timely manner;
    - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
    - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - h. Provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - i. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
  - j. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to

residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

- k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. The program providing training in clinical neurophysiology must have at least two faculty neurologists, including the director, who have completed training in this subspecialty. It is desirable that they be full-time members of the Department of Neurology.
2. Each of these members of the teaching staff should be certified by the American Board of Psychiatry and Neurology in clinical neurophysiology or possess appropriate educational qualifications, as determined by the RRC.
3. Appropriate expertise in the areas defined in Section I.B., above, must be present among the director and the faculty. The RRC recognizes that expertise in clinical neurophysiology is available from physicians board certified in many medical specialties, particularly in physical medicine and rehabilitation and in psychiatry, and actively encourages multidisciplinary cooperation in the training of residents.
4. The faculty shall devote sufficient time to the training program to ensure adequate clinical training of the resident in clinical neurophysiology and will be primarily involved in direction of the resident during the 1 year training.
5. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
6. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
7. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
8. The teaching staff must periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### **C. Other Teaching Staff**

In addition, faculty with suitable training and experience from other disciplines may be included in the teaching program.

#### **D. Other Program Personnel**

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### III. Clinical and Educational Facilities and Resources

#### A. Facilities

The section of clinical neurophysiology shall be within the Department or Division of Neurology and have facilities adequate for the educational program.

#### B. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### IV. Educational Programs

#### A. Curriculum

The training program is largely a clinical experience in which the resident develops and executes a plan of evaluation and treatment, including the appropriate technical skills to deal with patients with various neurological disorders.

#### B. Seminars and Conferences

The section of clinical neurophysiology must conduct formal lectures and teaching conferences in clinical neurophysiology on a regular basis. These must include clinical applications for each of the required neurophysiological studies and their correlation with the pertinent neurological disease processes as outlined in Section I.A, paragraph 2, above. Participation in clinical conferences dealing with epilepsy and neuromuscular disorders is of particular importance.

#### C. Teaching and Supervision

1. Supervisory faculty and staff must be available on a full-time basis. The resident must be exposed to a one-on-one relationship with the faculty. The teaching staff members must be available on site during both the neurophysiological studies and the clinical correlation of the results.
2. The resident in clinical neurophysiology must be given an active role in the teaching and training of neurology residents in which the section resides.

#### D. Clinical and Neurophysiological Basic Science Teaching

1. Clinical Science: The resident must have instruction and practical experience to permit him or her to develop diagnostic, procedural, technical, and interventional skills essential to the performance of clinical neurophysiology. The experience must include opportunities to observe, evaluate, and manage patients of all ages with a wide variety of disorders of the nervous system and muscles, as well as to learn the effectiveness of procedures. It should provide for basic and advanced training and education, as well as professional development. Experience must include appropriate outpatient care, inpatient care and support services in the fields of pathology and radiology. Examples of problems that must be included in the experience of the resident for the development of knowledge and skills specific to clinical neurophysiology are outlined in detail in Section I.A., paragraph 2, above. There must be experience in the development and execution of a plan of evaluation and treatment, including the appropriate technical skills to deal with patients with the specified

disorders. The opportunity must include experience in clinical diagnosis and accumulation /interpretation of laboratory data relevant to these disorders as part of outpatient and inpatient diagnostic evaluations.

Experience should include training in the various areas outlined in Section I.B., above. The resident's experience must include independent EEG, EMG, and/or sleep studies of a sufficient number of patients to achieve competence in the assessment of patients with a wide range of clinical disorders.

2. Basic Science: Residents must be provided with an advanced and extensive background in those basic sciences on which clinical neurophysiology is founded. These include neurophysiology, neuroanatomy, neuropharmacology, and neuropathology. Didactic lectures and seminars must include the basic neurological sciences as they pertain to clinical neurophysiology. Clinical neurophysiology residents should participate in the teaching of residents during their neurophysiology laboratory rotations at academic hospitals and major clinics.

#### E. Resident/Patient Ratio

The number of patients must be adequate to provide a sound educational program. It is the program director's responsibility to ensure that the number of patients is appropriate. They must be diversified as to age, sex, short-term and long-term neurological problems, and inpatients and outpatients. Making patients available to the clinical neurophysiology resident must not interfere with the training of residents in the core neurology training program.

#### F. Faculty/Resident Ratio

In general, there should be enough faculty with diverse interests and skills to make the breadth of training appropriate to a program meeting these special requirements, to ensure adequate clinical experience for residents, and to provide continued interaction (eg, through seminars, conferences, clinical supervision) among residents and faculty.

#### G. Diagnostic Skills

Clinical assignments should include progressively increasing responsibility for patient care with direct supervision by the appropriate faculty member or staff. Adequate faculty supervision is essential throughout the program.

#### H. Subspecialty Experience

While a wide range of clinical experience is mandatory, each resident should have extensive experience in one or more areas of clinical neurophysiology. Clinical assignments need not be identical for each resident. Subspecialty experience should accommodate individual interests.

#### I. Resident Evaluation

Resident evaluation by staff must be made at regular intervals so that areas of weakness and strength can be communicated to the resident. Records shall be maintained documenting resident experience and performance. Periodic review of the resident's performance is essential for planning his or her subsequent educational program. The evaluation will include judging the fund of knowledge, basic clinical competence, general skills in the primary specialty, and the specific technical skills required for clinical neurophysiology. The summary and final evaluation of the resident in clinical neurophysiology must be prepared by the program director of the clinical neurophysiology training program and should reflect the periodic evaluation of all the faculty. Each resident must be required to be proficient in the technical skills determined to be necessary for a clinical neurophysiologist and any related standards relevant to neurology.

### J. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents must be utilized in this process.

### K. Resident Participation in Research

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and clinical neurophysiology training must be conducted in centers where there is research in clinical neurophysiology. The program must include opportunities for the resident to participate in research projects and scholarly work relating to the field of clinical neurophysiology. This activity must include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support and encouragement for resident participation in scholarly activities.

### L. Resident Responsibility

The resident's education in clinical neurophysiology is reinforced by teaching the discipline to other residents in neurology and other disciplines and to medical students, nurses, and other health care personnel. Residents must be given this opportunity.

### M. Resident Duty Hours

To ensure an appropriate educational environment and prevent an excessive patient load, the program should provide for the following:

1. Residents should be allowed to spend an average of at least 1 full day out of 7 away from the hospital.
2. Residents should be assigned on-call duty in the hospital no more frequently than an average of every third night.
3. There should be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

### V. Other

#### A. Relation to Core Program

The 1 year of training in clinical neurophysiology must take place in a center in which there is an accredited residency program in neurology and with the written approval and support of the director of the neurology program.

#### B. Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in clinical neurophysiology provided by the American Board of Psychiatry and Neurology, as well as their performance on those examinations.

### C. Review of the Program

The provisions of the Institutional Requirements for residency training of the ACGME must also be met for approval of training in clinical neurophysiology.

ACGME: February 2000 Effective: January 2001

## Program Requirements for Residency Education in Neurodevelopmental Disabilities (Neurology)

### I. Introduction

#### A. Definition and Scope of the Specialty

The purpose of the training program is to prepare the physician for the independent practice as a neurodevelopmental disabilities specialist. The training program must combine training in the relevant basic sciences with supervised clinical training in the diagnosis and care of children with neurodevelopmental disabilities.

#### B. Duration and Scope of Education

1. Training in neurodevelopmental disabilities must be preceded by successful completion of 24 months of training in a pediatric residency training program accredited in the United States or Canada. The program director must review and approve the acceptability of these initial 2 years of training. This training should satisfy the requirements essential for board certification in pediatrics by the American Board of Pediatrics or its equivalent.
2. The length of the educational program is 4 years.
3. One year of the training must be a year of training in clinical adult neurology. Eighteen months must be spent in training in clinical child neurology and neurodevelopmental disabilities and 18 months in clinical and basic science training. Training in adult and child neurology should take place at the primary clinical site where the neurodevelopmental disabilities program is conducted. It is important that clinical and basic science training are within the same institution.
4. Any program that extends the length of training beyond 4 years must present an educational rationale that is consistent with the special requirements and the objectives for residency training. Approval for the extended curriculum must be obtained prior to implementation and at each subsequent review of the program.
5. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

#### C. Goals of Education

Programs must provide a broad educational experience in neurodevelopmental disabilities, which will prepare the resident to function as a neurodevelopmental disabilities specialist capable of providing comprehensive patient care in academic or clinical practice settings. The training must provide a strong scientific foundation that is confirmed by the training program and that will allow the resident to incorporate new developments in the basic sciences into their clinical practice. The clinical training in neurodevelopmental disabilities must also provide the resident with training that is supervised but training with increasing responsibility for outpatients and inpatients. This clinical training should lead to a defined level of clinical competence.

#### D. Program Design

1. All educational components of the neurodevelopmental disabilities residency program should be related to program goals.
2. The Neurology Residency Review Committee (RRC) must approve the program design and structure for neurodevelopmental disabilities training as part of the regular review process.

## II. Institutional Organization

### A. Sponsoring Institution

The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

The residency training program in neurodevelopmental disabilities must be within the department or division of an accredited program in neurology or an accredited program department of pediatrics.

### B. Participating Institutions

Definition/description of the requirements for the participating institutions: It is desirable, if possible, to have the training occur at a single institution. If the resources of two or more institutions are required to support the program, inter-institutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 3 months or more of the educational program must be approved prospectively by the RRC for Neurology. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program. The experience in child neurology and in neurodevelopmental disabilities should be in one integrated program. Training in two separate institutions will be allowed in unusual circumstances with the prior approval of the RRC.

1. Training in the sponsoring institution may be supplemented with training in no more than two additional, separate, ACGME-accredited programs for periods of 3 or more months.
2. The primary teaching faculty must have full time faculty status in the sponsoring institution.

### C. Appointment of Residents

1. Description of the appointment process: The development of a satisfactory program requires careful selection of applicants for appointment to the residency. The program director must adhere to the criteria for resident eligibility that are specified in the Institutional Requirements.
2. The RRC must prospectively approve the total number of residents in the program per year, based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.
3. Policy/procedure for changing resident complement or filling vacant resident positions:
  - a. The RRC must prospectively approve any change in the complement of residents in the training program prior to instituting the changes.
  - b. When a resident transfers into the training program, the training program director is responsible for communicating with the program director of the neurodevelopmental disabilities training program from which the trainee is transferring. The training director of the program into which the trainee is transferring must document in writing the concerns and training status of the transferring trainee prior to the transfer.

## III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director with primary responsibility for the program.

1. Qualifications of the program director
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.
  - c. There must be a single program director with primary responsibility for the program. There must also be an associate program director whose training complements the multidisciplinary scope of the subspecialty. The program director and associate program director must be certified by the American Board of Psychiatry and Neurology, the American Board of Pediatrics, or possess qualifications acceptable to the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
  - d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
  - f. The program director, with participation of the faculty, must:
    1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents using appropriate criteria and procedures;
    2. Communicate each evaluation to the residents in a timely manner;
    3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
    4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
    5. Provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Prepare an accurate statistical and narrative description of the program as requested by a review committee.
- j. Notify the RRC regarding major programmatic changes and changes in leadership in the training program.

#### B. Faculty

1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. In addition to the program director, the faculty must include at least two full-time faculty members who have appropriate educational qualifications in neurodevelopmental disabilities.
3. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. Additional faculty must include specialists in the following medical and allied health specialties: dentistry, genetics, neonatology, neurology, neurosurgery, ophthalmology, orthopedics, otolaryngology, pediatrics and its related subspecialties, physical medicine and rehabilitation, psychiatry, and child and adolescent psychiatry. Allied health and nonmedical disciplines that must be made available to the resident include audiology, nutrition, occupational therapy, physical therapy, neuropsychology, speech pathology, special and early education, social work, and vocational rehabilitation.
6. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
7. The faculty should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of faculty, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### IV. Facilities and Resources

- A. The institution's facilities and resources must provide space and equipment and patient populations to support the specialty education program. The residents must have access to computers and printers. There must be adequate space for the educational program, including meeting rooms; classrooms with audiovisual

and other educational aids, free space for staff; pertinent library materials; and diagnostic, therapeutic, and research facilities.

#### B. Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities

1. There must be a sufficient number of examining rooms, conference rooms, and research laboratories.
2. The inpatient and outpatient facilities must be adequate in size and diversity and must have the appropriate equipment necessary for a broad education in pediatrics and in neurology.
3. The institution must provide access to diagnostic and therapeutic equipment used in the diagnosis and treatment of children with neurodevelopmental disabilities. There must be adequate clinical laboratory facilities that rapidly report the results of necessary laboratory evaluations including clinical, pathological, electrophysiological, imaging, and other studies needed by the neurological and pediatric services.
4. Adequate chart and record keeping systems must be in place for patient treatment and evaluation.

#### C. Library

1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with a convenient nearby institution.
2. Library services should include electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collection of texts and journals must be readily available during nights and weekends.

#### D. Patient Populations

1. Programs must provide residents with patient care experiences in both the inpatient and outpatient settings. A sufficient number, variety, and complexity of patients ranging in age from infancy through adulthood must be present. The patient population must also be diversified with regard to long term and short term neurologic and developmental disorders.
2. The resident must have primary care or consulting responsibilities for hospitalized patients with neurologic disorders and neurodevelopmental disabilities. The resident must be involved with the management of patients with neurologic disorders who require emergency care. Adequate number of new and follow-up subspecialty outpatients must be available to provide the broad experience. The program must maintain an appropriate balance among the numbers and varieties of patients, numbers of preceptors, and the number of subspecialty residents in the program.

#### V. The Educational Program

##### A. Competencies

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate:

1. *Patient Care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
3. *Practice-Based Learning and Improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care

4. *Interpersonal and Communication Skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
6. *Systems-Based Practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

## B. Clinical Components

The program director and the faculty must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC as part of the regular review process.

1. Basic curriculum
  - a. One year of adult neurology in which some patients have chronic neurodevelopmental disabilities. This educational experience must include care for some adults with chronic neurodevelopmental disabilities in a continuity clinic during the 1 year of adult neurology training.
  - b. Eighteen months of clinical child neurology and neurodevelopmental disabilities: This time must include not only training in the neurodevelopmental disabilities encountered by a child neurologist but also training in a multidisciplinary team approach to children with chronic neurologic disabilities.
    - 1) Adequate training in neurodevelopmental disabilities requires that 50% of the resident's patient encounters are pediatric patients with neurodevelopmental disabilities.
    - 2) The training in the multidisciplinary team approach must be no less than 1 month (FTE).
  - c. Eighteen months of clinical and basic science training: This must include at least 1 month (FTE) experience in each of the following: child and adolescent psychiatry, neurosurgery, and neurorehabilitation. The resident must also gain significant clinical experience with behavioral neurology, neurogenetics/metabolism, neuromuscular disorders, neuro-oncology, and neuro-ophthalmology. Included in this time must be at least 6 months of elective time. In addition, the training in basic sciences must be included in this block of time.
2. Clinical training must be based upon a comprehensive neurodevelopmental curriculum. This includes exposure to all age groups and degrees of disability. While the focus is on learning principles of management, other foci include screening, assessment, diagnosis, interdisciplinary interaction, and advocacy. Training must be in outpatient and inpatient settings, and must include diagnostic assessment and management of the entire spectrum of neurodevelopmental disabilities. The trainee must have the opportunity to act as a neurodevelopmental pediatric consultant in developmental disabilities of other medical and nonmedical disciplines in inpatient, outpatient, and community settings.
3. There should be active participation of the teaching staff in clinical discussion, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. When on inpatient rotations the resident must make rounds at least 5 days each week. The resident must also take night call during the adult and child neurology training components.
4. The responsibility or independence given to residents in patient care should depend upon each resident's knowledge, manual skill, experience, and the complexity of the patient's illness.

5. Residents will be expected to follow inpatient cases during the duration of their hospital stay or the duration of the resident rotation. They will be expected to follow outpatients in a continuity clinic throughout the duration of their training period. This experience should include adults and children who are followed in the continuity clinic.
6. A faculty attending in conjunction with the resident, both on the inpatient and outpatient services, must see all patients. The attending may briefly precept patients well known to the resident.
7. Programs must provide opportunities for increasing responsibility and professional maturity of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place the resident in a position of taking increased responsibility for patients and into a liaison relationship with staff and referring physicians. Adequate faculty supervision is essential throughout the program.
8. The trainees should have structured opportunities throughout their training to develop and improve teaching skills. These activities should include the supervision of more junior trainees, as well as the teaching of other residents, medical students, nurses, and other health care professionals, either formally or informally.

## C. Didactic Components

1. Residents must obtain an adequate background in those basic sciences upon which child neurology and neurodevelopment are founded, including neuroanatomy, neuroembryology, neural development, neuropathology, basic neurophysiology, neuroimaging, neuropsychology, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, epidemiology, and biostatistics.
2. Specialty content
  - a. Residents must learn the fundamentals of specific diagnostic and management strategies of the major neurodevelopmental disabilities, including cognitive disorders (mental retardation, learning disabilities, progressive encephalopathies, etc), communication disorders, neurobehavioral disorders (autistic spectrum disorders), motor disabilities (cerebral palsy, neuromuscular disorders and other neuromotor disorders, movement disorders including Tourette syndrome), sensory disorders (including visual and auditory disorders), and multiple disabilities.
  - b. They must learn the appropriate instruments for neuropsychological assessment and understand how to apply developmental measurements and scales.
  - c. They must develop familiarity with anticipatory guidance and counseling of families with children with developmental disabilities.
  - d. They must learn strategies for pharmacological and non-pharmacological management of self-injurious and other troublesome behaviors.
  - e. They must learn the skills for the management of spasticity or other movement disorders. This must include some training in the technical skills needed to manage some patients with spasticity and movement disorders.
  - f. The resident must learn how to secure, organize, and manage patient resources and treatment.
3. Bioethics, economics and end-of-life content
 

The resident must receive instruction in the bioethics and economics of medicine. The resident must also receive instruction in appropriate and compassionate methods of end-of-life palliative care.
4. Conferences
  - a. Residents must regularly attend conferences in the following disciplines: child neurology, neurorehabilitation, neuro-

psychology, and clinical pharmacology. Residents must attend and participate in periodic seminars, journal clubs, lectures, didactic courses, and meetings of local and national neurological and neurodevelopmental societies. Residents must be periodically responsible for the design and presentation of clinical conferences.

- b. Faculty and residents should indicate attendance at all of the conferences and didactic sessions that constitute the core requirements for training (see above).
- c. Faculty must supervise and provide feedback to residents during resident-run conferences, and indicate areas of weakness or need for further development of educational skills.

#### D. Resident Policies

1. Appropriately qualified faculty must supervise all patient care services.
2. The program director must ensure, direct, and document proper supervision of residents at all times.
3. Residents must be provided with rapid, reliable systems for communicating with other/supervising residents and faculty. Supervising faculty with appropriate experience for the severity and complexity of the patient's condition must be available at all times.

#### E. Duty Hours and Conditions of Work

1. The physician's responsibilities for continuing patient care transcend normal working hours. To fulfill this obligation, provisions for night and weekend call should be established. However, residents should not be required regularly to perform excessively difficult or prolonged duties. The program director must ensure assignment of reasonable in-hospital duty hours. Except in the maintenance of continuity of care, residents at all levels should have the opportunity to spend at least 1 full day out of 7 per month free of clinical duties and should be on call in the hospital no more often than every third night. There should be adequate opportunity to rest and to sleep when on duty for 24 hours or more. On-call rooms arranged to permit adequate rest and privacy should be available for each resident on night duty in the hospital. There should be adequate back-up support if needed to maintain appropriate patient care.
2. The program must provide the residents with experience in direct and progressively responsible patient management as they advance through the educational program. The education must culminate in sufficiently independent responsibility for clinical decision making that the program director and faculty are assured the graduating resident has achieved the ability to make sound clinical decisions consistently.
3. Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, is a required aspect of the resident's education in neurodevelopmental disabilities.

#### F. Other Required Components

1. Scholarly activity  
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. This activity should include
  - a. Participation of the faculty in clinical and basic science teaching in a manner that promotes a spirit of inquiry and scholar-

ship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

- b. Participation in journal clubs and research conferences.
  - c. Participation in regional or national professional and scientific societies, particularly through presentations at the organizations meetings and publications in their journals.
  - d. Participation in research, particularly in projects that are funded following peer review and/or that result in publications or presentations at regional and national scientific meetings.
  - e. Offering of guidance and technical support, eg, research design and statistical analysis, for residents involved in research.
  - f. Provision of support for resident participation in scholarly activities.
  - g. Provision for opportunities for training in outcome research.
2. Related disciplines
    - a. The resident in neurodevelopmental disabilities must receive instruction in multidisciplinary management of children with neurodevelopmental disabilities. The resident must participate in team management of children in a variety of circumstances including developmental assessment, pediatric rehabilitation, and team management of children with developmental defects.
    - b. The resident must participate in activities that provide experience and training in public advocacy and community consultation.
  3. Appointment of other residents  
The appointment of other residents for education in neurodevelopmental disabilities must not dilute or detract from the educational opportunities of regularly appointed neurodevelopmental disabilities residents.  
The appointment of other residents requires a clear statement of the areas of training, clinical responsibilities, and duration of the special education. This statement must be supplied to the Residency Review Committee at the time the program is site visited.  
If such residents so appointed will, in the judgment of the Residency Review Committee, detract from the education of the regularly appointed neurodevelopmental disabilities residents, the accreditation status of the program may be adversely affected.
  4. Relation to core program  
The 4 years of training in neurodevelopmental disabilities must take place in a center in which there are accredited residency programs in child neurology, neurology, and pediatrics.

## VI. Evaluation

### A. Resident Evaluation

The program must have a formal mechanism by which the knowledge, skill, and professional growth of the residents are evaluated.

1. Policy for evaluation and promotion.
  - a. The residents' performance must be monitored and feedback provided on an ongoing basis.
  - b. The supervising faculty must evaluate each resident in writing at the completion of each rotation. This must be reviewed with the resident in a timely manner so that areas of weakness and strength can be communicated to the resident.
  - c. The program director or his or her designee must meet with each resident semiannually in a formal feedback session to discuss the resident's standing in relation to the specific learning and performance objectives. Plans to correct any deficiencies must be discussed. Each resident must be an active participant in formulating plans for his or her development. Evaluation data should be used to advise the resident and to make decisions regarding the progression in the resident's

level of responsibility. The evaluation data must include the results from annual objective written or clinical assessments of the resident's knowledge and skills.

- d. The assessment must specify how the acquisition of requisite skills for subspecialty competence is accomplished.
  - e. Written record of evaluations must be maintained, must be formally reviewed with the subspecialty resident, and must be accessible to authorized personnel. The resident should be advanced to positions of higher responsibility only on the basis of evidence that there is satisfactory progressive scholarship and professional growth.
  - f. Areas of evaluation should include knowledge, skills, and attitudes.
2. Final evaluation
    - a. At the conclusion of the resident's period of training in the program, the program director in consultation with the teaching staff must prepare a detailed, written evaluation of the resident's performance in relation to the program's learning and performance objectives and discuss this with the resident.
    - b. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability and acquisition of appropriate clinical and procedural skills to practice competently and independently.
    - c. The final evaluation should be discussed with the resident and signed and be part of the resident's permanent record.
    - d. It is to be maintained by the institution.

### 3. Records

A written record of the contents of the semiannual review session must be prepared and filed in the resident's permanent record. The resident must sign the written record of the evaluation and review. The resident must have the opportunity to append a written response to the written record of the evaluation and review.

Each resident's permanent record must include written evaluations completed for the defined educational experience, the written records from the semiannual reviews, the results of formal assessments, and the resident's final evaluation. Written descriptions of any deficiencies in problem areas, plans for the correcting the deficiencies, disciplinary actions, and commendations, where appropriate, should be included.

### B. Faculty Evaluation

Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activity. Residents should participate in these activities. The faculty should receive formal feedback from these evaluations.

### C. Evaluation of the Program

The educational effectiveness of the program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the residents have met the educational goals must be assessed. Written, confidential evaluations by residents should be utilized in this process.

The annual review and evaluation of the program in relation to the educational goals, the quality of the curriculum, the needs of the subspecialty residents, and the clinical and research responsibilities of the faculty must be documented. At least one subspecialty resident representative should participate in the periodic and annual reviews.

## VII. Board Certification

Residents who plan to seek certification in neurodevelopmental disabilities sponsored by the American Board of Psychiatry and Neu-

rology and the American Board of Pediatrics should communicate with the Executive Vice President/Secretary of the Board to ascertain the current requirements for acceptance as a candidate for certification.

## VIII. Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in neurodevelopmental disabilities provided by the American Board of Psychiatry and Neurology and the American Board of Pediatrics, as well as their performance on those examinations.

ACGME: February 12, 2002 Effective: February 12, 2002

# Program Requirements for Residency Education in Pain Management (Neurology)

## I. Scope and Duration of Training

### A. Definition and Scope of the Specialty

Pain management is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

### B. Duration of Training

Subspecialty training in pain management shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain management. The remainder may be in clinical activities or research relevant to pain management. Assignments must not be made to activities not directly related to pain management.

## II. Institutional Organization

### A. Relationship to Core Program

Accreditation of a subspecialty program in pain management will be granted only when the program is in direct association with a core residency program in neurology accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain management program is conducted. Rotations outside the institution in which the pain management program is based should not exceed 4 months.

### B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

### C. Institutional Policy: Resources

Because pain management is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain management that ensures cooperation of all involved disciplines.

## III. Program Director/Faculty

### A. Program Director

The program director must be a neurologist who has been certified in pain management by the American Board of Psychiatry and Neurology or who has appropriate educational qualifications in pain management as determined by the RRC. The program director should have appropriate experience in pain management as a clinician, administrator and educator.

The subspecialty program director has responsibility for the teaching program in pain management subject to the approval of the director of the core residency program.

### B. Medical Director

The medical director of the pain management service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain management, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

### C. Faculty

Qualified physicians with expertise in pain management must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain management must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than neurology. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain management.

At least three faculty with expertise in pain management should be involved in teaching pain management residents, and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

## IV. Facilities and Resources

### A. Space and Equipment

A pain management center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain management must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain management procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

### B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services

6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end of life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

### C. Patient Population

For each resident in the subspecialty of pain management each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain management.

### D. Library

There must be a departmental library with adequate material relevant to pain management. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

## V. The Educational Program

### A. Educational Environment

An accredited program in pain management must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

### B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain management. Subspecialty training in pain management must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques
5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain management

In addition to the above skills, the pain management resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis and follow-up.

### C. Didactic Components

The pain management curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain management
4. Pharmacology of centrally acting drugs used in pain management
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain management
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain management
12. Principles and techniques of cancer pain management, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain management
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain management center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions

### D. Pain Center Management

Subspecialty residents in pain management must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

### E. Resident Teaching

The subspecialty resident in pain management must become experienced in teaching principles of pain management to resident physicians, medical students, and other health-care professionals.

### F. Conferences

Pain management conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain management resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

## VI. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and neurology pain management training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:

- A. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- B. Participation in journal clubs and research conferences.
- C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
- D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- E. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
- F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract or publication.

## VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in neurology pain management must provide critical evaluations of each resident's progress and competence to the neurology pain management program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in neurology pain management must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in neurology pain management should be involved in continuous quality improvement, utilization review, and risk management.

## VIII. Board Certification

The record of its graduates in obtaining certification in pain management by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: June 2000 Effective: June 2000

# Program Requirements for Residency Education in Vascular Neurology (Neurology)

## I. Introduction

### A. Definition

1. Vascular neurology is an area of medicine in which selected neurological disorders involving the central nervous system due to ischemia or hemorrhage are assessed, monitored, treated, and prevented using a combination of clinical evaluation, imaging, interventional techniques, and medication. Specialists in vascular neurology are expected to
  - a. participate in interdisciplinary care of patients with vascular disease that incorporates aspects of epidemiology, basic science, clinical neurology, neuroimaging, critical care, endovascular surgical neuroradiology, neurologic vascular surgery, neurosurgery, neurosonology, cerebral blood flow and metabolism, neurobehavior, and neurorehabilitation
  - b. acquire detailed knowledge of the vascular supply of the central nervous system and its alteration by disease
  - c. manage stroke patients in outpatient and inpatient settings, including critical care units
2. Vascular neurology includes the prevention, evaluation, and treatment of a wide range of diseases resulting in vascular insults to the nervous system, including
  - a. Cardiogenic brain embolism
  - b. Large vessel cerebral atherosclerosis
  - c. Aortic arch cerebral and spinal embolism
  - d. Small cerebral artery occlusive disease
  - e. Hemodynamic brain ischemia
  - f. Migraine
  - g. Hereditary and acquired hypercoagulable states
  - h. Disseminated intravascular coagulation, thrombotic thrombocytopenic purpura, other hematological disorders
  - i. Antiphospholipid antibody syndromes
  - j. Substance abuse and drug toxicities
  - k. Hypertensive encephalopathy
  - l. Arterial dissection
  - m. Vasculopathies including inflammatory, infectious, Moya-moya
  - n. Cerebral venous thrombosis
  - o. Genetic and metabolic disorders
  - p. Intracerebral hemorrhage
  - q. Aneurysmal subarachnoid hemorrhage (SAH)
  - r. Subdural hematomas
  - s. Spinal cord infarction
  - t. Complications of vascular disease, including raised intracranial pressure, sepsis, and venous thrombosis
  - u. Vascular malformations

### B. Duration and Scope of Training

Training in vascular neurology shall encompass a total of 1 year that must be preceded by the completion of a residency program in neurology or child neurology accredited by the ACGME or the Royal College of Physicians and Surgeons (Canada). Elective time must be available for residents to pursue individual interests. Training must (1) be separate and distinct from all training required for certification in neurology and child neurology, and (2) include significant didactic and clinical experience in the care of patients with stroke and who are at risk for stroke in inpatient and outpatient settings as detailed in the Educational Programs section (IV). In particular, training must provide the following clinical experiences

1. inpatient management of patients with stroke, both ischemic and hemorrhagic
2. critical care management of patients with stroke, both ischemic and hemorrhagic
3. management of patients with neurosurgical cerebrovascular disorders, including aneurysms and arteriovenous malformations
4. emergent management of patients with stroke, including emergency department management
5. care of patients in different settings, including nursing homes, medical rehabilitation centers, and outpatient clinics
6. ordering and clinical correlation of diagnostic brain and vascular imaging
7. ordering and interpretation of diagnostic laboratory tests in stroke
8. involvement in community activities, including outpatient primary and secondary prevention of stroke
9. Participation in the delivery of educational programs about stroke and stroke prevention, including teaching medical students, ancillary health professionals, and residents
10. consulting with other medical professionals, including cardiologists, radiologists, neurosurgeons, vascular surgeons, and physiatrists in the overall care and management of stroke patients
11. participation in research, such as epidemiological studies, clinical trials, or laboratory research.

### C. Objective

The objective of the training outlined above is to provide the resident with the opportunity to develop the expertise necessary to evaluate and manage patients with inpatient and outpatient stroke disorders and risks.

### D. Program Design

1. All educational components of a residency program should be related to program goals. The program design and structure must be approved by the Residency Review Committee (RRC) for Neurology as part of the regular review process.
2. Participation by any institution providing 2 months or more of training in a program must be approved by the RRC.

## II. Personnel

The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include the following:
  - a. Completion of at least 1 additional year of stroke or vascular neurology training. At least 50% of the program director's practice should be devoted to care of stroke patients.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
  - c. Certification by the ABPN in Neurology and Vascular Neurology, or possession of appropriate educational qualifications in vascular neurology, as determined by the RRC
  - d. Appointment in good standing to the medical staff of an institution participating in the program
2. Responsibilities of the program director include the following

- a. Full commitment to the residency program and devotion of sufficient time to provide leadership to the program and supervision of the residents in the program
  - b. Monitoring the content and ensuring the quality of the program
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review
  - d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures
  - e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program
  - f. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians
  - g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician
  - h. Provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution
  - i. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances
  - j. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified
  - k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC
3. The program director, with participation of members of the teaching staff, shall
- a. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures
  - b. communicate each evaluation to the resident in a timely manner
  - c. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth
  - d. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. The program providing training in

- vascular neurology must have at least two faculty neurologists, including the director, who have completed training in this subspecialty. It is desirable that they be full-time members of the Department of Neurology.
2. Each member of the teaching staff should be certified by the ABPN in neurology or vascular neurology or possess appropriate educational qualifications as determined by the RRC.
  3. Appropriate expertise in the areas defined in Section I.B., above, must be present among the director and the faculty. The RRC recognizes that expertise in stroke is available from physicians board certified in many medical specialties, particularly in physical medicine and rehabilitation, cardiology, neurosurgery, vascular surgery and psychiatry, and actively encourages multidisciplinary cooperation in the training of residents.
  4. The faculty shall devote sufficient time to the training program to ensure adequate clinical training of the resident in vascular neurology and will be primarily involved in direction of the resident during the 1-year training.
  5. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
  6. In addition to coordination, the program director shall appoint the individual responsible for the residents at each site. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
  7. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
  8. The teaching staff must periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Other Teaching Staff

Faculty with suitable training and experience from other disciplines should be included in the teaching program.

#### D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### III. Clinical and Educational Facilities and Resources

#### A. Patient Population

There must be an adequate number and variety of patients in both inpatient and outpatient settings to expose residents to the broad spectrum of vascular diseases of the brain. Inpatient experience should include evaluation of a substantial number of stroke patients. No more than 50% of these should be hemorrhagic strokes. Outpatient experience should include involvement in management of at least 50 patients as the primary physician under supervision of a faculty member.

## B. Facilities

Vascular neurology shall be within the Department or Division of Neurology and have facilities adequate for the educational program. There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and residents, pertinent library materials, and diagnostic, therapeutic, and research facilities.

## C. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## IV. Educational Program

### A. Curriculum

The training program is largely a clinical experience in which the resident develops and executes a plan of evaluation and treatment, including the appropriate technical skills to deal with patients with various cerebrovascular disorders. This curriculum must include instruction in the following:

1. Fundamental mechanisms of stroke and other nervous system vascular disorders
2. Etiopathogenic characterization of stroke and other nervous system vascular disorders
3. Clinical manifestations of stroke and other nervous system vascular disorders
4. Diagnostic strategies in stroke and other nervous system vascular disorders
5. Treatment strategies in stroke and other nervous system vascular disorders
6. Epidemiologic issues

### B. Seminars and Conferences

The section of Vascular Neurology must conduct seminars and conferences that must include:

1. Formal lectures and teaching conferences in vascular neurology on a schedule that will allow the training program to cover all of the topics listed under I.A.2.  
A monthly didactic teaching conference dedicated to vascular neurology topics. The didactic teaching conference should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the field of vascular neurology. The didactic teaching conference should embrace the scope of vascular neurology as outlined in Section I of these Program Requirements. The monthly conference should be supplemented by journal clubs, pathology meetings, neuroanatomy courses, and neuroscience grand rounds related to vascular neurology. There should also be didactic and interactive conference time, including interdepartmental meetings with neurosurgeons and neuro-radiologists. Trainees should make patient management rounds with the attending faculty. Patient management rounds should be supplemented with weekly or bi-weekly teaching rounds during which specific vascular neurology patient management issues are discussed in depth by the faculty. Multidisciplinary conferences with neuroradiology, neurosurgery, and neuropathology.

## C. Teaching and Supervision

1. Supervisory faculty and staff must be available on a full-time basis. There must be a 1:1 faculty and resident ratio.
2. The resident must be given an active role in the teaching and training of neurology residents in which the section resides.
3. Clinical and Basic Science Teaching

### a. Clinical Science

The resident must have instruction and practical experience to foster the development of diagnostic, procedural, technical, and interventional skills essential to the practice of vascular neurology, including

- 1) opportunities to observe, evaluate, and manage patients of all ages with a wide variety of disorders of the cerebrovascular and nervous systems
- 2) learning about the effectiveness of procedures to manage stroke
- 3) participating in clinical experiences that provide for basic and advanced training and education, as well as professional development
- 4) acquiring systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services
- 5) participating in problem-based learning that includes experience in the areas critical to vascular neurology as outlined in Section I.A.2
- 6) Developing and executing plans for evaluation and treatment, including the appropriate technical skills for the noninvasive management of stroke patients. These skills must include familiarity with the indications for intubation, extubation/weaning and the general principles of respirator management and the placement of catheters for the supportive care and pharmacological treatment of strokes.
- 7) opportunities to formulate a clinical diagnosis and order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
- 8) progressive experience for training as outlined in Section I.B that includes caring for a sufficient numbers of stroke patients to achieve competence in the assessment of patients with a wide range of vascular neurology disorders

### b. Basic Science

Residents must be provided with an advanced and extensive background in those basic sciences on which vascular neurology is founded. In particular, the basic science program must include neuroepidemiology, neuroanatomy, neuropharmacology, neuropathology, and neurobiology, as well as mechanisms of atherosclerosis and coagulation. Didactic lectures and seminars must include the basic neurological sciences as they pertain to stroke.

## 4. Resident/Patient Ratio

The number of patients must be adequate to provide a sound educational program. The program director must ensure an appropriate number and variety of patients, with particular attention to balance in age, gender, short-term and long-term neurological problems, and inpatients and outpatients.

## 5. Faculty/Resident Ratio

There must be a ratio of at least two vascular neurology faculty for each vascular neurology resident. Faculty must demonstrate diverse interests and skills to contribute to the depth and breadth of training necessary to fulfill the program requirements for residency education in vascular neurology, to ensure adequate clinical experience for residents, and to provide for an

educational environment that supports seminars, conferences, and reliable supervision of residents.

#### 6. Diagnostic Skills

The residents must learn how to integrate information obtained from history, physical examination, imaging study results, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan. The resident is required to learn about the indications for and potential pitfalls of diagnostic tests and to interpret the results in the context of the clinical situation. These diagnostic tests must include the following imaging studies: cranial and spinal MRIs and CTs, magnetic resonance imaging, cerebral angiography, carotid and cranial doppler studies, single photon emission tomography (SPECT), and photon emission tomography (PET). The resident must also learn the appropriate biochemical and molecular testing for strokes at different ages.

The resident should also learn the temporal profile of the clinical, biochemical, and radiological changes that accompany vascular insults of the nervous system. The acquisition of the diagnostic skill must be provided by clinical assignments that provide a progressive increase in responsibility for patient care with direct supervision by the appropriate faculty member or staff.

#### 7. Subspecialty Experience

While a wide range of clinical experience is mandatory, each resident should have extensive experience in one or more areas of vascular neurology. Clinical assignments need not be identical for each resident. Subspecialty experience should accommodate individual interests.

#### 8. Resident Evaluation

Resident evaluation by staff must be made at regular intervals so that areas of weakness and strength can be communicated to the resident. Records shall be maintained documenting resident experience and performance. Periodic review of the resident's performance is essential for planning his or her subsequent educational program. The evaluation will include judging the fund of knowledge, basic clinical competence, general skills in the primary specialty, and the specific technical skills required for vascular neurology. The summary and final evaluation of the resident in vascular neurology must be prepared by the program director of the vascular neurology training program and should reflect the periodic evaluation of all of the faculty.

#### 9. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written, confidential evaluations by residents must be utilized in this process.

#### 10. Resident Participation in Research

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and vascular neurology training must be conducted in centers where there is research in vascular neurology. The program must include opportunities for the resident to participate in research projects and scholarly work relating to the field of vascular neurology. This activity must include the following

- a. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and

abnormal states and the application of current knowledge to practice

- b. Participation in journal clubs and research conferences
- c. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals
- d. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings
- e. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research
- f. Provision of support and encouragement for resident participation in scholarly activities

#### 11. Resident Duty Hours

To ensure an appropriate educational environment and prevent an excessive patient load, the program should provide for the following

- a. Residents should be allowed to spend an average of at least 1 full day out of 7 away from the hospital
- b. Residents should be assigned on call duty in the hospital no more frequently than an average of every third night
- c. There should be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on call periods

#### 12. Resident Responsibility for Teaching

The resident's education in vascular neurology is reinforced by teaching the discipline to other residents in neurology and other disciplines and to medical students, nurses, and other health care personnel. Residents must be given this opportunity.

### V. Other

#### A. Relation to Core Program

The 1 year of training in vascular neurology must take place in a center in which there is an ACGME-accredited residency program in neurology and with the written approval and support of the director of the neurology program.

#### B. Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in vascular neurology provided by the American Board of Psychiatry and Neurology, as well as their performance on those examinations.

#### C. Review of the Program

The provisions of the Institutional Requirements for residency training of the ACGME must also be met for approval of training in vascular neurology.

*ACGME: February 12, 2002 Effective: February 12, 2002*

# Program Requirements for Residency Education in Nuclear Medicine

## I. Introduction

### A. Definition and Scope of the Specialty

Nuclear medicine is the clinical and laboratory medical specialty that employs the measured nuclear properties of radioactive and stable nuclides for diagnosis, therapy, and research and to evaluate metabolic, physiologic, and pathologic conditions of the body.

### B. Duration and Scope of Education

#### 1. Length of program

The length of the nuclear medicine residency program is 2 years, following 1 year of preparatory clinical residency training (see below).

#### 2. Admission prerequisites

The length of the nuclear medicine residency program is 2 years. However, a minimum of 3 years of graduate medical education is necessary to train a physician in the field of nuclear medicine. Before entering a nuclear medicine residency, residents must satisfactorily complete 1 year of training in an ACGME-accredited or Royal College of Physicians and Surgeons of Canada-accredited or equivalent program that provides broad clinical education, with primary emphasis on the patient and the patient's clinical problems. [Note: Candidates who have not completed the clinical year in an ACGME- or RCPSC-accredited program should consult the nuclear medicine program director and/or the American Board of Nuclear Medicine for determination of eligibility.] Residents should have a sufficiently broad knowledge of medicine to obtain a pertinent history, perform an appropriate physical examination, and arrive at a differential diagnosis.

#### 3. Specific description of program format

Residencies in nuclear medicine must teach the basic skills and clinical competence that constitute the foundations of nuclear medicine practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. Clinical experience must include the opportunity to recommend and plan, conduct, supervise, interpret, and dictate reports for nuclear medicine procedures that are appropriate for the existing clinical problem or condition.

### C. Broad Description of Training Objectives and Goals

The program must be structured so that the resident's clinical responsibilities increase progressively during training. At the completion of the training program, residents should be proficient in all areas of clinical nuclear medicine and be able to function independently as nuclear medicine consultants, plan and perform appropriate nuclear medicine procedures, interpret the test results, and formulate a diagnosis and an appropriate differential diagnosis. The residents should be qualified to recommend therapy or further studies. If radionuclide therapy is indicated, they should be capable of assuming responsibility for patient care. Residents should develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render them capable of the independent practice of nuclear medicine.

The director and teaching staff of a program shall prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Nuclear Medicine as

part of the regular review process and must be distributed to residents on commencement of their training.

## II. Institutional Organization

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

### A. Sponsoring Institution

A residency program in nuclear medicine must have a single sponsoring institution. The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

### B. Participating Institutions

Limited outside rotations may be utilized to supplement training in a branch of nuclear medicine, eg, positron emission tomography (PET) or radionuclide therapy, if there is insufficient patient volume in the sponsoring institution. When the resources of another institution are utilized, letters of affiliation must be approved by the institutional governing boards. Affiliated institutions should not be so distant as to make it difficult for residents to travel between institutions for participation in clinical responsibilities or didactic activities. Assignments at affiliated institutions must not be made primarily to meet service needs. A member of the teaching staff of each participating institution must be designated to assume responsibility for day-to-day activities of the program at that institution, with overall coordination by the program director.

Participation by any institution providing 3 months or more of training in the program must be approved by the RRC for Nuclear Medicine, according to criteria similar to those applied to the primary institution. A maximum of 6 months of the 2-year nuclear medicine program may be spent outside the parent and integrated institutions on rotation to affiliated sites. [Note: An affiliation may be said to exist where there is a formal agreement between an accredited program and another institution to make facilities, clinical experience, supervision, and teaching sessions available to residents of the program who will rotate through the affiliated hospital. Rotations are restricted, as noted above.]

An integrated relationship is one in which the program director (a) appoints the members of the teaching staff and makes recommendations for the appointment of the chief of service at the integrated institution, (b) determines all rotations and assignments at the integrated institution, and (c) is responsible for the overall conduct of the educational program in the integrated institution. The amount of time spent in integrated institutions is not restricted.]

### C. Appointment of Residents

Programs must demonstrate the ability to recruit and retain qualified residents. Residents must be selected for appointment to the program in accordance with institutional and departmental policies and procedures. Residents should be appointed only when their documented prior experience and attitudes demonstrate the presence of abilities necessary to master successfully the clinical knowledge and skills required of all program graduates. All residents must have demonstrated understanding and facility in using the English language. Residents should be reappointed only when their clinical judgment, medical knowledge, history-taking, professional attitudes, moral and ethical behavior, and clinical performance are documented to be entirely satisfactory.

### III. Faculty Qualifications and Responsibilities

#### A. Program Director

##### 1. Qualifications of the Program Director

There must be a single program director responsible for the program. The strength of the program is directly related to the professional competence and leadership qualities of the program director, whose term of appointment must be sufficient to ensure continuity for the program. The qualifications of the program director include:

- documented clinical, educational, and administrative abilities and experience;
- certification by the American Board of Nuclear Medicine or other appropriate credentials and experience acceptable to the RRC for Nuclear Medicine;
- broad knowledge of, experience with, and commitment to general nuclear medicine, along with sufficient academic and administrative experience to ensure effective implementation of these Program Requirements and sufficient experience participating as an active faculty member in an accredited residency program;
- compliance with professional standards of ethical behavior;
- a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to his or her own continuing medical education, and participation in scholarly activities; and
- appointment in good standing to the medical staff of an institution participating in the program and licensure to practice in the state where the sponsoring institution is located. (Certain federal programs are exempted.)

A complete curriculum vitae of the program director shall be filed with the executive director of the RRC at the time of appointment and updated with each review of the program by the RRC.

##### 2. Responsibilities of the Program Director

The program director is responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation. Specific responsibilities include:

- preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
- selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians. (See also Section V.D.1, "Resident Policies," on supervision of residents.)
- regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. (See also Section VI.A, "Resident Evaluation," on evaluation of residents.)

- implementation of fair personnel procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- notification to the RRC of any changes, as they occur, that might significantly alter the educational experience, such as a change in program director, key faculty members, institutional affiliation, or in the number of residency positions offered.
- preparation of an accurate statistical and narrative description of the program, as requested by the RRC.

#### B. Faculty

##### 1. Number of Faculty Required

The number of nuclear medicine faculty and the size of the technologist staff must be large enough to carry out the workload of the facility as well as the responsibilities of the teaching program. The ratio of faculty to residents shall be sufficient to ensure adequate clinical supervision of residents at all times and to provide teaching of the clinical and basic sciences.

##### 2. Certification Requirements

The medical faculty who participate in the program must be certified by the American Board of Nuclear Medicine or possess other appropriate credentials and/or experience acceptable to the RRC for Nuclear Medicine. Basic science faculty should possess equivalent qualifications in their fields of interest, including credentials or experience acceptable to the RRC for Nuclear Medicine.

##### 3. Academic and Professional Qualifications

All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, and a commitment to their own continuing medical education. Faculty members should participate actively in the educational program and be willing to devote the necessary time and effort. The faculty must be able to nurture the attributes of the scholar, teacher, and humanist and must be available to residents for advice and counseling.

##### 4. Scholarly Activities

While not all faculty members must be investigators, the faculty as a whole must demonstrate involvement in research or other scholarly activities, including:

- participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry, scholarship, and learning.
- participation in journal clubs and research conferences.
- participation in research, particularly in projects that result in publication in scientific, peer-reviewed journals or recognized educational publications or in presentations at regional and national scientific meetings.
- participation in regional or national professional and scientific societies, particularly through presentations at meetings and publication in such societies' journals.
- offering of guidance and technical support such as research design and statistical analysis for residents involved in research or other scholarly activities.

The faculty as a whole must have demonstrated ongoing participation in such activities during the past 5 years.

The faculty must be organized and have regular, documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

### A. Patient Population and Procedures

The institution sponsoring a residency program in nuclear medicine should be of sufficient size and composition to provide an adequate volume and variety of patients for resident training.

### B. Space and Equipment

The program must provide adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in nuclear medicine and must possess the modern facilities and equipment required to practice nuclear medicine.

### C. Other Specialties

A nuclear medicine residency program requires the support of services in other specialties, notably medicine, surgery, radiology, pediatrics, and pathology. Training resources should be such that the total number of residents in the institution is large enough to permit peer interaction and intellectual exchange with residents in the nuclear medicine program.

### D. Library

Residents must have ready access to a major medical library with a representative selection of books and journals related to nuclear medicine, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends. Internet access must be readily available.

## V. Educational Program

### A. Clinical Components

#### 1. Curriculum Content

The residency program in nuclear medicine should include the diagnostic, therapeutic, and investigational uses of radionuclides. It should be of sufficient breadth to ensure that all residents become thoroughly acquainted with current nuclear medicine diagnostic and therapeutic applications. The training experience should ensure ample opportunity to attain sequentially increasing competence in selecting the most appropriate nuclear medicine studies for the patient, performing these studies in the technically correct manner, interpreting the information obtained, correlating this information with other diagnostic studies, and treating and following up with the patient who receives radionuclide therapy. Under adequate faculty supervision, the resident should participate directly in the performance of imaging studies, non-imaging measurements and assays, and therapeutic procedures.

Residents must be provided structured opportunities to (a) learn the indications, contraindications, complications, and limitations of specific procedures; (b) develop technical proficiency in performing these procedures; (c) learn to interpret the results of these procedures; and (d) dictate reports and communicate results promptly and appropriately. The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad range of common clinical nuclear medicine procedures. This must include experience in each of the following categories:

- a. Musculoskeletal studies, including bone scanning for benign and malignant disease, and bone densitometry.
- b. Myocardial perfusion imaging procedures performed with radioactive perfusion agents in association with treadmill and

pharmacologic stress (planar and tomographic, including gated tomographic imaging). Specific applications should include patient monitoring, with special emphasis on electrocardiographic interpretation, cardiopulmonary resuscitation during interventional pharmacologic or exercise stress tests, pharmacology of cardioactive drugs, and hands-on experience with performance of the stress procedure (exercise and pharmacologic agents) for a minimum of 50 patients. Program directors must be able to document the experience of residents in this area, eg, with logbooks.

- c. Radionuclide ventriculography performed with ECG gating for evaluation of ventricular performance. The experience should include first pass and equilibrium studies and calculation of ventricular performance parameters, eg, ejection fraction and regional wall motion assessment.
- d. Endocrinologic studies, including thyroid, parathyroid, and adrenal imaging, along with octreotide and other receptor-based imaging studies. Thyroid studies should include measurement of iodine uptake and dosimetry calculations for radioiodine therapy.
- e. Gastrointestinal studies of the salivary glands, esophagus, stomach, and liver, both reticuloendothelial function and the biliary system. This also includes studies of gastrointestinal bleeding, Meckel diverticulum, and C14 urea breath testing.
- f. Hematologic studies, including red cell and plasma volume, splenic sequestration, hemangioma studies, labeled granulocytes for infection, thrombus imaging, bone marrow imaging, and B12 absorption studies.
- g. Oncology studies, involving gallium, thallium, sestamibi, antibodies, peptides, fluorodeoxyglucose (FDG), and other agents as they become available. Oncology experience should include all the common malignancies of the brain, head and neck, thyroid, breast, lung, liver, colon, kidney, bladder, and prostate. It should also involve lymphoma, leukemia, melanoma, and musculoskeletal tumors. Hands-on experience with lymphoscintigraphy is very important.
- h. Neurologic studies, including cerebral perfusion with both single photon emission computed tomography (SPECT) and positron emission tomography (PET), cerebral metabolism with FDG, and cisternography. This experience should include studies of stroke, dementia, epilepsy, brain death, and cerebrospinal fluid dynamics.
- i. Pulmonary studies of perfusion and ventilation performed with radiolabeled macroaggregates and radioactive gas or aerosols used in the diagnosis of pulmonary embolus, as well as for quantitative assessment of perfusion and ventilation.
- j. Genitourinary tract imaging, including renal perfusion and function procedures, clearance methods, renal scintigraphy with pharmacologic interventions, renal transplant evaluation, vesicoureteral reflux, and scrotal and testicular imaging.
- k. Therapeutic administration of radiopharmaceuticals, to include patient selection and understanding and calculation of the administered dose. Specific applications should include radioiodine in hyperthyroidism and thyroid carcinoma, and may include radiophosphorus (soluble) in polycythemia vera and other myeloproliferative disorders, radiocolloids for therapy, radionuclides for painful bone disease, and radioligand therapy. Program directors must be able to document the experience of residents in this area, including patient follow-up, eg, with logbooks.
- l. Imaging procedures using positron-emitting radionuclides, medical cyclotron operation for production of PET radionuclides, and experience in PET radiochemistry synthesis.

m. Co-registration and image fusion of SPECT and PET images with computed tomography (CT) and magnetic resonance imaging (MRI) studies.

If the program cannot provide sufficient clinical experience in PET imaging, supplemental clinical training or at least didactic instruction should be made available.

#### 2. On Call Experience

In addition, each resident must be given the experience of being on-call and assuming the responsibility for providing consultative activities for procedures performed on an emergency basis.

#### 3. Patient Population Requirements

While the number of procedures may vary from one training program to another, a well-designed program will perform at least 4,000 common nuclear medicine imaging procedures annually, a wide variety of non-imaging procedures, and at least 15 radionuclide therapeutic procedures annually. Imaging procedures should be distributed over the entire spectrum of nuclear medicine practice, including the pediatric age group. A minimum of 100 pediatric nuclear medicine cases should be available annually. Resident rotations to hospitals with a large pediatric caseload should be considered if the number of pediatric studies in the primary institution averages fewer than 100 per year.

#### 4. Patient Management

The program must provide the residents with experience in direct and progressively responsible patient management as they advance through training. This training must culminate in sufficient independent responsibility for clinical decision making to ensure that the graduating resident has achieved the ability to function independently and in a proficient manner in all nuclear medicine consultative areas.

### B. Didactic Components

#### 1. Basic Science Content

Study of the basic sciences that constitute the foundation for clinical nuclear medicine must be part of the resident's education. This is most effectively accomplished through a combination of formal didactic lectures and discussion of these topics in conferences. The program director must develop a formal didactic schedule that indicates the specific date and time of each lecture, the topic of the lecture, the faculty individual presenting the lecture, and the duration of the lecture. This schedule must incorporate each of the elements of basic science detailed below, and the program director must provide written documentation of this schedule as part of the information submitted to the RRC for its review of the program. The schedule must be current for each academic year. Visiting faculty and residents may provide some of the lectures.

The training program must provide didactic instruction in the following areas:

- a. Physics: structure of matter, modes of radioactive decay, particle and photon emissions, and interactions of radiation with matter.
- b. Instrumentation: principles of instrumentation used in detection, measurement, and imaging of radioactivity with special emphasis on gamma cameras, including SPECT and PET devices, and associated electronic instrumentation and computers employed in image production and display.
- c. Mathematics, statistics, and computer sciences: probability distributions; medical decision making; basic aspects of computer structure, function, programming, and processing; applications of mathematics to tracer kinetics; compartmental modeling; and quantification of physiologic processes.
- d. Radiation biology and protection: biological effects of ionizing radiation, means of reducing radiation exposure, calculation of the radiation dose, evaluation of radiation overexposure, medi-

cal management of persons overexposed to ionizing radiation, management and disposal of radioactive substances, and establishment of radiation safety programs in accordance with federal and state regulations.

- e. Radiopharmaceuticals: reactor, cyclotron, and generator production of radionuclides; radiochemistry; pharmacokinetics; and formulation of radiopharmaceuticals.

An aggregate of at least 100 hours per year should be devoted to basic science instruction, ie, formal lectures and formal labs. An appropriate balance of time should be allocated to the major subject areas, which must include physical science and instrumentation: 50 hours per year; radiobiology and radiation protection: 15 hours per year; mathematics and statistics: 10 hours per year; radiopharmaceutical chemistry: 15 hours per year; computer science: 10 hours per year. Instruction in the basic sciences should not be limited to only didactic sessions. The resident's activities also should include laboratory experience and regular contact with basic scientists in their clinical adjunctive roles.

#### 2. Didactic Clinical Content

There must be didactic instruction in both diagnostic imaging and non-imaging nuclear medicine applications and therapeutic applications. The instruction must be well organized, thoughtfully integrated, and carried out on a regularly scheduled basis. The program director must develop a formal didactic schedule that indicates the specific date and time of each lecture, the topic of the lecture, the faculty individual presenting the lecture and the duration of the lecture. This schedule must incorporate each of the elements of the clinical specialty detailed below, and the program director must provide written documentation of this schedule to the RRC for its review of the program. Visiting faculty and residents may provide some of the lectures. The schedule must be current for each academic year.

Instruction must include the following areas:

- a. Diagnostic use of radiopharmaceuticals: clinical indications, technical performance, and interpretation of in vivo imaging of the body organs and systems, using external detectors and scintillation cameras, including SPECT and PET
- b. Exercise and pharmacologic stress testing: the pharmacology of cardioactive drugs; physiologic gating techniques; patient monitoring during interventional procedures; management of cardiac emergencies, including electrocardiographic interpretation and cardiopulmonary life support; and correlation of nuclear medicine procedures with other pertinent imaging modalities such as angiography, computed tomography, bone density measurement, ultrasonography, and magnetic resonance imaging.
- c. Non-imaging studies: training and experience in the application of a variety of non-imaging procedures, including instruction in the principles of immunology; preparation of radiolabeled antibodies; uptake measurements; in-vitro studies including Schilling test, glomerular filtration rate, red blood cell mass and plasma volume, and breath tests.
- d. Therapeutic uses of unsealed radiopharmaceuticals: patient selection and management, including dose administration and dosimetry, radiation toxicity, and radiation protection considerations in the treatment of metastatic cancer and bone pain, primary neoplasms, solid tumors, and malignant effusions; and the treatment of hematologic, endocrine, and metabolic disorders
- e. Quality management and improvement: principles of quality management and performance improvement, efficacy assessment, and compliance with pertinent regulations of the Nu-

clear Regulatory Commission and the Joint Commission on the Accreditation of Healthcare Organizations

3. Conferences and Seminars

All residents must participate in regularly scheduled clinical nuclear medicine conferences and seminars and interdisciplinary conferences, in which the resident is responsible for presenting case materials and discussing the relevant theoretical and practical issues. There should be active resident participation in well-structured seminars and journal clubs that review the pertinent literature with respect to current clinical problems and that include discussion of additional topics to supplement the didactic curriculum.

a. Clinical interpretation conference

All residents must participate in regularly scheduled, usually daily, procedure interpretation and review conferences. The program must provide the resident with the opportunity to gain progressively independent responsibility for review, technical approval and acceptance, and interpretation and dictation of consultative reports on completed nuclear medicine procedures.

b. Teaching files

Teaching case files involving diagnostic and therapeutic nuclear medicine procedures should cover the full spectrum of clinical applications; they should be indexed, coded with correlative and follow-up data, and readily accessible for resident use. There must be a mechanism for maintaining case records and treatment results to facilitate patient follow-up and to provide teaching material.

Electronic availability of teaching files is acceptable as a substitute or enhancement of on-site teaching case files.

**C. General Competencies**

In addition to developing competence in the specific nuclear medicine-related areas described above, residents are expected to attain competence in the following general areas:

1. Patient Care

- a. Obtain information about the patient related to the requested test or therapy using patient interview, chart and computer data base review, physical examination, and contact with the referring physician.
- b. Select appropriate procedures or therapy based on the referring physician's request and the patient's history. This involves selection of the appropriate radiopharmaceutical, dose, imaging technique, data analysis, and image presentation. It also includes review of image quality, defining the need for additional images and correlation with other imaging studies such as x-rays, CT, MRI, or ultrasound.
- c. Communicate results promptly and clearly to the referring physician or other appropriate health care workers. This communication should include clear and succinct dictation of the results.
- d. Conduct therapeutic procedures. Therapeutic procedures must be done in consultation with an attending physician who is a licensed user of radioactive material. These procedures should include dose calculation, patient identity verification, explanation of informed consent, documentation of pregnancy status, counseling of patients and their families on radiation safety issues, and scheduling follow-up after therapy.
- e. Maintain records (logs) of participation in nuclear cardiology pharmacologic and exercise studies and in all types of therapy procedures.

2. Medical Knowledge

Residents should closely follow scientific progress in nuclear medicine and learn to incorporate it effectively for modifying and improving diagnostic and therapeutic procedures.

- a. Become familiar with and regularly read the major journals in nuclear medicine. During the residency this will involve regular participation in journal club.
- b. Use computer technology including internet web sites and CDROM teaching disks.
- c. Participate in the annual in-service examination.
- d. Know and comply with radiation safety rules and regulations, including NRC and/or agreement state rules, local regulations, and the ALARA (as low as reasonably achievable) principles for personal radiation protection.
- e. Understand and use QC (quality control) procedures for imaging devices, laboratory instrumentation, and radiopharmaceuticals.

3. Interpersonal Skills and Communication

Residents must communicate clearly and effectively and work well with each of the following groups:

- a. Patients and their families.
- b. Physicians in nuclear medicine and radiology.
- c. Referring physicians from other specialties.
- d. Nuclear medicine technologists.
- e. Other health care workers throughout the institution.

4. Practice-Based Learning and Improvement

Residents must develop and continuously improve skills in obtaining medical knowledge using new techniques as they develop in information technology. This includes

- a. Using the Internet and computer databases to search for patient information, disease, and technique information. Residents should also be familiar with viewing and manipulating images with the computer, both locally and remotely.
- b. Residents should improve their understanding of diseases and patient care by attending interspecialty conferences, correlative conferences, mortality and morbidity conferences, and utilization conferences.
- c. Patient follow-up is essential for determining the accuracy of study interpretation. Residents should regularly obtain such follow-up information and correlate the clinical findings with their study interpretation.

5. Residents are expected to always behave in a professional manner. This includes:

- a. Consistent demonstration of completely ethical behavior.
- b. Respect for the dignity of patients and all members of the medical team.
- c. There should be no discrimination based on age, ethnicity, gender, disability, or sexual orientation.
- d. Residents should be responsive to patients' needs by demonstrating integrity, honesty, compassion, and commitment.
- e. Residents should always respect the patient's privacy and autonomy.

6. Residents should understand the principles of system-based practice. This involves learning to work in a variety of health care settings and understanding the inter-relationship with other health care professionals. Specifically, residents should be aware of:

- a. Work conditions in hospitals, out-patient clinics, diagnostic centers, and private practice settings.
- b. Resource allocation and methods directed towards controlling health care costs such as Diagnostic Related Groups (DRGs), APC, and pre-certification by medical insurers.
- c. The concept of providing optimal patient care by selecting the most cost-effective procedures and using or recommending other diagnostic tests that might complement the nuclear medicine procedures. This also involves awareness of the relevant risk-benefit considerations.

- d. Basic financial and business skills to function effectively in current health care delivery systems. This includes an understanding and knowledge of coding, procedure charges, billing practices, and reimbursement mechanisms.

#### D. Resident Policies

##### 1. Supervision

All patient care services provided by residents must be supervised by appropriately qualified faculty. The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising residents and attendings. Attending physicians or supervising residents with appropriate experience for the severity and complexity of the procedure and the patient's condition must be present at all times for the procedure. The resident must review with a nuclear medicine faculty member all patient studies that the resident has dictated.

##### 2. Duty Hours and Work Conditions

The practice of nuclear medicine requires 24-hour physician availability. Duty hours and night and weekend call for residents must reflect the concept of responsibility for patients and must provide for adequate patient care. Residents must not be required to regularly perform unduly prolonged duties. However, in no case should the resident go off duty until the proper care and welfare of the patient have been ensured. All residents should have the opportunity to spend an average of at least 1 full day out of 7 free of hospital duties and should be assigned on-call duty in the hospital no more frequently than, on average, every third night. It is the responsibility of the program director to ensure assignment of reasonable in-hospital and on-call duty hours.

Resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction, should be monitored. Program directors and teaching faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

##### 3. Other

The residents must be provided training in both basic life-support and advanced cardiac life-support.

#### E. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. The resident must demonstrate broad involvement in research and scholarly activity. This activity may include:

1. active participation in regional or national professional and scientific societies, through presentations at the organizations' meetings and publication in their journals.
2. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.

#### VI. Evaluation

##### A. Resident Evaluation

Resident evaluation should be carried out at least every 6 months and should concern itself with intellectual abilities, technical skills, attitudes, and interpersonal relationships. Observation of the resident performing specific tasks such as image interpretation, taking

a history and performing a physical examination, choosing diagnostic studies, formulating patient management, and communicating effectively should be included. There must be provision for appropriate and timely feedback of the content of these evaluations to the resident. Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth. The program must maintain a permanent record of the evaluation and counseling process for each resident. Such records must be accessible to the resident and other authorized personnel.

The program director must provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

The program must demonstrate that it has developed an effective plan for assessing resident performance throughout the program and for utilizing evaluation results to improve resident performance. This plan should include use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

##### B. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by the program must be assessed. Written evaluations by residents must be utilized in this process. Residents should be given the opportunity to provide confidential written evaluations of the faculty and program at least annually. The teaching staff also should evaluate periodically the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### VII. Board Certification

Residents who plan to seek certification by the American Board of Nuclear Medicine should communicate with the office of that board regarding the requirements for certification.

*ACGME: June 2002 Effective: January 1, 2003*

# Program Requirements for Residency Education in Obstetrics and Gynecology

## I. Introduction

### A. Program Goals and Objectives

1. A residency program in obstetrics-gynecology must constitute a structured educational experience, planned in continuity with undergraduate and continuing medical education, in the health care area encompassed by this specialty. While such residency programs contain a patient-service component, they must be designed to provide education as a first priority and not function primarily to provide hospital service.
2. An educational program in obstetrics-gynecology must provide an opportunity for resident physicians to achieve the knowledge, skills, and attitudes essential to the practice of obstetrics and gynecology and must also be geared toward the development of competence in the provision of ambulatory primary health care for women. The program must provide opportunity for increasing responsibility, appropriate supervision, formal instruction, critical evaluation, and counseling for the resident.
3. The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate
  - a. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health;
  - b. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care;
  - c. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care;
  - d. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals;
  - e. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population; and
  - f. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

### B. Program Design

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Obstetrics-Gynecology as part of the regular review process.
2. Participation by any institution providing 6 months or more of training in a program of 3 or more years must be approved by the RRC.

## II. Institutional Organization

### A. Administration

The administration of the sponsoring institution must demonstrate a commitment to educational and scholarly activities by meeting all provisions of the Institutional Requirements of the *Essentials for Accredited Residencies in Graduate Medical Education* for approval of a residency program.

### B. Participating Institutions

The RRC for Obstetrics-Gynecology uses the following categories for the purpose of monitoring the structure of residencies. In all cases, where more than one institution is involved, a formal written agreement, as defined in the Institutional Requirements, must exist between the responsible administrative bodies of those institutions.

1. **Independent**—An independent program is conducted within a single educational institution under a single program director. Extramural rotations for a total of no more than 6 months are permitted under the regulations applied to all programs (see II.B.4).
2. **Integrated**—An integrated program is conducted within multiple educational institutions but under a single program director. Each educational institution involved in an integrated program must provide the same quality of education and level of supervision required of an independent program and must formally acknowledge the authority of the program director and the role that the institution will play in the overall program. Residents may rotate at any level, including the final year of the program. The program director must have authority over the educational program in each hospital, including the teaching appointments and assignments of all faculty and all residents, and must ensure the adequacy of the educational experience for each resident. Additional extramural rotations for a total of no more than 6 months are permitted under the regulations applied to all programs (see II.B.4). If a program includes rotations for a total of more than 6 months for any resident at institutions other than those included in the integrated program, that program becomes an affiliated program.
3. **Affiliated**—An affiliated program is one in which any resident spends a total of more than 6 months in extramural rotations outside the parent institution (or institutions, in the case of integrated programs).
4. **Extramural Rotations**—Extramural rotations may be arranged by the program director of either an independent or an integrated program to enhance the educational experience of the residents. The following requirements for the duration of extramural rotations must be observed:
  - a. If the total time of extramural rotation from the parent program by any resident during the entire residency exceeds 6 months, the program is considered to be an affiliated program, and the entire program must receive prior approval by the RRC. Residents may not spend more than 18 months away from the parent institution(s) without prior approval of the RRC.
  - b. Rotations for a total of less than 6 months will not require that the program be designated as an affiliated program, and these rotations may be arranged by the program director without prior RRC approval.

### C. Resident Complement

1. The number of residents that can be adequately and responsibly educated depends on several interrelated factors. Clinical involvement alone does not constitute an educational experience. The provision of adequate supervision, education, individual evaluation, and administrative support is critical. With this, it is of

utmost importance that each resident have sufficient independent operative and clinical responsibilities to prepare for practice in the specialty.

2. The maximum number of residents in a program is linked to the number that can be accommodated within the framework of these requirements. One of the most important considerations is the clinical experience available to give each resident adequate primary responsibility. Because this usually centers on the senior resident year, the maximum number of residents in a program depends on how many senior residents the program can educate. Usually the maximum number of residents in a program is the number of senior residents the program can accommodate multiplied by four.
3. The minimum number of residents in an accreditable program is two per year. Accreditation is granted on the basis of a balance between the educational resources and the number of residents in the program. Appointment of residents in excess of the approved number may adversely affect the quality of the total experience of each resident. Therefore, changes in the educational resources should be reported to the RRC, and proposed increases in the number of residents must first be approved in writing by the RRC.
4. All requests for a change in the number of residents must demonstrate a distinct and substantial improvement in the educational opportunities for all residents in the program. Such requests must be based not only on the availability of an adequate patient population but also on adequate resources for supervision, education, and evaluation. A request for a permanent change in the number of residents must describe the predicted impact on the total experience of each of the senior residents under the new circumstances. The request must be received within 18 months of the latest survey of the program; otherwise, a new survey will be necessary. The request will be considered incomplete if it lists only expansion in beds, hospitals, or overall clinical experience and does not address the question of the expansion of faculty and administrative support necessary to teach, supervise, and evaluate the additional residents. Conversely, a reduction in beds or hospitals, or other changes in the program that may lead to an anticipated decrease in total experience for the residents, must be promptly called to the attention of the RRC to determine if a reduction in the number of resident positions in a given graduate medical program is necessary.
5. Residency programs may, with prior RRC approval, contain more residents in the first year than the number approved for subsequent years.
6. The development of a satisfactory program requires careful selection of applicants for appointment to the residency. When appointing residents, the program director must adhere to the criteria for resident eligibility that are specified in the Institutional Requirements. To determine the appropriate ongoing educational program for a resident who is transferring from another ACGME-accredited residency, the program director must receive written verification of the resident's educational experience, including such information as performance evaluations of the transferring resident, rotations completed, and a summary of his/her procedural experiences. Similarly, a program director, if requested to do so, must provide the same information for any resident who for any reason may leave the program prior to the completion of training.

### III. Faculty Qualifications and Responsibilities

The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director and the teaching staff are responsible for the general admin-

istration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director
  - a. The program director must be qualified and experienced as a clinician, administrator, and educator in obstetrics and gynecology and must have experience in and commitment to ambulatory primary health care for women. There must be a minimum of 5 years' experience (postresidency/fellowship) in such activities. The program director must be certified by the American Board of Obstetrics and Gynecology (ABOG) or must possess appropriate educational qualifications as determined by the RRC.
  - b. The program director must have unrestricted licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain physicians in federal programs are exempted.)
  - c. The program director must have appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. The program director must devote sufficient time and effort to the program to provide day-to-day continuity of leadership and to fulfill all of the responsibilities inherent in meeting the educational goals of the program.
  - b. The program director must function within a sound administrative organizational framework and have an effective teaching staff as essential elements of an approved residency program. Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program.
  - c. The program director should demonstrate active involvement in (1) clinical practice, (2) continuing obstetrics/gynecology education, (3) regional or national scientific societies, (4) presentations and publications, and (5) scholarly activities.
  - d. The program director must have appropriate authority to oversee and to organize the activities of the educational program. The responsibilities of this position should include but not be limited to the following:
    - 1) Resident appointments and assignments;
    - 2) Supervision, direction, and administration of the educational activities; and
    - 3) Evaluation of the house staff, faculty, and residency program.
  - e. The program director must provide a clearly defined assignment of responsibilities for resident education, including preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - f. The program director must provide for the selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - g. The program director must provide for the selection and supervision of the teaching staff and other program personnel at each institution participating in the program.

- h. The program director must provide for the supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- i. The program director must provide for the regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall

  - 1) at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
  - 2) communicate each evaluation to the resident in a timely manner;
  - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
  - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- j. The program director must verify that residents have satisfactorily completed the program and provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- k. The program director must provide for implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- l. The program director must provide for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- m. The program director must provide for the preparation of an accurate statistical and narrative description of the program as requested by the RRC.
- n. The program leadership is responsible for notifying the executive secretary of the RRC, in writing, within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including
  - 1) changes in leadership of the department or the program;
  - 2) changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution; and
  - 3) substantial changes in volume and/or variety of the patient population.
- o. The program director is responsible for communicating to the RRC any change in the use of rotations to participating institutions (including additions or deletions of institutions) and any significant change in the number of patient cases available at the sponsoring and/or participating institutions, if residency education would be adversely affected. The program director

must describe the effect of these changes and the corrective action taken to address them.

- p. The program director must obtain prior approval for the following changes in the program so the RRC may determine if an adequate educational environment exists to support these changes:
  - 1) The addition or deletion of any participating institution to which residents rotate for more than 6 months
  - 2) The addition or deletion of any rotation of more than 6 months
  - 3) Any change in the approved resident complement of the program
  - 4) Any major change in the educational format of the program (See V.A.3.b)On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

#### B. Faculty

- 1. An obstetrics-gynecology education program must have a sufficient and appropriate number of attending staff with professional ability, enthusiasm, dedication, and a sense of responsibility for teaching residents. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. It would be well for the staff to regard these attributes as a prerequisite to active faculty membership and promotion. The faculty complement should include appropriately educated generalist faculty. The quality of teaching and supervision by the faculty must be reviewed at least annually by the program director and through written feedback provided to individual faculty members. When deficiencies occur, corrective action should be undertaken. Regular, protected and anonymous input into this evaluation by the residents must be an integral component of such reviews.
- 2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
- 3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
- 5. The teaching staff should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Facilities and Resources

#### A. Outpatient Facilities

Appropriate facilities and equipment including patient medical and laboratory data retrieval capabilities to manage patients in a timely fashion must be provided so that efficient and effective edu-

cation in the ambulatory care aspects of the discipline can be accomplished.

### B. Inpatient Facilities

Appropriate facilities and equipment including patient medical and laboratory data retrieval capabilities must be provided to achieve the educational objectives, including the management of critically ill patients and those undergoing obstetric or gynecologic operative procedures.

### C. Medical Records

The fundamentals of good medical history taking and thoughtful, meticulous physical examination must be taught. Information gained by these procedures must be carefully recorded in the medical record. A reliable measure of the quality of a program is the quality of hospital records. These records should include daily appropriate progress notes by residents, together with a discharge summary. The hospital should maintain a records room with adequate cross indexing and ready reference for study of patients' charts. Periodic summaries of department statistics are essential for the evaluation of results and usually will be requested at the time a program is reviewed by the RRC.

### D. Medical Library

The medical library is an important resource to the obstetrics-gynecology education program. The library may be sponsored by the hospital or the department, but it must be readily accessible to staff and residents, both during the day and in the evening, including weekends. In addition, there must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. The textbooks should be kept up to date, and there should be an ample supply of current journals devoted to obstetrics-gynecology and related subjects. When a comprehensive library is not available in the hospital, an active reference system should be provided through ready access to larger medical libraries. Programs must provide instruction in retrieval and assessment of medical literature, and library services should include the electronic retrieval of information from medical databases.

### E. Resident Facilities and Support Services

Adequate facilities for residents to carry out their patient care and personal educational responsibilities are required. These include adequate on-call, sleep, lounge, and food facilities for residents while on duty and on call. Also required are clinical support services such as pathology and radiology, including laboratory and radiologic information retrieval systems that allow rapid access to results, intravenous (IV) services, phlebotomy services, and messenger/transporter services in sufficient number to meet reasonable demands at all times.

### F. Other Graduate Medical Education Programs

The program must exist in an educational environment that should include at least two other relevant graduate medical education programs such as internal medicine, pediatrics, surgery, or family practice. The program director must obtain teaching commitments from the other departments involved in the education of obstetrics-gynecology residents.

## V. Educational Program

### A. General

#### 1. Organization and structure

- a. Resident education in obstetrics-gynecology must include 4 years of accredited, clinically oriented graduate medical education, which must be focused on reproductive health care

and ambulatory primary health care for women, including health maintenance, disease prevention, diagnosis, treatment, consultation, and referral.

- b. Growth in knowledge and experience in the primary and preventive care role is best provided to residents by maximizing their participation in an ambulatory environment designed to enable continuity of care over an extended period of time. Specific educational experiences for the primary and preventive care role should occupy the equivalent of at least 6 months of the 4 years of residency and may be addressed in any of the 4 years of residency. The emphasis should be on ambulatory care of the patient, which requires both knowledge and skills in the areas of health maintenance, disease prevention, risk assessment, counseling, and the use of consultants and community resources. These experiences should be evident in the residents' exposure to continuity of care, general gynecology, general obstetrics, prevention or control of disease (eg, sexually transmitted disease), substance abuse, or prevention of pregnancy. In addition to rotations in obstetrics-gynecology, general medical management experience may also be obtained during rotations in internal medicine and/or family practice, emergency medicine, and geriatric medicine. If rotations outside the department of obstetrics-gynecology are used, the resident's role and experience in these rotations should be sufficiently similar to those of residents on these services and relevant to the health care of women. These experiences should be strongly oriented toward ambulatory care. Residents must have an experience in menopausal health care and geriatric medicine that is the equivalent of at least 1 month of a block rotation.
  - c. The patient population on which the educational program is based should be sufficient in size and composition so that the broad spectrum of experiences necessary to meet the educational objectives will be provided.
  - d. The ambulatory care experiences of residents preparing for their roles as providers of primary and preventive care require the same attention, supervision, and guidance as those experiences in specialty clinics. It is essential to provide a closely supervised experience by appropriately educated generalist faculty that assures patients of continuity of care by an individual resident. Increasing responsibility should be given to residents under the supervision of a qualified, on-site, attending staff/faculty member. Residents should develop and maintain a continuing physician-patient relationship with a panel of patients, at least 1/2 day per week, throughout at least 3 of the 4 years of education. The use of remote sites or institutions or clinical services must not interrupt continuity of care clinics for longer than 2 months in any of these 3 years. Residents should be provided opportunity on at least a weekly basis to return to the parent institution for their continuity clinic experience.
2. Content of curriculum
    - a. The resident's ability to personally evaluate a patient's complaint, provide an accurate examination, employ appropriate diagnostic tests, arrive at a correct diagnosis, and recommend the appropriate treatment is of paramount importance.
    - b. Formal teaching activities in obstetrics-gynecology should be structured and regularly scheduled. They generally should consist of patient rounds, case conferences, journal clubs, and protected time for didactic conferences covering all aspects of the specialty, including basic sciences pertinent to the specialty. In cross-disciplinary conferences such as perinatology, physicians from appropriate specialties should be invited to participate.

- c. Wise judgment regarding the need for a surgical procedure and recognition and management of complications are as important as the technical aspects of residency education. The program must, therefore, ensure that residents' clinical experience emphasizes appropriate involvement in the process that leads to selection of the surgical option, the preoperative assessment, and the postoperative care of the patients for whom they share surgical responsibility. Continuity of care of these patients must be documented. A residency program in obstetrics-gynecology must be able to provide substantial, diverse, and appropriate surgical experience after residents have mastered the basic skills.
  - d. The program must provide a structured didactic and clinical educational experience in all methods of family planning. Topics must include all reversible methods of contraception, including natural methods, as well as sterilization. This must include experience in management of complications as well as training in the performance of these procedures. This education can be provided outside the institution, in an appropriate facility, under the supervision of appropriately educated faculty.
  - e. No program or resident with a religious or moral objection shall be required to provide training in or to perform induced abortions. Otherwise, access to experience with induced abortion must be part of residency education. This education can be provided outside the institution. Experience with management of complications of abortion must be provided to all residents. If a residency program has a religious, moral, or legal restriction that prohibits the residents from performing abortions within the institution, the program must ensure that the residents receive satisfactory education and experience in managing the complications of abortion. Furthermore, such residency programs (1) must not impede residents in the programs who do not have religious or moral objections from receiving education and experience in performing abortions at another institution and (2) must publicize such policy to all applicants to those residency programs.
  - f. Because an increasing percentage of women seeking their medical care from obstetrician-gynecologists are postmenopausal, there must be appropriate didactic instruction and sufficient clinical experience in the management of the problems of women in the postreproductive age.
3. Educational objectives
    - a. To be accredited, every program must have a written statement of the educational objectives for the residents in that program, and a list of those objectives must be given to each resident. One example of such objectives is set forth in the current "Educational Objectives for Residents in Obstetrics and Gynecology," produced under the auspices of the Council on Residency Education in Obstetrics and Gynecology (CREOG). Directors of programs must be able to document that they are reviewing the implementation of the educational objectives and that the residents are indeed accomplishing what is anticipated of them. Any program that does not establish a system that clearly demonstrates that each resident has or has not successfully accomplished each of the items indicated in the program's statement of educational aims and objectives cannot be considered an adequate program.
    - b. It is neither essential nor desirable that all educational programs or individual resident experiences be identical in structure or function. Variations that provide creative solutions and opportunities or allow greater efficiency in the educational program may be implemented for up to 6 months of an educational experience focused on women's health care; an experience of more than 6 months and up to 12 months for an individual or a program would need prior written approval of the RRC. This approval requires the assurance that each residency program provides quality education and experience for all of the residents completing the program. The program director has the responsibility to assure that a resident completes the objectives and goals of the specific educational program. All educational experiences must have as a goal the enhancement of the quality of patient care.
  4. Patient responsibility/supervision
    - a. Supervision of residents in obstetrics and gynecology is required to ensure proper (1) quality of care, (2) education, (3) patient safety, and (4) fulfillment of responsibility of the attending physicians to their patients. These considerations must be integrated with the goal of independent competence in the full range of obstetrics and gynecology at the completion of residency. This implies a graduated and increasing level of independent resident action. Each program director must balance quality assurance for patient care, resident education, and independent resident action. The level of resident supervision should be commensurate with the amount of independent function that is designated at each resident level. Residents, as well as faculty, may provide supervision.
    - b. On an obstetrics and gynecology service, adequate supervision requires the 24-hour presence of faculty in the hospital except when residents are not assigned in-house call responsibilities. Faculty must be immediately available to the resident if clinical activity is taking place in the operating rooms and/or labor and delivery areas. Faculty must be within easy walking distance of patient care units. Clinical services provided in ambulatory (office) locations require on-site supervision. Open and generously used lines of two-way communication are important and should be encouraged.
    - c. If the program director judges that the size and nature of the patient population does not require the 24-hour presence of residents and faculty, this situation must be carefully defined and reviewed and should include information about the nature of the hospital, the patient population, the nature of attending staff, and the geographic and climatic situations. Exceptions require prior written approval from the RRC.
    - d. Supervision of residents is a responsibility of the program director and teaching staff. It is the responsibility of the institution sponsoring a residency program to establish oversight to ensure that programs meet the supervisory provisions of these Program Requirements.
  5. Graded Responsibility

Complete management of a patient's care under adequate supervision should be considered the highest level of residency education. There are, however, circumstances under which the resident may not assume complete management:

    - a. When the program director or his/her designee does not believe the resident's expertise or understanding is adequate to ensure the best care of the patient
    - b. When the attending physician is unable to delegate the necessary degree of responsibility
    - c. When the resident, for religious or moral reasons, does not wish to participate in proposed procedures

An essential feature of resident education is that a significant number of staff support the principle of delegation of complete management under supervision.

Increasing responsibility must progress in an orderly fashion, culminating in a senior resident year. The senior resident year consists of 12 months of clinical experience in the parent and/or integrated institution(s) that occur within the last 24 months of

the resident's program. The senior resident must have sufficient independent operating experience to become technically competent and have enough total responsibility for management of patients to ensure proficiency in the diagnostic and treatment skills that are required of a specialist in obstetrics-gynecology in office and hospital practice.

#### 6. Duty hours and personal responsibilities

On-call requirements are essential for an optimal educational environment and to ensure continuity of patient care. The number of residents and faculty should be adequate to prevent excessive frequency and length of on-call duty. The scheduling of on-call duty should consider that clinical events in obstetrics and gynecology do take place at any time; that both safe, effective patient care and a good learning environment require adequate periods of rest; and that the residency program appointment is the resident's full-time compensated occupation. The frequency of on-call duty for residents should be, on the average, no more often than every third night. Residents should be allowed to spend, on the average, at least 1 full day out of 7 away from program duties. The program director must also ensure adequate backup if sudden and unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

#### 7. Extracurricular activities

Residency training in obstetrics-gynecology is a full-time responsibility; activities outside the educational program must not interfere with the residents' performance in the educational process, as determined by the program director, and must not interfere with the residents' opportunities for rest, relaxation and study.

### B. Specific Educational Experiences

The educational curriculum must be written and implemented for the comprehensive development of measurable competencies for each resident. This education must include but not necessarily be limited to the following:

#### 1. Obstetrics

- a. The full range of obstetrics, including the medical and surgical complications of pregnancy and experience in the management of critically ill patients
- b. Genetics, including experience with genetic amniocentesis and patient counseling
- c. Learning and performing operative vaginal deliveries, including the use of obstetric forceps and/or the vacuum extractor
- d. Performing vaginal breech and vaginal multifetal deliveries
- e. Performing vaginal births after previous cesarean delivery
- f. Learning the principles of general and conduction anesthesia, together with the management and the complications of these techniques
- g. Immediate care of the newborn (Every resident must have experience in resuscitation of the human newborn and understanding of the principles of general neonatal complications.)
- h. The full range of commonly employed obstetrical diagnostic procedures, including ultrasonography and other relevant imaging techniques
- i. The emotional and psychosocial impact of pregnancy or pregnancy loss on an individual and her family
- j. The counseling of women regarding nutrition, exercise, health maintenance, high-risk behaviors, and preparation for pregnancy and childbirth
- k. Obstetric pathology

#### 2. Gynecology

- a. The full range of medical and surgical gynecology for all age groups, including experience in the management of critically ill patients

- b. Diagnosis and management of pelvic floor dysfunction, including experience with the various operations for its correction
- c. Diagnosis and medical and surgical management of urinary incontinence
- d. Oncology, including prevention, diagnosis, and treatment
- e. Diagnosis and nonsurgical management of breast disease
- f. Reproductive endocrinology and infertility
- g. Clinical skills in family planning
- h. Psychosomatic and psychosexual counseling
- i. The full range of commonly employed gynecologic diagnostic procedures, including ultrasonography and other relevant imaging techniques
- j. Counseling and educating patients about the normal physiology of the reproductive tract and about high-risk behaviors that may compromise reproductive function
- k. Gynecologic pathology

#### 3. Primary and preventive care

- a. Comprehensive history taking, including medical, nutritional, sexual, family, genetic, and social behavior data, and the ability to assess health risks
- b. Complete physical examination
- c. Appropriate use of laboratory studies and diagnostic techniques
- d. Patient education and counseling
- e. Screening appropriate to patients of various ages and risk factors
- f. Immunizations needed at specific ages and under specific circumstances
- g. Diagnosis and treatment of the common nonreproductive illnesses affecting women
- h. Continuous management of the health care of women of all ages
- i. Appropriate use of community resources and other physicians through consultation when necessary
- j. Appropriate awareness and knowledge of the behavioral and societal factors that influence health among women of differing socioeconomic and cultural backgrounds
- k. Behavioral medicine and psychosocial problems, including domestic violence, sexual assault, and substance abuse
- l. Emergency care
- m. Ambulatory primary care problems of the geriatric patient
- n. Basics of epidemiology, statistics, data collection and management, and use of medical literature and assessment of its value
- o. Ethics and medical jurisprudence
- p. Community medicine, including health promotion and disease prevention
- q. Health care delivery systems and practice management
- r. Information processing and decision making
- s. Patient safety

### C. Other Residents and Trainees

1. The number of residents from other graduate medical education programs in any specialty who are assigned to the obstetrics-gynecology residency should not be so large as to compromise the educational resources of the obstetrics-gynecology residency.
2. For those residency programs associated with postresidency fellowships, the education of fellows must not compromise the experience of residents.

### D. Research

The quality of the educational experience within a department of obstetrics and gynecology is enhanced by an active research environment. Programs should involve residents in research projects.

### E. Scholarly Environment

Documentation of scholarly activity on the part of the program and the faculty must be submitted at the time of program review. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad, ongoing involvement in scholarly activity. This activity should include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship (Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.)
2. Participation in journal clubs and research conferences
3. Participation in regional or national professional societies
4. Presentation and/or publication of studies
5. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings
6. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research
7. Provision of support for resident participation in scholarly activities.

### VI. Evaluation

#### A. Resident Performance

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include
  - a. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
  - b. mechanisms for providing regular and timely performance feedback to residents; and
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.
2. Programs that do not have a set of measures in place must develop a plan for improving its evaluations and must demonstrate progress in implementing the plan.
3. The program director must establish methods of periodically and systematically evaluating and documenting the level of performance, experience, and technical skills of the residents. One example of an acceptable mechanism helpful in evaluating cognitive knowledge is the CREOG in-training examination. On at least a semiannual basis, program directors or their designees must inform the residents of their individual progress, emphasizing strong points and offering guidance with regard to correcting deficiencies. These evaluations, as well as a list of skills that the resident has mastered, must be documented and available (without revealing the specific resident's identity) at the time the program is reviewed for approval.
4. Physicians must have the welfare of their patients as their primary professional concern. The resident must therefore demonstrate those humanistic qualities that foster the formation of appropriate patient/physician relationships. These include integrity, respect, compassion, professional responsibility, sensitivity to the patient's needs for comfort and encouragement, and an appropriate professional attitude and behavior toward colleagues. These attributes should be emphasized throughout the curriculum and must be evaluated.

#### B. Evaluation and Program Review

1. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.
2. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
3. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
4. For the purpose of program review, accurate and complete documentation of each individual resident's experience for each year of the program is mandatory. These records should indicate the level of participation of the resident and skills achieved. The program director must review the record of operative experience with individual residents at least semiannually for breadth and depth of experience as well as for evidence of continuing growth in technical achievements. These cumulative data will be reviewed in detail at the time of survey for program approval or continued program approval. For the purposes of these records, there is no distinction between private and service patients.
5. Annually, the program director must collect, compile, and retain the numbers and types of operative procedures performed by residents in the program, together with information describing the total resident experience in each institution and facility utilized in the clinical education of residents. This information must be provided in the format and form specified by the RRC.
6. One significant measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Obstetrics and Gynecology.

#### VII. Board Certification

Program directors must notify residents who plan to seek certification by the American Board of Obstetrics and Gynecology that they should communicate with the executive director of the board to obtain the latest information regarding current requirements for certification.

*ACGME: September 2000 Effective: July 2001*

# Program Requirements for Residency Education in Ophthalmology

## I. Introduction

- A. The Program Requirements for Residency Education in Ophthalmology set forth the educational prerequisites for trainees and the minimum components that a residency training program in ophthalmology must possess, including the duration of training, institutional support and administration, faculty, educational program, patient resources, and facilities.
- B. Residency training programs in ophthalmology should be organized to provide a stable, well-coordinated, progressive, educational experience for the resident.

## II. Prerequisites

All applicants entering ophthalmology training programs must have taken a post-graduate clinical year (PGY-1) in a program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The PGY-1 year must be comprised of training in which the resident has primary responsibility for patient care in fields such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, 6 months of this year must be a broad experience in direct patient care.

## III. Program Goals and Duration

### A. Program Goals and Design

1. The director and faculty of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals.
2. The program design and/or structure must be approved by the Residency Review Committee as part of the regular review process.

### B. Duration of Training

1. The length of training in ophthalmology must be at least 36 calendar months, including appropriate short periods for vacation, special assignments, or exceptional individual circumstances approved by the program director.
2. Any program that extends the length of training beyond 36 calendar months must present an educational rationale that is consonant with the Program Requirements and the objectives for residency training. Approval for the extended curriculum must be obtained prior to implementation and at each subsequent review. Prior to entry in the program, each resident must be notified in writing of the required curriculum length.
3. The length of time of residency training for a particular resident may be extended by the program director if a resident needs additional training. If the extension is only 6 months or less, the program director must notify the Residency Review Committee of the extension and must describe the proposed curriculum for that resident and the measures taken to minimize the impact on other residents. Any changes in rotation schedules should be included in the notification. Express permission must be obtained in advance from the RRC if the extension is greater than 6 months. (See below, IV.C.4.b.)

## IV. Institutional Support and Program Administration

### A. General

1. There must be a single program director responsible for the program.
2. The institution must ensure that the program director is given sufficient authority, financial support, and facilities by the governing body of the sponsoring institution to permit him/her to organize and supervise the following activities of the training program: resident selection and evaluation, resident instruction, patient management, research, and initiation of recommendations for staff recruitment.

### B. Qualifications of the Program Director

1. The program director must be a qualified ophthalmologist, who is either certified by the American Board of Ophthalmology or judged by the Residency Review Committee to possess appropriate educational qualifications. Since stability and continuity of the program are important, the program director should have a term of at least 3 years.
2. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
3. The program director must have an appointment in good standing to the medical staff of an institution participating in the program.
4. The program director who serves as administrator, educator, and research coordinator must devote sufficient time to the administration and conduct of the residency training program so that the educational experience for the residents is satisfactory. The Residency Review Committee for Ophthalmology will evaluate the overall effectiveness of the program director as an administrator, educator, and research coordinator.

### C. Responsibilities of the Program Director

1. The program director must prepare a written statement outlining the educational goals of the program with respect to knowledge, skills and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the faculty. It should be readily available for review.
2. The program director, with the support of the institution, must develop and maintain current documentation of institutional or inter-institutional agreements, resident selection and agreements, patient care statistics, faculty evaluations, and assessment of resident performance. This documentation must be provided to the Residency Review Committee as indicated in the Program Information Forms supplied by the Committee Secretary.
3. The program director is responsible for notifying the Executive Secretary of the Residency Review Committee of any changes in program director and/or departmental chairman as well as of a formal affiliation with another institution.
4. The program director is required to have prior approval of the Residency Review Committee for the following changes:
  - a. A required rotation of 6 months or more to any institution other than the parent.
  - b. The number of resident positions in the training program, both total number and the number at any level. If the change in resident complement results from the extension of training of a current resident as described in III.B.3 above and is not greater than 6 months, only prior notification of RRC is required.
  - c. The number of years of training.

The appropriate educational justification and documentation must accompany all of these requests in order that the Residency Review Committee may evaluate whether the quality of the program and the resources available are adequate to support the requested change.

5. To ensure proper supervision, the program director must prepare explicit, written descriptions of lines of responsibility for the care of patients and make these clear to all members of teaching teams. Residents must be provided with rapid, reliable systems for communication with and appropriate involvement of supervisory physicians in a manner appropriate for quality patient care and educational programs.
6. The program director must ensure the implementation of fair procedures and due process, as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
7. The program director must monitor resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations which consistently produce undesirable stress on residents must be evaluated and modified.

## **V. Minimum Resident Complement**

The Residency Review Committee recognizes the importance of interaction among trainees themselves as well as between faculty and trainees in the conduct of conferences and patient care. A critical mass or minimum number of residents is essential in order to provide an opportunity for meaningful interaction throughout the training period. Each program must be structured to have a minimum of two residents in each year of training.

## **VI. Teaching Faculty**

- A. The faculty must be highly qualified and possess appropriate clinical and teaching skills. The faculty must devote adequate time to the education of residents. The faculty must have a broad range of subspecialty expertise. Such expertise will usually be acquired by subspecialty fellowship training.
- B. Faculty members should be certified by the American Board of Ophthalmology or possess suitable equivalent qualifications as determined by the RRC.
- C. The number of teaching faculty (regardless of source of compensation) must be sufficient to ensure that, in the aggregate, they spend at least 13 hours per week per resident in direct interaction with the residents.
- D. Members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
- E. The faculty must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
- F. The faculty should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

## **VII. Other Program Personnel**

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

## **VIII. Program Research and Scholarly Activity**

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

### **A. Scholarly Activity**

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of a faculty must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the faculty in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organization's meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

## **IX. Participating Institutions**

A residency program in ophthalmology must have a designated parent institution where the majority of the required clinical and didactic educational experiences occur and are coordinated by the program director. Affiliations with other institutions may sometimes be desirable in order to provide complementary educational experiences for the residents. Programs that depend on rotations to hospitals other than the parent institution must submit documentation that the following criteria are being fulfilled:

### **A. Purpose**

There must be a clear statement in the narrative section of the Program Information Forms regarding the purpose of each participating institution, indicating how they enhance the total program and how they are coordinated with the other components of the overall educational experience.

### **B. Local Director**

There must be a designated local director of the program at each participating institution. The program director must appoint or be consulted in the appointment of the local program director, and this arrangement must be documented in writing by the appropriate individuals at each institution. There must be evidence of ongoing coordination of the various components of the overall program which would include planning of the rotations, evaluation of residents, and evaluation of each institution by the residents.

### **C. Physical Facilities**

The program director should assure that the physical facilities of each participating institution, including outpatient clinic, inpatient facilities, operating rooms, and their respective equipment, meet the Program Requirements.

#### D. Educational Experiences

1. The program director is ultimately responsible for the schedule and composition of the residents' rotations at each participating institution, as well as the extent of faculty supervision on the clinical services and in the operating room.
2. The program director is ultimately responsible for the content and quality of didactic lectures and conferences, and must assure that these are coordinated with the overall educational activities of the program. Sample schedules must be submitted along with those from the Parent Institution.
3. If a participating institution is sufficiently remote from the Parent Institution to prevent regular attendance by residents at the didactic and clinical conferences at the parent institution, or if the rotation otherwise prevents such attendance, the program director must demonstrate that each resident is exposed to a formal educational experience that fulfills the Program Requirements.
4. Formal teaching case presentations should be included at each participating institution to assure optimal utilization of patients for teaching purposes; alternatively, cases should be brought from participating institutions to the parent institution for presentation if formal teaching case presentations are held only there.
5. The program director must assure that all residents have equivalent educational experiences.
6. Rotations to foreign countries shall not be used to meet minimum educational standards.

#### X. Educational Program

The educational experience must be designed and supervised by the program director and should include:

##### A. General Competencies

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate:

1. *Patient Care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Residents are expected to demonstrate skills related to:
  - a. data acquisition of essential and accurate information about their patients
  - b. diagnosis and management of medical and surgical eye disease
  - c. patient and family counseling
  - d. effective utilization of information technology
  - e. sensitivity to sociocultural circumstances
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care. Residents are expected to demonstrate skills related to:
  - a. understanding of and ability to apply established and evolving biomedical, clinical, and cognate sciences
  - b. data base acquisition
  - c. critical evaluation of new information
3. *Practice-Based Learning and Improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care. Residents are expected to demonstrate skills related to:
  - a. investigation and evaluation of their own patient care
  - b. appraisal and assimilation of scientific evidence and improvements in patient care
  - c. participation in continuous self-improvement through self-analysis, peer-review, and continuing education

4. *Interpersonal and Communication Skills* that result in effective information exchange and teaming with patients, their families, and other health professionals. Residents are expected to demonstrate skills related to:
  - a. effective and sensitive information exchange with patients, families, and other health professionals
  - b. proper documentation of medical records
  - c. interaction with referring professionals
  - d. team-work skills with patients, colleagues, and other professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Residents are expected to demonstrate skills related to:
  - a. commitment to professional responsibilities
  - b. consistent demonstration of high standards of ethical behavior
  - c. sensitivity to a diverse patient population
  - d. respect for the physician-patient relationship
6. *Systems-Based Practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value. Residents are expected to demonstrate skills related to:
  - a. awareness and responsiveness to the larger context and system of healthcare
  - b. ability to call on system resources to provide care this is of optimal value
  - c. patient advocacy
  - d. ability to work in a variety of healthcare settings
  - e. maintaining awareness of cost-effectiveness and risk-benefit
  - f. promotion of health care and disease prevention
  - g. efficiency in time management reflected in quality patient care

##### B. Instruction in the Basic and Clinical Sciences

Residents should be educated in basic and clinical sciences through a structured regularly scheduled series of conferences and lectures encompassing a minimum of 360 hours during the 36-month training program, at least 200 of which are intramural. In addition, a minimum of 6 hours per month should be devoted to case presentation conferences (eg, Grand Rounds, Continuous Quality Improvement) attended by several faculty and a majority of residents. The program director or designee is responsible for documenting resident attendance at conferences.

##### C. Pathology

In addition to the structured series of lectures and the clinicopathological conferences devoted to ocular pathology, the training experience in this area should include a minimum of 50 hours of laboratory experience in gross and microscopic examination of pathological specimens, including the residents' review of pathological specimens of his/her patients with a pathologist who has demonstrated expertise in ophthalmic pathology. The experience with such a pathologist may take place intramurally or extramurally at a laboratory considered by the Residency Review Committee to be capable of providing such training.

##### D. Clinical Experiences

The volume and variety of clinical ophthalmological problems in children and adults must be sufficient to afford each resident a graduated supervised experience with the entire spectrum of ophthalmic diseases so that the resident may develop diagnostic, therapeutic, and manual skills and judgment as to their appropriate use.

### 1. Outpatient Experience

During the course of training residents should be responsible for the care of an adequate number of outpatients who represent a broad range of ophthalmic diseases. There must be appropriate faculty supervision of the residents in all outpatient visits. Appropriate faculty supervision occurs when the faculty is readily available to the resident(s) for consultation or assistance when requested.

- a. Each resident should participate in a minimum of 3,000 outpatient visits in which the resident performs a substantial portion of the examination.
  - b. There should be direct faculty supervision of each resident in at least 1,000 outpatient visits. Direct faculty supervision occurs when faculty members also examine the patient with the resident and discuss the management of the patient with the resident before the patient leaves the clinic.
- ### 2. Surgical Experience

a. Residents must perform and assist at sufficient surgery to become skilled as comprehensive ophthalmic surgeons.  
That is, each resident must have major technical and patient care responsibilities in the surgery (including laser surgery) of cataract, strabismus, cornea, glaucoma, retina/vitreous, oculoplastic, and trauma to provide an adequate base for a comprehensive ophthalmic practice.

- b. The program director is responsible for documenting the surgical experiences of each resident, to include the number of cases in each category where the resident has served as the primary surgeon or the assistant surgeon. This documentation must be provided to the Residency Review Committee on its Program Information Forms and individual resident logs must be available at the time of the site visit.
- ### 3. Systemic Disease Consultation Experience

Each resident should receive experience in providing inpatient and outpatient consultation during the course of 3 years of education.

### E. Duty Hours and Personal Responsibility

Duty hours and night and weekend call for residents must reflect the concept of responsibility for patients and provide for adequate patient care. Residents must not be required regularly to perform excessively difficult or prolonged duties. When averaged over 4 weeks, residents should spend no more than 80 hours per week in patient care activities. Residents at all levels should, on average, have the opportunity to spend at least 1 day out of 7 free of patient care activities and should, on average, have patient care activities no more often than every third night.

### F. Fellowship Program

If the residency training program is conducted in conjunction with fellowship training programs for teaching advanced competence in specialized areas of ophthalmology, such fellowship programs must not adversely affect the experience of residents in the core training program.

## XI. Facilities

### A. Clinic

The outpatient area of each participating institution must have a minimum of one fully equipped examining lane for each resident in the clinic. There must be access to current diagnostic equipment. This should encompass equipment designed for ophthalmic photography (including fluorescein angiography), perimetry, ultrasonography, keratometry, and retinal electrophysiology, as well as other appropriate equipment.

### B. Operating Room Facilities

The surgical facilities at each participating institution in which residents are trained in surgery must include at least one operating room fully equipped for ophthalmic surgery, including an operating microscope.

### C. Inpatient Facilities

There must be inpatient facilities with access to sufficient space and beds for good patient care. An eye examination room with a slit lamp should be easily accessible.

### D. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be readily available an on-site library or a collection of ophthalmological and general medical texts, journals, films, records and tapes in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## XII. Evaluation

### A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:
  - a. the use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice. An objective test mechanism is required annually as a component of evaluating the resident's cognitive ability. While each program may utilize its own test instruments, the Ophthalmic Knowledge Assessment Program (OKAP) examination is an example. However, results of the OKAP examination should not be used as the only criterion of resident performance. An analysis of the results of these tests should guide the faculty in assessing the strengths and weaknesses of individual residents and of the program. Other tools can be used to measure residents' competence, such as faculty and staff evaluations, patient surveys, faculty review of video-taped surgical procedures, review of medical records, evaluation of surgical and non-surgical outcomes, and evaluation of research manuscripts or presentations and literature reviews.
  - b. mechanisms for providing regular and timely performance feedback to residents that include at least
    1. a written, semiannual evaluation that is communicated to each resident in a timely manner
    2. the maintenance of a record of evaluation for each resident that is accessible to the resident and other authorized personnel
2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

**B. Faculty Evaluation**

The faculty must be evaluated at least annually to include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Written, confidential resident evaluations must be included in this process.

**C. Program Evaluation**

The educational effectiveness of a program must be evaluated at least annually in a systematic manner to include the quality of the curriculum and the extent to which the educational goals have been met by residents.

1. Written and confidential evaluations by the residents must be included in this process.
2. The institution must conduct a meaningful and timely Internal evaluation of the program as required by the Institutional Requirements.
3. Outcomes assessment
  - a. The program should have in place a process for using resident and performance outcome assessment results together with other program evaluation results to improve the residency program.
  - b. Results of the American Board of Ophthalmology certification examinations should be used as one measure of evaluating program effectiveness.

**XIII. Other**

Training programs in ophthalmology should comply with all of the provisions of the Institutional Requirements.

Residents who plan to seek certification by the American Board of Ophthalmology should communicate with the Executive Director of the Board regarding specific requirements for certification.

*ACGME: June 2001*

*General Competencies Implementation Date: July 1, 2001*

## Program Requirements for Residency Education in Orthopaedic Surgery

**Introduction****A. Definition and Scope of the Specialty**

Orthopaedic surgery is the medical specialty that includes the study and prevention of musculoskeletal diseases, disorders, and injuries and their treatment by medical, surgical, and physical methods.

**B. Definition and Scope of Education**

1. Orthopaedic residencies will be accredited to offer 5 years of graduate medical education. The orthopaedic residency director is responsible for the design, implementation, and oversight of a PGY-1 year that will prepare residents for specialty education in orthopaedic surgery. This year must include resident participation in clinical and didactic activities that will give them the opportunity to
  - a. develop the knowledge, attitudes, and skills needed to formulate principles and assess, plan, and initiate treatment of adult and pediatric patients with surgical and/or medical problems;
  - b. be involved in the care of patients with surgical and medical emergencies, multiple organ system trauma, soft tissue wounds, nervous system injuries and diseases, peripheral vascular injuries and diseases, and rheumatologic and other medical diseases;
  - c. gain experience in the care of critically ill surgical and medical patients;
  - d. participate in the pre-, intra- and post-operative care of surgical patients; and
  - e. develop an understanding of surgical anesthesia, including anesthetic risks and the management of intra-operative anesthetic complications.
2. In order to meet these goals the PGY-1 year must include
  - a. a minimum of 6 months of structured education in surgery, to include multi-system trauma, plastic surgery/burn care, intensive care, and vascular surgery;
  - b. a minimum of 1 month of structured education in at least three of the following: emergency medicine, medical/cardiac intensive care, internal medicine, neurology, neurological surgery, pediatric surgery or pediatrics, rheumatology, anesthesiology, musculoskeletal imaging, and rehabilitation; and
  - c. a maximum of 3 months of orthopaedic surgery.
3. The program director is also responsible for the design, implementation and oversight of PGY-2 through PGY-5 years that
  - a. must include at least 3 years of rotations on orthopaedic services; and
  - b. may include rotations on related services such as plastic surgery, physical medicine and rehabilitation, rheumatology, or neurological surgery.
- C. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 6 months of training in a program requires prior approval by the RRC.
- D. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum

and the extent to which the educational goals have been met by residents must be assessed. Confidential written evaluations by residents should be utilized in the process.

## II. Institutional Organization

### A. Sponsoring Institution

1. An orthopaedic residency must have a single sponsoring institution and one primary site where most of the residents' basic science and research education is provided.
  - a. Residents' clinical education at the primary site should include extensive experience in patient care. Preoperative evaluation and postoperative follow-up, as well as evaluation and treatment of patients not requiring surgery, must be included.
  - b. Basic science education and the principal clinical conferences should be provided at the primary site. Supplemental conferences may also be provided at other locations, but the program's didactic activities should be provided at the program's primary site.
2. The governing body of the sponsoring institution must provide support for the program director in teaching, recruiting staff, selecting residents, assigning residents to an appropriate workload, and dismissing residents whose performance is unsatisfactory and must encourage continuity in the program directorship.
3. In communities where the didactic programs of several residencies are combined, the staff of each accredited program must actively and consistently participate in the combined effort.
4. To provide an adequate interdisciplinary educational experience, the institution that sponsors the orthopaedic program should also participate in ACGME-accredited programs in general surgery, internal medicine, and pediatrics.

### B. Participating Institutions

1. When the resources of two or more institutions are utilized for the clinical or basic science education of orthopaedic residents, an affiliation agreement specifying the contribution of each institution to the orthopaedic surgery residency must be approved by institutional governing boards.
2. A program involving more than two institutions must clearly demonstrate the educational need for each institution's participation in the program. Clinical responsibility alone does not constitute a suitable educational experience.
3. Affiliations should be avoided with institutions that are at such a distance from the sponsoring institution as to make resident participation in program conferences and rounds difficult, unless the participating institution provides comparable activities.
4. The program director must have the responsibility and authority to coordinate program activities at all participating institutions and must maintain a file of written descriptions of the educational activities provided at each institution involved in the program.

## III. Faculty Qualifications and Responsibilities

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the Program Director
  - a. Requisite and documented clinical, educational, and administrative abilities and experience

- b. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC
  - d. Appointment in good standing to the medical staff of an institution participating in the program
2. Responsibilities of the Program Director
    - a. Preparing a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
    - b. Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures. Programs are encouraged to recognize the value and importance of recruiting qualified women and minority students.
    - c. Selecting, supervising, and evaluating the teaching staff and other program personnel at each institution participating in the program.
    - d. Supervising residents in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
    - e. Regularly evaluating residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall
      1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedure;
      2. communicate each evaluation to the resident in a timely manner;
      3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
      4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
    - f. Providing a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
    - g. Implementing fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
    - h. The program director must monitor each resident's performance and progress in the development of the cognitive and interpersonal skills, ethics, manual abilities, and affective qualities needed by an orthopaedic surgeon.
    - i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce

undesirable stress on residents must be evaluated and modified.

- j. Preparing an accurate statistical and narrative description of the program as requested by the RRC.
- k. Ensuring the provision of adequate facilities, teaching staff, resident staff, teaching beds, educational resource materials, outpatient facilities, and research facilities.
- l. Ensuring that resident performance is not impaired by excessive fatigue, whether caused by program duties or other activities. It is desirable that residents' work schedules be designed so that, on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at the senior levels, and therefore necessitates flexibility.
- m. In institutions that offer postgraduate fellowships and/or other educational experiences, ensuring that these activities do not compromise resident education.
- n. Maintaining a file of current, written institutional and interinstitutional agreements, resident agreements, patient care statistics, the operative experience of individual residents, policies on duty hours and supervision, and regular assessments of resident performance. These documents must be provided on request to the RRC or to the site visitor.
- o. Notifying the secretary of the RRC of any changes that may significantly alter the educational experience. Examples of such changes are
  1. change of program director or department chair/division chief.
  2. major changes in institutional affiliation. Any change in formal affiliation with an institution where a resident spends 6 months or longer requires prior approval by the RRC.
  3. extension of a resident's educational period. A program director may retain a resident longer than the duration for which the program is accredited in orthopaedic surgery so that the resident may achieve sufficient competence in the specialty. The RRC must be notified of such retention.
  4. change in number of residents. Any change in the number of residents at any level of training or a change in the total number of residents must receive prior approval of the RRC.

## B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
  - a. All programs must have at least three faculty who devote at least 20 hours each week to the program.
  - b. There must be at least one full-time faculty equivalent (one FTE equals 45 hours per week devoted to the residency) for every four residents in the program (excluding residents in nonorthopaedic education).
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. At least once a year the teaching staff should evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.
6. At least once a year the teaching staff must evaluate the educational effectiveness of the program. In particular, the quality of the curriculum and the extent to which educational goals have been met by residents must be assessed. Confidential written evaluations of the program by residents should be utilized in the process.
7. It is the responsibility of the teaching staff to
  - a. ensure that the structure and content of the residency program reflect an education-to-service ratio that identifies the resident as a student and provide adequate experience in preoperative and postoperative, as well as intraoperative, patient management. This responsibility must include direct supervision appropriate to a resident's competence and level of training in all patient care settings, including operative, inpatient, outpatient, and emergency, and participation in patient care conferences and other educational activities.
  - b. participate in appropriate scientific societies, pursue their own continuing education, and demonstrate an active interest in related research.
  - c. evidence ethical medical practice.

## C. Other Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## D. Residents

When reviewing a program for accreditation, the RRC will approve a maximum total number of residents to be educated in the program and the maximum that may be educated at each level of the program. Those numbers will be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; the quality of the educational offering; and the totality of institutional resources. It is important that the resident complement be sufficient in number to sustain an educational environment.

## IV. Educational Program

### A. Clinical Resources

Clinical problems must be of sufficient variety and volume to afford the residents adequate experience in the diagnosis and management of adult and pediatric orthopaedic disorders. The residents' clinical experience must include adult orthopaedics, including joint reconstruction; pediatric orthopaedics, including pediatric trauma; trauma, including multisystem trauma; surgery of the spine, including disk surgery, spinal trauma, and spinal deformities; hand surgery; foot surgery in adults and children; athletic injuries, including arthroscopy; metastatic disease; and orthopaedic rehabilitation, including amputations and postamputation care.

### B. Medical Knowledge

Residents must demonstrate knowledge about established and evolving biomedical, clinical, and cognate (epidemiological and so-

cial-behavioral) sciences and the application of this knowledge to patient care. Residents are expected to

1. demonstrate an investigatory and analytic thinking approach to clinical situations and
2. know and apply the basic and clinically supportive sciences which are appropriate to their discipline.

### C. Patient Care

Residents must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Residents are expected to

1. communicate effectively and demonstrate caring and respectful behaviors when interacting with patients and their families;
2. gather essential and accurate information about their patients;
3. make informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, up-to-date scientific evidence, and clinical judgment;
4. develop and carry out patient management plans;
5. counsel and educate patients and their families;
6. demonstrate the ability to practice culturally competent medicine;
7. use information technology to support patient care decisions and patient education;
8. perform competently all medical and invasive procedures considered essential for the area of practice;
9. provide health care services aimed at preventing health problems or maintaining health; and
10. work with health care professionals, including those from other disciplines, to provide patient-focused care

### D. Practice-Based Learning and Improvement

Residents must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices. Residents are expected to

1. analyze practice experience and perform practice-based improvement activities using a systematic methodology;
2. locate, appraise, and assimilate evidence from scientific studies related to their patients' health problems;
3. obtain and use information about their own population of patients and the larger population from which their patients are drawn;
4. apply knowledge of study designs and statistical methods to the appraisal of clinical studies and other information on diagnostic and therapeutic effectiveness;
5. use information technology to manage information, access on-line medical information; and support their own education; and
6. facilitate the learning of students and other health care professionals.

### E. Interpersonal and Communication Skills

Residents must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with patients, their patients' families, and professional associates. Residents are expected to

1. create and sustain a therapeutic and ethically sound relationship with patients;
2. use effective listening skills and elicit and provide information using effective nonverbal, explanatory, questioning, and writing skills; and
3. work effectively with others as a member or leader of a healthcare team or other professional group.

### F. Professionalism

Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Residents are expected to:

1. demonstrate respect, compassion, and integrity; a responsiveness to the needs of patients and society that supercedes self-interest; accountability to patients, society and the profession; and a commitment to excellence and ongoing professional development;
2. demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices;
3. demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities; and
4. demonstrate sensitivity and responsiveness to fellow health care professionals' culture, age, gender, and disabilities.

### G. Systems-Based Practice

Residents must demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value. Residents are expected to

1. understand how their patient care and other professional practices affect other healthcare professionals, the healthcare organization, and the larger society and how these elements of the system affect their own practice;
2. know how types of medical practice and delivery systems differ from one another, including methods of controlling healthcare costs and allocating resources;
3. practice cost-effective health care and resources allocation that does not compromise quality of care;
4. advocate for quality patient care and assist patients in dealing with system complexities; and
5. know how to partner with health care managers and healthcare procedures to assess, coordinate, and improve health care and know how these activities can affect system performance.

### H. Related Areas of Instruction

Resident education must include orthopaedic oncology, rehabilitation of neurologic injury and disease, spinal cord injury rehabilitation, orthotics and prosthetics, and the ethics of medical practice.

### I. Continuity of Care

All residents must have the opportunity to develop competence in the preadmission care, hospital care, operative care, and follow-up care (including rehabilitation) of patients. Opportunities for resident involvement in all aspects of care of the same patient should be maximized.

### J. Nonoperative Outpatient Experience

Residents must have adequate experience in nonoperative outpatient diagnosis and care, including all orthopaedic anatomic areas and patients of all age groups. Each week residents must have at least 1-half day and should have 2-half days of outpatient clinical experience in physician offices or hospital clinics with a minimum of 10 patients per session on all clinical rotations. Residents must be directly supervised by faculty and instructed in pre- and post-operative assessment as well as the operative and non-operative care of general and subspecialty orthopaedic patients. Opportunities for resident involvement in all aspects of outpatient care of the same patient should be maximized.

### K. Progressive Responsibility

Residents must have the opportunity to assume increasing responsibility for patient care, under direct faculty supervision (as appropriate for each resident's ability and experience), as they progress

through a program. Inpatient and outpatient experience with all age groups is necessary.

#### L. Teaching Rounds and Conferences

Faculty and residents must attend and participate in regularly scheduled and held teaching rounds, lectures, and conferences. Treatment indications, clinical outcomes, complications, morbidity, and mortality must be critically reviewed and discussed on a regular basis. Subjects of mutual interest and the changing practice of medicine should be discussed at interdisciplinary conferences. On average, there must be at least 4 hours of formal teaching activities each week.

#### M. Basic Medical Sciences

Basic science education must include substantial instruction in anatomy, biomechanics, pathology, and physiology. The basic science program must also include resident education in embryology, immunology, pharmacology, biochemistry, and microbiology.

1. Instruction in anatomy must include study and dissection of anatomic specimens by the residents and lectures or other formal sessions.
2. Instruction in pathology must include organized instruction in correlative pathology in which gross and microscopic pathology are related to clinical and roentgenographic findings.
3. Instruction in biomechanics should be presented in seminars or conferences emphasizing principles, terminology, and application to orthopaedics.
4. Organized instruction in the basic medical sciences must be integrated into the daily clinical activities by clearly linking the pathophysiologic process and findings to the diagnosis, treatment, and management of clinical disorders.
5. Organized instruction in the appropriate use and interpretation of radiographic and other imaging techniques must be provided for all residents.

#### N. Basic Motor Skills

Instruction in basic motor skills must include experience in the proper use of surgical instruments and operative techniques. Evaluation of new or experimental techniques and/or materials should be emphasized. The application of basic motor skills must be integrated into daily clinical activities, especially in the operating room.

#### O. Research and Scholarly Activity

1. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
2. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include
  - a. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - b. participation in journal clubs and research conferences.
  - c. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  - d. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.

- e. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  - f. provision of support for resident participation in scholarly activities.
3. To develop the abilities to critically evaluate medical literature, research, and other scholarly activity, resident education must include instruction in experimental design, hypothesis testing, and other current research methods, as well as participation in clinical or basic research.
  4. Space, equipment, faculty expertise and supervision, conferences, support personnel, time, and funding must be provided for research in the program.
  5. Program directors must maintain a current record of research activity by residents and faculty.
  6. Library Resources
    - a. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
    - b. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic residents in the program.
    - c. Library services should include the electronic retrieval of information from medical databases.
    - d. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

#### V. Evaluation

##### A. Evaluation of Residents

The program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
2. mechanisms for providing regular and timely performance feedback to residents; and
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.

Programs that do not have in place an acceptable set of measures must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan. Adequacy of progress will be assessed against an implementation timetable determined by the RRC that takes into account availability of acceptable tools and current standards of practice. The program is responsible for obtaining the timetable and related information from the RRC.

##### B. Program Evaluation

1. The program should use resident performance and outcome assessment results in its evaluation of the educational effectiveness of the program.
2. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

#### VI. Other

##### A. Examinations

One measure of the quality of a program is the performance of its graduates on examinations for certification by the American Board

of Orthopaedic Surgery. Program graduates should take both Part I and Part II of the examination, and at least 75% of those who take the exams for the first time should pass.

#### **B. Change of Program Director**

Programs that have acting directors for more than 1 year will be subject to review, which may include a site visit.

#### **C. Board Certification**

Residents should contact the American Board of Orthopaedic Surgery for information regarding certification.

*ACGME: June 2001 Effective July 1, 2002*

## **Program Requirements for Fellow Education in Adult Reconstructive Orthopaedics (Orthopaedic Surgery)**

### **I. Introduction**

- A. Adult reconstructive orthopaedics is a subspecialty of orthopaedic surgery that includes the in-depth study, prevention, and reconstructive treatment of musculoskeletal diseases, disorders, and sequelae of injuries by medical, physical, and surgical methods. An educational program in adult reconstructive orthopaedics may include the care of arthritis and related disorders in many anatomic regions or be limited to areas such as the hip, knee, shoulder, elbow, or ankle and foot. The program must be organized to provide sufficient experience for fellows to acquire the competency of a specialist in the field.
- B. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.
- C. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- D. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- E. The director and teaching staff of a program must prepare and comply with written educational goals and objectives for the program. All educational components of a program should be related to program goals and objectives.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

### **II. Institutional Resources and Organization**

- A. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of adult reconstructive orthopaedics. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- B. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- C. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
- D. Facilities to support the overall educational program must be available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must contain all necessary equipment, implants, and instrumentation for reconstructive surgery.
- E. There should be broad support from other clinical specialties, including radiology, laboratory medicine, rheumatology, gerontology, infectious disease, pathology, and rehabilitation.
- F. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be approved by the RRC. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.
- G. The RRC will approve the total number of fellows in the program, based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.

### **III. Program Personnel**

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

#### **A. Program Director**

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality. There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

- c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
- a. Preparation of a written statement outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to fellows and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - i. At least semiannually evaluate the knowledge, skills, and professional growth of the fellows, using appropriate criteria and procedures.
    - ii. Communicate each evaluation to the fellow in a timely manner.
    - iii. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - iv. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
  - f. The provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
  - g. Fellowship directors must ensure that fellows are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.
  - h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and fellow complaints or grievances.
  - i. Monitoring of fellow stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.

- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the fellows in the program. All programs must have at least two orthopaedists on the teaching staff who have significant responsibility for the supervision and instruction of all fellows during the 12 months of accredited education.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Educational Program

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in adult reconstructive orthopaedics. This education must consist of academic and technical components.
  1. The academic component must emphasize a scholarly approach to clinical problem-solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
  2. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- B. The program must offer supervised training in the operative and other technical skills integral to adult reconstructive orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- C. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- D. Clinical experience must include opportunities to observe and to manage patients with a variety of problems involving orthopaedic reconstruction on both an inpatient and outpatient basis, and the breadth of patient experience should include the evaluation

- and care of individuals through a wide range of ages, both sexes, and involve acute, subacute, and chronic conditions.
- E. The educational curriculum must include opportunities for fellows to study anatomy, physiology, biomechanics, pathology, microbiology, pharmacology, epidemiology, and immunology as they relate to adult reconstructive orthopaedics.
- F. The program must have regularly scheduled and held subspecialty conferences with active participation of faculty and fellows.
- G. The program must emphasize the diagnosis of clinical disorders of the bones, joints, and soft tissues; the pathogenesis of these disorders; the treatment modalities available for managing these disorders; and the results and complications of such treatment. Fellows must assume a major role in the continuing care of patients and have progressive responsibility in patient assessment, preoperative evaluation, operative experience, and postoperative management and rehabilitation.
- H. The fellow must keep a record of the diagnosis and procedure for each operation in which he or she is an operating surgeon or first assistant. This record must be kept on file and available for review.
- I. The fellowship program must provide sufficient training to permit fellows to develop clinical competence in the field of adult reconstructive orthopaedics. Reconstructive principles may be broadly based or taught in a context of specific anatomic regions. Examples of knowledge and skills that are desirable include but are not limited to the following:
1. The basic sciences related to adult reconstructive orthopaedics.
  2. The natural history of joint diseases.
  3. Prudent use of diagnostic laboratory tests.
  4. Interpretation of the radiographic and various imaging modality examination of the musculoskeletal system with an appreciation of the risk and information expected of the procedures.
  5. Development of a treatment plan to manage patients with traumatic, congenital and developmental, infectious, metabolic, degenerative, and rheumatologic disorders.
  6. Development of operative skills in reconstructive orthopaedics, including soft-tissue procedures, osteotomy, bone grafting, excisional arthroplasty, arthrodesis, and prosthetic arthroplasty.
  7. Recognition and management of complications of treatment.
  8. Assessment of the effectiveness of treatment methods, including outcome studies.
  9. Sufficient familiarity with current research methods to enable the fellow to critically analyze research reports and to design and implement clinical or basic research in the field of adult reconstructive orthopaedics.
  10. Acquisition of teaching skills in adult reconstructive orthopaedics.

## V. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

- A. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an

in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.
- B. Fellows must participate in hypothesis-based basic and/or clinical research.
1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
  2. The program must provide time and facilities for research activities by fellows.

## VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semiannual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Confidential written evaluations by fellows should be utilized in this process.
- C. Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Confidential written evaluations by fellows should be utilized in this process.

ACGME: June 2002 Effective: January 2003

# Program Requirements for Residency Education in Foot and Ankle Orthopaedics (Orthopaedic Surgery)

## I. Introduction

- A. Foot and ankle orthopaedics is a subspecialty of orthopaedic surgery that includes the in-depth study, prevention, and treatment of musculoskeletal diseases, disorders, and sequelae of injuries in this anatomic region by medical, physical, and surgical methods.
- B. Programs in foot and ankle orthopaedics will be accredited to offer 1 year of postresidency education to individuals who have completed an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency.
- C. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency.
- D. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an ACGME-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- E. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals.
  - 1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  - 2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.
- F. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.

## II. Institutional Resources and Organization

- A. Adequate facilities to support the overall educational program must be available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must be adequately equipped for reconstructive surgery.
- B. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- C. There should be broad support from other clinical subspecialties, including radiology, pathology, rheumatology, endocrinology, laboratory medicine, infectious disease, rehabilitation, and prosthetics and orthotics.
- D. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential

to the practice of foot and ankle orthopaedics. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

- E. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality.

There must be a single program director responsible for the program.

- 1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
- 2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  2. Communicate each evaluation to the resident in a timely manner.
  3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- g. Fellowship directors must ensure that trainees are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.
- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. In addition to the program director, there must be at least one other orthopaedist who actively participates in the academic and clinical components of the program and regularly provides supervision and instruction of residents.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of

patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### **C. Other Program Personnel**

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### **IV. Educational Program**

- A. The educational program in foot and ankle orthopaedics may include the orthopaedic management and appropriate referral for the care of related disorders (eg, rheumatoid arthritis, neuromuscular disorders, and diabetes), as well as those disorders of the leg that may directly or indirectly affect the foot and ankle (eg, compartment syndrome, neuromuscular disease, malalignment of the leg, bone instability).
- B. The educational program must be organized to provide advanced experience for residents to acquire the competency of a specialist in the field. Clinical experience must include opportunities to observe and to manage patients with a variety of problems involving orthopaedic repair of the foot and ankle on both an inpatient and an outpatient basis. The breadth of patient experience should include the evaluation and care of individuals through a wide range of ages and both sexes, and should involve acute, subacute, and chronic conditions.
- C. A postgraduate fellowship program must provide sufficiently advanced education to allow the fellow to acquire special expertise in foot and ankle orthopaedics. This education must consist of academic and technical components. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of foot and ankle orthopaedics.
- D. Programs must provide supervised training in the operative and other technical skills integral to foot and ankle orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in foot and ankle orthopaedics.
- E. The educational curriculum must include the study of anatomy, physiology, biomechanics and gait, pathology, microbiology, pharmacology, and immunology as they relate to foot and ankle orthopaedics.
- F. The program must have regularly held and attended subspecialty conferences, including at least one weekly teaching conference and a monthly morbidity-mortality conference, with active faculty and resident participation. A monthly journal club covering appropriate topics in foot and ankle surgery should be held.
- G. The program must emphasize the diagnosis of clinical disorders of the bones, joints, and soft tissues of the foot and ankle. The pathogenesis of these disorders, the treatment modalities available, and the results and complications of such treatment should be emphasized.
- H. Residents must assume a major role in the continuing care of patients and have progressive responsibility for patient assessment, decisions regarding treatment, preoperative evaluation, operative experience, nonoperative management, postoperative management, rehabilitation, long-term follow-up, and other outpatient care.
- I. A fellow must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic

biomedical knowledge with the clinical aspects of foot and ankle orthopaedics.

- J. Residents must keep a record of the diagnosis and procedure for each operation for which he or she is an operating room surgeon or first assistant. This must be kept on file and available for review.
- K. The program must provide sufficient education to permit residents to develop clinical competence in the field of foot and ankle orthopaedics. Examples of knowledge and skills that are essential include but are not limited to:
1. The basic sciences related to foot and ankle orthopaedics.
  2. The natural history of disease and disorders of the foot and ankle, including an understanding of the deformed, injured, or diseased pediatric foot.
  3. Prudent use of diagnostic laboratory tests.
  4. Interpretation of the radiographic examination of the musculoskeletal system, particularly the foot and ankle, with an understanding of the risk and information expected of these procedures.
  5. Development of a treatment plan to manage patients with traumatic, congenital and developmental, infectious, metabolic, degenerative, neurologic, and rheumatologic disorders.
  6. An understanding of the importance of the timing of orthopaedic procedures in the overall context of foot and ankle injuries.
  7. Prevention and treatment methods for the management of bony and soft-tissue injuries of the foot and ankle, including the indications for various types of internal and external fixation devices and their applications to foot and ankle trauma.
  8. Development of operative skills in reconstructive orthopaedics such as soft-tissue procedures, osteotomies, bone grafting, excisional arthroplasty, arthrodesis, and prosthetic arthroplasty.
  9. Understanding of the dysvascular and neurologically impaired foot, including the neuropathic foot, and the indications for various amputation procedures of the foot and ankle.
  10. Recognition and management of complications of treatment.
  11. Assessment of the efficacy of treatment methods.
  12. Sufficient familiarity with current research methods to enable the resident to critically analyze research reports and to design and implement clinical or basic research in the field of foot and ankle orthopaedics.
  13. Recuperative and rehabilitation techniques including the use of physical and occupational therapy designed to return the patient to normal activities and work.
  14. Understanding of prosthetics and orthotics pertaining to disorders of the foot, gait, and amputation.
  15. Development of teaching skills, lecture techniques, and instructional materials in foot and ankle orthopaedics.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an

in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. All residents must participate in clinical or basic research, and this should culminate in the development and publication and/or presentation of an appropriate paper.
- D. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty, and the program must provide time and facilities for research activities by faculty and fellows.

## VI. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed.
- B. The program, the educational process, and its faculty, in respect to academic performance, should be evaluated at least every 2 or 3 years to see if goals and objectives are being met.
- C. This review process must include direct observation and discussion of case management with the resident.
- D. In order to ensure that residents meet the academic and clinical goals of the program, evaluation procedures must include:
1. Formal testing of residents' cognitive capabilities.
  2. Systematic evaluation and documentation of residents' clinical abilities.
  3. Evaluation of residents' interpersonal skills and attitudinal traits.
- E. Formal review of residents by the program director and members of the teaching staff must include:
1. Written evaluation of the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures, at least once every 6 months.
  2. Timely communication and review of the written evaluation to the resident.
- F. Programs must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

ACGME: September 1994 Effective: July 1995

# Program Requirements for Residency Education in Hand Surgery (Orthopaedic Surgery)

## I. Introduction

### A. Definition of the Specialty

Hand surgery is a surgical subspecialty that deals with congenital and acquired defects of the hand and wrist that compromise the function of the hand. A hand surgery educational program is designed to educate physicians in the art and science of hand surgery and to develop a competent hand surgeon who is capable of independent function. The educational program should provide experience in the repair, resection, and reconstruction of defects of form and function of the hand; in the design, construction, and transfer of flaps and the transplantation of tissues, including microsurgery of multiple tissues; in replantation of upper extremity parts; in surgical and ancillary methods of treatment of tumors; in management of complex wounds; and in the use of alloplastic materials.

### B. Scope of Education

1. Prerequisite resident education must be completed in a general surgery, orthopaedic surgery, or plastic surgery program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program is 1 year.

## II. Institutional Organization

### A. Sponsoring Institution

The educational program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty; financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

### B. Participating Institutions

1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.
2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.
4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

### C. Appointment of Residents

1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.

2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.
3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

## III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

A single program director must be responsible for the program.

1. Qualifications of the program director
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.
  - c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
  - e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.
2. Responsibilities of the program director
  - a. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of hand surgery residents at each level of education and for each assignment. This statement must be distributed to hand surgery residents and members of the faculty. It should be readily available for review.
  - b. Select residents for appointment to the program according to institutional and departmental policies and procedures.
  - c. Select and supervise the faculty and other program personnel at each participating institution.
  - d. Supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
  - e. Regularly evaluate residents' knowledge, skills, and overall performance. The program director, with participation of the faculty, must
    1. at least quarterly, evaluate the progress of each hand surgery resident in writing, using appropriate criteria and procedures;
    2. communicate each evaluation to the resident in a timely manner;
    3. advance residents to positions of higher responsibility only on evidence of their satisfactory progressive scholarship and growth;
    4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
    5. provide a final written evaluation to each hand surgery resident who completes the program. The evaluation must include a review of the resident's performance during the

final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. Each evaluation should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following completion of the program.

- f. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
- h. Prepare an accurate statistical and narrative description of the program, as requested by the RRC.
- i. Ensure that each resident is provided with a sufficient educational program, including a sufficient volume and variety of operative experience and progressive surgical responsibility.
- j. Annually collect, compile, and retain the number and types of hand surgery operative procedures performed in all institutions used for resident education. These data must be provided in the form and format specified by the RRC.
- k. Annually collect, compile, and retain a comprehensive record of the operative procedures performed by each hand surgery resident completing the program. This information must be provided in the form and format specified by the RRC. This record must be signed by the hand surgery resident and the program director, attesting to its accuracy.
- l. Advise applicants of the prerequisite requirements of the appropriate specialty board.
- m. Document the satisfactory completion of prerequisite education before the resident begins the hand surgery program.
- n. Notify the executive director of the RRC in writing of any major change in the program that significantly alters the educational experience for the residents, including
  1. changes in program leadership, to include any change in appointment of the program director, section or division head, or department chair, and
  2. changes in administrative structure that affect the status of the parent department in the institution.
- o. Obtain prior RRC approval for the following changes in the program:
  1. the addition or deletion of any participating institution to which residents are assigned for a total of 2 months or longer;
  2. any change in the approved resident complement of the program; and
  3. any change in the length or format of the program.

#### B. Faculty

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.

3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.
6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty, and the quality of resident supervision.

#### C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

#### D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Facilities and Resources

#### A. Inpatient Facilities

1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

#### B. Outpatient Facilities

Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment,

and postoperative follow-up of patients for whom the resident has responsibility.

### **C. Library Facilities**

1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

## **V. The Educational Program**

### **A. Program Design**

1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

### **B. Clinical Component**

1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.
2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualities for the hand surgeon, education should be provided in the following areas:
  - a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
  - b. Fingertip injuries
  - c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
  - d. Tendon transfer and tendon balancing
  - e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuroma, transpositions, and nerve decompressions
  - f. Management of fractures and dislocations, including phalangeal or metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
  - g. Bone grafts
  - h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
  - i. Pollicization or ray transfer
  - j. Foot to hand transfer
  - k. Tumors, benign and malignant
  - l. Dupuytren's contracture
  - m. Replantation, revascularization
  - n. Amputations
  - o. Fasciotomy, deep incision and drainage for infection, and wound débridement
  - p. Congenital deformities, including syndactyly and others
  - q. Management of upper extremity vascular disorders and insufficiencies

- r. Foreign body, implant removal
- s. Thermal injuries
- t. Arthroscopy
- u. Upper extremity pain management

### **C. Didactic Components**

1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery.

Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.

3. A list of the conferences should be maintained and available for review at the time of the site visit.
4. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
5. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.
7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

### **D. Supervision**

1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

### **E. Duty Hours**

1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at senior levels, and flexibility will be necessary.
2. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Sufficient support services must be provided to ensure that residents are not required to spend excessive time in noneducational activities that can be discharged properly by other personnel.
4. The hand surgery residency is a full-time responsibility. Activities outside the educational program must not interfere with resident performance in the educational program as determined by the program director and must not interfere with resident opportunity for rest, relaxation, and study.

**F. Appointment of Other Residents**

1. The appointment of other residents for hand surgery education must not dilute or detract from the educational opportunities of hand surgery residents.
2. The appointment of other residents to the hand surgery service requires a clear statement of the areas of education, clinical responsibilities, and duration of the education. This statement must be supplied to the RRC at the time the program is reviewed.
3. If such residents so appointed will, in the judgment of the RRC, detract from the education of the hand surgery residents, the accreditation status of the program may be adversely affected.

**VI. Evaluation****A. Resident Evaluation**

The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

**B. Faculty Evaluation**

1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.
2. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
3. The program should demonstrate that such evaluations are used in improving the program.

**C. Program Evaluation**

1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.
2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by one of the sponsoring boards. The RRC may consider this information as part of the overall evaluation of the program.

**VII. Board Certification**

Residents who plan to seek hand surgery certification as administered by the American Board of Orthopaedic Surgery should communicate with the executive director of the board to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: September 1997 Effective: July 1998*

## Program Requirements for Residency Education in Musculoskeletal Oncology (Orthopaedic Surgery)

**I. Introduction**

- A. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency. Graduate medical education programs in the

subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

- B. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- C. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- D. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

**II. Institutional Resources and Organization**

- A. The sponsoring institution must provide sufficient faculty, financial resources and clinical, research, and library facilities to meet the educational needs of the fellows and to enable the program to comply with the requirements for accreditation.
- B. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be approved by the RRC. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.
- C. The RRC will approve the total number of fellows in the program based upon the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.
- D. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of musculoskeletal oncology. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- E. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- F. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow

should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.

- G. There should be broad support from other clinical specialties, including diagnostic and therapeutic radiology, pediatrics, nuclear medicine, pathology, psychiatry, surgery and its subspecialties, and medical oncology. Support of oncologic nursing, rehabilitation, nutrition, dietetic counseling and social services, as well as physical and occupational rehabilitation, is desirable.
- H. Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient ambulatory care and laboratory resources. Specifically, there should be advanced pathology services, including electron microscopy and immunopathology; resources for nuclear medical imaging, magnetic resonance imaging, musculoskeletal angiography, and computed tomography; and sufficient facilities for qualitative correlative studies.
- I. The fellow must have day-to-day access to pathologists and to radiologists with recognized expertise in musculoskeletal pathology and radiology.
- J. On-site radiation and medical oncology facilities and a modern diagnostic radiologic service are necessary.
- K. It is desirable that there be other clinical subspecialties of orthopaedic surgery and general surgery to which the orthopaedic oncology fellow may relate formally as well as special facilities for musculoskeletal pathology.
- L. There must be a minimum of 300 new patients per fellow of benign and malignant bone and soft tissue tumors with an appropriate mix of primary and metastatic lesions to afford the fellow adequate educational experience in musculoskeletal oncology. This experience must include the care of both inpatients and outpatients.
- M. The program should include access to computer facilities, and a teaching collection of slides, x-rays, and specimens that are appropriately indexed for easy retrieval.

### **III. Program Personnel**

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

#### **A. Program Director**

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality. There must be a single program director responsible for the program.

- 1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
- 2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of fellows at each level of training and for each major rotation or other program assignment. This state-

ment must be distributed to fellows and members of the teaching staff. It should be readily available for review.

- b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. The supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
  - 1. At least semiannually evaluate the knowledge, skills, and professional growth of the fellows, using appropriate criteria and procedures.
  - 2. Communicate each evaluation to the fellow in a timely manner.
  - 3. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - 4. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
- f. The provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
- g. Fellowship directors must ensure that trainees are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.
- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and fellow complaints or grievances.
- i. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Teaching Staff**

- 1. There must be at least two orthopaedic faculty with documented qualifications who have significant responsibility for the instruction and supervision of program fellows.
- 2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
- 3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching

abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Educational Program

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in musculoskeletal oncology. This education must consist of academic and technical components.
  1. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
  2. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- B. The program must offer supervised training in the operative and other technical skills integral to musculoskeletal oncology. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- C. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- D. The educational program in musculoskeletal oncology must be organized to provide experience at a sufficient level for the fellow to acquire the competency of a specialist in the field. Clinical experience must include opportunities to observe and to manage patients with a wide variety of clinical orthopaedic oncologic problems on both an inpatient and outpatient basis.
- E. The fellow must be given an opportunity to assume continuing responsibility for both acutely and chronically ill patients in order to learn the natural history of musculoskeletal neoplasia as well as the effectiveness of therapeutic programs. Fellow education must provide sufficient opportunity for independent clinical decision making so that the program director and faculty are assured that the graduating fellow has achieved the ability to make sound clinical decisions.
- F. There should be a weekly multi-disciplinary tumor conference involving pathologists and radiologists as well as radiation, medical, and pediatric oncologists.

- G. The program must provide training to develop clinical competence in the overall field of musculoskeletal oncology. Examples of knowledge and skill that are desirable include, but are not limited to, the following:
  1. The natural history of musculoskeletal neoplasia
  2. Knowledge and understanding of musculoskeletal surgical pathology and diagnostic radiology
  3. Management of treatment protocols
  4. Knowledge of the indications for and limitations of surgery, radiation therapy and chemotherapy in the treatment of musculoskeletal neoplasms
  5. Knowledge of the methodology and techniques to perform creditable clinical and/or basic research in musculoskeletal oncology to include epidemiology and statistics and design of clinical trials
  6. Acquisition of teaching skills in musculoskeletal pathology and oncology
- H. The educational program must be based on a core curriculum that ensures appropriate instruction in the basic concepts of oncogenesis and molecular oncology, adult and pediatric oncology, immunology, and radiation oncology.
- I. Fellows and faculty must participate in a journal club which reviews current literature in medical, pediatric, and radiation oncology on at least a monthly basis.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organization's meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.
- C. Fellows must participate in basic and/or clinical, hypothesis-based research.
  1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
  2. The program must provide time and facilities for research activities by fellows.

## VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.

- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semiannual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Confidential written evaluations by fellows should be utilized in this process.
- C. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Confidential written evaluations by fellows should be utilized in this process.

ACGME: September 2001 Effective: July 1, 2002

# Program Requirements for Residency Education in Orthopaedic Sports Medicine (Orthopaedic Surgery)

## I. Introduction

- A. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.
- B. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- C. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- D. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a program should be related to program goals.

## II. Institutional Resources and Organization

- A. Sponsoring Institution  
The sponsoring institution must provide sufficient faculty, financial resources and clinical, research, and library facilities to meet the educational needs of the fellows and to enable the program to comply with the requirements for accreditation.
- B. Participating Institutions  
If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be approved prospectively by the Residency Review Committee. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.
- C. Appointment of Fellows  
The RRC will approve the total number of fellows in the program based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.
- D. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of orthopaedic sports medicine. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- E. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- F. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
- G. Facilities to accomplish the clinical and educational objectives of the specialty must be available and functioning for both inpatients and outpatients.
  - 1. The physical therapy and the athletic training departments must be completely equipped with the modern therapeutic modalities used in the treatment of the injured athlete.
  - 2. The operating room facilities must contain modern equipment, including arthroscopes, adjunctive equipment for arthroscopy, and necessary imaging equipment.
- H. The educational program must be conducted in a setting that will allow interaction with the disciplines of radiology, physical therapy, internal medicine and such other specialties ordinarily encountered in sports medicine.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, advancement of fellows and the maintenance of records related to program accreditation.

### A. Program Director

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality. There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of orthopaedic surgery residents and fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents, fellows, and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of orthopaedic surgery residents and fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Orthopaedic surgery residents and fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    1. At least semiannually evaluate the knowledge, skills, and professional growth of fellows, using appropriate criteria and procedures.
    2. Communicate each evaluation to the fellow in a timely manner.
    3. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    4. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
  - f. The provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow permanent record maintained by the institution.
  - g. Fellowship directors must ensure that trainees are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of

routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.

- h. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and fellow complaints or grievances.
- i. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.
- k. Notify the RRC regarding any major programmatic changes.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the fellows in the program. All programs must have at least two orthopaedists on the teaching staff who have significant responsibility for the supervision and instruction of all fellows during the 12 months of accredited education.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. Educational Program

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in orthopaedic sports medicine. This education must consist of academic and clinical components.
  1. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
    - a. All fellows must participate in didactic sessions devoted to the basic sciences, including anatomy, biomechanics, and biology of healing.

- b. Instruction should also be provided in sports medicine issues in the areas of cardiology, dermatology, pulmonology, preventive medicine, pediatric and adolescent medicine, exercise physiology, environmental exposure, athletic populations, team physicians, and protective equipment (including braces).
2. The clinical component must be designed to ensure that fellows become competent in the evaluation (history, physical examination, and imaging) and management (both operative and nonoperative) of patients with sports injuries or conditions.
- B. The program must offer supervised training in the operative and other technical skills integral to orthopaedic sports medicine. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- C. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- D. Clinical experience must include inpatient and outpatient opportunities to observe, manage, operate and follow patients with a wide variety of sports medicine problems.
- E. The program must be structured to provide the fellow with an opportunity to assume continuing responsibility with appropriate supervision for patients with acute and chronic injuries and to observe the natural course of athletic injuries and the effects of various therapeutic modalities on their outcome. Fellow education must provide sufficient opportunity for independent clinical decision making so that the program director and faculty are assured that the graduating fellow has achieved the ability to make sound clinical decisions.
- F. The program should provide the fellow with the opportunity to work with athletic teams and/or athletic organizations.
- G. The program must emphasize the pathology and biomechanics of athletic injuries and the effects of injury on the athlete, including both physical and psychological manifestations. Appropriate utilization of laboratory tests, physical modalities, and operative procedures for the diagnosis and treatment of athletic injuries must be stressed.
- H. The program must provide the fellow with specific experience with athletic trainers and physical therapists and with related experience in writing appropriate prescriptions and in monitoring patient progress.
- I. The program must provide sufficient opportunity for the fellow to gain knowledge and skill in a number of areas that include, but are not limited to:
  1. Taking a history and performing an appropriate physical examination for orthopaedic sports injuries.
  2. Exposure to patients with typical histories and physical findings of chronic orthopaedic sports injuries and the management of those injuries.
  3. Differentiating between those sports injuries that require immediate surgical treatment and those that can be treated nonoperatively.
  4. Recognizing those sports injuries for which a minor delay in treatment would not be deleterious to the patient.
  5. Acute care of orthopaedic and other acute sports medicine injuries that may occur during athletic competition and how to deal with those injuries on the athletic field.
  6. How to order and interpret radiologic examinations that are used for diagnosis of sports injuries, including specific views,

tomograms, bone scans, arthrograms, computerized axial tomography scans, and magnetic resonance imaging.

7. Therapeutic modalities offered in the department of physical therapy, how to use them, and how to judge the appropriateness and efficacy of a treatment plan.
8. Diagnostic and operative arthroscopy.
9. Nonorthopaedic problems that occur in sports medicine and how to deal with those problems or how to refer them appropriately.
10. The psychological effect of injuries on athletes and how to deal with them personally and how to select consultants to assist in their management.
11. Sports equipment, particularly protective devices intended to allow the athlete to continue to compete, including helmets, protective pads, knee braces, foot orthotics, and others not specifically named.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.
- C. Fellows must participate in basic and/or clinical research.
  1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
  2. The program must provide time and facilities for research activities by fellows.

## VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semiannual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Confidential, written evaluations by fellows should be utilized in this process.
- C. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Confidential, written evaluations by fellows should be utilized in this process.

ACGME: September 2001 Effective: July 1, 2002

# Program Requirements for Fellow Education in Orthopaedic Surgery of the Spine (Orthopaedic Surgery)

## I. Introduction

- A. Subspecialty training in orthopaedic spine surgery includes the in-depth study, prevention, and treatment of spinal column diseases, disorders, and injuries by medical, physical, and surgical methods. The educational program of a fellowship in orthopaedic surgery of the spine must be organized to provide sufficient experience for a fellow to acquire the competency of a specialist in the field.
- B. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.
- C. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- D. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- E. The director and teaching staff of a program must prepare and comply with written educational goals and objectives for the program. All educational components of a program should be related to program goals and objectives.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

## II. Institutional Resources and Organization

- A. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of spine surgery. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- B. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institution(s) as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be approved by the RRC. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.
- C. Appointment of Fellows
 

The RRC will approve the total number of fellows in the program, based on the total number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.
- D. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- E. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
- F. Facilities and equipment to support the overall educational program must be readily available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must contain all necessary equipment for surgery of the spine.
- G. Institutions sponsoring programs in orthopaedic surgery of the spine should also have an ACGME-accredited residency in neurological surgery. The educational program must involve close cooperation with neurological surgery and should maintain close collegial relationships with related clinical specialties including but not limited to physical medicine and rehabilitation, neurology, radiology, pathology, laboratory medicine, anesthesiology, and infectious disease. Exceptions to this standard will be considered on a case-by-case basis and will require justification based on sound educational principles, as well as demonstration of substantial compliance with the intent of this requirement.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

### A. Program Director

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that

adequate facilities and other necessary resources are available to provide an education of high quality.

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to fellows and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    1. At least semiannually evaluate the knowledge, skills, and professional growth of the fellows, using appropriate criteria and procedures.
    2. Communicate each evaluation to the fellow in a timely manner.
    3. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    4. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
  - f. The provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
  - g. Fellowship directors must ensure that fellows are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.

- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and fellow complaints or grievances.
- i. Monitoring of fellow stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the fellows in the program. All programs must have at least two physicians with experience or qualifications in spine surgery on the teaching staff who have significant responsibility for the supervision and instruction of all fellows during the 12 months of accredited education.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

#### **C. Other Program Personnel**

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### **IV. Educational Program**

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in orthopaedic surgery of the spine. This education must consist of academic and technical components.
  1. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
  2. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- B. The program must offer supervised training in the operative and other technical skills integral to orthopaedic surgery of the spine. Instruction and experience must be sufficient for the

fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.

- C. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- D. The fellows' clinical experience must include opportunities to observe and manage patients on both an inpatient and an outpatient basis as well as for the evaluation and care of individuals through a wide range of ages and of both sexes, and with a wide variety of problems in various spinal regions.
- E. The educational curriculum must include anatomy, physiology, biomechanics, microbiology, pathology, and other sciences as they relate to orthopaedic surgery of the spine.
- F. The program must have regularly scheduled and held subspecialty conferences with active participation of faculty and fellows.
- G. The program must emphasize the diagnosis of clinical disorders of the spine, the pathogenesis of these disorders, the operative and nonoperative treatment modalities available for managing these disorders, and the results and complications of such treatment.
- H. The educational program will not include experience in the treatment of intradural pathology. When spinal disease or injury and neurological deficit coexist, the educational program will ensure appropriate interdisciplinary cooperation with neurological surgery and rehabilitation medicine. The program structure must ensure that the fellow plays a major role and has progressive responsibility in the assessment, preoperative evaluation, surgical care, and postoperative management and rehabilitation of patients. There must be an opportunity for continuing evaluation of treated patients.
- I. Fellows must maintain a record of the diagnosis and procedure for each operation in which they are an operating surgeon or first assistant. This record must be kept on file and available for review by the RRC and its site visitors.
- J. Fellows must have the opportunity to develop clinical competence in the field of orthopaedic surgery of the spine. Principles may be broadly based or taught in a context of specific anatomic regions. Examples of knowledge and skills that are essential include but are not limited to:
  1. The basic sciences related to the musculoskeletal system.
  2. The natural history of spinal degeneration.
  3. The ability to assess clinically the neurologic function of the spinal cord and nerve roots.
  4. Prudent use of diagnostic laboratory tests (including electrophysiologic monitoring).
  5. Indications for and interpretation of imaging studies of the spine, including an appreciation of the risk and information expected of the procedures.
  6. Development of a treatment plan to manage patients with traumatic, congenital, developmental, infectious, metabolic, degenerative, and rheumatologic disorders of the spine.
  7. Development of operative skills for the management of patients with orthopaedic disorders of the spine.
  8. Recognition and management of complications of treatment (including appropriate consultations with subspecialists).
  9. Assessment of the effectiveness of diagnostic and treatment methods.
  10. Familiarity with currently used research methods.
  11. Acquisition of teaching skills in evaluation and care of spinal problems.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship, in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.
- C. Fellows must participate in hypothesis-based basic science and/or clinical research.
  1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
  2. The program must provide time and facilities for research activities by fellows.

## VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semiannual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Confidential written evaluation of the faculty by fellows should be included in these activities.
- C. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Confidential written evaluations by fellows should be utilized in this process.

ACGME: June 2002 Effective: January 2003

# Program Requirements for Residency Education in Orthopaedic Trauma (Orthopaedic Surgery)

## I. Introduction

- A. Orthopaedic trauma is a subspecialty of orthopaedic surgery that includes the in-depth study and treatment of injuries to the locomotor system and their sequelae. An educational program in orthopaedic trauma must be organized to provide sufficient experience for fellows to acquire the competency of a specialist in the field.
- B. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education will take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.
- C. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- D. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- E. The director and teaching staff of a program must prepare and comply with written educational goals and objectives for the program. All educational components of a program should be related to program goals and objectives.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

## II. Institutional Resources and Organization

- A. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of orthopaedic trauma. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- B. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- C. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic

fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.

- D. Modern facilities to support the overall educational program must be available and functioning. The primary hospital in which the fellow works must be a Level I or II trauma center or equivalent with 24-hour full services, acute and emergency surgery, and at least 200 operative orthopaedic trauma cases each year. It must have a modern operating room facility, image intensification, compatible fracture table, orthopaedic implants in stock, and, ideally, a special room dedicated to acute and emergency surgery.
- E. There must be access to records and x-rays of orthopaedic trauma cases for at least 5 years following patient discharge via computerized or other efficient coding system. Photographic records and photography support should be readily available.
- F. There must be broad support and cooperation from other clinical services, particularly emergency medicine, general surgery, neurosurgery, anesthesia, intensive care, rehabilitation services, and radiology (including CT and angiography available on an emergency basis). Plastic surgery, urology, otolaryngology, ophthalmology, and pulmonary medical specialists should also be available to provide emergency consultation.
- G. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring institution and participating institutions as required by the Institutional Requirements. Participation by any institution that provides two months or more of the educational program must be approved by the Residency Review Committee.
- H. The RRC will approve the number of residents in the program per year, based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

### A. Program Director

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality.

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or appropriate educational qualifications as judged by the RRC.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills and

other attributes of fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to fellows and members of the teaching staff. It should be readily available for review.

- b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
  1. at least semiannually evaluate the knowledge, skills and professional growth of the fellows, using appropriate criteria and procedures;
  2. communicate each evaluation to the fellow in a timely manner;
  3. advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
  4. maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
- f. Provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
- g. Fellowship directors must ensure that trainees are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.
- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and fellow complaints or grievances.
- i. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the fellows in the program.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### IV. The Educational Program

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in orthopaedic trauma. This education must consist of academic and technical components.
  1. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
  2. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- B. The program must offer supervised training in the operative and other technical skills integral to orthopaedic trauma. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- C. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- D. Clinical experience must include opportunities to observe and to manage patients with a wide variety of problems in orthopaedic trauma, and the breadth of patient experience should include the evaluation and care of individuals of a wide range of ages and both sexes. Generally, care of these patients involves several specialties and a cooperative effort in trauma centers.
- E. The educational curriculum must include opportunities for fellows to study anatomy, physiology, biomechanics, pathology, microbiology, pharmacology, and epidemiology as they relate to orthopaedic trauma.
- F. The program must hold regularly scheduled subspecialty conferences, including at least one weekly teaching conference, a monthly morbidity/mortality conference, and a monthly conference with other trauma services, with active faculty and fellow participation.

- G. The program must emphasize the diagnosis of clinical orthopaedic trauma problems, the mechanism of injury, the treatment modalities available, and the results and complications of such treatment. Fellows must have the opportunity to assume a major role in the continuity of care of patients and have progressive responsibility for patient assessment, preoperative planning, operative experience, postoperative intensive care, other postoperative management, rehabilitation, and other outpatient care of patients.
- H. The fellow must keep a record of the diagnosis and procedure for each operation in which he/she is an operating surgeon or first assistant. This must be kept on file and available for review.
- I. The fellowship program must provide sufficient training to permit fellows to develop clinical competence in the field of orthopaedic trauma, and in resuscitation as applied to the patient with polytrauma. Examples of knowledge and skills that are desirable include, but are not limited to, the following:
1. The basic sciences related to orthopaedic trauma.
  2. An understanding of the integration of the orthopaedic traumatologist in a trauma team and an appreciation of the importance of the timing of orthopaedic procedures in the overall care of the severely injured patient.
  3. Indications for various types of internal and external fixation devices and their applications in multiple trauma situations both in the axial and appendicular skeletons.
  4. Treatment protocols for severe soft tissue injuries, including compartment syndrome and secondary organ failures in polytrauma.
  5. Indications for early or immediate amputation rather than salvage attempts in severely injured limbs.
  6. Diagnosis and management of complications of musculoskeletal trauma.
  7. Pathophysiology of severe musculoskeletal trauma and secondary organ failure.
  8. Psychiatric and psychological implications of severe musculoskeletal trauma for the patient and family members.
  9. Recuperative and rehabilitation techniques and use of physical and occupational therapy designed to return the patient to normal activities and work.
  10. Sufficient familiarity with current research methods to enable the fellow to critically analyze research reports and to design and implement clinical or basic research in the field of musculoskeletal trauma.
  11. Teaching skills and lecture techniques and materials in orthopaedic traumatology.
  12. Overall, the fellow must develop medical, surgical and psycho-sociological skills in the management of the severely injured patient.

#### V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and

abnormal states and the application of current knowledge to practice.

2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.
- C. Fellows must participate in hypothesis-based basic and/or clinical research.
1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
  2. The program must provide time and facilities for research activities by fellows.

#### VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

#### VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semi-annual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Confidential written evaluations by fellows should be utilized in this process.

ACGME: June 2001 Effective: July 1, 2002

## Program Requirements for Residency Education in Pediatric Orthopaedics (Orthopaedic Surgery)

#### I. Introduction

- A. Definition and Scope of Specialty  
Pediatric Orthopaedics is the medical specialty that includes the study and prevention of musculoskeletal diseases, disorders, and injuries and their treatment by medical, surgical, and physical methods in patients aged 16 years and younger.
- B. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and

such education will take place after completion of an accredited orthopaedic surgery residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

- C. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
- D. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
- E. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a program should be related to program goals.
  - 1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  - 2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

## II. Institutional Resources and Organization

- A. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of pediatric orthopaedics. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.
- B. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
- C. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
- D. Inpatient, ambulatory care, and laboratory facilities must be available and functioning.
- E. The program must be conducted in a setting in which comprehensive surgical, medical, and pediatric consultation services are available.
- F. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides two months or more of the educational program must be approved (prospectively) by the Residency Review Committee. Assignments to participating institutions must be based on a clear educational rationale and should provide

clinical resources not available to the program's sponsoring institution.

- G. The RRC will approve the total number of fellows in the program based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

### A. Program Director

The director of the subspecialty program and the director of the affiliated orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for ensuring that adequate facilities and other necessary resources are available to provide an education of high quality.

There must be a single program director responsible for the program.

- 1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Orthopaedic Surgery or judged by the RRC to possess appropriate educational qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
- 2. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills and other attributes of fellows and for each major rotation or other program assignment. This statement must be distributed to residents, fellows and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. Supervision of residents and fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents and fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - 1. at least semiannually evaluate the knowledge, skills and professional growth of the fellows, using appropriate criteria and procedures;
    - 2. communicate each evaluation to the fellow in a timely manner;
    - 3. advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and

4. maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
- f. Provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
- g. Fellowship directors must ensure that fellows are given reasonable duty and call assignments. It is desirable that fellows' work schedules be designed so that on average, excluding exceptional patient care needs, fellows have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Scheduling will necessitate flexibility, as fellows are at the postgraduate level, so the ratio of hours worked and on-call time may vary.
- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and fellow complaints or grievances.
- i. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the fellows in the program. All programs must have at least two pediatric orthopaedists on the teaching staff who have significant responsibility for the instruction and supervision of all fellows during the 12 months of accredited education.
2. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

#### **C. Other Program Personnel**

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

#### **IV. Educational Program**

- A. The fellowship must provide sufficiently advanced education to allow the fellow to acquire the expertise of a specialist in pediatric orthopaedics. This education must consist of academic and technical components.
  1. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
  2. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- B. The program must include a didactic program, non-operative experience, and an operative experience emphasizing continuity of care in pediatric orthopaedics trauma (acute and reconstructive), metabolic and genetic conditions, tumors, neuromuscular conditions, spinal conditions, hip conditions, foot and ankle conditions, amputations and prosthetics, hand surgery, athletic injuries, and general pediatric orthopaedics.
- C. The program must offer supervised training in the operative and other technical skills integral to pediatric orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- D. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- E. The fellows' clinical experience should include observation and treatment of both in-patients and out-patients with a wide variety of orthopaedic disorders.
- F. Fellows must have the opportunity to assume continuous responsibility for both acutely and chronically ill patients so as to learn the natural history of pediatric orthopaedic disorders as well as the effectiveness of treatment programs and the impact of growth on these disorders.
- G. The program should emphasize normal physiologic mechanisms and the pathogenesis and complications of pediatric orthopaedic disorders.
- H. Utilization of appropriate laboratory procedures and allied medical personnel should be stressed.
- I. The knowledge and skills the program must cover include, but are not limited to:
  1. prudent and judicious use of diagnostic tests;
  2. use of data resources and the need for and interpretation of data;
  3. interpretation of radiologic examination of the musculoskeletal system including vascular studies and the modalities of nuclear medicine (and other advanced techniques) with an appreciation of the risk and expected yield of the procedures;
  4. understanding of the role of physical and occupational therapists, and of orthotists and prosthetists in the rehabilitation and on-going management of pediatric orthopaedic disorders; and
  5. performance of pediatric orthopaedic surgical procedures.

#### **V. Program Research and Scholarly Activity**

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which both residents and fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
6. Provision of support for fellow participation in scholarly activities.

C. Fellows must participate in basic and/or clinical research.

1. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
2. The program must provide time and facilities for research activities by fellows.

## VI. Library

- A. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- B. Library services should include the electronic retrieval of information from medical databases.
- C. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. Program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills; attitudinal traits; and surgical judgment. There must be at least semiannual communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.
- B. Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Confidential written evaluations by fellows should be used in this process.
- C. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Written evaluations by fellows should be utilized in this process.

ACGME: June 2001 Effective: July 1, 2002

# Program Requirements for Residency Education in Otolaryngology

## I. Introduction

### A. Definition and Scope of the Specialty

Residency programs in otolaryngology-head and neck surgery are designed to provide residents with education in the comprehensive medical and surgical care of patients with diseases and disorders that affect the ears, the upper respiratory and upper alimentary systems and related structures, and the head and neck. The educational program should include the core knowledge, skills, and understanding of the basic medical sciences relevant to the head and neck; the upper respiratory and upper alimentary systems; the communication sciences, including the knowledge of audiology and speech pathology and audiologic and speech rehabilitation; and the chemical senses and allergy, endocrinology, and neurology as they relate to the head and neck area. The educational program also should include the clinical aspects of diagnosis and the medical and/or surgical therapy for prevention of diseases, neoplasms, deformities, disorders and/or injuries of the ears, the upper respiratory and upper alimentary systems, the face, the jaws, and other head and neck systems; head and neck oncology; and facial plastic and reconstructive surgery.

Following completion of the educational program, residents should be prepared to care for patients of all ages with medical and surgical disorders of the ears, the upper respiratory and upper alimentary systems and related structures, and the head and neck; to carry out diagnostic evaluations of patients with otolaryngologic disorders; and to carry out the surgical and nonsurgical management of otolaryngologic disorders, including rehabilitation and referral to subspecialists when appropriate.

### B. Duration and Scope of Education

1. Residency programs in otolaryngology-head and neck surgery must be of 5 years' duration, which must include 1 year of general surgery and 4 years of progressive education in the specialty. Experience in the basic surgical sciences should precede the otolaryngology-head and neck surgery education. The final year of the 4 years of otolaryngology education must be a chief resident experience and must be spent within institutions approved as part of the program.
2. Prior to admission, the program must notify each resident in writing of the required length of the educational program. The required length of the educational program for a particular resident may not be changed without mutual agreement during his or her program unless there is a significant break in his or her training or the resident requires remedial education.
3. While it is not essential that all programs have the same curriculum or offer a uniform sequence of experience, all accredited programs should adequately cover the entire scope of the discipline with interdisciplinary interaction as appropriate.
4. The program should provide a comprehensive educational experience in bronchoesophagology, endocrinology, facial plastic and reconstructive surgery, head and neck surgery, immunology, laryngology, otology, otolaryngic allergy, neurology, neurotology, pediatric otolaryngology, and rhinology. The program must provide sufficient clinical and operative experience to enable the residents, on completion of their education, to practice this specialty in a scientific, a knowledgeable, and an independent manner.

## II. Institutional Organization

### A. Sponsoring Institution

The sponsoring institution must provide sufficient faculty, financial resources, support space, clinical and research facilities, and library materials to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation. The governing body of the sponsoring institution must grant the program director sufficient authority, financial support, and access to facilities to organize and supervise the following activities: resident selection and evaluation; the didactic and clinical components of the program, including patient management and scholarly activity; and staff recruitment and evaluation. There must be sufficient operative time available to ensure an adequate resident surgical experience.

### B. Participating Institutions

1. A program need not be confined to a single hospital. However, in programs involving two or more hospitals, the sponsoring institution must organize the program to provide residents with a progressive educational experience.
2. Each participating institution must offer significant educational opportunities to the program. Resident education at each participating institution must comply with the Program Requirements for Otolaryngology. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. There must be a qualified otolaryngologist-head and neck surgeon appointed by and responsible to the program director in each geographically separate institution. This individual must be responsible for the education of the residents and also will supervise the educational activities of the other faculty relating to resident education in that institution. The program director at each participating institution must have major clinical responsibilities at that institution.
4. The educational program may not include assignments to any nonapproved participating institutions for more than a total of 3 months without prior approval of the Residency Review Committee (RRC).

### C. Appointment of Residents

1. The total number of residents and the number of residents per year must be approved in advance by the RRC. The number of residents will be based on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the totality of institutional resources committed to resident education.
2. Programs may not graduate more residents in any given year than the number of residents approved by the RRC, except in cases where a resident's educational program is extended because the program director has determined the need for additional education to meet minimum requirements for competency. The program director must request approval in writing from the RRC to extend a resident's educational program. Any increase in the number of residents in any year of the program or in the total number of residents must receive prior approval of the RRC. Any request for change in the approved resident complement must include a strong educational rationale.
3. A vacancy in a resident complement, if filled, must be at the same level in which the vacancy occurs, unless otherwise approved by the RRC.  
Violations of these requirements will result in an adverse accreditation action.

### D. Appointment of Subspecialty Residents

1. The appointment of subspecialty residents for special training or education must not dilute or detract from the educational opportunities of regularly appointed otolaryngology residents.
2. Any program with subspecialty residents must submit a clear statement of the areas of education, clinical responsibilities, and duration of the educational program. This statement must be supplied to the RRC at the time the program is site visited.
3. If subspecialty residents will, in the judgment of the RRC, detract from the education of the regularly appointed otolaryngology residents, the accreditation status of the program may be adversely affected.

## III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director
  - a. Requisite and documented clinical, educational, and administrative abilities and experience
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
  - c. Certification by the American Board of Otolaryngology or judged by the RRC to possess appropriate qualifications
  - d. Appointment in good standing to the medical staff of an institution participating in the program
2. Responsibilities of the program director
  - a. Preparing a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty and should be readily available for review.
  - b. Devoting sufficient time to the program to provide continuity of leadership and to fulfill all of the responsibilities inherent in meeting the educational goals of the program. Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program and will be cause for serious concern.
  - c. Developing a sound administrative organizational framework and an effective faculty as essential elements of an approved residency program.
  - d. Active involvement in clinical practice, continuing medical education, regional or national scientific societies, presentations and publications, and research.
  - e. Overseeing and organizing the activities of the educational program. The responsibilities of this position should include but not be limited to:
    1. selection of residents for appointment to the program according to institutional and departmental policies and procedures;
    2. supervision, direction, and administration of the educational activities;
    3. evaluation of the residents, faculty, and residency program;
    4. selection and supervision of the faculty and other program personnel at each institution participating in the program,

to include the appointment of program directors at participating institutions.

- f. Supervising residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- g. Regularly evaluating residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- h. Implementing fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. The program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. Preparing an accurate statistical and narrative description of the program as requested by the RRC.
- k. Promptly notifying the executive director of the RRC in writing of any major change in the program that may significantly alter the educational experience for the residents, including:
  1. changes in leadership of the department, such as the appointment of a permanent or acting program director and/or department chair;
  2. changes in administrative structure, such as an alteration in the status of the program within the institution.
- l. Obtaining prior approval of the RRC for the following changes in the program to determine if an adequate educational environment exists to support these changes:
  1. The addition of any institution to which residents rotate for more than 3 months
  2. Any change in the approved resident complement of the program
  3. Any change in the length or format of the educational program

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

## B. Faculty

1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. The faculty is responsible for ensuring that the structure and content of the residency program reflect an appropriate education-to-service ratio. The resident should be recognized as a student and provided with a sufficient experience in nonoperative management and the preoperative, intraoperative, and postoperative patient care of patients with otolaryngologic disorders. This responsibility must include on-site supervision of the resident in operative, inpatient, outpatient, and emergency cases and participation in patient care conferences and other educational exercises.
3. It is desirable that there be at least two other members of the faculty with qualifications similar to those of the program director.
4. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, and support for the goals and objectives of the educational

program. The faculty must be willing to devote the necessary time and effort to the educational program and be engaged in scholarly activities, including:

- a. participation and presentation of their work at regional or national scientific societies;
  - b. participation in their own continuing medical education;
  - c. participation in clinical and/or basic research;
  - d. publication in refereed journals, monographs, or books.
- A faculty that does not exhibit such characteristics will be the cause of concern to the RRC as to its adequacy and suitability for conducting a program of graduate education in otolaryngology-head and neck surgery.
5. There must be clear documentation of adequate faculty commitment to the residency program. One measure of this commitment is the extent to which faculty permit residents to participate in the management of faculty members' private patients.
  6. A faculty member from each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
  7. The faculty must be organized and have regular documented meetings at least annually to review program goals and objectives and program effectiveness in achieving them. At least one resident representative should participate in these reviews.
  8. The faculty should evaluate at least annually the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

## C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

There must be adequate space and equipment for the educational program, including meeting rooms; classrooms with audiovisual and other educational aids; office space for staff; pertinent library materials and current information technology readily available for clinical care; and diagnostic, therapeutic, and research facilities.

- A. Within each institution, beds sufficient for the needs of the service must be provided.
- B. Residents must have access to outpatient facilities, clinics, and office space for education in the regular preoperative evaluation and postoperative follow-up of cases for which the resident has responsibility.
- C. Technologically current equipment considered necessary for diagnosis and treatment must be available.
- D. A patient information system that facilitates both quality patient care and education must be available.
  1. The patient information system should be supervised by qualified staff.
  2. The patient information system should be maintained to ensure easy and prompt access at all times.
  3. The patient information system should be organized to permit the collection and evaluation of selected material from clinical records for investigative and review purposes.
- E. Residents should be provided with adequate office, sleeping, lounge, and food facilities during assigned duty hours. Adequate clerical support services also must be provided.

F. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

V. The Educational Program

A. ACGME Competencies

The residency program must require its residents to obtain competencies in the 6 areas below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
4. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

B. Program Goals and Objectives

The program director and faculty must prepare and implement written educational goals for the program.

1. Program design  
All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC as part of the regular review process.
2. The program must have a comprehensive, well-organized, and effective curriculum, including the cyclical presentation of core specialty knowledge supplemented by the addition of current information. There must be evidence that the teaching is conducted in a variety of educational settings such as clinics, classrooms, operating rooms, bedsides, and laboratories, employing accepted educational principles.

C. Specialty Content

The broad scope of the specialty of otolaryngology-head and neck surgery requires that the program provide surgical and medical education in the following areas:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, and immunology relevant to the head and neck; the upper respiratory and upper alimentary systems; the communication sciences, including knowledge of audiology and speech-language pathology; the chemical senses and allergy,

endocrinology, and neurology as they relate to the head and neck; and voice sciences as they relate to laryngology.

2. Diagnosis and diagnostic methods: audiologic and vestibular assessments, techniques in voice assessment, electrophysiologic techniques, and other related laboratory procedures for diagnosing diseases and disorders of the ears, the upper respiratory and upper alimentary systems, and the head and neck.
3. Therapeutic and diagnostic radiology: the interpretation of medical imaging techniques relevant to the head and neck and the thorax, including studies of the temporal bone, skull, nose, paranasal sinuses, salivary and thyroid glands, larynx, neck, lungs, and esophagus.
4. Diagnostic evaluation and management of congenital anomalies, allergy, trauma, and diseases affecting the regions and systems mentioned above.
5. Management of congenital, inflammatory, endocrine, neoplastic, degenerative, and traumatic states, including operative intervention and preoperative and postoperative care of the following major categories:
  - a. General otolaryngology
  - b. Head and neck surgery
  - c. Plastic and reconstructive surgery
  - d. Otology
  - e. Endoscopy
6. Habilitation and rehabilitation techniques and procedures including respiration, deglutition, chemoreception, balance, speech, and hearing.
7. Diagnostic and therapeutic techniques involving the application and utilization of lasers and flexible and rigid perioral endoscopy.
8. Ethical, socioeconomic, and medicolegal issues affecting graduate medical education and how to apply cost-effective measures in the provision of patient care.
9. Current information technology and clinical outcomes analysis and their impact on quality patient care.

D. Surgical Experience

1. The sponsoring and participating institutions approved for the program must have a sufficient number and variety of adult and pediatric medical and surgical patients who are available for resident education.
2. While not all residents are expected to have operative experience in all surgical specialty procedures, the surgical procedures performed by the residents must be sufficient in number and variety to provide education in the entire scope of the specialty. There must be adequate distribution and sufficient complexity within the principal categories of the specialty.
3. Generally equivalent and adequate distribution of categories and procedures among the residents must be demonstrated. Significantly unequal experience in volume and/or complexity of cases managed by the residents will be considered serious noncompliance with these requirements. In some instances, the quality of care may require that case management be conducted with other specialties (eg, hypophysectomy, cerebellopontine tumor).
4. Documentation of each individual resident's operative experience must be provided. The cumulative operative experience of each resident must be reviewed at least semiannually by the program director as a part of his or her responsibility for evaluation of the balanced progress of individual residents. The program director is responsible for compiling accurate information regarding the institutional operative records and the individual resident operative reports annually at the end of each academic year and for submitting these records for review as requested by the RRC.

**E. Resident Policies****1. Supervision**

All cases must be adequately supervised by appropriately qualified faculty. The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising residents and faculty. Faculty or supervising residents with experience appropriate to the severity and complexity of a patient's condition must be available at all times on site. The responsibility or independence given to residents in patient care should depend on each resident's knowledge, manual skill, and experience and on the complexity of a patient's illness and the risk of the operation(s).

**2. Duty hours**

The physician's responsibilities for continuing patient care transcend normal working hours. To fulfill this obligation, provisions for night and weekend call should be established. However, residents should not be required regularly to perform excessively difficult or prolonged duties. The program director must ensure assignment of reasonable in-hospital duty hours. Residents at all levels should have the opportunity to spend, on average, at least 1 full day out of 7 free of hospital duties and should be on call in the hospital no more often than every third night, except in the maintenance of continuity of care. There should be adequate opportunity to rest and to sleep when on duty for 24 hours or more. On-call rooms arranged to permit adequate rest and privacy should be available for each resident on night duty in the hospital. There should be adequate backup support if needed to maintain appropriate patient care.

**3. Graded responsibility**

The program must provide the residents with experience in direct and progressively responsible patient management as they advance through the educational program. This education must culminate in sufficient independent responsibility for clinical decision making to reflect that the graduating resident has developed sound clinical judgment and possesses the ability to formulate and carry out appropriate management plans.

**F. Research and Scholarly Activities**

1. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. Research offers an important opportunity for the application of the basic sciences to clinical problems and is an important part of the preparation of the resident for a lifetime of self-education after the completion of formal residency education.
2. The educational program should provide a structured research experience for the residents, sufficient to result in an understanding of the basic principles of study design, performance, analysis, and reporting. The research experience may be clinical or basic in nature and should reflect careful advice by and planning with the faculty. Facilities and protected time for research by the residents should be provided, with guidance and supervision by qualified faculty.
3. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  - a. participation of the faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of

basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

- b. participation in journal clubs and research conferences.
- c. participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
- d. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- e. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
- f. provision of support for resident participation in scholarly activities.

**G. Outpatient Experience**

1. There must be a well-organized and well-supervised outpatient service. This service must operate in relation to an inpatient service used in the program. Residents must have the opportunity to see patients, establish provisional diagnoses, and initiate preliminary treatment plans. An opportunity for follow-up care must be provided so that the results of surgical care may be evaluated by the responsible residents. These activities must be carried out under appropriate faculty supervision.
2. If residents participate in preoperative and postoperative care in a private office, the program director must ensure that the resident functions with an appropriate degree of responsibility with adequate supervision. Experience should be provided in office practice procedures and management.
3. Residents must have experience in the emergency care of critically ill and injured patients with otolaryngology-head and neck conditions.

**H. Conferences**

1. Basic science
  - a. There must be a structured educational experience in basic science. Ordinarily, this should be provided within the participating institutions of the residency program. Any program that provides the requisite basic science experience outside the approved participating institutions must demonstrate that the educational experience provided meets these designated criteria. Faculty must participate in basic science education, resident attendance must be monitored, education must be evaluated, and content must be integrated into the educational program. The basic science education should meet the following requirements:
    - a. Basic science education should include instruction in anatomy, biochemistry, cell biology, embryology, immunology, molecular genetics, pathology, pharmacology, physiology, and other basic sciences related to the head and neck.
    - b. Sufficient resources, including space, equipment, personnel, and funding for instruction and study of the basic sciences, should be available to permit satisfactory correlation between basic science knowledge and clinical application.
    - c. Resident instruction in anatomy should include study and dissection of cadaver anatomic specimens, including the temporal bone, with appropriate lectures and other formal sessions.
    - d. Resident instruction in pathology should include formal instruction in correlative pathology in which gross and microscopic pathology relating to the head and neck area are included. The resident should study and discuss with the pathology service tissues removed at operations and autopsy material. It is desirable to have residents assigned to the Department of Pathology.
2. Clinical conferences
  - a. Clinical conferences must be held regularly and should be attended by all residents and faculty. Grand rounds, mortality and

morbidity conferences, tumor conferences, and conferences on other pertinent topics must be included in the educational program. Interdisciplinary conferences are encouraged.

## VI. Evaluation

### A. Resident Evaluation

1. The program must develop mechanisms by which the residents can demonstrate the acquisition of fundamental knowledge and clinical skills before progression to the level of supervised, semi-independent patient management and operative care.
2. Each resident's performance and progress in the cognitive, judgmental, interpersonal, and manual skills should be continuously monitored. Residents who fail to demonstrate appropriate industry, competence, responsibility, learning abilities, and ethics should be successively counseled and, after due process, dismissed if remediation has not occurred.
3. It is essential that the residents participate in existing national examinations. The annual otolaryngology examination of the American Academy of Otolaryngology-Head and Neck Surgery is one example of an objective test that can be used by the program. An analysis of the results of these testing programs should guide the faculty in assessing the strengths and weaknesses of individual residents and the program. The program director should also monitor the performance of program graduates on the examinations of the American Board of Otolaryngology.
4. Outcomes assessment: The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:
  - a. the use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
  - b. mechanisms for providing regular and timely performance feedback to residents; and
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.
5. The program director, with participation of faculty, shall:
  - a. at least semiannually provide formal written evaluations of the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  - b. communicate each evaluation to the resident in a timely manner.
  - c. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - d. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - e. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

### B. Faculty Evaluation

Faculty also must be evaluated on an annual basis. Documentation of faculty evaluation should include teaching ability and commit-

ment, clinical knowledge, and scholarly contributions. Residents should participate in this evaluation.

### C. Program Evaluation

1. The educational effectiveness of a program must be evaluated in a systematic manner at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written and confidential evaluations by residents must be utilized in this process.
2. There should be documented evidence of periodic self-evaluation of the program in relation to the educational goals, the needs of the residents, and the teaching responsibilities of the faculty. This evaluation must include an assessment of the balance between the educational and service components of the residency.
3. Outcomes assessment
  - a. The program should use resident performance and outcome assessment results in its evaluation of the educational effectiveness of the residency program.
  - b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
4. One measure of the quality of a residency program is the performance of its graduates on the certifying examinations of the American Board of Otolaryngology. In its evaluation of residency programs, the RRC will take into consideration the information provided by the American Board of Otolaryngology regarding resident performance on the certifying examination.

## VII. Board Certification

Residents who plan to seek certification by the American Board of Otolaryngology should communicate with the executive vice president of the board to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: June 2001 Effective: July 1, 2001 (competency revision)*

# Program Requirements for Residency Education in Otolaryngology-Neurotology (Otolaryngology)

## I. Introduction

### A. Definition and Description of the Specialty

The otology-neurotology lateral skull base surgery program will provide advanced education in the diagnosis and management of disorders of the temporal bone, lateral skull base, and related structures. Surgery of the lateral skull base that involves the mesial aspect of the dura or intradural structure requires the joint effort of an otology-neurotology and neurological surgery team. A 24-month educational program will ensure that concentrated time is available for the otology-neurotology resident to develop advanced diagnostic expertise and advanced medical and surgical management skills not afforded in the basic otolaryngology residency program; ie, for the care of diseases and disorders of the petrous apex, infra-temporal fossa, internal auditory canals, cranial nerves (eg, vestibular nerve section and joint otology-neurotology resection of intradural VIII nerve tumors), and lateral skull base, including the occipital bone, sphenoid bone, and temporal bone. This advanced education is required so that the neurotology resident may develop expertise with extradural skull base approaches in collaboration

with neurological surgery. The postoperative care of these lateral skull base surgery patients requires the joint management of both neurological surgery and otology-neurotology. The advanced education is also necessary to gain expertise in the joint collaborative management of patients undergoing lateral skull base surgery. In addition, the program will permit exposure to new research opportunities and time to explore new research ideas.

### B. Duration and Scope of Education

1. Admission to a program is contingent on completion of a residency program in otolaryngology accredited by the Accreditation Council for Graduate Medical Education (ACGME).
2. The duration of the program is 24 months, all of which must be spent in participating institutions approved by the Residency Review Committee (RRC). The otology-neurotology program must be associated with an ACGME-accredited otolaryngology program. Resident experiences in related specialties such as physical medicine and rehabilitation, neurology, neurological surgery, neuroradiology, and neuropathology must be offered by the sponsoring institution.
3. One otology-neurotology resident should be enrolled each year. A program without a resident for 2 successive years will be administratively withdrawn. The RRC will develop an annual resident reporting system to ensure that ACGME procedures are followed in this respect.

### C. Program Goals and Objectives

The program course of study must be comprehensive and well organized and must provide each resident with opportunities for progressive management responsibility in both inpatient and outpatient environments. The goals and objectives of the program must include the following experiences:

1. The program must include increasing responsibility in both inpatient and outpatient environments. Direct surgical experience with all procedures must be documented. The experience must include neurotology and lateral skull base surgery techniques with intracranial exposures performed jointly with neurosurgery.
2. Program faculty must be responsible to the patient and the otology-neurotology resident so that when an otologist-neurotologist plans an operation in which the dura may be entered, neurological consultation will be obtained to determine the appropriateness and planning of a joint surgical effort by both otology-neurotology and neurosurgery.
3. The refinement of diagnostic expertise and the development of medical and surgical management strategies, including intracranial exposure, and postoperative care necessary to treat congenital, inflammatory, neoplastic, idiopathic, and traumatic diseases of the petrous apex, internal auditory canal, cerebellopontine angle, cranial nerves, and lateral skull base, including the occipital bone, temporal bone, and craniovertebral junction.
4. Because advanced otology-neurotology is multidisciplinary in nature and because interactions with peers from related disciplines contribute to the quality of education, the faculty from related disciplines such as neurology, neurological surgery, audiology, neuro-ophthalmology, neuroradiology, and neuropathology should participate in the program to enhance the educational opportunities for the otology-neurotology residents. Close interaction with physical medicine and rehabilitation in the aspect of otologic-neurologic rehabilitation is highly desirable.
5. In addition to combined educational conferences with the other disciplines listed in C.4 above, cooperative efforts in the diagnostic area with neurological surgeons, surgical team approaches to operative therapy with neurosurgeons, and combined approaches to rehabilitative efforts with physical medicine and rehabilitation must be emphasized. The program faculty must be

responsible to the patient and the otology-neurotology resident so that when an otologist-neurotologist plans an operation in which the dura may be entered, it is expected that neurosurgical consultation will be obtained to determine the appropriateness and planning of a joint effort by otology-neurotology and neurosurgery.

6. The otology-neurotology resident must be provided with experience in the habilitation and rehabilitation of the vertiginous patient and the treatment of intracranial and intratemporal facial nerve disorders.
7. Participation in a multidisciplinary surgical team that manages disorders of the temporal bone, cerebellopontine angle, lateral skull base, and related structures is required. Members of the team should include audiologists, electrophysiologists, head and neck surgeons, neurologists, neuroradiologists, neurological surgeons, neuro-ophthalmologists, neuropathologists, neurotologists, and psychiatrists.

## II. Institutional Organization

### A. Sponsoring Institution

1. A single sponsoring institution must sponsor the otology-neurology program, as stated in the Institutional Requirements.
2. The sponsoring institution must provide sufficient faculty, financial resources, and clinical and research support. Other educational resources, such as a temporal bone dissection laboratory; testing facilities for complete auditory and vestibular evaluation that include facilities for intracranial nerve monitoring; and other appropriate diagnostic, therapeutic, and research facilities to meet the educational needs of the otology-neurotology residents, are required.
3. Service commitments must not compromise the achievement of the program's educational goals and objectives.

### B. Participating Institutions

1. If the resources of two or more institutions are used, interinstitutional agreements must be developed by the institutional governing boards, as referenced in the Institutional Requirements.
2. The RRC must approve the addition and deletion of all participating institutions prospectively. Such approval will be based on a clear educational rationale and the value of the institution to the program as a whole.

### C. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an onsite library or to a collection of appropriate texts and journals in each institution participating in the educational program.

### D. Appointment of Residents

1. The RRC will approve a total number of otology-neurotology residents in the program for each year. The number of residents will be based on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to the educational program.
2. A program may not graduate more residents in any given year than are approved by the RRC unless prior approval has been received.

### III. Program Personnel

The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

##### 1. Qualifications

- a. A single program director with the requisite and documented clinical and educational experience must be responsible for the program. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located and must be appointed in good standing to the medical staff of an institution participating in the program.
- b. The program director must be certified by the American Board of Otolaryngology and be certified in the subspecialty or possess suitable equivalent qualifications, as determined by the RRC.
- c. The program director must have administrative responsibility for the otology-neurotology program and should possess the skills of administrator, clinician, teacher, and researcher. The program director must devote sufficient time to the program to ensure continuity of leadership and to fulfill all of the responsibilities inherent in meeting the educational goals of the program. Frequent changes of leadership or long periods of temporary leadership will be cause for serious concern. The executive secretary should be notified promptly of any change in program leadership.

##### 2. Responsibilities

- a. Development of a sound administrative and organizational framework, to include an effective faculty as an essential element of the program.
- b. Maintenance of the record of otology-neurotology operative cases performed by the service and for each otology-neurotology resident. These records must be reviewed annually by the program director with the resident as a part of the director's responsibility for evaluation of the balanced progress of each resident and of the total program. These data must be submitted to the RRC at the time of the program review.
- c. Preparation of a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of otology-neurotology residents at each level of education and for each major rotation or other program assignment. This statement must be distributed to residents and members of the faculty and must be readily available for review.
- d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- e. Selection and supervision of faculty and other personnel at each institution participating in the program.
- f. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should

be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.

- i. Preparation of an accurate statistical and narrative description of the program, as requested by the RRC.

#### B. Faculty

1. There must be one otology-neurotology faculty member in addition to the program director who is certified by the American Board of Otolaryngology with additional appropriate professional qualifications in otology-neurotology or other equivalent qualifications, as determined by the RRC.
2. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing education, and participation in scholarly activities. One measure of this commitment is the extent to which faculty members permit otology-neurotology residents to participate in the management of patients in their care.
4. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving them. At least one resident should participate in these reviews.
5. The faculty should periodically evaluate the use of resources available to the program, the contribution of each participating institution, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of resident supervision.
6. The faculty must demonstrate involvement in scholarly activities, including
  - a. participation in their own continuing education;
  - b. participation in regional and national scientific societies;
  - c. presentation and publication of scientific studies;
  - d. active participation in research as it pertains to otology-neurotology;
  - e. offering of guidance and technical support, eg, research design and statistical analysis, for residents involved in research; and
  - f. active participation in clinical discussions, rounds, and conferences in a manner that promotes the spirit of inquiry and scholarship.
7. Because otology-neurotology is multidisciplinary in nature and because interaction with peers from related disciplines contributes to the quality of education, faculty from related disciplines such as audiology, neuro-ophthalmology, neurological surgery, neurology, physical medicine and rehabilitation, psychiatry, and radiology should participate in the program to enhance the residents' educational opportunities. These faculty members should have recognized expertise in otology-neurotology.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### IV. The Educational Program

The educational program must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for the practice of the specialty. This objective can be achieved only when the program leadership, the faculty, and the sponsoring institution are committed to the educational program and when appropriate resources and facilities are available.

**A. General**

1. The program director is responsible for developing a structured curriculum with written, defined goals and objectives. Clinical, basic science, and research conferences and seminars and critical literature review activities about the subspecialty must be conducted regularly and as scheduled. The otology-neurotology residents must participate in planning and in conducting conferences. Both the faculty and otology-neurotology residents must attend and participate in multidisciplinary conferences.
2. The otology-neurotology residents must be provided with the opportunity to develop skills in providing consultation, in communication with colleagues and referring physicians, and in teaching medical students, physicians, and other professional personnel.
3. Lines of responsibility must be clearly delineated between otology-neurotology residents and otolaryngology residents in the areas of training, clinical responsibilities, and duration of training. Such information must be supplied to the RRC at the time of the review and survey.
4. The same resident duty hours and supervision requirements apply to these subspecialty residents as documented in the core Program Requirements for Residency Education in Otolaryngology.

**B. Course of Study****1. Academic**

The academic component should provide supplemental education in the basic sciences related to otology-neurotology, including allergy and immunology, audiology and rehabilitative audiology, genetics, neuroanatomy, neurophysiology, neuropathology, neuropharmacology, neuro-ophthalmology, physical medicine and rehabilitation, temporal bone histopathology, and vestibular pathophysiology. The course of study must reflect the following content areas:

- a. Neurophysiology, neuropathophysiology, diagnosis, and therapy of advanced otologic-neurotologic disorders, including advanced audiologic and vestibular testing; evaluation of cranial nerves and related structures; interpretation of imaging techniques of the temporal bone and lateral skull base; and electrophysiologic monitoring of cranial nerves VII, VIII, X, XI, and XII
- b. Vestibular rehabilitation
- c. Auditory and speech rehabilitation of the hearing impaired, included cochlear implants
- d. Management and rehabilitation of extradural cranial nerve defects and those defined in the definition and description of the specialty (Section I.A)
- e. Didactic and laboratory experience teaching advanced surgical techniques to deal with diseases and disorders of the auditory and vestibular systems; extradural skull base, including the sphenoid bone; temporal bone; and reconstructive techniques for repair of deficits in these areas

**C. Clinical**

1. Programs must provide structured clinical opportunities for residents to develop advanced skills in otology-neurotology and lateral skull base surgery, including exposure to intracranial approaches.
2. A sufficient volume and variety of cases must be available to ensure adequate inpatient and outpatient experience for each otology-neurotology resident.
3. Each otology-neurotology resident must prepare documentation of surgical experience as both assistant surgeon and surgeon in the surgical revision procedures for the treatment of chronic otitis media; disorders of the vestibular system; otosclerosis; profound hearing loss; facial nerve disorders; and congenital

inflammatory, neoplastic, idiopathic, and traumatic disorders of the extradural petrous bone and apex, occipital bone, sphenoid bone, and related structures.

4. The diagnosis and medical and surgical management of congenital, traumatic, inflammatory, degenerative, neoplastic, and idiopathic diseases and other disease states of the temporal bone, occipital bone, sphenoid bone, craniovertebral junction, and related structures are required experiences.
5. Audiometric testing including auditory brainstem responses and otoacoustic emissions, vestibular testing, facial nerve testing, electrophysiologic monitoring strategies, and neuroradiologic procedures used to evaluate the temporal bone, skull base, and related structures are required experiences.
6. Rehabilitation techniques and procedures concerning the vestibular disorders, cranial nerve neuropathies, assistive listening devices and hearing aids, and cochlear implants must be provided.

**D. Research and Scholarly Activity**

1. Graduate medical education must take place in an environment of inquiry and scholarship in which otology-neurotology residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty.
2. The course of study must include research methodology, not to exceed 6 months, with protected time for the pursuit of scholarly activities and research. The otology-neurotology resident should study epidemiology, statistical methods, experimental design, and manuscript preparation, including literature searches and the use of computerized databases.
3. It is highly desirable that the resident prepare and submit at minimum one paper for publication in a peer-reviewed journal. While the specific content will be related to the particular expertise, interest, and capability of the program faculty and institutional resources, the general goal of the research experience should be maintained.

**V. Evaluation****A. Resident Evaluation**

The program director with participation of the faculty must

1. evaluate each resident in writing at least semiannually, using appropriate criteria and procedures. The evaluation must be confidential and must include observation, assessment, and substantiation of the resident's acquired body of knowledge, skills in physical examination and patient communication, technical proficiency, professional attitudes, humanistic qualities as demonstrated in the clinical setting, consultation skills, patient management, decision making, and critical analysis of clinical situations.
2. communicate each evaluation to the resident in a timely manner and provide feedback on his or her performance, including appropriate counseling and necessary remedial effort.
3. advance residents to positions of higher responsibility based on evidence of satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a final written evaluation for each resident graduating from the program that includes a review of resident performance during the program. This evaluation should verify that the resident has demonstrated sufficient professional ability to practice

competently and independently. The final record should be part of the resident's permanent record maintained at the institution.

- maintain the record of surgical operative procedures performed by the resident during the educational program. These records must be submitted to the program director and kept in a permanent file for review as requested.

### B. Faculty Evaluation

All faculty must be evaluated on a regular basis. This evaluation should include teaching ability and commitment to the educational program, clinical knowledge, and scholarly contributions. Residents should participate in this evaluation.

### C. Program Evaluation

There should be documented evidence of periodic self-evaluation of the program in relation to the educational goals, the needs of the otology-neurotology residents, and the extent to which the goals of resident education have been met. Confidential written evaluations by residents should be included in this process.

*ACGME: June 1995 Effective: June 1995*

## Program Requirements for Residency Education in Pediatric Otolaryngology (Otolaryngology)

### I. Introduction

#### A. Definition of the Subspecialty

Pediatric otolaryngology is a subspecialty within otolaryngology-head and neck surgery defined by both the age of the patient served and the knowledge and skill of the physician providing medical and surgical care. The pediatric otolaryngologist has special expertise in the management of infants and children with complex problems generally referred to tertiary care pediatric institutions with a multidisciplinary team of full-time hospital-based medical specialists. A pediatric otolaryngology educational program will be based in a tertiary care pediatric institution where the care of children can be readily coordinated with other subspecialists, thus allowing sufficient exposure and broad experience in the management of uncommon and complex otolaryngology disorders in children. A pediatric otolaryngology educational program must provide the following experiences for the pediatric otolaryngology residents: the diagnosis and care of congenital and acquired conditions involving the aerodigestive tract, nose and paranasal sinuses, the ear, diseases and disorders of the laryngotracheal complex and the head and neck; expertise in the diagnosis, treatment, and management of childhood disorders of voice, speech, language, and hearing; and a knowledge of genetics. The program should provide opportunities for the pediatric otolaryngologist to function as an advocate for the child and facilitate patient management in the home, school, or institutional setting.

#### B. Duration and Scope of Education

- Admission to a pediatric otolaryngology program is contingent on completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency program in otolaryngology.
- The duration of a pediatric otolaryngology program is 24 months, all of which must be spent in participating institutions approved by the Residency Review Committee (RRC). The pediatric

otolaryngology program must be associated with an ACGME-accredited otolaryngology program.

- One pediatric otolaryngology resident should be enrolled each year. A program without a resident for 2 successive years will be administratively withdrawn. The RRC will develop an annual resident reporting system to ensure that the ACGME procedures are followed in this respect.

### C. Program Goals and Objectives

The overall goal for residency education is to provide the pediatric otolaryngology resident with diagnostic and surgical skills for the care of ear, nose, throat, head and neck, and bronchoesophageal disorders of children that are uncommon and complex. Specific objectives include

- an in-depth study of the embryology, developmental anatomy and physiology, microbiology, oncology, and psychology of the infant and child as related to the head and neck;
- an understanding of the differences among the medical management of infant, childhood, and adult diseases of the head and neck;
- provision for a sufficient number and variety of pediatric otolaryngology surgical procedures in the scope of the specialty with emphasis on those procedures infrequently encountered in the general practice of otolaryngology;
- an appreciation for the inherent complexities of interacting with children and their families compared with adult patients; and
- the ability to teach otoscopic and other diagnostic skills to pediatricians and other primary care physicians.

### II. Institutional Organization

#### A. Sponsoring Institution

- A pediatric otolaryngology educational program must be sponsored by a single sponsoring institution, as stated in the Institutional Requirements. In addition, the program must be based within a pediatric tertiary care institution that provides sufficient exposure and broad experience in the management of uncommon and complex otolaryngology disorders of children. The RRC will develop an annual resident reporting system to ensure that ACGME procedures are followed in this respect.
- The sponsoring institution must provide sufficient faculty, clinical material, research and other educational resources to meet the needs of the pediatric otolaryngology residents.
- Service commitments must not compromise the achievement of educational goals and objectives.

#### B. Participating Institutions

- If the resources of two or more institutions are used, interinstitutional agreements must be developed by the institutional governing boards, as referenced in the Institutional Requirements.
- The RRC must approve the addition or deletion of all participating institutions prospectively. Such approval will be based on a clear educational rationale and the value of the institution to the program.

#### C. Appointment of Residents

- The RRC will approve a total number of pediatric otolaryngology residents in the program for each year. The number will be based on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to the program.

2. The program may not graduate more residents in any year than are approved by the RRC unless prior approval has been received.

### III. Program Personnel

The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

##### 1. Qualifications

- a. There must be a single program director responsible for the program with requisite and documented clinical, educational, and administrative abilities and experience. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located and must be appointed in good standing to the medical staff of an institution participating in the program.
- b. The program director must be certified by the American Board of Otolaryngology and be certified in the subspecialty or possess suitable equivalent qualifications as determined by the RRC for Otolaryngology.
- c. The program director must have administrative responsibility for the pediatric otolaryngology program and should possess the skills of administrator, clinician, teacher, and researcher. The program director must devote sufficient time to the program to ensure continuity of leadership and to fulfill all the responsibilities inherent in meeting the educational goals of the program. The executive secretary should be notified promptly of any change in program leadership.

##### 2. Responsibilities

- a. Development of a sound administrative and organizational framework that includes an effective faculty as an essential element of the program. Continuity of leadership is essential to the program's stability. Frequent changes in leadership or long periods of temporary leadership will be cause for serious concern. The executive secretary should be notified promptly of any change in program leadership.
- b. Maintenance of a record of pediatric otolaryngology operative cases performed by the service and a record of operative experience for each pediatric otolaryngology resident. These records must be reviewed at least semiannually by the program director as a part of his or her responsibility for evaluation of the balanced progress of each individual resident and of the total program. These data must be submitted to the RRC at the time of each program review.
- c. Preparation of a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of education and for each major rotation or other program assignment. This statement must be distributed to residents and members of the faculty and be readily available for review.
- d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- e. Selection and supervision of faculty and other personnel at each institution participating in the program.
- f. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.

- g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program, as requested by the RRC.

#### B. Faculty

1. There must be one pediatric otolaryngology faculty member in addition to the program director who is certified by the American Board of Otolaryngology with additional appropriate professional qualifications in pediatric otolaryngology or other equivalent qualifications, as determined by the RRC.
2. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all pediatric otolaryngology residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. Because the care of pediatric otolaryngology patients may be multidisciplinary in nature, additional peers from pediatrics and other related pediatric disciplines should participate in the program to enhance the residents' educational opportunities. Examples of related faculty may include anesthesiology; medical genetics; radiology; neonatology; pediatric neurology; audiology, speech, voice, and hearing specialists; plastic surgery; and pathology.
4. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. One measure of this commitment is the extent to which faculty members permit pediatric residents to participate in the management of patients under their care.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving them. At least one pediatric otolaryngology resident should participate in these reviews.
6. The faculty should periodically evaluate the utilization of resources available to the program, the contribution of each participating institution, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of resident supervision.
7. The faculty must demonstrate involvement in scholarly activities, to include
  - a. participation in their own continuing education;
  - b. participation in regional and national scientific societies;
  - c. presentation and publication of scientific studies;
  - d. active participation in research as it pertains to pediatric otolaryngology;
  - e. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research; and
  - f. active participation in clinical discussions, rounds, and conferences to promote a spirit of inquiry and scholarship.

### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. The Educational Program

The educational program must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for the practice of the subspecialty.

This objective can be achieved only when the program leadership, the faculty, and the sponsoring institution are committed to the educational program and when appropriate resources and facilities are available.

### A. General

1. The program director is responsible for developing a structured curriculum with written, defined goals and objectives. Clinical, basic science, and research conferences and seminars and journal club activities pertaining to the subspecialty must be conducted regularly. The pediatric otolaryngology resident must participate in planning and conducting the conferences. Both the faculty and the resident must attend and participate in multidisciplinary conferences.
2. The pediatric otolaryngology resident must be provided with opportunities to develop skills in providing consultation, in communicating with colleagues and referring physicians, and in teaching medical students, residents, physicians, and other professional personnel.
3. Lines of responsibility must be clearly defined between pediatric otolaryngology and otolaryngology residents in the areas of education, clinical responsibilities, and duration of education. Such information must be supplied to the RRC at the time of the survey and review.
4. The same resident duty hours and supervision requirements apply to these subspecialty residents as those documented in the Program Requirements for Residency Education in Otolaryngology.

### B. Clinical

1. Outpatient Experiences
  - a. There must be adequate outpatient experiences to provide a sufficient number of visits for the evaluation of patients with varied types of disorders to provide the residents with wide experience in diagnosis and outpatient management of patients with otolaryngology disorders. Residents are required to attend a minimum of two clinic sessions per week.
  - b. Experience in the ambulatory care setting should include evaluation of children with common disorders and experience with the diagnosis and management of children with congenital abnormalities of the head and neck, hearing impairment, inherited disorders and developmental abnormalities, swallowing disorders, and sinus disease.
  - c. In addition, multispecialty, interdisciplinary team experience should be provided to include, for example, a craniofacial and/or cleft palate team.
2. Inpatient
  - a. An adequate inpatient facility must be available to provide a broad range of pediatric consultative experience.
  - b. Pediatric intensive care facilities must be available for resident experience.
  - c. There must be a sufficient number and variety of surgical cases to provide the pediatric otolaryngology resident with operative experience in all aspects of pediatric otolaryngology. The surgical case load should include experience in the following areas: laryngobronchoesophagology, head and neck sur-

gery, laryngotracheal surgery, otologic surgery, surgery of the nose and paranasal sinuses, surgery for congenital abnormalities of the head and neck, and surgery for benign and malignant head and neck disorders.

### 3. Diagnostic

- a. Complete diagnostic facilities for infants and children with otolaryngologic disorders must be available to provide the resident with the opportunity to interpret the results of diagnostic studies.
- b. The diagnostic studies for complete audiologic, voice, speech, language, and developmental assessments must be available. In addition, state-of-the-art diagnostic, therapeutic, and laboratory facilities must be provided.

### C. Research and Scholarly Activity

1. Graduate medical education must take place in an environment of inquiry and scholarship in which pediatric otolaryngology residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty.
2. The course of study must include research methodology, not to exceed 6 months, with protected time for the pursuit of scholarly activities and research. The pediatric otolaryngology resident should study epidemiology, statistical methods, experimental design, and manuscript preparation, including literature searches and the use of computerized databases. It is highly desirable that the resident prepare and submit one paper for publication in a peer-reviewed journal.

### D. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an onsite library or to collections of appropriate texts and journals in each institution participating in the educational program.

## V. Evaluation

### A. Resident Evaluation

The program director, with faculty participation, must

1. evaluate residents in writing at least semiannually regarding the knowledge, skills, and professional growth using appropriate criteria and procedures. The procedures must be confidential and must include observation, assessment, and substantiation of the resident's acquired body of knowledge, skills in physical examination and patient communication, technical proficiency, professional attitudes, and humanistic qualities demonstrated in the clinical setting, consultation skills, patient management, decision making, and critical analysis of clinical situations.
2. communicate each evaluation to the resident in a timely manner and provide feedback on his or her performance, including appropriate counseling and necessary remedial effort.
3. advance residents to positions of higher responsibility based on evidence of satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a final written evaluation for each resident graduating from the program that includes a review of the resident's

performance during the program. This evaluation should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record at the institution.

6. maintain the list of all surgical operative procedures performed by the resident during the educational program. These data must be submitted to the program director and kept in a permanent file for review by the RRC at the time of the site visit and review.

### B. Faculty Evaluation

All faculty must be evaluated on a regular basis. This evaluation should include teaching ability and commitment to the educational program, clinical knowledge, and scholarly contributions. Residents should participate in this evaluation.

### C. Program Evaluation

There should be documented evidence of periodic self-evaluation of the program in relation to the educational goals, the needs of the pediatric otolaryngology residents, and the extent to which the goals of resident education have been met. Confidential written evaluations by residents should be included in this process.

ACGME: June 1995 Effective: June 1995

## Program Requirements for Residency Education in Pathology

Graduate medical education programs in pathology are accredited in the following categories:

APCP-4	Four-year programs in anatomic pathology and clinical pathology
AP-3	Three-year programs in anatomic pathology
CP-3	Three-year programs in clinical pathology
PCP-1	One-year programs in cytopathology
BB-1	One-year programs in blood banking/transfusion medicine
DP-1	One-year programs in dermatopathology
FP-1	One-year programs in forensic pathology
HMP-1	One-year programs in hematology
MM-1	One-year programs in medical microbiology
NP-2	Two-year programs in neuropathology
PP-1	One-year programs in pediatric pathology
PCH-1	One-year programs in chemical pathology
SP	One-year programs in selective pathology. Selective pathology programs are typically sponsored by institutions that provide unique educational resources in a specialized area of pathology.

### I. Duration and Scope of Training

- A. Graduate medical education programs in anatomic pathology and/or clinical pathology must provide an organized educational experience for qualified physicians seeking to acquire the basic competence of a pathologist.
- B. Programs must offer residents the opportunity to acquire a broad understanding of anatomic pathology and/or clinical pathology, the techniques and methods of those disciplines, and the consultative role of the pathologist in patient-care decision making.
- C. APCP-4 programs are accredited to offer 4 years of education/training in anatomic pathology and clinical pathology, 3 years of training in anatomic pathology (AP-3), and 3 years of training in clinical pathology (CP-3).
- D. APCP-4 programs must include 18 months of formal education in anatomic pathology and 18 months of formal education in clinical pathology. The remaining 12 months of training may be a continuation of structured anatomic pathology or clinical pathology education or may be devoted to a specialized facet of pathology. AP-3 and CP-3 programs must include 24 months of anatomic pathology or clinical pathology education. The remaining 12 months of training may be a continuation of structured anatomic pathology and/or clinical pathology education or may be devoted to a specialized facet of pathology. The education must occur under the direction of the program director or designated member of the teaching staff. The program director must clearly define, as part of the program description, the available opportunities whereby residents may accomplish the additional 12 months of pathology education. The program director must approve all such opportunities and monitor their progress.

### II. Institutional Support of Graduate Medical Education

- A. Institutions involved in residency programs must be in compliance with the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education*. Institutional commitment to graduate medical education is a critical influence on a residency and will be carefully evaluated when pathology programs are reviewed.

- B. When the resources of two or more institutions are utilized in a program, valid letters of agreement from the appropriate institutional representatives detailing the educational role of each institution must be kept on file by the director of the residency program.
- C. As other residency programs facilitate peer interchange and augment the breadth of the educational experience, institutions providing graduate medical education in anatomic pathology and/or clinical pathology should also sponsor at least three additional accredited residency programs. Programs in internal medicine, family practice, obstetrics and gynecology, general surgery, pediatrics, and radiology are considered to be most complementary to pathology education. Requests for exceptions to this requirement will be considered on a case-by-case basis.
- D. Resident assignments away from the primary institution in a program should not prevent regular resident participation in rounds and conferences, either at the parent institution or in equivalent conferences at participating institutions.

### III. Program Goals and Objectives

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- B. All educational components of a residency program should be related to program goals.
  - 1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  - 2. Participation by an institution providing more than 6 months of training in a program must be approved by the RRC.
- C. There must be a program statement, available for review by applicants, residents, and the RRC, describing the program and each rotation, assignment, or other experience.
  - 1. The program statement must include
    - a. a description of the program's educational goals and philosophy;
    - b. a listing and description of all required rotations, including their duration;
    - c. a listing and description of elective rotations, the year(s) of the program in which they are available, and their duration;
    - d. a description of resident opportunities for teaching and research;
    - e. a description of the manner in which residents and the program are evaluated and how such evaluations are used; and
    - f. a description of the manner in which residents are supervised.
  - 2. The description of rotations, assignments, or other experiences must include
    - a. the goals and objectives of the experience;
    - b. the duration of the experience;
    - c. the duties and responsibilities of residents at each year of training;
    - d. the teaching staff responsible for the supervision and instruction of the residents during the experience; and
    - e. the manner in which residents are supervised and evaluated during the experience.

### IV. Curriculum

- A. Education in anatomic pathology must include autopsy and surgical pathology, cytopathology, pediatric pathology, dermatopathology, forensic pathology, immunopathology, histochemistry, neuropathology, ultrastructural pathology, cytogenetics, molecular biology, aspiration techniques, and other advanced diagnostic techniques as they become available.

- B. Education in clinical pathology must include microbiology (including bacteriology, mycology, parasitology, and virology), immunopathology, blood banking/transfusion medicine, chemical pathology, cytogenetics, hematology, coagulation, toxicology, medical microscopy (including urinalysis), molecular biologic techniques, aspiration techniques, and other advanced diagnostic techniques as they become available.
- C. Programs must provide residents with instruction and experience in the interpretation of laboratory data as part of patient care decision making and patient care consultation. Residents must also participate in pathology conferences, rounds, teaching, and scholarly activity and gain experience in the management and direction of a pathology laboratory (including quality assurance, safety, regulations, and the use of hospital and laboratory information systems).
- D. The educational experiences detailed above may be provided through separate, exclusive rotations, by rotations that combine more than one area, or by other means; in any case, all rotations and other assignments must conform to the educational goals and objectives of the program.

### V. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

- 1. The program director is responsible for and must have the authority to conduct the entire program and must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
- 2. A program involving two or more institutions must have a single director with the responsibility and authority for the supervision and coordination of the portions of the program carried out at each institution.
- 3. Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in the directorship or long periods of temporary leadership are cause for serious concern by the RRC.
- 4. The program director must demonstrate a continuing involvement in scholarly activity.
- 5. Qualifications of the program director include
  - a. requisite and documented clinical, educational, and administrative abilities and experience.
  - b. licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. certification by the American Board of Pathology (in anatomic pathology and clinical pathology, anatomic pathology, or clinical pathology) or appropriate educational qualifications as judged by the RRC.
  - d. appointment in good standing to the medical staff of an institution participating in the program.
  - e. at least 5 years of participation as an active faculty member in an accredited pathology residency.
- 6. Responsibilities of the program director include
  - a. preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This state-

ment must be distributed to residents and members of the teaching staff. It should be readily available for review.

- b. selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. the supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. the program director, with participation of members of the teaching staff, shall
  1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
  2. communicate each evaluation to the resident in a timely manner;
  3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
  4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- g. provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- h. implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- i. monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. preparation of an accurate statistical and narrative description of the program as requested by a review committee.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
  2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
  3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
  5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Number of Residents

1. The number of resident positions requested must not exceed the educational resources available in a program.
2. When reviewing a program for accreditation, the RRC will approve a maximum number of residents to be trained in the program at any one time. Any increase in that number requires prior written approval of the RRC.
3. Programs must maintain a number of residents sufficient to promote an intellectually stimulating educational environment. There should be at least two residents enrolled in each year of a program. A lesser number is cause for concern by the RRC.

### D. Appointment of Fellows

1. The appointment of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of the regularly appointed residents.
2. The appointment of fellows by a program director requires a clear statement of the areas of training, responsibilities, and duration of the fellowship. This statement must be provided to the RRC at the time the program is reviewed.

### E. Other Personnel

1. The laboratories providing patient-care services must be accredited by the appropriate organizations and must be directed by a qualified physician who is licensed to practice medicine and is a member of the medical staff.
2. The number and qualifications of medical technologists and other support personnel must be adequate for the volume of work in the laboratory and the educational activities of the institution.
3. Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## VI. Program Facilities

- A. Adequate space and equipment must be available for the conduct of the program, including equipment for the performance of all the functions described above, meeting rooms, classrooms, and office and research space for staff.
- B. Office and laboratory space must be provided for the residents for both patient-care work and participation in scholarly activities.
- C. The patient material of the department must be indexed in such a way as to permit appropriate retrieval.
- D. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. The services provided by the library should include the electronic retrieval of information from medical databases.
- E. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts

and journals must be readily available during nights and weekends.

- F. The audiovisual resources available for educational purposes should be adequate to meet the goals and objectives of the program.

## VII. Educational Program

### A. Resources for Anatomic Pathology

1. The volume and variety of material available in the program for anatomic pathology education must be sufficient to ensure that residents have a broad exposure to both common conditions and unusual entities and develop the necessary professional and technical skills to perform the functions of an anatomic pathologist. This experience must emphasize the role of the pathologist as a consultant for effective patient care decisions.
2. While the quality of an educational program is not based upon volume of teaching material alone, programs should have sufficient volume and variety of material available for educational purposes to ensure that all residents
  - a. perform at least 50 autopsies during the program. Each resident must be the primary prosector of 40 autopsies. Further, programs must ensure that residents participate fully in all aspects (including gross and microscopic examinations) of the autopsies they count toward this standard. It is highly desirable that this experience include forensic and stillborn autopsies.
  - b. examine and sign out at least 2,000 surgical pathology specimens during the program. This material must be from an adequate mix of cases to ensure exposure to both common and uncommon conditions.
  - c. examine at least 1,500 cytologic specimens during the program. This material must include a variety of both exfoliative and aspiration specimens.
  - d. perform at least 200 operating room consultations (frozen sections) during the program.

### B. Resources for Clinical Pathology

1. The volume and variety of material available in the program for training in clinical pathology should be sufficient to ensure that residents have a broad exposure to both common conditions and unusual entities and develop the necessary professional and technical skills to perform the functions of a clinical pathologist. This experience must emphasize the role of the pathologist as a consultant for effective patient care decisions.
2. The number and variety of tests performed in the laboratories utilized in the program should be sufficient to give residents experience in the range of tests typically available in a general hospital. Further, resident experience should be augmented through the use of seminar and course materials and laboratory indexes of unusual cases.
3. While the quality of an educational program is not based upon the volume of teaching material alone, programs should have a laboratory workload that will ensure that all residents gain experience with the full spectrum of clinical pathology procedures.
4. A sufficient number of supervisory personnel and medical technologists, as well as modern equipment, must be available in each of the laboratories utilized in the program.

### C. General Competencies

Residents must develop the following six competencies to the level of a new practitioner. Toward that end, the program must define the specific knowledge, skills, and attitude required and provide educational experiences as needed in order for their residents to demonstrate and measure the competence of each resident and to be able

to counsel the resident. The program must create and reinforce the concept of life long learning.

1. Patient care  
Residents must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.
2. Medical knowledge  
Residents must demonstrate knowledge about established and evolving biomedical, clinical and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.
3. Practice-based learning and improvement  
Residents must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.
4. Interpersonal and communication skills  
Residents must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.
5. Professionalism  
Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice  
Residents must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

### D. Seminars, Conferences, and Rounds

1. There must be regularly scheduled seminars and conferences devoted to the basic and applied medical sciences and clinical correlation conferences.
2. Clinical correlation conferences (eg, a pediatric mortality conference) should be held with clinical services such as internal medicine, surgery, gynecology, radiology, pediatrics, and their subspecialties.
3. There must be departmental conferences, in which both faculty and residents participate, for detailed discussion of difficult and unusual cases.
4. Residents must participate in the regular, formal clinical and teaching rounds corresponding to the laboratory services to which they are assigned. For example, infectious disease service rounds should be attended during an assignment in microbiology.

### E. Consultation

1. Both faculty and residents must be regularly involved in consultative activity.
2. Patient-care consultations should be both intra- and interdepartmental.

### F. Resident Teaching

1. Residents should participate in the education of medical students and other trainees.
2. The effectiveness of residents as teachers should be monitored and evaluated by the program director and teaching staff.

## VIII. Evaluation

- A. There must be regular, formal, written evaluation of residents by the teaching staff. Evaluations should be completed at least once every 6 months and after rotations outside the primary institutions or to specialty experiences. Evaluations should be

discussed with the residents by the program director or appropriate designee at least once each year.

- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. As part of this process, residents should provide formal, anonymous written evaluations of the program and teaching staff at least once a year for the confidential review of the program director.
- C. The program must demonstrate that it has an effective plan for evaluating residents and providing performance feedback to residents. Each program must develop and use a set of performance measures that produce dependable assessment of a resident's competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice. Programs that do not have in place an acceptable set of measures must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan. Adequacy of progress will be assessed against an implementation timetable determined by the RRC that takes into account availability of acceptable tools and current standards of practice. The program is responsible for obtaining the timetable and related information from the RRC.

### IX. Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include
  1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. participation in journal clubs and research conferences.
  3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. provision of support for resident participation in scholarly activities

### X. Resident Research

- A. Throughout their time in the program, residents should be exposed to and encouraged to participate in clinical or laboratory research, research seminars, work-in-progress sessions, and organized reviews of intradepartmental research.
- B. Resident involvement in research may be related to methods development, clinical or basic research, or literature surveys, but in all cases the program should provide an environment that promotes research or scholarly activity by residents.

### XI. Resident Responsibility

- A. Residents must be considered integral members of the staff of the Department of Pathology and must have the opportunity to participate in discussion of matters related to management of the Department.
- B. There must be periods of time when decision making in the laboratory is the direct responsibility of residents, under appropriate supervision.
- C. Duty hours and night and weekend call for residents must reflect the fact that responsibilities for continuing patient care are not automatically discharged at any given hour of the day or any particular day of the week. However, the program director must ensure that residents are given reasonable duty and call assignments. All residents should, on the average, have the opportunity to spend at least 1 full day out of 7 free from hospital duties and should be on call no more often than every third night. Backup support should be provided for residents when their patient care responsibilities are especially difficult or prolonged.

### XII. The Residency Review Committee

- A. When a program is scheduled for review by the RRC, the accuracy of the program information forms required by the Committee is the responsibility of the program director. Action by the RRC will be deferred, or an adverse action considered, if the forms are not completed as requested.
- B. The RRC must be provided written notification of major changes in a program, including changes in leadership, within 90 days. Prior approval of the RRC is required for the addition or deletion of a major participating institution, a major change in the design of the program, or an increase or decrease in the approved number of residents in the program.

### XIII. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in pathology. The American Board of Pathology is responsible for certification of individual physicians in pathology.
- B. Questions about accreditation of residency programs should be directed to the executive secretary of the RRC.
- C. Individuals who plan to seek certification by the American Board of Pathology should communicate with the executive vice president of the board to obtain the latest information regarding certification.
- D. One measure of the quality of a program is the performance of its graduates on examinations for primary certification by the American Board of Pathology.

*ACGME: February 2001 Effective: July 1, 2001  
ACGME Competencies Implementation Date: July 1, 2002*

## Program Requirements for Residency Education in Blood Banking/Transfusion Medicine (Pathology)

### I. Definition, Duration, and Scope of Education

- A. Blood banking/transfusion medicine is the practice of laboratory and clinical medicine concerned with all aspects of blood transfusion, including the scientific basis of transfusion, selection and recruitment of blood donors, utilization and quality control,

preparation of blood components, pretransfusion testing, transfusion of blood components, adverse effects of blood transfusion, autoimmunity, transplantation, histocompatibility, therapeutic apheresis and phlebotomy, blood substitutes, medicolegal considerations of transfusion, paternity analysis, management aspects of blood services, and the history of blood transfusion. Blood banking/transfusion medicine requires a strong foundation in clinical pathology as well as clinical medicine.

- B. Graduate medical education programs in blood banking/transfusion medicine must provide an organized educational experience for qualified physicians seeking to acquire additional competence in blood banking/transfusion medicine.
- C. Programs will be accredited to offer 1 year of organized education in all aspects of blood banking/transfusion medicine.

## **II. Program Goals and Objectives**

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- B. All educational components of a residency program should be related to program goals.
  - 1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  - 2. Participation by any institution providing more than 2 months of training must be approved by the RRC.

## **III. Educational Program**

### **A. Curriculum**

- 1. The program must be structured to give residents clearly defined graduated responsibilities and delegated authority. Written goals and objectives for the educational program must be clearly defined.
- 2. There must be sufficient opportunity for the resident to develop comprehensive knowledge of the technical aspects of blood banking and immunohematology. There must be an opportunity to acquire knowledge and skills in new technologies as they become available.
- 3. Clinical aspects of transfusion medicine must be emphasized throughout the program. Residents must participate in ongoing clinical consultations regarding all aspects of blood transfusion and have opportunity to develop competence in providing services to patients and other physicians.

### **B. Educational Activities**

- 1. Lectures, tutorials, seminars, and conferences must be regularly scheduled and held, with active participation of clinical services. The residents must have the opportunity to attend regional or national meetings.
- 2. Instruction should include studies illustrating usual and unusual cases.

## **IV. Personnel**

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### **A. Program Director**

- 1. A program involving two or more institutions must have a single director with authority for the supervision and coordination of the portions of the program carried out at each institution.
- 2. Qualifications of the program director include:

- a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Blood Banking/Transfusion Medicine or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
- 3. Responsibilities of the program director include:
    - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
    - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
    - c. Selection, supervision, and evaluation of the teaching staff and other program personnel at each institution participating in the program.
    - d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
    - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

- 1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  - 2. Communicate each evaluation to the resident in a timely manner.
  - 3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - 4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
  - h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

- i. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.
  - j. The program director must be responsible for and have the authority to conduct the training program effectively. He or she must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including implementation of sound administrative practices and evaluation procedures and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
  - k. The program director must demonstrate a continuing record of scholarly activity.
  - l. The program director must ensure that residents are given reasonable duty and call assignments.
2. Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Residents

1. The resident should have completed training in anatomic and clinical pathology or in clinical pathology, or be certified by a primary medical specialty board of the American Board of Medical Specialties.
2. The number of resident positions requested must be consistent with the educational resources available in the program.
3. Residents must have the opportunity to assume increasing responsibilities as they progress through the program.
4. Residents should have the opportunity to become involved in basic scientific or clinical research and teaching during the program.
5. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night. The ratio of hours worked and on-call time will vary, particularly at the senior levels, and therefore necessitate flexibility.

### D. Other Personnel

1. The laboratories and clinical services involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.

## VI. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Institutional Resources

- A. The program must have a sufficient number and variety of patients to offer training in the widest range of blood banking/transfusion medicine. There must be a mechanism for the retrieval and review of cases. There must be effective mechanisms to facilitate clinical correlation with laboratory findings.
- B. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
- C. The institutions, laboratories, and clinical services participating in the program must be appropriately accredited and/or licensed.

## VIII. Evaluation

- A. There must be regular, formal, and written evaluations of the residents by the teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by

residents must be assessed. Residents should submit formal, written evaluations of the program and faculty at least once each year for review by the director and the teaching staff.

## IX. Administrative Structure

Each blood banking/transfusion medicine program should be administratively attached to an Accreditation Council for Graduate Medical Education-accredited residency in anatomic and/or clinical pathology when feasible.

## X. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in blood banking/transfusion medicine. The American Board of Pathology is responsible for certification of individual physicians in pathology and blood banking/transfusion medicine.
- B. Questions about accreditation of residency programs should be directed to the executive director of the RRC.
- C. Individuals who plan to seek certification from the American Board of Pathology in blood banking/transfusion medicine should communicate with the executive vice president of the board to obtain current information regarding certification.

ACGME: February 1993 Effective: July 1995

# Program Requirements for Residency Education in Chemical Pathology (Pathology)

## I. Introduction

- A. The minimum training program in chemical pathology shall be 1 year in addition to the completion of acceptable residency training in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program of anatomic and/or clinical pathology, as outlined in the *Graduate Medical Education Directory*, or equivalent postgraduate training and experience.
- B. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- C. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.
- D. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

## II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

1. There must be a single program director responsible for the program.

2. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Chemical Pathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
3. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- f. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

- h. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### III. Educational Program

- A. The program must provide opportunities for residents to become expert in the development, operation, and quality control of a chemical pathology laboratory and in the clinical interpretation of laboratory results; and to become a consultant in these areas to physicians and patients.
- B. The analytical repertoire of the laboratory must be distributed satisfactorily within the various categories and subdivisions of chemical pathology to provide experience at a sufficient level for the resident to acquire the competency of a specialist in chemical pathology.
- C. Clinical training in relation to chemical pathology, including the use and interpretation of chemical analyses in clinical diagnosis and management, must be an integral part of the training program.
- D. The training program must provide opportunities for residents to develop knowledge and skills relating to (1) analytical chemical pathology, both basic and applied; (2) instrumentation; (3) administration and management of a chemical pathology laboratory; and (4) data processing. It is further expected that the resident will engage in research activities during the period of training.

### IV. Institutional Organization and Resources

- A. The training institution should be of sufficient size to provide the program with the necessary volume and variety of clinical material in chemical pathology.
- B. The laboratory must have office and bench space sufficient to provide for both laboratory personnel and residents. The

facilities should be well equipped with modern instrumentation in all major areas of analytical work.

- C. The training program should be administratively attached to an ACGME-accredited program whenever feasible.

### V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
  1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

ACGME: November 1983 Effective: July 1995

## Program Requirements for Residency Education in Cytopathology (Pathology)

### I. Definition, Duration, and Scope of Education

- A. Cytopathology is the practice of pathology concerned with the study and diagnosis of human disease manifested in cells. Cytology requires a strong foundation in anatomic pathology.
- B. Graduate medical education programs in cytopathology must provide an organized educational experience for qualified physicians seeking to acquire the competence of a cytopathologist.
- C. Programs will be accredited to offer 1 year of organized education in all current aspects of cytopathology, including laboratory procedures, laboratory management, quality assurance,

self-assessment, diagnostic and patient care decision making, and the scientific basis of cytopathology.

## II. Program Goals and Objectives

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- B. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.

## III. Educational Program

### A. Curriculum

1. The program must be structured to give residents clearly defined graduated responsibilities and delegated authority. Written goals and objectives for the educational program must be clearly defined.
2. There must be ample opportunity for residents to develop knowledge and skills in the techniques of screening, specimen collection, cytopreparation, fine needle aspiration, flow cytometric and image analysis, in situ hybridization, hormone receptor assessment, and other new immunological and molecular techniques as they become applicable to the study of cells.
3. Diagnosis, pathogenesis, clinical correlation, consultative skills, and prognostic significance must be emphasized throughout the program.
4. Residents must be instructed and involved in correlating cytologic and histopathologic specimens.

### B. Educational Activities

1. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held.
2. Instruction should include the use of study sets of usual and unusual cases and other educational materials.

## IV. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

A program involving two or more institutions must have a single director with authority for the supervision and coordination of the portions of the program carried out at each institution.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Cytopathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Conducting the training program effectively. He or she must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices and

evaluation procedures and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.

- b. Ensuring that residents are given reasonable duty and call assignments.
- c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
- d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
  1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  2. Communicate each evaluation to the resident in a timely manner.
  3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  5. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Residents

1. Prior to enrollment in a cytopathology program, residents should have completed training in:
  - a. Anatomic and clinical pathology or
  - b. Anatomic pathology.
2. The number of resident positions requested must be consistent with the educational resources available in the program.
3. Residents must have the opportunity to assume increasing responsibility as they progress through the program.
4. Residents should have the opportunity to become involved in cytopathologic research and teaching during the program.
5. Residents' performance must not be impaired by fatigue, whether caused by program duties or other activities. On average, residents should have the opportunity to spend at least 1 full day out of 7 free from hospital duties and should be on call no more often than every third night.

### D. Other Personnel

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### V. Institutional Resources and Organization

- A. The program must have access to a large volume and variety of cytopathology material. The material and files must be indexed to permit appropriate retrieval. There must be mechanisms to facilitate correlation with anatomic material.
- B. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
- C. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- D. A cytopathology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology when feasible.

### VI. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research

findings, and develop habits of inquiry as a continuing professional responsibility.

- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
  1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### VII. Evaluation

- A. There must be regular, formal, written evaluation of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Residents should submit formal, written evaluations of the program at least once each year for review by the director and the teaching staff.

### VIII. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in pathology. The American Board of Pathology is responsible for certification of individual physicians in pathology.
- B. Questions about accreditation of residency programs should be directed to the Executive Secretary of the RRC.
- C. Individuals who plan to seek certification by the American Board of Pathology should communicate with the executive vice president of the board.

ACGME: June 1991 Effective: July 1995

# Program Requirements for Fellowship Education in Dermatopathology (Pathology)

## I. Duration and Scope of Education

- A. Dermatopathology is the subspecialty of dermatology and pathology that is concerned with the study and diagnosis of diseases of the skin and adjacent mucous membranes, cutaneous appendages, hair, nails and subcutaneous tissues by histological, histochemical, immunological, ultrastructural, molecular, microbiological, and other related techniques.
- B. Graduate medical education programs in dermatopathology must provide an organized educational experience for qualified physicians seeking to acquire the additional competence of a dermatopathologist.
- C. Programs must provide organized education in all current aspects of dermatopathology, including basic science, laboratory procedures, laboratory management, quality assurance, and self-assessment.
- D. The dermatopathology program must be an equal and joint function of the Department of Dermatology and of the Department of Pathology in the sponsoring institution that has an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in Dermatology and an ACGME-accredited residency in Anatomic Pathology (AP-3) or Anatomic and Clinical Pathology (APCP-4.)
- E. Dermatopathology programs must offer 12 months of education subsequent to the satisfactory completion of an ACGME-accredited residency in either dermatology or pathology.
- F. For all dermatopathology fellows, 50% of their education should be devoted to the study of dermatopathology as outlined in II.A.1. For those who have completed a pathology residency, 50% of the 1-year program should be education in clinical dermatology provided by the dermatology teaching staff. For those who have completed a dermatology residency, 50% of the program should be education in anatomic pathology provided by the pathology teaching staff.
- G. The director and teaching staff of the program must prepare and comply with written educational goals for the program and distribute them to applicants, fellows, and members of the teaching staff. All educational components of the program should be related to these goals.
- H. The program design and/or structure must be approved by the dermatopathology review committee as part of the regular review process.
- I. Participation by any institution providing more than 2 months of training in the program must be approved by the dermatopathology review committee.
- J. The educational effectiveness of the program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed. Written evaluations by fellows should be utilized in this process.

## II. Educational Program

### A. Curriculum

1. Fellows must actively participate in the daily review and diagnosis of current dermatopathology specimens. This experience must extend throughout the 12 months of accredited education and must be equivalent in quantity and quality for all fellows.

2. The program must include didactic instruction and practical experience in the diagnosis of skin disorders by direct inspection, and by histological, histochemical, immunological, molecular, microbiological, and other related techniques.
3. Dermatopathology fellows must be given clearly defined assignments and increasing responsibility as they progress through the program.
4. The program must provide a sufficient volume and variety of dermatopathology specimens (at least 5,000 new accessions per fellow per year) and other educational material for the fellow to acquire the qualifications of a consultant in dermatopathology.
5. The program must provide the fellow with the experience required to set up and to operate a dermatopathology laboratory and to supervise and train laboratory personnel.
6. All dermatopathology fellows should participate in patient examination appropriate to dermatopathology. Fellows who are pathologists must participate in the examination of at least 1,000 dermatology patients.
7. Dermatopathology fellows who are dermatologists must have exposure to surgical pathology. This experience should emphasize contemporary diagnostic techniques and require attendance at surgical pathology conferences and the review of slide sets of diseases relevant to dermatopathology. Participation in autopsies appropriate to dermatopathology is desirable.

### B. Educational Activities

1. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held.
2. Instruction should include the use of and access to study sets and files of usual and unusual cases and other educational materials (eg, the Internet, etc).

## III. Program Personnel

- A. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows and the maintenance of records related to program accreditation.

### B. Program Director

1. The program director must be responsible for and have the authority to conduct the training program effectively. He or she must devote sufficient time to the program to ensure the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, fellow staff, and educational resource materials.
2. A program involving two or more participating institutions must have a single director with authority for the supervision and coordination of the portions of the program carried out at each institution.
3. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification in Dermatopathology by the American Board of Dermatology or American Board of Pathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of, and privileged in dermatopathology at, an institution participating in the program.
  - e. At least 5 years of experience (following fellowship) in the practice of dermatopathology.

- f. Experience as a teacher and/or administrator in a dermatopathology or related program.
4. The program director must demonstrate continuing scholarly activity.
5. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of fellows at each level of training and for each major rotation or other program assignment. This statement must be distributed to fellows and members of the teaching staff. It should be readily available for review.
  - b. Selection of fellows for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection, supervision, and evaluation of the teaching staff and other program personnel at each institution participating in the program.
  - d. Supervision of fellows in accordance with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Fellows must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of fellows' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - i. At least semi-annually evaluate the knowledge, skills, and professional growth of the fellows, using appropriate criteria and procedures.
    - ii. Communicate each evaluation to the fellow in a timely manner.
    - iii. Advance fellows to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - iv. Maintain a permanent record of evaluation for each fellow and have it accessible to the fellow and other authorized personnel.
  - f. Provision of a written final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final period of training and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the fellow's permanent record maintained by the institution.
  - g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and fellow complaints or grievances.
  - h. Monitoring fellow stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to fellows. Training situations that consistently produce undesirable stress on fellows must be evaluated and modified.
  - i. Preparation of an accurate statistical and narrative description of the program as requested by the dermatopathology review committee.

### C. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications in dermatopathology to instruct and supervise adequately all the fellows in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

2. All members of the teaching staff must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
5. At least once a year the teaching staff should evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.
6. At least once a year the teaching staff must evaluate the educational effectiveness of the program. In particular, the quality of the curriculum and the extent to which educational goals have been met by fellows must be assessed. Written evaluations of the program by fellows should be utilized in the process.

### D. Dermatopathology Fellows

Fellows appointed to an ACGME-accredited dermatopathology fellowship must have completed an ACGME-accredited residency in Anatomic Pathology (AP-3), Anatomic Pathology/Clinical Pathology (AP/CP-4), or Dermatology.

1. The number of positions requested must not exceed the educational resources available in a program.
2. Fellows must have the opportunity to assume increasing responsibility under supervision appropriate to their experience as they progress through the program.
3. Fellows should have the opportunity to become involved in dermatopathologic research and teaching during the program.
4. The program director must ensure that fellows are adequately supervised by faculty at all times. Further, fellow duty and on-call assignments must be made in a manner that ensures that neither education nor quality of patient care is jeopardized by fellow stress or fatigue. Physicians must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day. In no case should a trainee go off duty until the proper care and welfare of the patients have been ensured. Fellow duty hours and night and weekend call must reflect the concept of responsibility for patients and the provision of adequate patient care. Fellows must not be required regularly to perform excessive, prolonged duties. When averaged over 4 weeks, fellows should spend no more than 80 hours per week in hospital duties. Fellows should, on average, have the opportunity to spend at least 1 day out of 7 free of program duties and should be on call no more often than every third night. When on call for 24 hours or more, there should be opportunity to rest and sleep.

### E. Other Personnel

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. There must be a sufficient number of qualified professional, technical, and clerical personnel to support laboratory work and the educational program.

#### IV. Institutional Resources

- A. There must be ample case material and supporting facilities to meet the training requirements in dermatopathology, dermatology, and pathology. Each dermatopathology fellow should examine at least 5,000 dermatopathology specimens (ie, inhouse or referred specimens in the institution's accessions file for which reports are generated.)
- B. There must be adequate equipment, laboratory space, office facilities, meeting rooms, classrooms, and research space to support service, teaching, and educational responsibilities.
- C. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- D. Fellows must have ready access to a major medical library either at the institution where the fellows are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

#### V. Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which fellows participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for fellows involved in research.
  6. Provision of support for fellow participation in scholarly activities.

#### VI. Evaluation

- A. There must be regular, written evaluation of fellows by teaching staff. Evaluations should be completed and discussed with the fellows at least once every 6 months.
- B. Fellows should submit written evaluations of the program at least once each year for confidential review by the director.

#### VII. Certification and Accreditation

- A. The Residency Review Committees for Dermatology and Pathology are responsible for accreditation of graduate medical education programs in dermatopathology.
- B. The American Board of Dermatology and American Board of Pathology are responsible for certification of individual physicians

in dermatopathology. Individuals who plan to seek certification should communicate with their respective boards to obtain the latest information regarding certification.

*ACGME: February 2002 Effective: July 2002*

## Program Requirements for Residency Education in Forensic Pathology (Pathology)

### I. Introduction

- A. The program shall be for a period of 1 year and must be directed by a pathologist who is certified by the American Board of Pathology in Forensic Pathology or has equivalent qualifications.
- B. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- C. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.
- D. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

### II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

1. There must be a single program director responsible for the program.
2. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Forensic Pathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
3. Responsibilities of the program director include:
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.

- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
  - a. The teaching staff must include at least two forensic pathologists (including the program director).
  - b. Programs that offer training for two or more residents must have a senior staff of qualified forensic pathologists that numbers at least one more than the number of residency positions.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### III. Educational Program

- A. A resident should perform 250 to 350 autopsies in a year of approved training and should have experience in scene investigations, including examination of the body before it has been disturbed.
- B. The resident should have responsibility for the performance of autopsies in cases that are likely to result in criminal prosecution or civil litigation, and it is highly desirable for residents to have opportunities to participate in the legal follow-up of cases if such occurs during the course of their year of training.
- C. It is highly desirable for residents to accompany staff pathologists when they testify in court and give depositions.
- D. During the year of approved training, the resident must have a period of approximately 4 to 8 weeks devoted exclusively to laboratory experience in toxicology, physical anthropology, and components of the crime laboratory such as firearms, serology, and trace evidence.

### IV. Institutional Resources

- A. Approximately 500 medicolegal autopsies should be conducted in an approved program each year. Of these, 100 or more should be in cases in which death is due to the immediate (within 24 hours) and direct effects of physical or chemical injury.
- B. The institution or office should conduct approximately 300 additional autopsies for each additional residency position requested.
- C. Adequate facilities and competent personnel shall be available and properly utilized for the conduct of all bacteriologic, biochemical, toxicology, firearms, trace evidence, physical anthropology, odontology, and other scientific studies as may be needed to ensure complete postmortem investigation. When such support services are not housed at the medicolegal facility, they should be available and accessible to the resident at suitable laboratories.
- D. If the resident is to spend parts of the training program at other laboratories or institutions, such training must be adequately supervised by qualified personnel.

### V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators,

the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VI. Evaluation

- A. There must be regular, formal, written evaluation of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Residents should submit formal, written evaluations of the program at least once each year for review by the director and the teaching staff.

## VII. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in pathology. The American Board of Pathology is responsible for certification of individual physicians in pathology.
- B. Questions about accreditation of residency programs should be directed to the executive director of the RRC.
- C. Individuals who plan to seek certification by the American Board of Pathology should communicate with the executive vice president of the board.

ACGME: February 1986 Effective: July 1995

# Program Requirements for Residency Education in Hematology (Pathology)

## I. Definition, Duration, and Scope of Education

- A. Hematology is the practice of pathology concerned with the study and diagnosis of human diseases involving the hematopoietic

tissues and cells. Hematology requires a strong foundation in pathology.

- B. Graduate medical education programs in hematology must provide an organized educational program for qualified physicians seeking to acquire additional competence in hematology and should be associated with an active program in clinical hematology of both adults and children.
- C. Programs will be accredited to offer 1 year of organized training in all current aspects of hematology, including clinical laboratory procedures, laboratory management, database management, quality assurance, self-assessment, clinical consultation, and the scientific basis of hematology.

## II. Program Goals and Objectives

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- B. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.

## III. Educational Program

### A. Curriculum

1. The program must be structured to give hematology residents clearly defined graduated responsibilities and delegated authority. Written goals and objectives for the educational program must be clearly defined.
2. There must be ample opportunity for the residents to develop knowledge and skills in the techniques of specimen collection and preparation for routine hematologic testing, bone marrow aspiration, biopsy and interpretation, lymph node interpretation, coagulation testing, cell analysis systems, and the applications of advanced technology, including *in situ* hybridization, image analysis, immunocytochemistry, cytogenetics, and molecular probe diagnosis, to hematologic problems. Adult and pediatric diagnostic material must be available.
3. Diagnosis, pathogenesis, clinical correlation, and prognostic significance of hematologic disease must be emphasized throughout the program.
4. Residents must be given increasing responsibilities for services to patients and other physicians as they progress through the program.
5. Residents must be instructed in methods of correlating data from cytological, histopathological, and clinical pathology assessments of hematologic disease.

### B. Educational Activities

1. Lectures, tutorials, seminars, rounds, and conferences with clinical services must be regularly scheduled and held.
2. Instruction should include the use of study sets of usual and unusual cases, performance of tests under supervision, and interpretation of results with generation of narrative reports.

## IV. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

**A. Program Director**

A program involving two or more institutions must have a single director with authority for the supervision and coordination of the portions of the program carried out at each institution.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Hematology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Conducting the training program effectively. He or she must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices, evaluation procedures, and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
  - b. Ensuring that residents are given reasonable duty and call assignments.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
    2. Communicate each evaluation to the resident in a timely manner.
    3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- i. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- j. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

**B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

**C. Residents**

1. The resident should have completed training in anatomic and clinical pathology, anatomic pathology or clinical pathology, or primary certification in another primary medical specialty board of the American Board of Medical Specialties.
2. The number of resident positions requested must be consistent with the educational resources available in a program.
3. Residents must have the opportunity to assume increasing responsibility as they progress through the program.
4. Residents should have the opportunity to become involved in hematology research and teaching during the program.
5. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked and on-call time will vary, particularly at the senior levels, and therefore necessitate flexibility.

**D. Other Personnel**

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program. There must be a

sufficient number of qualified and credentialed technical, clerical, and other personnel to support laboratory work and the educational program.

## V. Institutional Resources

- A. The program must have access to the number and variety of patients needed to provide education in hematology. The material and files must be indexed to permit appropriate retrieval. There must be mechanisms to facilitate correlation with anatomical material.
- B. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
- C. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.

## VI. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
  1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VII. Evaluation

- A. There must be regular, formal, written evaluations of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Residents should submit formal,

written evaluations of the program and faculty at least once each year for review by the director and the teaching staff.

## VIII. Administrative Structure

A hematology program should be administratively attached to an Accreditation Council for Graduate Medical Education-accredited residency in anatomic and/or clinical pathology.

## IX. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in hematology. The American Board of Pathology is responsible for certification of individual physicians in hematology.
- B. Questions about accreditation of residency programs should be directed to the executive director of the RRC.
- C. Individuals who plan to seek certification from the American Board of Pathology should communicate with the executive vice president of the board to obtain the latest information regarding certification.

ACGME: February 1993 Effective: July 1995

# Program Requirements for Residency Education in Medical Microbiology (Pathology)

## I. Introduction

- A. The minimum training period in medical microbiology shall be 1 year in addition to the completion of acceptable residency training in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program of anatomic and/or clinical pathology, as outlined in the *Graduate Medical Education Directory*, or equivalent postgraduate training and experience.
- B. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- C. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in a program must be approved by the RRC.
- D. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

## II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

1. There must be a single program director responsible for the program.
2. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.

- b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Medical Microbiology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
3. Responsibilities of the program director include:
- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.  
The program director, with participation of members of the teaching staff, shall:
    - 1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
    - 2. Communicate each evaluation to the resident in a timely manner.
    - 3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - 4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
  - h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
  - i. Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

## B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

## C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## III. Educational Program

- A. The training program in medical microbiology must be designed to provide a broad knowledge in the discipline through didactic instruction and a personal participation in microbiologic techniques and methodology, as well as in the reporting and interpretation of laboratory results, principles of laboratory management, teaching, and investigation.
- B. The training program must provide opportunities for residents to develop knowledge and skills relating to preparation and examination of cultures, identification of microorganisms, and performance of diagnostic immunologic procedures, supplemented with stock cultures of infrequently encountered and medically important microorganism microscope slides, photographs, and seminar material.
- C. Knowledge of specimen collection, transport, and processing; microscopic examination of specimens; histopathologic and clinical correlation of microbiologic data; activity and pharmacokinetics of antimicrobial agents; antibiotic assay; antimicrobial susceptibility testing; and interpretation of findings are important educational objectives.
- D. Residents must develop knowledge and skills related to principles of disinfection and sterilization, hospital infection control, infection control committee functions and responsibilities, microbiologic safety, quality control, workload accounting, budgeting, personnel supervision, and hospital and public health epidemiology.
- E. Educational experiences should include opportunities to observe patients, both adults and children, with a wide variety of infectious diseases through interaction with physicians from other clinical services.
- F. The program should provide regular administrative meetings, seminars, and conferences in medical microbiology, pathology, and the clinical and epidemiologic aspects of infectious diseases.

- G. Instruction should include but not be limited to training in medical bacteriology, mycobacteriology, mycology, virology, parasitology, and immunology.

#### IV. Institutional Organization and Resources

- A. The training program should provide the necessary clinical material and analytical capability in medical microbiology to provide experience at a sufficient level for the resident to acquire the competency of a specialist in medical microbiology.
- B. Access to reference laboratories should be available for training in specialized procedures not available in the laboratory.
- C. The laboratory should have adequate modern facilities, policies and procedures, equipment, and personnel for the performance of all laboratory aspects of medical microbiology, epidemiology, and infectious diseases.
- D. The training program should be administratively attached to an ACGME-accredited program whenever feasible.

#### V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

ACGME: November 1983 Effective: July 1995

## Program Requirements for Residency Education in Molecular Genetic Pathology (Pathology)

### I. Introduction

- A. Molecular Genetic Pathology (MGP) is the subspecialty of Medical Genetics and Pathology in which the principles, theory, and technologies of molecular biology and molecular genetics are used to make or confirm clinical diagnoses of Mendelian genetic disorders, disorders of human development, infectious diseases and malignancies, to assess the natural history of those disorders, and to provide the primary physician with information by which to improve the ability to provide optimal care for individuals affected with these disorders. Molecular Genetic Pathology includes a body of knowledge and techniques necessary to study diseases associated with alterations in genes, provides information about gene structure, function, and alteration, and applies laboratory techniques for the diagnosis, treatment, and prognosis of individuals with these disorders.
- B. Educational programs in molecular genetic pathology must be 1 year in length and provide a structured educational experience for qualified physicians seeking to acquire additional competence in all current aspects of the discipline including basic science, diagnostic laboratory procedures, laboratory management, and consultation. Programs must be designed to teach trainees to integrate molecular genetic pathology into medical consultations with clinicians in the diagnosis and care of patients.
- C. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- D. All educational components of a residency program should be related to program goals.
1. The Molecular Genetic Pathology Residency Review Subcommittee (MGPRRC) as part of the regular review process must approve the program design and structure.
  2. Participation by any institution providing training in the program must be approved by the MGPRRC.

### II. Institutional Organization

#### A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources and clinical, research, and library facilities to meet the educational needs of the residents for accreditation.
2. Postgraduate fellowships in molecular genetic pathology will be accredited in institutions that also sponsor ACGME-accredited residencies in medical genetics and pathology. Requests for exceptions to this policy will be reviewed on a case by case basis.

#### B. Participating Institutions

If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements. Participation by any institution that provides 2 months or more of the educational program must be approved (prospectively) by the Subcommittee for Molecular Genetic Pathology. Assignments to participating institutions must be based on a clear educational rationale and should provide clinical resources not available to the sponsoring institution for the program.

### III. Program Personnel

#### A. Program Director

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Unrestricted licensure to practice medicine in the state where the institution that sponsors the program is located.
  - c. Certification by the American Board of Pathology or the American Board of Medical Genetics (in clinical medical genetics) or appropriate educational qualifications as judged by the Subcommittee, and certification in molecular genetic pathology or appropriate educational qualifications as judged by the Subcommittee.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. A program involving two or more participating institutions must have a single director who has the authority to supervise and coordinate the portions of the program carried out at each institution.
3. Responsibilities of the program director include:
  - a. In association with the teaching staff, the general administration of a program; including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, advancement of residents, and the maintenance of records related to program accreditation.
  - b. Conducting the training program effectively. He or she must devote sufficient time to fulfill the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices, evaluation procedures, and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - e. Selection, supervision, and evaluation of the teaching staff and other program personnel at each institution participating in the program.
  - f. The supervision of residents in accordance with explicit written descriptions of supervisory lines of responsibility for the performance/interpretation of laboratory tests and care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - g. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - i. At least semiannually evaluate the knowledge, skills, and personal growth of the residents, using appropriate criteria and procedures.
    - ii. Communicate each evaluation to the resident in a timely manner.
    - iii. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

- iv. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and authorized personnel.
- h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - i. Implementation of fair procedures, as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
  - j. The monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
  - k. Preparation of an accurate statistical and narrative description of the program as requested by the MGPRRC.
    - l. To demonstrate his/her own continuing scholarly activity.

#### B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications in MGP to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically review the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of the supervision of residents.

#### C. Molecular Genetic Pathology Residents

1. The resident should have completed training in an ACGME accredited residency in either Medical Genetics or Pathology, or be a physician who is certified by the American Board of Medical Genetics.
2. The number of positions requested must not exceed the educational resources available in a program.
3. Residents must have the opportunity to assume increasing responsibility under supervision appropriate to their experience as they progress through the program.
4. Residents should have the opportunity to become involved in Molecular Genetic Pathology research and teaching during the program.

5. The residents must maintain a logbook of MGP cases in which they were involved in sufficient detail to ascertain the residents' involvement in establishing the primary diagnosis and the transmittal of this information. A "case" is defined as the complete laboratory evaluation of an individual or an individual specimen (eg, for tumor specimens). If a family study is involved, the entire family is considered as a single case. Completion of the case will involve appropriate communication of the results (eg, written report, verbal communication to referring physician and/or counseling of the individual/family). The logbook should contain sufficient information to demonstrate experience with the breadth of techniques and variety of diseases necessary to direct an MGP diagnostic laboratory service.
6. The program director must ensure that residents are adequately supervised by faculty at all times. Further, resident duty and on-call assignments must be made in a manner that ensures that neither education nor quality of patient care is jeopardized by resident stress or fatigue. Residents should, on average, have the opportunity to spend at least 1 day out of 7 free of program duties and should be on call no more often than every third night. When on call for 24 hours or more, there should be opportunity to rest and sleep.

#### D. Other Personnel

There must be a sufficient number of qualified, professional, technical and clerical personnel to support the administration, laboratory work, and the educational program.

### IV. Institutional Resources

- A. The sponsoring institution must provide sufficient faculty, administrative, financial, and library services, as well as technical personnel, laboratory space and equipment, meeting rooms, classrooms, research space, and resident office space to support service, teaching, and educational responsibilities in molecular genetic pathology.
- B. The molecular genetic pathology program must be jointly sponsored by the Department of Pathology and the Department of Medical Genetics. Further, the sponsoring institution must ensure that activity is supported by other disciplines, including internal medicine, pediatrics, and obstetrics-gynecology.
- C. A sufficient volume and variety of current specimens from adult and pediatric patients must be available to provide MGP residents a broad exposure to consultation regarding medical genetic testing for congenital and acquired diseases without diluting the educational experience of residents in affiliated Pathology and Medical Genetics residencies.
- D. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- E. Residents must have ready access to a major medical library. Library services should include electronic retrieval of information from national medical databases.
- F. Residents must have ready on-site access to appropriate texts and journals in each institution participating in the program.

### V. Educational Program

#### A. Curriculum

1. The curriculum for the program must be based upon written, clearly defined educational goals and objectives prepared by the program director and teaching staff.
2. Programs should be structured so that residents are involved in MGP throughout the year. The program must include didactic instruction and practical experience with the molecular biology and the biochemistry of nucleic acids and proteins including structure, function, replication mechanisms, *in vitro* synthesis,

and the roles of DNA and various RNA classes and proteins in cellular biology. Programs should instruct residents in an understanding of the mechanism of regulation of gene expression in prokaryotes and eukaryotes, and the biochemical mechanisms of mutations. The program should instruct residents in the detailed knowledge of disease processes at the molecular level and the methods used for their detection. These diseases include but are not limited to: solid tumors, leukemia-lymphomas, infectious diseases, inherited Mendelian diseases, non-Mendelian and acquired genetic diseases (eg, mitochondrial disorders, triplet repeats, expansion disorders, cytogenetic aberrations, and imprinting disorders). In addition, residents should be instructed in tissue typing/identity testing and the principles of linkage analysis. The program should instruct residents in their role as a consultant and the application of molecular techniques and interpretation of results with regard to diagnosis, prognosis, treatment and recurrence risk in patient care decision making.

3. MGP residents must be given clearly defined assignments and increasing responsibility as they progress through the program.
4. The program must provide a sufficient volume and variety of MGP specimens and other educational material for the resident to acquire the qualifications of a consultant in MGP. The resident must be instructed to create and must keep a logbook of each accession in which they are involved.
5. Residents must gain experience as consultants in clinical decision making in collaboration with professionals from related disciplines and in the cost-effective use of molecular genetic pathology testing.
6. The program must provide the resident with the experience required to set up and to operate a MGP laboratory and to supervise and train laboratory personnel in other advanced techniques as they are developed.
7. MGP residents who are pathologists must participate in the diagnosis, management, and treatment of patients with genetic disorders and in the counseling of the patient and the family. MGP residents who are medical geneticists must have exposure to autopsy and surgical pathology. This experience should emphasize contemporary diagnostic techniques and require involvement in autopsies, surgical pathology, the review of slide sets of diseases relevant to Molecular Genetic Pathology, and other relevant pathology activities.

#### B. Educational Activities

1. There must be regularly scheduled inter-departmental MGP conferences as well as intra-departmental conferences, lectures, seminars, journal clubs and other structured educational activities. Both teaching staff and residents must attend and actively participate in these sessions on a regular basis.
2. Instruction should include the use of study sets and files of usual and unusual cases and other educational materials.

### VI. Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an

in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

2. Participation in journal club and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

## VII. Evaluation

- A. There must be regular, written evaluation of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. Residents should submit written evaluations of the program at least once during the year for review by the director and teaching staff.
- C. Residents should submit written evaluations of program teaching staff at least once during the year for confidential review by the program director.

## VIII. Certification and Accreditation

- A. The Residency Review Committees for Medical Genetics and Pathology are responsible for accreditation of graduate medical education programs in MGP.
- B. The American Board of Medical Genetics and The American Board of Pathology are responsible for certification of individual physicians in MGP. Individuals who plan to seek certification should communicate with their respective Boards to obtain the latest information regarding certification.

*ACGME: June 2001 Effective: June 12, 2001*

# Program Requirements for Residency Education in Neuropathology (Pathology)

## I. Introduction

- A. The educational program must be 2 years in length and provide a structured educational experience in all current aspects of the discipline, including basic science, laboratory management, and patient care consultation.
- B. The director and teaching staff of the program must prepare and comply with written educational goals for the program.
- C. All educational components of the residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training in the program must be approved by the RRC.

## II. Program Personnel

The program director and the teaching staff are responsible for the general administration of the program, including those activities re-

lated to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation.

## A. Program Director

There must be a single program director, whose primary professional responsibility must be neuropathology.

1. Qualifications of the program director
  - a. Prerequisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in neuropathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
3. The program director, with participation of members of the teaching staff, shall
  - a. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
  - b. communicate each evaluation to the resident in a timely manner.
  - c. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
  - d. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - e. the provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - f. implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
  - g. monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff

should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

- h. prepare an accurate statistical and narrative description of the program as requested by a review committee.
4. The program director must have the authority to organize and oversee the program and ensure that an appropriate educational environment is maintained.

#### **B. Teaching Staff**

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### **C. Number of Residents**

The number of residents must conform to the neuropathologic resources available for educational purposes. Programs that fail to recruit new residents in 2 consecutive years will be subject to review and possible adverse accreditation action.

#### **D. Other Program Personnel**

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

### **III. The Educational Program**

- A. Residents must actively participate in the evaluation of a comprehensive body of pathological lesions of the central nervous system, peripheral nervous system, and neuromuscular systems.
- B. Residents should regularly participate in basic neuroscience activities, teaching conferences in neuropathology, and joint conferences with the pathology department and clinical services involved in the diagnosis and management of neurological disorders.
- C. Programs must be designed to teach neuropathology residents to integrate neuropathologic information into medical consultations with clinicians in the diagnosis and management of patients.

### **IV. Institutional Resources and Organization**

- A. The neuropathology program must be based in institutions where each year

1. at least 200 necropsies that include examination of the nervous system are performed; and
  2. there are at least 100 neurosurgical specimens from the brain, spinal cord, pituitary gland, and eyes (including neoplastic, degenerative, infectious, and immune disorders) of significance in the treatment and management of pediatric and adult patients.
- B. The neuropathology program should ensure that sufficient material is available for each trainee to examine at least 50 neuromuscular biopsy specimens and to study neoplasms and related lesions of peripheral nerves and the sympathetic and parasympathetic nervous systems.
  - C. Appropriate laboratory space, facilities, and personnel should be available for the conduct of special neuropathologic procedures, including but not limited to ultrastructural, histochemical, immunopathologic, and molecular-biologic techniques.
  - D. Indexes of usual and unusual cases, course and seminar materials, microscopic slide collections augmented by photographs, and museum specimens sufficient for the study of conditions and diseases not frequently encountered in routine necropsy and surgical specimens should be readily available to the program for educational purposes.
  - E. Neuropathology programs should be administratively attached to an Accreditation Council for Graduate Medical Education-accredited anatomic and clinical pathology (APCP) program.

### **V. Program Research and Scholarly Activity**

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following
  1. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
  1. Library services should include the electronic retrieval of information from medical databases.
  2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VI. Evaluation

- A. Residents should be provided with a summary of the assessment of their performance and professional growth following each rotation or other major educational assignment.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Neuropathology residents should evaluate the program, the faculty, and the facilities in writing at least once each academic year.

## VII. Certification

Residents who plan to seek certification by the American Board of Pathology should communicate with the executive vice president of the board regarding certification matters.

*ACGME: September 1997 Effective: July 1998*

# Program Requirements for Residency Education in Pediatric Pathology (Pathology)

## I. Definition, Duration, and Scope of Education

- A. Pediatric pathology is that practice of pathology concerned with the study and diagnosis of human disease manifested in the embryo, fetus, infant, child, and adolescent. Pediatric pathology requires a strong foundation in pathology and its clinical interpretation.
- B. Graduate medical education programs in pediatric pathology must provide an organized educational experience for qualified physicians seeking to acquire advanced competence in the diagnosis of childhood diseases.
- C. Programs will be accredited to offer 1 year of organized education in pediatric pathology, which must include formal education in diagnostic pediatric pathology and management and quality assessment issues germane to the pediatric laboratory environment.
- D. The director and teaching staff of a program must prepare and comply with written educational goals for the program.
- E. All educational components of a residency program should be related to program goals.
  1. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
  2. Participation by any institution providing more than 2 months of training during the program must be approved by the RRC.

## II. Educational Program

### A. Curriculum

1. The program must be structured to give residents clearly defined graduated responsibilities and delegated authority. The descriptions of rotations, assignments, or other experiences must include:
  - a. The goals and objectives of the experience.
  - b. The duration of the experience.
  - c. The duties and responsibilities of residents at each year of training.
  - d. The teaching staff responsible for the supervision and instruction of the residents during the experience.

- e. The manner in which residents are supervised during the experience.
2. There must be a program statement available for review by applicants, residents, and staff. The program statement must include:
  - a. A description of the program's educational goals and philosophy.
  - b. A listing and description of all required rotations, including their duration.
  - c. A listing and description of elective rotations and their duration.
  - d. A description of resident opportunities for teaching and research, including the manner in which such research is funded.
  - e. A description of the manner in which residents and the program are evaluated and how such evaluations are used.
3. The education in pediatric pathology must include general and systemic aspects of autopsy and surgical pathology (including embryo-fetal, perinatal, and placental pathology as well as pediatric aspects of dermatopathology, gynecological and obstetrical pathology, forensic pathology, and neuropathology), immunopathologic and histochemical techniques, cytopathology, ultrastructural pathology, cytogenetics, molecular biologic techniques including diagnostic techniques for metabolic diseases, and other advanced diagnostic techniques as they relate to pediatric pathology.
4. Programs must provide instruction and experience in the major aspects of a hospital laboratory as it relates to diagnosis in pediatric pathology, including resident participation in interpretation of laboratory data as part of pediatric patient-care consultation, conferences, rounds, laboratory management, quality assurance, data processing, teaching, and scholarly activity.

### B. Educational Activities

1. The educational experiences detailed above may be provided through separate, exclusive rotations or by rotations that combine more than one area or by other means.
2. Lectures, tutorials, seminars, and conferences with clinical services including pediatric surgery, pediatric hematology, pediatric oncology, medical microbiology, medical genetics, pediatric radiology, obstetrics, and pediatrics must be regularly scheduled and held.
3. Instruction should include the use of study sets of usual and unusual cases and other educational materials.

## III. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

A program involving two or more institutions must have a single director who has the authority for the supervision and coordination of the portions of the program carried out at each institution.

1. Qualifications of the program director include:
  - a. Requisite and documented clinical, educational, and administrative abilities and experience.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Pathology in Pediatric Pathology or suitable equivalent qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the program director include:
- Conducting the training program effectively. He or she must devote sufficient time to fulfilling the responsibilities inherent in meeting the educational goals of the program, including the implementation of sound administrative practices, evaluation procedures and the provision of adequate facilities, teaching staff, resident staff, and educational resource materials.
  - Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall:
    - At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
    - Communicate each evaluation to the resident in a timely manner.
    - Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
  - The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
  - Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
  - Preparation of an accurate statistical and narrative description of the program as requested by the RRC.
  - Ensuring that residents are given reasonable duty and call assignments.

## B. Teaching Staff

- There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
- All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
- A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
- The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

## C. Residents

- Residents should have completed at least 2 years of training in residencies in anatomic and clinical pathology prior to appointment to a pediatric pathology program.
- The number of resident positions requested must be consistent with the educational resources available in a program.
- Residents must have the opportunity to assume increasing responsibility as they progress through the program.
- The number of residents should be sufficient to promote an intellectually stimulating educational environment. Typically, there should be at least one resident enrolled in each year of a program.
- Resident performance must not be impaired by fatigue, whether caused by program duties or other activities. On average, residents should have the opportunity to spend at least 1 full day out of 7 free from hospital duties and should be on call no more often than every third night.
- The appointment of other individuals for special training or education must not dilute or detract from the educational opportunities of the regularly appointed residents in pediatric pathology.

## D. Other Personnel

- The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
- Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Institutional Resources

- The program must have access to an adequate volume and variety of pediatric pathology material. The material and files must be indexed to permit appropriate retrieval. There must be mechanisms to facilitate correlation with anatomical material.
- There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.

- C. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
- D. Each pediatric pathology program should be administratively attached to an Accreditation Council for Graduate Medical Education-accredited residency in anatomic and clinical pathology or anatomic pathology when feasible.
- E. To facilitate peer interchange and augment the breadth of the educational experiences, institutions providing programs in pediatric pathology must be affiliated with accredited specialty training programs in pediatrics, obstetrics, surgery, and radiology.
- F. While the quality of an educational program is not based on the volume of teaching material alone, programs must have sufficient volume and variety of materials available for educational purposes to ensure the opportunity for:
  1. The participation in at least 40 pediatric autopsies per resident during the program. This experience must include general pediatric, metabolic, forensic, perinatal, and stillborn autopsies. It is highly desirable that this experience also include embryo-fetal autopsies.
  2. Examination of at least 2,000 pediatric surgical pathology specimens per resident during the program. This material must be from an adequate mix of cases, including obstetrics-related materials (placentas and abortions) and cytology.
  3. The performance of at least 50 intraoperative consultations (frozen sections, smears) per resident during the program.
  4. The number and variety of laboratory tests utilized in the program should be sufficient to give each resident experience in the range of laboratory examinations typically available and useful in the diagnoses and following of both common and unusual pediatric diagnostic problems, including metabolic, prenatal, genetic, neoplastic, and other diseases of the pediatric population.

## V. Program Research and Scholarly Activity

- A. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
- B. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  2. Participation in journal clubs and research conferences.
  3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  6. Provision of support for resident participation in scholarly activities.
- C. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

1. Library services should include the electronic retrieval of information from medical databases.
2. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

## VI. Evaluation

- A. There must be regular, formal, written evaluation of residents by teaching staff. Evaluations should be completed and discussed with the residents at least once every 6 months.
- B. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Residents should submit confidential, written evaluations of the program and teaching staff at least once each year.

## VII. Certification and Accreditation

- A. The RRC for Pathology is responsible for accreditation of graduate medical education programs in pathology. The American Board of Pathology is responsible for certification of individual physicians in pathology.
- B. Questions about accreditation of residency programs should be directed to the executive secretary of the RRC.
- C. Individuals who plan to seek certification from the American Board of Pathology should communicate with the executive vice president of the board to obtain the latest information regarding certification.

ACGME: June 1994 Effective: July 1995

# Program Requirements for Residency Education in Pediatrics

## I. Introduction

### A. Scope of Training

Programs must provide residents with a broad exposure to the health care of children and substantial experience in the management of diverse pathologic conditions. This must include experience in child health supervision and those conditions commonly encountered in primary care practice. It must also include experience with a wide range of acute and chronic medical conditions of pediatrics in both the inpatient and ambulatory settings.

Preventive health care, ethical issues, and discussions of the cost of diagnostic tests, procedures, and therapies should be a part of all rotations.

Throughout the 3 years of training, emphasis must be placed on enhancement of residents' competence in the medical interview, physical examination, and communication and interpersonal skills.

### B. Duration and Levels of Training

Programs must provide a progressive educational experience with increasing patient care responsibility over a 3-year period. The first year (PL-1) should include an introduction to the basic experiences on which the rest of the training will be based. During the last 24 months of training the program must require at least 5 months of supervising the activities of more junior residents within the approved educational settings. The supervisory responsibilities must involve both inpatient and outpatient experience.

### C. Goal of the Residency

The goal of residency training in pediatrics is to provide educational experiences that prepare residents to be competent general pediatricians able to provide comprehensive, coordinated care to a broad range of pediatric patients. The residents' educational experiences must emphasize the competencies and skills needed to practice general pediatrics of high quality in the community. In addition, residents must become sufficiently familiar with the fields of subspecialty pediatrics to enable them to participate as team members in the care of patients with chronic and complex disorders.

Residents must be given the opportunity to function with other members of the health care team in both inpatient and ambulatory settings to become proficient as leaders in the organization and management of patient care.

## II. Institutional Organization

### A. Sponsoring Institution

There must be one sponsoring institution for each residency, as mandated by the Institutional Requirements. This entity must be identified at the time of each review of the residency.

### B. Participating Institutions

#### 1. Single or Multiple institutions

An accredited program may be independent or may occur in two or more institutions that develop formal agreements and conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions. When affiliated institutions are utilized and a single program director assumes responsibility for the entire residency, including the appointment of all residents, the determination of all rotations, and the assignment of both residents and members of the teaching staff, the affiliated institution may be proposed as integrated. Ordinarily one hospital may not be an integrated part of more than one pediatric residency.

The Residency Review Committee (RRC) must approve the designation of a participating hospital as integrated. In making its determination the RRC will consider the proximity of the hospital to the primary teaching site and the duration of rotations planned. Normally, at least 3 months of required experience should occur at a hospital that is designated as integrated. A significant increase in the time spent at an integrated hospital should receive prior approval from the RRC. Within a single program some participating hospitals may qualify as integrated, while others are merely affiliated.

#### 2. Agreements with Participating Institutions

When a residency program relies on other institutions to provide some components of the curriculum, the arrangement between the institutions must be designed to meet the educational needs of the residents and must be described in a written document that is signed by the appropriate persons from the respective institutions. These agreements must relate specifically to the residency program in pediatrics and must be current at the time of the site visit. Copies of these written arrangements, specifying administrative, organizational, and educational relationships, must be submitted with the program information forms at the time of each evaluation by the RRC.

### C. Appointment of Residents

The development of a satisfactory program requires careful selection of applicants for appointment to the residency. When appointing residents, the program director must adhere to the criteria for resident eligibility that are specified in the Institutional Requirements. To determine the appropriate level of training for a resident who is transferring from another ACGME-accredited pediatrics program, the program director must receive written verification of the previous educational experiences in a pediatric residency and a statement regarding the performance evaluation of the transferring resident prior to accepting that resident into the program. The program director is also required to provide verification of training, if requested to do so, for any residents who may leave the program prior to completion of training.

## III. Faculty Qualifications and Responsibilities

The chief of pediatrics/department chair must have overall responsibility for all educational programs that are carried on within the Department of Pediatrics, including those in the subspecialties. All program descriptions submitted to the RRC from this department must bear this person's signature, in addition to that of the program director, indicating that the chief/chair has reviewed and approved the materials submitted.

The program director and teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program. The RRC must be notified immediately in writing of a change in leadership of the program. Continuity of leadership over a period of years is important for the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program and will be cause for serious concern.

#### 1. Qualifications

a. Experience/Ability: The director of the residency program must have demonstrated ability as a clinician, medical educator, and administrator and have an understanding of, and commitment to, general pediatric education.

- b. Licensure: The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. Board Certification: The director must be currently certified by the American Board of Pediatrics or must possess appropriate educational qualifications. The adequacy of alternate qualifications will be determined by the RRC.
- d. Medical Staff Appointment: The director must hold an appointment in good standing to the medical staff of an institution participating in the residency.

## 2. Responsibilities

The program director must devote sufficient time to the residency program to provide continuity of leadership and to fulfill the administrative and teaching responsibilities inherent in achieving the educational goals of the program.

The responsibilities of the director include the following:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment, and distribution of the statement to residents and members of the teaching staff.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of residents.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- g. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Training situations that consistently produce undesirable stress on residents must be evaluated and modified. The director should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents.
- h. Program directors are required to provide accurate and complete statistical and narrative information as requested by the RRC for these evaluations.
- i. Notification of the RRC of major changes in the program.

## B. Faculty

The teaching staff must have sufficient background and expertise to ensure that the educational goals, objectives, and/or curricular content can be met. They must be actively involved in the establishment of educational goals and objectives for the resident experiences in which they participate and in the evaluation of both the residents and the program.

### 1. Sufficient Numbers and Diversity

There must be a sufficient number of pediatric teaching staff who function as general pediatrician and subspecialist role models for the residents and who contribute adequate time to the program to meet the educational needs of the residents.

Within the primary hospital and/or integrated participating hospitals there must be teaching staff with expertise in the area of general pediatrics who will serve as teachers, researchers, and role models for general pediatrics. Hospital-based as well as community-based general pediatricians should participate actively in the program as leaders of formal teaching sessions, as outpatient

preceptors, and as attending physicians on the general inpatient services. The number of general pediatricians actively involved in the teaching program must be sufficient to enable each resident to establish close working relationships that foster role-modeling. Where teaching staff participate on a part-time basis, there must be evidence of sufficient involvement and continuity in teaching. These physicians should have a continuing time commitment to direct patient care to maintain their clinical skills.

There must be teaching staff with training and/or experience in behavioral and developmental pediatrics, as well as teaching staff with training and/or experience in adolescent medicine. Within the primary hospital and/or integrated participating hospitals, there also must be teaching staff in at least four of the pediatric subspecialties listed in Section V.C.3 from which the four required 1-month rotations must be chosen. These subspecialists must function as integral parts of the clinical and didactic components of the program in both outpatient and inpatient settings.

A surgeon having significant experience with pediatric patients must play a major role in the residents' education with respect to surgical diagnoses and preoperative and postoperative care. A pathologist and a radiologist who have significant experience with pediatric problems and who interact regularly with the pediatric residents are essential.

### 2. Commitment to Education

The faculty must demonstrate a commitment to the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. A measure of the commitment of the teaching staff to the program is the degree to which patients under their care are available for resident education.

### 3. Participating Institutions

Where multiple hospitals participate, a member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

### 4. Qualifications

All of the physician teaching staff must be currently board-certified and have achieved subspecialty certification where appropriate or must possess appropriate educational qualifications. Each time the program is evaluated by the RRC it is the responsibility of the program director to provide evidence of appropriate qualifications for teaching staff who lack board certification. The RRC will judge the adequacy of alternate qualifications.

## C. Other Program Personnel

Teaching by other health professionals such as nurses, pharmacists, social workers, child life specialists, physical and occupational therapists, speech and hearing pathologists, respiratory therapists, psychologists, and nutritionists is highly desirable.

## D. Support Staff

Additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program must be provided.

## IV. Facilities and Resources

### A. Inpatient and Outpatient Facilities

The inpatient and outpatient facilities must be adequate in size and variety and must have the appropriate equipment necessary for a broad educational experience in pediatrics.

There must be an appropriately equipped and staffed emergency facility for the care of pediatric patients. The program must also

have an intensive care facility that is appropriately equipped and staffed for the care of a sufficient number of seriously ill pediatric patients to provide adequate experience for the number of residents in the program.

### **B. Medical Library**

Residents must have ready access to a major medical library, either at the institution where they are located or through arrangement with convenient nearby institutions. These library services should include the electronic retrieval of information from medical databases. There must also be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### **C. Patient Population**

Programs must provide residents with patient care experience in both inpatient and outpatient settings. A sufficient number, variety, and complexity of patients, ranging in age from infancy through young adulthood, must be present. A deficient or excessive patient load may jeopardize the accreditation status of the program.

## **V. Educational Program**

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate:

- Patient Care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
- Medical Knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
- Practice-Based Learning and Improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
- Interpersonal and Communication Skills that result in effective information exchange and teaming with patients, their families, and other health professionals
- Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
- Systems-Based Practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

### **A. Curriculum, Goals, and Objectives**

Each program must describe a core curriculum that complies with the RRC's requirements and is participated in by all residents. Programs that utilize multiple hospitals or that offer more than one track must provide evidence of a unified educational experience for each resident. Where multiple tracks exist within one program, each track must comply with the requirements, and residents in all tracks must have a minimum of 18 months of training in common. The provisions of the Institutional Requirements also must be met for accreditation.

Written goals and objectives and a method of evaluation must exist for each curricular component. The residency curriculum must be a structured educational experience that reflects an appropriate balance between clinical and didactic elements. The curriculum should be competency-based and focus on skill attainment and

skill maintenance. It should emphasize attitudes and skills necessary for lifelong learning.

#### **1. Resident Assignments**

Assignments to affiliated institutions must be designed to fulfill the educational goals and objectives of the program and must not be made primarily to meet service needs.

While no limit is placed on the duration of rotations to institutions that are integrated with the primary hospital's pediatric program (although the duration must have RRC approval), rotations to participating institutions that are not integrated with the primary hospital may not exceed a total of 9 months during the 3 years of training. No more than 3 months of these outside rotations may be in institutions that do not have their own pediatric residencies.

Rotations to other programs should enrich but not replace core experiences. When residents rotate to an institution that has its own accredited pediatric residency, the rotating residents must be fully absorbed into the prevailing pattern of instruction and patient care at the same level as the pediatric residents of that affiliated institution.

Residency programs that offer training to residents from other pediatric residencies must provide instruction and experience equivalent to that given to their own residents. They should enter into agreement with other programs only if they are prepared to absorb those residents into the prevailing pattern of education and patient care.

#### **2. Approval of Changes**

The program design or format must be approved by the RRC as part of the regular review process. Major changes in the content or format of a program that are proposed between regular reviews and/or the addition or deletion of a participating institution that provides 6 months or more of training require RRC approval before implementation. The RRC may determine that a site visit is required before a decision is made on such proposals.

### **B. General Pediatrics**

In keeping with the commitment to general pediatrics, a minimum of 50% of clinical training should be devoted to ambulatory experiences. This may include all assignments in the continuity practice, emergency and acute care, and community-based experiences, as well as the ambulatory portion of normal/term newborn, subspecialty, behavior/development, and adolescent experiences.

#### **1. Inpatient Experience**

General inpatient pediatrics must constitute at least 5 months of a resident's overall experience, exclusive of intensive care rotations. It must be structured to provide the resident with a concentrated exposure and continuity of involvement to ensure a primary role in patient care. The inpatient care experience must be designed to develop resident competency in managing patients with diverse illnesses of such complexity and severity as to require in-hospital care but not care in a critical care unit. This can be achieved most effectively through block rotations. An experience that is integrated with other educational activities will be considered acceptable if the program can demonstrate that the educational goals and objectives are met and that the primary role of the resident in the ongoing care of patients is ensured.

The experience must be structured to enable residents to develop

- a. an understanding of which patients require in-hospital care and why, including medical, psychosocial, and environmental considerations;
- b. skills in determining which patients can be managed in a general inpatient setting and which require higher levels of care and expertise in a critical care unit;

- c. skills and competence in the evaluation, diagnosis, management, and appropriate disposition of pediatric patients in the hospital setting;
- d. skills in working with an organized inpatient health care team, including nursing, child life therapy, social services, physical therapy, occupational therapy, and discharge planning; and
- e. skills in the appropriate utilization of consultants and selection of studies in the care of pediatric patients in the hospital setting.

The program must ensure that each resident has the opportunity for independent evaluation and development of a differential diagnosis, planning diagnostic studies, formulating and implementing therapeutic options, and planning for discharge of patients under their care. It is not an appropriate educational experience if the above are all accomplished by attending physicians without the pediatric inpatient resident's involvement.

The resident must be given progressive responsibility under close faculty supervision within a team that fosters peer and supervisory interchange. The availability of consultative resources appropriate to the patient base must be ensured, while allowing the resident to participate in the full spectrum of patient care from admission through discharge.

Regularly scheduled teaching/attending rounds that include all patients for whom the resident is responsible must be conducted by qualified teachers who are immediately available for consultation and who are supported by consultants in subspecialty areas appropriate to the patient population. Rounds should be targeted to the knowledge and skills required of a general pediatrician in an inpatient setting and should emphasize the appropriate utilization of subspecialist colleagues. The correlation of basic pathophysiologic principles with the disease process should be stressed. Rounds that focus on the educational objectives of inpatient care must be held at least three times per week and may not be replaced by rounds that are primarily work-oriented.

The patient load for residents at all levels of training should allow time for close and effective management and detailed study of patients, yet should challenge the resident with diverse and complex problems at increasing levels of responsibility. A first-year resident should be responsible for approximately six to ten inpatients, depending on the average length of stay and the nature and severity of the illness. Second- and third-year residents may be involved in the care of more patients in a supervisory capacity, but this number should not exceed 30 in most situations.

The patient population available for resident education on the inpatient service must be of sufficient number, age distribution, and variety of complex and diverse pathology to assure the residents of adequate experience with infants, children, and adolescents who have acute and chronic illnesses, as well as with those with life-threatening conditions. Although there is increasing emphasis on outpatient care for a broad spectrum of pediatric illness, resident experience that is limited to the ambulatory setting will not be considered adequate for patient groups that require inpatient care as part of their ongoing treatment.

The comprehensive curriculum should include but not be limited to the following core content and should emphasize the pathophysiologic correlates of the clinical situations:

- a. Interviewing techniques with specific emphasis on behavioral, psychosocial, environmental, and family unit correlates of disease
- b. Physical examination, both general and system-specific, as a tool in initial diagnosis and subsequent patient monitoring

- c. Utilization of appropriate members of the health care team to ensure comprehensive yet cost-effective care of the patient and the family
- d. Diagnosis and management of acute episodic medical illness including but not limited to meningitis, sepsis, dehydration, pneumonia, diarrhea, renal failure, seizure, coma, hypotension, hypertension, and respiratory illnesses
- e. Diagnosis and management of acute problems associated with chronic diseases including but not limited to diabetic ketoacidosis, status asthmaticus, status epilepticus, oncologic therapy and complications, congenital heart disease, cystic fibrosis, chronic renal disease, gastrointestinal disorders, hepatic failure, metabolic disorders, and neurologic disorders
- f. Pediatric aspects of the management of surgical patients, both preoperatively and postoperatively, including interaction with the surgical team
- g. Principles of discharge planning to ensure efficient transition and continuity of care

Residents on the inpatient service must be supervised by pediatric faculty who have extensive experience in and knowledge of the care of pediatric patients with illnesses of sufficient severity to warrant hospitalization. The utilization of general pediatricians in this role is encouraged, provided that consultative services from pediatric subspecialists and other specialists appropriate to the patient population are readily available.

## 2. Emergency and Acute Illness Experience (See also Section V.G.2, paragraph 7)

The experience in emergency and acute illness must constitute of a minimum of 4 months. Two of these months should be in emergency medicine; at least 1 of these months must be a block rotation in an emergency department that serves as the receiving point for EMS transport and ambulance traffic and is the access point for seriously injured and acutely ill pediatric patients in the service area. This may be either a pediatric emergency department or a combined pediatric/adult emergency department. Assignment to an acute care center or walk-in clinic to which patients are triaged from the emergency department will not fulfill this requirement.

The remaining required experience may be in the emergency department or, if patients are available in sufficient numbers, in another setting where acutely ill pediatric patients are seen. Optional sites may include walk-in clinics, acute care centers, and/or community-based primary care practice settings. Preferably, this experience would be as a block rotation, but integration into other longitudinal experiences is acceptable if the required duration and the educational goals and objectives can be met and appropriate supervision ensured.

The experience must be designed to develop resident competence in managing unselected and unscheduled patients with acute illness and injury of varying degrees of severity, from very minor to life-threatening.

Specific objectives of this experience must include but not be limited to development skills in the following:

- a. Evaluation and care of patients with acute illnesses or injuries of varying degrees of severity
- b. Resuscitation, stabilization, and triage of patients after initial evaluation
- c. Interaction with other professionals involved in emergency care in the emergency department, including the trauma team; emergency physicians; specialists in surgery, anesthesia, radiology, and relevant pediatric and surgical subspecialties; dentists; and others as appropriate

d. Participation with the emergency medical system in the provision of prehospital care for acutely ill or injured patients, including access to appropriate transport systems and triage

The program director must ensure that the pediatric residents have first-contact evaluation of pediatric patients and continuous on-site supervision. It is not a sufficient educational experience if the pediatric resident functions only on a consultative basis or deals only with a preselected patient population. Residents in these settings must have on-site supervision by members of the pediatric teaching staff or by other attending staff who have extensive experience in and knowledge of the care of acute pediatric illnesses and injuries.

The resident should have the opportunity to work on a multidisciplinary clinical team to learn the role of the general pediatrician in such a setting. A system for patient outcome feedback to the resident should be established. The resident's performance must be evaluated on a regular basis by staff directly involved in the acute and emergency care experience, and appropriate feedback must be provided to the resident and to the program director.

Although they may be called on to care for some adult patients to ensure adequate volume and diversity, the pediatric residents' major responsibility must be for an appropriate range of pediatric patients. Programs that share the emergency and acute illness patient base with other training programs, such as emergency medicine, pediatric emergency medicine, and family practice, must document that a sufficient and appropriately diverse pediatric patient population is available to the pediatric residency program.

The comprehensive experience for all residents should include but not be limited to the following disorders and should emphasize the pathophysiologic correlates of the clinical situations:

- a. Acute major and minor medical problems such as respiratory infection, respiratory failure, cardiopulmonary arrest (including sudden infant death syndrome, or SIDS), dehydration, coma, seizures, diabetic ketoacidosis, asthma, skin disorders, pyelonephritis, sepsis, shock, fever, and childhood exanthems
- b. Acute major and minor surgical problems such as appendicitis, bowel obstruction, burns, foreign body inhalation and ingestion, abscess drainage, and head trauma
- c. Poisonings and ingestion
- d. Physical and sexual abuse
- e. Minor trauma (including splinting, casting, and suturing)
- f. Major trauma (including active participation with the trauma team)
- g. Participation in prehospital management and transport
- h. Acute psychiatric, behavioral, and psychosocial problems
- i. Admission or discharge planning, including communication with the personal physician

### 3. Continuity Experience

The program must provide adequate continuity experience for all residents to allow them the opportunity to develop an understanding of and appreciation for the longitudinal nature of general pediatric care, including aspects of physical and emotional growth and development, health promotion/disease prevention, management of chronic and acute medical conditions, family and environmental impacts, and practice management. Residents must assume responsibility for the continuing care of a group of patients throughout their training. Inherent in the principle of continuity of care is that patients are seen on a regular and continuing basis, rather than on a single occasion. Isolated block experiences will not satisfy this requirement.

The continuity of care experience must include participation in a setting that is structured and designed to emulate the prac-

tice of general pediatrics and that is conducive to efficient processing and management of patients. This setting may be an office-based practice, an institutional-based continuity clinic, or a community-based center. Ideally, residents should participate in the care of their patients through any hospitalization, assess them during acute illnesses, and be available to facilitate other services, such as school-related evaluations and specialty referrals.

Residents must devote at least ½ day per week to their continuity experience throughout the 3 years, and an additional ½ day session per week is suggested. This experience must receive priority over other responsibilities, and may be interrupted only for vacations and outside rotations located at too great a distance to allow residents to return. The periods of interruption may not exceed 2 months in any 1 year or 3 consecutive months at any time.

The program must ensure that residents are exposed to a continuity patient population sufficient in number and of adequate variety to meet the educational objectives. It must include well patients as well as those with complex and chronic problems. Patients initially managed in the normal newborn nursery, emergency department, inpatient service, intensive care unit (pediatric and neonatal), subspecialty clinics, and other sites may be enrolled in the residents' panels. Guidelines for numbers of continuity panel patients seen per half-day experience are three to six patients per resident in the PL-1 year, four to eight patients in the PL-2 year, and five to ten patients in the PL-3 year. Acceptable minimum numbers for each resident's patient panel are approximately 50 patients for each PL-1 resident and approximately 100 patients for each PL-2 and PL-3 resident.

The curriculum should emphasize the generalist approach to common office-based pediatric issues including anticipatory guidance from birth through young adulthood, developmental and behavioral issues, and immunization practices and health promotion, as well as the care of children with chronic conditions. The resident must learn to serve as the coordinator of comprehensive primary care for children with complex and multiple health-related problems and to function as part of a health care team. Subspecialty consultants and allied health personnel must be available to residents in the care of their continuity patients.

The number of teaching staff in the continuity clinic must be sufficient to ensure an appropriate educational experience for all residents present. Teaching staff who serve as attendings in the continuity clinic must have expertise in the area of general pediatrics and be able to function as role models in general pediatrics. They must be actively involved in direct patient care to maintain their expertise and credibility. These and other competing responsibilities, however, must not compromise their availability for supervision and consultation with the residents.

Record maintenance must be designed to allow verification of the adequacy of each resident's experience.

### 4. Normal/Term Newborn Experience

There must be the equivalent of at least 1 month in the care of normal/term newborns. This may not be part of a neonatal intensive care unit (NICU) rotation but it may be combined with another experience over a longer period of time if an equivalent duration is demonstrated and the educational goals of both experiences can be met. Preferably, this rotation should take place in the first year of training to provide an experience on which more advanced training will be based, and it should be supervised primarily by general pediatric faculty. This experience should include longitudinal follow-up of selected infants discharged from the nursery. The experience should also include at least the following:

- a. Recognition and appropriate intervention for high-risk infants

- b. Distinguishing well from ill infants
  - c. Performance of physical examination on newborn infants, which includes assessment of gestational age and the appropriateness of intrauterine growth
  - d. Identification of common anomalies, birth defects, and syndromes, including counseling the parents
  - e. Provision of routine newborn care
  - f. Recognition and treatment of common physiologic deviations in the newborn
  - g. Identification and management of infants of mothers with substance abuse and/or sexually transmitted diseases (STDs) or other infections
  - h. Routine newborn screening and appropriate follow-up of infants with positive test results
  - i. Preventive measures including immunization schedules and safety issues, such as counseling parents on the importance of infant safety seats and knowledge of normal infant nutrition, including breast feeding, as well as knowledge of normal newborn growth and development
  - j. Discharge planning
5. Community Experiences

There must be structured educational experiences that prepare residents for the role of advocate for the health of children within the community. These should include both didactic and experiential components that may be integrated into other parts of the curriculum, eg, continuity, adolescent behavior/development, or they may be designed as distinct longitudinal or block rotations.

Residents must be supervised by pediatricians and other health professionals experienced in the relevant content areas. The curriculum should include but not be limited to the following subjects:

- a. Community-oriented care with focus on the health needs of all children within a community, particularly underserved populations
- b. The multicultural dimensions of health care
- c. Environmental toxicants and their effect on child health
- d. The role of the pediatrician within school and day care settings
- e. The role of the pediatrician in the legislative process
- f. The role of the pediatrician in disease and injury prevention
- g. The role of the pediatrician in the regional emergency medical system for children

These experiences should utilize settings within the community, such as

- a. community-based primary care practice settings;
- b. community health resources and organizations, including governmental and voluntary agencies, eg, local and state public health departments, services for children with disabilities, Head Start;
- c. schools and day-care settings, including elementary school through college;
- d. home-care services for children with special health care needs; and
- e. facilities for incarcerated youth.

### C. Subspecialty Education

Education in the various subspecialties of pediatrics must be a vital part of the training of general pediatricians. Although it is not possible for each resident to rotate through every subspecialty, it is required that all residents be exposed to the specialized knowledge and methods of the major pediatric subspecialties through longitudinal experiences on the general inpatient and intensive care services and in outpatient settings. Residents should be taught when

to seek consultation, when to refer to the subspecialist, and how to manage chronic illness as a team member with the subspecialist.

The curriculum must be designed to teach each resident the knowledge and skills appropriate for a general pediatrician, including the management of psychosocial problems affecting children with complex chronic disorders and their families. The experiences should include appropriate reading assignments and subspecialty conferences and familiarizing the residents with the techniques and skills used by the subspecialist.

All subspecialty rotations must have an adequate number, variety, and complexity of patients to provide each resident with an appropriately broad experience in the subspecialty. Outpatient experiences should be integrated into all subspecialty rotations to provide an opportunity for residents to develop the skills needed to manage patients with complex illnesses in a primary care practice.

The resident must be given appropriate patient care responsibilities with an opportunity to evaluate and formulate management plans for subspecialty patients. In the outpatient subspecialty clinics and with appropriate supervision by a subspecialist, the resident should function as the physician of first contact. Experiences in which the resident is solely an observer will not fulfill this requirement.

Subspecialty faculty must be directly involved in the supervision of residents and be readily available for consultation on a continuing basis. The supervision must be provided by pediatricians who are currently certified by the appropriate subboard of the American Board of Pediatrics or by other specialists who care for pediatric patients and who are certified by a specialty board approved by the American Board of Medical Specialties. In the absence of such certification, documentation of suitable equivalent qualifications must be provided. The acceptability of alternate qualifications will be determined by the RRC.

#### 1. Intensive Care Experience (NICU and PICU)

The intensive care experiences must provide the opportunity for residents to deal with the special needs of critically ill patients and their families. Intensive care experience must be for a minimum of 4 and a maximum of 6 months and must include at least 3 block months of neonatal intensive care (Level II or III) and 1 block month of pediatric intensive care. Night and weekend responsibilities in the NICU, when the residents are on other rotations, will be included in the allowable maximum period of intensive care experience, with 200 hours being considered the equivalent of 1 month.

Programs with 1 month of PICU and 4 block months of neonatal intensive care experience may allow an additional 200 hours of night and weekend responsibilities while the residents are on other rotations. Programs with 3 block months may have 400 hours of additional call. Programs with 5 block months may have no additional NICU call.

To provide additional experience for those who may need it for future practice, 1 additional elective block month in the NICU may be allowed for individual residents after completion of the required NICU experience in the program. As is the case with any block month, it may include call.

The curricula in neonatal and pediatric intensive care must be structured to familiarize the resident with the special multidisciplinary and multiorgan implications of fluid, electrolyte, and metabolic disorders; trauma, nutrition, and cardiorespiratory management; infection control; and recognition and management of congenital anomalies in pediatric patients. It also must be designed to teach the following:

- a. Recognition and management of isolated and multiorgan system failure and assessment of its reversibility

- b. Understanding of the variations in organ system dysfunction by age of patient
- c. Integration of clinical assessment and laboratory data to formulate management and therapeutic plans for critically ill patients
- d. Invasive and noninvasive techniques for monitoring and supporting pulmonary, cardiovascular, cerebral, and metabolic functions
- e. Participation in decision making in the admitting, discharge, and transfer of patients in the intensive care units
- f. Resuscitation, stabilization, and transportation of patients to the ICUs and within the hospital
- g. Understanding of the appropriate roles of the generalist pediatrician and the intensivist/neonatologist in these settings
- h. Participation in preoperative and postoperative management of surgical patients, including understanding the appropriate roles of the general pediatric practitioner and the intensivist in this setting
- i. Participation, during the neonatal intensive care experience, in perinatal diagnostic and management discussions
- j. Resuscitation and care of newborns in the delivery room
- k. Evaluation and management, during the pediatric intensive care experience, of patients following traumatic injury

2. Adolescent Medicine

The program must provide all residents with experience in adolescent medicine that will enable them to recognize normal and abnormal growth and development in adolescent patients. This experience must be supervised by faculty having training and/or experience in adolescent medicine.

The experience must include, as a minimum, a 1-month block rotation to ensure a focused experience in the area of adolescent medicine. The program must also provide the resident with an integrated experience that incorporates adolescent issues into ambulatory and inpatient experiences throughout the 3 years, eg, inpatient unit, community settings, continuity clinic, or subspecialty rotations.

It must include instruction and experience in at least the following:

- a. Normal pubertal growth and development and the associated physiologic and anatomic changes
- b. Health promotion, disease prevention, and anticipatory guidance of adolescents
- c. Common adolescent health problems, including chronic illness, sports-related issues, motor vehicle safety, and the effects of violence in conflict resolution
- d. Interviewing the adolescent patient with attention to confidentiality, consent, and cultural background
- e. Psychosocial issues, such as peer and family relations, depression, eating disorders, substance abuse, suicide, and school performance
- f. Male and female reproductive health, including sexuality, pregnancy, contraception, and STDs

3. Developmental/ Behavioral Pediatrics

The program must provide all residents with an adequate experience in developmental/behavioral pediatrics to ensure that the resident recognizes normal and abnormal behavior and understands child development from infancy through young adulthood. The program must educate the residents in the intrinsic and extrinsic factors that influence behavior to enable them to differentiate behavior that can and should be managed by the general pediatrician from behavior that warrants referral to other specialists. Clinical and didactic components of behavioral, psychosocial, and developmental pediatrics should be integrated into

the general educational program and into each patient encounter, when possible.

The experience must be supervised by faculty with training and/or experience in the developmental/behavioral aspects of pediatrics.

The experience must include, as a minimum, a 1-month block rotation to ensure a focused experience in developmental/behavioral pediatrics. The program also must provide an integrated experience that incorporates developmental/behavioral issues into ambulatory and inpatient experiences throughout the 3 years, eg, inpatient unit, community setting, continuity clinic, and subspecialty rotations. The program must include formal instruction in at least the following components to enable the residents to develop appropriate skills:

- a. Normal and abnormal child behavior and development, including cognitive, language, motor, social, and emotional components
- b. Family structure, adoption, and foster care
- c. Interviewing parents and children
- d. Psychosocial and developmental screening techniques
- e. Behavioral counseling and referral
- f. Management strategies for children with developmental disabilities or special needs
- g. Needs of children at risk, eg, those in poverty, from fragmented families, or victims of child abuse/neglect
- h. Impact of chronic diseases, terminal conditions, and death on patients and their families

4. Additional Required Subspecialty Experience

Excluding the adolescent medicine, developmental/behavioral pediatrics, and intensive care experiences, the time committed by any resident to subspecialty rotations must be a minimum of 6 months. During the 3 years of training no more than 3 block months, or its equivalent, may be spent by a resident in any one of the subspecialties in the lists below. Subspecialty research electives that involve no clinical activities need not be included in the calculation of a resident's subspecialty months.

The program must require that each resident complete a minimum of four different 1-month block rotations taken from the following list of pediatric subspecialties:

Allergy/Immunology	Gastroenterology
Infectious Disease	Genetics
Cardiology	Hematology/Oncology
Nephrology	Pulmonology
Endocrinology/Metabolism	Rheumatology
Neurology	

At least two of the four subspecialty rotations must be taken at the primary teaching site and/or integrated hospitals. Two of these subspecialties may be combined over a 2-month block if the outpatient and inpatient experiences of the two disciplines can be successfully integrated.

Additional subspecialty experiences needed to comply with the minimum requirements may be scheduled either as block assignments or as part of rotations in the outpatient department or inpatient services. The daytime equivalent of a block month is 140 hours. These may be selected from the list above or from the following list:

Child Psychiatry	Otolaryngology
Dermatology	Pediatric Radiology
Ophthalmology	Pediatric Surgery
Orthopaedics & Sports Medicine	

Two subspecialty areas from this second list may be combined over a 1- or 2-month period to provide a more effective educational experience.

#### D. Additional Curricular Requirements

Departmental conferences, seminars, teaching rounds, and other structured educational experiences must be conducted on a regular basis sufficiently often to fulfill educational goals. Reasonable requirements for resident attendance should be established, and resident and staff attendance should be monitored and documented. In addition to providing instruction in topics relevant to general pediatrics and to the subspecialty disciplines, there must be a structured curriculum in each of the following areas:

1. Medical ethics, including but not limited to the ethical principles of medical practice and the ethical aspects of
  - a. the relationship of the physician to patients, eg, initiating and discontinuing the treatment relationship, confidentiality, consent, and issues of life-sustaining treatments
  - b. the relationship of the physician to other physicians and to society, eg, the impaired physician, peer review, conflicts of interest, resource allocation, institutional ethics committees, and ethical issues in research
2. Quality assessment, quality improvement, risk management, and cost effectiveness in medicine
3. Health care organization, financing, and practice management, with instruction in
  - a. the organization and financing of health care services for children at the local, state, and national levels, including an understanding of the role of the pediatrician in the legislative process
  - b. the organization and financing of office practice, including personnel and business management, scheduling, billing and coding procedures, and maintenance of an appropriate patient record system.
4. Medical information sciences, emphasizing the skills necessary to prepare the resident for continued self-learning and including instruction in
  - a. basic computer skills, techniques for electronic retrieval of the medical literature, and the use of electronic information networks
  - b. the critical evaluation of the medical literature, study design, and the applicability of clinical studies to patient care
  - c. clinical decision theory and its application to clinical practice.

#### E. Development of Procedural Skills

The program must teach residents, in both hospital and ambulatory settings, those procedural skills appropriate for a general pediatrician. These educational experiences should be graduated so that residents build and maintain skills throughout the training program.

1. Each program must provide sufficient training in and monitor resident development of at least the following skills:
  - a. Basic and advanced life support
  - b. Endotracheal intubation
  - c. Placement of intraosseous and intravenous lines
  - d. Arterial puncture
  - e. Venipuncture
  - f. Umbilical artery and vein catheter placement
  - g. Lumbar puncture
  - h. Bladder catheterization
  - i. Thoracentesis
  - j. Chest tube placement
  - k. Gynecologic evaluation of prepubertal and postpubertal females
  - l. Wound care and suturing of lacerations
  - m. Subcutaneous, intradermal, and intramuscular injections
  - n. Developmental screening test.

Each program must have a formal system for documenting resident experience and for monitoring resident compliance with the

documentation process. Documentation of skills, eg, procedure logs, must be maintained by the program in the resident files. Supervision and documentation of skills must be by faculty or others with documented competence in the procedures. Residents should be informed about the procedures they are expected to learn and must receive feedback on their proficiency as part of the evaluation process.

2. In addition, programs should provide exposure to the following procedures or skills:
  - a. Circumcision
  - b. Conscious sedation
  - c. Tympanometry and audiometry interpretation
  - d. Vision screening
  - e. Hearing screening
  - f. Simple removal of foreign bodies, eg, from ears or nose
  - g. Inhalation medications
  - h. Incision and drainage of superficial abscesses
  - i. Suprapubic tap
  - j. Reduction and splinting of simple dislocations
  - k. Pain management.

All residents should maintain certification in pediatric advanced life support (PALS) and neonatal advanced cardiac life support or in equivalent lifesaving systems.

#### F. Elective Experiences

Electives are intended to enrich the educational experience of residents in conformity with their needs, interests, and/or future professional plans. Electives must be well-constructed, purposeful, and effective learning experiences, with written goals and objectives. The choice of electives must be made with the advice and approval of the program director.

#### G. Resident Policies

1. Supervision of Residents
 

The supervision of residents must be accomplished through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians. On-call schedules for teaching staff must be structured to ensure that supervision is readily available to residents on duty.

Residents must be supervised by teaching staff in a way that will allow them to assume progressively increasing responsibility for patient care according to their level of training, their ability, and their experience. The level of responsibility accorded to each resident must be determined by the teaching staff.

2. Duty Hours and Conditions of Work

Residency training is a full-time responsibility. The program director should monitor the effects of outside activities, including moonlighting in or outside the primary hospital, to ensure that the quality of patient care and the educational experience, as outlined in the agreement between the institution and the residents, is not compromised. Formal written policies on outside professional activities must be provided to the residents and should be available to the RRC, if requested.

Clinical duties must not be so pressing or consuming that they preclude ample time for educational activities, other important phases of the training program, or personal needs.

It is equally important that the residents have a keen sense of personal responsibility for patient care. Residents should be taught that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. The resident should not be relieved of duty until the

proper care and welfare of the patients have been ensured by the presence of a suitable professional replacement.

On-call duty should occur with a monthly average of every third to fourth night for inpatient rotations requiring call. Call may be less frequent for outpatient or elective rotations. The call expected is in-house call for services with acutely ill patients, ie, inpatient and intensive care. Call on other rotations or electives may be in-house or by phone. There should also be a resident backup call schedule or alternate plan to provide coverage in the event that the assigned resident is unable to fulfill the assignment.

Call-free rotations should not occur on regular inpatient services where such a schedule would compromise the concept of continuity of care and interfere with the educational experience, eg, teaching rounds. Call-free rotations should not exceed 4 months during the 3 years of training.

The purposes of night call are to provide patient care, assume clinical responsibility, teach and supervise, and accumulate clinical experience including skill maintenance. Night and weekend duties must be sufficient to permit implementation of the concept of continuity of patient care.

The schedule should be designed to provide a monthly average of at least 1 day out of 7 without assigned duties in the program. Emergency department shifts should not exceed 12 hours, with consecutive shifts separated by at least 8 hours. Night float rotations must not occur so frequently in the program as to interfere with the educational experience for the residents.

### 3. Resident Complement/Peer Interchange

Because peer interchange is a very important component of the learning process, each program is expected to recruit and retain a sufficient number of qualified residents to fulfill the need for peer interaction among those training in pediatrics. The number of residents from other specialties or programs who rotate on the pediatric service must not dilute the experience and peer interaction of the pediatric residents.

There must be a sufficient number of residents at each level to provide appropriate peer interaction including frequent and meaningful discussion during all phases of the training program, eg, neonatal, outpatient, inpatient, and emergency services. Residents at more than one level of training must interact in the care of inpatients. To achieve this, a program should offer a minimum total of 12 resident positions, ie, four at each level, exclusive of subspecialty residents. Except for periods of transition, the same number of positions should be offered in each of the 3 years of training. The RRC will consider the presence of residents from combined pediatrics programs, eg, medicine/pediatrics or pediatrics/emergency medicine, when it evaluates the adequacy of the resident complement and of peer interaction. An inability to recruit the required minimum number of residents and/or a high rate of resident attrition from a program over a period of years will be a cause of concern to the RRC.

### H. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, which should include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;

2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals;
3. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings;
4. Provision of guidance and technical support for residents involved in research, eg, research design, statistical analysis; and
5. Provision of support for resident participation in scholarly activities.

There should be evidence of clinical investigation and research that is designed to provide an environment of inquiry and scholarship in which the residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. This must include

1. a journal club and research conferences in which members of the teaching faculty participate and
2. opportunity to participate in scholarly activities, which may include clinical investigation and/or basic research.

## VI. Evaluation

The program director is responsible for developing and implementing formal mechanisms for evaluation, as described below.

### A. Evaluation of Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice
2. mechanisms for providing regular and timely performance feedback to residents
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance

Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

The program must have formal mechanisms for monitoring and documenting each resident's acquisition of fundamental knowledge and clinical skills and his or her overall performance prior to progression to the level of supervised semi-independent patient management. The supervising faculty must evaluate each resident in writing at the completion of each rotation. The resident should be evaluated on the acquisition of knowledge, skills, and attitudes, and should receive formal feedback about these evaluations at least twice a year. The program should advance residents to positions of higher responsibility only on the basis of evidence of satisfactory performance, progressive scholarship, and professional growth.

Written documentation of regular periodic evaluation of each resident must be maintained and must be available for review by the site visitor. Evaluations must include noncognitive areas such as interpersonal and communication skills, attitudes, and professional behavior, as well as moral and ethical characteristics.

Program directors are required to keep accurate documentation of the general and subspecialty experience of each resident in the program and to submit this information to the RRC if it is requested. The exact nature of the general and subspecialty experiences of residents at other institutions and evaluation of their performance must be documented in the residents' files.

It is essential that residents participate in existing national examinations. The annual In-Training Examination of the American

Board of Pediatrics is one example of an objective test that can be utilized by the programs. An analysis of the results of these testing programs should be used by the faculty to identify the cognitive strengths and weaknesses of individual residents and weaknesses in the teaching program and to develop remedial activity, if warranted.

The program director and faculty are responsible for provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record that is maintained by the institution.

The program must demonstrate that it has developed an effective plan for accomplishing this and that specific performance measures are used in each resident's evaluation. These must include, at a minimum, the assessment of the resident's competence in patient care, clinical science, practice-based learning and improvement, interpersonal skills and communication, professionalism, and systems-based practice.

### B. Evaluation of Faculty

Teaching faculty must be evaluated at least annually. Documentation of faculty evaluation should include teaching ability and commitment as well as clinical knowledge. There must be a formal mechanism by which residents participate in this evaluation in a confidential manner.

### C. Evaluation of the Program

The teaching staff must be organized and have regular, documented meetings to review program goals and objectives, the program's effectiveness in achieving them, and the needs of the residents. At least one resident representative should participate in these reviews. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be addressed.

The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.

The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

This evaluation should include an assessment of the balance between the educational and service components of the residency. In addition, the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, and the quality of supervision of the residents should be evaluated. Written evaluation by residents should be utilized in the process.

As part of the evaluation of the effectiveness of the program, the director must monitor the performance by the program's graduates on the certifying examination of the American Board of Pediatrics. Information gained from the results should be used to improve the program.

## VII. Board Certification

One measure of the quality of a residency program is the performance of its graduates on the certifying examinations of the American Board of Pediatrics. In its evaluation of residency programs, the RRC will take into consideration the information provided by the American Board of Pediatrics regarding resident performance on the certifying examinations during the most recent 3 to 5 years. A

program will be judged deficient if, over a period of years, the rate of those passing the examination on their first attempt is less than 50% and/or if fewer than 75% of those completing the program take the certifying examination.

Residents who plan to seek certification by the American Board of Pediatrics should communicate with the president of the board to obtain the latest information regarding certification.

ACGME: September 26, 2000 Effective: July 1, 2001

## Program Requirements for Residency Education in the Subspecialties of Pediatrics

### I. Introduction

In addition to complying with the requirements in this document, each program must comply with the program requirements for the respective subspecialty, which may exceed the minimum requirements set forth here.

An accredited pediatric subspecialty program must exist in conjunction with and be an integral part of a core pediatric residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME).

Interaction of the subspecialty residents and faculty with the residents in the core pediatrics residency program is required. [Note: Those in accredited subspecialty programs are called *residents* or *subspecialty residents*. The term *fellow* is not used.] Lines of responsibility for the pediatric residents and the subspecialty residents must be clearly defined. The presence of the subspecialty program should not adversely affect the education of the pediatric residents.

## II. Institutional Organization

### A. Sponsoring Organization

The pediatric subspecialty program must be sponsored by the same institution that sponsors the related core pediatrics program.

### B. Single or Multiple Institutions

An accredited program may occur in one or more institutions. If training occurs in more than one institution, there must be formal agreements that describe conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions. An institution that provides 6 months or more of the inpatient and/or outpatient training requires approval by the Residency Review Committee (RRC).

When a program relies on other institutions to provide some components of the curriculum, the arrangement between the institutions must be designed to meet the educational needs of the subspecialty residents and must be described in a written document that is signed by the appropriate persons from the respective institutions. These agreements must relate specifically to the subspecialty program and must be current, no more than 5 years old, at the time of the site visit.

Copies of these written arrangements, specifying administrative, organizational, and educational relationships, must accompany an application for initial accreditation. At the time of subsequent reviews these documents need not be submitted but must be available for review by the site visitor.

### C. Appointment of Subspecialty Residents

Prerequisite training for entry into a pediatric subspecialty program should include the satisfactory completion of an ACGME-accredited pediatric residency or other training judged suitable by the program director. [Note: Candidates who do not meet this criterion must be advised by the program director to consult the American Board of Pediatrics or other appropriate board regarding their eligibility for subspecialty certification.]

To determine the appropriate level of training for a subspecialty resident transferring from another ACGME-accredited pediatric subspecialty program, the program director must receive from the director of that program written verification of the subspecialty resident's educational experiences in the subspecialty and a statement regarding his/her performance.

## III. Duration and Scope of Training

### A. Length of Training

Unless specified otherwise in the program requirements for a subspecialty, pediatric subspecialty programs must provide 2 years of training. [Note: If a third year is offered, it must be described when the program is reviewed by the RRC. Those residents who plan to seek certification by the subboard should consult the American Board of Pediatrics regarding the criteria for eligibility, including length of training, with the exception of sports medicine, which is 1 year.]

### B. Scope of Training

Each subspecialty program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and provides subspecialty residents adequate training in the diagnosis and management of these subspecialty patients. This must include progressive clinical, technical, and consultative experiences that will enable the subspecialty resident to develop expertise as a consultant in the subspecialty.

The subspecialty program also must develop in its subspecialty residents a commitment to lifelong learning and must emphasize scholarship, self-instruction, development of critical analysis of clinical problems, and the ability to make appropriate decisions. Progressive acquisition of skill in investigative efforts related to the subspecialty is essential.

The program must provide the subspecialty residents with instruction and opportunities to ensure effective interaction with patients, their patients' families, professional associates, and others in carrying out their responsibilities as physicians in the specialty. They must be taught how to create and sustain a therapeutic relationship with patients and how to work effectively as members or leaders of patient care teams or other groups in which they participate as researcher, educator, health advocate, or manager.

## IV. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program. These activities include, but are not limited to, the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of subspecialty residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director based at the primary teaching site who is fully committed to the program and devotes sufficient time to ensure achievement of the educational goals and objectives. The RRC must be promptly notified in writing of a change in the leadership of the program.

### 1. Qualifications

The director must

- a. document possession of the requisite clinical, educational, investigative, and administrative abilities and experience.
- b. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. be currently certified by the relevant subboard of the American Board of Pediatrics or possess appropriate educational qualifications judged by the RRC to be acceptable.
- d. have an appointment in good standing to the medical staff of an institution participating in the program.

### 2. Responsibilities

The program director is responsible for the following:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of the subspecialty residents at each level of training and for each major rotation or other program assignment, and distribution of this statement to subspecialty residents and members of the teaching staff. It should be readily available for review.
- b. Selection of subspecialty residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of subspecialty residents through explicit written guidelines describing supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Subspecialty residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and subspecialty resident complaints or grievances.
- f. Monitoring subspecialty resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services related to subspecialty residents. Training situations that consistently produce undesirable stress on subspecialty residents must be evaluated and modified.
- g. Monitoring and documenting the procedural skills of the subspecialty residents.

### B. Teaching Staff

There must be sufficient numbers of teaching staff who devote adequate time to the educational program to enable it to meet its goals and objectives. In addition to the subspecialty program director, there must be at least one other member of the teaching staff who is qualified in the subspecialty. In some of the specialties, two or more additional subspecialists are required. Specific details are included in the requirements for each pediatric subspecialty.

If the program is conducted at more than one institution, a member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

Appropriate teaching and consultant faculty in the full range of pediatric subspecialties and in other related disciplines also must be available. The other related disciplines should include medical genetics, child neurology, child and adolescent psychiatry, as well as pediatric surgery and surgical subspecialties as appropriate to

the subspecialty. An anesthesiologist, pathologist, and a radiologist who have significant experience with pediatric problems and who interact regularly with the subspecialty residents are essential.

All of the members of the physician teaching staff should be currently certified by the appropriate member board of ABMS. Pediatric subspecialists should be certified in their subspecialty by the American Board of Pediatrics. Where this is not the case, evidence of appropriate educational qualifications must be provided. The RRC will determine the acceptability of such qualifications.

All members of the teaching staff must demonstrate a strong interest in the education of subspecialty residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. They must devote adequate time to each of these endeavors.

### C. Other Professional Personnel

Programs must have access to the additional professional, technical, and clerical personnel needed to support the administrative and educational conduct of the program appropriate to the subspecialty. The professional personnel should include nutritionists, social workers, respiratory therapists, pharmacists, subspecialty nurses, physical and occupational therapists, child life therapists, and speech therapists with pediatric focus and experience, as appropriate to the subspecialty.

## V. Facilities and Resources

The sponsoring institution is responsible for ensuring that the subspecialty program has adequate facilities and resources to achieve the educational objectives.

### A. Inpatient and Outpatient Facilities

Adequate inpatient and outpatient facilities, as specified in the requirements for each subspecialty, must be available. These must be of sufficient size and be appropriately staffed and equipped to meet the educational needs of the subspecialty program.

### B. Support Services

Support services must include clinical laboratories, intensive care, nutrition, occupational and physical therapy, pathology, pharmacology, mental health, diagnostic imaging, respiratory therapy, and social services.

### C. Patient Population

Patients should range in age from newborn through young adulthood, as appropriate. Adequate numbers of pediatric subspecialty inpatients and outpatients, both new and follow-up, must be available to provide a broad experience for the subspecialty residents. The program must maintain an appropriate balance among the number and variety of patients, the number of preceptors, and the number of subspecialty residents in the program.

### D. Library Facilities and Computer Access

Subspecialty residents must have access to an on-site library or collection of appropriate texts and journals in each participating institution or must have access to electronic databases and other data processing applications.

### E. Resources for Research and Scholarly Activities

There must be adequate resources for scholarly activity, research, and critical analysis. These must include adequate laboratory space, equipment, financial support, and computer services.

## VI. Educational Program

The subspecialty program must provide advanced training to allow the subspecialty residents to acquire expertise as a consultant in

the subspecialty. The formal curriculum must be reflected in the goals and objectives.

A subspecialty program must provide an environment in which high standards of professionalism and a commitment to continued improvement are evident. The values of professionalism must be fostered in the subspecialty residents throughout their training. These values include placing the needs of one's patients ahead of one's self-interest, being responsive to the needs of society, continuing a commitment to scholarship and to high standards of related research, and enhancing the ability of all colleagues in the medical profession to discharge their responsibilities optimally.

### A. Program Design

The program design and structure must be approved by the RRC as part of the regular review process.

### B. Clinical Skills

A subspecialty program must offer supervised training to ensure the acquisition of the necessary clinical skills used in the subspecialty and the development of sound judgment and decision-making skills that affect patient treatment and management. Residents must regularly participate in clinical quality improvement activities.

Subspecialty residents must be provided with adequate and appropriate faculty supervision in accord with their level of experience and expertise.

### C. Diagnostic Tests and Procedures

The program must offer supervised experience in interpreting the results of laboratory tests and diagnostic procedures for use in patient care. Instruction and experience must be sufficient for the subspecialty residents to acquire the necessary procedural skills and develop an understanding of their indications, risks, and limitations. Each resident's experience in such procedures must be documented by the program director.

### D. Curriculum

There must be a formally structured educational program in the clinical and basic sciences related to the subspecialty that utilizes lectures, seminars, and practical experience. Subspecialty conferences must be regularly scheduled and should involve active participation by the subspecialty resident in the planning and implementation of these meetings.

The curriculum should involve basic and fundamental disciplines related to each subspecialty and should include the following, as appropriate: anatomy, physiology, biochemistry, embryology, pathology, microbiology, pharmacology, immunology, genetics, and nutrition/metabolism.

This curriculum should include the pathophysiology of disease, reviews of recent advances in clinical medicine and biomedical research, conferences dealing with complications and death, as well as instruction in the scientific, ethical, and legal implications of confidentiality and of informed consent.

There should be instruction in the ways in which sociocultural factors affect patients and their families.

Bioethics, biostatistics, epidemiology and population medicine, outcome analysis, and the economics of health care must also be included in the formal curriculum. The latter must involve training and education in current health care management issues, such as cost-effective patient care, practice management, quality improvement, and clinical outcomes.

### E. Teaching Experience

Subspecialty residents must be given the opportunity to teach and to assume some departmental administrative responsibilities.

Subspecialty residents should develop an understanding of the appropriate role of the pediatric generalist in subspecialty care and

participate in the residency and continuing education activities. They must participate actively in conferences, lectures, and clinical experiences for general pediatric residents and other trainees. These teaching experiences should include oral presentations and correlation of basic biomedical knowledge with the clinical aspects of the subspecialty. The program should provide instruction in curriculum design and in the development of teaching material for the subspecialty residents.

#### F. Subspecialty Resident Policies

The program director must establish an environment that is optimal for both subspecialty resident education and patient care, including the responsibility for continuity of care, while ensuring that undue stress and fatigue among subspecialty residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that subspecialty residents are not subjected to excessively difficult or prolonged working hours. Subspecialty residents' work schedules must be designed so that they have at least 1 day out of 7, averaged monthly, free of program responsibilities. They should be on call in the hospital no more often than every third night. Call from home may not be so frequent as to infringe on a reasonable amount of personal time.

During in-house call subspecialty residents must be provided with adequate sleeping, shower and lavatory, lounge, and food facilities. Adequate backup must be available so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the subspecialty resident does not spend an inordinate amount of time in noneducational activities that should be discharged properly by other personnel.

#### G. Research and Scholarly Activity

Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. As part of the academic environment of each accredited subspecialty program, an active research component, involving both faculty and subspecialty residents, is required. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the program director and the teaching staff. Recent productivity by the program faculty and by the subspecialty residents will be assessed.

Participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship must be demonstrated.

##### 1. Faculty Research/Scholarly Activity

The teaching staff must provide evidence of a commitment to and productivity in research in the pediatric subspecialty area. This research must be ongoing in clinical and/or basic aspects of the pediatric subspecialty field. The RRC will consider the following as indicative of the commitment of the teaching staff to research:

- a. Projects funded by agencies requiring peer review
- b. Publications in peer-reviewed journals
- c. Presentations at national, regional, or international scientific meetings
- d. Research protocols approved by the local Institutional Review Board and implemented.

##### 2. Research Program for Subspecialty Residents

Subspecialty residents must be instructed in the scientific and ethical bases of clinical research, including study design, modeling and methodology, statistical concepts, and data collection and analysis. The institution must provide the support necessary for a subspecialty resident to participate in such scholarly activities.

Research experience must begin in the first year and continue for the entire period of training to allow adequate time for the

development of research skills, completion of research projects and presentation of results to the medical community. Each subspecialty resident must actively participate in the design, conduct, evaluation, and preparation for publication of a clinical or laboratory research project in his/her subspecialty area.

Subspecialty residents also should have experience and be given guidance in the critical evaluation of pertinent medical literature, the process of grant application, preparation of scientific articles, and medical writing. In addition, they should be required to conduct research seminars and prepare reports of their research activities. These efforts should be reviewed and evaluated by supervising faculty.

### VII. Evaluation

There must be formal mechanisms for the assessment of subspecialty resident performance, faculty performance, and program objectives. The same evaluation mechanisms used in the related pediatrics residency program must be adapted for and implemented in all of the pediatric subspecialty programs that function with it. These must be in compliance with the specific guidelines provided below.

#### A. Evaluation of Subspecialty Residents

The program must have formal mechanisms by which the knowledge, skills, and professional growth of the subspecialty residents are evaluated at least semiannually. This assessment must specify how the acquisition of requisite skills for subspecialty competence is accomplished.

A written record of these evaluations must be maintained, must be formally reviewed with the subspecialty resident at least semiannually, and must be accessible to authorized personnel. Subspecialty residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

The program director, in consultation with the teaching staff, must provide a written final evaluation for each subspecialty resident who completes the program. This evaluation must include a review of the subspecialty resident's performance during the final period of training. Verification that the subspecialty resident has demonstrated sufficient professional ability and acquisition of appropriate clinical and procedural skills to practice competently and independently in the pediatric subspecialty should be provided. This final evaluation should be part of the subspecialty resident's permanent record that is to be maintained by the institution.

#### B. Evaluation of Faculty

Teaching faculty must be evaluated at least annually. Documentation of faculty evaluation must include assessment of their teaching ability and commitment to teaching, their clinical knowledge, and their active participation in scholarly activity. There must be a formal mechanism by which residents in both the core and subspecialty programs participate confidentially in these evaluations. Faculty should receive formal feedback from these evaluations.

#### C. Evaluation of the Program

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. They should periodically evaluate the use of the resources available to the program. Written evaluations by subspecialty residents should be used in this process. Specifically, the contribution of the participating institutions, the financial and administrative support of the program, the volume and variety of patients available for educational purposes, the performance of the teaching staff, and the quality of supervision of subspecialty residents should be considered in the evaluation. In-

formation gained from these evaluations should be used to implement improvements in the program.

Annual review and evaluation of the program in relation to the educational goals, the quality of the curriculum, the needs of the subspecialty residents, and the clinical and research responsibilities of the faculty must be documented. At least one subspecialty resident representative should participate in the periodic and annual reviews.

### VIII. Evaluation by the RRC

Each subspecialty program will be evaluated by the RRC at regular intervals, usually in conjunction with a review of the related core pediatrics program. During the interval between regular reviews, approval of the RRC should be obtained before implementation of major changes in the program.

The program director is responsible for submitting complete and accurate information on the program to the RRC. Upon review of this information, the RRC will judge the degree of compliance with the published standards.

One measure of the quality of a training program is the performance of its graduates on the certifying examination of the sub-board. In its evaluation of these programs, the RRC will take into consideration the information provided by the American Board of Pediatrics. A program will be judged deficient if, for the most recent 5- to 10-year period, fewer than 75% of those completing the program take the certifying examination. A subspecialty program director will be expected to supply this information at the time of each RRC review.

*ACGME: September 1999 Effective: July 2000*

## Program Requirements for Residency Education in Adolescent Medicine (Pediatrics)

### Introduction

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in adolescent medicine also must comply with the following requirements.

### I. Scope and Duration of Training

Programs in adolescent medicine must provide training in and include an appropriate balance among clinical, didactic, and research activities. They must provide education in the broad and diverse knowledge base of this multidisciplinary field that focuses on the unique physical, psychological, and social characteristics of adolescents, their health-care problems and needs.

Adolescence links childhood with the adult years, covering the period from the start of puberty to early adulthood, programs in adolescent medicine must, therefore, integrate the relevant areas of pediatrics and the pediatric subspecialties with family practice, general internal medicine, psychiatry, obstetrics/gynecology, sports medicine, dermatology, and surgery and with related fields such as clinical pharmacology/toxicology, law, psychology, social work, education, nutrition, juvenile justice, sociology, and public health.

### II. Faculty

Appropriate physician and nonphysician faculty in numbers sufficient for the size of the program must be available to provide ongoing

teaching and supervision of the subspecialty residents. In addition to the program director, there must be at least one other physician who possesses appropriate qualifications in adolescent medicine, as described in the Program Requirements for Residency Education in the Subspecialties of Pediatrics.

In addition to the full range of pediatric subspecialists, consultant faculty in the following areas must be available to the program:

- A. Child/adolescent psychiatry
- B. Child neurology
- C. Obstetrics/gynecology
- D. General surgery
- E. Orthopedic surgery
- F. Sports medicine
- G. Dermatology

In addition, personnel from the following categories should be available:

- A. Psychology
- B. Social work
- C. Public and private school systems
- D. Education
- E. Public health
- F. Chemical dependency
- G. Nutrition
- H. Clinical pharmacology

### III. Facilities/Training Sites

The facilities and settings used by the program must be adequate for the program to accomplish the educational goals, and must include access to the following:

- A. An inpatient medical service
- B. An outpatient service
- C. Clinical consultation
- D. Additional clinical settings should include a school-based clinic, a summer camp, a crisis center, juvenile justice facilities, a college health program and a community health center, psychiatric, drug and alcohol facilities, and a family plan program.

### IV. Curriculum

#### A. Core Knowledge Areas

The program must provide adequate instruction and clinical experience for all of the adolescent medicine residents to enable them to gain sufficient knowledge of and skill in the following:

1. Physical, physiologic, and psychosocial changes associated with pubertal maturation and its disorders
2. Organ-specific conditions frequently encountered during the teenage years
3. The effects of adolescence on preexisting conditions
4. Mental illnesses of adolescence (including psychopharmacology and psychophysiology disorders)
5. Family dynamics, conflicts, and problems
6. Adolescent parenthood
7. Disorders of cognition, learning, attention, and education
8. Social and emotional development of the adolescent, including cultural/ethnic diversity
9. Chronic handicapping conditions
10. Disorders of the endocrine system and metabolism
11. Sexuality, including sexual identity, development, and sexual health problems
12. Sexually transmitted diseases (prevention and treatment)
13. Reproductive health issues of males and females (eg, menstrual disorders, gynecomastia, contraception, pregnancy, fertility)
14. Nutrition, including normal needs, health problems and deficiencies, and nutritional needs of special populations

15. Health promotion, disease prevention, screening, and immunizations
16. Infectious diseases, including epidemiology, microbiology, and treatment
17. Pharmacology and toxicity
18. Substance abuse, including alcohol and tobacco
19. Eating disorders, eg, obesity, anorexia nervosa, and bulimia
20. Social/environmental morbidities including physical and sexual abuse, risk-taking behaviors, injuries, sexual assault, and violence
21. Juvenile justice
22. Sports medicine
23. Legal and ethical issues including advocacy
24. Interviewing/short-term counseling skills for teens and their parents
25. Public health issues including demographics, social epidemiology, population-based interventions, and adolescent health promotion
26. Financing adolescent health care in public, private, and academic managed care environments

### **B. Clinical and Continuity Experience**

The program must provide on-site clinical supervision of the subspecialty residents in a manner that allows them to assume graded responsibility for both the provision of clinical services and the supervision of other learners during the years of training.

The subspecialty resident must be given the opportunity to assume continuing responsibility for both acute and chronic health problems of adolescents in both inpatient and outpatient settings and to provide direct and consultative care to adolescents of various ages and socioeconomic and racial backgrounds in a variety of hospital and community settings. It is essential that the adolescent medicine resident have an outpatient continuity experience to include at least ½ day per week in an adolescent medicine setting.

### **C. Didactic Sessions**

Conferences must emphasize the core knowledge and skill areas enumerated above. In addition, clinical conferences must include discussion of the basic clinical sciences. Health education, current health-care legislation, biomedical ethics, and preventive measures should also be addressed. Faculty must be available to provide instruction in interdisciplinary patient management and case conferences.

### **D. Administrative Instruction**

Adolescent medicine residents must be exposed to formal sessions on the organization and leadership of, and membership in, a comprehensive health-care team. This must include utilization of the services of all relevant health-care professionals, including those in social services, nursing, education, mental health, and community resources.

The subspecialty resident must be provided with instruction and experience in the administrative aspects of an adolescent health care program, eg, knowledge of staffing needs, program management, continuous quality improvement, the organization and financing of health-care services, preparation of grant proposals, and planning for program development in a variety of settings.

*ACGME: September 1997 Effective: September 1997*

## **Program Requirements for Residency Education in Developmental-Behavioral Pediatrics (Pediatrics)**

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in developmental-behavioral pediatrics also must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

### **I. Duration and Scope of Training**

Developmental-behavioral pediatrics is the specialty within pediatrics that focuses on (1) understanding the complex developmental processes of infants, children, adolescents, young adults, and their families in the context of their families and communities; (2) understanding the biological, psychological, and social influences on development in the emotional, social, motor, language, and cognitive domains; (3) mechanisms for primary and secondary prevention of disorders in behavior and development; and (4) identification and treatment of disorders of behavior and development throughout childhood and adolescence.

An accredited program in developmental-behavioral pediatrics must be 3 years in duration. A progressive educational experience is required, which must include responsibility for patient care, the development of clinical proficiency, involvement in community or community-based activities, and the development of skills in teaching, program development, research, and child advocacy. Subspecialty residents must participate in clinical training activities, including direct and indirect patient care activities, consultations, observations, teaching conferences, clinical supervision, and related activities.

The goal of education in this subspecialty is to understand and foster optimal cognitive, social, and emotional functioning of the patients and their families. This can be achieved only through close collaboration with several medical and nonmedical disciplines that address a similarly broad goal through their own unique and complementary perspectives.

### **II. Faculty**

The program director and the teaching staff are responsible for the general administration of the program. These activities include, but are not limited to, the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of subspecialty residents and the maintenance of records related to program accreditation.

#### **A. Program Director**

(See general requirements that pertain to all pediatric subspecialties for general description, qualifications, and responsibilities of the Program Director)

#### **B. Developmental-Behavioral Specialists**

In addition to the program director, there must be at least one other physician faculty member who is board certified or appropriately qualified in the subspecialty of developmental-behavioral pediatrics. Additional subspecialty faculty may be required, depending on the number of subspecialty residents appointed to the program. These subspecialists in developmental-behavioral pediatrics must devote sufficient time to the program to meet its administrative and educational needs and to ensure continuity of teaching.

### C. Core-related Disciplines

Additional physician and nonphysician faculty from appropriate disciplines must be available in numbers sufficient to provide ongoing teaching and supervision of the subspecialty residents in the full breadth of this subspecialty. In addition to the full range of pediatric subspecialists, consultant faculty from child and adolescent psychiatry, child neurology, pediatric physical medicine and rehabilitation and/or neurodevelopmental disabilities, and psychology (developmental, clinical, educational, or pediatric) must be available to the program. Formal linkages should be established to ensure their participation in instruction and clinical supervision.

### D. Other Related Disciplines

Programs must have access to the additional professional and technical personnel needed to support the clinical and educational conduct of the program.

1. Clinicians from these related disciplines must be available to the program: occupational therapy, physical therapy, social work, and speech and language pathology.
2. Personnel from the following disciplines should be available to the program: audiology, nutrition, pharmacology, education, nursing, and public health.

### III. Facilities and Resources

The facilities must be adequate for the program to accomplish its educational goals. In addition to the facilities and resources that are required for all pediatric subspecialty programs, there must be

- A. outpatient facilities for developmental-behavioral clinical services. These must include clinical services for children from infancy through adolescence with or at risk for developmental delays and disabilities, behavioral difficulties, learning problems, and chronic physical health conditions. These facilities should provide a patient base with the conditions described under Core Knowledge;
- B. collaboration with general pediatrics services to provide opportunities for consultation and teaching; and
- C. established linkages with selected community-based facilities that serve children and families, such as child care programs; early intervention programs; schools; and community agencies that serve children who have visual impairments, hearing impairments, or serious developmental, physical, and/or emotional disabilities.

### IV. Educational Program

The program must provide instruction, research opportunities, and clinical experience in developmental-behavioral pediatrics to enable all subspecialty residents to diagnose and treat patients with developmental-behavioral disorders. The program must include a formal educational program with activities pertaining to the knowledge and skills required in the clinical care of patients, as well as instruction and experience in teaching, in program development and administration, and in child advocacy, all of which must occur with appropriate supervision.

#### A. Core Knowledge

The education of a developmental-behavioral specialist must include an understanding of theories of the process of normal development from infancy through young adulthood, in addition to a structured curriculum that includes the following:

1. Biological mechanisms of behavior and development, eg, development and functional organization of the central nervous system, neurophysiology, genetics, and biological risk factors
2. Family and social/cultural factors that contribute to children's development and family functioning

3. Variations in temperament and adaptive styles
4. Adaptations to general health problems and their treatments, eg, acute illnesses, chronic illnesses, physical disabilities, hospitalization
5. Developmental and behavioral aspects of a wide variety of childhood conditions, eg, perinatal conditions, chromosomal/genetic disorders, metabolic, neurologic, sensory, endocrine, and cardiac disorders
6. Cognitive disabilities
7. Language and learning disorders
8. Motor disabilities, eg, cerebral palsy, myelodysplasia, dystrophies
9. Autistic spectrum disorders, eg, autism, Asperger's syndrome
10. Attention disorders
11. Externalizing conditions, eg, aggressive behavior, conduct disorder, oppositional defiant disorder
12. Internalizing behaviors, eg, anxiety, mood, and obsessive disorders, suicidal behavior
13. Substance use/abuse, eg, tobacco, alcohol, illicit drugs
14. Child abuse and neglect, eg, physical, sexual, factitious
15. Somatoform conditions
16. Sleep problems
17. Feeding/eating difficulties, eg, obesity, failure to thrive, anorexia, bulimia
18. Elimination problems, eg, encopresis, enuresis
19. Variations and difficulties in sexual development, eg, sexual orientation, gender identity, deviance
20. Atypical behaviors, eg, tic disorders, self-injurious behavior, repetitive behaviors
21. Complementary and alternative therapies

#### B. Clinical

The clinical training must be under the supervision of developmental-behavioral pediatricians. Clinical training must include participation in interdisciplinary activities involving physicians of various disciplines, various nonmedical professionals, and families.

The three major areas of patient care activity that must be emphasized are patient assessment, patient management, and consultation, as outlined below.

1. Assessment skills
  - Acquiring appropriate skills for competency in patient assessment is of prime importance and must include the following for children from infancy through adolescence:
    - a. Developmental screening and surveillance techniques
    - b. Behavioral screening and surveillance techniques
    - c. Interviewing and assessment of family history and functioning
    - d. Neurodevelopmental assessment
    - e. Assessment of behavioral adjustment and temperament
    - f. Psychiatric interviewing and diagnosis
    - g. Understanding of the major diagnostic classification schemas: DC 0-3, DSM-IV, DSM-PC [*Note:* Various systems of classification have been developed to describe systematically the range of disorders of behavior and development that are encountered regularly by professionals who care for children and adolescents. The *Diagnostic Statistical Manual*, fourth edition (DSM-IV) was developed by the American Psychiatric Association. The American Academy of Pediatrics, in collaboration with several collaborating professional organizations, created the *DSM for Primary Care, Child and Adolescent Version* (DSM-PC) to emphasize the contextual nature and the process of development of many of the disorders seen in the course of pediatric care. The DC 0-3 system was developed to focus attention on the critical development of infants in the first 3 years of life.]

In developing competence in patient assessment, the subspecialty residents must learn the importance of understanding and integrating evaluations by other disciplines. The subspecialty residents must gain understanding of the scope and range of evaluations performed by all disciplines listed in Sections II.C and II.D.1 above.

## 2. Patient management

The program must provide training for the subspecialty residents to develop competence in providing anticipatory guidance, consultation and referral, individual and family counseling, behavioral treatment methods, developmental interventions, and psychopharmacotherapy. They must also become familiar with the therapeutic modalities used by the other disciplines listed in Sections II.C and II.D.1, to be able to recommend them and/or apply them in their clinical activities. They must also be familiar with the early intervention and educational systems. Finally, they should be familiar with complementary and alternative therapies for developmental and behavioral disorders.

The program must enable subspecialty residents to provide longitudinal care to children and families of diverse ethnic, racial, and socioeconomic status groups. Subspecialty residents should follow a sufficient number of children to appreciate the range of psychosocial impacts and stresses on children and families and the effectiveness of therapeutic programs.

In addition to required skills in management of all conditions referred to above (IV.A), the development of skills in one or more of the following is desirable: pain management, biofeedback and hypnosis, and psycho-educational group involving parents and children.

## 3. Consultation and referral

The curriculum must include instruction and experience in providing consultation to primary care providers, pediatric subspecialists, schools, and other community organizations. Included as well must be the development of skills for multidisciplinary collaboration with both physician and other professional colleagues, including the process of making referrals to appropriate specialists (physicians and nonphysicians).

## C. Policy and Leadership Skills

The subspecialty residents must acquire adequate knowledge of, and have experience with, health care systems, community resources, support services, and the structure and administration of educational programs for children with and without special educational needs. Program faculty must provide instruction in legislative processes (local, state, and national), health care policy, child advocacy organizations, and the legal and judicial systems for children and families.

## V. Research

(See general requirements that pertain to all pediatric subspecialties)

## VI. Evaluation

(See general requirements that pertain to all pediatric subspecialties for evaluation of residents, including evaluation of core competencies, faculty, and the program)

ACGME: June 2002 Effective: January 2003

# Program Requirements for Residency Education in Neonatal-Perinatal Medicine (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

## I. Scope of Training

The purpose of an accredited program in neonatal-perinatal medicine is to provide residents with the background to understand the physiology and altered structure and function of the fetus and the neonate and to diagnose and manage problems of the neonate.

To ensure an appropriate educational environment, an accredited program in neonatal-perinatal medicine must be affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency program in obstetrics and gynecology, within the same geographic location, that has board certified maternal-fetal medicine specialists.

The program must emphasize the fundamentals of clinical diagnosis and management of problems seen in the continuum of development from the prenatal through the intrapartum and neonatal periods, including longitudinal follow-up.

## II. Faculty

### A. Neonatologists

In order to ensure appropriate education and to provide adequate supervision, four hospital-based neonatologists devoting full-time to the program.

### B. Other Physician Teaching and Consultant Faculty

In addition to having the full range of pediatric subspecialists available for teaching and consultation, each program must have

1. a pediatric cardiologist
2. a pediatric surgeon
3. a cardiovascular surgeon skilled in pediatric cardiovascular surgery as a consultant and teacher
4. a pediatrician skilled in infectious diseases
5. a pediatrician skilled in neurodevelopment
6. a neurosurgeon skilled in pediatric neurosurgery as a consultant and teacher
7. an obstetrician skilled in maternal-fetal medicine
8. an ophthalmologist skilled in pediatric ophthalmologic disease and treatment
9. a pediatric orthopaedic surgeon
10. a pediatric otorhinolaryngologist
11. a pediatric urologist

Consultant faculty from other related disciplines also must be available.

### C. Other Professional Personnel

The following program staff are essential: respiratory therapists skilled in the care of the neonate, an ultrasonographer well versed in perinatal ultrasonic techniques, and an echocardiographic technician skilled in neonatal echocardiography.

The nursing staff must be sufficient to meet appropriate standards of care. This implies leadership by nurses skilled in neonatal and obstetrical intensive care. Medical social workers qualified in maternal-child health also must be available.

### III. Facilities/Resources

A specially designed neonatal intensive care unit must be located in the primary teaching site. Facilities and equipment in that unit must meet the generally accepted standards of modern intensive care units and laboratories, and must be available on a 24-hour-a-day basis.

These must include but are not limited to the following:

1. Microchemical laboratory
2. Blood gas laboratory
3. Perinatal diagnostic laboratory
4. Radiology and ultrasound imaging facilities
5. Diagnostic bacteriology and virology laboratory
6. Hematology laboratory
7. Blood bank
8. Electrocardiographic and electroencephalographic laboratories
9. Computed tomography and/or magnetic resonance imaging facilities
10. Echocardiography capability
11. Screening laboratory for inborn errors of metabolism

In addition, access to the following should be available within a reasonable period of time at the primary teaching site or nearby:

1. Clinical toxicology laboratory
2. Nuclear medicine facilities
3. Cytogenetics laboratory

### IV. Educational Program

Programs must provide experience and instruction that is adequate to enable the neonatal-perinatal residents to develop special competence in the management of critically ill neonates. In addition to the general principles of critical care this should include but not be limited to techniques of neonatal resuscitation, venous and arterial access, endotracheal intubation, preparation for transport, ventilatory support, continuous monitoring, temperature control, and nutritional support.

The program also must provide instruction in the psychosocial implications of disorders of the fetus, neonate, and young infant, as well as in the family dynamics surrounding the birth and care of a sick neonate. The subspecialty residents also should be involved in a regional program that involves outreach education, patient consultation, and transport of ill neonates.

Each resident must be taught to identify the high-risk pregnancy and must become familiar with the methods used to evaluate fetal well-being and maturation. Each resident must become familiar with factors that may compromise the fetus during the intrapartum period and recognize the signs of fetal distress. In addition, each resident must participate in the longitudinal follow-up of high-risk neonates.

#### A. Patient Population

The program must provide the patient care experiences necessary for the subspecialty residents to acquire skill in delivery room stabilization and resuscitation of critically ill neonates. To accomplish this, there must be a sufficient number and variety of high-risk obstetrical patients to ensure that the residents become knowledgeable in identifying high-risk pregnancies and evaluating fetal well-being and maturation.

Also, an adequate number of critically ill neonates with a variety of disorders must be available.

Each resident must participate in the care of a sufficient number of neonates who require ventilatory assistance to become skilled in their management. Similarly, each resident should participate in the care of an adequate number of neonatal patients who require major surgery, including cardiac surgery, to become skilled in the diagnosis and management of these neonates.

#### B. Outpatient Experience

A sufficient number of discharged infants must be available in a continuity clinic to assure appropriate outpatient experience for each subspecialty resident. These experiences should enable residents to become skilled in the longitudinal follow-up, evaluation, and management of such patients and to become aware of the socioeconomic impact and the psychosocial stress that such infants may place on a family.

#### C. Neonatal Data Base

A neonatal database of all patient admissions, diagnoses, and outcomes must be available for resident education. Experience in tabulating and evaluating institutional and regional fetal and neonatal morbidity and mortality data should be provided. There also should be instruction and experience in techniques of collation and critical interpretation of data pertaining to immediate outcome and sequelae of various diseases, for which the presence of a statistician is desirable. This experience should be closely related to the evaluations of various modalities of therapy used in these disorders.

#### D. Curriculum

The program must include instruction in related basic sciences. Seminars, conferences, and courses must be offered in the basic disciplines related to pregnancy, the fetus, and the neonate. This should include maternal physiological, biochemical, and pharmacological influences on the fetus; fetal physiology; fetal development; placental function (placental circulation, gas exchange, growth); physiological and biochemical adaptation to birth; cellular, molecular, and developmental biology and pathology relevant to diseases of the neonate; psychology of pregnancy and maternal-infant interaction; breast feeding and lactation; growth and nutrition; and genetics.

Residents should participate in regularly scheduled multidisciplinary conferences, such as sessions that review perinatal mortality, morbidity, and patient care, as well as in case conferences and current literature and research conferences.

*ACGME: September 1999 Effective: July 2000*

## Program Requirements for Residency Education in Pediatric Cardiology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. The specialty requirements may exceed the common requirements.

#### I. Duration and Scope of Training

An accredited program in pediatric cardiology must be 3 years in duration. The purpose of a training program is to provide the pediatric cardiology residents with the foundation for understanding normal and abnormal cardiovascular conditions, with a focus on the pathophysiologic basis of cardiovascular disease, and to prepare them to provide optimal care and consultation for pediatric patients with cardiovascular disease.

An accredited program must include properly balanced, well-organized, and progressive responsibility for the care and study of patients on inpatient services, in intensive care units, and in ambulatory centers.

## II. Faculty

### A. Pediatric Cardiologists

There must be at least four pediatric cardiologists who provide sufficient time to the program to ensure its educational and research quality and to provide adequate supervision of cardiology residents. They must be certified in pediatric cardiology by the American Board of Pediatrics or have equivalent qualifications.

### B. Other Physician Teaching and Consultant Faculty

Appropriate pediatric intensive care personnel must be available for the special and constant care needed by patients in the PICU. Residents also must be provided access to scientists who are actively engaged in cardiovascular research.

Staff from other disciplines, including cardiovascular radiology, cardiothoracic surgery, adult cardiology, anesthesiology, pathology, and genetics, should be readily available.

Special staff expertise should be available in electrophysiology, exercise physiology, invasive and interventional cardiac catheterization procedures, preventive cardiology, and echo cardiography, including transesophageal, Doppler, and fetal ultrasonography.

Residents should be taught to work with and utilize the special skills of pediatric cardiovascular nurses, intensive care nurses, catheterization laboratory technicians, operating room personnel, social workers, and psychologists.

## III. Facilities and Resources

It is preferable that all facilities be within the primary institution. Where a special facility is shared by several local institutions in the interest of cost and efficiency, the program director may arrange for a resident to rotate to that facility.

### A. Inpatient Service/Outpatient Services

Facilities should include space in an ambulatory setting for optimal evaluation and care of outpatients and an inpatient area with a full array of pediatric and related services staffed by pediatric faculty and residents.

An active inpatient pediatric cardiology service is essential to the educational program. It should provide all the diagnostic and treatment services characteristic of a comprehensive children's facility.

There must be an intensive care unit in each center in which patients with heart disease are cared for under the supervision of the training program staff and are available to the residents. In these units there must be preoperative and postoperative patients with heart disease, as well as appropriate personnel and equipment to allow provision of the special and constant care needed by these patients.

### B. Cardiac Data Base

Clinical data, including inpatients, outpatients, and patients undergoing catheterization and/or surgery, should be cross-indexed to allow rapid evaluation and analysis of the assembled information, including age, diagnosis, and outcome morbidity and mortality.

### C. Support Facilities

The following facilities must be available:

1. Diagnostic imaging facilities and nuclear cardiology
2. Diagnostic and interventional cardiac catheterization laboratory facilities
3. A graphics laboratory with facilities for recording the standard electrocardiogram and 2-D and Doppler echocardiograms
4. Laboratories to perform routine analyses of blood and urine to determine blood gas values, to perform blood chemistry and blood clotting studies, and to cross-match blood
5. An operating room designed for pediatric patients who require cardiopulmonary extracorporeal circulation and equipped with

appropriate monitoring devices, defibrillators, and cardiac pacing devices

6. A blood bank closely affiliated with the center that is equipped to meet the demands of cardiac surgery
7. Access to a clinical cardiac electrophysiologic laboratory for invasive intracardiac electrophysiologic studies and catheter ablation.

## IV. Educational Program

### A. Clinical Experience

#### 1. Patient Population

The experience must encompass age groups from the fetus and newborn through young adulthood, and must include exposure to adults with heart disease, particularly congenital and rheumatic disease. The resident must be exposed to pathologic conditions ranging from mild to those requiring extensive or continued intensive care. There must be both pre- and post-surgical and medical experience with a broad spectrum of congenital and acquired heart disease and in chronic, acute, and emergency situations.

Patients admitted to the inpatient service should be under the direct or indirect supervision of the subspecialty program staff and must be available to the residents.

An accredited program must have an annual patient population, including patients less than 1 year of age, that is sufficient in number to enable each resident to become skilled in the following techniques.

Training in history taking and physical examination must be the cornerstone of the training program. This must include family history that is a critical aspect of the evaluation of pediatric patients with suspected cardiovascular disease. Programs must include training in at least the following fundamental skills:

#### a. Noninvasive techniques

The program must provide education in clinical diagnosis with special emphasis on roentgenology, electrocardiography, echocardiography, exercise testing, ambulatory electrocardiography, and magnetic resonance imaging. Each resident must perform and interpret a minimum of 300 pediatric echocardiography studies.

The program also must provide sufficient experience for residents to acquire skill in the interpretation of electrocardiograms, ambulatory ECG monitoring studies, and exercise stress testing with ECG monitoring.

#### b. Invasive techniques

Experience and instruction must be provided in the techniques and understanding of the indications for and limitations of diagnostic cardiac catheterization, selective angiography, electrophysiologic testing, therapeutic catheterizations, and pacemaker implantation. During the 3 years of training each subspecialty resident must participate in a minimum of 100 catheterizations and 10 pediatric intracardiac electrophysiologic studies.

#### c. Resuscitation techniques

Experience and instruction in the techniques, indications, and interpretation of pericardiocentesis, thoracentesis, cardiopulmonary resuscitation, mechanical ventilation cardioversion, and temporary pacing are required.

#### d. Technical and other skills

The residents must be taught the use of relevant electronic equipment, recording devices, and other equipment necessary to perform cardiac catheterization, echocardiography, ambulatory ECG monitoring, and electrophysiologic studies. In addition, the program must instruct the residents in the fundamentals of radiation safety.

**2. Preoperative and Postoperative Care**

Participation in the care of preoperative and postoperative care of patients having both closed and open cardiac surgery, in close cooperation with the cardiothoracic surgical staff, is required. Residents must have sufficient exposure to or instruction in current surgical techniques, mechanical ventilation, methods of cardiopulmonary bypass, and hypothermia to develop adequate understanding of these surgical techniques. The resident should be instructed in the management of postoperative patients and postoperative complications, both immediate and delayed. Opportunity for long-term follow-up observations of both preoperative and postoperative patients must be provided.

Residents should participate in consultations or conferences in which the medical and surgical staffs evaluate the results of surgery and the patient's cardiac status before discharge from the hospital.

**3. Pediatric Cardiology Clinic**

There must be a regularly scheduled pediatric cardiology clinic that is supervised by one or more members of the cardiology staff. Time and space in this clinic must be available for residents to provide continuity and follow-up care for all patients under their care.

**4. Other Clinical Experiences**

The program must provide instruction and clinical experience with rheumatic heart disease, collagen vascular diseases, infective endocarditis, Kawasaki disease, and other infectious and metabolic conditions. Instruction should also include clinical experience in assessing the genetic basis of heart disease. Residents should be instructed in the etiologic and risk factors in hypertensive and atherosclerotic heart disease, including hyperlipidemic states, and should gain experience in the prevention, diagnosis, and management of patients with these cardiovascular problems.

**B. Curriculum**

The program should offer courses, seminars, workshops, or laboratory experience to provide appropriate background in basic and fundamental disciplines related to the heart and cardiovascular system.

The resident must receive instruction in cardiovascular pathology, including examination of specimens demonstrating the various types of congenital cardiovascular anomalies. Conferences involving current pathological material must be held regularly and must be closely correlated with clinical experience.

There must be instruction in embryology and anatomy of the normal heart and vascular system and potential deviations from normal. Normal and abnormal cardiovascular and cardiopulmonary physiology and metabolism should be taught, as well as fundamentals of cardiovascular pharmacology, including mechanisms of drug action, therapeutic indications, and side effects.

Conferences must be held on clinical diagnosis and therapy on a regular basis, including quality assurance evaluation, cardiovascular research, and clinical morphologic correlations.

Multidisciplinary conferences should include physiology, pharmacology, neonatology, cardiovascular radiology, cardiothoracic surgery, and adult cardiology.

*ACGME: September 1999 Effective: July 2000*

## Program Requirements for Residency Education in Pediatric Critical Care Medicine (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. These specialty requirements may exceed the common requirements.

If there is more than one ACGME program in critical care medicine in the institution, there should be an institutional policy governing the educational resources committed to these programs and ensuring cooperation of all involved disciplines.

**I. Scope of Training**

The purpose of an accredited program in pediatric critical care medicine is to provide subspecialty residents with an understanding of the pathophysiology of acute, life-threatening disease and injury. To achieve this, the program must emphasize the fundamentals of clinical diagnosis, patient assessment, and clinical management.

The program must provide the subspecialty residents with the opportunity to augment their knowledge of advanced multisystem life support as well as their leadership skills in patient care, teaching, and research in the subspecialty.

These programs must be organized and conducted in a manner that ensures optimum patient care while providing residents with the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators familiar with and capable of administering a critical care unit.

**II. Faculty****A. Pediatric Critical Care Medicine Specialists**

To ensure the educational and research quality of the program, and to provide adequate supervision of residents, there must be at least four members of the teaching staff who have knowledge of and experience in the care of acute pediatric illness and injuries. Two of these must be certified in pediatric critical care medicine or have equivalent qualifications in pediatric critical care medicine.

**B. Other Physician Teaching and Consultant Faculty**

An accredited program also is required to have consultants in each of the following:

1. Pediatric cardiology
2. Pediatric pulmonology
3. Neonatology
4. Pediatric gastroenterology
5. Pediatric infectious diseases
6. Pediatric nephrology
7. Pediatric neurology
8. Pediatric hematology/oncology
9. Pediatric surgery
10. Pediatric cardiovascular surgery

**C. Other Professional Personnel**

The following other personnel are essential contributors to a program in that they enhance the subspecialty resident's understanding of the multidisciplinary nature of pediatric intensive care: respiratory therapy staff, critical care nursing staff, social workers and support staff, pediatric nutritionist, pediatric pharmacist, physical and occupational therapist, child life therapist, and speech therapist.

The presence of a bioengineer, statistician and/or epidemiologist, and an ethicist is highly desirable.

### III. Facilities/Resources

At the primary teaching site there must be a specially designed pediatric critical care unit in which the program is based. Facilities and equipment in and related to that unit must meet the generally accepted standards of modern intensive care units (ICUs) and must be available on a 24-hour-a-day basis. These must include but are not limited to the following:

1. Microchemistry laboratory
2. Blood gas laboratory
3. Hematology laboratory
4. Diagnostic bacteriology and virology laboratories
5. Blood bank
6. Facilities for special radiographic imaging, including computerized axial tomography, radionuclide scanning, angiography, magnetic resonance imaging, and ultrasonography
7. Cardiac catheterization facility
8. Pulmonary function testing laboratory
9. Capabilities for portable use, including radiology and echocardiography
10. Screening laboratory for inborn errors of metabolism

In addition, access to the following should be available within a reasonable period of time at the primary teaching site or nearby:

1. Clinical toxicology laboratory
2. Nuclear medicine facilities

### IV. Educational Program

#### A. Clinical Experience

The subspecialty residents must have the opportunity to acquire the knowledge and skills required to diagnose and manage patients with acute life-threatening problems. This must include but not be limited to the development of special competence in such areas as cardiopulmonary resuscitation; stabilization for transport; trauma; triage; ventilatory, circulatory, and neurologic support; management of renal and hepatic failure, poisoning, and complicated hematological, infectious, and immune problems; continuous monitoring; and nutritional support.

Though clinical training in pediatric critical care medicine must include direct patient care responsibilities, a graduated experience also must enable the subspecialty resident to assume supervisory and teaching roles.

#### B. Patient Population

An adequate number and variety of pediatric ICU patients must be available to enable the subspecialty resident to develop competence in the management of such patients, including those requiring preoperative and postoperative care. In the case of a patient on the surgical service, the pediatric critical care resident should collaborate with the surgeon managing the care of the patient.

To meet the educational objectives of an accredited program, the average daily census in the ICU should be at least six patients per pediatric critical care resident assigned to the service.

The pediatric patients available to the residents should include patients with solid organ transplantations, at least 50 cases per year of patients who have sustained severe trauma, at least 100 cases per year of patients who have undergone cardiovascular surgery, and at least 150 cases per year of patients who have major neurologic or neurosurgical problems.

The number of patients requiring mechanical ventilation must be sufficient to provide each resident with adequate opportunity to become skilled in their management.

#### C. Procedural Experience

The patients must be sufficiently ill and the cases sufficiently complex that adequate opportunities exist for residents to become pro-

ficient in critical care procedures. These include but are not limited to peripheral arterial and venous catheterization, central venous catheterization, endotracheal intubation, thoracostomy tube placement, and sedation of conscious patients. Furthermore, there should be sufficient exposure to the use of pulmonary artery catheters and intracranial monitoring to ensure understanding of their uses and limitations. The program director must monitor and document the development of clinical competence in the performance of necessary procedural skills.

#### D. Curriculum

The curriculum should include instruction in collation and critical interpretation of patient care data. Interpretation of laboratory studies essential to the care of the critically ill pediatric patient also must be included. The program must teach pharmacologic principles and provide opportunity for the subspecialty residents to apply them to the critically ill patient. Instruction in biomedical instrumentation must be offered to familiarize the resident with current and developing technology.

Subspecialty residents must participate in regularly scheduled multidisciplinary conferences such as morbidity and mortality review and case conferences.

#### E. Other Critical Care Unit Experiences

Some of the residents' clinical experience may take place in other critical care settings, for example, with anesthesiologists, in a medical ICU, in a burn unit, in a neonatal ICU, and/or in a surgical ICU. Electives in these units may be included in the clinical experience, but they should not replace time in the pediatric ICU. The time spent in these other critical care settings should be no more than 4 months.

*ACGME: September 1999 Effective: July 2000*

## Program Requirements for Residency Education in Pediatric Emergency Medicine (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics or Emergency Medicine, programs in pediatric emergency medicine must comply with the following requirements.

### I. Introduction

The goal of a residency program in pediatric emergency medicine is to produce physicians who are clinically proficient in the practice of pediatric emergency medicine, especially in the management of the acutely ill or injured child, in the setting of an emergency department that is approved as a 911 receiving facility or its equivalent and has an emergency medical services system.

A program in pediatric emergency medicine must be administered by, and be an integral part of, an ACGME-accredited program in either emergency medicine or pediatrics and must be associated with an ACGME-accredited residency program in the corresponding discipline.

There must be written agreements between the director of the program in pediatric emergency medicine and the directors of the participating residencies in pediatrics and emergency medicine specifying the experiences that will compose this subspecialty program. These agreements should address appropriate curriculum content, supervision of the resident, amount and distribution of

clinical and nonclinical time, conferences, clinical performance criteria, and mechanisms for resolving performance problems.

Prerequisite training should include satisfactory completion of an ACGME-accredited residency program in either emergency medicine or pediatrics.

## II. Duration and Scope of Training

A training period of 2 years is required for all subspecialty residents. [Note: For those planning to seek certification from the American Board of Pediatrics, 3 years of training is required.] [Note: If a third year is offered, it must be described when the program is reviewed by the Residency Review Committee. Those planning to seek certification should consult with the appropriate certifying board regarding the criteria for eligibility, including duration of training.]

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families while providing residents the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators. The program must emphasize the fundamentals of assessment, diagnosis, and management. Residents also should be exposed to the academic debate, intensive research review, and the interaction between and among the specialties of pediatrics and emergency medicine.

## III. Curriculum

The residents in pediatric emergency medicine must participate in the care of pediatric patients of all ages, from infancy through young adulthood, with a broad spectrum of illnesses and injuries of all severities. At least 12 months of the clinical experience must be obtained seeing children in an emergency department where children, ages 21 years of age or less, are treated for the full spectrum of illnesses and injuries. To provide adequate exposure for selected problems, additional experience with anesthesiologists, intensivists, neurologists, psychiatrists, pre-hospital care providers, orthopedists, surgeons, toxicologists, traumatologists, who have training and experience in the care of children and adolescents, and other specialists must be available.

Specialty-specific content must include at least 4 months of training in the reciprocal specialty from which the resident enters the training program. Additional elective months of reciprocal training should be scheduled when deemed appropriate by the program director on the basis of the background of the resident and his/her progress in acquiring the essential skills of a pediatric emergency specialist.

For the emergency medicine graduate, the reciprocal time must include time spent in pediatric subspecialty and ambulatory clinics, inpatient management, neonatal management, and pediatric critical care in an ACGME-accredited residency program in pediatrics.

For the pediatric graduate, this must include 4 months in an adult emergency department that is part of an ACGME-accredited residency program in emergency medicine. One month of that experience may occur off site as approved by the ACGME-accredited program in emergency medicine, in EMS, adult trauma, or toxicology.

Additional experiences may be necessary for residents from both core specialties. For example, adolescents have unique aspects of disease and injury. Experience with blunt and penetrating trauma, and with significant gynecologic and obstetrical emergencies, as well as psychiatric emergencies of the adolescent, must be a part of a resident's training if previous experience in these areas was not adequate. These experiences should be in settings best suited for the resident's training.

The core content must include training in EMS, administration, ethics, legal issues, and procedures. It must also include but not be limited to structured opportunities to develop special competence in such areas as cardiopulmonary resuscitation; trauma; disaster and environmental medicine; transport; triage; sedation; monitoring (biomedical instrumentation); emergencies arising from toxicologic, obstetric, gynecologic, allergic/immunologic, cardiovascular, congenital, dermatologic, dental, endocrine/metabolic, gastrointestinal, hematologic/oncologic, infectious, musculoskeletal, neurologic, ophthalmic, psychosocial, and pulmonary causes; renal/genitourinary and surgical disorders; and physical and sexual abuse.

In addition to achieving an understanding of the pathophysiology, epidemiology, and management of these problems, the resident must learn how to evaluate the patient with an undifferentiated chief complaint such as abdominal pain. The resident must be taught to arrive at a diagnosis, whether it falls in areas traditionally designated medical or surgical, eg, appendicitis, ectopic pregnancy, intussusception, sickle cell anemia; to perform the evaluation rapidly in accordance with any pathophysiologic disturbances in the patient; and to proceed with an appropriate life-saving therapy, such as endotracheal intubation or thoracostomy or administration of antibiotics, before arriving at a definitive diagnosis.

The resident must learn the skills necessary to prioritize and manage the emergency care of multiple patients. Finally, the resident must have supervised experience in a range of technical/procedural skills, as they apply to pediatric patients of all ages.

The resident must be given increasing responsibilities for patient care as she or he progresses through the program. In the final year of training, the resident must be given the opportunities to demonstrate the skills appropriate to a supervisor, teacher, and a decision maker in pediatric emergencies.

There must be an emphasis on developing a compassionate understanding of the stress associated with sudden illness, injury, and death so that the resident may be responsive to the emotional needs of the patients, their families, and the staff of the emergency department. Discussion and appreciation of the many ethical issues involved in pediatric emergency medicine should be part of the educational program.

Residents should be exposed to formal sessions on organizing teaching programs, medical writing, and oral presentation. Residents should have the opportunity to develop teaching skills by conducting lectures, seminars, and clinical conferences and by preparing written reports and teaching materials. These efforts must be reviewed and evaluated by the supervising faculty in light of competency based objectives developed by the program. The resident must receive instruction and experience in the administrative and management skills necessary to oversee a division or department.

## IV. Conferences

There should be opportunities to participate in regularly scheduled, multidisciplinary conferences that include lectures, morbidity and mortality conferences, case conferences, general reviews, and research seminars. The program must include instruction in or other educational exposure to related basic sciences, including physiology, growth and development, pathophysiology, and epidemiology, and prevention of pediatric illnesses and injuries.

The program also should provide education on physician wellness and stress management.

## V. Teaching Staff

There must be at least four members of the teaching staff who have experience and knowledge of the care of acute pediatric illness and injuries to provide adequate supervision of residents and to ensure

the educational and research quality of the program. Two of the faculty must be certified in pediatric emergency medicine or have equivalent qualifications. For a subspecialty program that functions as an integral part of a pediatric residency program, there must be adequate exposure to faculty who are certified by the American Board of Emergency Medicine. Conversely, for a subspecialty program based in an emergency medicine residency program, there must be adequate exposure to faculty certified by the American Board of Pediatrics.

The availability of consultant and collaborative faculty in related medical and surgical disciplines, as referred to in Section III, must be ensured.

The pediatric emergency medicine faculty must have an active role in curriculum development and in the supervision and evaluation of the subspecialty residents.

## VI. Patient Population

A sufficient number of patients must be available to provide adequate opportunity for subspecialty residents to acquire competence in the management of the full spectrum of acutely ill and injured children, adolescents, and young adults. The subspecialty residents must provide the initial evaluation of and treatment to all types of patients.

To meet the educational objectives of the program and to provide both the pediatric and subspecialty residents with an adequate experience to acquire competence in clinical management, there should be a minimum of 15,000 pediatric patient visits per year in the primary emergency department that is used for the program. Patient acuity and the total number of trainees will be considered in assessing the adequacy of the patient population. These must include a sufficient number of patients with major and minor trauma, airway insufficiency, ingestions, obstetric and gynecologic disorders, psychosocial disturbances, and emergent problems from all pediatric medical and surgical subspecialties.

Subspecialty residents should not serve as the only care givers for children seen in the emergency department. They should provide supervision and consultation to other residents who are assigned to the emergency department and will be caring for patients. These subspecialty residents must, however, have the opportunity to manage multiple patients at the same time, to learn the skills necessary to prioritize the evaluation and treatment of these patients. In addition, the program must provide the pediatric emergency medicine residents the opportunity to assume leadership responsibility for the pediatric emergency department.

## VII. Facilities

There must be an acute care facility that receives patients via ambulance from the prehospital setting, is equipped to handle trauma, and that has a full range of services associated with residencies in pediatrics and emergency medicine. This facility should be accredited by the Joint Commission on Accreditation of Healthcare Organizations.

The emergency department must be adequately staffed, have appropriate bedside monitoring capability, and be capable of resuscitating medical and trauma patients. Facilities and equipment must meet the generally accepted standards of a modern emergency department and be available within the institution on a 24-hour-a-day basis.

The institution should have comprehensive radiologic and laboratory support systems and readily available operative suites and intensive care unit beds.

## VIII. Board Certification

Residents seeking certification in the subspecialty of pediatric emergency medicine should consult their primary specialty board, ie, the American Board of Pediatrics or the American Board of Emergency Medicine, regarding the criteria for eligibility for certification in this subspecialty.

ACGME: June 1998 Effective: June 1998

## Program Requirements for Residency Education in Pediatric Endocrinology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. The specialty requirements may exceed the common requirements.

### I. Scope of Training

The purpose of the program must be to provide the residents with the background to diagnose and manage endocrine diseases and to understand the physiology of hormonal regulation in infancy, childhood, adolescence, and young adulthood.

The program must emphasize fundamentals of clinical diagnosis, with special emphasis on history taking, physical examination, and interpretation of pertinent laboratory data.

### II. Faculty

#### A. Pediatric Endocrinology Specialists

A program must have at least two qualified pediatric endocrinologists, inclusive of the program director, and must ensure access to the full range of pediatric subspecialists.

#### B. Other Physician Teaching and Consultant Faculty

In addition, appropriate consultant faculty and staff must be available in related disciplines, including surgery, obstetrics/gynecology, internal medicine, child and adolescent psychiatry, nephrology, neurology, neurosurgery, radiology, nuclear medicine, ophthalmology, urology, genetics, and diabetes education.

### III. Facilities/Resources

#### A. Outpatient and Inpatient

Facilities should include space in an ambulatory setting for optimal evaluation and care of outpatients and an inpatient area with a full array of pediatric and related services staffed by pediatric residents and faculty.

#### B. Laboratory/Support Services

Modern facilities and services, including inpatient, ambulatory care, and laboratory resources, must be available and functioning. Specifically, there must be a complete chemistry laboratory; facilities for radioimmunoassay and karyotyping; nuclear, ultrasonic, and radiologic imaging services that can conduct studies for all types of endocrine disease; a dietary service; endocrine surgical services; and a pathology laboratory for the interpretations of surgical and cytologic specimens, including immunohistologic studies. In addition, there should be a close working relationship with dietary and/or nutrition services.

## IV. Educational Program

### A. Clinical and Continuity Experience

An adequate number of patients with endocrine disorders, including diabetes, who range in age from newborn through young adulthood, must be available to the training program.

The program must provide a sufficiently diversified and complex endocrine outpatient experience and adequate experience with inpatient management. In particular, the pediatric endocrinology residents must have continuing responsibility for care of patients with diabetes mellitus and other chronic endocrine disorders.

Residents must learn through patient care about normal and abnormal hormonal regulation. The interaction of endocrine pathology and psychosocial problems must be addressed.

The clinical experience must include but not be limited to the following:

1. Short stature, including constitutional delay
2. Disorders of anterior pituitary hormone physiology, including growth hormone deficiency
3. Disorders of posterior pituitary hormone physiology, including diabetes insipidus
4. Disorders of hypothalamic hormonal regulation
5. Disorders of thyroid hormone physiology
6. Diagnosis and management of endocrine neoplasia
7. Disorders of the adrenal gland physiology
8. Disorders of androgen and estrogen metabolism, including adolescent reproductive endocrinology
9. Disorders of sexual differentiation and development
10. Disorders of calcium, phosphorus, and vitamin D metabolism
11. Disorders of parathyroid gland physiology
12. Disorders of fluid and electrolyte balance
13. Disorders of carbohydrate metabolism, including diabetes mellitus and hypoglycemia
14. Disorders of nutrition, including eating disorders

### B. Laboratory Experience

The residents must be instructed in the proper use of laboratory techniques for measurement of hormones in body fluids. They must be taught to recognize the limitations and pitfalls of interpretation of laboratory results. All residents should be instructed in proper interpretation of endocrine stimulation and suppression tests, including the normal variations that occur in laboratory results at different ages and times of day. Residents should be provided with a background that will enable them to utilize current diagnostic procedures of endocrinology that involve radiology, including ultrasonography, CT scanning and MRI, and nuclear medicine.

### C. Curriculum

The training program must include instruction in related clinical and basic sciences. These include endocrine physiology, pathology, and biochemistry; embryology of endocrine and related systems with emphasis on sexual differentiation; genetics, including laboratory methods, cytogenetics, and enzymology; and aspects of immunology pertinent to understanding endocrine disease and the use of immunoassays.

In addition, regular conferences reviewing patient management must be scheduled and attendance required of the subspecialty residents.

*ACGME: September 1999 Effective: July 2000*

## Program Requirements for Residency Education in Pediatric Gastroenterology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

### I. Introduction

The principal goal of a training program should be the development of competent subspecialists. The program must provide the resident in gastroenterology with the background and experience to diagnose and manage patients with acute and chronic diseases of the digestive system (esophagus, stomach, intestines, hepatobiliary system, and pancreas) and with nutritional disorders, including those that are life-threatening, and to conduct research in this specialized field. The resident must be guided in developing clinical judgment and skills as well as in acquiring medical knowledge, humanistic qualities, and professional attitudes and behaviors that are appropriate for the pediatric gastroenterologist.

### II. Duration and Scope of Training

An accredited program in pediatric gastroenterology must provide 3 years of progressive educational experience that includes the development of procedural skills, responsibility for patient care, and participation in research.

### III. Faculty

There must be at least three pediatric gastroenterologists on the teaching staff; in addition, consultant and collaborative faculty in the following related pediatric disciplines must be readily available to the program: neonatology, hematology, immunology, genetics, and infectious disease.

### IV. Facilities and Resources

The following must be available to the program:

- A. Space in an ambulatory setting for optimal evaluation and care of outpatients.
- B. An inpatient area staffed by pediatric residents and faculty with a full array of pediatric and related services, including pediatric surgery and child and adolescent psychiatry and/or psychology.
- C. Full support services, including nuclear medicine, physical/occupational therapy, social services, pathology, nutrition, and feeding therapy.
- D. Pediatric intensive care unit.
- E. Neonatal intensive care unit.
- F. Access to a gastrointestinal function laboratory capable of measuring intestinal absorptive function, esophageal function, pancreatic function, and nutritional parameters in pediatric patients, plus a laboratory that can either perform or access specialized serological, parasitological, immunological, metabolic, and toxicological studies applicable to gastrointestinal and hepatobiliary disorders.
- G. Fully equipped and staffed procedure facilities that include diagnostic and therapeutic endoscopic instruments as well as equipment for measuring gastrointestinal motility. The staff must be skilled in the care of pediatric patients. There must be appropriate equipment for patients ranging in age from the neonate to the young adult.

## V. Educational Program

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families.

### A. Breadth of Experience

To develop the residents' competence in clinical diagnosis, medical management of patients, and the correlation of pathophysiology with clinical disorders, the program must emphasize developmental gastrointestinal physiology in infants, children, adolescents, and young adults.

There must be training in the selection, performance, and evaluation of procedures for morphological, physiological, immunological, microbiological, and psychosocial assessment of gastrointestinal and hepatobiliary diseases and nutritional disorders.

Residents must have experience in a variety of diagnostic tests and therapeutic procedures, eg, the use of imaging techniques, tests of digestive system function, histological interpretation of biopsy specimens, and assessment of nutritional status and pancreatic function. The program must stress the role of the subspecialist as a consultant and promote skills necessary to communicate effectively with the referring physician. In recognition of the importance of outpatient medicine to the practice of pediatric gastroenterology and nutrition, all trainees must spend at least 1/2 day per week for the entire period of training in an ambulatory care clinic in which both new and established patients are seen.

### B. Clinical Experience

#### 1. Patient population

The patient population available to the program must have sufficiently varied and complex diseases and be of a volume sufficient to ensure that the residents have the opportunity to become clinically competent in the management of common as well as uncommon gastrointestinal, hepatobiliary, and pancreatic diseases and nutritional disorders in patients ranging from infancy through young adulthood.

Residents must have ongoing responsibility for the continuing care of patients with chronic gastrointestinal problems and must have sufficient opportunities to provide consultation on a wide variety of patients to become familiar with the gastrointestinal manifestations of a broad spectrum of pediatric illnesses.

This clinical experience must involve the management of patients with gastrointestinal and nutritional diseases and disorders, including but not limited to those listed below in V.B.2 as well as familiarity with the principles of evaluation and follow-up care of patients requiring liver transplantation and those with small bowel disease.

#### 2. Diseases/Disorders

- a. Growth failure and malnutrition including an understanding of nutritional assessment and parenteral and enteral nutrition support
- b. Malabsorption (celiac disease, cystic fibrosis, pancreatic insufficiency, etc)
- c. Gastrointestinal allergy
- d. Peptic ulcer disease
- e. Jaundice
- f. Hepatobiliary disease
- g. Digestive tract anomalies
- h. Chronic inflammatory bowel disease
- i. Functional bowel disorders
- j. Other gastrointestinal disorders, such as gastrointestinal infections; gastrointestinal problems in the immune-compromised host, including graft versus-host (GVH) disease; motility disorders; infectious and metabolic liver diseases; and pancreatitis

- k. Gastrointestinal complications of eating disorders, such as, obesity, bulimia, and anorexia

#### 3. Procedures

- Residents must receive training in the following:
- a. Diagnostic colonoscopy (with and without biopsy) and therapeutic colonoscopy with snare polypectomy
  - b. Diagnostic upper gastrointestinal endoscopy (including biopsy) and therapeutic upper gastrointestinal endoscopy
  - c. Esophageal pH monitoring
  - d. Diagnostic and therapeutic flexible sigmoidoscopy
  - e. Paracentesis
  - f. Percutaneous liver biopsy
  - g. Rectal biopsy
  - h. Removal of foreign bodies from the gastrointestinal tract
  - i. Small bowel biopsy

In addition, residents should have training in the following:

- a. Anorectal manometry
- b. Breath hydrogen analysis
- c. Dilatation of esophagus
- d. Therapeutic upper panendoscopy (sclerosis of esophageal varices)
- e. Esophageal manometry
- f. Pancreatic stimulation test
- g. Placement of percutaneous gastrostomy
- h. Endoscopic placement of feeding tubes

Residents must also be familiar with the basic principles, indications, and risks of advanced endoscopic procedures, such as endoscopic retrograde cholangiopancreatography (ERCP), endoscopic ultrasonography, endoscopic laser therapy, esophageal endoscopic stent placement, and endoscopic esophageal fundoplication.

The residents' understanding of the indications, risks, and benefits of diagnostic and therapeutic procedures, as well as development of skills in their performance must be documented and included in the regular resident evaluations.

### C. Didactic and Laboratory Experience

The program must have a well-developed formally structured curriculum, including courses, workshops, seminars, and laboratory experience, that provides an appropriate background for residents in the basic and fundamental disciplines related to the digestive system, such as embryology, physiology, pharmacology, nutrition, pathology, biochemistry, molecular biology, immunopathology, and genetics. Training in the evaluation of the psychosocial aspects of chronic gastrointestinal disease as they affect the child and competence in counseling chronically ill patients and their families should be components of the training program. Health education, biomedical ethics, and preventive measures for digestive disease also should be emphasized.

Interdisciplinary conferences with pediatric radiology, pediatric pathology, and pediatric surgery should be held at least quarterly.

*ACGME: February 2002 Effective: July 2002*

## Program Requirements for Residency Education in Pediatric Hematology/Oncology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

## I. Scope of Training

An accredited program in pediatric hematology/oncology must provide the educational environment for the subspecialty resident to develop an understanding of the pathophysiology of pediatric hematologic and oncologic disorders and competence in the clinical diagnosis and management of these disorders. There must be training in the selection, performance, and evaluation of procedures necessary for appropriate assessment of these disorders.

The program must emphasize the fundamentals of clinical diagnosis, with special emphasis on history taking and physical examination, and must provide sufficient clinical experience with both inpatients and outpatients who have hematologic and oncologic disorders to allow residents to develop skill in diagnosing and managing both common and unusual problems.

## II. Faculty

### A. Pediatric Hematology/Oncology Specialists

At least four pediatric hematologists/oncologists must be based at the primary teaching site and must devote sufficient time to the program to ensure adequate teaching and to provide critical evaluation of the progress and competence of the subspecialty residents.

### B. Other Physician Teaching and Consultant Faculty

In addition to the full range of pediatric subspecialists, appropriate consultants must be available in related disciplines, including radiation oncology, gynecology, neuro-oncology, pain control, and physical medicine and rehabilitation.

## III. Facilities/Resources

### A. Outpatient and Inpatient

Space in an ambulatory setting must be provided for optimal evaluation and care of patients, including facilities for outpatient chemotherapy and transfusions. An inpatient area with a full array of pediatric and related services staffed by pediatric residents and faculty also must be present.

### B. Laboratories

The program also must have access to specialized laboratories capable of assaying red-blood-cell enzymes, identifying unusual hemoglobins, performing human lymphocyte antigen typing, immunophenotyping leukemic blast cells, performing flow cytometry, performing cytogenetic analysis, and identifying complex congenital and/or acquired hemostatic abnormalities.

The principal training institution also should have available the diagnostic services of radiology, including full-body magnetic resonance imaging, nuclear medicine, computerized tomography, sonography, angiography, clinical chemistry, microbiology, immunology, and cytogenetics.

## IV. Educational Program

### A. Patient Population

Adequate numbers of patients with hematologic and oncologic disorders, ranging in age from newborn through young adult, must be available to the training program. Each subspecialty resident must have continuing responsibility for the care of patients with malignant disease and chronic hematologic problems.

An accredited program should have at least 60 patients with newly diagnosed oncologic disease each year. A program having fewer such patients must specifically demonstrate that it is able to provide the breadth of experience required for the number of subspecialty residents in the program.

To become familiar with the hematologic manifestations of a broad spectrum of pediatric illnesses, each subspecialty resident must provide consultation for a sufficient variety of patients. A program without a sizable population of patients with nononcologic hematologic disorders, such as one based in a cancer center, must demonstrate how residents will gain exposure to sickle cell disease, hemophilia, and other acute and chronic hematologic problems.

### B. Clinical Experience

The clinical experience must involve patients who have a broad variety of hematologic-oncologic problems that should include but not be limited to the following categories:

1. Hematologic disorders of the newborn
2. Hemoglobinopathies, including the thalassemia syndromes
3. Inherited and acquired disorders of the red-blood-cell membrane and of red-blood-cell metabolism
4. Autoimmune disorders including hemolytic anemia
5. Nutritional anemia
6. Inherited and acquired disorders of white blood cells
7. Hemophilia, von Willebrand's disease, and other inherited and acquired coagulopathies
8. Platelet disorders, including idiopathic thrombocytopenic purpura (ITP) and acquired and inherited platelet function defects
9. Congenital and acquired thrombotic disorders
10. Congenital and acquired immunodeficiencies
11. Leukemias, both acute and chronic
12. Lymphomas
13. Solid tumors of organs, soft tissue, bone, and central nervous system
14. Bone marrow failure
15. Transfusion medicine and use of blood products
16. Management of the patient undergoing long-term transfusion therapy
17. Bone marrow reconstitution including use of allogeneic peripheral blood stem cells and umbilical cord blood
18. Graft-versus-host disease

The subspecialty residents must become familiar with all aspects of chemotherapy as well as the pertinent aspects of surgical therapy and radiotherapy in managing patients with malignant diseases. They also must be taught the diagnosis, management of complications, and treatment of infections in the compromised host and indications and procedures for transfusion of blood components, including apheresis, plateletpheresis, and stem cell harvest and infusion. The program also should instruct the subspecialty residents in the methods of physiologic support of the cancer patient, including parenteral nutrition, control of nausea, and management of pain.

The pediatric oncology component of the program must include education in the staging and classification of tumors, the application of multimodal therapy, the epidemiology and etiology of childhood cancer, how to make appropriate observations, and how to keep accurate patient data. The experience should include learning to function as a member of a multidisciplinary team serving patients with cancer and chronic hematologic disorders.

The subspecialty resident should participate in the activities of the tumor board and in the provision of comprehensive care to the child with cancer and should have experience in support of the patient, family, and staff in dealing with terminal illness. Residents should be guided in the development of skills in communication and counseling, including the recognition and management of psychosocial problems in pediatric patients.

### C. Laboratory Experience and Diagnostic Procedures

Appropriate educational experiences in the laboratories, including blood bank and tissue pathology, should be included. There must be instruction in the proper use of laboratory techniques for diagnosis, with recognition of the limitations of the various methods and the pitfalls in interpretation of laboratory results. This should include the normal variations in laboratory data that occur at different ages and the influence of medications, toxins, and systemic disease on hematologic values.

Subspecialty residents must be provided with a background that will enable them to utilize the current diagnostic procedures of hematology and oncology. These include (a) the performance and interpretation of bone marrow aspiration and biopsy, (b) lumbar puncture with evaluation of cerebrospinal fluid, (c) microscopic interpretation of peripheral blood films, and (d) interpretation of all hematologic laboratory diagnostic tests.

### D. Curriculum

The training program should provide instruction in the related basic sciences, including the structure and function of hemoglobin and iron metabolism, the phagocytic system, splenic function, cell kinetics, immunology, coagulation, genetics, the principles of radiation therapy, the characteristics of malignant cells, tissue typing, blood groups, pharmacology of chemotherapeutic agents, molecular biology, microbiology and anti-infective agents in the compromised host, and nutrition.

Within the research conferences and clinical experiences, the residents must be exposed to the concept of multi-institutional collaborative research as exemplified by the pediatric oncology cooperative groups.

ACGME: September 1999 Effective: July 2000

## Program Requirements for Residency Education in Pediatric Infectious Diseases (Pediatrics)

### I. Introduction

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in pediatric infectious diseases also must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

### II. Scope of Training

A period of 3 years of progressive educational experience is required to provide subspecialty residents with the background and experience that will enable them to provide optimal care and consultation to pediatric patients with infectious diseases. To achieve this, the clinical and technical training must include properly balanced, well-organized, and progressive teaching, research, and consultative experiences. The educational program also must encompass basic concepts in immunology, epidemiology, clinical pharmacology, and infection control as they relate to patient care and training in the prevention of infectious diseases.

### III. Faculty

#### A. Pediatric Infectious Diseases

Supervision of subspecialty residents must be provided by members of the teaching staff who are skilled in medical education and re-

search, as well as in care of patients, and can devote adequate time to these endeavors. The supervising faculty must include teaching staff who are active and competent in pediatric infectious diseases and who are available to ensure proper education and patient care as appropriate. There must be at least two pediatric infectious diseases teaching staff to ensure adequate time for administrative, clinical, and research activities involved in the education of subspecialty residents. Clinical supervision must be on a 24-hour-a-day, 7-day-a-week basis.

#### B. Other Physician Teaching and Consultant Faculty

Consultant faculty in related disciplines must also be available at the institution where the training occurs, including

1. allergy-immunology
2. dermatology
3. microbiology

Consultants in clinical and laboratory aspects of mycology, virology, parasitology, and clinical pharmacology also should be available.

### IV. Facilities/Resources

Facilities and resources available to the program for the required clinical experiences must include at least the following:

#### A. Outpatient and Inpatient Facilities

The following facilities must be available at the primary teaching site:

1. An ambulatory facility for appropriate evaluation and care of patients from the newborn period to early adulthood.
2. An inpatient facility with full pediatric (including adolescent) and related services that are staffed by pediatric residents and faculty and that includes
  - a. facilities for isolation of patients with infectious diseases;
  - b. pediatric and neonatal intensive care units; and
  - c. support services including radiology, hematology, nuclear medicine, and pathology.

#### B. Laboratories

There must be access to clinical microbiology laboratories that include techniques for identification of bacteria, mycobacteria, fungi, viruses, rickettsiae, chlamydiae, and parasites in tissues and body fluids.

#### C. Other

There must be an infection control program with a physician leader who has knowledge of epidemiology of pediatric infectious diseases, written protocols for prevention of infection and its spread, an active surveillance system, and an interventional plan for outbreak control.

### V. Educational Program

#### A. Patient Population

An adequate number and variety of patients with infectious diseases, ranging in age from newborn through young adulthood, must be available to the educational program and to each subspecialty resident. This patient population must include inpatients, outpatients, and patients with chronic diseases.

The program must ensure that each subspecialty resident provides consultation for an appropriate variety of patients in order to become familiar with the manifestations of a broad spectrum of infectious diseases. Such experiences must encompass longitudinal care, which provides the opportunity for observation of the course of illness and the benefits and risks of therapy.

The clinical population must include but not be limited to patients with the following conditions:

1. Primary immunodeficiency
2. Prematurity, low-birth-weight infants
3. HIV disease
4. Immunosuppression secondary to malignancies and to chemotherapeutic or immunosuppressive agents
5. Postoperative patients

### B. Clinical Experience

Clinical experience in the application and interpretation of diagnostic tests and indications, risks, and interpretation of the results of therapeutic procedures must be provided for all subspecialty residents in the program. This must involve experience with outpatients and inpatients having infectious diseases such as:

1. Upper respiratory tract infections
2. Lower respiratory tract infections
3. Central nervous system infections
4. Urinary tract infections
5. Cardiovascular infections
6. Bone and joint infections
7. Skin/soft tissue/muscle infections
8. Gastrointestinal tract/intra-abdominal infections
9. Hepatic/biliary infections
10. Ocular infections
11. Reproductive tract infections
12. Sexually transmitted diseases
13. Foreign-body and catheter-related infections
14. HIV infection
15. Nosocomial infections
16. Surgical and traumatic wound infections
17. Congenital infections

### C. Curriculum

The program must have a well-developed, formally structured curriculum that is designed to

1. provide subspecialty residents with the information and experience necessary to diagnose and manage pediatric patients with a wide variety of acute and chronic infectious diseases, including disorders of host defense;
2. prepare the subspecialty resident to understand and manage the principles of disease control, prevention of nosocomial infections, emerging pathogens, immunization programs, and/or vaccine-preventable diseases;
3. teach basic epidemiologic and biostatistical methods and their application to clinical research and patient care;
4. teach the subspecialty resident the functions and appropriate utilization of diagnostic microbiology, immunology, virology, mycology, and parasitology laboratories;
5. prepare the subspecialty residents to conduct research in the broad area of pediatric infectious diseases; and
6. ensure acquisition of appropriate teaching skills that can be used in the area of pediatric infectious diseases.

The educational program must include training in

1. the appropriate use of antimicrobial agents in a variety of clinical settings, their mechanisms of action, pharmacokinetics, and potential adverse reactions;
2. microbiological and immunologic factors that determine the outcome of the interaction between host and microbe;
3. microbiology laboratory techniques, including culture techniques, rapid diagnostic methods, and molecular methods for identification of bacteria, mycobacteria, fungi, viruses, rickettsiae, chlamydiae, and parasites in clinical specimens;
4. the effects of underlying disease states and immunosuppressive therapies on host response to infectious agents;
5. mechanisms of protection against infection, eg, active or passive immunization and immunomodulating agents;

6. clinical pharmacology of antimicrobial agents including drug interactions, adverse reactions, dose adjustments for abnormal physiology, and principles of pharmacokinetics and pharmacodynamics;
7. methods of determining activity of antimicrobial agents and techniques to determine their concentrations in blood and other body fluids;
8. indications for diagnostic procedures and the interpretation of results. For example, bronchoscopy, thoracentesis, arthrocentesis, lumbar puncture, and aspiration of abscess cavities and soft tissues;
9. the sensitivity, specificity, efficacy, benefits, and risks of contemporary technologies, such as those for rapid microbiologic diagnosis and for diagnostic imaging;
10. the principles and practice of hospital epidemiology and infection control;
11. the understanding of adverse events attributed to specific immunizations and immunomodulators;
12. public health issues pertinent to pediatric infectious diseases.

ACGME: February 2002 Effective: July 2002

## Program Requirements for Residency Education in Pediatric Nephrology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following specialty requirements. The specialty requirements may exceed the common requirements.

### I. Scope of Training

The purpose of the training program must be to provide the subspecialty resident with the capability and experience to diagnose and manage renal diseases and to understand the physiology of fluid and electrolyte and acid-base regulation.

The training program must be designed to develop the physician's competence in clinical diagnosis, pathophysiology, and medical treatment of disorders of the kidneys; urologic abnormalities; hypertension; and disorders of body fluid physiology in newborns, infants, children, adolescents, and young adults. This experience should include the therapy of acute renal failure and end stage renal disease, including hemodialysis, continuous hemofiltration, peritoneal dialysis, and renal transplantation. Training and experience in selection, performance, and evaluation of procedures, including the renal biopsy, that are necessary for morphologic and physiologic assessment of renal disease must be included.

There should also be training in the evaluation of psychosocial aspects of life-threatening and chronic diseases as they affect the patient and the family and in counseling both acutely and chronically ill patients and their families.

The resident also should be provided with instruction and experience in the operational aspects of a pediatric nephrology service, including the dialysis facility. Knowledge of the staffing needs, unit management, preparation of grant proposals, quality improvement programs, appropriate communications with the referring physicians, and planning for program development should be acquired during training.

## II. Faculty

A program must have at least two qualified pediatric nephrologists and ensure access to the full range of pediatric subspecialists. In addition, appropriate consultant faculty and staff must be available in related disciplines, including, but not limited to, pediatric urology, pediatric surgery, pathology, radiology, immunology, psychiatry, and organ transplantation.

## III. Facilities/Resources

Inpatient, ambulatory care, and laboratory facilities that are necessary to accomplish the overall educational program must be available and functioning. Specifically, there must be facilities for renal replacement therapy and renal biopsy. The following must also be available: a radiology service that can provide modern renal-related procedures, a diagnostic radionuclide laboratory, biochemistry and serologic laboratories; a nutrition support service; and relevant social and psychological services. Surgery, urology, psychiatry, pathology, and radiologic services must be available.

## IV. Educational Program

### A. Patient Population

The primary teaching site must have at least 5 pediatric kidney transplants per year or have a formal written agreement with another institution that ensures nephrology residents will have adequate experience with renal transplantation.

The training program should be of sufficient size to ensure adequate exposure of residents to patients with acute renal failure and a chronic dialysis patient population, including patients that utilize home dialysis treatment modalities, to ensure adequate training in chronic dialysis.

The training program must afford the residents the opportunity to care for patients with renal and other disorders in the intensive care unit setting.

Adequate numbers of patients with a wide variety and complexity of renal disorders must be available to the training program. It is important that the residents have continuing responsibility for the care of outpatients throughout their training.

### B. Clinical Experience

The residents must have formal instruction, clinical experience, or opportunities to acquire expertise in the prevention, evaluation, and management of the following:

1. Perinatal and neonatal conditions, including genetic disorders and congenital anomalies of the genitourinary tract
2. Hypertension
3. Acute renal failure
4. Chronic renal failure
5. New end-stage renal disease
6. Urinary tract infections
7. Renal transplantation
8. Neoplasms of the kidney
9. Fluid and electrolyte and acid base disorders
10. Acute and chronic glomerular diseases
11. Renal tubular disorders
12. Nephrolithiasis
13. Voiding dysfunction and urologic disorders
14. Renal dysplasia and cystic disease of the kidney
15. Inherited renal disorders

### Special Experiences

In addition, residents must have experience in the following:

1. Evaluation and selection of transplant candidates
2. Preoperative evaluation and preparation of transplant recipients

3. Recognition and medical management of surgical and non-surgical complications of transplantation
4. Dialysis therapy. Each resident should have exposure to dialysis and extracorporeal therapies, which includes
  - a. Evaluation and selection of patients for continuous renal replacement therapies.
  - b. Long-term follow-up with patients undergoing chronic dialysis.
  - c. Understanding of the principles and practices of both hemodialysis and peritoneal access.
  - d. Understanding of the special nutritional requirements of hemodialysis of patients.

### C. Technical Experiences

Residents must be given sufficient experience with indications, contraindications, complications, and interpretation of results in the following areas to enable them to develop appropriate expertise:

1. Urinalysis
2. Percutaneous biopsy of both native and transplanted kidneys
3. Peritoneal dialysis
4. Acute and chronic dialysis and hemofiltration
5. Renal ultrasound

### D. Curriculum

The program must offer instruction through courses, workshops, seminars, and laboratory experience to provide appropriate background for residents in diagnostic techniques and in the basic and fundamental disciplines related to the kidney. These should include immunopathology, cell biology, molecular biology, magnetic resonance imaging, computed tomography, ultrasound, and nuclear medicine.

ACGME: September 1999 Effective: July 2000

## Program Requirements for Residency Education in Pediatric Pulmonology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

### I. Scope of Training

The purpose of an accredited program is to provide the resident with the background to diagnose and manage pediatric patients with acute and chronic respiratory disorders, including those that are life-threatening, and to prepare the resident to conduct research in this field. The program should emphasize normal pulmonary physiology in pediatric patients and correlation of pathophysiology with clinical disorders. It must require research and provide opportunity for the development of teaching skills on the part of the residents. This educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of patients and their families.

The training program must be designed to develop the subspecialty resident's competence in the clinical diagnosis, pathophysiology, and medical treatment of respiratory disorders in pediatric patients. There must be training in the selection, performance, and evaluation of procedures necessary for morphologic and physiologic assessment of pulmonary diseases.

## II. Faculty/Personnel

### A. Pediatric Pulmonology Specialists

There must be at least two qualified pediatric pulmonologists who provide sufficient time to the program to ensure its educational and research quality and to provide adequate supervision of pulmonology residents. These staff must be certified in pediatric pulmonology by the American Board of Pediatrics or have equivalent qualifications.

### B. Other Physician Teaching and Consultant Faculty

In addition to having the full range of pediatric subspecialists, the program must have consultant faculty in related disciplines at the institution where the training takes place. These must include faculty with special expertise in the following areas:

- Pediatric surgery and cardiothoracic surgery
- Allergy/immunology
- Pediatric otolaryngology
- Pediatric radiology
- Pediatric anesthesiology
- Pediatric pathology

In addition, consultants should be available in the following areas:

- Genetics
- Pediatric neurology
- Developmental and behavioral pediatrics
- Pediatric psychiatry

### C. Other Professional Personnel

The following other professional staff are essential contributors to a program in that they enhance the subspecialty resident's understanding of the multidisciplinary nature of pediatric pulmonology: pediatric respiratory therapy staff, pulmonology nursing staff, social workers and support staff, pediatric nutritionist and registered dietitian, pediatric pharmacist, physical and occupational therapist, child life therapist, and speech therapist.

## III. Facilities/Resources

An accredited program must have adequate facilities to support the educational activities.

### A. Inpatient and Outpatient

There must be an inpatient area with full pediatric and related services, including a pediatric intensive care unit and neonatal intensive care unit, staffed by pediatric residents and faculty. The inpatient unit also must be capable of meeting the specific needs of young adults with cystic fibrosis, including a transition to adult pulmonologists where appropriate.

Adequate space in an ambulatory setting must be available for optimal evaluation and care of patients.

### B. Laboratory and Support Services

Full support services, including radiology, laboratory, nuclear medicine, and pathology, must be available at the primary teaching site. At this site there also must be a pediatric pulmonary function laboratory capable of measuring lung volumes, including body plethysmography, flows, gas exchange, bronchoprovocation studies, and polysomnography.

A suite in which flexible bronchoscopy examinations in pediatric age patients can be performed must be present at the primary site or available through affiliation with another institution.

### C. Research Resources

Adequate resources for research and/or clinical studies, including statistical consultation, laboratory space, and computer services, must be available.

## IV. Educational Program

### A. Patient Population

An adequate number and variety of patients with pulmonary disorders who range in age from newborn through young adulthood must be available. The patient population must be sufficiently varied and frequently encountered so as to ensure that the pediatric pulmonology resident has the opportunity to become clinically competent in its management.

### B. Clinical and Continuity Experience

There should be sufficient opportunity for the subspecialty residents to provide consultation on a variety of patients to enable them to become familiar with the pulmonary manifestations of a broad spectrum of pediatric illnesses. It is particularly important that they have continuing responsibility for the care of patients with chronic pulmonary problems.

The clinical experience must include but not be limited to the following categories:

1. Asthma and allergic disorders affecting the pulmonary system
2. Bronchopulmonary dysplasia
3. Cystic fibrosis
4. Lower respiratory tract infections
5. Newborn respiratory diseases
6. Pulmonary intensive care
7. Sleep disordered breathing, such as apnea
8. Airway appliances and chronic ventilatory assistance
9. Aspiration syndromes
10. Anomalies of the respiratory system, including upper airway obstruction
11. Chronic suppurative lung disease
12. Respiratory infections in the immunocompromised host
13. Other diseases such as pulmonary hypertension, interstitial lung disease, hemosiderosis, carbon monoxide poisoning, and acute lung injuries

### C. Diagnostic Tests and Procedures

Clinical experience in the interpretation of a variety of diagnostic tests and the performance of therapeutic procedures must be part of the training, including tests of pulmonary function and evaluation of respiration during sleep. The subspecialty resident must have the opportunity to become proficient in bronchoscopy, thoracentesis, and techniques of chest physiotherapy and pulmonary rehabilitation. Training must include consultative experience in pulmonary intensive care and must provide the opportunity for the subspecialty residents to develop an understanding of how a patient's critical respiratory problems affect other critical organ systems.

### D. Curriculum

The program must offer instruction through courses, workshops, seminars, and laboratory experience to provide an appropriate experience for residents in the basic and fundamental disciplines related to the lung, including allergy and immunology, and immunopathology. Training must be provided in the evaluation of the psychosocial aspects of chronic pulmonary disease as they affect the pediatric patient and his or her family.

The program also must provide opportunities for and instruct the subspecialty residents in the development of competence in counseling chronically ill patients and their families. Health education and preventive measures related to pulmonary disease also should be emphasized.

### E. Teaching and Administrative Experience

The subspecialty resident must be provided with instruction and experience in operational aspects of a pediatric pulmonology facility,

including staffing needs, unit management, and planning for program development.

ACGME: September 1999 Effective: July 2000

## Program Requirements for Residency Education in Pediatric Rheumatology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in pediatric rheumatology must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

### I. Introduction

The purpose of a program in pediatric rheumatology is to provide subspecialty residents in pediatric rheumatology with the background to diagnose and manage patients with acute and chronic rheumatic and musculoskeletal diseases, including those that are life-threatening, and to help them develop investigative skills related to this specialized field.

### II. Duration and Scope of Training

An accredited program in pediatric rheumatology must provide 3 years of training to allow sufficient time for the subspecialty residents to develop expertise in the long-term continuity of care that is required for the patients and to understand the natural history of the diseases. Continuity of care for a panel of patients throughout the 3 years is required.

### III. Faculty

#### A. Pediatric Rheumatologists

There must be at least two pediatric rheumatologists in the program to ensure adequate time for the administrative, clinical, and research activities involved in educating the subspecialty residents.

#### B. Other Physician Teaching and Consultant Faculty

Consultant and collaborative faculty in related disciplines, particularly pediatric orthopedics, must be available at the institution where training takes place. There must be pediatric subspecialists available in cardiology, gastroenterology, hematology/oncology, immunology, infectious disease, and nephrology, as well as specialists who have expertise with pediatric patients in at least the following areas: dermatology, ophthalmology, pathology, and physical medicine and rehabilitation. Collaboration with basic science departments and with internal medicine rheumatology programs is encouraged.

#### C. Other Personnel

Staff from allied health disciplines, including registered physical and occupational therapists, must be available. The presence of a nurse specialist, a pediatric social worker, and a nutritionist is highly recommended.

### IV. Facilities and Resources

There must be full support services, including nuclear medicine and access to pediatric rehabilitation services, electromyography laboratory and clinical immunology laboratory.

## V. Educational Program

### A. Breadth of Experience

The program must provide subspecialty residents with a thorough knowledge of normal growth and development with emphasis on the musculoskeletal system, as well as the correlation of pathophysiology with clinical diseases. The program should ensure the availability of all facilities and personnel necessary for the complete care of infant, child, adolescent, and young adult patients with rheumatic diseases. A patient population of sufficient size must be available to ensure training of both the general pediatric residents and the rheumatology residents.

The program must ensure that each subspecialty resident has the opportunity to provide continuing responsibility for both acute and chronic rheumatic diseases in order to observe the natural history of the disease process and effectiveness of therapeutic programs. Continuing responsibility for the care of patients with chronic rheumatic diseases is of particular importance.

### B. Clinical Experience

The clinical component of the program must provide broadly based experience with a variety of rheumatic and musculoskeletal diseases and must be designed to develop the subspecialty resident's understanding of the pathophysiology of various rheumatic diseases and to promote competence in the clinical diagnosis and medical management of these disorders. There must be training in the selection, performance, and evaluation of procedures necessary for pathologic, physiologic, immunologic, microbiologic, and psychosocial assessment of rheumatic and musculoskeletal diseases.

#### 1. Diagnostic tests and procedures

The program must provide sufficient experience for the residents to acquire skill in

- Therapeutic injection of diarthrodial joints;
- Nailfold capillary microscopy;
- Use of nonsteroidal anti-inflammatory drugs, disease-modifying drugs, biologic response modifiers, glucocorticoids, cytotoxic drugs, and infectious/post-infectious therapy.

#### 2. The program must provide sufficient training for the residents to become proficient in the following:

- Diagnostic aspiration of joints and interpretation of analysis of joint synovial fluid
- Prescription of physical therapy, occupational therapy, splints, and other therapeutic modalities
- Bone and joint imaging
- Evaluation for surgical intervention, including participation in both preoperative and postoperative patient management
- Interpretation and utilization of laboratory tests as they relate to rheumatic disorders
- Understanding the indications for electromyographic (EMG) and nerve conduction studies
- Performing biopsies of tissues relevant to rheumatic diseases
- Slit lamp examination of the eye

#### 3. Patient population

The patient population must be sufficiently varied and the volume sufficiently large to assure the subspecialty resident of the opportunity to become clinically competent in the management of common as well as uncommon rheumatic disorders. The patient population must be characterized by ample diversity of rheumatic diseases including but not limited to the following categories:

- Infectious/post-infectious such as acute rheumatic fever and Lyme disease
- Juvenile rheumatoid arthritis
- Kawasaki disease
- Systemic lupus erythematosus

- e. Scleroderma
  - f. Dermatomyositis/polymyositis
  - g. Henoch-Schönlein purpura
  - h. Other vasculitic disorders, eg, Wegners and Polyarteritis nodosa
  - i. Nonarticular rheumatic diseases including reflex neurovascular dystrophy and fibromyalgia
  - j. Infections of bones and joints
  - k. Neonates with consequences of maternal rheumatic diseases or medications for rheumatic diseases
  - l. Spondyloarthropathies, psoriasis, and other HLA B27-related disorders
  - m. Malignancies of bone and muscle
  - n. Disorders of collagen and connective tissue
  - o. Rheumatic aspects of immunocompromised (congenital or acquired) children
  - p. Rheumatic aspects of systemic diseases such as endocrine, metabolic, gastrointestinal and infectious diseases, skeletal dysplasias, and other systemic diseases
  - q. Sports injuries, including over use syndromes
  - r. Avascular necrosis, including Legg-Perthes syndrome
  - s. Osteochondritis syndromes
- C. There should be sufficient opportunity for the subspecialty resident to provide consultation for wide variety of patients with rheumatic complaints common in the spectrum of other childhood diseases.

#### D. Curriculum

##### 1. Basic sciences and conferences

The program must emphasize anatomy, immunology, physiology, biochemistry, genetics, and molecular biology of the musculoskeletal system in the developing child and the young adult.

##### 2. Didactic and laboratory experience

The program must have a well-developed, formally structured curriculum, including courses, workshops, seminars, and laboratory experience that provides an appropriate background for subspecialty residents in the basic and fundamental disciplines related to the musculoskeletal system and rheumatic disease, eg, anatomy, biochemistry, embryology, genetics, immunology, molecular biology, pathology, pharmacology, and physiology. Instruction and experience in rehabilitative and psychosocial aspects of chronic rheumatic diseases as they affect the child are essential. Experience in counseling chronically ill patients and their families must be a component of the training program. Health education, current health care legislation, biomedical ethics, and preventive measures also should be emphasized.

##### 3. Health care team

The subspecialty residents must be exposed to formal sessions on organization and leadership of a comprehensive health care team and the utilization of the services of all relevant allied health professionals, including those in social services, rehabilitation, education, and mental health. There also must be education in the use of community resources in the care of children with rheumatic diseases.

ACGME: February 2002 Effective: July 2002

## Program Requirements for Residency Education in Pediatric Sports Medicine (Pediatrics)

### I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics.

### II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

### III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers should also be included.

### IV. Facilities and Resources

The program must include the following:

#### A. Patient Population

A patient population, unlimited by age or gender and adequate in number and variety to meet the needs of the training program, must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

#### B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. Nonsurgical residents must be supervised by a

physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacology must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

#### **C. Sporting Events/Team Sports/Mass-Participation Events**

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

#### **D. Acute-Care Facility**

There must be an acute-care hospital, with a full range of services, associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

### **V. Educational Program**

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and the primary care or emergency medicine ambulatory facility.

Residents must spend 1/2 day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

#### **A. Preparticipation Evaluation of the Athlete**

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

#### **B. Acute Care**

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

#### **C. Sports Medicine Clinic Experience**

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

#### **D. On-Site Sports Care**

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

#### **E. Mass-Participation Sports Events**

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local emergency medical systems, and other medical aspects of those events.

### **VI. Specific Knowledge and Skills**

#### **A. Clinical**

The program must provide educational experiences for the residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, eg, diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

#### **B. Patient Education/Teaching**

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, eg, nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

*ACGME: June 2000 Effective: June 2000*

# Program Requirements for Residency Education in Physical Medicine and Rehabilitation

## I. Introduction

### A. Definition of Physical Medicine and Rehabilitation

Physical medicine and rehabilitation (PM&R), also referred to as *physiatry*, is a medical specialty concerned with diagnosis, evaluation and management of persons of all ages with physical and/or cognitive impairment and disability. This specialty involves diagnosis and treatment of patients with painful or functionally limiting conditions, the management of comorbidities and coinfections, diagnostic and therapeutic injection procedures, electrodiagnostic medicine and emphasis on the prevention of complications of disability from secondary conditions.

Physiatrists are trained in the diagnosis and management of impairments of the neurologic, musculoskeletal (including sports and occupational aspects) and other organ systems and the long-term management of patients with disabling conditions. Physiatrists provide leadership to multidisciplinary teams concerned with maximal restoration or development of physical, psychological, social, occupational and vocational functions in persons whose abilities have been limited by disease, trauma, congenital disorders or pain to enable people to achieve their maximum functional abilities.

### B. Program Design and Evaluation

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

#### 1. Program design

a. All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Physical Medicine and Rehabilitation as part of the regular review process.
2. The participation or change in participation by any institution which provides 3 months or more of training must be reported within 30 days to the RRC and approved by the RRC.

b. Programs that cosponsor combined training in PM&R and another specialty must so inform the RRC. Residents in such training must be informed of the necessary requirements of the specialty boards in question.

#### 2. Program evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents must be utilized in this process.

### C. Duration of Training

1. a. Four years of graduate medical education are necessary to complete training for a physician seeking specialization in this field, 3 years of which must be physical medicine and rehabilitation training. Of these 3 years, no more than 6 months can be elective. No more than 1 month of this elective time may be taken in a non-ACGME-accredited program, unless prior approval is given by the RRC.
- b. One year of the 4 years of training is to develop fundamental clinical skills. This year of training in fundamental clinical skills must consist of an accredited Transitional Year or in-

clude 6 months or more inpatient responsibility in accredited training in family practice, internal medicine, obstetrics-gynecology, pediatrics, or surgery, or any combination of these patient care experiences. The remaining months of this year may include any combination of accredited specialties or subspecialties.

Accredited training in any of the specialties or subspecialties selected must be for a period of at least 4 weeks. No more than 8 weeks may be in nondirect patient care experiences. Training in fundamental clinical skills must be completed within the first 2 years of the 4-year training program.

2. Training programs may choose either to provide 3 years of physical medicine and rehabilitation training and appoint residents at the PG-2 level contingent on satisfactory completion of 1 year's accredited training in fundamental clinical skills or to provide 4 years of training to include 12 months of these fundamental clinical skills in areas other than physical medicine and rehabilitation.
3. a. A training program of 3 years' duration is responsible for the 36 months of physical medicine and rehabilitation training and responsible for assuring that residents appointed at the PG-2 level have received satisfactory training in fundamental clinical skills.
- b. A training program of 4 years' duration is responsible for the quality of the integrated educational experience for the entire training program, including 12 months of training in fundamental clinical skills in areas other than physical medicine and rehabilitation.

### D. Objectives for Residency Training

1. The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate
  - a. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health;
  - b. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care;
  - c. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care;
  - d. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals;
  - e. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population; and
  - f. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.
2. An approved residency in physical medicine and rehabilitation must document that it provides an educational experience of such quality and excellence as to offer its graduates the opportunity for attainment of those competencies necessary for entry level independent practice of this specialty. This must include knowledge about the diagnosis, pathogenesis, treatment, prevention, and rehabilitation of those neuromusculoskeletal, neuro-behavioral, cardiovascular, pulmonary, and other system

disorders common to this specialty in patients of both sexes and all ages. The training program must provide the opportunity for the graduate to develop the attitudes and psychomotor skills required to

- a. modify history-taking technique to include data critical to the recognition of functional abilities and physical and psychosocial impairments that may cause functional disabilities;
  - b. perform the general and specific psychiatric examinations, including electromyography, nerve conduction studies, and other procedures common to the practice of physical medicine and rehabilitation;
  - c. make sound clinical judgments; and
  - d. design and monitor rehabilitation treatment programs to minimize and prevent impairment and maximize functional abilities.
3. The training program must provide the opportunity for the graduate to be able to coordinate effectively and efficiently an interdisciplinary team of allied rehabilitation professionals for the maximum benefit of the patient by
- a. an understanding of each allied health professional's role,
  - b. the ability to write adequately detailed prescriptions based on functional goals for psychiatric management, and
  - c. the development of management and leadership skills.
4. Additionally, the training program must stress the importance of self-evaluation, continuing medical education and continued professional development after graduation. The training program must provide the opportunity for the resident to develop the necessary written and verbal communication skills essential to the efficient practice of psychiatry.
5. The organization and philosophy of the residency program must provide the opportunity for development of the clinical competence of the resident. The curiosity and creativity of all residents must be stimulated. They must be involved in the critical appraisal of current literature.
6. All provisions of the Institutional Requirements must also be met for accreditation.

## II. Administration and Organization

### A.

Physical medicine and rehabilitation must be organized as an identifiable specialty within the sponsoring institution.

### B. Participating Institutions

1. When two or more institutions affiliate to participate in residency education, a written agreement, signed by the authorities of each institution, must document the following:
  - a. The purpose and scope of the affiliation for residency education
  - b. The financial, faculty and facility resources involved
  - c. An administrative relationship between the institutions that ensures the program director's authority to accomplish the goals and objectives of the clinical and didactic curriculum at all training sites
  - d. Designation of the authority and responsibility for the day-to-day program operations at the participating institution to a key faculty member who reports to the program director
  - e. Assurance that residents assigned to all training sites will attend their core conferences
2. At each participating training site, the program must be provided with the necessary professional, technical and clerical personnel needed to support the residency.
3. Institutions sponsoring or participating in residency training in physical medicine and rehabilitation should be appropriately accredited by the Joint Commission on Accreditation of Healthcare

Organizations for rehabilitation or the Commission on Accreditation of Rehabilitation Facilities. If the institution is not so accredited, reasons why accreditation was not sought or was denied must be explained, and the inclusion of the institution in resident education must be justified.

4. The sponsoring institution must notify the RRC promptly of any major changes in leadership, governance, affiliation or fiscal arrangements that affect the educational program. The RRC may schedule a site visit when notified of such changes.

### C. Resident Complement

1. The program must select residents in accordance with institutional and departmental policies and procedures. To ensure the stimulating educational atmosphere that a peer group provides, residents should be enrolled in a training program at all times. All training programs should have at least two residents per year in each year of training, with an approximately equal distribution of these residents. In addition, each training program should provide educational experiences that bring together all of the residents of the training program at frequent and regular intervals.
2. Failure to recruit any new residents for 2 consecutive years will result in RRC review and possible adverse action. Also, the program must demonstrate the ability over time to retain qualified residents by consistently graduating at the end of residency at least 80% of the residents enrolled at the beginning of residency.
3. The program director will establish the maximum number of resident positions that can be supported by the educational resources for the program, subject to the approval of the RRC. The program director must report any change in the number of resident positions offered.
4. Before accepting a resident in transfer from another program, the program should obtain a written evaluation of the resident's past performance and experience from the previous program director(s). The program also must accept responsibility for completion of the resident's training and fulfillment of educational goals and objectives leading to eligibility for board certification. Similarly, a program director, if requested to do so, must provide the same information to the appropriate program director for any resident who for any reason may leave the program prior to the completion of training.

## III. Faculty

### A. The Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include the following:
  - a. The program director must have the professional ability, enthusiasm, and sense of responsibility to achieve and maintain high quality of the training program. The director must have the authority and time needed to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the training program and to participate with other institutional program directors in maintaining the quality of all training programs.
  - b. The program director must devote sufficient time to provide adequate leadership to the training program, implementation of the *Essentials*, and supervision for residents. To maintain training program continuity the program director should have adequate tenure of office and be assigned over a period of years.
  - c. The program director must have licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

- d. The program director must be experienced and qualified as a teacher, clinician and administrator, and be certified by the American Board of Physical Medicine and Rehabilitation or possess appropriate educational qualifications as a physiatrist, as determined by the RRC.
- e. The program director must have appointment in good standing to the medical staff of an institution participating in the program.
- f. The program director must have at least 4 years of recent, postresidency experience as a clinician, administrator, and educator in PM&R.
- 2. Responsibilities of the program director include the following:
  - a. The program director is responsible for the accuracy and timeliness of the information on the program information forms and other communications with the RRC.
  - b. The program director must provide for the preparation of a written statement outlining the educational goals and objectives of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review. The program director must be able to document the implementation and achievement of these goals and objectives.
  - c. The program director must provide for the selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - d. The program director must provide for the selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
  - e. The program director must provide for the supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - f. The program director must provide for the regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall

- 1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
- 2. communicate each evaluation to the resident in a timely manner;
- 3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth; and
- 4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- g. The program director must provide for a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- h. The program director must provide for the implementation of fair procedures as established by the sponsoring institution re-

garding academic discipline and resident complaints or grievances.

- i. The program director must provide for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j. The program director must provide for the preparation of an accurate statistical and narrative description of the program as requested by the review committee.
- k. The program director must notify in writing the Executive Director of the RRC within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including but not limited to
  - 1. changes in the program directorship or the departmental leadership (Notification of a change in the program directorship must include a copy of the new director's curriculum vitae, including details of his/her experience and qualifications in graduate medical education.);
  - 2. significant changes in the complement of medical faculty;
  - 3. changes in the resident complement, as defined in section II.C.3, above;
  - 4. changes in administrative structure, such as a change in the hierarchical status of the program/department within the institution;
  - 5. changes in the length of training (whether 3 or 4 years);
  - 6. changes in participation by any institution that provides 3 months or more of training; and
  - 7. significant changes in any institution (see section II.B.4, above).

Upon such notification, the RRC may schedule a site visit of the program.

#### B. Faculty

- 1. There must be a sufficient number of medical staff who are highly competent clinicians and motivated toward teaching residents. There should be a minimum of three full-time equivalent faculty, including the program director, with a ratio of at least one full-time equivalent psychiatric faculty member for every three PG-2 through PG-4 residents.
- 2. The faculty must be certified by the American Board of Physical Medicine and Rehabilitation or possess appropriate educational qualifications as determined by the RRC. Nonphysiatric medical faculty must be appropriately certified or possess appropriate educational qualifications. These teachers must participate regularly and systematically in the training program, both clinical and didactic, and must be readily available for consultations to the resident and be available during clinical crises. Part-time faculty should have specific, regular teaching responsibilities.
- 3. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, and a commitment to their own continuing medical education. The faculty as a whole must set examples for residents, make reasonable scholarly contributions, provide quality clinical care, participate in research, and contribute to the professional literature.
- 4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well

as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

### C. Professional Staff

Professional staff in the disciplines of nursing, occupational therapy, orthotics and prosthetics, physical therapy, psychology, rehabilitation nursing, social service, speech-language pathology, recreational services, and vocational counseling who are appropriately credentialed should be integrated into both the didactic and clinical experience of the resident whenever relevant.

### D. Other Program Personnel

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

- A. It is necessary to have beds assigned to the physical medicine and rehabilitation service grouped in one or more geographic area(s). A minimum census of eight physical medicine and rehabilitation inpatients should be available for each full-time equivalent resident assigned to an acute or subacute inpatient rehabilitation service.
- B. There must be adequate equipment and space available to carry out a comprehensive training program in physical medicine and rehabilitation. There must be specific equipment for physical medicine interventions, and residents must have actual experience with this equipment. Equipment must be suitable for all age groups, with special attention to modified equipment for the pediatric and geriatric patient. These include radiant, conductive, and convective heat sources; other thermotherapy and hydrotherapy devices; exercise equipment; ambulatory aids; wheelchairs; special devices for the impaired driver; electrodiagnostic and EMG equipment; urodynamic laboratory instruments; and simple splinting apparatuses. The occupational therapy area must be adequately equipped to give the residents experience in activities of daily living and in the evaluation of and training in devices to improve skills in activities of daily living. Psychometric and vocational and social evaluation facilities and test instruments must be adequate to expose the resident to the broad spectrum of their prescription and their use and interpretation in the common practice of rehabilitation medicine. Adequate office space should be available for the faculty and residents to participate in both clinical examination of patients and in self-study.
- C. The sponsoring institution must provide an adequate, available professional library with suitable basic textbooks and journals pertinent to general medicine and surgery as well as the specialty of physical medicine and rehabilitation. Loan capabilities with other main or lending libraries should be available. Also, there must be access to an on-site library or collection of appropriate texts and journals in each institution participating in the residency program. Library services should include the electronic retrieval of information from medical databases. On-site libraries and/or collections of texts and journals must be readily available to residents during evening hours and weekends.

D. Basic teaching aids such as slide projectors and videotape facilities are essential. Reasonable access to these items on nights and weekends for residents and staff must be available.

Adequate space must be available for seminars, lectures, and other teaching experiences. There must be facilities for team conferences and specialty care clinics, such as orthotics, prosthetics, children's handicaps, and the like.

E. Facilities must be accessible to persons with disabilities.

## V. Educational Program

### A. Clinical Components

1. The clinical portion of the curriculum must include a sufficient variety, depth, and number of clinical experiences. However, clinical activities must not compromise the educational requirements of the training program.
2. The training program must include at least 12 months with direct responsibility for complete management of hospitalized patients on the physical medicine and rehabilitation service. Residents must spend at least 12 months of their training in the care of outpatients, including a significant experience in the care of musculoskeletal problems.
3. The program must ensure, with each year of training, that each resident has increasing responsibility in patient care, leadership, teaching and administration. Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program director must establish written guidelines for appropriate supervision of more junior residents by more senior residents and of all residents by attending physicians with attention to the acuity, complexity and severity of patient illness. Supervision must include faculty review of a clearly written patient history and physical examination and a meaningful continuous record of the patient's illness, background, and management strategies, as well as lucid presentations of the case summary.
4. Provision must be made for the resident to review personally pertinent laboratory, roentgenographic, and other imaging materials for the patient. Opportunity to observe directly and participate in the various therapies in the treatment areas must occur regularly throughout the residency program, including the proper use and function of equipment and tests.
5. The residents must have the opportunity to observe and gain fundamental understanding of orthotics and prosthetics, including fitting and manufacturing, through documented arrangements made with appropriate orthotic-prosthetic facilities.
6. The residents must have the opportunity to observe and gain fundamental understanding of the types of patients served, referral patterns and services available in the continuum of rehabilitation care in community rehabilitation facilities. These include subacute units and skilled nursing facilities; sheltered workshops and other vocational facilities; schools for persons with multiple handicaps, including deafness and blindness; independent living facilities for individuals with severe physical impairments; day hospitals and home health-care services; and community reentry services. Some introduction to these options for care may be made by on-site visits to some of these facilities as well as didactic lectures. Residents should be encouraged to interact with health-care consumer groups and organizations.
7. The clinical curriculum must be written and implemented for the comprehensive development of measurable competencies for each resident in the following areas:
  - a. History and physical examination pertinent to physical medicine and rehabilitation.
  - b. Assessment of neurological, musculoskeletal and cardiovascular-pulmonary systems.

- c. Determining disability evaluations and impairment ratings.
  - d. Data gathering and interpreting of psychosocial and vocational factors.
  - e. Performance of electromyography, nerve conduction and somatosensory evoked potential studies, and other electrodiagnostic studies. In general, involvement in approximately 200 electrodiagnostic consultations per resident, under appropriate supervision, represents an adequate number.
  - f. Therapeutic and diagnostic injection techniques.
  - g. Prescriptions for orthotics, prosthetics, wheelchairs and ambulatory devices, special beds and other assistive devices.
  - h. Written prescriptions with specific details appropriate to the patient for therapeutic modalities, therapeutic exercises and testing performed by physical therapists, occupational therapists, and speech/language pathologists. It is necessary to provide for an understanding and coordination of psychologic and vocational interventions and tests.
  - i. Familiarity with the safety and maintenance, as well as the actual use, of medical equipment common to the various therapy areas and laboratories.
  - j. A formal experience in evaluation and application of cardiac and pulmonary rehabilitation as related to physiatric responsibilities.
  - k. The rehabilitation of children.
  - l. Collaboration with other medical professionals and members of the allied health team, including management techniques consistent with the resident's team leadership role, and the treatment program management role of the physiatrist.
  - m. Geriatric rehabilitation.
  - n. Prevention of injury, illness and disability.
  - o. Counseling of patients and family members, including end of life care.
  - p. The importance of personal, social and cultural factors in the disease process and clinical management.
  - q. The principles of pharmacology as they relate to the indications for and complications of drugs utilized in PM&R.
  - r. Experience in the continuing care of patients with long-term disabilities through appropriate follow-up care.
8. The resident must have opportunities for progressive responsibility in diagnosing, assessing, and managing the conditions commonly encountered by the physiatrist in the rehabilitative management of patients of all ages of at least the following:
- a. Acute musculoskeletal pain syndromes, including sports and occupational injuries
  - b. Chronic pain management
  - c. Congenital or acquired myopathies, peripheral neuropathies, and motor neuron and motor system diseases
  - d. Rehabilitative care of traumatic brain injury
  - e. Hereditary, developmental and acquired central nervous system disorders, including cerebral palsy, stroke, myelomeningocele, and multiple sclerosis
  - f. Rehabilitative care of spinal cord trauma and diseases, including management of bladder and bowel dysfunction and pressure ulcer prevention and treatment
  - g. Rehabilitative care of amputations for both congenital and acquired conditions
  - h. Sexual dysfunction common to the physically impaired
  - i. Postfracture care and rehabilitation of postoperative joint arthroplasty
  - j. Pulmonary, cardiac, oncologic, infectious, immunosuppressive, and other common medical conditions seen in patients with physical disabilities
  - k. Diseases, impairments and functional limitations seen in the geriatric population

- l. Rheumatologic disorders treated by the physiatrist
- m. Acute and chronic medical conditions, comorbidities and complications commonly seen and managed in the physiatric patient
- n. Medical conditioning, reconditioning and fitness
- o. Soft tissue disorders such as burns, ulcers and wound care

### B. Didactic and Formal Components

1. Formal education must have a high priority. Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out and attended on a regularly scheduled basis. It must expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc) must be an essential part of the residency. Clinical case conferences, such as those for radiology, neuromuscular disease and EMG, clinical PM&R and pain management, and journal clubs are desirable adjuncts to an organized didactic curriculum. Active participation by the faculty in the didactic program is required.
2. The curriculum must include adequate and systematic training in basic sciences relevant to physical medicine and rehabilitation such as anatomy, physiology, pathology and pathophysiology of the neuromusculoskeletal, cardiovascular and pulmonary systems; kinesiology and biomechanics; functional anatomy; electrodiagnostic medicine; fundamental research design and methodologies; and instrumentation related to the field. This instrumentation should pertain to physiologic responses to the various physical modalities and therapeutic exercises and to the procedures commonly employed by physiatry. This training should be correlated with clinical training but should, when appropriate, include basic science faculty. An accessible anatomy laboratory for dissection is highly desirable.
3. The training program must provide adequate and supervised experience in medical administration and teaching methodology.
4. Bedside teaching rounds on hospitalized physical medicine and rehabilitation patients must be made by residents with faculty at least five times per week.

### C. Educational Policies

1. The clinical care of patients is the core of an adequate residency program, since the chief objective of residency training is the development of clinical competence in its graduates. The attainment of this chief objective must not be attenuated by participation of the resident in other activities.
2. Physicians must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligations to patients are not automatically discharged at any given time of the day or any particular day of the week. Duty hours and weekend call for residents reflect the concept of responsibility for patients and provide for adequate patient care. It is the responsibility of the program director, however, to ensure and monitor assignment of reasonable inpatient and outpatient duty hours for care to ensure that the resident is not subjected regularly to excessively difficult or unduly prolonged duties. Residents at all levels, on the average, should have the opportunity to spend 1 full day out of 7 free of inpatient and outpatient care duties and, on the average, should be on night call no more often than every third night. The resident must be provided with adequate support, such as sleeping and food facilities, during duty hours.
3. Satisfactory performance in the residency program is the resident's primary responsibility. Activities outside the educational program must be monitored proactively so as not to interfere with the resident's ability to perform in the educational process.

It is also the program director's responsibility to have and to implement written guidelines that address all of the above issues.

#### D. Research/Scholarly Activity

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:
  - a. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - b. Participation in journal clubs and research conferences.
  - c. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
  - d. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  - e. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  - f. Provision of support for resident participation in scholarly activities.
2. Residents should have the opportunity to participate in structured, supervised research training. It is desirable that each resident produce a peer-reviewed publication during the residency program. A program director may elect to offer a special research or academic track for selected residents. This may take the form of an elective or research rotation, usually not to exceed 6 months, within the 36 months of physical medicine and rehabilitation residency training.

#### E.

Physical medicine and rehabilitation residents must have interaction with residents and faculty from other specialties and/or medical students in order to provide opportunities for peer interaction and teaching.

#### F. Professional Ethical Behavior

1. Physician accountability
  - a. The educational program must have mentors, role-model clinicians, and an environment that demonstrates the values of professionalism, such as placing the needs of the patient first, maintaining a commitment to scholarship, helping colleagues meet their responsibilities, maintaining a commitment to continued improvement, and being responsive to society's health-care needs.
  - b. Residents should participate in community service, professional organizations, or institutional committee activities.
2. Humanistic qualities  
Physicians must have the welfare of their patients as their primary professional concern. The residents and faculty members, therefore, must demonstrate humanistic qualities that foster the formation of appropriate patient/physician relationships. These qualities include integrity, respect, compassion, professional responsibility, courtesy, sensitivity to patient needs for comfort and encouragement, and an appropriate professional attitude and behavior toward colleagues. The written curriculum must emphasize the importance of humanistic qualities throughout the residency.
3. Professional ethics

The training program must foster a commitment to professional ethics in residents that is demonstrated by a spirit of collegiality and a high standard of moral behavior within the clinical setting in the care of patients, in the education of residents, in conducting research, and in interacting with funding organizations.

#### G. Special Educational Requirements

1. Clinical ethics  
The program must include education in the principles of bioethics as applied to medical care, and the residents must participate in decision making involving ethical issues that arise in the diagnosis and management of their patients.
2. Quality assessment, risk management and cost effectiveness in medicine
  - a. Residents must receive instruction in the social and economic impact of medical decisions on patients and society and the need to be the primary advocate for patients' needs.
  - b. All residents must receive formal instruction regarding the principles, objectives and process of performance improvement and program evaluation, risk management and cost effectiveness in medicine.

### VI. Evaluation

#### A. Resident Evaluation

1. There must be a documented, confidential, organized, and formal system for resident evaluation by faculty members at least every 6 months. There must be a formal system for evaluation of the clinical competence of residents, together with annual in-service examinations, postrotation evaluations, or external examinations, such as those provided by the American Academy of Physical Medicine and Rehabilitation. The resident must meet with the program director or designee at least twice a year for formal review and feedback as to his/her knowledge, skills and professional growth and have access to his/her evaluation folder. The resident's rights must be protected by due process procedures. The resident must be provided with the written institutional policy concerning his/her rights and the institution's obligations and rights.
2. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include
  - a. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
  - b. mechanisms for providing regular and timely performance feedback to residents; and
  - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance.
3. Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

#### B. Final Evaluation

The program director must prepare a written evaluation of each resident at the conclusion of his/her period of training, stipulating the degree to which the resident has acquired the skills, clinical competency, knowledge and professional attitudes identified in the program's curriculum. This evaluation should be discussed with the resident and should verify whether the resident has demonstrated sufficient professional ability to practice competently and independently.

### C. Records

Adequate permanent records of the evaluation and educational counseling process within the training program for each resident must be maintained. Such records must be available in the resident file and must be accessible to the resident and other authorized personnel.

### D. Faculty Evaluation

A formal system must exist to identify special competencies and weaknesses of faculty and to make appropriate teaching, clinical and research assignments. Residents must have an effective, formal, written, confidential and anonymous mechanism for faculty and rotation evaluation. Such evaluations must be reviewed at least annually by the program director. Where indicated, substantive efforts should be made to correct faculty weaknesses.

### E. Program Evaluation

1. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
2. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
3. A formal system to identify strengths and weaknesses of the training program must exist. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process. Residents must have an effective, formal mechanism for evaluation of the residency program. Such evaluations must be reviewed by the program director at least annually. Other types of evaluation (sponsoring institution's internal reviews, in-service examinations, performance on Board examinations, etc) should also be utilized. Where indicated, substantive efforts must be made to correct residency program weakness.

### F. Board Examinations

One measure of the quality of a residency program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation. A program will be judged deficient by the RRC if during the most recent 5-year period less than 70% of its graduates taking the examination pass either part of the Board examination on the first try. At least 75% of graduates should take the examination.

## VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation should communicate with the Executive Director of the Board. The program director must communicate requisite registrations and evaluations concerning each resident with the American Board of Physical Medicine and Rehabilitation.

ACGME: June 2000 Effective: July 2001

## Policies and Procedures for Residency Education in the Subspecialties of Physical Medicine and Rehabilitation

- A. The initial application for a subspecialty program will not require an on-site survey, but will require submission of all application materials and information signed by the director of the subspecialty program and the director of the accredited sponsoring program in a relevant core specialty such as anesthesiology, emergency medicine, family practice, internal medicine, neurological surgery, neurology, orthopaedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, surgery, or urology. The Residency Review Committee for Physical Medicine and Rehabilitation (RRC) will take initial action based on a "paper review" of the program, namely, a review without survey.
- B. Subsequent review of subspecialty programs will be in conjunction with the survey and review of the core program. A separate set of forms will have to be completed by the subspecialty program director. In special cases determined by the RRC, the subspecialty program will be surveyed and reviewed separately. The RRC will also entertain interim requests and, on occasion, ask for interim progress reports.
- C. The RRC will designate programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a program will be directly tied to that of the core. If the core program is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program will result in a simultaneous loss of accreditation of the subspecialty program.
- D. If the core program remains in good standing but the RRC judges the subspecialty program to be in noncompliance with the applicable program requirements, a warning will be issued. If these areas of noncompliance are not corrected, accreditation may be withdrawn from the subspecialty program. The Procedures for Proposed Adverse Action and for Appeal of Adverse Actions may be utilized by programs from which the accreditation has been withdrawn in an action separate from withdrawal of accreditation of the core program.
- E. Inquiries about accreditation of subspecialty programs should be directed to the Executive Secretary of the Residency Review Committee for Physical Medicine and Rehabilitation.

## Program Requirements for Residency Education in Pain Management (Physical Medicine and Rehabilitation)

### I. Scope and Duration of Training

#### A. Definition and Scope of the Specialty

Pain management is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas

of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

### B. Duration of Training

Subspecialty training in pain management shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain management. The remainder may be in clinical activities or research relevant to pain management. Assignments must not be made to activities not directly related to pain management.

## II. Institutional Organization

### A. Relationship to Core Program

Accreditation of a subspecialty program in pain management will be granted only when the program is in direct association with a core residency program in physical medicine and rehabilitation accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain management program is conducted. Rotations outside the institution in which the pain management program is based should not exceed 4 months.

### B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

### C. Institutional Policy: Resources

Because pain management is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain management that ensures cooperation of all involved disciplines.

## III. Program Director/Faculty

### A. Program Director

The program director must be a physiatrist who has been certified in pain management by the American Board of Physical Medicine and Rehabilitation or who has appropriate educational qualifications in pain management as determined by the RRC. The program director should have appropriate experience in pain management as a clinician, administrator and educator.

The subspecialty program director has responsibility for the teaching program in pain management subject to the approval of the director of the core residency program.

### B. Medical Director

The medical director of the pain management service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain management, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

### C. Faculty

Qualified physicians with expertise in pain management must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain

management must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than physical medicine and rehabilitation. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain management.

At least three faculty with expertise in pain management should be involved in teaching pain management residents, and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

## IV. Facilities and Resources

### A. Space and Equipment

A pain management center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain management must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain management procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

### B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end of life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

### C. Patient Population

For each resident in the subspecialty of pain management each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain management.

### D. Library

There must be a departmental library with adequate material relevant to pain management. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

## V. The Educational Program

### A. Educational Environment

An accredited program in pain management must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated

and prepared to apply acquired knowledge and talents independently.

### B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain management. Subspecialty training in pain management must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques
5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain management

In addition to the above skills, the pain management resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis, and follow-up.

### C. Didactic Components

The pain management curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain management
4. Pharmacology of centrally acting drugs used in pain management
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain management
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain management
12. Principles and techniques of cancer pain management, including death and dying, and the ethical principles involved in hospital, hospice, and home care

13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain management
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain management center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions

### D. Pain Center Management

Subspecialty residents in pain management must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

### E. Resident Teaching

The subspecialty resident in pain management must become experienced in teaching principles of pain management to resident physicians, medical students, and other health-care professionals.

### F. Conferences

Pain management conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain management resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

### VI. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and physical medicine and rehabilitation pain management training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:

- A. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- B. Participation in journal clubs and research conferences.
- C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
- D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- E. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
- F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract or publication.

## VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in physical medicine and rehabilitation pain management must provide critical evaluations of each resident's progress and competence to the physical medicine and rehabilitation pain management program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in physical medicine and rehabilitation pain management must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in physical medicine and rehabilitation pain management should be involved in continuous quality improvement, utilization review, and risk management.

## VIII. Board Certification

The record of its graduates in obtaining certification in pain management by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

*ACGME: June 2000 Effective: June 2000*

# Program Requirements for Residency Education in Pediatric Rehabilitation Medicine (Physical Medicine and Rehabilitation)

## I. Introduction

### A. Definition

Pediatric rehabilitation medicine (PRM) is the subspecialty that utilizes an interdisciplinary approach to address the prevention, diagnosis, treatment, and management of congenital and childhood-onset physical impairments including related or secondary medical, physical, functional, cognitive, psychosocial, and vocational limitations or conditions. Rehabilitation management of children with physical impairments requires the identification of functional capabilities and the selection of the best rehabilitation intervention strategies, with an understanding both of the life course of the disability and of the continuum of care.

### B. Program Design

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

All educational components of a residency program should be related to the program goals.

1. The Residency Review Committee (RRC) for Physical Medicine and Rehabilitation must approve the program design as part of the regular review process.
2. Participation by any institution providing 3 months or more of training must be approved by the RRC.

## C. Duration of Training

1. Training in PRM shall be 24 months in duration if it begins after satisfactory completion of an Accreditation Council for Graduate Medical Education (ACGME)-approved residency training program in physical medicine and rehabilitation (PM&R). The program must assure that the resident acquires knowledge and skills in general pediatrics, normal childhood development, normal neonatal development, and adolescent medicine including psychosocial issues.
2. Training in PRM shall be 12 months in duration if it begins after satisfactory completion of ACGME-approved combined or consecutive residency training in both PM&R and pediatrics.

## D. Program Goals and Objectives

1. Goals  
An approved subspecialty program must be designed to provide an educational experience to ensure that its graduates possess the advanced knowledge and competencies necessary to practice this subspecialty.
2. Objectives  
The program must provide the resident opportunities to develop a specific set of attitudes, knowledge, and psychomotor skills in pediatric rehabilitation conditions to ensure his or her ability to enhance the quality of care available to those individuals and their families. The resident must become competent in:
  1. Defining aspects of growth and development in the context of children and adults with congenital and childhood onset disabilities, throughout the life course.
  2. Identifying age-appropriate assessment and measurement tools to evaluate functional status or outcomes of interventions.
  3. Managing common medical issues in pediatric rehabilitation.
  4. Describing principles and techniques for general pediatric rehabilitative therapeutic management.
  5. Evaluating and prescribing age-appropriate assistive devices and technologies to enhance function.
  6. Understanding and performing pediatric rehabilitation procedures.
  7. Outlining the clinical course of and functional prognosis for common pediatric disabilities.
  8. Identifying interventions to assist children, adults, and their families to participate successfully in age-appropriate education and other activities.
  9. Advocating for care needs, systems of care, and research to enhance the care and function of children and adults with congenital or childhood onset disabilities.
  10. Providing consultation to physiatrists, pediatricians, and other clinicians regarding PRM issues.
  11. Participating in instruction and conducting research in PRM.
  12. Applying principles of management and administration.

## II. Administration and Organization

### A. Sponsoring Institution

1. The institution sponsoring the PRM program must be a center for care of persons with pediatric rehabilitative diagnoses or affiliated with such a center. Affiliation with an accredited medical school is desirable. The Joint Commission on Accreditation of Healthcare Organizations-Rehabilitation Section or the Commission on Accreditation of Rehabilitation Facilities should accredit the institution.
2. Accreditation of a subspecialty program in PRM will be granted only when the program is affiliated with an ACGME-accredited residency program in PM&R.

3. There must be close cooperation between the core residency program and the subspecialty program. The lines of responsibility between residents in the core program and the subspecialty program must be clearly delineated.
4. The sponsoring institution should exercise the necessary administrative management of the training program.
5. There should be an institutional policy, reviewed at the time of regular institutional or internal review, governing the educational resources committed to the PRM program to ensure cooperation of all involved disciplines.
6. The institution must provide for financial resources that include, but are not limited to, salaries, fringe benefits, and opportunities for residents' continuing education.

#### B. Participating Institutions

Participating institutions should be in the same geographic location and conveniently and safely accessible to residents.

#### C. Appointment of Residents

1. The program shall establish written policies and procedures regarding selection and appointment of residents. There should be at least one resident in the program at all times.
2. The program shall have and implement written policies and procedures, based on the clinical and educational resources available, for determining the number of resident positions.
3. The program shall have and implement written policies and procedures, based on the clinical and educational resources available, regarding changes in resident complement or filling vacant positions.
4. The applicant must be licensed for unrestricted practice in a state or province of the United States or Canada.

### III. Faculty Qualifications and Responsibilities

The program director and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

#### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the Program Director
  - a. Documented qualifications as a clinician, administrator, and educator in the field of PRM.
  - b. Board certification in PRM or appropriate educational qualifications as determined by the RRC.
  - c. Licensure to practice medicine in the state where the sponsoring institution is located. (Certain federal programs are exempted.)
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the Program Director
  - a. Sufficient time devoted to provide continuous leadership to the program as well supervision of the residents.
  - b. Active participation in research and scholarly activities in PRM.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.

- d. Selection of residents for appointment to and assignment in the program in accordance with institutional and departmental policies and procedures.
- e. Selection, assignment, and supervision of teaching staff and other program personnel at each institution participating in the program.
- f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communications and interaction with supervisory physicians.
- g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for the timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical report and narrative description of the program as required by the RRC. Adequate data collection and analysis is necessary for overall program evaluation and total quality management. Data regarding resident and faculty performance should be gathered, analyzed, and maintained.
- j. Notification to the RRC of any major programmatic changes. The RRC must be notified immediately of any change in the program directorship.

#### B. Number and Qualifications of Faculty

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director there must be at least one other faculty member with expertise in PRM who is dedicated to the program.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities in the field of PRM, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities in the field of PRM.
3. The faculty should be board certified in PRM or possess appropriate educational qualifications as determined by the RRC.
4. A member of the teaching staff of each participating institution must be designated to assume the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each participating institution, the financial and administrative support of the program, the volume and variety of the patients available to the program for educational purposes, the performance of other members of the teaching staff, and the quality of supervision of the residents.

### C. Other Program Personnel

Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

### A. Institutional Facilities

Education in PRM should include experience in both inpatient and outpatient facilities. The sponsoring and participating institutions must operate or have access to a service delivery system dedicated to the care of persons with pediatric rehabilitative disorders. Necessary resources include

1. Inpatient pediatric rehabilitation beds,
2. A designated outpatient clinic or examination area for persons with pediatric rehabilitative disorders,
3. Transitional services for home care, community entry, schooling, etc.

### B. Specific Facilities and Resources

1. The sponsoring institution must have available the equipment, electrodiagnostic devices, radiology services, laboratory services, and clinical facilities necessary to provide appropriate care to persons with pediatric rehabilitative disorders. Facilities for teaching services must be available as well as a medical records system that allows for efficient case retrieval.
2. The sponsoring institution must have available specialty consulting services essential to the care of persons with pediatric rehabilitative disorders. These services include anesthesia, emergency medicine, family medicine, genetics, neurological surgery, neurology, orthopedic surgery, pathology, pediatrics (including the relevant subspecialties), plastic surgery, psychiatry, radiology, surgery, urology, and other relevant health care professionals.
3. Availability of home care and specialized schooling.

### C. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Residents must have access to computer and audiovisual capabilities and electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. These must be readily available during nights and weekends.

### D. Patient Population

The patient population must be of sufficient size and diversity of pediatric age groups to provide the resident with the opportunity to care for an adequate number of persons in all pediatric rehabilitative diagnostic categories in both inpatient and outpatient settings.

## V. Educational Program

### A. Clinical Components

1. The clinical component of the curriculum must include a sufficient variety, depth, and volume of clinical experiences. The educational program should take into consideration the resident's documented past educational and patient care experiences. The training program must provide for the resident to spend a significant amount of time with responsibility for the direct care of hospitalized as well as non-hospitalized patients. Residents must devote at least 1/3 of their clinical experience to the care of

hospitalized patients and at least 1/3 to non-hospitalized patients.

2. The educational program must be designed so that residents may attain knowledge and competency in the following areas of PRM:
  - a. Normal growth and development, including physical growth, developmental skills attainment (language and communication skills, physical skills, cognitive skills, emotional skills and maturity, academic achievement/learning skills), transitional issues, metabolic status, biomechanics, the effects of musculoskeletal development on function, sexuality, avocational interest development, wellness and health promotion, and aging issues for adults with congenital or childhood onset disabilities.
  - b. Applications, efficacy, and selection of PRM assessment tools, including enabling/disabling process, general health measures, developmental attainment measures, general functional measures, and specific outcomes measures.
  - c. Identification and management of common pediatric rehabilitation medical conditions and complications, including nutrition, bowel management, bladder management, gastroesophageal reflux, skin protection, pulmonary hygiene and protection, sensory impairments, sleep disorders, spasticity, DVT prophylaxis, congenital and acquired lymphedema, feeding disorders, swallowing dysfunction, seizure management, and behavioral problems.
  - d. Principles and techniques for general pediatric rehabilitative therapeutic management, including early intervention, age-appropriate functional training, programs of therapy, play (avocation), therapeutic exercise, electrical stimulation and other modalities, communication strategies, oral motor interventions, discharge planning, educational and vocational planning, transitional planning, adjustment to disability support, and prevention strategies.
  - e. Evaluation and prescription for assistive devices technology, including orthotics, prosthetics, wheelchairs and positioning, ADL aids, interfaces and environmental controls, augmentative/alternative communication, environmental accessibility, electrical stimulation, and dynamic splinting.
  - f. Principles and techniques of PRM procedures, including spasticity management and electrodiagnosis.
  - g. Interpretation of diagnostic studies commonly ordered in PRM.
  - h. Rehabilitation management of musculoskeletal disorders and trauma, including sports injuries.
    - i. Rehabilitation management of cerebral palsy.
    - j. Rehabilitation management of spinal dysraphism and other congenital anomalies.
    - k. Rehabilitation management of pediatric spinal cord injury.
    - l. Rehabilitation management of pediatric traumatic brain injury.
    - m. Rehabilitation management of limb deficiency/amputation.
    - n. Rehabilitation management of neuromuscular disorders.
    - o. Rehabilitation management of rheumatologic and connective tissue disorders, including but not limited to specific conditions, such as juvenile rheumatoid arthritis, spondyloarthropathies, dermatomyositis, and Lyme disease.
    - p. Pediatric rehabilitation management of burns.
    - q. Rehabilitation management of peripheral nerve injuries.
    - r. Administration, including principles of organizational behaviors and leadership, quality assurance, cost efficiency, knowledge of health care systems, community resources, and support services regulations pertaining to service provision (external reviews, inpatient services, outpatient services, home care, school based programs and capabilities), skills for

effective advocacy, medical legal aspects (child protective services, guardianship, liability), professionalism, and ethics.

- s. Psychological, social, and behavioral aspects of rehabilitation management, including family-centered care.
  - t. Requesting of appropriate medical/surgical consultations from other specialties.
3. The program should be designed so that the resident has an opportunity to follow individual patients longitudinally as well as the ability to encounter a wide variety of patient problems.
  4. The program should be designed so that the resident has an opportunity to develop a management style compatible with an interdisciplinary team process.

**B. Didactic Components**

1. Basic science content should include a didactic curriculum taught by faculty and a self-directed learning program to address the theoretical and clinical principles that form the fundamentals for managing patients with pediatric medicine disorders. Pathophysiology, discussion and knowledge of clinical manifestations, and management problems should constitute the major topics for study.
2. Presentation of specialty content should include faculty in anesthesiology, emergency medicine, family medicine, genetics, neurology, neurosurgery, orthopedic surgery, pediatrics (including the relevant subspecialties), plastic surgery, psychiatry, radiology, surgery, and urology taking an active role in providing instruction in the areas of their practices relevant to PRM.
3. Conferences
  - a. Required conferences should include case-oriented multidisciplinary conferences, journal clubs, and quality management seminars relevant to clinical care in PRM.
  - b. Conferences must be of sufficient quality and frequency to provide in-depth coverage of the major topics in PRM over 1 year.
  - c. There must be documentation of staff and resident attendance at conferences.
  - d. Educational activities must be carried out under the direct supervision of faculty members.

**C. Resident Policies**

1. Supervision
  - a. The level of supervision of the residents should be determined by the program director based on formal and informal evaluations.
  - b. The program director should assign a member of the faculty as supervisor to each resident. Written objectives for each clinical rotation must be provided to each resident.
  - c. The supervisor is responsible for the educational experience according to the written plan developed at the beginning of the training. The supervisor must meet regularly with the program director and resident for appropriate monitoring and feedback.
2. Duty hours
 

While the actual number of hours worked by a subspecialty resident may vary, the resident should have sufficient off-duty time to avoid undue fatigue and stress. The resident should be allowed to spend, on average, at least 1 full day out of 7 away from the hospital, and should be assigned on-call duty in the hospital no more frequently than an average of every third night. The program director is responsible for monitoring, in accord with written policies, on-duty assignments as well as activities outside the program.
3. Graded responsibility
 

Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and

demonstrates additional competencies. The program should be flexible but sufficiently structured to allow for such graded responsibility.

4. Peer interaction
 

The resident must have the opportunity to meet and share experience with residents in the core program and in other specialties. It is desirable for the resident to interact with peers in primary care and relevant subspecialties. Residents should have the opportunity to teach other residents, medical students, and other health care professionals.
5. Presence of other learners
 

Rotation to the PRM program by residents from other specialties or subspecialties as well as medical students is desirable.

**D. Other Program Components**

1. Research and scholarly activity
 

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuous professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of the teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity that includes:

  - a. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
  - b. Participation in journal clubs and research conferences.
  - c. Active participation in regional or national conferences and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
  - d. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at national regional scientific meetings.
  - e. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  - f. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activity. The goal for the resident should be at least one scientific presentation, abstract, or publication.
2. Management
 

Within the interdisciplinary PRM care team, the resident should be taught and should understand and apply principles of organizational and group behavior, leadership and management styles, evaluation and modification of performance, labor management issues, cost accounting containment, and quality assurance techniques. The resident should gain an understanding and some proficiency in the areas of budget planning and presentation, preparation of management briefings, information systems, and external reviews such as those by the Commission for the Accreditation of Rehabilitation Facilities.
3. Teaching by the resident
 

The resident should have the opportunity to:

  - a. Teach other hospital personnel and health care providers, patients, and patient support systems about the rehabilitation and longitudinal needs in PRM.
  - b. Teach medical students, residents, and other health care professionals.
  - c. Understand and utilize learning theory, including assessment of learning needs, development of objectives and curriculum

- plans, effective use of audiovisual aids and other teaching materials, and evaluation of teaching outcomes.
- d. Provide instruction to patients and families.
- e. Participate in educational activities within the interdisciplinary PRM care team.

## VI. Evaluation

Evaluation is an essential component of the program. The program director and faculty must have a plan that addresses the evaluation of residents, faculty, and the program. Well-designed evaluation combined with feedback improves the program and focuses the learning process.

### A. Residents

1. Policy and principles
    - a. Evaluation should be based on the program objectives and on the objectives of the resident's individualized program. These include resident knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
    - b. Evaluation must be carried out semi-annually and should be followed by extensive feedback to the resident. Remedial objectives may be established.
    - c. Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - d. A permanent record of evaluation should be maintained for each resident and it should be accessible to the resident and other authorized personnel.
  2. The following areas should be evaluated:
    - a. Acquisition of competencies outlined in V.A.2
    - b. Problem solving skills
    - c. Interpersonal relationship skills
    - d. Ability to access, retrieve, and critically evaluate the literature
    - e. Information management
    - f. Quality and cost-effectiveness measures of patient care
    - g. Research and other scholarly accomplishments
  3. A written final evaluation must be provided for each resident who completes the program. The evaluation must include a review of resident performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice completely independently. This final evaluation should be part of the permanent record maintained by the institution.
- B. The educational effectiveness of the program must be evaluated annually and in a systematic manner. In particular, the quality of the curriculum and the extent to which the resident has met the educational goals must be assessed. Written, confidential evaluations by residents should be utilized in this process. Resident satisfaction at the completion of training should also be assessed.
- C. The faculty must be evaluated at least annually. This should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Written confidential resident evaluations must be included in this process.
- D. One measure of the quality of a program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation for subspecialty certification in PRM.

## VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation in pediatric rehabilitation medicine should communicate with the executive director of the

ABPMR to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: June 2002 Effective: June 11, 2002*

# Program Requirements for Residency Education in Spinal Cord Injury Medicine (Physical Medicine and Rehabilitation)

## I. Introduction

### A. Definition

1. Spinal Cord Injury Medicine (SCIM) addresses the prevention, diagnosis, treatment and management of traumatic spinal cord injury (SCI) and nontraumatic myelopathies, including the prevention, diagnosis and treatment of related medical, physical, psychosocial and vocational disabilities and complications during the lifetime of the patient.
2. The management of persons with spinal cord dysfunction (SCD) requires a team and interspecialty approach with contributions from several medical and surgical specialties as well as other health care professionals. The specialist in SCIM should serve as the team leader after the patient is medically and surgically stabilized. When the spinal cord dysfunction is due to an active process or a chronic degenerative disorder, the management of the patient's primary disease is the responsibility of a physician in the appropriate discipline.

### B. Duration and Scope of Education

1. Training in SCIM shall be 12 months in duration beginning after satisfactory completion of an approved residency program in a specialty relevant to SCIM, such as anesthesiology, emergency medicine, family practice, internal medicine, neurological surgery, neurology, orthopaedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, surgery, or urology.
2. The program must provide for individuals to acquire, within the interdisciplinary spinal cord injury team, knowledge of emergency care and knowledge and skills in the following areas:
  - a. post-initial care,
  - b. initial and ongoing medical rehabilitation,
  - c. discharge planning,
  - d. lifelong care, and
  - e. scholarly activity in support of these skills.
3. Any program that extends training beyond the 12-month minimum requirement must present a clear educational rationale consonant with the program requirements and objectives for subspecialty training. The program director must obtain approval of the Residency Review Committee (RRC) prior to implementation and at each subsequent review of the program. Prior to entry in the program, each resident must be notified in writing of the required length of training.

### C. Program Goals and Objectives

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

1. Goals: An approved subspecialty program must be designed to provide an educational experience to ensure that its graduates possess the advanced knowledge and competencies necessary to practice this subspecialty.

2. Objectives: The program must provide the resident opportunities to develop a unique set of attitudes, knowledge, and psychomotor skills because SCD affects multiple organ systems of the body and its treatment involves many specialty areas of expertise.
  - a. The resident must be given the opportunity to gain knowledge of:
    - 1) the impact of SCD on the various organ systems,
    - 2) the natural history, pharmacologic management, and evolution of organ system functioning after SCD and the interaction among the various organ systems,
    - 3) the impact of aging and longstanding injury on organ system decline,
    - 4) the prevention and treatment of secondary complications of SCD, and
    - 5) the maximal functions possible based on the characteristics and level of SCD and how to achieve them.
  - b. The resident must be given the opportunity to become proficient in:
    - 1) coordination in the post-initial care setting of the impact and timing of treatment of each organ system's dysfunction so that an optimum treatment effect can be obtained,
    - 2) planning of the most efficient and effective treatment approaches for acquisition of skills and knowledge by the patient so that he/she may acquire the highest level of functioning, and
    - 3) promotion of patient education about all aspects of SCD in order to promote patient independence and patient recognition of illness.

The program must prepare the person trained as a SCIM specialist to implement, over the course of the individual patient's lifetime, a health maintenance and disease prevention program with early recognition and effective treatment of complications related to SCD, and must promote awareness of the impact of aging on SCD.

#### D. Program Design

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the appropriate review committee as part of the regular review process.
2. Participation by any institution providing more than 3 months of training must be approved by the RRC.

## II. Institutional Organization

### A. Sponsoring Institution

1. The institution sponsoring the SCIM program must be a center for care of persons with SCD or affiliated with such a center. Affiliation with an accredited medical school is desirable. The institution should be accredited by the Joint Commission on Accreditation of Health Care Organizations-Rehabilitation Section (JCAHO-Rehab) or the Commission on Accreditation of Rehabilitation Facilities (CARF).
2. Accreditation of a subspecialty program in SCIM will be granted only when the program is administratively attached to an ACGME-accredited residency program in a relevant specialty.
3. There must be close cooperation between the core residency training program and the subspecialty program. The lines of responsibility between resident staffs in the core program and the subspecialty program must be clearly delineated.
4. The sponsoring institution should exercise the necessary administrative management of the training program.
5. There should be an institutional policy, reviewed at the time of regular institutional or internal review, governing the

educational resources committed to the SCIM program, assuring cooperation of all involved disciplines.

6. The institution must provide for the financial resources including, but not limited to, salaries, fringe benefits, and opportunities for continuing medical education of residents.

### B. Participating Institutions

It is highly desirable for participating institutions to be in the same geographic location and conveniently and safely accessible to residents.

### C. Appointment of Residents

1. The program shall establish written policies and procedures regarding selection and appointment of residents. The resident complement should be appropriate to the available clinical and educational resources, including faculty. It is highly desirable to have at least one resident in the program at all times.
2. The program shall have and implement written policies and procedures, based on the educational resources available, for determining the number of resident positions.
3. The program shall have and implement written policies and procedures, based on the educational resources available, regarding change in resident complement or filling vacant positions.
4. The applicant must be licensed for unrestricted practice in a state or province of the United States or Canada.

## III. Faculty Qualifications and Responsibilities

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. Documented qualifications as a clinician, administrator, and educator in the field of SCIM.
  - b. Board certification in a specialty or subspecialty related to the care of persons with SCD and subspecialty certification in SCIM or suitable equivalent qualifications.
  - c. Licensure to practice medicine in the state where the institution that sponsors the program is located.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
  - a. Sufficient time devoted to provide continuous leadership to the program as well as supervision of the residents.
  - b. Active participation in research and scholarly activities in SCIM.
  - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
  - d. Selection of residents for appointment to and assignment in the program in accordance with institutional and departmental policies and procedures.
  - e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program. The program director should assign faculty and perform annual evaluations of their performance.

- f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- g. Regular evaluation of the resident's knowledge, skills, and competence, including the development of professional attitudes consistent with being a physician.
  - The program director, with participation of members of the teaching staff, shall:
    - 1) At least semi-annually evaluate the knowledge, skills, competence, and professional growth of the resident, using appropriate criteria and procedures.
    - 2) Communicate each evaluation to the resident in a timely manner.
    - 3) Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
    - 4) Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- i. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- j. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC. Adequate data collection and analysis is necessary for overall program evaluation and total quality management. The program director should gather, analyze, and maintain data regarding resident and faculty performance.
  - l. Gathering and analyzing initial, discharge and follow-up data regarding the functional outcomes of persons served.
- m. Notification to the RRC of major programmatic changes. The RRC must be notified immediately of any change in program directorship.

#### **B. Number and Qualifications of Faculty**

- 1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, there must be at least one other faculty member with expertise in SCIM who is dedicated to the program.
- 2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities in the field of SCIM, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. The faculty

should actively participate in teaching, research and scholarly activity in the field of SCIM.

- 3. The faculty should be Board-certified in a specialty or subspecialty related to the care of persons with SCD or possess suitable equivalent qualifications.
- 4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 5. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
- 6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

#### **C. Other Program Personnel**

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

### **IV. Facilities and Resources**

#### **A. Institutional Facilities**

Education in SCIM should include experience in both inpatient and outpatient facilities. The sponsoring and participating institutions must operate or have access to a service delivery system dedicated to the care of persons with SCD. Necessary resources include:

- 1. an emergency department that treats patients with SCI,
- 2. an accredited acute care hospital,
- 3. a dedicated inpatient rehabilitation unit,
- 4. a designated outpatient clinic for persons with SCD, and
- 5. availability of home care and independent living programs.

#### **B. Specific Facilities and Resources**

- 1. The sponsoring institution must have available the equipment, diagnostic imaging devices, electrodiagnostic devices, laboratory services, a urodynamic laboratory, and clinical facilities necessary to provide appropriate care to persons with spinal cord dysfunction. Medical library facilities and facilities for teaching experiences must be available, along with a medical records system that allows for efficient case retrieval.
- 2. The sponsoring institutions must have available specialty consultant services in anesthesia, emergency medicine, family practice, internal medicine (including the relevant subspecialties), neurological surgery, neurology, orthopedic surgery, pathology, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology.

#### **C. Library**

- 1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
- 2. Residents must have regular access, including nights and weekends, to computer and audiovisual capabilities and electronic retrieval of information from medical information databases.
- 3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts

and journals must be readily available during nights and weekends.

#### D. Patient Population

The patient population must be of sufficient size and diversity of age so as to provide the resident with the opportunity to care for an adequate number of persons with new SCI, to care for persons re-admitted to the hospital with intercurrent illness, and to care for appropriate numbers of outpatients. There should be a minimum census of eight patients per resident.

### V. Educational Program

#### A. Clinical Components

1. The clinical portion of the curriculum must include a sufficient variety, depth, and volume of clinical experiences. The educational program should take into consideration the resident's documented past educational and patient care experiences. The training program must provide for the resident to spend a significant amount of time in responsibility for the direct care of hospitalized as well as non-hospitalized patients. Residents must devote at least one third of their clinical experience to the care of hospitalized patients and at least one third to non-hospitalized patients.
  2. The educational program must be designed for the resident to attain the following knowledge and competencies within the interspecialty and interdisciplinary care team:
    - a. Initial Care
      1. Understand the organization and interdisciplinary practices of the Emergency Medical Services system relating to the prehospital and initial Emergency Department care of spinal cord injured patients as well as their concomitant and associated injuries. This is not meant to interfere with the independent decision making of the attending physician during the initial care.
      2. Understand the techniques of appropriate spinal immobilization in order to protect patients from additional neurological damage.
      3. Be able to perform a comprehensive neurologic assessment and determine the appropriate injury level of the patient.
      4. Understand the supportive role of SCIM to neurological surgery, orthopedic surgery, emergency medicine, and other appropriate physicians in initial care sites, including intensive and critical care units.
      5. Understand and assist in the management of the abnormalities and complications in other body systems resulting from SCI, especially the following: pulmonary, genitourinary, endocrine, metabolic, vascular, cardiac, gastrointestinal, musculoskeletal and integumentary.
    - b. Post-Initial Care
      1. Understand how the stability of the spine is evaluated and know the various options for treatment of fractures/dislocations at all vertebral levels.
      2. Understand the optimal coordination of services of the various physicians and other health professionals in the prevention and treatment of complications in each organ system.
      3. Develop the skills to initiate and direct appropriate rehabilitation programming in the early hospital phase of treatment.
      4. Understand the relationship between the extent and level of SCI on the patient's ultimate residual functional capacity and be able to inform and counsel the patient, the family, and other health specialists on a timely basis about the impact of the disability.
  5. Through lectures and appropriate clinical assignments under the integrated services of pediatricians and specialists in SCIM, understand special needs and problems that children and adolescents with SCI may have in areas such as behavior, bladder and bowel and skin care, growth and development, immunizations, mobility, nutrition, pediatrics, self-care, recreation, and schooling. Also understand the special needs of parents and others in relating to and assisting young patients with these problems.
- c. Initial and Ongoing Medical Rehabilitation
1. Coordinate the transition from post-initial care to rehabilitation and assume primary management responsibility.
  2. Establish short and long term rehabilitation goals and coordinate the implementation of the rehabilitation program to meet such goals.
  3. Monitor the evolution of neural dysfunction in order to recognize conditions that may require additional evaluation, consultation, or modification of treatment.
  4. After post-initial care, in conjunction with the interspecialty SCI team, participate in the management of SCI following either operative or nonoperative stabilization, including activity restrictions and appropriate orthotic support.
  5. Understand the collaborative role of integral members of the SCI care team.
  6. Recognize, diagnose and coordinate treatment for respiratory complications such as tracheostomies, airway obstruction, atelectasis, pneumonia, and tracheal stenosis, as well as for mechanical methods of respiration including both fixed and portable equipment. The resident should be able to manage patients with high quadriplegia and respirator-dependent patients, including weaning them from the respirator, and evaluating indications and contraindications of phrenic nerve pacing, motorized wheelchairs, portable respirators, environmental control systems, home modifications, etc.
  7. Recognize, diagnose and treat orthostatic hypotension and other cardiovascular abnormalities during initial mobilization of the patient.
  8. Evaluate and manage skin problems utilizing various techniques of prevention such as the proper use of specialized beds, other surfaces, cushions, and wheelchairs, to manage pressure ulcers effectively; and, in consultation with surgical colleagues, determine the indications for various surgical procedures including resection of bone and the development of flaps and other techniques for soft tissue coverage. The resident should also develop an understanding of the pre- and post-operative management of these patients.
  9. With appropriate consultation, identify the risk of infection and coordinate treatment and infection control including the judicious use of antimicrobials.
  10. Coordinate and implement management of the neurogenic bowel.
  11. Understand management of the neurogenic bladder and sexual dysfunction and that the role of urologists is pivotal in the diagnosis and management of bladder dysfunction, urinary tract infection, urinary calculi, sexual dysfunction, obstructive uropathy with or without stones, infertility and problems of ejaculation; such specialists should be utilized early in the care of these patients.
  12. Diagnose and treat, with appropriate consultation, complications such as deep vein thrombosis, pulmonary embolus, autonomic hyperreflexia, substance abuse, pain, spasticity,

depression, and the sequelae of associated illnesses and pre-existing diseases.

13. Recognize pharmacologic alterations associated with SCI, including changes in pharmacokinetics, pharmacodynamics, drug interactions, over-medication, and compliance.
14. Diagnose and manage the psychological dysfunction associated with SCI.
15. Perform a functional assessment based on neurological, musculoskeletal and cardiopulmonary examinations and psychosocial and prevocational evaluations.
16. Determine functional goals for self-care, mobility, and vocational and avocational activities based on the level and completeness of the lesion.
17. If appropriate, prescribe motor retraining and conditioning activities, orthoses, and the adaptive equipment needed to meet the rehabilitation goals.
18. Anticipate the approximate length of stay, cost of hospitalization, equipment needs, etc, with the involvement of the patient, the patient's support persons and appropriate agencies.
19. Identify the indications for and the use of clinical neurophysiologic testing to assess the extent of neuropraxia, denervation, reinnervation, phrenic nerve function, and spinal cord function.
20. Identify the indications and use of functional electrical stimulation (FES) as applied to the management of spinal cord impairment.
21. Understand the kinesiology of upper extremity function and the use of muscle substitution patterns in retraining; the value, indications and contraindications of tendon and muscle transfers and other operative procedures that would enhance function.
22. Within the interdisciplinary and interspecialty SCI teams, understand the concepts of muscle and tendon transfer, and of other operative procedures that enhance extremity function, and manage the post-operative retraining, when indicated.
23. Prescribe appropriate motor vehicle modifications to promote independence in mobility and transportation.
24. Understand group process and team dynamics, and coordinate the activities of the interdisciplinary team through daily rounds, staff conferences, and patient and family educational and training sessions in order to maximize the goals established by the patient and team.
25. Understand the training and capabilities of rehabilitation nurses, social workers, psychologists, physical therapists, occupational therapists, prosthetists, orthotists, speech/language pathologists and recreational and vocational counselors; recognize the professional role and contributions of the various allied health professions individually and collectively; encourage their full participation in patient care management while maintaining medical responsibility; and appreciate that a team effort, with as much continuity as practical, will produce a more satisfying outcome and experience for the patient, family and team members.
26. Conduct a problem-oriented conference and set goals with the participation of the allied health staff.

d. Discharge Planning

1. Determine when the rehabilitation goals have been achieved, finalize the discharge plan, and arrange for the appropriate level of care to match the patient's needs.

2. Participate in family meetings/discharge planning conferences, with focus upon community integration and adjustment to disability.
  3. Organize and conduct programs of patient and family education.
  4. In concert with appropriate disciplines and other team members, manage the psychological effects of the impairment in order to prevent their interference with the reintegration and re-entry to the community.
  5. Use the full range of community resources to facilitate the transition to the community.
  6. Understand the needs for personal care attendants, architectural modifications, and community follow-up care.
- e. Follow-Up Phase—Sustaining Care
1. Recognize, diagnose and treat intercurrent disease in conjunction with the proper consultants. There should be special emphasis on the prevention and management of these diseases in patients at various levels of SCI.
  2. Diagnose and coordinate the treatment of the complications associated with chronic SCI including pressure sores, spasticity, pain, urinary calculi, urinary tract infection, fractures, post-traumatic syringomyelia, and progressive respiratory decline.
  3. Set up a program of regular follow-up, evaluation, and preventive health care to keep the person at his/her maximum health and rehabilitation status, and coordinate this care with the patient's personal community physician.
  4. Direct to or establish the patient in a program of vocational rehabilitation, if appropriate.
  5. Appreciate that the ultimate goal is to return and maintain the person with SCI as a satisfied and productive member of society.
  6. Understand the prevention and management of complications associated with long-standing disability, the effects of aging with a disability, and the provision of long-term follow-up services.
  7. Coordinate and manage an SCI home care program.
  8. Develop and maintain as needed a professional relationship with primary care physicians and be available to assist in the provision of care for specific health care issues, including follow-up examinations and management of complex issues of SCI care.
  9. In all phases of care, understand and define the ethical and legal issues especially pertinent to SCI, including diminished competence and the right to refuse treatment.
3. The program should be designed so that the resident has an opportunity to follow individual patients longitudinally as well as the ability to encounter a wide variety of patient problems.
  4. The program should be designed so that the resident has an opportunity to develop a management style compatible with the interdisciplinary team process.

**B. Didactic Components**

1. Basic science content. There should be a didactic curriculum taught by faculty and a self-directed learning program to address the theoretical and clinical principles that form the fundamentals for care of patients with SCD. Pathophysiology, discussion and knowledge of clinical manifestations, and management principles about the care of such patients should constitute the major topics for study.
2. Specialty content. Specialists in anesthesiology, emergency medicine, internal medicine (including the relevant subspecialties), neurology, neurosurgery, orthopedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology should take an active role in the

didactic curriculum, providing instruction in the areas of their practices relevant to SCD.

3. Conferences
  - a. Required conferences should include case-oriented multidisciplinary conferences, journal club, and quality management seminars relevant to clinical care on the spinal cord program.
  - b. Conferences must be of sufficient quality and frequency to provide in-depth coverage of the major topics in SCIM over 1 year.
  - c. There must be documentation of staff and resident attendance.
  - d. Educational activities must be carried out under the direct supervision of faculty members.

### C. Resident Policies

1. Supervision
  - a. The level of supervision of the residents should be determined by the program director based on formal and informal evaluations.
  - b. The program director should assign a member of the faculty as supervisor to each resident. Written objectives for each clinical rotation must be provided to the resident.
  - c. The supervisor is responsible for the educational experience according to the written plan developed at the beginning of the training. The supervisor must meet regularly with the program director and resident for appropriate monitoring and feedback.
2. Duty hours. While the actual number of hours worked by a subspecialty resident may vary, the resident should have sufficient off-duty time to avoid undue fatigue and stress. The resident should be allowed to spend, on average, at least 1 full day out of 7 away from the hospital, and should be assigned on-call duty in the hospital no more frequently than an average of every third night. The program director is responsible for monitoring, according to written policies, on-duty assignments as well as activities outside the program.
3. Graded responsibility. Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program should be flexible but sufficiently structured to allow for such graded responsibility.
4. Peer interaction. The resident must have opportunity to meet and share experience with residents in the core program and in other specialties. It is desirable for the resident to interact with peers in primary care and relevant subspecialties. Residents should have the opportunity to teach other residents, medical students, and other health care professionals.
5. Presence of other learners/fellows. Rotation to the SCIM program by residents from other specialties or subspecialties as well as medical students is desirable.

### D. Other Program Components

1. Research and Scholarly Activity. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
  - a. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a

spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

- b. Participation in journal clubs and research conferences.
  - c. Active participation in regional or national professional and scientific societies, particularly through presentations at meetings and publications in journals.
  - d. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
  - e. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
  - f. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract, or publication.
2. Management. Within the interspecialty and interdisciplinary SCIM care team, the resident should be taught and should understand and apply principles of organizational and group behavior, leadership and management styles, evaluation and modification of performance, labor-management issues, cost accounting and containment, and quality assurance techniques. The resident should gain an understanding and some proficiency in the areas of budget planning and presentation, preparation of management briefings, information systems, and external reviews such as the Joint Commission for the Accreditation of Healthcare Organizations (JCAHO) and the Commission on Accreditation of Rehabilitation Facilities (CARF).
  3. Teaching by the resident. The resident should have the opportunity to:
    - a. teach local medical communities and the general public about prevention of SCI;
    - b. teach prehospital personnel and other health care providers how to stabilize patients with SCI and institute a rational protocol for their prehospital care;
    - c. teach other hospital personnel and health care providers, patients, and care givers about the rehabilitation needs and long-term care of patients with SCI;
    - d. teach medical students, medical residents and other health professionals;
    - e. understand and utilize learning theory, including assessment of learning needs, development of objectives and curriculum plans, effective use of audiovisual and other teaching materials and evaluation of teaching outcomes;
    - f. provide instruction to patients and families; and
    - g. participate in educational activities within the interspecialty and interdisciplinary SCIM care team.

## VI. Evaluation

Evaluation is an essential component of the program. The program director and faculty must have a plan that addresses the evaluation of residents, faculty, and the program. Well-designed evaluation, combined with feedback, improves the program and focuses the learning process.

### A. Residents

1. Policy and Principles
  - a. Evaluation should be based on the program objectives and on the objectives of the resident's individualized program.
  - b. Evaluation must be carried out semi-annually and should be followed by extensive feedback to the resident. Remedial objectives may be established.
2. The following areas should be evaluated:

- a. acquisition of described competencies,
- b. problem-solving skills,
- c. interpersonal relationship skills,
- d. ability to access, retrieve, and critically evaluate the literature,
- e. information management,
- f. quality and cost-effectiveness measures of patient care, and
- g. research and other scholarly accomplishments.

## B. Faculty and Program

1. Faculty evaluation by residents should be on a semi-annual basis.
2. Areas to be evaluated are:
  - a. clinical skills and competencies,
  - b. teaching skills,
  - c. scholarly activity,
  - d. leadership skills, and
  - e. interpersonal skills.
3. The educational effectiveness of the program must be evaluated annually and in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by the residents must be assessed. Written, confidential evaluations by residents should be utilized in this process. Resident satisfaction at the completion of training should also be assessed.
4. One measure of the quality of a program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation for special qualifications in SCIM.

## VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation in Spinal Cord Injury Medicine should communicate with the Executive Director of the ABPMR to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: February 2002 Effective: July 2002*

# Program Requirements for Residency Education in Plastic Surgery

## I. Introduction

### A. Definition of the Specialty

Education in the specialty of plastic surgery deals with the resection, repair, replacement, and reconstruction of defects of form and function of the integument and its underlying anatomic systems, including the craniofacial structures, the oropharynx, the trunk, the extremities, the breast, and the perineum. It includes aesthetic (cosmetic) surgery of structures with undesirable form. Special knowledge and skill in the design and transfer of flaps, in the transplantation of tissues, and in the replantation of structures are vital to these ends, as is skill in excisional surgery, in management of complex wounds, and in the use of alloplastic materials. Residency education in plastic surgery is designed to educate and train physicians broadly in the art and science of plastic and reconstructive surgery and to develop a competent and responsible plastic surgeon with high moral and ethical character capable of functioning as an independent surgeon. A variety of educational plans will produce the desired result.

### B. Scope of Education (Including Prerequisites)

1. All prerequisite residency education must be taken within programs accredited by the following organizations: the Accreditation Council for Graduate Medical Education (ACGME), the Royal College of Physicians and Surgeons of Canada, or the American Dental Association.
2. The curriculum for residency education in plastic surgery is 2 years. A program may be accredited for more than 2 years (such as in the integrated model or the independent model using a 3-year format) when it is demonstrated that there is a clear educational rationale, consonant with the Program Requirements for Residency Education in Plastic Surgery and the objectives for residency education, that cannot be met in a 2-year curriculum or when the program director has delineated a program with special goals that exceed those defined in the program requirements.
3. The Residency Review Committee (RRC) for Plastic Surgery recognizes two educational formats: independent and integrated.
  - a. Independent Format

In the independent format, residents complete 2 or 3 years of concentrated plastic surgery education, with 12 months of senior/chief responsibility, after successful completion of one of the following prerequisite curricula:

1. A minimum of 3 years of clinical education with progressive responsibility in a general surgery program. A transitional year or rotating internships may not be used to fulfill this requirement.
2. A complete neurological surgery, orthopaedic surgery, otolaryngology, or urology residency.
3. Satisfactory completion of an educational program in oral and maxillofacial surgery approved by the American Dental Association (ADA) is an alternate pathway for prerequisite education prior to a plastic surgery residency. This pathway is available only to those individuals holding the DMD/MD or DDS/MD degree. This education also must include a minimum of 24 months of progressive responsibility on surgical rotations under the direction of the general surgery program director after receipt of the MD degree.

Rotations in general surgery during medical school, prior to receiving the MD degree, will not be considered as fulfilling any part of the 24-month minimum requirement.

#### b. Integrated Format

In the integrated format, residents complete 5 or 6 years of ACGME-accredited plastic surgery education following receipt of an MD or DO degree from an institution accredited by the Liaison Committee on Medical Education (LCME) or the American Osteopathic Association. Graduates of schools of medicine from countries other than the United States or Canada must present evidence of final certification by the Education Commission for Foreign Medical Graduates (ECFMG).

1. The integrated curriculum must contain 5 or 6 years of clinical surgical education under the authority and direction of the plastic surgery program director.
2. Of these 5 or 6 years, 24 months must be concentrated plastic surgery education with no less than 12 months of chief responsibility on the clinical service of plastic surgery. Residents must complete the last 2 years of their education in the same plastic surgery program.
3. Additional clinical experiences appropriate to plastic surgery education should be provided in anesthesiology, burn management, critical care medicine, emergency medicine, cardiothoracic surgery, general surgery, neurological surgery, oncologic surgery, orthopedic surgery, otolaryngology, pediatric surgery, trauma management, and vascular surgery.
4. Administrative requirements
  - a. The program director must obtain prior approval of the sponsoring institution and the RRC to change the program format. At each subsequent review, the educational format will be evaluated.
  - b. Prior to entry into the program, each resident must be notified in writing of the required program length. The educational program length for a particular resident may not be changed without mutual agreement during his or her program unless there is a break in his or her education or the resident requires remedial education. All such changes must have prior approval of the RRC.
  - c. Residents must complete the program length for which they have enrolled (ie, although residents may transfer from one program to another, they may not change from one model of education to another without RRC prior approval).

## II. Institutional Organization

### A. Sponsoring Institutions

An educational program in plastic surgery must have one sponsoring institution within a single geographic location with primary responsibility for the entire program. Appropriate institutions include medical schools, hospitals, and medical foundations. The sponsoring institution must provide sufficient faculty, financial resources, and academic support to enable the program to comply with the requirements for accreditation. This support must include sufficient operating time to ensure adequate resident surgical experience.

### B. Participating Institutions

When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be documented in an affiliation agreement that conforms to ACGME Institutional Requirements I.C.

1. Participating institutions include the sponsoring institution and other affiliated institutions approved by the RRC for clinical education.

2. Participating institutions must promote the educational goals of the program rather than simply enlarging the program, and they must not be added primarily for the purpose of meeting service needs.
3. Programs using multiple hospitals must ensure the provision of a unified educational experience for the residents. Affiliations that merely duplicate experiences otherwise available within the program are not acceptable.
4. Participating institutions that are geographically distant from the sponsoring institution are not desirable. These are acceptable only if they offer special resources, which are unavailable locally, that significantly augment the overall educational experience of the residents.
5. The number and distribution of participating institutions must not preclude the satisfactory participation of residents and faculty in conferences and other educational activities of the program.

### C. Appointment of Residents

1. The RRC will approve the total number of resident positions in the program by year and in total. The number of approved positions will be based primarily upon the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; the totality of institutional resources committed to resident education; and the program's compliance with the Institutional and Program Requirements.
2. Programs may not enroll more residents at any level than the number of residents approved by the RRC for that year of education, except when a resident's education is extended because the program director has determined the need for additional education to meet the minimum requirements for competency. In this circumstance, the program director must receive RRC prior approval to extend a resident's program. Any increase, including temporary increases, in the number of residents at any level or increase in the total number of residents must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale. Requests based primarily on service considerations will not be approved.
3. Vacancies
  - a. In an independent program, a vacancy in resident complement, if filled, must be at the same level in which the vacancy occurs, unless otherwise approved by the RRC.
  - b. In an integrated program, the program director may appoint a new resident at a level that overlaps that of another resident in the program, provided that (1) each appointment does not adversely affect the education of residents already in the program and (2) commencing at the time when the resident whose departure created the vacancy would have completed education, the average number of residents graduating yearly will not exceed the number approved by the RRC over the accredited length of the program.

## III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
  - a. An experienced, clinically active, competent teacher, clinician, and administrator.
  - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
  - c. Certification by the American Board of Plastic Surgery or judged by the RRC to possess appropriate educational qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
  - e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.
2. Responsibilities of the program director include:
  - a. Familiarity with the current Institutional Requirements and Program Requirements approved by the ACGME.
  - b. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of education and for each major rotation or other program assignment. This statement must be distributed to residents and members of the faculty and should be readily available for review.
  - c. Prompt written notification to the executive secretary of the RRC of any major change in the program that may significantly alter the educational experience for the residents, including:
    1. Changes in leadership of a section, division, or department of plastic surgery, such as appointment as a permanent or acting program director, section head, division head or chief, or department chairman.
    2. Changes in administrative structure that affect the status of the program/division or department of plastic surgery within the institution.
  - d. Obtaining prior approval of the RRC for the following changes in the program to determine if an adequate educational environment exists to support these changes. On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
    1. The addition or deletion of any participating institution which provides each resident with 3 months experience or longer during the program.
    2. The addition or deletion of any participating institution with assignments of 3 months or longer.
    3. Any change in the resident complement of the program.
    4. Any change in the length or format of the program.
  - e. Developing, maintaining, and communicating written guidelines specifically delineating the supervisory responsibilities of the faculty in each participating institution used by the educational program, to include promulgation of regular call schedules.
  - f. Ensuring that the educational environment, the volume and variety of patient population, and the concept of progressive surgical responsibility are scrupulously followed.
  - g. Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - h. Selecting and supervising the faculty at each institution participating in the program.
  - i. Annually collecting, compiling, and retaining records of the number and types of plastic surgery operative procedures performed in all institutions and facilities utilized in the clinical education of residents. This information must be provided as requested in the format and form specified by the RRC.

- j. Annually compiling a comprehensive record of the number and type of operative procedures performed by each resident completing the program. This record must include all of the procedures in which the plastic surgery resident was either surgeon or assistant during the program and must be signed by both the resident and the program director as a statement of its accuracy. This information must be provided as requested in the format and form specified by the RRC. These records must be maintained by the program director.
- k. Having documentation on file of the satisfactory completion of prerequisite education before the candidate begins plastic surgery residency education.
  1. Verifying the credentials of a transferring resident prior to accepting the resident into the program. Verification should include documentation of all rotations for which the transferring resident has been given credit by the previous program director. The program director who accepts a transferring resident should modify the individual's course of study as needed to ensure that the resident completes all education requirements prior to graduation.
  - m. Regularly evaluating the residents and the program, as noted in Section VI of these Program Requirements.
  - n. Advising resident applicants of the prerequisite requirements of the American Board of Plastic Surgery.
  - o. Implementing fair procedures, as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
  - p. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. The program director and the faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
  - q. Preparing an accurate statistical and narrative description of the program as requested by the RRC.

#### **B. Number and Qualifications of Faculty**

1. There must be sufficient numbers of qualified faculty available at all times at each of the participating institutions to supervise and instruct residents to ensure optimal patient care and resident education.
2. The plastic surgery faculty must be certified by the American Board of Plastic Surgery or judged by the RRC to possess appropriate educational qualifications.
3. The faculty should possess qualifications that contribute to the program, including high moral and ethical standards, and should demonstrate an appropriate commitment in time and energy to fulfill the teaching assignments.
4. There must be evidence of scholarly activity among the plastic surgery faculty. Such evidence should include a high order of teaching skills, participation in clinical and/or basic research, involvement in plastic surgery and/or other medical scientific organizations and their meetings, and publication in refereed journals, monographs, and books.
5. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
6. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
7. The faculty should periodically evaluate the resources available to the program, the contribution of each institution participating

in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

### C. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

The responsibility for establishing and maintaining the faculty environment of inquiry and scholarship rests with the program director and the faculty. While not all members of the faculty must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

### D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

## IV. Facilities and Resources

### A. Inpatient Facilities

1. Although inpatient facilities may vary from one participating institution to another, the plastic surgery inpatient service should have an adequate number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suites as well as diagnostic and treatment facilities must contain technologically current equipment.

### B. Outpatient Facilities

Appropriately equipped outpatient facilities, including operating suites, clinics, and office space, must be available for resident participation in the regular preoperative evaluation, treatment, and postoperative follow-up of patients for whom the resident has responsibility.

### C. Library Facilities

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### D. Other Facilities and Resources

Within the participating institutions of the program, the following must be adequate and readily available:

1. Laboratory services
2. Diagnostic imaging
3. Medical library resources, including current texts and journals relevant to the practice of plastic surgery, that are accessible to residents on a 24-hour basis
4. Adequate space and resources for conferences, including appropriate audiovisual equipment
5. Data information systems sufficient to support research activities and enable the program to meet its record-keeping and data-reporting needs
6. Sufficient technical and clerical support personnel to meet the needs of the educational program

## V. Educational Program

### A. Program Goals and Objectives

The program director and faculty must prepare and comply with written educational goals for the program.

1. Program design  
All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the appropriate review committee as part of the regular review process.
2. Program evaluation  
The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

### B. ACGME Competencies

The residency program must require its residents to obtain competencies in the 6 areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
4. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

### C. Clinical Components

Knowledge of surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pharmacology, wound healing, surgical pathology and microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation is fundamental to this specialty. The judgment and

technical capability for achieving satisfactory surgical results are mandatory qualities for the plastic surgeon.

1. Specific education should be provided in the following areas:
  - a. Congenital defects of the head and neck, including clefts of the lip and palate, and craniofacial surgery.
  - b. Neoplasms of the head and neck, including the oropharynx, and education in appropriate endoscopy.
  - c. Craniomaxillofacial trauma, including fractures.
  - d. Aesthetic (cosmetic) surgery of the head and neck, trunk, and extremities.
  - e. Plastic surgery of the breast.
  - f. Surgery of the hand/upper extremities.
  - g. Plastic surgery of the lower extremities.
  - h. Plastic surgery of congenital and acquired defects of the trunk and genitalia.
  - i. Burn management, acute and reconstructive.
  - j. Microsurgical techniques applicable to plastic surgery.
  - k. Reconstruction by tissue transfer, including flaps and grafts.
  - l. Surgery of benign and malignant lesions of the skin and soft tissues.
2. There must be a well-organized and well-supervised outpatient clinic. This clinic must operate in relation to an inpatient service used in the program.
  - a. Residents must have the opportunity to see patients, establish provisional diagnoses, and initiate preliminary plans prior to the patients' treatment.
  - b. An opportunity for follow-up care must be provided so that the results of surgical care may be evaluated by the responsible residents.
  - c. These activities must be carried out under appropriate faculty supervision. If residents participate in preoperative and post-operative care in a private office, the program director must ensure that the resident functions with an appropriate degree of responsibility with adequate supervision.
  - d. Adequate experience should be provided in office practice procedures and management.
3. The institutions in the program must have an adequate number and variety of adult and pediatric surgical patients available for resident education. Experience in all 12 categories of surgical experience is important and must not be limited by excessive clinical responsibility in any one or several categories or by excessive nonclinical activities.
4. Generally equivalent and adequate distribution of categories and cases among the residents must be demonstrated.
5. Resident experience in patient management should demonstrate graduated and progressive responsibility.

#### **D. Didactic Components**

The scope of plastic surgery is so broad that a well-organized, comprehensive, and an effective educational curriculum is necessary to ensure that all residents obtain experience in all the various areas of the specialty, including pertinent related basic science applications. The written curriculum should reflect careful planning of all years of the program, with evidence that the cyclical presentation of core specialty knowledge is being supplemented by the addition of current information, including practice management, ethics, and medical-legal topics as related to plastic surgery.

1. Conferences should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the wide field of plastic surgery and to evaluate current information.
2. Conferences should embrace the scope of plastic surgery education as outlined in sections I.A and V.B.1.a-1 of these Program Requirements.

3. Teaching conferences must include basic science subjects, such as anatomy, physiology, pathology, embryology, radiation biology, genetics, microbiology, and pharmacology.
4. There should be regular, documented attendance of plastic surgery conferences by residents and faculty.
5. Periodic review of the morbidity and mortality experiences of the service must be documented.
6. Participation in, and presentation of, educational material at conferences is expected of residents. Adequate time for preparation should be permitted, both to maximize the educational experience for the residents and to emphasize the importance of the experience.

#### **E. Resident Policies**

1. Supervision  
The program director must ensure adequate supervision for all resident patient care and educational activities.
2. Working Conditions and Environment
  - a. The program director must establish an environment that is optimal both for resident education and for patient care, while ensuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly.
  - b. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night.
  - c. During these on-call hours, residents should be provided with adequate sleeping, lounge, and food facilities.
  - d. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
  - e. Support services must be such that residents do not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.
  - f. Different rotations may require different working hours and patterns. A distinction must be made between on-call time in the hospital and on-call availability at home vis-a-vis actual hours worked. The ratio of hours worked and on-call time will vary, particularly at the senior levels, and therefore necessitate flexibility.
3. Residency education in plastic surgery is a full-time responsibility; activities outside the educational program must not interfere with the residents' performance in the educational process as determined by the program director and must not interfere with the residents' opportunities for rest, relaxation, and study.
4. Appointment of Individuals for Special Education
  - a. The appointment of other individuals, ie, fellows, etc, for special education must not detract from the educational opportunities of the residents. The appointment of such individuals must be reported to the RRC.
  - b. The addition of such individuals requires a clear statement of the areas of education, clinical responsibilities, duration of the education, and the impact of these individuals on plastic surgery education. This statement is to be supplied to the RRC at the time the program is reviewed.
  - c. If individuals so appointed, in the judgment of the RRC, detract from the education of the residents, the accreditation status of the program may be adversely affected.

#### **F. Other Required Components**

1. Education must take place in an environment of inquiry and scholarship. Residents must be taught to understand and apply

the scientific method to clinical medicine through scholarly activity. Residents should have genuine opportunities to engage in scholarly activities such as participation in ongoing clinical and/or basic research projects with which appropriate faculty are involved, preparation of reports for publication (eg, case reports, summaries of current scientific knowledge, or reviews of recent developments in plastic surgery), and participation in scientific meetings.

2. Recognizing the comprehensive nature of the specialty of plastic surgery, there should be clinical resources for the education of plastic surgery residents in anesthesiology, burn management, emergency medicine, cardiothoracic surgery, general surgery, neurological surgery, orthopedic surgery, otolaryngology, pediatric surgery, surgical critical care, surgical oncology, trauma management, and vascular surgery.

## VI. Evaluation

### A. Evaluation of Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
2. mechanisms for providing semiannual and timely performance feedback to residents.
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.
4. Residents should be evaluated at the completion of each rotation by the faculty member who is responsible for the resident's supervision and education. The progress of each resident, including personality characteristics and ethics, knowledge, skills, and professional growth, must be evaluated by the program director in consultation with the faculty in a semiannual, written review using appropriate criteria and procedures. The semiannual review should accomplish the following:
  - a. The evaluations must document any deficiencies to be corrected prior to completion of the residency program.
  - b. The evaluations must be communicated in a timely manner to the individual resident in a confidential conference with the program director, with a discussion of remedial steps, if any. The review and comments should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following the resident's completion of the program.
  - c. The record of evaluations for each resident must be maintained and must be accessible to the resident and other authorized personnel.
  - d. A final written evaluation for each resident who completes the program must be provided. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
  - e. There must be a written basis for annual advancement of a resident and written procedures for redress of grievances and for due process.

### B. Program Evaluation

1. The residency program should use resident performance and outcome assessment results in its evaluation of the educational effectiveness of the residency program.
2. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

### C. Faculty Evaluation

1. At least annually, all individual faculty members must be formally evaluated by the program director as well as by the residents. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
2. The program should demonstrate that such evaluations are used in improving the program.

### D. Internal Evaluation

There should be provisions for annual internal evaluation of the educational, research, and clinical aspects of the program by the institutional GMEC. Residents should participate in this evaluation.

## VII. Board Certification

- A. One measure of the quality of a program is the performance of its graduates with respect to the American Board of Plastic Surgery certification process. Graduates of ACGME-approved programs are expected to complete this process successfully.
- B. Residents who plan to seek certification by the American Board of Plastic Surgery should communicate with the secretary of the board to obtain current information regarding certification prior to beginning their education.

*ACGME: February 2001 Effective: July 1, 2002  
(Competency revisions)*

# Program Requirements for Residency Education in Craniofacial Surgery (Plastic Surgery)

## I. Introduction

### A. Definition of the Specialty

1. Craniofacial surgery is a subspecialty of plastic surgery that includes the in-depth study and reconstructive treatment of disorders of the soft and hard tissues of the face and cranial areas, such as congenital anomalies and posttraumatic and other acquired conditions. Although craniofacial surgery includes combined intracranial and extracranial surgery, the broad scope of the subspecialty is applicable to other procedures in the craniofacial region. Surgeons trained in craniofacial surgery should be able to manage any hard- or soft-tissue reconstruction problem of the craniofacial region.
2. The team approach to many problems may be appropriate, resulting in the integration of other specialties into the craniofacial team. In addition to plastic surgery, these specialties should include neurological surgery, ophthalmology, otolaryngology, oral surgery, and orthodontics.
3. The primary goals of a craniofacial surgery educational program are to provide a broad education in the art and science of the

specialty and sufficient experience for surgeons to acquire competency as specialists in the field.

### **B. Duration and Scope of Education**

1. The length of the educational program in craniofacial surgery is 1 year. Before entry into the program, each prospective craniofacial surgery resident must be notified in writing of the length of the program.
2. Admission to a craniofacial surgery educational program is open to those who have satisfactorily completed an accredited plastic surgery residency program or to other appropriately qualified surgeons.
3. The craniofacial surgery educational program should be associated with an accredited program in plastic surgery; exceptions must be justified. The educational relationship should demonstrate the use of shared resources to include, for example, faculty, educational conferences, patient management, and other institutional resources.

### **C. Program Goals and Objectives**

1. Although educational programs in craniofacial surgery may differ in format and objectives, each program must demonstrate that residents are provided with the opportunity to obtain the knowledge, skills, clinical judgment, and attitudes essential to the practice of craniofacial surgery.
2. The craniofacial surgery resident must be provided with progressive senior surgical responsibility in the four essential phases of total patient care: preoperative evaluation, therapeutic decision making, operative experience, and postoperative management.
3. The craniofacial surgery resident must be provided with sufficient knowledge of the sciences of embryology, anatomy, physiology, and pathology as these relate to the diagnosis and treatment of diseases of the craniofacial areas. Education in the diagnosis and management of disease and deformity involving the jaws, teeth, and occlusion also must be included in the program.

## **II. Institutional Organization**

### **A. Sponsoring Institution**

1. There must be one institution responsible for the conduct of the educational program as required by the Institutional Requirements.
2. The sponsoring institution must provide sufficient resources to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.
3. A sufficient number of patients must be available to ensure inpatient and outpatient experiences for each craniofacial surgery resident without diluting the educational experience for regularly enrolled plastic surgery residents or residents in other specialties.

### **B. Participating Institutions**

1. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements.
2. Participation by any institution that provides 2 months or more of the educational program must be approved prospectively by the Residency Review Committee (RRC) for Plastic Surgery.
3. Assignments to participating institutions must be based on a clear educational rationale and should provide special clinical resources not otherwise available to the program.

### **C. Library**

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals at each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

### **D. Appointment of Residents**

1. The RRC will approve a total number of residents in the program per year, based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program. The minimum faculty/resident ratio is 1:1.
2. The program may not graduate more residents in any given year than are approved by the RRC unless prior approval has been obtained.

## **III. Faculty Qualifications and Responsibilities**

The program director and faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

### **A. Program Director**

There must be one program director responsible for the program.

1. Qualifications of the program director
  - a. Requisite and documented clinical, educational, and administrative abilities and experience in craniofacial surgery.
  - b. Licensure to practice medicine in the state where the sponsoring institution is located.
  - c. Certification in plastic surgery and certification in the subspecialty or judged by the RRC to possess appropriate qualifications.
  - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director
  - a. Preparation of a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of education and for each major clinical assignment. This statement must be distributed to residents and members of the faculty. It should be readily available for review.
  - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
  - c. Selection and supervision of faculty and other program personnel at each institution participating in the program.
  - d. Supervision of residents through explicit written description of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
  - e. Regular evaluation of the resident's knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
  - f. The program director, with participation of the faculty, shall
    1. at least semiannually evaluate the knowledge, skills, and professional growth of the craniofacial surgery residents, using appropriate criteria and procedures;

2. communicate each evaluation to the resident in a timely manner;
  3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
  4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
  5. provide a final written evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation should be part of the resident's permanent record maintained by the institution.
- g. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. The program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services for residents.

Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.

- i. Prepare an accurate statistical and narrative description of the program as requested by the RRC.
- j. Notify the Executive Director of the RRC for Plastic Surgery of any changes that might substantially alter the educational experience, eg, a change in program director or changes in participating institutions.

#### B. Faculty

1. There must be a sufficient number of faculty with documented qualifications in craniofacial surgery to instruct and supervise adequately all residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The faculty must be organized and have regular, documented meetings to review program goals and objectives and program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The faculty should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the didactic course of study, the performance of the faculty, and the quality of resident supervision.

#### C. Other Program Personnel

The program must be provided with the professional, technical, and clerical personnel to support the administration and educational conduct of the program.

## IV. The Educational Program

The program director and the faculty are responsible for providing the intellectual environment necessary for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for the practice of the specialty. These objectives can be achieved only when the program leadership, the faculty, and the sponsoring institution are committed to the educational program and when appropriate resources and facilities are available.

### A. General

1. The program director and faculty must prepare and comply with written educational goals for the program. All educational components of the program must be related to program goals and objectives.
2. The program design and structure must be approved by the RRC as part of the review process.
3. Clinical, basic science, and research conferences; monthly morbidity and mortality sessions; and other conferences focused specifically on craniofacial surgery must be conducted regularly and as scheduled. The topic and subject matter of these conferences must be linked to the goals and objectives for the course of study.
4. Written lines of responsibility describing the relationship between craniofacial surgery residents and plastic surgery residents regarding their clinical responsibilities must be supplied to the RRC at the time of the review.

### B. Academic and Clinical Components

The educational program should include the areas outlined below.

1. Basic science
  - a. Normal and abnormal embryology and fetal development of the head and neck with special emphasis on the development of the cranium, the maxillary and mandibular complex, the mechanisms of clefting, and the development of the temporomandibular joint and surrounding musculature.
  - b. Normal growth and development of the cranium and face with special attention to dental development and occlusion and to the consequences of congenital anomalies, trauma, surgery, and radiation.
  - c. Dental radiographs, cephalometric analysis, and study models; construction of splints and their use in craniofacial and maxillofacial surgery.
  - d. Interpretation of sophisticated diagnostic imaging modalities used in craniofacial surgery, such as computed tomography, magnetic resonance imaging, and arteriography.
  - e. Standards of beauty and normalcy as they relate to the face and an understanding of the relationship of cephalometric values to soft-tissue features.
  - f. Bone healing, including primary healing, malunion, nonunion, osteomyelitis, and the physiology and methods of bone grafting.
  - g. Use of alloplastic materials used for reconstruction.
  - h. Congenital, developmental, and secondary deformities of the head and face, including the embryology, pathogenesis, anatomy, natural history, and course of the disease following treatment:
2. Congenital anomalies and disorders

The foundation of this subspecialty is the treatment of congenital craniofacial anomalies. Because such treatment can be applied to a variety of acquired deformities, the program must include in-depth training, education, and participation in the diagnosis, planning, operative treatment, and postoperative care of craniofacial problems including but not necessarily limited to

- a. craniosynostosis;
  - b. congenital and developmental deformities of the face that may be related to craniosynostosis, including midface hypoplasia and facial asymmetries;
  - c. syndromal malformations of the face such as Treacher Collins, hemifacial microsomia;
  - d. congenital orbital dysmorphologies including orbitofacial clefts and hypertelorism;
  - e. facial cleft deformities;
  - f. atrophic and hypertrophic disorders such as Romberg's disease, bone dysplasia;
  - g. craniofacial manifestations of systemic disorders such as neurofibromatosis and vascular malformations and lymphatic disorders;
  - h. posttraumatic complex skull and facial deformities;
  - i. congenital and acquired disorders of the facial skeleton and occlusal relationships; and
  - j. craniofacial concepts in the exposure and/or reconstruction in cranial base oncologic surgery.
3. Clinical activities

The clinical education should include active participation in an integrated craniofacial team with sufficient patient volume to provide an exposure to diverse craniofacial problems. In addition to plastic surgery, the craniofacial team should include neurological surgery, ophthalmology, otolaryngology, dentistry, and orthodontics. Clinical activities should include:

- a. education, training, and participation in the surgical methods of craniofacial surgery, including rigid fixation of skull facial bones and training in the fabrication of dental splints;
  - b. preoperative assessment and decision making regarding methods and timing of intervention in craniofacial disorders;
  - c. management of craniofacial patients from the preoperative through the postoperative stages; and
  - d. knowledge of critical care in the postoperative management of craniofacial patients.
4. Education and experience in the following areas is desirable:
- a. Diagnostic methods and treatment techniques of temporomandibular joint disorders.
  - b. Aesthetic contour deformities such as masseteric hypertrophy, frontal cranial remodeling.
  - c. Elective orthognathic surgery for orthodontic problems.
  - d. Surgical correction of congenital clefts of the lip and palate with emphasis on both primary and late repairs and revisions.
  - e. Reconstructive management of defects after ablative surgery for malignancy about the maxillofacial region, including pedicle and free flap surgery and bone grafting techniques.

### C. Operative Experience

1. A program of graduate education in craniofacial surgery must provide a sufficient number and variety of surgical experiences to ensure that residents receive sufficient exposure to a wide range of diseases and injuries to the soft and hard tissues of the craniofacial region.
2. The resident must be allowed senior responsibility as the operating surgeon while performing critical portions of the surgery in the operative management of a range of common craniofacial surgery procedures.
3. The craniofacial surgery resident is not a substitute for faculty and should not act on a regular basis as a teaching assistant to the chief resident in plastic surgery. If the craniofacial surgery resident and the plastic surgery resident share operative experience, only one surgeon may receive credit as surgeon for the experience.

### D. Resident Policies

1. Supervision  
All patient care services must be supervised by appropriately qualified faculty. The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with other residents and faculty. The level and appropriateness of resident supervision must be based on the severity and complexity of the patient's condition.
2. Duty hours and conditions of work  
The resident's work schedule should be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities, and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary and necessitate flexibility.

### E. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty may be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.
2. The types of activities should include
  - a. participation in clinical discussion, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice;
  - b. participation in journal clubs and conferences;
  - c. participation in regional and national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in peer-reviewed journals;
  - d. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
  - e. offering of guidance and technical support, for example, research design or statistical analysis, for residents involved in research;
  - f. provision of support for resident participation in scholarly activities.

### V. Evaluation

#### A. Resident Evaluation

1. Semiannual written evaluation of each resident is required as defined in section III.A.2.f.
2. The resident operative experience must be submitted yearly to the RRC to permit evaluation of each resident's experience.

#### B. Faculty Evaluation
